## Part Five DESIGN LAW

### 16 What is a design? 545

Introduction	545
Brief history of design law up to 2001	547
Community design and the UK registered design right	548
Design right	551
Community design, the UK registered design and the UK unregistered design right	552
UK unregistered design right and copyright	553
Particular examples	555
Ownership – differences between rights	557
International aspects	559

### 17 Community design and the UK registered design 561

Introduction	561
Community design	562
Requirements for protection (RCD and UCD)	563
Exclusions from the Community design	565
Entitlement to a Community design	567
Dealing with the Community design	569
Rights and infringement	570
Limitations and defences	571
Remedies	574
Offences	576
Registration of Community design	576
Invalidity and surrender	579
Appeals from decisions at the OHIM	582
Jurisdiction	583
UK registered design	585
Brief history of the UK registered design	586
Implementation of the Directive	586
Requirements for registrability	589
Registration	598
Cancellation and invalidity	600
Duration	601
Ownership and dealing with registered designs	602
Rights of proprietor	604
Infringement and exceptions	605
Defences	607
Remedies	607
Groundless threats of infringement proceedings	608
Offences	608
Crown use and secrecy provisions	609

### 18 The UK unregistered design right 611

Introduction	611
Subsistence of right	612
Originality	615
Tangible form requirement	622
Qualification	622
Exceptions	624
Duration of design right	631

Ownership	633
Assignment and licensing	635
Rights of owner and infringement	637
Exceptions to infringement	641
Defences to infringement actions	642
Remedies	645
Semiconductor topography design right	646

## Part Six BUSINESS GOODWILL AND REPUTATION

### 19 Trade marks – introduction and background 655

Introduction	655
Rationale	657
Brief history	658
The Trade Marks Act 1994	659
The Act, the Directive and the Regulation	661
Hierarchy of courts and trade mark offices	662
Scheme and structure of the chapters on trade marks	664

### 20 The UK trade mark – registrability, surrender, revocation and invalidity, property rights and registration 668

Introduction	668
Registrable trade marks	669
Capable of distinguishing	670
Graphical representation	672
Unregistrable signs	679
Absolute grounds for refusal or invalidity	680
Relative grounds for refusal	702
Certification marks	720
Collective marks	721
Surrender of registered trade mark	722
Revocation	723
Invalidity	729
Trade marks as property	730
Registration	733

### 21 The UK trade mark – rights, infringement, limitations and defences, remedies and criminal offences 740

Introduction	740
Rights conferred by registration and infringement	741
Comparative advertising	753
Applying mark to material, etc.	758
Well-known marks – Paris Convention countries	758
Trade marks and the internet	759
Evidential aspects	765
Limitations and defences	767
Acquiescence	774
Exhaustion of rights	774
Groundless threats of infringement proceedings	776

Remedies	778
Criminal offences	780

## 22 Community trade mark and the Madrid System 790

Introduction	790
Community trade mark	791
Nature of the CTM	792
Requirements for registration	792
Rights, infringement and remedies	798
Limitation of the effects of a CTM	800
Applying for and registration of a CTM	800
Property rights in a CTM	801
Surrender, revocation and invalidity	802
Decisions at OHIM and appeals	804
Jurisdiction	804
The UK Community Trade Mark Regulations	806
International registration of trade marks	806

## 23 Passing off and malicious falsehood 809

Introduction	809
Basic requirements for a passing off action	811
Claimant's goodwill	814
Descriptive words and geographical names	819
The scope of passing off	822
The nature of the misrepresentation	829
Character merchandising	837
Post-sale confusion	842
Damage to goodwill	843
Passing off and internet domain names	847
Defences	852
Remedies	853
Malicious falsehood	854
Summary	858

## Part Seven EUROPEAN AND INTERNATIONAL PERSPECTIVES ON IPR

### 24 Freedom of movement of goods and EC competition law 863

Introduction	863
Freedom of movement of goods	864
Repackaging	868
Goods placed on the market outside the EEA	871
Exhaustion of rights and disparities between national laws	873
Competition law	875
Article 81 – restrictive agreements, etc.	876
The Technology Transfer Regulation	880
Article 82 – abuse of a dominant trading position	882

### 25 IPR and conflict of laws 890

Introduction	890
Jurisdiction	891
Forum shopping	901
Forum non conveniens	903
Applicable law	904
<i>Appendix 1 – Trade mark classification for goods and services</i>	909
<i>Appendix 2 – Useful internet addresses for intellectual property information</i>	911
<i>Bibliography</i>	913
<i>Index</i>	916

Visit the *Intellectual Property*, eighth edition mylawchamber site at [www.mylawchamber.co.uk/bainbridgeip](http://www.mylawchamber.co.uk/bainbridgeip) to access valuable learning material.

### FOR STUDENTS

*Do you want to give yourself a head start come exam time?*

#### Self study support

- Use the multiple choice, problem and essay questions, to test yourself on each topic throughout the course.
- Use the updates to major changes in the law to make sure you are ahead of the game by knowing the latest developments.
- Use the live weblinks to help you read more widely around the subject, and really impress your lecturers.

### FOR LECTURERS

#### Teaching support material

- Use these ready-created PowerPoint slides for visual support in explaining legal concepts.

For more information please contact your local Pearson Education sales representative or visit [www.mylawchamber.co.uk/bainbridgeip](http://www.mylawchamber.co.uk/bainbridgeip).

# Preface

There have been numerous significant legislative initiatives affecting intellectual property since the first edition of this book was published in 1992. But now we seemed to have reached the sunny uplands and there has been little change to intellectual property legislation since the publication of the seventh edition, the most notable change being the coming into force of the Trade Marks Rules 2008, hardly an earth-shattering event. This gives us all the opportunity to take a long hard look at the legislation, domestic and from Europe, and to consider whether the legislation in its current state best serves the various and often diverse and conflicting interests of innovators, rightholders, consumers and all others affected by intellectual property rights. Patenting remains a somewhat unsatisfactory vehicle in addressing conflicting interests, particularly in the field of pharmaceuticals. Software-related inventions still remain controversial, particularly in respect of whether they comply with the requirement of being an invention for the purposes of the European Patent Convention and the UK Patents Act 1977. So much difficulty has this caused that the President of the European Patent Office has finally asked the Enlarged Board of Appeal to consider a number of questions on the matter.

The quietness on the legislative front has, of course, not been matched in the courts. There have been a number of important cases before the House of Lords (now renamed as the Supreme Court) and the European Court of Justice. Three patent cases stand out, *Generics v Lundbeck* and *Conor v Angiotech* in the House of Lords. In the former, Lord Hoffmann's judgment in *Biogen* was explained and important points were made in terms of disclosure and sufficiency in the latter. In particular, it was held that it was not necessary for a patent specification to show that a claimed invention actually worked or how it worked. We also had the first recorded case where employees succeeded in their application for compensation in relation to an invention which was of outstanding benefit to their employer: *Kelly v GE Healthcare*. The awards were £1 million and £500,000 respectively.

Copyright cases have involved authorship of the Procul Harem hit 'Whiter Shade of Pale' and its final resolution in the House of Lords, the copyright status of the Star Wars Stormtrooper costumes and an important case on encrypted broadcasts, *Football Association v QC*

*Leisure*, involving the importation of decoders lawfully put on the market outside the UK and the scope of the restricted act of communication to the public. The European Court of Justice handed down important rulings on the scope of the *sui generis* database right. Important privacy cases included one involving J.K. Rowling's infant son and the former Formula 1 boss Max Mosely. Design law cases included one on passenger aircraft seating involving Virgin Atlantic, another concerning the design of specialist lawnmowers. The scope of design protection came up for consideration in relation to spiky balls used in tumble driers and similar spiky balls used for a completely different purpose, being for massaging the human body. The Court of Justice also confirmed that a person commissioning a design is not entitled to the design rights in it in the absence of an assignment of those rights. This highlights a significant difference between the Community design and the UK's registered design and unregistered design right. These in turn differ from the position under UK copyright law and surely it is now time to modify the Registered Designs Act 1949 (long overdue consolidating into a new statute) and Part III of the Copyright, Designs and Patents Act 1988 which deals with the unregistered design right. Indeed, there is much to be said for repealing Part III of that Act and scrapping that right with necessary changes to copyright law to prevent long term protection of functional designs.

Trade marks law continues to make much work for the Court of Justice. There have been numerous references for a preliminary ruling on the interpretation of the trade marks Directive. Areas dealt with by the Court of Justice include more consideration of 'genuine use', exhaustion of rights, in relation to the sale of luxury goods in discount stores, bad faith in the context of chocolate bunny rabbits and comparative advertising. In terms of the latter, surely this now sounds the death knell for section 10(6) of the Trade Marks Act 1994.

Writing the eighth edition has proved as enjoyable as ever. I would like to thank Zoë Botterill, Cheryl Cheasley and all the people at Pearson Education for their help, support and patience and my wife Lorraine for her help and encouragement. I have attempted to state the law as at 1 October 2009.

David Bainbridge

# Table of cases

## UK CASES (INCLUDING CASES BEFORE THE JUDICIAL COMMITTEE OF THE PRIVY COUNCIL)

- 10 Royal Berkshire Polo Club [2001] RPC 643 **668, 711**

# Glossary

## TERMS AND PHRASES COMMON IN INTELLECTUAL PROPERTY LAW

**Assignment:** the transfer of the title in a chose in action. For example, ownership of copyright is transferred by means of an assignment in writing which is signed by or on behalf of the previous owner of the copyright, that is the assignor. In intellectual property law, an assignment must be distinguished from an exclusive licence, which is similar in many practical respects, but which does not involve the transfer of the title to the right.

**Character merchandising:** this occurs when the owner of the rights in some popular character or personality grants licences to others allowing them to apply drawings, photographs or other representations of the character to goods and articles which those others make or sell. Typically, the character will be a famous fictitious character popularised by television or film. Examples are Mickey Mouse, Bob the Builder, Denis the Menace, Indiana Jones, Harry Potter, etc.

**Collecting society:** a society that collects revenue in respect of the exploitation of an intellectual property right and distributes that revenue amongst the right owners. In some cases, the owners of the right will assign part of their rights to the collecting society. An important example is the *Performing Right Society* ('PRS') which takes an assignment of the performing rights in music, grants blanket licences and distributes the revenue thus earned between the authors of the music. For example, the owner of premises such as a shop to which the public have access will pay a fee to the *Performing Right Society* which will allow him to play popular music in the shop. The same applies to hotels, restaurants and the like playing background music. This arrangement is much more convenient to the shop owner or hotelier and removes the problem of trying to negotiate separate licences with individual copyright owners. Whereas some collecting societies, such as the PRS, take an assignment of the relevant rights others, such as the *Copyright Licensing Agency*, do not.

**Comptroller of Patents, Designs and Trade Marks:** the head of the Patent Office (its operating name is now the UK Intellectual Property Office) with responsibility

for the administration and grant of patents, registered designs and trade marks. Under trade mark legislation and design legislation the Comptroller is referred to as the *Registrar*. The Comptroller has other duties. Examples are: the conduct of hearings and proceedings, the production of statistics and an annual report, increasing public awareness of the work of the Patent Office in addition to working with, advising and participating with the European Patent Office, the World Intellectual Property Organisation and the Council of Europe. The Comptroller now has the power to make non-binding opinions as to validity (novelty or inventive step) or infringement of patents. In the year ending 31 March 2009, the Patent Office employed an average of 990 persons and had a turnover of £61.1 million.

**Exhaustion of rights:** a doctrine emanating from EC law. Basically, the owner of an intellectual property right which relates to articles which have been put into circulation by him or with his consent anywhere within the European Economic Area ('EEA' – the EC Member States, Iceland, Liechtenstein and Norway) cannot exercise that right to prevent the subsequent import, export or sale of those particular articles. The right is said to be exhausted. This will only apply where trade between Member States is likely to be affected. The doctrine does not apply in relation to articles put on the market outside the EEA and imported into the EEA.

**Freezing injunction (formerly Mareva injunction):** an injunction freezing the assets of a defendant thus preventing him from removing them out of the jurisdiction of the court. Such an injunction is useful where the defendant is not resident within the United Kingdom. Originally named after the case *Mareva Compania Naviera SA v International Bulk Carriers SA* [1980] 1 All ER 213.

**Get-up:** a style, mark, appearance, packaging or form of advertising or marketing used in connection with, or applied to, an undertaking's ('trader's') goods or services which may be or become distinctive in relation to that undertaking and which may give rise to, contribute to, or be associated with, the undertaking's goodwill which is protected by the law of passing off. A particular stylised logo, emblem or other form of insignia may, in appropriate circumstances, be registered as a trade mark.

**Infringement:** intellectual property law gives rights to the owner of that property permitting him to do certain acts in respect of the thing in which the right subsists. Any person who does one of these acts without the permission or authority of the right-owner is said to infringe the right unless the act concerned is permitted by law or a defence applies. Thus, it is usual to speak of an infringement of copyright or to say that a patent has been infringed.

**Licence:** a licence is a permission given by the owner of a right (the licensor) to another person (the licensee) allowing that other person to do certain specified things in respect of the subject matter of the right. For example, the owner of the copyright subsisting in a musical work may grant a licence to a publishing company allowing it to print and sell copies of the work in the form of sheet music. Another example is where the proprietor (owner) of a patent grants a licence to another person permitting the working of the invention by that other person. Intellectual property licences are normally contractual in nature and the licensor will usually receive royalties by way of consideration for the permission.

Licences may be exclusive or non-exclusive. An *exclusive licence* is one where the licensee has the exclusive right to do certain things to the exclusion of all others including the licensor. Several *non-exclusive licences* may be granted to different persons in respect of the same work and the same activities. For example, the owner of the copyright in a dramatic work may grant several non-exclusive licences to theatre companies permitting each of them to perform the dramatic work live on stage.

Compulsory licences may be granted under the provisions of an Act of Parliament. For example, the Patents Act 1977 gives the Comptroller of Patents, Designs and Trade Marks the power to grant a compulsory licence to an applicant if, for example, where the invention is a product, demand in the United Kingdom is not being met on reasonable terms. In some cases, licences are available as of right. This may be the ultimate result of a report from the Competition Commission (for example, if a patent or design is not being sufficiently worked and this is contrary to the public interest), or because of a statutory provision, for example as regards designs subject to the design right during the last five years of the right, or because the owner has volunteered that such licences be available (in the case of a patent, the proprietor may do this and from then on he will only pay half the usual renewal fees).

If there is a defect in an assignment or a misunderstanding as to the ownership of a right, a court might be prepared to imply a licence. For

example, if a person commissions the making of a work of copyright and there is no express agreement for the assignment of that copyright, the court might be able to imply a licence so that the commissioner can use the work for certain purposes consistent with the purpose of the commission. Alternatively, the concept of beneficial ownership may be used to similar effect.

**Moral rights:** the rights that the author of a work of copyright has independent of the economic rights of the copyright owner. The moral rights are: to be identified as the author of the work (or the director of a film) and to be able to object to a derogatory treatment of the work. These rights leave the author with some control over his work even if he does not own the copyright. Any person also has a right, under copyright law, not to have a work falsely attributed to him. Moral rights have recently been extended to performers.

**Public domain:** refers to all material which is available to the public at large (or a portion of it) and which may be freely used and exploited without infringing anyone's intellectual property rights. Material may be in the public domain because: (a) it is commonplace or lacks novelty, (b) it has been put there deliberately by the 'owner', and (c) the intellectual property rights concerning the material have expired or lapsed. It is possible that material has fallen into the public domain through a breach of confidence, in which case only those persons who have come across the material in good faith without notice of the breach of confidence will be free to make use of it. Such cases will be rare.

**Reverse engineering:** the process where information about the design or construction of an article is determined by an examination of the article itself, frequently after dismantling or measuring the dimensions of the article. Another manufacturer can copy articles by this process without having to inspect drawings and other design documents made for the article. For example, one company copied another's exhaust pipes by removing an exhaust system from a car and measuring it. The protection of spare parts is a controversial area, particularly with respect to spare parts for vehicles. The UK approach is to deny protection to elements of such parts which have to be a particular shape to fit or match a composite article of which they form a part.

**Royalty:** a payment mechanism, normally calculated on a percentage of the income derived from sales of works or articles subject to an intellectual property right. This is a common method of paying for a licence to exploit an intellectual property right. For example, the author of a literary work may grant a licence to a publisher permitting him to print and sell copies to bookshops.

The publisher may then pay the author 10 per cent of the price he receives from the booksellers. Sometimes, royalty figures will have to be agreed by the Comptroller of Patents, Designs and Trade Marks or by the Copyright Tribunal (for example, where a compulsory licence is obtained and the parties cannot agree a royalty). A percentage based on sales is not the only method of payment and a single lump sum or series of sums can be agreed between the parties instead. It is not unusual for writers to be given an advance on royalties.

**Search order (formerly Anton Piller order):** an order of the High Court permitting the aggrieved party to enter the premises of an alleged wrongdoer and take into safe custody or copy materials that are important evidentially. Originally named after the case of *Anton Piller KG v Manufacturing Processes Ltd* [1976] 1 Ch 55. The order must be executed by a solicitor. The applicant must show, *inter alia*, a strong case. Its purpose is the preservation of evidence, that is, to prevent the destruction or concealment of evidence by an alleged wrongdoer. The order is common in intellectual property cases, for example to allow a copyright owner to take possession of alleged pirate copies of his work to be used in evidence. The successful applicant for a search order usually has to give an undertaking in damages to compensate the other person should the applicant lose the case at trial.

## COMPUTER TERMS AND PHRASES

**Assembly language:** *see* low-level programming language.

**Computer memory:** the storage facilities of a computer. Computers can store vast amounts of data. Some of the computer's storage is internal, such as that provided for by integrated circuits and an internal magnetic disk. Other forms of storage are external, for example, 'floppy' diskettes, magnetic tape, CD ROM discs and DVD. Older forms of external storage include punched cards and paper tape. Internal computer memory can be classified as being ROM (read only memory) or RAM (random access memory). ROM contains programs such as the start up program and parts of the computer's operating system. ROM cannot be altered; it is permanent. RAM is transient memory; the contents are alterable. It is used to store application programs and associated data during the operation of a computer program which has been loaded from a disk or tape. When the computer is switched off, the contents of RAM are erased.

**Computer program:** a series of instructions which control or condition the operation of a computer.

**Decompilation and disassembly:** disassembly is an operation whereby the object code of a computer program is converted into assembly language (a low-level programming language). This is relatively easy to do using an appropriate computer program. Much more difficult is decompilation. This is where object code is converted into its original form in a high-level language. For this to be feasible, the type and version of the high-level language in which the program was originally written must be known. Quite often the word decompilation is used to describe disassembly (in essence, the process is the same, retrieving a source code program from an object code version). Reverse analysis of computer programs is usually undertaken using a disassembler program.

**High-level programming language:** a language that resembles natural language more closely than machine code (object code) or assembly language. High-level language is relatively remote from the machine language which can be directly 'understood' by the computer's central processing unit (processor). It is easier to write programs using a high-level language. However, for the program to operate, it must be converted permanently (compiled) or temporarily (interpreted) into machine code. Each statement in a high-level language corresponds to several statements in machine code. From reading a listing of a computer program written in a high-level language, it is possible to obtain a good insight into the ideas used and the program's algorithm. Examples of high-level languages are COBOL, BASIC, PASCAL and FORTRAN.

**Low-level programming language:** (or assembly language) a language which is very close to the machine code directly executable by the computer. Each statement is directly equivalent to a machine code operation. Assembly language is usually written using mnemonics and memory addresses.

**Programming language:** a set of words, letters and numbers which, according to the particular syntax of the language, describe a computer program, directly or indirectly, to a computer.

**Object code:** the machine code resulting from compiling a program written in a high-level language. Alternatively, it is produced by 'assembling' a program written in a low-level language. Object code is directly executable by a computer. Object code is not directly intelligible and must be converted by disassembly before it can be understood by humans. Most computer programs are marketed in object code form. It is processed faster and is far less easy to modify than a source code program.

**Reverse analysis:** this is the computer equivalent of reverse engineering. It is the process where a computer program is analysed by converting object code into assembly language or high-level language to determine features about the program. Reverse analysis can be used to discover interface details, that is information which will enable the writer of another program to make his program (or the files generated by his program) compatible with the other program. Reverse analysis can also be used to determine a program's algorithm and structure and to facilitate the writing of a program which will perform the same task. Hence, the scope and permissibility of reverse analysis are of utmost importance to the computer industry.

**Source code:** a program in a high-level language which must be converted into object code before it can be executed. *See also*, **object code**.

## INTERNET TERMS AND PHRASES

**Domain name:** the unique name that is the address of a website or its URL (Uniform Resource Locator) that describes the location of the site. For example, the author of this book has a number of domain names including `http://www.davidbainbridge.com`.

**Electronic mail (e-mail):** a system for sending mail electronically, via computer networks, anywhere in the world, almost instantaneously. Persons using electronic mail have their own e-mail address. This may be supplied by the person's employer or Internet Service Provider.

**HTML (Hypertext Markup Language):** the language used to format content for display on a web Browser. It comprises a set of markers to indicate formatting of

text and images, etc. and to link within a web page or to other web pages or other files.

For example, consider the phrase 'The cat sat on the mat'. To display the whole phrase centralised with the word 'cat' underlined and the word 'mat' emboldened, the HTML version would read as follows:

```
<CENTER>The <U>cat</U> sat on the <B>mat
</B></CENTER>
```

**Internet:** a global system of linked telecommunications and computer networks which allows the sending of data or messages from one computer to another anywhere in the world.

**Internet Service Provider (ISP):** an organisation that provides its subscribers with access to the internet together with other services such as chat rooms, bulletin boards and hosting web pages.

**Intranet:** a computer network within a single organisation allowing for the transfer of data, e-mail messages and computer documents. For example, a company may have an intranet that serves the head office and all its branch offices, wherever physically located.

**World Wide Web (WWW or the Web):** the collection of resources using the Hypertext Transfer Protocol (HTTP, a protocol of established rules for communication over the internet controlling the transfer of data and information).

**Website:** a specific location on the World Wide Web. It may contain numerous web pages that link together as well as links to other websites. A website may be controlled and managed by a company or other organisation or by a single individual. The author's website can be inspected at the domain name address given above.

# Law reports references, etc.

There have been some changes to the system of referencing for law reports and terminology and also some changes to the numbering of the EC Treaty. The changes and the conventions used in this book are described below.

## REFERENCES TO LAW REPORTS

Since the beginning of 2001, some law report references used in this book have changed to make them media neutral (particular examples are ETMR, FSR and RPC). The same applies to reports published by the Court Service. This means that a reference will be the same whether the report is published on paper or electronically and, importantly, reference can be made to a particular part in a judgment without using page numbers. Cases in some series of law reports are numbered seriatim, rather than referring to the first page of the report, and a reference to a part of the judgment is made using the paragraph number. For example, to refer to the case of *British Airways plc v Ryanair Ltd* at the point where Jacob J talks of the defendant's advertising as amounting to no more than 'vulgar abuse', the citation should be *British Airways plc v Ryanair Ltd* [2001] FSR 32 at para. 35. (That case was the 32nd reported in the Fleet Street Reports for 2001 – in the report as published on paper, the reference would be [2001] FSR 541 at 554.) As the versions of law reports published on paper still indicate page numbers on their pages and in their indexes, the following convention is used in this book.

All cases are cited in the conventional way with the page number of the case being used in the main citation. Where the reader is directed to a particular part of the judgment, in cases before 2001, the page number where the relevant extract or quotation is to be found is still used. In cases from 1 January 2001, reference to a particular part of the judgment will be by paragraph number. Thus the above reference will be *British Airways plc v Ryanair Ltd* [2001] FSR 541 at para. 35. Where reference to a paragraph is used, this is made explicit, as in the example.

## AVAILABILITY OF LAW REPORTS AND LEGISLATION

Apart from subscription services such as the Law Reports, the All ER, FSR, RPC and online subscription

services such as LexisNexis and Westlaw, increasing numbers of the full text of judgments are available free of charge by online access. Appendix 2 indicates the website addresses where access to these may be made though at this stage it should be noted that BAILII (British and Irish Legal Information Institute) is particularly good and has a wealth of UK, European and foreign cases available, usually uploaded within a few days of the judgment being handed down. Judgments of the Court of Justice and Court of First Instance are available from Europa Eur-Lex and Curia websites. Both give access to the European Court Reports which may be accessed by means of the year and case number (for example, Year 2000 No 291 in the case of Eur-Lex) or case reference (for example, C-291/00 in the case of Curia). The latter is more up to date than the former but does not carry the ECR reference. Consequently, to assist readers in accessing these cases, the case number is given, as is the ECR reference. Additional references to other law reports, where available, are given in the table of cases for ECJ and CFI judgments.

Full text of UK legislation is available freely at the Office of Public Sector Information (OPSI). Statutory instruments are accessed by year and SI number (cited in the references and tables of legislation to the book). Updated versions of much legislation are available through the Statute Law Database and also OPSI. European Community legislation is available from Europa EurLex and the text of most of the international treaties and conventions is available at the WIPO website. The European Patent Office website gives access to the European Patent Convention and to cases before the Boards of Appeal. The Office for the Harmonisation of the Internal Market (Trade Marks and Designs) also carries decisions of the Divisions and Boards of Appeal.

## TERMINOLOGY

The terminology resulting from the Civil Procedure Rules 1998 has been used throughout this book (except that quotations have not been modified). The following table shows the new terms and phrases used in this book alongside the old terminology (Scotland and Northern Ireland are unaffected).

<i>New terminology</i>	<i>Old terminology</i>
Claimant	Plaintiff
interim injunction	interlocutory injunction
search order	Anton Piller order
freezing order	Mareva injunction

Note that there have been some changes to the names of the courts. The Supreme Court of England and Wales is now known as the Senior Courts of England and Wales and the House of Lords has been renamed the United Kingdom Supreme Court.

### RENUMBERING OF THE EC TREATY

As a result of the Amsterdam Treaty, the provisions of the EC Treaty were renumbered. The following table indicates the provision together with the new number and the old number of the relevant Article of the EC Treaty. This may prove useful when referring to older cases.

<i>Provision</i>	<i>Old Article number</i>	<i>New Article number</i>
No discrimination on the grounds of nationality	7	12
Prohibition of quantitative restrictions on imports	30	28
Prohibition of quantitative restrictions on exports	34	29
Above prohibitions not to preclude prohibitions justified on the grounds, <i>inter alia</i> , of the protection of industrial property	36	30
Prohibition of restrictive trade agreements, etc.	85	81
Prohibition of an abuse of a dominant trading position	86	82
Preliminary rulings by the European Court of Justice	177	234
Treaty not to prejudice rules governing the system of property ownership	222	295

# Part One

## PRELIMINARY

**1 Introduction**

**3**

## INTRODUCTION

The content of this chapter goes further than a simple introduction to the subject of intellectual property in which the various forms of intellectual property are briefly described. The chapter also addresses some of the basic principles underlying this area of law, examines the nature of intellectual property law and discusses some cross-cutting themes that transcend boundaries between individual forms of intellectual property rights. Some practical considerations are also dealt with briefly at this stage such as the essential rationale for intellectual property and its importance in a commercial sense. Finally, the nature of the study of intellectual property is discussed. The purpose of this chapter is to give the reader a feel for intellectual property law and to introduce some of the important issues, laying the foundations for the more detailed study which follows.

### WHAT IS INTELLECTUAL PROPERTY LAW?

Intellectual property law is that area of law which concerns legal rights associated with creative effort or commercial reputation and goodwill. The subject matter of intellectual property is very wide and includes literary and artistic works, films, computer programs, inventions, designs and marks used by traders for their goods or services. The law deters others from copying or taking unfair advantage of the work or reputation of another and provides remedies should this happen. There are several different forms of rights or areas of law giving rise to rights that together make up intellectual property. They are:

- copyright
- rights in performances
- the law of confidence
- patents
- registered designs
- unregistered design rights
- trade marks
- passing off
- malicious falsehood (trade libel).

This list is not exhaustive and there are other rights, for example, the rights associated with plant and seed varieties protection, but these will not be dealt with in detail in this book.

## Taxonomy of intellectual property rights

Obviously, there are many similarities and differences between the various rights that make up intellectual property law. For example, there is common ground between patents and registered designs, as there is between copyright and rights in performances. Some rights give rise to monopolies, while others merely prevent the unfair use by others of an existing work or article. The various rights are not necessarily mutually exclusive and two or more of the rights can coexist in relation to a certain ‘thing’. Sometimes the rights will progressively give protection, one right taking over from another over a period of time during the development of an invention, design or work of copyright.

A practical distinction that can be used to subdivide the various rights is whether there is a requirement for registration; that is, whether the right is dependent upon the completion of formalities, or whether it automatically springs into life at a specified time. Another distinguishing feature is the nature of the right, whether it applies to something which is primarily creative or has to do with goodwill in a wide commercial sense. Creative things can be further subdivided into those that are creative in an artistic or aesthetic sense, such as an oil painting, music or literature, or those that are inventive in an industrial context, such as a new type of machine or engine, or a new way of making a particular product. Before looking briefly at each type of right, consider Table 1.1, which shows how, somewhat imperfectly, intellectual property rights conform to the above taxonomy. The word ‘artistic’ is used in an everyday and wide sense and should not be confused with the artistic category of copyright works where the word has a special significance.

### Formalities

Some intellectual property rights, in respect of particular ideas, works or things, are secured by the successful completion of a formal application and registration procedure. The necessary formalities are not simply satisfied by depositing details with an appropriate authority because such rights are not granted lightly. They do, after all, put the owner of the right in a privileged position whereby he can restrain others from doing certain things while exploiting the right for himself. The rights impinge upon the freedom of action of others. The owner has a form of property which he can use as he likes, subject to some constraints, and he can take legal action either to deter would-be trespassers or to obtain damages against those who have trespassed just as the owner of real property can do.<sup>1</sup>

For those rights that require registration, the applicant will succeed in obtaining such registration only if certain rigorous standards are achieved.<sup>2</sup> The rationale for this

<sup>1</sup> This also extends to other persons having rights under intellectual property law such as an exclusive licensee of a copyright or patent, as it does to lessees and licensees of real property.

<sup>2</sup> However, the examination of trade mark and registered design applications has been relaxed. Patents remain subject to a rigorous search and examination process.

**Table 1.1** Taxonomy of intellectual property

<i>Whether formalities required</i>	<i>Basic nature of the right</i>		
	<i>Creative</i>	<i>Industrial</i>	<i>Commercial reputation and goodwill</i>
Formalities required	Registered designs	Patents Plant varieties	Trade marks
Formalities not required	Copyright Rights in performances	Unregistered design rights	Passing off Malicious falsehood
	The law of breach of confidence		

**Table 1.2** Statutory and common law rights

<i>Statute</i>	<i>Common law (or equity)</i>
Copyright	Breach of confidence
Patent	Passing off
Trade marks	Malicious falsehood
Registered designs	
Unregistered design rights	
Rights in performances	
Plant varieties	

is that rights subject to formalities are generally monopolistic in nature. Another distinction is between those rights that are provided for and governed by statute and those that derive from the common law or equity (although the latter are given statutory recognition). There is no correlation between the need for formalities and whether the area of intellectual property law is rooted in statute, as a comparison of Table 1.1 and Table 1.2 shows.

### Industrial property

Traditionally, a number of intellectual property rights were known collectively as industrial property. Such rights include patents, trade marks and designs. This description is used in the Paris Convention for the Protection of Industrial Property 1883. Included in this term by implication are the law of confidence and passing off. When other rights such as copyright are added to industrial property the phrase used to describe the entirety of rights is intellectual property and this has become the phrase normally used to describe these individual, and sometimes disparate, rights collectively. Significant moves have been made in terms of the international harmonisation of intellectual property law, but it should be remembered that the early development of copyright, patents and trade mark law in England set the mould that was largely adopted throughout the common law countries of the world. Even before the beginning of the twentieth century, international collaboration and cooperation was well under way, reflecting the worldwide importance of intellectual property.

Before discussing further the nature of intellectual property, it will be useful to describe briefly each right individually using non-technical language.

### Copyright

Copyright is a property right which subsists (exists) in various ‘works’, for example literary works, artistic works, musical works, sound recordings, films and broadcasts. The author of a work is the person who creates it<sup>3</sup> and he (or his employer) is normally the first owner of the copyright, which will last until 70 years after the author’s death or 50 years after it was created depending on the type of work.<sup>4</sup> Copyright gives the owner the right to do certain things in relation to the work, which includes making a copy, broadcasting or giving a public performance. Anyone else who does any of these things (known as the acts restricted by copyright) without the permission of the owner, infringes copyright and may be subject to legal action taken by the owner for that infringement. Ownership of a copyright is alienable and it can be transferred to another or a licence may be granted by the owner to another, permitting him to do one or more specified acts with the work in question.

Copyright does not protect ideas, only the expression of an idea (that is, its tangible form), and others are free to create similar, or even identical, works as long as they do

<sup>3</sup> For some types of works, the author is the person by whom the arrangements necessary for the creation of the work are undertaken. Films are usually works of joint authorship, the authors being the principal director and the producer.

<sup>4</sup> From the end of the calendar year during which the author died or the work was created, as appropriate. The 50-year period has been raised to 70 years for some forms of works.

so independently and by their own efforts. In other words, copyright does not create a monopoly in a particular work.<sup>5</sup> In addition, certain things may be done in relation to a work of copyright without the permission of the copyright owner such as making a copy of a work, for example for the purposes of non-commercial research, private study, criticism or review. Such acts are known as the ‘permitted acts’ and limit the scope of copyright protection. Copyright gives rise to two forms of rights:

- 1 the proprietary or economic rights in the work, for example the right to control copying, and
- 2 moral rights which leave the author (or principal director of a film), who may no longer be the owner of the copyright, with some control over how the work is used or exploited in the future.

The author (or film director) has a right to be identified as such and has a right to object to a derogatory treatment of the work. The moral rights are independent of the economic rights and hence the importance of the distinction between the author of a work and the owner of the copyright subsisting in it. There are some forms of infringement which can be grouped together as being of a commercial nature, such as importing or dealing with infringing copies, that carry criminal penalties.

A new right was introduced in 2006 as a result of an EC Directive. It is known as the ‘artists’ resale right’ and gives artists a royalty on the resale of their works of art. This right has existed for some time in some Member States, notably France, where it is known as the *droit de suite*. This right is described in Chapter 5 on authors’ rights.

International protection of copyright works is effected mainly through two international conventions: the Berne Copyright Convention<sup>6</sup> and the Universal Copyright Convention, both of which lay down minimum standards of protection to be attained and for reciprocity of protection between those countries that are signatories to the conventions. The conventions have been partly responsible for the measure of harmony that now exists on the world stage, albeit far from complete. The effect is that a foreign national can take legal action in the UK for copyright infringement occurring there as if he was a British subject.<sup>7</sup> The UK is a member of both conventions. Further harmonisation has taken place throughout the European Community as a result of a number of harmonising Directives.

## Rights in performances

Live performances give rise to two different rights: the performer’s right and a recording right. Until recently, the former was restricted to a right not dissimilar to the author’s moral right in copyright, whilst persons with whom the performer had an exclusive recording contract acquired a right similar to the copyright owner’s economic right. However, as a result of the Copyright and Related Rights Regulations 1996,<sup>8</sup> bolstered by the Copyright and Related Rights Regulations 2003,<sup>9</sup> the performer now also has a true property right relating to making copies, the issue of copies and the rental and lending of recordings of his performance. Being property rights, these rights may be assigned or licensed. Performers now also have moral rights to be identified as the performer and to object to a derogatory treatment of the performance.<sup>10</sup>

The need for specific rights in live performances is that they give the performer, and the person having exclusive recording rights, a means of protecting live performances from persons making illicit (‘bootleg’) recordings of such performances.<sup>11</sup> Of course, the work being performed may be protected by copyright, but the copyright owner may not wish to take action. These rights are directly enforceable by the performer and the recording company. In some cases, the work on which the performance is based may be an old work in which copyright does not subsist, such as an operatic aria by Mozart.

<sup>5</sup> Except perhaps where the creator of the work is the only person with access to the contents or other material from which the work has been created.

<sup>6</sup> The Berne Convention for the Protection of Literary and Artistic Works 1886.

<sup>7</sup> *Hanfstaengl v Empire Palace* [1894] 2 Ch 1. All three judges in the Court of Appeal commented on this then novel state of affairs. For a list of countries afforded reciprocal protection see the Copyright and Performances (Application to Other Countries) Order 2008, SI 2008/677.

<sup>8</sup> SI 1996/2967.

<sup>9</sup> SI 2003/2498.

<sup>10</sup> By virtue of the Performances (Moral Rights) Regulations 2006, SI 2006/18.

<sup>11</sup> Bootleg recordings of performances by Phil Collins and Cliff Richard were the subject of a case before the European Court of Justice in which it was held that German copyright law was contrary to Article 12 of the EC Treaty (previously, before amendment to the Treaty, Article 6) in that it discriminated against non-German nationals: Joined Cases C-92/92 and C-326/92 *Collins v Imtrat Handelsgesellschaft mbH* [1993] ECR I-5145, [1994] FSR 166.

Rights in performances are not restricted to music and are available in respect of a dramatic performance, the reading or recital of a literary work and the performance of a variety act such as by a juggler.

Rights in performances last for 50 years from the end of the calendar year during which the performance took place.<sup>12</sup> Where a sound recording of a performance is published commercially and is played in public or included in a broadcast or cable programme service, the performer is entitled to an equitable remuneration from the owner of the copyright in the sound recording. This right may not be assigned except to a collecting society, which will enforce the right on behalf of the performer.

<sup>12</sup> Unless, within that 50 years it was 'released', the rights last for 50 years from the end of the calendar year when it was so released.

### The law of breach of confidence

The law of breach of confidence developed in equity as a way of protecting confidential information by preventing its misuse by persons to whom the information has been divulged in confidence or the further disclosure of the information by such persons. A wide variety of types of information is protected, ranging from industrial or trade secrets to details of a personal nature to secrets about the government or defence of the realm. In the context of intellectual property, it is with trade and industrial secrets that we are primarily concerned. The rationale of the law of confidence is that it stops a person making wrongful use of information beyond the purposes for which it was disclosed to him. The law of confidence protects ideas and is a useful ally to other intellectual property rights, often being the only form of protection when the subject matter is still in an embryonic state.

### Patent law

A patent right, because it gives its owner a monopoly in an invention, is the form of intellectual property par excellence. A patent may be granted in respect of a new and non-obvious invention capable of industrial application and gives a monopoly right that can last for up to 20 years.<sup>13</sup> This very strong form of protection is reserved for inventions that satisfy rigorous standards (for example, novelty and inventive step) and an application for a patent has to be drawn up precisely and accurately stating the scope of the invention and the claims made in respect of it for which protection is sought. A patent may be for a product such as a new type of longer lasting light bulb, a new type of ignition system for a petrol engine or a new pharmaceutical product or it may be for a new industrial process, for example a new way of making synthetic rubber tyres or a novel technique for making plate glass.

Patents can be assigned and licences may be granted in respect of them. The owner of a patent is the person who is registered as the proprietor. A large number of inventions are made by employees and usually, in such cases, the employer will be the proprietor although the inventor will be named as such in the patent as published. If the invention turns out to be of outstanding benefit to the employer, the employee may apply for a compensation award. By their nature, patents usually protect ideas, as expressed in the description and claims, but there are several controls on the monopoly status they confer upon proprietors. For example, compulsory licences may be available after the first three years from the grant of a patent, or it may be indicated on the register of patents that a licence is available as of right. There are other controls over patents resulting from either domestic or EC Competition law. For example, the grant of a compulsory licence, or providing that licences are available as of right, might be appropriate if a patented invention was not being worked at all or if the proprietor was limiting supply of a patented product in order to maintain excessively high prices or refusing to grant licences to work the invention in the UK where the invention represented an important technical advance of considerable economic significance. There is

<sup>13</sup> Twenty-five years for certain medicinal and plant products.

also provision for compulsory licensing of patents relating to the manufacture of pharmaceutical products for export to countries with health problems. This is the result of a European Union Regulation.

The European Patent Convention permits the application for a bundle of patents covering a specified number of Member States including the UK. The administration of the convention, patent applications, patent grant and opposition are within the remit of the European Patent Office, situated in Munich, which has its own Boards of Appeal.<sup>14</sup> This route to obtaining patent protection throughout Europe (not limited to the countries of the EU) has grown in importance and, eventually, it may be possible to obtain a Community-wide patent as is now the case with the Community trade mark and the Community design. Protection in other countries may be obtained through the Patent Cooperation Treaty, a system which facilitates the application procedure where several countries are concerned, including numerous countries outside the EU.

As a result of the European Patent Convention and the Patent Cooperation Treaty, and looking forward to the introduction of a Community Patent Convention, if and when it ever comes into force, a number of the provisions of the UK Patents Act 1977 are framed so as to have, as nearly as practicable, the same effect as the corresponding provisions of the European Patent Convention, the Community Patent Convention (when in force) and the Patent Cooperation Treaty.<sup>15</sup>

The UK has not had a form of intellectual property right known elsewhere as a petty patent or utility model. Such protection is now available in most of the countries of the EC with a few exceptions including the UK. There has been a proposal to harmonise this form of protection throughout the EC and there has been a proposal for a harmonising Directive.<sup>16</sup> Progress has been minimal and there have been no plans to introduce a Community-wide utility model form of protection. No real progress has been made thus far. It is arguable that the panoply of other intellectual property rights available in the EC and Member States as they now exist should provide adequate protection for anything that could be protected by a utility model form of protection, whether on a national or European basis.

<sup>14</sup> Applications can also be made through the Patent Office in London. This would be the normal procedure for a UK applicant.

<sup>15</sup> Patents Act 1977 s 130(7).

<sup>16</sup> Amended proposal for a European Parliament and Council Directive, approximating the legal arrangements for the protection of inventions by utility model, COM (1999) 309 final, OJ C248, 29.8.2000, p 56.

## Design law

A new product or article may be designed which is not sufficiently novel or inventive to satisfy the exacting requirements for the grant of a patent. It may, however, be protected by design law, an area of intellectual property law that has become much more important following harmonisation of registered designs throughout the EC and the introduction of Community-wide design rights. The Community design takes a twin-track approach protecting new designs having an individual character by registration for up to 25 years, or, failing registration, giving protection as an informal right for up to three years. Apart from protection through the Community design, in the UK a design may be protected by means of registration under the Registered Designs Act 1949, as amended, or through the UK's *sui generis*, unregistered design right, which bears little relationship to other forms of protection for designs.

Design law typically protects a wide range of designs of products that may have some eye appeal but the rights under design law are not so limited and they may apply to designs that are new and have an 'individual character'. They do not apply generally to the design of products not normally on display during ordinary use but the UK unregistered design right is not limited to designs that are normally seen by the naked eye. It can be argued that, in the UK, any new or unusual design will be protected, whether or not registered, and that UK protection for designs, though arguably diminished from the position before the Copyright, Designs and Patents Act 1988 came into force, has never been so strong.

The protection afforded by registration of a design, whether in the UK or through the Community design, lasts for up to 25 years, initially granted for five years and then subject to renewal every five years. Failure to register can still result in three years' protection through the Community design or up to a maximum of 15 years through the UK unregistered design right (although reduced effectively to no more than ten years' protection following commercial exploitation). The rules as to first ownership of a design are different to those for copyright and, in the UK, the fact that a design is commissioned may be determinative of first ownership.

## Trade marks

Trade marks may not have the glamour of inventions or creative works but they are, nevertheless, of substantial importance in an industrial and commercial sense. Trade marks are closely associated with business image, goodwill and reputation. Goods or services are often requested by reference to a trade mark and the public rely on many marks as indicating quality, value for money and origin of goods or services.

Trade marks are registered in respect of certain classes of goods or services. Registrations for trade marks may be renewed indefinitely. Registration for trade marks began in 1876 and some of the first marks registered (including the very first mark, the Bass Red Triangle label mark) are still in use today. In addition to marks applied to or used with goods or services to indicate a connection in the course of trade, there are also certification marks indicating the origin or quality of the goods, for example the 'wool mark', and collective marks, typically used by members of an association. All registered marks must be used and they can be subject to revocation proceedings if they are not used for five or more years. A basic principle is that a trade mark should be capable of distinguishing goods or services of one 'undertaking'<sup>17</sup> from those of other undertakings. In other words, trade marks should operate as 'badges of origin'. That is their basic function and purpose and they should not be registered if they fail, or are likely to fail, in serving that purpose.

<sup>17</sup> The Trade Marks Act 1994, following the language of the European Community Directive harmonising trade mark law, uses the term 'undertaking' rather than 'trader'.

Significant changes to trade mark law were made by a European Council Directive that attempted to achieve a limited harmonisation of trade mark law throughout the EC and which formed the basis for the Trade Marks Act 1994 which replaced the outdated and obscure Trade Marks Act 1938. In addition to bringing trade mark law up to date, the 1994 Act allowed the UK to ratify the Protocol to the Madrid Convention for the international registration of trade marks. Since then there has been a Community-wide trade mark system in operation under which undertakings can register Community trade marks (CTMs) which apply throughout the European Community and have a unitary nature. This system has become very popular and although the requirements for registration, infringement and other aspects are equivalent to or very similar to those for the harmonised trade mark, the CTM has generated a significant amount of case law in its own right as indeed has the Directive harmonising trade mark law throughout Europe.

## Passing off

The tort of passing off is, in effect, a common law version of trade mark law. Indeed, trade mark law developed from passing off, which in turn developed from the tort of deceit. Being common law, passing off can be more flexible than trade mark law, and can protect marks that would not be sufficiently distinctive for registration as a trade mark or are otherwise unregistrable. Passing off protects the goodwill a trader has developed and which is associated with his business. As goodwill is such a vague concept, protection can apply to all manner of aspects of a trader's business operations

and activities and advertising and marketing techniques. It is often said that passing off protects a trader's 'get-up'. As with trade mark law, such protection has the secondary effect of protecting the buying public from trade deception. One area of interest is character merchandising, usually a massive commercial activity whereby famous and often fictional characters are used to promote the sale of goods, for example by applying names or images of the characters to the goods, such as 'Teletubbies' dolls and 'Bob the Builder' toys.

This area of law has also proved very useful in controlling 'cybersquatting', the registration of internet domain names containing company names or trade mark names by persons hoping to sell the names at grossly inflated prices to the relevant companies or trade mark proprietors. Although most organisations register and police their trade marks, passing off remains important in protecting unregistered trade marks and other forms of unfair competition where the rights under registered trade mark law may not be engaged, for one reason or another. Indeed, the goodwill protected by passing off may be used to challenge the registration of trade marks.

## NATURE OF INTELLECTUAL PROPERTY

### Intellectual property as property

Intellectual property rights give rise to a form of property that can be dealt with just as with any other property, and which can be assigned, mortgaged and licensed. Table 1.3 shows a classification scheme for property and how intellectual property fits in with this scheme.

Intellectual property is property in a legal sense: it is something that can be owned and dealt with. Statutory forms of intellectual property are declared to be property rights, but even common law forms have been recognised as producing a form of property right.<sup>18</sup> Most forms of intellectual property are akin to 'choses in action', rights that are enforced only by legal action as opposed to possessory rights. Channell J described a chose in action in the following terms in *Torkington v Magee*:

'Chose in action' is a known legal expression used to describe all personal rights which can only be enforced by action, and not by taking physical possession.<sup>19</sup>

This has implications as regards the transfer of rights (assignment) and the requirement for consideration. In many cases, the assignment of intellectual property rights is expressly governed by statute and, where this is so, assignment requires no consideration.<sup>20</sup> Otherwise, assignment of a chose in action (meaning 'thing in action') is governed, in England and Wales, by the Law of Property Act 1925 s 136, which requires the assignment to be written and signed by the assignor, to be absolute and followed by express notice.<sup>21</sup> However, there is some doubt as to whether intellectual property rights are truly choses in action. Indeed, patents are declared to be personal property without being a thing in action by the Patents Act 1977 s 30(1). In *Colonial Bank v Whinney*,<sup>22</sup>

<sup>18</sup> For example, in the passing off case of *Leather Cloth Co Ltd v American Leather Cloth Co Ltd* (1863) 4 De GJ&S 137, the Court of Chancery recognised that the claimant had acquired a property in a trade mark which was valid in equity.

<sup>19</sup> [1902] 2 KB 427 at 430.

<sup>20</sup> *Re Westerton, Public Trustee v Gray* [1919] 2 Ch 104.

<sup>21</sup> This has been recognised as extending to equitable choses in action. It is possible to have an equitable assignment of an equitable chose in action.

<sup>22</sup> (1885) LR 30 ChD 261.

**Table 1.3** Classification of property and examples

<i>Real property</i>		<i>Personal property</i>	
<i>Tangible (immovable)</i>	<i>Intangible</i>	<i>Tangible (movable)</i>	<i>Intangible</i>
Land	Easement <i>Profit à prendre</i>	Car Desk Book Box of chocolates	Cheque Company shares Intellectual property, e.g. copyright

23 *Colonial Bank v Whinney* (1886) LR 11 App Cas 426.

24 For example, *Chaplin v Leslie Frewin (Publishers) Ltd* [1966] Ch 71; *Paterson Zochonis & Co Ltd v Merfarken Packaging Ltd* [1986] 3 All ER 522 and *London General Holdings Ltd v USP plc* [2006] FSR 65.

25 For example, Penner, J. E. (1997) *The Idea of Property in Law*, Oxford University Press, at pp 118–19 cf Groves, P. (1997) *Sourcebook on Intellectual Property Law*, Cavendish Publishing, at p 17.

26 Recording, in this sense, means putting ideas into some tangible form, for example by writing down on paper, recording on magnetic tape or entering into a computer memory.

27 Hohfeld, W.N. *Fundamental Legal Conceptions as Applied in Judicial Reasoning*, reprinted in part in Lloyd, Lord (of Hampstead) (1979) *Introduction to Jurisprudence* (4th edn) Stevens, pp 260–66.

28 Knowledge of the existence of the right may be relevant in terms of the applicability and measure of some of the remedies for infringement. For example, in an action for infringement of copyright, damages are not available against an ‘innocent’ infringer: Copyright, Designs and Patents Act 1988 s 97(1).

Lindley LJ said (at 284) that while debts, money in funds, company shares, copyrights and patents are all incorporeal personal property, care must be taken not to give them a common name which conceals their differences. He held that company shares were not choses in action. He was overruled in the House of Lords.<sup>23</sup> Copyright has been accepted as being a chose in action in a number of cases in the Court of Appeal<sup>24</sup> but the question is not beyond doubt. There remain a number of authors who doubt that it is a chose in action.<sup>25</sup>

## Jurisprudential character

Intellectual property gives rise to rights and duties. It establishes property rights, which give the owner the right to do certain things in relation to the subject matter. The rights are negative in nature in that they allow the owner to prevent others carrying out certain specified acts in relation to the subject matter without consent. For example, if the right is a copyright and the subject matter is a piece of music, the owner of the copyright has the exclusive right to make copies of the sheet music, to make an arrangement of the music and to control the performance of the music. However, this exclusive right gives the owner the negative right to prevent others from doing such things in relation to the music. The right can arise automatically, on the creation of the thing to which the right pertains, an example being copyright which springs to life automatically upon the recording of a work.<sup>26</sup> In other cases, the right depends on the completion of an application and registration procedure, patents and trade marks being examples of such rights. In one area of intellectual property, the right comes into existence only after goodwill has been established. This is passing off where one trader is attempting to take unfair advantage of another trader’s goodwill. The law can only give remedies here if the aggrieved trader has built up goodwill associated with his business, and this could take several years or just a few days, depending on the circumstances.

We have seen that intellectual property law is concerned with rights. Conversely, it must create duties, for according to the legal theorist Hohfeld, every right has an associated duty – there cannot be one without the other. It is instructive to take the Hohfeldian analysis of legal rules further, particularly in terms of his legal correlatives and oppositions as shown in Figure 1.1.

Rights and duties have a distinct relationship and are called legal correlatives by Hohfeld.<sup>27</sup> In terms of intellectual property, the right is a right to do certain things, such as making copies of a work of copyright, making articles to a design covered by a design right or making products in accordance with a patented invention. The correlative duty is a duty owed by all others not to infringe the right. This duty exists even if the person infringing the right does not know of it.<sup>28</sup> Looking at Hohfeld’s scheme again, it can be seen that there are associated privileges and ‘no rights’. The right resulting from the operation of intellectual property law gives the owner of that right a corresponding privilege, that is, the privilege to exploit the work. The correlative ‘no right’ is to the effect that persons other than the owner do not have this privilege, without the owner’s consent.

Figure 1.1 Hohfeld's correlations and oppositions

In this overall scheme of things, certain provisos must be added. In the area of intellectual property, the law strives to reach a balance between conflicting interests, to reach a justifiable compromise.<sup>29</sup> Therefore, the duty not to infringe is often curtailed by way of exceptions to infringement. For example, the right given by registration of a design does not extend to features of appearance solely dictated by a product's technical function.<sup>30</sup> Copyright law permits many things to be done that would otherwise infringe, for example, the 'fair dealing' provisions. Infringement in areas of intellectual property provided for by statute is carefully and precisely defined and any act that falls outside can be freely done by anyone, regardless of the right owner's wishes. An example in copyright law is lending a book to a friend; copyright law does not control such an act, however much the author or the publisher may argue that a sale has been lost as a result.

The honest use by a trader of his own name will not infringe a trade mark comprising the same name. Hohfeld's 'no right' is also compromised as it is possible, under certain circumstances, to exploit the intellectual property under a compulsory licence or licence of right even if the owner of the right is vehemently opposed to this. For example, it may be possible to obtain a compulsory licence to exploit a patent irrespective of the proprietor's wishes. The final limitation on intellectual property rights concerns their duration. Most of the rights are limited in time. As a rule of thumb, it can be said that the duration of the right is inversely proportional to its power. For example, a patent gives a monopoly right which is limited to 20 years maximum, but a copyright, which is not a monopoly right, will last for at least 70 years.<sup>31</sup> Some rights may, however, endure for longer.<sup>32</sup> Trade mark rights are of indefinite duration and last as long as the proprietor of the mark is prepared to continue both renewing his registration and using the mark. The law of passing off will give protection to the goodwill of a trader as long as this still exists. The law of breach of confidence will be available to protect the information concerned for as long as it can be kept confidential.

### Purchasers' rights and intellectual property

The theoretical nature of intellectual property has many practical ramifications. Of particular interest in the understanding of intellectual property law is the question of what rights a purchaser of an article that embodies an intellectual property right obtains. An examination of this question is best carried out by means of an example, and that following is set in the context of copyright law although some of the principles are relevant to other rights. Consider the situation where a person, Georgina, goes to a bookshop to purchase a copy of a bestselling novel. The text of the novel itself will be protected by copyright as a literary work.<sup>33</sup> Georgina picks up a copy of the novel, takes it across to the sales point and buys it. Georgina has become the owner of the book and she now has legal title to it – or does she? She certainly has legal title to the paper, the cover and the printer's ink which are the physical embodiment of the book. But what are her rights in relation to the literary work expressed in the book – does she own it and can she do with it as she pleases? The answer emphatically is NO: the copyright in the literary work still belongs to the publisher of the novel or the author as the case may be. Georgina can do certain things, such as reading the book, selling it to a second-hand bookseller or she may even destroy it by burning it because none of these acts is controlled by copyright. However, Georgina may not make a copy of the book or translate it into a foreign language (and, in so doing, writing it down or printing it out) because these acts are controlled by copyright.<sup>34</sup>

What if Georgina wishes to lend the novel to her friend John? Non-commercial lending is not a restricted act, so at first sight this would seem to be perfectly lawful. However, if Georgina looks inside the flyleaf of her book she will find a notice stating

<sup>29</sup> Justifiable on the grounds of protecting private interests and promoting investment while providing benefits for society at large in terms of increased wealth, knowledge and employment.

<sup>30</sup> Registered Designs Act 1949 s 1C(1).

<sup>31</sup> In many cases, the period will be significantly longer. However, typographical arrangements of published editions are limited to 25 years' protection.

<sup>32</sup> Until 1 August 1989, copyright contemplated perpetual rights in respect of works the copyright in which was vested in the Universities of Oxford and Cambridge and some other colleges.

<sup>33</sup> Unless the copyright has expired. Copyright endures for 70 years after the end of the calendar year during which the author dies. The typographical arrangement will also be protected by copyright but this is not considered further in the example.

<sup>34</sup> A translation of a literary work is a form of adaptation, which is within the owner's exclusive rights but an adaptation is not made until it is recorded in writing or otherwise. Simply translating a book in one's mind without recording the translation does not infringe the copyright.

35 Or the author depending upon which of those two own the copyright.

36 A restriction on lending 'by way of trade or otherwise' is common. The lending of a copy of, *inter alia*, a literary work to the public is now a restricted act: Copyright, Designs and Patents Act 1988 s 18A(1).

37 A publisher who sold a book written by Alastair MacNeill, based on an outline for a story made by the famous novelist, the late Alistair Maclean, was found guilty of offences under the Trade Descriptions Act 1968 because the relative prominence of Alistair Maclean's name compared to the actual author's name was such that the buying public thought that they were acquiring a book written by *Alistair Maclean*. The publisher was fined £6,250: *The Times*, 28 September 1991.

38 By the Sale of Goods Act 1979 s 61(1) 'goods' include all personal chattels other than things in action and money. Copyright is a thing in action and, therefore, outside the provisions of the Act.

39 [1932] AC 562. But is it realistic to expect a bookseller to check the safety of instructions in books which he sells? Even if he wants to check, the bookseller will be ill equipped to validate the integrity of the contents of many books.

40 For example, compare with the latent defect in a catapult giving rise to damages for breach of contract in *Godley v Perry* [1960] 1 WLR 9.

41 Consumer Protection Act 1987 s 45(1).

42 For a discussion of the nature of a contract for the acquisition of computer software, see Bainbridge, D.I. (2008) *Introduction to Information Technology Law* (6th edn) Longman, Chapter 13.

43 *Beta Computers (Europe) Ltd v Adobe Systems (Europe) Ltd* [1996] FSR 367.

44 [1983] 2 NSWLR 48.

45 [1995] FSR 686.

that certain things cannot be done without the permission of the publisher and lending might be one of them. This brings into question Georgina's status *vis-à-vis* the publisher.<sup>35</sup> The sale of the book was a sale of goods contract between Georgina and the proprietors of the bookshop – there is no privity of contract between Georgina and the publisher. Even if there was, it is extremely doubtful whether the notice was a term of that contract. The only way a contractual link can be forged between Georgina and the publisher would be on the basis of a copyright licence, but this would be unrealistic as Georgina does not need a licence to be able to read the book; she would need a licence only if she intended to perform one of the acts controlled by copyright. Therefore, it would seem that, apart from those parts of the notice that refer to the acts restricted by the copyright, Georgina can ignore it and lend the book to her friend.<sup>36</sup> It would be different, however, if the book was an e-book, as reading it would involve making transient copies in the device used to read it and, without the licence of the copyright owner, this would infringe copyright.

Another issue is what remedy Georgina has should the novel turn out to be very poorly written, lacking a good plot; in essence, nothing at all unless there has been some misrepresentation by the bookseller concerning the quality of the novel which is sufficient to make the contract between Georgina and the bookseller voidable.<sup>37</sup> Of course, if the tangible matter is defective, for example the printer's ink is poor and has smudged destroying the legibility of the book, or if the binding is poor and the book falls apart, Georgina may obtain redress from the bookseller under the Sale of Goods Act 1979 s 14(2). However, the absence of a contractual link between Georgina and the publisher robs her of any remedy if the story itself turns out to be very badly written, and it does not appear that the implied terms of satisfactory quality, fitness for purpose and sale by description contained in the Sale of Goods Act 1979 ss 13 and 14 apply to a work of copyright.<sup>38</sup> Lastly, suppose that the book is not a novel but a cookery book and one of the recipes contains a mistake that can lead to serious illness or even poisoning if that recipe is used. If Georgina suffers as a result, can she sue for negligence, and, if so, who? The bookseller might be liable in negligence on the basis of *Donoghue v Stevenson*<sup>39</sup> or on the basis of the contract between them,<sup>40</sup> or the publisher might be liable under the product liability provisions of the Consumer Protection Act 1987. However, the definition of 'product' and 'goods' in that Act would appear not to include intellectual property.<sup>41</sup>

These issues are complex and, in the main, largely unresolved. The problems are compounded tenfold where the transaction includes a licence from the right owner in addition to a normal sale or service contract for example, where the contract relates to computer software. The 'sale' of computer software must include a licence because using the software will normally require the performance of an act restricted by copyright, unlike the case of reading a book. The licence may be express, but will otherwise be implied. This may result in a hybrid contract involving a sale of goods contract for the physical items such as floppy disks, together with a licence to use the computer programs included in the package.<sup>42</sup>

The nature of the transaction is far from clear. In Scotland, in the Court of Session, Outer House, Lord Penrose held that a contract for the acquisition of off-the-shelf software was *sui generis*.<sup>43</sup> An Australian case, *Toby Construction Products Pty Ltd v Computer Bar (Sales) Pty Ltd*,<sup>44</sup> had been influential in England and Wales in classifying contracts to acquire software as sale of goods contracts. In that case, hardware had been acquired which incorporated defective software. The hardware accounted for most of the overall cost and the court held that the contract was a sale of goods contract with the consequences that entailed, such as the implication of terms relating to quality. In *St Albans City & District Council v International Computers Ltd*,<sup>45</sup> at first instance Scott Baker J concluded, *obiter*, that a contract for the writing of computer

software was a sale of goods contract, citing *Toby Construction* with approval. However, on appeal, Glidewell LJ accepted that it was not a sale of goods contract as the program was not sold but licensed.<sup>46</sup> Nevertheless, he went on to say that it would be appropriate to imply a term that a program was reasonably capable of achieving its intended purpose.

The better view is that a contract for the acquisition of computer software is or includes a licence between the copyright owner and the person acquiring the software. That licence will be implied if it is not express. If goods are delivered with the software, there may be a collateral sale of goods contract, the importance of which is reflected in the main purpose of the transaction. For example, did the 'buyer' predominantly want to acquire hardware or other things falling in the conventional classification of goods, or were the goods merely the vehicle on which the software was delivered?

As regards liability for defective software, it is now firmly established that the Unfair Contract Terms Act 1977 ss 2–4 apply to the bulk of the terms in software licence agreements and the effect of para 1(c) of Sch 1 to the Act, excluding the operation of those sections in relation to contracts for the creation or transfer of a right or interest in any patent, trade mark, copyright, etc. is very limited.<sup>47</sup> In terms of advice contained in a book or provided by computer software, the law of negligent misstatement is very relevant and, as a result of the Unfair Contract Terms Act 1977, it may be difficult to restrict liability for loss occasioned by defective advice generated by computer software.

<sup>46</sup> [1997] FSR 251 at 266.

<sup>47</sup> See, for example, *The Salvage Association v CAP Financial Services Ltd* [1995] FSR 654 and *St Albans City & District Council v International Computers Ltd* [1997] FSR 251.

## CROSS-CUTTING THEMES

Two particular features or aspects permeate through all or most forms of intellectual property rights. The first is concerned with the control of an abuse of the rights, for example by the proprietor of a patent who is unfairly manipulating the market to his own advantage. Obviously, a line will have to be drawn because part of the rationale for intellectual property is that it provides a mechanism for exploiting ideas and the tangible expression of those ideas, but sometimes there is a danger that the exploitation will reach unacceptable levels. The second aspect concerns the international pressures and opportunities presented by intellectual property law, and of particular importance in this respect is competition law both within the UK and the EC.

### Abuse of intellectual property

The owner of an important and prominent item protected by intellectual property law might be tempted to use his position to control a market to the disadvantage of competitors and consumers alike. He can prevent or deter potential competitors from developing products similar to his own, and he can charge high prices for the product. To some extent this is to be expected in a capitalistic society; there must be sufficient rewards for the risks of investment in new products and entrepreneurial creation of employment and wealth. Nevertheless, human nature being what it is, some will try to take an 'unfair' advantage of their status as intellectual property right holders. Some rights, such as patents, give a monopoly and this can lead to obvious abuse. However, there are provisions in domestic UK patent law and in European Community law to control abuse. The Patents Act 1977 s 48 allows any person to apply for a compulsory licence to work the patent after three years of the patent being granted, on the basis of specified grounds, for example when the demand for the product is not being met on reasonable terms. Article 81 of the EC Treaty<sup>48</sup> controls restrictive trade practices and Article 82 prohibits the abuse of a dominant position within the EC where either affects or is likely to affect trade between Member States.<sup>49</sup> There seems to be an irreconcilable

<sup>48</sup> Unless otherwise stated, references to the EC Treaty are to the consolidated version of that Treaty brought about by the Treaty of Amsterdam, 1 May 1999.

<sup>49</sup> There are equivalent controls under the UK Competition Act 1998 which apply where trade within the UK is affected by the prohibited behaviour.

conflict between the basic monopoly concept of a patent and Article 82. However, EC law recognises the existence and utility of patents and does not prevent dominant trading situations developing; it only controls abuse of such dominant positions where this affects trade between Member States.

Another way in which the owner of an intellectual property right can abuse his position is to threaten potential competitors with legal action. In some cases the threats may be groundless, but the victim might be prepared to cease the relevant activities or pay a royalty rather than risk the court action and its attendant costs. Litigation can be very expensive, and this may deter the person threatened from challenging the validity of the right concerned or otherwise defending the alleged infringement. UK patent law, design law and trade mark law contain remedies for groundless threats of infringement proceedings<sup>50</sup> and it is an offence falsely to represent that a trade mark is registered.<sup>51</sup> In the UK, there are equivalent provisions in respect of groundless threats made in relation to the Community design and the Community trade mark and there is an offence of falsely representing that a trade mark is registered as a Community trade mark. There is no control over groundless threats of infringement proceedings with respect to an alleged copyright infringement.<sup>52</sup> Bearing in mind the commercial importance of copyright and the possibility of legal tactics by dominant companies to control the market, this seems a serious omission. However, the tort of malicious falsehood (trade libel) might be available in limited cases to provide a remedy.<sup>53</sup>

The Competition Act 1998 contains provisions equivalent to the controls in the EC Treaty in respect of restrictive trade practices and abuses of a dominant trading position but which apply in relation to the UK rather than in respect of trade between Member States.

<sup>50</sup> Patents Act 1977 s 70, Registered Designs Act 1949 s 26, Copyright, Designs and Patents Act 1988 s 253 and Trade Marks Act 1994 s 21.

<sup>51</sup> Trade Marks Act 1994 s 95. There is an equivalent provision for registered designs (Registered Designs Act 1949 s 35). There are offences as regards false representations in respect of patents: Patents Act 1977 ss 110 and 111.

<sup>52</sup> Apart from the possibility of applying for a declaration of non-infringement under the court's inherent jurisdiction.

<sup>53</sup> See Chapter 23.

## European and international considerations

Intellectual property law has long been set upon an international stage, and therefore it is not surprising that the UK's membership of the European Community has had a great influence on copyright, patents, trade marks and the like. Three particular issues mark the impact of the European Community on intellectual property law:

- 1 the drive towards greater harmonisation of the laws of individual Member States;
- 2 the move to Community-wide intellectual property rights;
- 3 the impact of the EC Treaty on the use and abuse of intellectual property rights.

Each of these aspects is discussed in the context of individual intellectual property rights in the relevant parts of the book. However, a brief overview of basic principles is given below.

### Harmonisation

The Internal Market in the EC is reinforced and trade between Member States is facilitated if the intellectual property rights implemented in each Member State are alike. The process of harmonisation of national laws in the field of intellectual property has been proceeding for some time and has not been restricted to the EC. Harmonisation of patent law was effected through the European Patent Convention which has a larger membership than that of the EC. UK patent law was changed on 1 June 1978 as a result of this Convention.<sup>54</sup> EC Directives have been instrumental in changing domestic laws protecting, *inter alia*, computer programs, semiconductor products, databases, biological inventions, trade marks and registered designs. Other changes have been made to copyright law and rights in performances. A right of artists to a royalty on the resale of their works was introduced into the UK in 2006 as a result of a Directive and there is

<sup>54</sup> The date that the Patents Act 1977 came into force.

a proposal for a Directive to harmonise utility model protection though this seems to have lost momentum for the time being.<sup>55</sup>

### Community-wide rights

It would be ideal if identical intellectual property rights were recognised and given effect throughout the European Community. Work has been done towards this goal in respect of patent law and trade mark law. A proposal for a Community Patent Convention was first published in 1975.<sup>56</sup> The Community patent differs from a patent under the European Patent Convention in that the Community patent system will be a unitary system, granting patents that will take effect throughout the Community, whereas a grant obtained under the European Patent Convention gives a bundle of national patents. The Community patent will be administered by the European Patent Office. The Patents Act 1977 contains the necessary mechanism for recognition of the Community patent.<sup>57</sup> Interest in the Community patent flares up now and again but it does not seem as if it is likely to come into being in the immediate future. This is a great pity as it could help overcome the difficulties facing a proprietor trying to enforce a number of national patents obtained through the European Patent Convention for the same invention. A proposal for a Directive on software-related inventions was rejected by a massive majority in the European Parliament during 2005.

There have, however, been some success stories regarding Community-wide rights. The Community trade mark has proved very successful and it looks like the Community design will follow this success. The Office for the Harmonisation of the Internal Market (Trade Marks and Designs) ('OHIM') was established at Alicante in Spain and started accepting applications to register Community trade marks on 1 January 1996. The OHIM is also responsible for registering the Community design and started registering Community designs as from 1 April 2003. The introduction of Community-wide rights is a logical part of the process of consolidating the single market.

### Enforcement Directive

Accepting that intellectual property is essential for the success of the Internal Market of the European Communities, a Directive has been adopted on the enforcement of intellectual property rights.<sup>58</sup> The Directive recognises the importance of intellectual property rights in promoting innovation and creativity and in developing employment and improving competitiveness. The Directive seeks to strike a balance between providing inventors and creators with the opportunity to realise a legitimate profit and encouraging the widest dissemination of works, ideas and new know-how whilst not hampering freedom of expression, freedom of information and the protection of personal data on the internet. To this end, Member States are required to provide for measures, procedures and remedies necessary to ensure the enforcement of intellectual property rights, those measures, procedures and remedies to be effective, proportionate and dissuasive.<sup>59</sup> The scope of the Directive is wide in that it applies to all intellectual property rights covered by Community provisions in the field and Member States may, if they wish, extend the provisions to their laws relating to unfair competition.<sup>60</sup> The UK already had some appropriate measures, procedures and remedies in place. In Scotland, the introduction of a disclosure order was the necessary equivalent to the Norwich Pharmacal Order<sup>61</sup> in the rest of the UK. Regulation 3 of the Intellectual Property (Enforcement, etc.) Regulations 2006,<sup>62</sup> which, *inter alia*, implemented the Directive, requires that damages shall be appropriate to the prejudice suffered by the claimant. This applies where the defendant knew or had reasonable grounds to know that he was engaged in an infringing activity. Factors to be taken into account when assessing damages include, in particular:

<sup>55</sup> Although a harmonising Directive, this will have the effect of introducing this form of protection into the UK as there previously existed no equivalent protection in the UK.

<sup>56</sup> Convention for the European Patent for the Common Market (Community Patent Convention) (76/76/EEC), OJ L401, 30.12.89, p 1.

<sup>57</sup> Patents Act 1977 ss 86 and 87.

<sup>58</sup> Directive 2004/48/EC of the European Parliament and of the Council on the enforcement of intellectual property rights, OJ L 157, 30.04.2004, p 45.

<sup>59</sup> Article 3.

<sup>60</sup> Recital 13 to the Directive.

<sup>61</sup> So called after *Norwich Pharmacal Co v Commissioners of Customs and Excise* [1974] AC 133 in which this form of order for discovery was first created. These orders are discussed in Chapter 6.

<sup>62</sup> SI 2006/1028.

- the negative economic consequences, including any lost profits, which the claimant has suffered, and any unfair profits made by the defendant; and
- elements other than economic factors, including the moral prejudice caused to the claimant by the infringement; or
- where appropriate, they may be awarded on the basis of the royalties or fees which would have been due had the defendant obtained a licence.

### Conflicts with the EC Treaty

The control of abuses of intellectual property rights by provisions in the EC Treaty has been noted previously. Those provisions are: Articles 28 to 30 which promote the free movement of goods, Article 81 which prohibits restrictive trade practices and Article 82 which is designed to prevent the abuse of a dominant market position.<sup>63</sup> It must be stressed that these controls are relevant only if trade between Member States is affected or is likely to be affected. By their very nature, the rights given by intellectual property law can easily offend against the EC Treaty. For example, the proprietor of a patent will wish to exploit that patent to its best advantage, and to do this he may be selective about markets and persons to whom licences are granted and this may operate against the free movement of goods. However, Community law recognises the advantage of intellectual property law and is sufficiently realistic to appreciate the value of licensing arrangements and the like. Article 295 of the EC Treaty states that nothing in the Treaty shall prejudice the rules in Member States governing the system of property ownership; and, as already mentioned, intellectual property is a form of property. Nevertheless, the worst abuses are struck down without hesitation by the Commission or the European Court of Justice and this has sometimes been controversial, as evidenced by opportunistic parallel importing and the doctrine of exhaustion of rights.<sup>64</sup> This doctrine means that the owner of an intellectual property right cannot use that right to prevent the further commercialisation of articles subject to that right which have been placed on the market within the European Economic Area by him or with his consent.<sup>65</sup>

### International aspects

On a wider international stage, it is worth mentioning briefly the importance of uniform laws and reciprocal protection. The vast majority of the world's developed nations play a role and are members of one or more of the various international conventions relating to intellectual property rights. Several of these conventions are administered by the World Intellectual Property Organisation (WIPO), which is part of the United Nations. One of the most important and earliest conventions is the Paris Convention for the Protection of Industrial Property 1883, to which there are currently 172 signatories, including the UK.<sup>66</sup> This convention, which is updated and amended occasionally (last revision in 1979), applies to inventions, trade marks, industrial designs, indications of origin and unfair competition. It establishes basic principles for laws in individual countries and reciprocal protection, and also priority rights in respect of patents, trade marks and industrial designs. The WIPO also administers, *inter alia*, the Berne Copyright Convention and the Madrid Agreement for the international registration of trade marks. The UK has ratified the Protocol to this latter agreement. Another important convention on copyright law is the Universal Copyright Convention. Most countries belong to one or both of the copyright conventions and 138 countries are Contracting Parties to the Patent Cooperation Treaty which provides a streamlined method of obtaining a patent internationally.<sup>67</sup>

The Uruguay Round of the GATT (General Agreement on Tariffs and Trade) was concluded on 15 December 1993 with a series of agreements including the 'TRIPs Agreement' (Trade Related Aspects of Intellectual Property Rights), now administered by the World Trade Organisation (WTO). The TRIPs Agreement lays down minimum

<sup>63</sup> Article 12 of the EC Treaty, which prohibits discrimination on the grounds of nationality, may also be relevant.

<sup>64</sup> See Chapter 24.

<sup>65</sup> This doctrine extends to the States of the European Economic Area which is made up of the Member States of the EU, Iceland, Liechtenstein and Norway by virtue of equivalent provisions in the Agreement on the European Economic Area, OJ L 1, 03.01.1994, p 3, Articles 11 to 13. There are other provisions equivalent to Articles 81 and 82 of the EC Treaty.

<sup>66</sup> As at 3 January 2005.

<sup>67</sup> The membership of this Treaty has increased rapidly over the last few years.

standards of protection for intellectual property on the basis that adequate and effective protection must be given in such a way that the enforcement of intellectual property rights does not create barriers to legitimate trade. There is an obligation on members to comply with certain parts of the Paris Convention for the Protection of Industrial Property, the Berne Copyright Convention, the Rome Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organisations and the Washington Treaty on Intellectual Property in Respect of Integrated Circuits. Part II of the Agreement sets out the standards relating to copyright and related rights, trade marks, geographical indications of origin, industrial design, patents, layout designs of integrated circuits, protection of undisclosed information and the control of anti-competitive practices in contractual licences. There are also measures dealing with enforcement and the resolution of disputes, for example, where a member considers a judicial decision affects its rights under the Agreement.

There are transitional provisions notable in that they grant a period of grace in respect of most of the provisions of the Agreement of four years to developing countries and ten years for the least developed countries. The Agreement came into force on 1 January 1995. The TRIPs Agreement is, arguably, the most important international initiative in the field of intellectual property since the Paris Convention of 1883. Of course, much of UK law already complies, but there are differences. However, the TRIPs Agreement is not of direct effect: *Lenzing AG's European Patent (UK)*.<sup>68</sup> In the UK, its effects will be felt through European Community legislation, though it has to be said that there are unlikely to be many changes to domestic law in Europe resulting from the TRIPs Agreement. Members are permitted to grant more extensive protection than that set out in the Agreement provided that it does not conflict with the other provisions of the Agreement. The unregistered design right is an example of such more extensive protection. A submission that it was incompatible with the TRIPs Agreement was unsuccessful in *Azrak-Hamway International Inc's Licence of Right Application*.<sup>69</sup>

## PRACTICAL CONSIDERATIONS

### Rationale and justification for intellectual property law

Various justifications have been put forward for the existence of intellectual property law and these have usually been set in the context of patents. A more detailed discussion of the justification for intellectual property rights is, therefore, contained in Chapter 11 concerning patent law. The basic reason for intellectual property is that a man should own what he produces, that is, what he brings into being. If what he produces can be taken from him, he is no better than a slave. Intellectual property is, therefore, the most basic form of property because a man uses nothing to produce it other than his mind.<sup>70</sup> It is claimed that investment should be stimulated by the presence and enforcement of strong laws that provide a framework ensuring that the publication of new works and the manufacture of new products will be profitable, assuming, of course, that they are sufficiently meritorious, useful and commercially attractive to attain a viable level of sales. If investment is stimulated this should lead to increased prosperity and employment. Another justification is that the existence of strong laws in this area encourages the publication and dissemination of information and widens the store of available knowledge. For example, details of patents are published and are available for public inspection. In due course, when the patent expires, anyone is free to make the product or use the process, as the case may be. This would seem to be ample vindication for offering a monopoly protection in the case of patents.

Another reason is that a person who creates a work or has a good idea which he develops has a right, based partly on morality and partly on the concept of reward, to

<sup>70</sup> I am indebted to Professor Bryan Niblett for suggesting this simple but powerful reason.

control the use and exploitation of it, and he should be able to prevent others from taking unfair advantage of his efforts. Why should others be able to save themselves all the time and effort required to create or invent the thing concerned? Surely, on this basis, the law should provide remedies against those who appropriate the ideas of others, and a person who has devoted time and effort to create something has a right to claim the thing as his own and also has a right to obtain some reward for all his work. The tendency in the UK has been to encourage innovation through economic incentives, but in other countries stress has been placed on moral aspects although there have been moves in the UK to afford rights to the creator independent from the ownership of the right.

The grant of formal intellectual property rights has sometimes been explained in terms of a contract between the inventor or designer and the state. For example, in return for the grant of a patent, offering monopoly protection for a limited period of time, the inventor donates his invention to the state. This is the consideration theory and two variants of it were identified by Jacob J, at first instance, in *Philips Electronics NV v Remington Consumer Products Ltd.*<sup>71</sup> An extension of this view of intellectual property rights is to argue that a particular invention should no longer be protected by other intellectual property rights once the patent has expired. Jacob J said (at 310):

71 [1998] RPC 283.

I would only add this about the ‘it-was-once-patented, or expired right’ point. In general there is no rule of law which prevents one type of intellectual property right from running parallel to another. In particular, for instance, it has long been held that in some circumstances a design can also be a trade mark . . . Similarly, patents and designs can coexist . . . and passing off rights can exist in shapes the subject of a patent . . . The notion that there may not be parallel rights seems to be based on two fallacies, or perhaps one expressed in two different ways. One is that by applying for one form of monopoly the applicant is abandoning all others (the ‘election theory’) . . . The other is that by obtaining such a monopoly for a fixed term the applicant is deemed to dedicate the subject of the monopoly to the public when the monopoly expires (the ‘dedication theory’).

He went on to dismiss the ‘consideration theory’ and said that it had no place in the modern statutory scheme of things and had no application to modern intellectual property law. Of course, there is no reason why a number of different intellectual property rights cannot give protection to the same subject matter. The preferred embodiment of a product invention might possess aesthetic qualities making both patent protection and registered design protection appropriate. The shape of a container might be registrable as a design and as a trade mark. There is a complete absence of statutory provisions bringing one form of right to an end on the expiry of another right in respect of the same invention, design or logo. When a patent expires, it brings to the public the right to work the invention subject to the patent but does not automatically bring a bonus to do other things protected by subsisting intellectual property rights. When a document, which was confidential, is published, that does not bring the copyright subsisting in it to an end also. It would be preposterous if it did and would emasculate copyright protection. The next section in this chapter explores concurrent protection by intellectual property rights.

Other considerations come into the study of the place of intellectual property law in modern society. Counterfeiting is a serious problem which should be attacked, not so much to protect the interests of legitimate traders but to protect society from being deceived into buying substandard goods. In some cases, safety is at issue: for example, where the counterfeit is a poorly made toy covered in a paint containing high levels of lead. Furthermore, there are links between organised crime and intellectual property crime.<sup>72</sup> This is one main reason why the maximum penalties for copyright offences and trade mark offences are considerable.

72 The Gowers Review of Intellectual Property, HMSO, 2006, at p 97.

Certain offences under copyright law, rights in performances and trade mark law have been designated as serious offences for the purposes of the Serious Crime Act 2007. This Act provides for serious crime prevention orders which may contain prohibitions, restrictions or requirements or other terms which are considered appropriate by the court for protecting the public by preventing, restricting or disrupting involvement by a person concerned in serious crime.<sup>73</sup> This is a reflection of the seriousness with which some intellectual property offences are now viewed.<sup>74</sup>

Pharmaceutical patents have been controversial where the high cost of drugs and medicines protected by patents can work against public health issues in developing countries, especially where there are serious and widespread health problems. The World Trade Organisation attempted to deal with this issue in the 'Doha Declaration'<sup>75</sup> concerning the possibility, *inter alia*, of using compulsory licensing and parallel importing to cut the cost of pharmaceutical products. Compulsory licences may be available for pharmaceuticals to be exported to countries with health problems under an EU Regulation.<sup>76</sup> The Doha Declaration also postpones the deadline for least developed countries to provide for patents for pharmaceutical products until 1 January 2016. Compulsory licensing may not solve the problem, however, if the country in question does not have the facility to manufacture drugs and other medicines. The issue is a sensitive one requiring a balance between public health issues and the economic realities of running pharmaceutical companies which are answerable to their shareholders and need to maintain profitability to fund research into new products in order to remain successful.

<sup>73</sup> The orders will be made under s 1 of the Act. These provisions apply to England and Wales and Northern Ireland but, at the time of writing, have not yet been brought into force.

<sup>74</sup> The Gowers Review, *op cit*.

<sup>75</sup> Fourth Ministerial Conference at Doha, Qatar, November 2001.

<sup>76</sup> Regulation (EC) No 816/2006 of the European Parliament and of the Council of 17 May 2006 on compulsory licensing of patents relating to the manufacture of pharmaceutical products for export to countries with health problems, OJ L 157, 09.06.2006, p 1.

## Combination of intellectual property rights

The lifespan of an invention or a work of copyright can comprise several different and distinct stages, and during these stages different intellectual property rights may afford protection to the invention or work. For example, an idea for an invention will be protected by the law of confidence until such time as a patent application is published. Once a patent has been granted in respect of the invention, patent law takes over. Other rights might be appropriate, such as the law of trade marks or passing off, if a mark or name is applied to the product. Intellectual property rights work together to provide legal protection throughout the life of the product until such time as all the rights have expired for one reason or another. Tables 1.4 and 1.5 give examples of how the various intellectual property rights work together to give continuity of protection.

Note that, in the first example, copyright protection might be all but exhausted because, under the Copyright, Designs and Patents Act 1988 s 47, documents submitted in a patent application are open to public inspection and may be copied (with the authority of the Comptroller-General of Patents, Designs and Trade Marks). Copyright still provides limited protection to these documents, for example if copied without such permission.

In the tables, solid vertical lines represent the duration of the right, and a broken line signifies that the right still exists but in a weaker form.

## The nature of the study of intellectual property

Intellectual property law is a demanding subject, but this is compensated by being one of the most enjoyable and diverse of all substantive law areas. Many aspects of procedural law are also highly relevant. As much as any subject in the study of law, intellectual property law cuts across boundaries and makes the oft-imposed

**Table 1.4** The life of an invention

<i>Stage in the life of an invention</i>	<i>Form of intellectual property right</i>				
	<i>Confidence</i>	<i>Copyright</i>	<i>Patent</i>	<i>Trade marks</i>	<i>Passing off</i>
The bare idea, in the inventor's mind only	***				
Discussion with friends and colleagues	Maintain air of confidence				
Idea expressed in tangible form, e.g. in writing, on drawings, in a computer memory		***			
Preliminary negotiations with potential manufacturers	Maintain air of confidence				
Patent application (assumed successful)	Only in respect of things not disclosed in the patent application		*** From priority date		
Further negotiations with potential manufacturers					
Put invention into production and sell articles made to it				*** If applied for	
Establish a reputation associated with the product					***
		Protected for author's life plus 70 years	Up to a maximum of 20 years	For as long as renewed	For as long as reputation associated with article

\*\*\* Signifies the commencement of the right.

compartmentalisation of legal subjects seem awkward and inappropriate. A study of intellectual property law embraces property law (real and personal), contract law, tort, criminal law, commercial law, competition law, European Community law, evidence, procedure and jurisdiction. An understanding of the subject is enhanced by a knowledge of the basic principles of equity, some legal philosophy and at least a superficial grasp of other disciplines such as economics, sociology and industrial history. A liking for, or sympathy with, science and technology is also helpful. A number of practitioners in the field of intellectual property, including members of the Chancery Bar, solicitors, patent agents and trade mark agents, have science degrees in addition to law degrees or other legal qualifications, and this dual educational background can be very much an advantage in the practice of intellectual property law. A command of one or more foreign languages may also be useful.

**Table 1.5** The life of a play

<i>The life of a play</i>	<i>Form of intellectual property right</i>			
	<i>Confidence</i>	<i>Copyright</i>

		Dramatic works protected for author's life plus 70 years	For 25 years from end of year of first publication	For 50 years from end of year of first performance

\*\*\* Signifies the commencement of the right.

Note: rights in performance are for the benefit of the performers and any person with whom they have a recording contract.

## COMMERCIAL EXPLOITATION OF INTELLECTUAL PROPERTY

Intellectual property is a valuable asset which may be exploited in a number of ways. It may be assigned, whereby the ownership in the whole or part of the right is transferred, or licences may be granted in respect of it. As with assignments, licences may be in respect of the whole or part of the right. For example, the owner of the copyright in a dramatic work might grant a licence to a number of theatre companies to perform the work in public for five years, each company being restricted geographically in terms of where it might make the performance.

Licences may be exclusive or non-exclusive. An exclusive licence grants the rights governed by the licence to the licensee who can perform those rights to the exclusion of everyone else including the owner. For example, the proprietor of a patent may grant an exclusive 'worldwide' licence to a manufacturer to work the invention. A non-exclusive licence is appropriate where the owner of the intellectual property right wishes to grant licences to numerous licensees, a good example being in the case of computer software.<sup>77</sup> Sometimes a sole licence is appropriate. This grants permission to perform the particular acts to only one licensee but, unlike the exclusive licence, the owner retains the right to perform the acts himself.

Other forms of exploiting intellectual property include using it as security for loan, such as by way of a mortgage or other charge. Alternatively, it may be acquired as an

<sup>77</sup> In some cases, the licensee of computer software may require an exclusive licence or even an assignment such as where the software has been written for his specific requirements.

investment, by paying a capital sum in return for an assignment; the person acquiring it will hope to receive income from it over a number of years by granting licences. In 1996, Enid Blyton's copyrights were sold for £13 million.<sup>78</sup>

It has already been pointed out in this chapter that intellectual property rights are very diverse in nature. Some are informal and arise automatically whilst others can only be acquired by applying for registration. This distinction leads to some persons collectively describing the informal intellectual property rights as 'soft IP' and those subject to registration as 'hard IP'.

It is important to note that, even in the case of soft IP, certain formalities must be adhered to in many cases to make a transaction effective at law. For example, in the case of an assignment of copyright, it must be in writing and be signed by or on behalf of the person making the assignment, the assignor.<sup>79</sup> An exclusive licence in respect of a copyright must be in writing signed by or on behalf of the copyright owner.<sup>80</sup>

Most types of transactions involving hard IP must also conform to certain statutory requirements. For example, an assignment or mortgage of a patent is void unless it is in writing and signed by or on behalf of the assignor or mortgagor, as appropriate.<sup>81</sup> An assignment of a registered trade mark is not effective unless it is in writing signed by or on behalf of the assignor.<sup>82</sup> To be effective, a licence to use a registered trade mark, whether exclusive, non-exclusive or a sublicense, must be in writing signed by or on behalf of the grantor.<sup>83</sup> It may take some time before the patent is granted or the trade mark is registered and it is possible to deal with the application for a patent or to register a trade mark and similar formalities apply to applications as well as the granted rights.

A further requirement exists with hard IP. Not only must the fact of registration appear on the appropriate register, but most forms of transactions concerning the right must also be notified and placed on the register. Copies of register entries are available to the public on payment of a fee and it is important that the register accurately reflects the fact of proprietorship and what rights have been granted in or under the particular intellectual property. For example, in the case of a patent, the register will include information relating to the proprietor of the patent and, where appropriate, transactions affecting rights in or under the patent such as assignments, the grant or assignment of a licence, sublicense or mortgage.<sup>84</sup>

Registration of a transaction will be made following application on the appropriate form. For example, for a registrable transaction concerning a patent,<sup>85</sup> Patents Form 21 must be used and include evidence establishing the transaction, instrument or event.<sup>86</sup> Similar provisions apply to trade marks and to registered designs.

Failure to register a registrable transaction may have serious consequences. There are a number of statutory provisions that can fairly be said to have as one of their main purposes the encouragement of the registration of transactions involving hard IP. A person who takes the right under a transaction may acquire the title to the intellectual property as against someone claiming under an earlier transaction if that earlier transaction had not, at the time of the later one, been registered and the person taking under the later transaction did not know of the earlier one.<sup>87</sup>

A defendant in an infringement action in respect of a patent or trade mark will be able to set up a failure to register a relevant transaction as a partial defence so as to negate the remedies of damages or an account of profits. For example, in respect of a patent, costs (expenses in Scotland) are not available unless the relevant and registrable transaction, instrument or event was registered within six months or, if it was not practicable to register within six months,<sup>88</sup> it was registered as soon as practicable thereafter.<sup>89</sup> Originally, this worked to deprive a claimant of damages or an account and was described by Jacob J as being designed to encourage the registration of transactions rather than providing an infringer with a fortuitous defence.<sup>90</sup>

<sup>78</sup> *The Times*, 24 January 1996. Enid Blyton died in 1968 and her copyrights will endure until the end of the year 2038.

## IP in acquisitions and mergers

Often intellectual property will be acquired as part of a transaction which includes all manner of other property. For example, some or all of the assets of a company may be acquired, the assets comprising tangible property such as premises, plant and equipment in addition to intangible property such as intellectual property. Some of the intellectual property is likely to be soft IP such as copyright in engineering drawings and software, whilst other rights might be in relation to hard IP such as patents, registered designs and trade marks. Many of the points discussed below also apply in the case of mergers and de-mergers.

The organisation making the acquisition is likely to have a number of questions in respect of the various intellectual property rights (IPR). These questions will include:

- what the IPR are and how long will they endure, assuming hard IPs are renewed to the maximum extent, and what is their territorial scope;
- whether the IPR are owned outright or jointly;
- whether any of the IPR are licensed in (that is, whether they were being exploited under a licence granted by a third party to the company now selling its assets) and, if so, what the scope of the licences are;
- whether any IPR are licensed out (that is, the company now selling its assets granted licences to third parties enabling them to exploit the IPR) and, if so, what the scope of the licences are;
- whether all registrable transactions were registered in a timely manner, and whether there are any other transactions affecting the IPR;
- whether all renewal fees in respect of hard IPR have been paid on time;
- whether there have been challenges to the IPR and, in the case of patents, whether there have been any opinions by the Comptroller of Patents;
- whether the IPR have been infringed and, if so, what the outcome was;
- whether there are any current potential infringements of the IPR and what evidence has been gathered and what preliminary steps have been taken;
- whether there have been any instances where the IPR have infringed or have been alleged to infringe IPR belonging to third parties;
- how much the IPR are worth.

These questions can be answered, at least to some extent, by carrying out an audit. This will involve obtaining up-to-date register entries in respect of hard IP, and asking for some evidence of the date of creation of important soft IP. For example, the company may have carried out a policy of depositing copies of its engineering drawings with an independent third party such as the Stationers' Company. Assignments will be scrutinised for form and validity. Licence agreements will be inspected as well as records of royalty payments. In some respects, the organisation acquiring the intellectual property will have to rely on the company now divesting itself of its assets. It will be sensible in such circumstances for the agreement for the transfer of assets to include appropriate warranties: for example, a warranty that a trade mark has been renewed when due and has been in continuous use.<sup>91</sup>

Some information may require more significant detective work such as determining the history of the IPR as regards litigation, or steps taken preliminary to litigation which did not or has not come to fruition. Another problem may be the existence of equitable rights in relation to the IPR. These are not generally registrable in the case of hard IP<sup>92</sup> and, for all forms of IPR, may arise without any written agreement. In other cases, there may be some written agreement which does not comply with the requirements as to form. There may also be an implied licence which is not supported by any direct documentary evidence. Again, the inclusion of warranties in the agreement to transfer the

<sup>91</sup> If a trade mark has not been put to genuine use in the UK during the first five years following completion of the registration procedure, or if such use has been suspended for an uninterrupted period of five years, it will be susceptible to revocation (Trade Marks Act 1994 s 46(1)). Similar provisions apply in relation to the Community trade mark.

<sup>92</sup> For example, the Trade Marks Act 1994 states that no notice of any trust (express, implied or constructive) shall be entered in the register: see s 26(1).

IPR may help, but is no substitute for actual knowledge of all the rights and interests that might affect the value or exploitation of the IPR. The investigative work which is performed to verify and assess the nature, scope and value of IPR is often referred to as ‘due diligence’.

It is not unusual for a contract under which IPR are to be transferred to take effect as an agreement to assign the IPR, the formal assignments of the IPR being executed subsequently. If this is the case, the contract should include a term to the effect that the assignor will do everything necessary, including executing the required agreements and completing and submitting the necessary application forms, to give effect to any assignments or other transactions covered by the agreement and ensure their registration.

## FRAMEWORK FOR DESCRIPTION OF RIGHTS

In this book, each of the various rights is described, examined and discussed within the following framework:

- overview and history
- nature of the right and its subsistence
- ownership of the right and dealings with it
- infringement of the right
- exceptions and defences
- remedies.

There is a separate section on European and international aspects although, of course, the implementation of European Directives and Community-wide rights are dealt with in the appropriate chapters. The above framework is followed wherever possible, although it has been modified for some of the rights. Given the nature of these rights, it is usual to speak of infringement rather than breach. You infringe a right, but breach a duty. Breach is suggestive of a pre-existing contractual or tortious duty owed by and to specific persons (though infringing copyright is a tort). Therefore, a person infringes a copyright, a patent or a trade mark; he is not in breach of copyright, etc. However, many judges talk in terms of breach of copyright and, strictly speaking, this is just as valid an expression. With passing off, it is usual to say that a person has committed the tort of passing off or is guilty of passing off. Breach of confidence is the usual phrase, though it should be noted that this is not a tort as such, as an obligation of confidence is a creature of equity.

# Part One

## PRELIMINARY SUMMARY

### KEY POINTS

Intellectual property laws protect inventions, creative works, confidential information and trade secrets, designs, trade marks and business goodwill. The nature of intellectual property rights varies considerably. They are intangible rights, distinct from the tangible works or products to which they apply.

Intellectual property rights are either formal or informal:

- formal rights, such as patents, are subject to a formal registration system;
- informal rights, such as copyright, come into being when the subject-matter is created or fixed in some tangible form.

Formal intellectual property rights give monopoly protection whilst the protection afforded by informal rights require proof of an act in relation to the subject-matter, such as making a copy. Generally, monopoly rights do not last as long as some (though not all) informal rights. To this there are exceptions:

- unregistered design protection has a short lifespan;
- registered trade marks may be renewed indefinitely provided the trade marks continue to be used.

The owner of an intellectual property right has economic rights, being rights of exploitation. For copyright and performance rights, the creator or performer also has moral rights, which primarily are:

- a right to be identified as creator or performer; and
- a right to object to a derogatory treatment of the subject-matter.

Intellectual property rights are true property rights which may be exploited in a number of ways such as by:

- transfer of ownership, in whole or in part;
- the grant of licences to others to allow them to carry out certain acts in relation to the subject-matter of the right;

- the grant of mortgages or otherwise using the rights as security for loans.

Intellectual property rights operate by giving the owner the right to perform certain acts in relation to the subject-matter, such as making a patented product or using a patented process. Any person who carries out such acts without the licence (permission) of the owner will infringe the right. However, there are a number of defences and acts which are permitted without infringing the right.

Intellectual property rights provide for checks and balances to prevent the rights becoming too powerful or extensive and there are a number of controls over the abuse of intellectual property rights, for example:

- copyright law contains numerous 'permitted acts' which may be carried out without infringing copyright;
- compulsory licences may be available, for example, if a patent is not being reasonably exploited because the owner is limiting supply to drive up prices;
- licences of right may be available in some cases;
- competition law may be used to curb the worst excesses of intellectual property rights involving restrictive trade agreements or abuses of dominant positions.

Intellectual property rights are territorial and only apply in the relevant territory. Protection in other countries is afforded by means of international conventions. However, some rights have a unitary nature and apply throughout the European Community, examples being the Community trade mark and Community design. There has also been significant harmonisation of some intellectual property rights throughout the Community.

Intellectual property rights are vital to industry, business and commerce and may be justified on the basis that the protection afforded encourages financial, human and technological investment in the creation of new or improved works, inventions and designs. The rights are

not without controversy, however, and there are a number of associated issues, such as the conflict with the desirability of plentiful supplies of inexpensive pharmaceuticals to poor countries with major health problems.

The problem with piracy and counterfeiting and the involvement of organised crime in such activities has been met with increased penalties for criminal offences.

## DISCUSSION QUESTIONS

- 1** Consider why some intellectual property rights give rise to monopoly protection whilst others do not. Should all forms of intellectual property rights require proof of copying? Discuss.
- 2** Different intellectual property rights may apply during the development of a work or product and its exploitation. Discuss how these rights may apply and interact in relation to (a) a logo used to promote a new product and (b) a new means of making a widget which has a different appearance compared with pre-existing widgets.
- 3** Discuss the justification for intellectual property rights and consider the consequences, if any, if all intellectual property laws were repealed.

## BACKGROUND AND BASIC PRINCIPLES

### WHAT IS COPYRIGHT?

Copyright is a property right that subsists in certain specified types of works as provided for by the Copyright, Designs and Patents Act 1988. Examples of the works in which copyright subsists are original literary works, films and sound recordings. The owner of the copyright subsisting in a work has the exclusive right to do certain acts in relation to the work, such as making a copy, broadcasting or selling copies to the public. These are examples of the acts restricted by copyright. The owner of the copyright can control the exploitation of the work, for example, by making copies or selling copies to the public or by granting permission to another to do this in return for a payment. A common example is where the owner of the copyright in a work of literature permits a publishing company to print and sell copies of the work in book form in return for royalty payments, usually an agreed percentage of the price the publisher obtains for the books.

If a person performs one of the acts restricted by copyright without the permission or licence of the copyright owner, the latter can sue for infringement of his copyright and obtain remedies: for example, damages and an injunction. However, there are limits and certain closely drawn exceptions are available, such as fair dealing with the work. An example would be where a person makes a single copy of a few pages of a book in a library for the purpose of private study. Other acts may be carried out in relation to the work if they are not restricted by the copyright: for example, borrowing a recording of music from a friend to listen to in private.

A broad classification can be made between the various types of copyright work. Some, such as literary, dramatic, musical and artistic works, are required to be original. As will be seen later, this is easily satisfied and the work in question need not be unique in any particular way.

Other works such as films, sound recordings, broadcasts<sup>1</sup> and typographical arrangements can be described as derivative or entrepreneurial works and there is no requirement for originality: for example, repeat broadcasts each attract their own copyright.<sup>2</sup> Copyright extends beyond mere literal copying and covers acts such as making a translation of a literary work, performing a work in public and other acts relating to technological developments, such as broadcasting the work or storing it in a computer.

Fundamentally and conceptually, copyright law should not give rise to monopolies, and it is permissible for any person to produce a work which is similar to a pre-existing work as long as the later work is not taken from the first.<sup>3</sup> It is theoretically possible, if unlikely, for two persons independently to produce identical works, and each will be considered to be the author of his work for copyright purposes. For example, two photographers may each take a photograph of Nelson's Column within minutes of each other from the same position using similar cameras, lenses and films, after selecting the

<sup>1</sup> Cable programmes (sent by cable as opposed to being transmitted through the ether) were a separate form of work but, as a result of the Copyright and Related Rights Regulations 2003, they were reclassified as broadcasts, the definition of which was amended accordingly.

<sup>2</sup> Under previous copyright legislation, original works were described as Part I works and derivative works were described as Part II works (see Copyright Act 1956). The copyright in a repeat broadcast expires at the same time as the copyright in the original broadcast: Copyright, Designs and Patents Act 1988 s 14. However, no copyright arises in a repeat broadcast made after the expiry of copyright in the original broadcast: s 14(5).

<sup>3</sup> In some circumstances, copyright can give a monopoly right: for example, where the content of the work is available only to the creator of the work and none other.

same exposure times and aperture settings. The two photographs might be indistinguishable from each other but copyright will, nevertheless, subsist in both photographs, separately. The logical reason for this situation is that both of the photographers have used skill and judgment independently in taking their photographs and both should be able to prevent other persons from making copies of their respective photographs.

Another feature of copyright law which limits its potency is that it does not protect ideas; it merely protects the expression of an idea. The late Barbara Cartland did not have a monopoly in romantic novels. Anyone else is free to write a romantic novel, since the concept of a romantic novel is an idea and not protected by copyright. However, writing a romantic novel by taking substantial parts of a Barbara Cartland novel infringes copyright, because the actual novel is the expression of the idea. Just how far back one can go from the expression as formulated in a novel to the ideas underlying the novel is not easy to answer. If a person gleans the detailed plot of a novel and then writes a novel based on that detailed plot, there is an argument that there has been an infringement of copyright even though the text of the original novel has not been referred to further or copied during the process of writing the second novel.<sup>4</sup> A detailed plot, including settings, incidents and the sequence of events can be described as a non-literal or non-textual form of expression. However, the boundary between idea and expression is notoriously difficult to draw.<sup>5</sup> Suffice it to say at this stage that judges have been reluctant to sympathise with a defendant who has taken a short cut to producing his work by making an unfair use of the claimant's work, especially when the two works are likely to compete.

Copyright is also restricted in its lifespan; it is of limited duration, although it must be said that copyright law is rather generous in this respect. For example, copyright in a literary work endures until the end of the period of 70 years from the end of the calendar year in which the author dies.<sup>6</sup> Approximately, therefore, copyright lasts for the life of the author plus 70 years.<sup>7</sup> This temporal generosity can be justified on the basis that copyright law does not lock away the ideas underlying a work.

Ownership of the copyright in a work will often remain with the author of the work, the author being the person who created it or made the arrangements necessary for its creation, depending on the nature of the work. However, if a literary, dramatic, musical or artistic work is created by an employee working in the course of his employment, his employer will be the first owner of the copyright subject to agreement to the contrary. Additionally, copyright, like other forms of property, can be dealt with; it may be assigned; it may pass under a will or intestacy or operation of law, and licences may be granted in respect of it.

Full acknowledgement of moral rights is a relatively recent concept in UK copyright law, though well established in other European countries reflecting differences in the historical development and conceptual foundations of copyright between the UK and continental Europe.<sup>8</sup> These moral rights, such as the right to be recognised as the author of a work and the right to object to a derogatory treatment of the work, remain with the author irrespective of subsequent ownership and dealings with the ownership of the copyright. They recognise the creator's contribution, a way of giving legal effect to the fact that the act of producing a work is an act of creation and that the creator has a link or bond with the work which should be preserved regardless of hard economic considerations. The tort of defamation has, of course, long been available and could provide remedies if an author's work were to be distorted or if a work was falsely attributed to someone, depending on the circumstances: for example, if a dreadful musical composition was falsely attributed to a famous and brilliant composer. But the difficulties of suing in defamation and the attendant expense and uncertainty are good reasons for the author-work nexus to be specifically recognised and enforceable under copyright law.<sup>9</sup>

<sup>4</sup> *Corelli v Gray* [1913] TLR 570.

<sup>5</sup> For example, in *Nichols v Universal Pictures Corporation* (1930) 45 F 2d 119 the eminent US judge Learned Hand said of the boundary between idea and expression: 'Nobody has ever been able to fix that boundary, and nobody ever can' (at 121).

<sup>6</sup> This was increased from life plus 50 years by the Duration of Copyright and Rights in Performances Regulations 1995, SI 1995/3297.

<sup>7</sup> For some types of works, the period is 50 years or, effectively, 25 years.

<sup>8</sup> For a discussion of the continental tradition of moral rights, see Cornish, WR 'Authors in Law' (1995) 58 MLR 1 at 8.

<sup>9</sup> Under the Legal Aid Act 1988, legal aid was not available for defamation actions, but legal aid was possible for an action for false attribution. The Access to Justice Act 1999 continued this prohibition on legal aid for defamation actions but did not rule it out altogether as there was a discretion in exceptional circumstances. In *Steel and Morris v United Kingdom* (2005) 41 EHRR 403 (the libel case involving the 'McDonald's Two') the European Court of Human Rights found that the lack of legal aid in defamation actions could render the proceedings unfair and a breach of Article 6.1 (right to a fair trial) of the Council of Europe Convention for the Protection of Human Rights and Fundamental Freedoms 1950 and a breach of the right of freedom of expression (Article 10).

Copyright law adopts a very practical posture and takes under its umbrella many types of works which lack literary or artistic merit and may or may not have commercial importance. Thus, everyday and commonplace items, such as lists of customers, football coupons, drawings for engineering equipment, tables of figures, a personal letter and even a shopping list, can fall within the scope of copyright law.<sup>10</sup> One important reason for protecting such things is that some of them are likely to be of economic value and usually will be the result of investment and a significant amount of work, such as a computer database. Without protection there are many who would freely copy such things without having to take the trouble to create them for themselves and who would be able, as a consequence, to sell the copied items more cheaply than the person who took the trouble to create the original. If this were to happen, the incentive for investment would be severely limited. Neither is copyright generally concerned with the quality or merit of a work, the rationale being that it would be unacceptable for judges to become arbiters of artistic or literary taste or fashion. Copyright implicitly accepts that tastes differ between people and over a period of time. If the converse were true, many *avant-garde* works would be without protection from unauthorised copying and exploitation.

The pace of technological development in recent times has been unprecedented, but copyright law has striven to keep pace and the current legislation, the Copyright, Designs and Patents Act 1988, attempted to provide a framework which would be resilient to future changes.<sup>11</sup> A recent example of copyright being adapted to prevent the unfair use of works created by or associated with modern technology is the way that many countries extended copyright expressly to include computer programs in the fold of copyright works.<sup>12</sup>

## BRIEF HISTORY

Dating back almost to the beginnings of civilisation there have been those eager to profit from the work of others. In ancient times, the idea that the author of a work of literature had economic rights to control dissemination and copying was not particularly well established, and yet those who falsely claimed a work were considered contemptible. Most authors were primarily teachers, hence the emphasis on moral rights. The word ‘plagiarist’, meaning one who copies the work of another and passes it off as his own, is derived from the Latin ‘plagiarius’ meaning kidnapper. The problems of unauthorised copying of works produced by others stretch back into antiquity.

Copyright law has a relatively long history and its roots can be traced back to before the advent of printing technology, which permitted the printing of multiple copies quickly and at relatively little expense. The first record of a copyright case was *Finnian v Columba*.<sup>13</sup> Statutes of the University of Paris in 1223 legalised duplication of texts for use within the university. However, two factors limited the importance of protecting literary works. Before the late fifteenth century, works of literature were mainly religious and were written by scholarly monks who would work painstakingly for considerable periods of time preparing their gloriously illuminated books. Obviously, because of the substantial human labour and skill required to produce such works, plagiarism of books was not usually a viable consideration. Additionally, there was not a market for books due to the general illiteracy of the population at large. The religious books which were produced were made mainly for use within monasteries or churches.

Two inventions in the late fifteenth century changed everything. It could be claimed that printing has had a greater impact on civilisation than any other single invention. Gutenberg invented moveable type, first used in 1455, and Caxton developed the printing press and published Chaucer’s *Canterbury Tales* in 1478, the first ‘bestseller’. An Act

<sup>10</sup> The protection of designs by means of the copyright in design documents such as engineering drawings was considerably curtailed by the Copyright, Designs and Patents Act 1988 s 51.

<sup>11</sup> However, it has been amended a number of times, largely as a result of EC harmonisation initiatives.

<sup>12</sup> For example, in the UK, the Copyright (Computer Software) Amendment Act 1985 (now repealed); in France, 1985 Law, Article 46 (Law No. 85–660 of 3 July 1985); in the Federal Republic of Germany, BGBl 1985 I 1137 amending the Copyright Law of 1965 and, in the United States, Pub. L. No. 96–517, 12 December 1980, 94 Stat 3028, amending the Copyright Act of 1976.

<sup>13</sup> Incredibly, in the year AD 567. Apparently, St Columba surreptitiously made a copy of a Psalter in the possession of his teacher Finnian: see Bowker, RR (1912) *Copyright: Its History and its Law*, Houghton Mifflin, p 9.

of Richard III in 1483 encouraged the circulation of books from abroad. In 1518, the first printing privilege was issued to Richard Pynson, the Royal Printer, which prohibited the printing, for two years, of a speech by anyone else.<sup>14</sup> A copyright notice was appended to the speech.

<sup>14</sup> Bowker, RR, *ibid*, p 19.

Until the early sixteenth century, the art of printing was practised freely and England was quickly established as an important centre for printing in Europe.<sup>15</sup> But Henry VIII, desiring to restrict and control the printing of religious and political books, eventually banned the importation of books into England. By an Act of 1529, Henry VIII set up a system of privileges and printing came to be controlled by the Stationers' Company, originally a craft guild. With the backing of the infamous Court of Star Chamber, the government and the Stationers' Company maintained an elite group of printers and regulated publishing. Only registered members of the Stationers' Company could print books, the titles of which had to be entered on the Company's Register before publication. Members of the Company had the right to print their books in perpetuity and this right became known as 'copyright', the right to make copies. The Stationers' Company had powers to enable it to control printing and it could impose fines, award damages and confiscate infringing copies. Following the abolition of the Star Chamber by the Long Parliament in 1640, infringement of copyright was still subject to statutory penalties. For example, in 1649, a penalty of 6s 8d was imposed for reprinting registered books without permission. Eventually, after the lapse of this system, common law copyright was enforced in the Court of Common Pleas which soon recognised that copyright could be assigned.

<sup>15</sup> As were Germany, France, Venice and Florence.

The system of privileges, registration and control survived, going through phases of varying effectiveness and licensing systems, until its ultimate collapse in 1695; and, following a brief period when piracy of books flourished, the Statute of Anne was passed in 1709.<sup>16</sup> In the period leading up to the Act, many had argued that copyright was a property right:

<sup>16</sup> 8 Anne c. 19.

just the same as houses and other estates and that existing copies [assignments of copyright] had cost at least £50,000, and had been used in marriage settlements and were the subsistence of many widows and orphans.<sup>17</sup>

<sup>17</sup> Bowker, RR, *op cit*, p 23.

It was said that Jonathan Swift, the author of *Gulliver's Travels*, who had himself suffered at the hands of copyright pirates, had a hand in drafting the Statute of Anne.

The effect of wide scale piracy of books was described in the Act, in words bordering on the emotional, as being 'to their [authors and proprietors of books and writings] very great Detriment and too often to the Ruin of them and their Families'. The importance of the law as a means of encouraging the dissemination of information was also recognised in the Preamble which described the Act as being for:

. . . the Encouragement of Learning by vesting the Copies of Printed Books in the Authors or Purchasers of such Copies.

The Statute of Anne gave 14 years' sole right of printing to authors of new books (books already published by 1710 were given 21 years' protection). At the end of that period, the right returned to the author and, if still alive, he was granted an additional 14 years. Infringers were to pay a fine of one penny for every sheet of the infringing book, one moiety of which went to the author, the other to the Crown. By modern standards, this was a considerable fine. In addition, infringing books and parts of books were forfeit to the proprietor who 'shall forthwith damask and make waste paper of them'. A system of registration was still in place and an action could be brought only if the title had been entered in the register book at the Stationers' Company before publication. The 'copy', by the Act, was the 'sole liberty of printing and reprinting' a book and this liberty could be infringed by any person who printed, reprinted or imported

the book without consent. The Act was also the first clear acknowledgement of the legal right of authorship. The 1709 Act did not extend to certain universities and libraries, but some doubt about the scope and effectiveness of this was remedied by the Copyright Act of 1775<sup>18</sup> which gave a perpetual copyright to copies belonging to the Universities of Oxford and Cambridge and the Colleges of Eton, Westminster and Winchester. This survived until the Copyright, Designs and Patents Act 1988 which substituted a period of 50 years from the end of 1989, after which such rights expire.<sup>19</sup>

Later, there was some argument as to whether the author had, apart from statute, a perpetual common law right to print or publish his work (a right that could be assigned to a publisher in perpetuity). Soon after the expiry of the statutory term for previously published cases, there were challenges to the common law copyright. In *Millar v Taylor*<sup>20</sup> the Court of King's Bench held that a perpetual common law copyright existed independent of any statute. That case concerned the copyright to Thomson's *The Seasons* published in four parts from 1726 to 1730.<sup>21</sup> Thomson died in 1748 and his copyright was sold by his executors to Beckett who took legal action against Donaldson, an alleged infringer, obtaining a permanent injunction from the Lord Chancellor. However, the case was appealed to the House of Lords and was heard before 11 Law Lords. In *Donaldson v Beckett*,<sup>22</sup> it was held that the author did have common law rights that were potentially perpetual (that is, the right of first printing and publishing), but once the work was published, this common law right was extinguished and the author's rights were to be determined solely from the Statute of Anne 1709. On the latter point, the decision was a majority decision of 6:5; a narrow victory that has not gone without criticism since. For example, Drone points out that many jurists consider that:

intellectual productions constitute a species of property founded in natural law, recognised by the common law, and neither lost by publication nor taken away by legislation.<sup>23</sup>

The Statute of Anne was copied by the US Congress in 1790 and *Donaldson v Beckett* followed in the Supreme Court in *Wheaton v Peters*.<sup>24</sup> Hence the similarity between the copyright laws of the UK and the US.<sup>25</sup>

The scope of copyright was gradually increased to include other works, such as engravings and prints in 1734–35, lithographs in 1734, sculptures in 1798, dramatic works in 1833 and musical works in 1882.<sup>26</sup> Moves were also made to extend the term of copyright, though these changes did not go unchallenged; for example, the historian Macaulay described copyright as 'a tax on readers for the purpose of giving bounty to writers'.<sup>27</sup> In the meantime, it was becoming recognised that copyright was important in an international context, and the Berne Convention for the Protection of Literary and Artistic Works.<sup>28</sup> was formulated in 1886 with the purposes of promoting greater uniformity in copyright law and giving copyright owners full protection in all Contracting States. Reciprocal protection was based on the place of publication and not by reference to the nationality of the author. The Berne Convention was remarkable in that it successfully reconciled the fundamentally different nature of UK copyright law with the French tradition of *droit d'auteur*.<sup>29</sup> In the Berlin revision of 1908 (the Berlin Act), *inter alia*, the term of copyright protection was increased to the life of the author plus 50 years and copyright was extended to cover choreographic works, works of architecture and sound recordings. The revision also introduced the compulsory licence and removed formalities (works still had to be registered in the UK). Major changes to UK copyright law were introduced by the Copyright Act 1911, heavily influenced by the Berlin revision. The 1911 Act formed the basis of copyright law throughout the British Empire and accounts for similarities in copyright law between the UK and countries such as Australia, New Zealand and South Africa.

Since the Berne Convention and subsequent revisions (and the later Universal Copyright Convention, first promulgated in 1952), the impetus for change in copyright

18 15 Geo. III c. 53.

19 Copyright, Designs and Patents Act 1988 Sch 1, para 13. The Whitford Committee found that the universities and colleges concerned were not overly anxious to retain perpetual copyright: *Copyright and Design Law*, Cmnd 6732, HMSO, 1977.

25 There are now, however, some significant differences which compromise the impact of US precedents.

26 Musical works were protected earlier though the form of protection was unsatisfactory.

27 Hansard, HC Deb vol 56 (5 February 1841). However, he was not arguing for the abolition of copyright, merely against extending it beyond the author's life.

28 The 'Berne Convention'.

29 Authors' rights.

law has been largely the result of the conventions<sup>30</sup> rather than internal national considerations. The 1911 Act was replaced in the UK by the Copyright Act 1956, which added three new forms of works: cinematograph films, broadcasts and the typographical arrangement of published editions. The Performing Right Tribunal was created.<sup>31</sup> The 1956 Act classified works as being either original works (Part I works – literary, dramatic, musical and artistic works) or Part II works, sometimes known as derivative works or entrepreneurial works (namely sound recordings, cinematograph films, broadcasts and the typographical arrangement of published editions). These works could be described as derivative as they were usually based on a Part I work. For example, a sound recording may be made of the live performance of a musical work. The link was not essential and a Part II work could be subject to copyright protection without an equivalent Part I work: for example, a sound recording of a bird singing could qualify for copyright protection.

Finally, in response to major technological developments, the current Act, the Copyright, Designs and Patents Act 1988, was passed. This Act takes due account of *moral rights*, inalienable rights which belong to the author irrespective of the ownership of copyright.<sup>32</sup> These are equivalent to the *droit moral* of the Rome Act of 1928 of the Berne Convention; that is a right to claim authorship of a work and the right to object to any distortion, mutilation or other modification of a work which could be prejudicial to the honour and reputation of the author.<sup>33</sup> This also has the effect of pulling English copyright law closer to that subsisting in other European countries.

## COPYRIGHT AND ITS RELATIONSHIP TO OTHER INTELLECTUAL PROPERTY RIGHTS

Like other intellectual property rights, copyright does not stand in splendid isolation. The unfair taking or use of the results of the application of human intellect may infringe more than any one single right. An act giving rise to infringement of copyright may be associated with or accompany a breach of confidence. For example, if an employee copies a confidential report belonging to his employer without permission and then passes on the copy to a competitor of the employer, there will be an infringement of copyright by the act of making a copy without permission and a serious breach of confidence by the employee giving the copy to the competitor, and also by the latter if he realises or ought to realise that the report is confidential. Additionally, the employee will be in breach of his contract of employment. The action taken by his employer may depend on the remedies available and, in the example quoted, it is likely that the employer would dismiss the employee (for being in breach of the contract of employment) and an injunction would be sought (for breach of confidence) against the competitor, restraining him from using the information and from divulging it further. It is unlikely that there would be much to be gained by suing the employee for infringement of copyright, although this could be a case where ‘additional damages’ might be appropriate (see Chapter 6).

Generally, things that fall within the ambit of copyright law are excluded from the grant of a patent,<sup>34</sup> but preliminary materials such as plans, sketches, specifications, and the like, will be protected, in principle, by copyright. That is, copyright will subsist in each of these items irrespective of any patent granted for the invention with which the items are concerned.<sup>35</sup> However, there are two limitations to this, the first being where the details of the invention represented in drawings fall within the scope of the UK unregistered design<sup>36</sup> and the second being that copies may be made of patent applications (including the specification) by permission of the Comptroller-General of Patents, Designs and Trade Marks without infringing copyright.<sup>37</sup> Ideas for a new invention,

<sup>30</sup> And, more recently, the European Community.

<sup>31</sup> Now replaced by the Copyright Tribunal.

<sup>32</sup> Including now the *droit de suite*, the author’s right to payment on subsequent sale of his work of art or manuscript: Berne Convention, Article 14<sup>ter</sup>. Introduced into the UK by the Artists’ Resale Right Regulations 2006 SI 2006/346 implementing Directive 2001/84/EC of the European Parliament and of the Council of 27 September 2001 on the resale right for the benefit of the author of an original work of art, OJ L 272, 13.10.2001, p 32.

<sup>33</sup> Article 6<sup>bis</sup> of the Berne Convention.

<sup>34</sup> Patents Act 1977 s 1(2). But see Chapter 12 for instances when a computer program (which is a literary work under copyright law) can indirectly achieve patent protection.

<sup>35</sup> The Patents Act 1977 makes provision for the possibility that an employee might be entitled to a patent for an invention but copyright or design rights might belong to his employer: s 39(3).

<sup>36</sup> Indirect copying of a drawing of a design by making the article represented does not infringe the copyright in the drawing: Copyright, Designs and Patents Act 1988 s 51(1).

<sup>37</sup> Copyright, Designs and Patents Act 1988 s 47.

while outside the scope of copyright until such time as they are given some tangible form of expression, will be the subject matter of the law of confidence. There is also a close relationship between copyright and the law of designs, and many articles that are subject to design law will have been prepared from drawings and written specifications. However, any potential overlap between design law and copyright is reduced by the Copyright, Designs and Patents Act 1988.<sup>38</sup>

<sup>38</sup> With respect to the unregistered design right, see Copyright, Designs and Patents Act 1988 s 236.

Changes to UK registered design and the introduction of the Community design (registered and unregistered) has increased the potential overlap between copyright and design law as, for example, typefaces and graphic symbols may be protected by design law in addition to copyright protection. The difference between registered designs and copyright can be important where there is such an overlap as, although copyright gives longer protection, a registered design gives monopoly protection.

Sometimes, different rights may be relevant at different times during the life of a work. For example, if a musician has an idea for a piece of music, that idea will be protected by the law of confidence, unless it is already in the public domain. When the music is written down, it will be protected by copyright both before and after publication. After publication, of course, confidentiality will be lost. Live performances of the music will be protected under the Copyright, Designs and Patents Act 1988 Part II which deals with rights in performances (replacing the Performers' Protection Act 1963) and any recordings made will be protected as sound recordings and, separately, as a recording of a live performance. If a copy is made of a record, cassette tape or compact disc of the music, the copyright both in the sound recording (and 'recording right') and the original music will be infringed. If the music is a song, the lyrics will be independently protected as a literary work. Thus, it can be seen that a single item may be subject to several copyrights. This is essential as different interests may be involved. For example, in the case of a song, the music may have been written by one person, the words by another. The recording company will also require direct protection of the sound recording so that it may take action against anyone making duplicates of the recordings. The performer and, if recorded live, the recording company, also require protection against persons making unauthorised 'bootleg' recordings of the live performance.

## COPYRIGHT AS A MEANS OF EXPLOITING A WORK

Copyright provides a very useful and effective way of exploiting a work economically. It provides a mechanism for allocation of risks and income derived from the sale of the work. For example, if a poet compiles an anthology of poems, this will be protected as a literary work even if unpublished. Copyright provides remedies in respect of published and unpublished works. If an unpublished work is copied and sold by someone without the permission of the copyright owner, remedies such as damages, additional damages, accounts of profits and injunctions are available depending on the circumstances. They are, however, available only to the owner of the copyright, an exclusive licensee or a non-exclusive licensee expressly granted the right of action by the copyright owner. A beneficial owner of the copyright cannot obtain damages or a perpetual injunction without joining the owner of the legal title to the copyright, although a beneficial owner may be able to obtain an interim injunction on his own. If the poet in the example wants his anthology of poems published, he might decide to approach prospective publishers, and, if one agrees to publish, the poet might grant an exclusive licence to the publisher allowing him to print and sell copies of the poems in book form. Alternatively, the poet might agree to assign the copyright to the publisher. In either case, the publisher usually takes the risk – he pays the cost of printing, binding,

marketing and distributing. In return, the poet will be paid a fee or a royalty of, say, 10 per cent of the income obtained by the publisher on sales of the anthology.

An added attraction, in the case of an exclusive licence,<sup>39</sup> for example, a licence granting the exclusive rights of publishing the work in the UK, is that the publisher has the right to sue for infringement, and, if the publisher is successful, the poet will be entitled to a share of the damages awarded equivalent to his lost royalties attributable to the infringement.<sup>40</sup> Depending on the terms of the exclusive licence, the poet may be free to make agreements in respect of other modes of expression of the poems, such as a sound recording of the poems being recited by a famous actor. Of course, if the poet assigns the work to the publisher, the publisher will be entitled to sue for infringement as owner of the copyright and the assignment agreement may provide for a division of the damages awarded between the author and the publisher. For the author, a major attraction of granting an exclusive licence,<sup>41</sup> or for that matter an assignment, to a publisher is that copyright actions tend to be fairly expensive and daunting for an individual to pursue, but a reputable publishing company will not hesitate in enforcing its rights under copyright law and, indirectly, the rights of the author.

A copyright can be considered to comprise a bundle of rights, associated with the acts restricted by the copyright. These are the acts that only the copyright owner is allowed to do or authorise. These acts include copying, issuing copies to the public, performing, playing or showing the work in public and broadcasting the work. These can be exploited separately and a copyright owner must be careful not to assign or grant licences for more rights than necessary for the exploitation envisaged. For example, the owner of the copyright in a dramatic work might grant an exclusive right to publish the work in book form to a literary publisher. The owner may then later grant other rights to others, such as the right to perform the work on stage, or even the right to make it into a film. In this way, the income the owner derives from the work can be maximised.

<sup>39</sup> Or a non-exclusive licence in which the licensee has been expressly granted a right of action by the copyright owner: s 101A.

<sup>40</sup> By the Copyright, Designs and Patents Act 1988 s 102 neither the owner nor the exclusive licensee may proceed without the leave of the court unless the other is joined in the action.

<sup>41</sup> Or non-exclusive licence where the licensee has expressly been granted a right of action.

## SUBSISTENCE OF COPYRIGHT

### INTRODUCTION

Fundamentally, copyright law exists to prevent others from taking unfair advantage of a person's creative efforts. The courts have displayed very little sympathy for plagiarists and frequently have demonstrated that copyright law ought to be interpreted in such a way as to protect the interests of the copyright owner. This approach is best summed up in the words of Peterson J in *University of London Press Ltd v University Tutorial Press Ltd*, where he said:

... there remains the rough practical test that what is worth copying is prima facie worth protecting.<sup>1</sup>

<sup>1</sup> [1916] 2 Ch 601 at 610.

However, this probably goes too far and, if applied literally, protection would be afforded to works which were not the result of sufficient skill and judgment. Pumfrey J made this point in *Cantor Fitzgerald International v Tradition (UK) Ltd*<sup>2</sup> where he said of the above maxim (at 133):

<sup>2</sup> [2000] RPC 95.

This maxim is open to the criticism that it proves too much. So it is possible that entirely mechanical labour may be saved by copying something produced by entirely mechanical labour, involving no skill.

As we will see later, the test for originality has been easily satisfied in the past and presents a relatively low threshold to copyright subsistence. But something more than labour alone should be sought in deciding whether or not a work is original. Whilst it might be true that a work having commercial value may be the product of labour or effort only, it is questionable whether such works should be subject to copyright. The modern trend is towards a more transparent approach to the denial of protection to works produced in the absence of skill and judgment and which are the result only of the application of the 'sweat of the brow'.<sup>3</sup>

<sup>3</sup> That is, works that are the result of effort only. See Chapter 8 for more discussion on this point.

<sup>4</sup> In its original form. The Act has been amended on numerous occasions.

The Copyright, Designs and Patents Act 1988 is the legislative source of copyright law. This voluminous Act, comprising 306 sections and eight Schedules,<sup>4</sup> also deals with designs, rights in performances and has miscellaneous provisions concerning patent law and trade mark law. The copyright provisions of the Act came into force on 1 August 1989. Although some significant changes were made to copyright law by the Act, it was not intended to change fundamental copyright principles and much of the case law developed prior to the coming into force of the Act may still be used as an aid to the construction of the Act and for determining whether the previous law has been departed from.<sup>5</sup> Also, copyright provisions under the Act which correspond to provisions under the previous law are not to be taken to depart from previous law merely because of a change of expression.<sup>6</sup>

<sup>5</sup> Copyright, Designs and Patents Act 1988 s 172(3). Statutory references in this chapter are to the Copyright, Designs and Patents Act 1988 unless otherwise stated.

<sup>6</sup> Section 172(2).

Some of the primary effects of the 1988 Act in terms of copyright law are that it:

- 1 takes account of new technology and it attempts to use definitions that will prove to be sufficiently flexible to take future technological developments in its stride;
- 2 provides more effectively for ‘moral rights’ for authors, in accordance with the Berne Convention for the Protection of Literary and Artistic Works;
- 3 removes some of the anomalies under the old law (for example, under the Copyright Act 1956, the author of the copyright in a photograph was the person who owned the film,<sup>7</sup> not the photographer);
- 4 attempts to rationalise design law and its overlap with copyright.

<sup>7</sup> Copyright Act 1956 s 48(1).

The Act has been changed on numerous occasions, primarily to comply with European Community harmonising Directives. Some of these changes have been very significant, such as the extension to the term of copyright, increased rights in performances, the protection of computer programs and databases and the introduction of specific provisions dealing with copyright in the information society. Other changes have been more to do with rationalising some of the aspects of copyright, such as the inclusion of cable programmes as a form of broadcast, ending the distinction between the two forms of work. With these and many other changes, the Act as it presently is bears only scant resemblance to when it first came into force on 1 August 1989. This makes it very difficult to pin down some of the provisions in the Act and this is made more complex because of the defective implementation of some of the European Directives. An example of the complexity is provided by the duration of copyright in sound recordings for which the following provisions may be relevant (notwithstanding the transitional provisions in Schedule 1 to the 1988 Act and the fact that a film sound track was treated differently to the film):

- Copyright in a sound recording expires 50 years from the end of the calendar year in which it was made or, if released before the end of that period, 50 years from the end of the calendar year in which it was released (s 13(1) of the Act as at Royal Assent and s 13A which along with s 13B substituted the old s 13) (released meant first published, broadcast or included in a cable programme service).
- Copyright in an existing work shall continue to subsist as calculated under the 1988 Act prior to amendment if longer than the duration calculated under the Act as amended by the Duration of Copyright and Rights in Performances Regulations 1995 (reg 15 of those Regulations).
- Copyright expires 50 years from the end of the calendar year in which it was made or, if published during that period, 50 years from the end of the calendar year in which it was published or, if during that period it was not published but was made available to the public by being played in public or communicated to the public, 50 years from the end of the calendar year in which it was so made available or communicated (new s 13A(2) inserted by the Copyright and Related Rights Regulations 2003).
- Copyright in an existing sound recording shall continue to subsist as determined under reg 15 of the 1995 Regulations if longer than the term under new s 13A(2) inserted by the 2003 Regulations.

There is a strong case for a new consolidating Copyright Act but it is unlikely to be high on any parliamentary wish-list given the volume of primary legislation put before Parliament. Indeed, other domestic IP legislation could be significantly improved and made more transparent by such action, as will be seen when looking at the legislative mess that has been achieved in relation to the UK’s registered design legislation.

Moving on to look at the specifics of copyright subsistence, it should be noted that copyright can subsist only in specified descriptions of works. Section 1(1) lists the

works in which copyright can subsist, subject to the qualification requirements (discussed later), as being:

- (a) original literary, dramatic, musical or artistic works;
- (b) sound recordings, films or broadcasts; and
- (c) the typographical arrangement of published editions.

Each of these categories is now examined in detail.

## ORIGINAL LITERARY, DRAMATIC, MUSICAL OR ARTISTIC WORKS

All of these must be original and must be ‘works’. Over the course of time, the courts have attempted to develop tests for showing whether the subject matter is an original work. Apart from defining originality and searching for the threshold that brings the status of a ‘work’, judges have often engaged in more esoteric exercises, particularly in terms of differentiating between unprotectable idea and copyright expression. It should be noted at once that nowhere in the Act does it state expressly that ideas are not protected by copyright. However, by the Copyright, Designs and Patents Act 1988 s 50BA, lawful users of computer programs are permitted to gain access to ideas and principles which underlie any element of the program by carrying out certain acts they are entitled to perform, and the Council Directive 91/250/EEC of 14 May 1991 on the legal protection of computer programs expressly states that ideas and principles underlying any element of a computer program are not protected by copyright.<sup>8</sup>

Before looking at each of the original works separately, the basic issues relating to subsistence of copyright are discussed.

### Originality

One can be excused for believing that the word ‘original’ requires that the work must be new or innovative in some sense, but in copyright law ‘original’ does not have its ordinary dictionary meaning and the courts have interpreted the concept very loosely. The work does not have to be unique, or even particularly meritorious. Rather, originality is more concerned with the manner in which the work was created and is usually taken to require that the work in question originated from the author, its creator, and that it was not copied from another work. In *Ladbroke (Football) Ltd v William Hill (Football) Ltd*, Lord Pearce said that the word ‘original’ requires:

only that the work should not be copied but should originate from the author.<sup>9</sup>

A drawing of an existing object may not be original because the design of the object was not created by the act of drawing. Harman J came to this conclusion in *Duriron Company Inc v Hugh Jennings & Co Ltd*<sup>10</sup> in the context of an inaccurate drawing of an existing design of an anode, described as being of the most jejune and simple character. It would be unthinkable if this view of originality were applied to drawings made by artists. The act of drawing a representation of a flower, a wild bird or a scene from nature requires skill and judgment, even if a faithfully accurate reproduction is the purpose. Although the thing drawn already exists, it is in respect of the drawing that the test of originality must be applied. In this respect, the judgment of Harman J is very questionable. It would have been better if he had based his decision on a lack of skill or judgment, or that the drawing was not a ‘work’. There is, however, some authority for the proposition that an accurate representation of a pre-existing subject is not an original work for copyright purposes, even if its creation requires skill and judgment. In *Antiquesportfolio.com plc v Rodney Fitch & Co Ltd*<sup>11</sup> it was argued that photographs of

<sup>8</sup> Article 1(2), OJ L122, 17.05.1991, p 42.

<sup>9</sup> [1964] 1 WLR 273 at 291.

<sup>10</sup> [1984] FSR 1.

<sup>11</sup> [2001] FSR 345.

antiques placed on a website were not works of copyright. Neuberger J considered that a photograph of a three-dimensional object, such as a sofa, could be an original work as there was skill and judgment (albeit of a commercial sense) in positioning the object and choosing the angle at which the photograph was taken,<sup>12</sup> the lighting and focus. He reviewed the views of learned writers on originality and photographs. Where a photograph was taken of a two-dimensional object, such as a painting or an existing photograph, providing some skill has been used by the photographer, for example in respect of angle, lighting, choice of film and filters, then the resulting photograph could be original for copyright purposes. The main test should be whether the photographer intended to make a faithful copy of the original or whether he wanted to imbue the finished photograph with his own flair. Was he trying to make a duplicate, indistinguishable from the original, or was he trying to put his own ‘signature’ on it? This is particularly relevant nowadays in the context of computer technology and the ways in which images can be modified and manipulated by numerous techniques.

Although it may seem difficult to reconcile a refusal of copyright for an attempt to duplicate an existing photograph or painting with an attempt by an artist to create a painting that accurately records a scene from nature, in practice there is such a distinction. In the latter case, the artist is working with a three-dimensional scene and has an almost infinite choice of positioning and angle. He must also decide on the field of view. Simply trying to reproduce an existing photograph in full leaves the photographer none of these choices. However, using a camera to create a duplicate of a painting or photograph does require a significant amount of technical skill in taking the film, developing it and making prints. If the motive is to create as exact a duplicate as possible, copyright will be denied.<sup>13</sup> If the photographer’s purpose is to stamp his own personality and taste on the finished product, then it may well be a work of copyright. One might ask why the photographer’s motive should be relevant. But it is the desire to create something different, something reflecting the photographer’s own taste, that gives originality.<sup>14</sup> One only has to think of the work of Andy Warhol or Damien Hirst to see this.

A work in respect of which copyright subsistence is in issue may be preceded by preliminary works, such as sketches made prior to a finished drawing or painting. This does not prejudice the originality of the finished work. In *Biotrading and Financing OY v Biohit Ltd*<sup>15</sup> it was held that, where an author makes preliminary drawings before producing a final version, the final version does not lack originality merely because it was preceded by the preliminary drawings.<sup>16</sup> In *LA Gear Ltd v Hi-Tec Sports plc*,<sup>17</sup> the Court of Appeal thought the point so obvious that it needed no authority,<sup>18</sup> whilst in *Macmillan Publishers Ltd v Thomas Reed Publications Ltd*,<sup>19</sup> the court relied on a sequence of ‘chartlets’ in successive editions of a nautical almanac. The sense of this approach can be seen when one considers the alternative – it would be curious if a rough sketch were protected by copyright yet the finished drawing was not. The same principle should apply to the other original works: for example, where a written plan for a speech precedes the final printed speech.

In another way, the utility of the rule that the work in question must not have been copied from another work is limited because, if the work is a copy, the very act of copying would most likely infringe the copyright, if any, in the prior work. As a consequence, the maker of the second work would find it difficult, if not impossible, to exploit his work. One situation of more practical import, where originality would be denied on the basis of copying, is where the copyright in the earlier work has expired or it is not a work of copyright at all. Otherwise any person, whether a stranger or the owner of the copyright which had subsisted in a work, would be able to extend the duration of copyright simply by making another work which was largely a copy of the prior work, incorporating some minor or trivial alterations. In *Interlego AG v Tyco Industries Inc*<sup>20</sup> small modifications made to existing drawings of ‘Lego’ bricks were held not to give rise

<sup>12</sup> Unless, perhaps, the object was a sphere.

<sup>13</sup> Though see the discussion of *Hyperion Records Ltd v Dr Lionel Sawkins* [2005] RPC 808, below.

<sup>14</sup> However, creating a work based on a previous work will bring difficult questions of the scope of protection available for the new work.

<sup>15</sup> [1996] FSR 393.

<sup>16</sup> In the Court of Appeal, Aldous LJ said that the question is whether sufficient independent labour, skill and judgment had been expended in the creation and this is a matter of fact and degree. It was confirmed that the final drawings were works of copyright: *Biotrading and Financing OY v Biohit Ltd* [1998] FSR 109. See also *Guild v Eskandar Ltd* [2001] FSR 645 in relation to modifications to existing garment designs.

<sup>17</sup> [1992] FSR 121.

<sup>18</sup> This point was accepted by Lewison J in *Taylor v Rive Droite Music Ltd* [2004] EWHC 1605 (Ch).

<sup>19</sup> [1993] FSR 455.

<sup>20</sup> [1989] 1 AC 217.

to new works independently protected by copyright, even though the modifications were technically significant. To hold otherwise would result in the possibility that copyright in what was essentially the same work could be extended indefinitely. Thus, half a day's work by a draughtsman making a new drawing by tracing over an existing drawing and making some minor alterations was not sufficient to create a new work of copyright. Originality requires something more than competent draughtsmanship. In *Interlego AG v Tyco Industries Inc*<sup>21</sup> Lord Oliver said that producing a good copy of a painting or an enlarged photograph from a negative would not create an original artistic work, even though the copy painting or positive print would require 'great skill, judgment and labour'. Of course, an artist making a faithful representation of, for example, a still life, uses more than his skill in applying paint to canvas. He also uses compositional and lighting skills, and it is in respect of these that copyright is earned. Some photographers might take issue with Lord Oliver's denial of copyright to photographic enlargements taken from negatives unless, as seems likely, he intended to restrict his comment to those cases where there is no selectivity in cropping the photograph and the entire negative is enlarged without any special effects.<sup>22</sup> The point Lord Oliver was making was that simply to produce a copy of an existing work, no matter how much skill and labour went into its making, could not give rise to a new original work of copyright.

Sometimes, originality is equated with the degree of skill, labour and judgment that went into the creation of the work.<sup>23</sup> However, any skill, labour or judgment used merely in the process of copying an existing work cannot be sufficient to make a work original. It is submitted that the requirement for 'skill, labour and judgment' is a test to be used to determine whether the thing concerned is a 'work', rather than a test of originality, and is more concerned with questions of adequacy and the *de minimis* principle, discussed below.

Peterson J gave the issue of originality detailed consideration in *University of London Press Ltd v University Tutorial Press Ltd*, where he said:

The word 'original' does not in this connection mean that the work must be an expression of original or inventive thought. Copyright Acts are not concerned with the originality of ideas, but with the expression of thought, and, in the case of a 'literary work', with the expression of thought in print or writing. The originality which is required relates to the expression of thought.<sup>24</sup>

He went on to say that the work must not be copied from another work, but that it should originate from the author. The implication of this is that the constituent parts of the work themselves need not be new in any sense and that the work as a whole can be made up from commonplace and pre-existing materials. In a case concerning a street directory, *Macmillan & Co Ltd v K & J Cooper*,<sup>25</sup> it was held that although many compilations have nothing original in their parts, yet the sum total of the compilation may be original for the purposes of copyright. The basic argument for holding that copyright can subsist in such things is that a reasonable amount of work involving judgment and selection has been used in making the compilation.

A formula may be original but its use will not create new works of copyright. In *Bookmakers' Afternoon Greyhound Services Ltd v Wilf Gilbert (Staffordshire) Ltd*<sup>26</sup> Aldous J said that, once a formula has been derived, he did not consider that sufficient skill, labour and judgment is used when calculating, in this case, dividends from starting prices in greyhound races.<sup>27</sup> Aldous J also considered that there was no copyright in a list of 12 such dividends, as it amounted to a mere collocation and not a copyright compilation. There was no skill or judgment and minimal labour in writing them down.

Where the author of a work expends considerable labour and skill in creating a work which uses techniques that are well known in the relevant trade, that will not necessarily deprive the finished work of copyright protection. So it was held in *IPC Magazines*

21 [1989] 1 AC 217 at 262.

22 Curiously, in an unreported case, *Manners v The Reject Shop*, June 1994, Bow Street Magistrates' Court, a stipendiary magistrate decided that a photocopy (in this case of a design applied to a ceramic tile) could be an original work: see Kinnier-Wilson, J. 'Criminal Copyright Offences under Sections 107 and 110 UK CDPA' [1995] 1 EIPR 46.

23 See, for example, the judgment of Whitford J (at first instance) in *LB (Plastics) Ltd v Swish Products Ltd* [1979] RPC 551, where, talking in terms of artistic copyright, he suggested that the question of originality depended upon the amount of labour, skill and judgment expended on the creation of the work.

24 [1916] 2 Ch 601 at 608–609.

25 (1923) 93 LJPC 113.

26 [1994] FSR 723.

27 *Quaere* whether a formula would be deemed *de minimis*; see below.

*Ltd v MGN Ltd*.<sup>28</sup> In that case, it was argued that the claimant's 'masthead' logo for *Woman* magazine had been infringed by the defendant. Summary judgment was granted in favour of the claimant. Although the logo made use of common techniques such as the font used, and appeared in white letters on a red background, it was accepted that sufficient time and labour had been spent on the design of the logo. Richard McCombe QC, sitting as deputy High Court judge said (at 438):

Mr Platt-Mills submitted that the logo is 'little more' than the word 'Woman' written in ordinary letters and ordinary manner; he says no great skill and labour is involved. In summary, he submitted, 'I could do that'. Decisively, however, to mind he did *not* do that; Mr Earl did, and indisputably he spent time and labour in doing so. (Original emphasis.)

It is perhaps unfortunate that the phrase 'time and labour' was used. Although, as discussed below, judges have used different phrases in the past, and variations of similar phrases, the better test for originality now is that the author of the work has expended skill and judgment in its creation, in a conceptual way rather than just in the manufacture of the physical embodiment of the work.

There is an important qualification to the requirement that a literary, dramatic, musical or artistic work must be original. In the case of computer programs and databases protected by copyright, they are required to be the author's own intellectual creation. Section 3A(2) of the Copyright, Designs and Patents Act states that a database is original if, and only if, by reason of the selection or arrangement of the contents of the database the database constitutes the author's own intellectual creation. The Directive on the legal protection of computer programs<sup>29</sup> required that the only test for subsistence of copyright in a computer program was that it was protected if it was original in the sense that it was the author's own intellectual creation, with no other criteria being used to determine its eligibility for protection.<sup>30</sup> However, when the Directive was implemented no mention was made of the phrase 'author's own intellectual creation' though this should not be a problem as a judge would almost certainly use the text of the Directive if originality was in issue.

We have seen that the test of originality has been applied in a relatively soft manner but the modern trend is to look for skill and judgment in the creation of a literary, dramatic, musical or artistic work. The prominence which 'labour' or 'effort' had in the process of creating a work now seems to have faded. That being so, it now seems reasonable to argue that a work is original if it is the author's own intellectual creation and that the two standards are one and the same. This is not beyond doubt, however, given the very large body of case law on originality, but it would be regrettable if a different standard applied to computer programs and databases as applied to the other forms of original works of copyright. Had the Court of Appeal used the standard of intellectual creation in *Hyperion Records Ltd v Dr Lionel Sawkins*,<sup>31</sup> discussed later, they would have found it easier than they did to find that Dr Sawkins' performing edition of Baroque music was original for copyright purposes.

## Meaning of 'work'

As mentioned above, the search for a reasonable amount of effort expended in the creation of a work is one way in which some judges have tested for originality. For copyright to subsist in a literary, dramatic, musical or artistic work, it must qualify as a 'work', and one way of determining this is to consider the amount of skill, labour or judgment which has gone into its creation. Judges have displayed some inconsistency in the formulae they have used: for example, 'work or skill or expense' *per* Lord Pearce in *Ladbroke (Football) Ltd v William Hill (Football) Ltd*,<sup>32</sup> 'knowledge, labour, judgment or literary skill or taste' *per* Lord Atkinson in *Macmillan & Co Ltd v K & J Cooper & Co Ltd*<sup>33</sup>

<sup>28</sup> [1998] FSR 431.

<sup>29</sup> Council Directive 91/250/EEC of 14 May 1991 on the legal protection of computer programs, OJ L122, 17.05.1991, p 42.

35 (1829) 1 Russ & M 73.

and ‘skill and labour’ *per* Lord Templeman in *British Leyland Motor Corp Ltd v Armstrong Patents Co Ltd*.<sup>34</sup> Nevertheless, it is clear that some measure of skill or judgment must have been expended in the production of the work before it can attract copyright protection. In *Baily v Taylor*,<sup>35</sup> a case concerning the copying of tables of values of leases and annuities, a request for an injunction to restrain publication of a work containing the copied tables was refused partly on the ground that any competent person could have recalculated the tables in a few hours.

It is misleading to suggest that the creation of a work of copyright should extend over a significant period of time. After all, the time taken might be quite small as in the case of an artist creating a sketch in a matter of minutes or in taking a photograph. However, *Baily v Taylor* is not authority for saying that there can be no copyright in a work which takes but a short time to create. As the claimant brought his action in the Court of Chancery, the only remedies available to him were an injunction and/or an account of profits. The Court of Chancery did not say that copyright did not subsist in the tables, and the claimant was left to pursue a remedy for damages at law should he wish. What is of greater interest is the position where the information contained in the work is entirely factual such that there is no ‘design freedom’, as was the case in *Baily v Taylor*. Speaking of factual information in a table containing information such as sunrise and sunset times, Viscount Simon said, *obiter*, in *Cramp (GA) & Sons Ltd v Frank Smythson Ltd*.<sup>36</sup>

36 [1944] AC 329 at 336.

The sun does in fact rise, and the moon set, at times which have been calculated, and the utmost that a table can do on such a subject is to state the result accurately. There is so far no room for taste or judgment.

The creation of a new table or compilation containing exclusively factual information may require a significant amount of work and effort in deriving that information, for example, by scientific observation and measurement. It seems unduly harsh to deny protection against another wishing to copy the information to save himself the trouble and expense of deriving the same information independently, particularly if his purpose is to produce a competing work. Of course, there may be copyright in the manner in which the information is presented (for example, in the design and layout of the table itself or in annotations), but that does not protect the information.

It may be that the person recording or calculating the information has done so imperfectly. What if the table contains a number of mistakes and someone copies the table without permission? Notwithstanding that the presence of common mistakes may be potent evidence of copying, is there a copyright in mistakes? Another way of looking at the situation where there is no freedom of expression is to argue that the issue is not one of subsistence of copyright, but is rather a matter of evidential value in an infringement action. The fact that two persons create works containing the same information which must, by necessity, be identical is not evidence of copying; something further is needed.

The question is whether the application of sheer effort alone is sufficient to bestow copyright upon the resulting work. The US Supreme Court held not in *Feist Publications Inc v Rural Telephone Service Co Inc*<sup>37</sup> in denying copyright protection to purely factual compilations, laying to rest the ‘sweat of the brow’ doctrine.<sup>38</sup> In that case it was held that the ‘White Pages’ in a telephone directory were not protected by copyright because that section of the directory was the result of effort only and did not require the application of skill and judgment. It was basically a question of arranging names in alphabetical order and including addresses and telephone numbers. On the other hand, ‘Yellow Pages’ in telephone directories could be copyright material because of the skill and judgment expended in selecting the classification system and the fact that other copyright materials such as advertisements were also included.<sup>39</sup>

37 499 US 340 (1991).

38 According to this doctrine copyright was a reward for the hard work that went into compiling facts.

39 However, in *Bell South Advertising and Publishing Corp v Donnelly Information Publishing Inc* 999 F 2d 1436 (11<sup>th</sup> Cir, 1993), it was held that copying factual information from Yellow Pages did not infringe copyright.

In another US case, *Southco Inc v Kanebridge Corp*,<sup>40</sup> copyright was denied to part numbers used to identify fastening devices known as retractable captive-screw assemblies. Southco, which made the fasteners, derived a system for allocating part numbers comprising nine-digit codes to the fasteners. The Court of Appeals said that short phrases and part numbers were denied copyright protection because they lacked creativity.<sup>41</sup> An example of a part number used by Southco was 47-10-202-10. This lacked any creative spark, being produced by the mechanical application of the numbering system. The fact that thought and conception went into designing and developing the numbering system did not help. The assignment of the part numbers required no human judgment but was based on the properties of the fasteners.

The approach in *Feist* and *Southco* is not necessarily at odds with the position in the UK and, apart from the woolliness of some judgments on this point, it appears that the same principle applies. For example, in *Cramp (GA) & Sons Ltd v Frank Smythson Ltd*,<sup>42</sup> a diary containing the usual information printed in diaries, such as a calendar, tables of weights and measures and postal information, failed to attract copyright in respect of the work of selecting and arranging the information. The reason was that the commonplace nature of the information left no room for taste or judgment in the selection and organisation of the material.

However, in *Waterlow Directories Ltd v Reed Information Systems Ltd*<sup>43</sup> the subsistence of copyright in legal directories containing lists of names and addresses of firms of solicitors and barristers was not put in issue. The defendant simply denied infringement. In *Cobbett v Woodward*<sup>44</sup> it was suggested that a Post Office directory which was purchased by the public could be subject to copyright, although it was held that there could be no copyright in a trade catalogue, a fact that must be seriously doubted now. Though there must be some doubt about the copyright status of compilations which require no skill or judgment in their making, as soon as some additional material is included by reason of the application of skill or judgment by the compiler, then copyright will subsist in the compilation. That additional material may be a set of headings for a classification scheme,<sup>45</sup> or a credit rating appended to each client in a database of customers. This approach accords with German copyright law, which requires a work to be a 'personal intellectual creation'<sup>46</sup> and the European Community approach which requires a copyright computer program to be the author's 'own intellectual creation'.<sup>47</sup> Where the creation of the work itself does not require skill or judgment, it may still attract copyright if there is sufficient skill or judgment expended in the work carried out in preparing for its creation. Aldous J so held in *Microsense Systems Ltd v Control Systems Technology*<sup>48</sup> in relation to a list of mnemonics designed to control pelican crossings. He said it was at least arguable that the skill and labour in devising the functions and operations of the controller should be taken into account.

Scholars who carry out research into old works are concerned about the copyright status of the results of their research. For example, if a literary scholar, by his research, attempts to piece together the true text of a medieval sonnet, does he gain a copyright in his finished work? It would seem entirely possible, especially if the approach of Aldous J in the *Microsense* case above is accepted as representing the true position. Indeed, in Israel it has been held that a scholar who, by his extensive knowledge of the Hebrew language, history and culture, pieced together fragments of one of the Dead Sea Scrolls, filling in missing pieces based on his research, created a work of copyright.<sup>49</sup> It could be argued that there must be a limit to this approach and the new work must be more than a mere copy of the original. Logically, if a scholar manages to reproduce an old work exactly as it was originally written he can have no copyright. A long-since expired copyright cannot be resurrected.<sup>50</sup> Of course, if the original does not exist in its complete form, it is impossible to tell for certain whether it has been re-created precisely. On the other hand, there should be some reward for the undoubted research, skill

<sup>40</sup> 324 F 3d 190 (3<sup>rd</sup> Cir 2003).

<sup>41</sup> The case can also be seen as an example of the application of the *de minimis* principle discussed later.

<sup>42</sup> [1944] AC 329.

<sup>43</sup> [1992] FSR 409.

<sup>44</sup> (1872) 14 Eq 407 LR.

<sup>45</sup> It was held that there was copyright in a set of headings in a trade catalogue in *Lamb v Evans* [1893] 1 Ch 218.

<sup>46</sup> German Copyright Act 1965 s 2(2).

<sup>47</sup> Article 1(3), Council Directive 91/250/EEC of 14 May 1991 on the legal protection of computer programs, OJ L122, 17.05.1991, p 42. The same test for subsistence applies to copyright databases.

<sup>48</sup> Unreported, 17 July 1991.

<sup>49</sup> *Elisha Kimron v Hershel Shanks* [1993] 7 EIPR D-157.

<sup>50</sup> Except where the term of copyright is increased by legislative action, as happened under the Copyright Act 1911 and the Duration of Copyright and Rights in Performances Regulations 1995, SI 1995/3297.

and judgment that goes into re-creating old works that no longer exist in their original and complete form.

It would seem likely that, on the basis of skill and judgment, discovering, understanding and translating ancient text in a language not previously understood would attract copyright in the translation: for example, in the case of the Rosetta stone which enabled Jean-François Champollion to decipher ancient Egyptian hieroglyphs by comparing them with the Greek and Demotic script also on the stone.<sup>51</sup> This would, however, not give any rights to prevent the use of the hieroglyphic language by others.

<sup>51</sup> He deciphered the hieroglyphs in 1822, having to make a number of educated guesses about the meaning of some of the hieroglyphs.

A person who uses his or her expertise to fill in the missing parts of an old work which cannot readily be pieced together from remaining parts and fragments will usually require the expenditure of skill and judgment, sometimes on a substantial scale. In *Hyperion Records Ltd v Dr Lionel Sawkins*,<sup>52</sup> the Court of Appeal had to decide whether this could give rise to a new copyright. Dr Lionel Sawkins was a recognised world expert on the work of a French composer Lalande who lived from 1657 to 1726 and had been court composer to the French monarchy. Relatively little remained of the manuscripts of Lalande's music and Dr Sawkins carried out extensive research that took him to numerous libraries all over the world which had parts of original manuscripts and other materials. Dr Sawkins decided to write new performing editions of a number of Lalande's musical works, carrying out a significant amount of work on what remained of the source material, making additions and corrections. In the case of some works, these were considerable. He also added 'figuring' for the bass parts, absent from much of the original manuscripts and wrote some missing viola parts. Dr Sawkins' admitted intention was to recreate the works as faithfully as possible though he said that whether that was achieved was a matter of guesswork based on his knowledge and experience. At first instance, the judge, Patten J, described the process gone through by Dr Sawkins as combining his 'scholarship and knowledge derived from a long and detailed study of the composer's music with a certain amount of artistic inventiveness'.

<sup>52</sup> [2005] RPC 808.

The works were to be performed by an orchestra with choir known as *Ex Cathedra* and was to be recorded by Hyperion Records. Dr Sawkins sent copies of the scores to the conductor for the performances and he also registered the works with the Performing Right Society and the Mechanical Copyright Protection Society Limited. Each of the works as registered carried a copyright notice in the name of Dr Sawkins. An agreement was forwarded to Hyperion Records which stated that Dr Sawkins was the copyright owner and imposed restrictions on the use of the scores. Hyperion Records refused to sign this although it was prepared to credit Dr Sawkins as author. However, Hyperion Records had a policy of not paying royalties on works that were out of copyright. Negotiations went on right up to the time the recordings took place and it appeared that Dr Sawkins hoped the copyright issues would be resolved. After Hyperion Records produced and marketed CDs of the recording, Dr Sawkins commenced proceedings for copyright infringement and breach of his moral right to be identified as the author (although he was named on the CDs, it was not as author).

Patten J in the Chancery Division held that Hyperion infringed the copyright in all but one of the works complained of (this was a relatively small work with few changes made by Dr Sawkins). He also held that there had been a breach of the right to be identified as author. The Court of Appeal agreed. As regards originality, the case of *Walter v Lane*<sup>53</sup> was cited with approval. In that case, a reporter attended a speech made by Lord Roseberry and took shorthand notes of it. Later, he wrote a newspaper report which carried the speech. He had written it from his notes, partly working from memory and adding corrections and punctuation. It was held that copyright subsisted in the report which had been copied without consent by the defendant. In *Hyperion v Sawkins*, Mummery LJ said (at para 36):

<sup>53</sup> [1900] AC 539.

on the application of *Walter v Lane* to this case, the effort, skill and time which the judge found Dr Sawkins spent in making the 3 performing editions were sufficient to satisfy the requirement that they should be ‘original’ works in the copyright sense. This is so even though (a) Dr Sawkins worked on the scores of existing musical works composed by another person (Lalande); (b) Lalande’s works are out of copyright; and (c) Dr Sawkins had no intention of adding any new notes of music of his own.

Jacob and Mance LJ agreed. Jacob LJ was of the opinion that *Walter v Lane* was still good law even though it was based on the Copyright Act 1842 before the requirement of originality (this was introduced in the Copyright Act 1911).<sup>54</sup> He was also of the opinion that public policy was in favour of granting protection to works such as the performing editions written by Dr Sawkins as such work should be encouraged and it saves others the time and trouble to re-create old works. It does not give a monopoly and others may make use of the works providing they seek the author’s permission. If they choose not to, there is nothing to prevent them independently going through the same process. Even though their performing editions may be very similar to that of Dr Sawkins they would be the authors of their versions for copyright purposes.

The greater the skill and expertise of the author, the closer one may get to the work as originally written or composed. In *Walter v Lane*, the better at taking shorthand notes, the nearer to the speech the finished report would be likely to be. But this cannot be a relevant consideration in deciding whether copyright subsists. If the speaker was very eloquent, clearly spoken and unhesitating in his delivery and the reporter very able, it may be that the report would well-nigh be identical to the speech. On the other hand, if the speaker was indistinct and hesitant<sup>55</sup> and the reporter’s shorthand skills were poor, the finished report might bear much less resemblance to the exact text of the speech. Should the latter attract copyright because the reporter’s contribution to the finished report would have to be greater than in the first case? The answer must be that both cases require the expenditure of skill and judgment. In the first case, it is the skill in taking shorthand notes and then adding appropriate punctuation and splitting the speech into paragraphs. There would still probably be a few gaps to fill in and, possibly, structural changes. In the second case, the skill comes from producing a finished report from a very imperfect set of notes of the speech. This point was made by Lord Davey in *Walter v Lane*.

Finally, it can be said that one way of looking at the requirement for skill or judgment to have been used in the creation of a work of copyright is to consider it as an example of the basic principle, as alluded to by Peterson J in the *University of London Press* case, that copyright does not protect ideas, merely the expression of ideas.

## Idea/expression

The USA has a well-defined legal principle that copyright protects expression but not ideas; indeed the US Copyright Act of 1976 specifically states that ideas, procedures, processes, systems, methods of operation, concepts, principles and discoveries are excluded from copyright protection.<sup>56</sup> Blank forms for accounts were denied protection by the Supreme Court in *Baker v Selden*<sup>57</sup> and the idea/expression dichotomy has been developed to high levels of sophistication by the US courts ever since. The distinction is important in two respects:

- 1 some things can be expressed only in one way, the expression being dictated by its function or external factors; and
- 2 if copyright were limited only to the actual words used (in a literary work), it would be too easily circumvented by rewriting the work using different words.

<sup>54</sup> Probably what Lord Oliver said *obiter* in *Interlego v Tyco*, above, about making faithful copies not attracting copyright, was too widely stated.

<sup>55</sup> In *Walter v Lane*, Lord Robertson, dissenting, said that some speakers do not speak in sentences but in fragments of sentences, and yet, the following morning, there appears a coherent and grammatical discussion on the subject in a report of the speech. In such cases, as distinct from the facts of *Walter v Lane*, the reporter’s intellectual and literary contribution may be as great as that of the speaker.

<sup>56</sup> United States Copyright Act of 1976, 17 USC § 102 (a). Council Directive 91/250/EEC of 14 May 1991 on the legal protection of computer programs, OJ L 122, 17.05.1991, p 42 also adheres to the idea/expression distinction as, by Article 1(2), underlying ideas and principles are not protected by copyright.

<sup>57</sup> 101 US 99 (1880).

Therefore, as a direct result of these points, some forms of expression are not protected as being ideas (or equivalent to, or dictated by, ideas) and some forms of expression are not directly perceivable (they are non-literal forms of expression).

UK law does not explicitly make the distinction between idea and expression, either in legislation or in case law.<sup>58</sup> It has been pointed out that use of the aphorism ‘there is no copyright in an idea’ is likely to confuse.<sup>59</sup> Indeed, as Lord Hailsham observed in *LB (Plastics) Ltd v Swish Products Ltd*, agreeing with the late Professor Joad, it all depends on what you mean by ‘ideas’.<sup>60</sup> However, English judges have decided cases in such a way as to produce similar results. In *Page v Wisden*<sup>61</sup> (which was cited in *Baker v Selden*) it was held that a cricket scoring sheet was not protected by copyright. In *Kenrick v Lawrence*<sup>62</sup> effective protection was denied to a drawing showing a hand holding a pen and marking a ballot paper. The intention of the person commissioning the drawing was that it could be used to show persons with poor literacy skills how to vote. It was held that a similar drawing did not infringe because it was inevitable that any person who attempted to produce a drawing to show people how to vote would create a similar drawing. In other words, it was an unprotectable idea.<sup>63</sup> The use of design concepts taken from the common stock of architectural ideas that every one is entitled to use, *per se*, will not infringe the artistic copyright in an architect’s plans.<sup>64</sup> However, design concepts and underlying structures and developed ideas may be protected providing they are not too remote from the work as expressed. For example, non-literal expression has been recognised as being within the scope of copyright protection in *Rees v Melville*<sup>65</sup> and *Corelli v Gray*<sup>66</sup> concerning the plot of a play taken from a novel.

Lord Hoffmann identified two propositions when looking at the idea/expression dichotomy in *Designers Guild Ltd v Russell Williams (Textiles) Ltd*.<sup>67</sup> The first was that a work may express ideas that are not protected by copyright because they do not relate to works of copyright, such as an idea for an invention or an inventive concept. The second proposition was that, although the ideas related to a literary, dramatic, musical or artistic work, they are not original or are so commonplace so as not to form a substantial part of the work. In that particular case, he said that the notion of combining stripes and flowers for artwork for a fabric design would not have represented sufficient of the author’s skill and labour so as to amount to a substantial part of the work.

Even if one accepts the idea/expression rule of subsistence as having merit, it has proved, and will continue to prove, very difficult to apply as the boundary between idea and expression is notoriously difficult to discover.<sup>68</sup> This factor, and the idea/expression dichotomy in general, has become highly relevant in terms of computer programs and is discussed at more length in Chapter 8 (see pp 260 and 266).

### De minimis principle

It is clear that it would be ridiculous to afford copyright protection to works that are trivial in the extreme or so small as to be entirely insignificant. However, a line has to be drawn separating works that are the proper subject matter of copyright from those that are not. The courts will often, though not always, use the principle *de minimis non curat lex*,<sup>69</sup> that is, that the work is insufficiently significant to be afforded copyright protection. For example, in *Sinanide v La Maison Kosmeo*,<sup>70</sup> it was held that to quote a bit of a sentence of a literary work was too small a matter on which to base a copyright infringement action. *A fortiori* a name cannot be subject to copyright. For example, the name of the fictional television detective ‘Kojak’ was not protected by copyright.<sup>71</sup> Nor is there any copyright in a single word such as ‘Hitachi’.<sup>72</sup> In the *Sinanide* case, the claimant had used an advertising slogan ‘Beauty is a social necessity, not a luxury’ and complained about the defendant’s use of the phrase ‘A youthful appearance is a social necessity’. Generally, copyright will not subsist in advertising slogans and titles because

58 Judges may sometimes recognise the principle: for example, Whitford J in *Geo Ward (Moxley) Ltd v Sankey* [1988] FSR 66 and Ferris J, applying US authorities, in *John Richardson Computers Ltd v Flanders* [1993] FSR 497. The Directive on the legal protection of computer programs denies protection to underlying ideas and principles (see Chapter 8).

59 Jacob J in *IBCOS Computers Ltd v Barclays Mercantile Highland Finance Ltd* [1994] FSR 275.

60 [1979] RPC 551 at 629.

61 (1869) 20 LT 435.

62 (1890) 25 QBD 99.

63 However, the judge went on to say that if the drawing had been an exact duplicate, there would have been an infringement of copyright. Is this true to say that exact copies would infringe but inexact copies would not?

64 *Jones v London Borough of Tower Hamlets* [2001] RPC 407. See also *Ultra Marketing (UK) Ltd v Universal Components Ltd* [2004] EWHC 468 (Ch).

65 [1911–1916] MacG CC 168.

66 [1913] TLR 570.

67 [2001] FSR 113.

68 For an example involving ‘Fantasy Football’, see *Bleiman v News Media (Auckland) Ltd* [1994] 2 NZLR 673, discussed in Brown, B ‘The Idea/Expression Dichotomy and the Games that People Play’ [1995] 5 EIPR 259.

69 The law does not concern itself with trifles. In *Exxon Corporation v Exxon Insurance Consultants International Ltd* [1981] 3 All ER 241, it was held that the word ‘EXXON’ could not be an ‘original literary work’ without recourse to the *de minimis* principle.

70 (1928) 139 LT 365.

71 *Tavener Rutledge Ltd v Trexapalm Ltd* [1977] RPC 275. Nor is ‘ELVIS’ protected by copyright; *ELVIS PRESLEY Trade Marks* [1997] RPC 543.

72 *Hitachi Ltd v Zafar Auto & Filter House* [1997] FSR 50, Copyright Board, Karachi, Pakistan.

they are usually fairly brief, and the song title ‘The Man who Broke the Bank at Monte Carlo’ was held to be insufficiently substantial for copyright purposes.<sup>73</sup> Nevertheless, there may be circumstances where a title is of such an extensive nature and important character that it will be the proper subject matter of copyright. The *de minimis* rule also applies in the US and examples of short phrases denied copyright protection include ‘most personal sort of deodorant’ and ‘Good morning Detroit. This is J.P. on JR in the A.M. Have a swell day’.<sup>74</sup>

In *Shetland Times Ltd v Dr Jonathan Wills*,<sup>75</sup> the Court of Session, Outer House, Scotland, considered that headlines on an internet website could be a literary work. Some of the headlines consisted of eight or more words put together for the purpose of imparting information. This seems to be inconsistent with the line of cases mentioned above, though it should be noted that, in the *Shetland Times* case, the defendant had conceded the point. The basic question should remain – can the subject matter be claimed to be a *work*? It is arguable that a small number of words may so qualify if they are the result of a significant amount of work involving the exercise of skill and judgement. Nevertheless, the Court of Appeal was not attracted by an argument that the considerable amount of market research that had gone into the selection of the word ‘EXXON’ could, by itself, mean that the word was an original literary work.

If a name or title is represented in a particular way it seems possible that copyright might subsist in it. It was held in *News Group Newspapers Ltd v Mirror Group Newspapers (1986) Ltd*<sup>76</sup> that the use by one newspaper in its advertisements of the logo of another newspaper (the *Sun*) gave rise to an arguable case of copyright infringement. Similarly, in *IPC Magazines Ltd v MGN Ltd*,<sup>77</sup> it was accepted that a stylised version of the word ‘Woman’ in white on a red background as part of a magazine masthead was, at least arguably, a work of copyright. Of course, unauthorised use of a name or title in connection with goods or services or other business activity could infringe a trade mark or be actionable as passing off.

## Tangibility

We have seen that copyright does not protect ephemeral things such as an idea for a novel or a play.<sup>78</sup> As such, ideas may have some protection under the law of confidence, depending upon the circumstances. Copyright law is, because of the nature of the drafting of the current Act and previous Acts, directed to the expression of ideas rather than to the ideas themselves.<sup>79</sup> The method used by copyright law is to require that the work has some tangible form. In the case of some works, such as sound recordings and films, their very existence implies tangibility. The same applies to artistic works. For example, according to Lawton LJ in *Merchandising Corp of America v Harpbond*<sup>80</sup> a painting is not an idea: it is an object. However, literary, dramatic and musical works clearly can exist without any material form. For example, a person may compose a poem and recite it from memory without ever having written it down. A musician may devise a tune while sitting at a piano keyboard without recording it in some way. Therefore, for literary, dramatic and musical works, the Copyright, Designs and Patents Act 1988 declares that copyright does not subsist in such works unless and until they are recorded, in writing or otherwise.<sup>81</sup> ‘Writing’ is defined in s 178 (the interpretation section)<sup>82</sup> as including any form of notation or code, whether by hand or otherwise and regardless of the method by which, or medium in which, it is recorded. These definitions are deliberately couched in language which should ensure that copyright will not be defeated by technological advances, hence the use of the phrase ‘or otherwise’. The requirement for some tangible existence is also important in that it dates the creation of the work, that is, the work is deemed to have been made when it is recorded for the first time.

<sup>73</sup> *Francis Day & Hunter Ltd v Twentieth Century Fox Corporation Ltd* [1940] AC 112.

<sup>74</sup> Quoted in *Southco Inc v Kanebridge Corp* 324 F 3d 190 (3<sup>rd</sup> Cir 2003) Court of Appeals for the Third Circuit in which it was held that nine-digit part numbers were not protected by copyright.

<sup>75</sup> [1997] FSR 604.

<sup>76</sup> *The Times*, 27 July 1988.

<sup>77</sup> [1998] FSR 431.

<sup>78</sup> Provided that they are not so detailed as to be considered a non-literary form of expression.

<sup>79</sup> This distinction is evident in the Berne Copyright Convention.

<sup>80</sup> [1983] FSR 32.

<sup>81</sup> Copyright, Designs and Patents Act 1988 s 3(2).

<sup>82</sup> Section 178 contains several important definitions, but other definitions are scattered throughout the 1988 Act. However, the Act is very helpful in that an index is provided to assist in the location of definitions: s 179. Other indexes are provided for the parts of the Act dealing with rights in performances and the design right.

Of course, one would expect that the record is made by the author or with the author's permission, but this is not essential, and s 3(3) states that it is immaterial whether the work is recorded by or with the permission of the author. Therefore, if a person delivers an impromptu unscripted speech without having made any notes previously, and a member of the audience records the speech verbatim in writing, then the speaker will be the author of the written work for copyright purposes. If the member of the audience uses skill and judgment in recording the speech, perhaps adding structure and punctuation, then he is likely to be considered to be the author of that record of the speech, as in *Walter v Lane*,<sup>83</sup> where it was held that copyright subsisted in a newspaper report of a speech by Lord Roseberry prepared from a reporter's shorthand notes and that the newspaper for which the reporter worked, *The Times*, owned that copyright.<sup>84</sup>

<sup>83</sup> [1900] AC 539.

<sup>84</sup> At the time of this case there was no requirement for originality. It may depend on whether the person making the record exercises some skill thus bringing some originality to the report: see *Robertson v Lewis* [1976] RPC 169 and Cross J's comments on *Walter v Lane*. In *Express Newspapers plc v News (UK) Ltd* [1990] 1 WLR 1320 it was held that *Walter v Lane* was still undeniably good law. It was applied by the Court of Appeal in *Hyperion Records Ltd v Dr Lionel Sawkins* [2005] RPC 808.

Section 3(3) goes on to state that nothing in s 3(2) affects the question whether copyright subsists in the record as distinct from the work recorded. This is likely to be relevant in a case where a sound recording is made of a literary, dramatic or musical work that has not previously been recorded in any form. Consider a musician who sits down at a piano and plays an impromptu piece of music which he composes as he plays. He does not make any record of the music. However, as he plays the music, another person makes a sound recording of it. At the time the sound recording is made the work, as a musical work, does not exist for copyright purposes. The person making the sound recording will be the producer of it and, therefore, its author. He will have a copyright in that sound recording as a sound recording. If the musician is able to remember the music and later decides to write it down on paper, using musical notation, it will then exist as a musical work and the musician will be the author of it as such. The effect of the proviso to s 3(3) is to prevent any prejudice to the copyright in the sound recording. However, the impact of rights in performances must be noted and should resolve any potential conflict between the two copyrights, for example, where the sound recording is later played in public without the consent of the musician.

### Shifting standards of copyright subsistence

We have seen that there are several ways in which works in the original category of copyright may fail to attract copyright protection. The 'thing' concerned may not be original, or it may not be the result of skill, labour or judgment. It may be deemed to be a mere idea, or it may be too small or trivial for copyright. The traditional English approach of readily granting copyright protection has a lot to be said for it. After all, why should the creator of a work be deprived of the right to control its future use because of the application of some ill-conceived test? For example, take the idea/expression dichotomy and the apparent denial of copyright for 'ideas'. This is based on the false premise that, otherwise, ideas would be monopolised. Copyright does not create monopolies. Copyright infringement requires some act to be done in relation to the first work. The independent creation of a new work, no matter how similar it may be to existing works, does not trespass on the property rights of other copyright owners. Thus, the purported justification of denying copyright to ideas is unfounded.

<sup>85</sup> 101 US 99 (1880).

The courts in the US, since *Baker v Selden*<sup>85</sup> have fallen into a trap from which they cannot escape in a dignified manner. The simple truth is that the idea/expression dichotomy should not be an issue of subsistence of copyright. Its relevance is entirely a matter of evidence. Indeed, this is how the court in *Kenrick v Lawrence*<sup>86</sup> rightly interpreted it. The fact that the expression of a work is dictated by, or at least severely constrained by, its underlying idea does not and should not affect the subsistence of copyright one way or another. It simply means that any similarity between the first and second work cannot raise a presumption of copying. The independent act of creating a new work based on the same idea inevitably would result in a similar expression. That is not

<sup>86</sup> 101 US 99 (1880).

the same as saying that deliberately copying will not infringe. If such copying results in an exact duplicate of the first work, it is likely that a court will accept that there has been infringement of copyright, in the absence of any other explanation.<sup>87</sup>

By falling into the idea/expression trap and using other misguided tests such as *de minimis* (again, this is probably more concerned with infringement rather than subsistence) it is easy to lose sight of the basic legislative provisions dealing with subsistence. Parliament has sought to endow copyright on qualifying original literary, dramatic, musical and artistic works. The first three are also required to be recorded in writing or otherwise. We have seen that a work is original if it is its author's own work and not simply a copy of an existing work. For the thing to be a work, it must be the result of skill, judgment or labour. This accords with the ordinary meaning of 'work'.

The Act does not expressly deny protection to ideas or, provided they are the result of skill, judgment or labour, small works. Why should we further curtail copyright by imposing additional criteria not in the Act? For example, if I spend some time and effort in compiling a list of customers or in calculating the sun's inclination in the sky at a given time and at a given geographical location based on well-known formulae, why should I be denied copyright? Should I not have a remedy against someone who copies my list or calculations, without my permission, saving himself the trouble of finding the information for himself?

The UK is in danger of moving from the reward for work theory to a position whereby more hurdles are placed along the route to copyright subsistence. This danger comes from two fronts. First, there are pressures from European Community legislation, which uses standards such as 'the author's own intellectual creation'<sup>88</sup> and which envisages that many databases will fail to attract copyright protection.<sup>89</sup> The second danger stems from the USA and the readiness of some English judges to treat copyright precedents from there with a respect that is a little too generous.<sup>90</sup>

Lord Devlin, in *Ladbroke (Football) Ltd v William Hill (Football) Ltd*,<sup>91</sup> spoke of copyright in the following terms:

The law [of copyright] does not impinge on freedom of trade; it protects property. It is no more an interference with trade than is the law against larceny. Free trade does not require that one man should be allowed to appropriate without payment the fruits of another's labour, whether they are tangible or intangible. The law has not found it possible to give full protection to the intangible. But it can protect the intangible in certain states, and one of them is when it is expressed in words and print. The fact that that protection is necessarily limited is no argument for diminishing it further; and it is nothing to the point to say that either side of the protective limits a man can obtain gratis whatever his ideas of honesty permit him to pick up.

The basic rationale of copyright is the grant of property rights in works created by the human mind which are expressed in some way. It should not matter if the finished work is constrained by its underlying idea or if it requires only effort in its execution. In both of these cases, what is being rewarded is the mental decision to create the work coupled with the toil or labour to bring it to fruition. Why should a work that requires skill in its execution be better protected than one in which the creative element lies in the conception of the work in the human mind? Because we are being drawn into unnecessary or unduly stringent tests for the subsistence of copyright, we are in grave danger of further diminishing copyright law. The elitism of art over labour is becoming subsumed in copyright law.

## Literary works

The Copyright, Designs and Patents Act 1988 s 3(1) defines a literary work as any work, other than a dramatic or musical work, which is written, spoken or sung, and includes a table or compilation other than a database, a computer program, preparatory design

<sup>87</sup> In *Kenrick v Lawrence* it was said, *obiter*, that a slavish copy would infringe.

<sup>88</sup> Article 1(3), Council Directive 91/250/EEC of 14 May 1991 on the legal protection of computer programs, OJ L 122, 17.05.1991, p 42.

<sup>89</sup> Article 3(1), Directive 96/9/EC of the European Parliament and of the Council of 11 March 1996 on the legal protection of databases, OJ L 77, 27.03.1996, p 20.

105 [1994] FSR 659.

material for a computer program and a database.<sup>92</sup> It should already be clear that a literary work does not have to be a work of literature, and this is implied by the inclusion of tables, compilations, computer programs, preparatory design material for computer programs and databases in the category of literary works. The courts have long since been prepared to take a very wide view of what constitutes a literary work. For example, Peterson J said in *University of London Press Ltd v University Tutorial Press Ltd*:

It may be difficult to define 'literary work' as used in this Act [Copyright Act 1911], but it seems to be plain that it is not confined to 'literary work' in the sense in which that phrase is applied, for instance, to Meredith's novels and the writings of Robert Louis Stevenson . . . In my view the words 'literary work' cover work which is expressed in print or writing, irrespective of the question whether the quality or style is high. The word 'literary' seems to be used in a sense somewhat similar to the use of the word 'literature' in political or electioneering literature and refers to written or printed matter.<sup>93</sup>

This must be expanded nowadays to cover material recorded on modern storage media. For example, a report produced using a word processor is a literary work the moment it is stored on a computer disk because it is then recorded 'in writing or otherwise'.

Examples of works afforded literary copyright are books of telegraphic codes,<sup>94</sup> examination papers,<sup>95</sup> football coupons,<sup>96</sup> consignment notes,<sup>97</sup> headings in a trade directory,<sup>98</sup> business letters,<sup>99</sup> legal forms and precedents<sup>100</sup> and case headnotes and summaries.<sup>101</sup> Tables and compilations expressly fall within the meaning of literary work, examples of tables being railway timetables, company balance sheets, actuarial tables and mileage charts. In the past, compilations included things like lists of customers, directories, listings of television programmes and the 'Top Twenty' bestselling records. Now, with the introduction of databases as a form of literary work, most of these things will be protected by copyright as databases, providing they are intellectual creations. Indeed, recital 13 to the database Directive<sup>102</sup> states: 'Whereas this Directive protects collections, sometimes called "compilations", of works, data or other materials . . .' Few examples of compilation copyright may now exist though one example is a compilation of musical performances, expressly excluded from the scope of the database Directive. One issue is what the position is where a database is not the result of intellectual creation. This standard, used in the database Directive, may be slightly higher than the test of originality. If a database is 'original', though not quite an intellectual creation, is it protected as a compilation? (It may be protected by the *sui generis* database right, discussed in Chapter 8 pp 282–7.) Compilation copyright may also still be available for collections of materials that are not arranged in a systematic or methodical manner, this being required for databases protected under the Directive.

In the past it was accepted that a compilation can comprise both literary and artistic materials,<sup>103</sup> but a change in terminology in the 1988 Act compared to the previous legislation suggested that there is no copyright protection in a compilation of artistic works only because a literary work must be written, spoken or sung, and it can be argued that artistic works are not written.<sup>104</sup> However, the introduction of database copyright has probably resolved such doubts. Additionally, of course, the artistic works may be protected in their own right.

In *Anacon Corp Ltd v Environmental Research Technology Ltd*,<sup>105</sup> Jacob J was prepared to accept that circuit diagrams from which circuit boards were made, in addition to being artistic works, were also literary works as a circuit diagram has writing on it which is intended to be read rather than simply being appreciated by the eye. The writing may be in code: for example, the value of a component. Nevertheless, the written information forms a table or compilation and the fact that it is scattered about and joined by lines does not prevent it being so. The headnote to the law report states that the circuit diagrams were literary works. This goes too far. They are artistic works that

contain information protected by literary copyright. The graphic elements such as representations of components and connecting lines are not subject to literary copyright. Laddie J considered this to be the correct view of *Anacon* in *Electronic Techniques (Anglia) Ltd v Critchley Components Ltd*<sup>106</sup> where he dismissed an application for summary judgment. Part of the basis for his decision was that, ignoring the graphic elements of the diagrams, as a literary work the circuit diagram was little more than a list of five or six components. Consequently, the defendant had a significant defence that the diagram was not sufficiently substantial to qualify as an original literary work.

The Copyright, Designs and Patents Act 1988 affords copyright protection to computer programs and preparatory design material for computer programs as literary works. The Act, very wisely, does not attempt to define what a computer program is.<sup>107</sup> In view of the rate of development of computer technology, any precise legal definition could prove to be inappropriate in the future or, at least, could unduly inhibit flexibility in the law. Where the Act does contain definitions, they tend to be very widely drawn. The classification of computer programs as literary works follows international developments and is in line with European Community developments on the subject. Computer programs, preparatory design material for computer programs, databases and other items of computer software are considered more fully in Chapter 8.

For a work to be an ‘original literary work’, it must accord with that phrase taken as a whole. It is not sufficient that a work satisfies each word individually. This is another limitation on the scope of copyright, the effect of which is similar to the *de minimis* principle. In particular, the word ‘original’ should not be looked at in isolation. In *Exxon Corporation v Exxon Insurance Consultants International Ltd*,<sup>108</sup> the claimant was a multinational oil company. It decided to choose a new corporate name, and after considerable research and consultation the word ‘Exxon’ was decided upon. The claimant contended that the word ‘Exxon’, being first used by it, was *original*, that it was *literary* because it was expressed in letters and that it was a *work*, being the result of considerable research and effort. Therefore, the claimant argued that the word ‘Exxon’ was an ‘original literary work’ within the Copyright Act 1956 s 2(1). However, it was held that the term ‘original literary work’ was a composite expression denoting a literary work intending to offer information, instruction or pleasure in the form of literary enjoyment.<sup>109</sup> For a word or expression to be within the meaning of ‘original literary work’, it was not enough that the work could be described as ‘original’, ‘literary’ and a ‘work’. Although ‘Exxon’ could be described thus separately, it was not an original literary work because it conveyed no information, provided no instruction and gave no pleasure in the form of literary enjoyment. There was, therefore, no copyright in the word ‘Exxon’.<sup>110</sup> However, the requirement for literary enjoyment must be questioned now because of the addition of computer programs to the categories of literary works.

There may be an issue of the extent of protection by copyright. If copyright subsists in a literary work, for example, to what level of abstraction does copyright extend? In *Baigent v Random House Group Ltd*,<sup>111</sup> an allegation had been made that the novel *The Da Vinci Code* infringed the copyright in an earlier work entitled *The Holy Blood and The Holy Grail*. Both works were the result of substantial research. Whilst the latter was described as a work of ‘historical conjecture’ including material on the Knights Templar and the Merovingian Kings and drawing on writings on the Holy Grail and early Church history, the former book was described as a thriller novel drawing on similar material. Mummery LJ said (at para 156):

Original expression includes not only the language in which the work is composed but also the original selection, arrangement and compilation of the raw research material. It does not, however, extend to clothing information, facts, ideas, theories and themes with exclusive property rights, so as to enable the claimants to monopolise historical research or knowledge and prevent the legitimate use of historical and biographical material, theories propounded,

106 [1997] FSR 401.

107 Neither does the Computer Misuse Act 1990 define ‘computer program’. The Banks Committee described a computer program as ‘a series of instructions which control or condition the operation of a data processing machine’ (*Committee to Examine the Patent System and Patent Law*, Cmnd 4407, 1970, p 140, para 471). The USA has a statutory definition: being ‘a set of statements or instructions to be used directly or indirectly in a computer to bring about a certain result’, 17 USC § 101. This gives rise to the question ‘what is a computer?’!

108 [1981] 3 All ER 241.

109 Based on the definition of a literary work given by Davey J in *Hollinrake v Truswell* [1894] 3 Ch 420 at 427. This seems to be a narrower definition than that adopted by Peterson J in *University of London Press Ltd v University Tutorial Press Ltd* [1916] 2 Ch 601.

110 The word ‘Exxon’ was registered as a trade mark both within the UK and elsewhere.

111 [2007] FSR 579.

general arguments deployed, or general hypotheses suggested (whether they are sound or not) or general themes written about.

In other words, copyright subsistence (and hence infringement) may extend to the way in which facts, ideas and theories are expressed by the author but this does not mean that those facts, ideas and theories are themselves the subject matter of copyright. This shows that copyright does not give a monopoly in such aspects of a work and others should be free to use them providing they express them in their own way.

### Dramatic works

**112** Copyright, Designs and Patents Act 1988 s 3(1).

**113** [1908] 1 KB 821.

**114** See also *Tate v Thomas* [1921] 1 Ch 503.

**115** [1989] RPC 700.

**116** The only exception is where the copyright owner is also the only source of the information contained in the work; see Joined Cases C-241/91P and C-242/91P *RTE & ITP v EC Commission* [1995] ECR I-743.

**117** [1911–1916] MacG CC 168.

**118** Legislative action is needed to clarify the protection of the dramatic format of ‘game shows’. An opportunity to include suitable measures in the Broadcasting Act 1990 was not taken advantage of.

**119** [1999] FSR 79.

A dramatic work includes a work of dance or mime.<sup>112</sup> Under previous law, it was possible, theoretically, for a work to be both a dramatic work and a literary work: for example, a script for a play could fall into both of these categories. This was of no consequence as the rights provided for were identical for both types of work. Under the Copyright, Designs and Patents Act 1988, this sterile overlap is removed and a literary work is defined to exclude a dramatic work. Dramatic works, in common with literary and musical works, must be recorded for copyright to subsist in them. In *Tate v Fullbrook*<sup>113</sup> it was held that a visual skit for a music hall sketch involving the use of a firework was not the subject matter of copyright because it had not been reduced to writing.<sup>114</sup> In *Green v Broadcasting Corporation of New Zealand*,<sup>115</sup> it was held that the dramatic format of a television show had to have some certainty in its subject matter for that format to be entitled to copyright protection. The appellant, Hughie Green, devised the television show *Opportunity Knocks* and claimed copyright in the scripts and dramatic format of the show. The latter comprised catchphrases, the use of a ‘clapometer’ and sponsors to introduce competitors. Finding for the respondents, Lord Bridge said that the protection which copyright gave was a monopoly, and that there had to be certainty in the subject matter of such a monopoly. However, Lord Bridge erred in this respect because copyright certainly does not give a monopoly, it being free to anyone else to produce a similar work as long as they do so independently.<sup>116</sup> A better rationale is that Mr Green’s dramatic format could not be protected either because it lacked certainty for want of material form, or because the respondent had copied only the ideas and not the expression of those ideas. It is difficult to reconcile this case with earlier cases such as *Rees v Melville*<sup>117</sup> concerning the plot of a dramatic work, in which it appears that the plot of the play, in addition to the written expression, may be afforded some protection. It depends on the level of abstraction from the literal expression: the closer it is, the more likely it can be considered to be protected. The further away it is, the more likely it will be considered to be an unprotected idea.<sup>118</sup>

A further problem to protecting a format as a dramatic work is that a dramatic work should be capable of being performed. A dance must be capable of being danced and a work of mime must be capable of being mimed. As Lord Bridge of Harwich said in the *Green* case (at 702):

It seems to their Lordships that a dramatic work must have sufficient unity to be capable of performance.

At first instance, in *Norowzian v Arks Ltd (No 2)*,<sup>119</sup> Rattee J readily accepted this proposition in relation to a dramatic work, recorded on film, which had been made by a process described as ‘jump cutting’. The claimant had made such a film of a man dancing to music but recorded on film in such a way that the position of the man suddenly changed in a way that could not be performed. This was done by cutting out parts of the film and joining together the parts before and after the part that had been removed. The film was supposed to show a spectrum of emotions and was called *Joy*. The first defendant was an advertising agency which made a film for the second defendant,

Guinness, using a similar technique and which showed a man dancing about impatiently waiting for his pint of Guinness stout to settle. Again, impossible movements were portrayed as the man suddenly changed position. This film was called *Anticipation*. It was held that the work could not be a dramatic work because it could not be performed live before an audience. It was also held that a film could be a recording of a dramatic work but that it could not be a dramatic work itself.

On appeal, the Court of Appeal disagreed with the finding that a film could not, *per se*, be a dramatic work.<sup>120</sup> Nourse LJ said that the definition of dramatic work (the Act states simply that it includes a work of dance or mine) is at large and the term must be given its natural and ordinary meaning. That being so, a dramatic work is a work of action with or without words or music which is capable of being performed before an audience. A film is, of course, capable of being performed before an audience. Thus, there is an overlap between dramatic works and films and three possibilities were identified in that a film could be:

- a dramatic work in itself,
- a recording of a dramatic work and also a dramatic work in itself,
- a recording of something which is not a dramatic work.

The Court of Appeal confirmed that the film *Joy* was a dramatic work in itself, being a work of action which was capable of being performed before an audience.<sup>121</sup> However, it was not a recording of a dramatic work although the unedited version of the film was. Despite finding that *Joy* was a dramatic work, the court went on to hold that it was not infringed by *Anticipation*. There was a striking similarity in terms of styles and editing techniques but that was as far as it went. There is no copyright in style or technique.

The decision of the Court of Appeal makes sense and recognises the use of modern techniques such as digital recording and computer manipulation of images in making dramatic works. Thus, a cartoon film made using images developed on or generated by computer will be protected as both a dramatic work and a film but is not a recording of a dramatic work. It could be said that this was Parliament's intention as the Copyright Act 1956 expressly excluded films from the definition of a dramatic work<sup>122</sup> whereas under the 1988 Act there is no such exclusion. Furthermore, the decision of the Court of Appeal accords with the Berne Convention for the Protection of Literary and Artistic Works which states that cinematographic works should be protected as original works.<sup>123</sup>

It appears that a computer game is not a dramatic work. In *Nova Productions Ltd v Mazooma Games Ltd*,<sup>124</sup> at first instance, it was argued, *inter alia*, that a computer game based on the game of pool was a dramatic work. The judge rejected the argument, referring to Nourse LJ in *Norowzian v Arks Ltd (No 2)*<sup>125</sup> who described a dramatic work as a work of action with or without music, which is capable of being performed before an audience. The game could not be so described, it had no unity of action and the results depended to a large extent on the way in which it is played. According to Kitchen J, features of similarity between the claimant's and defendant's computer games could no more be described as features of a dramatic work than those relied on in *Green v Broadcasting Corporation of New Zealand*.<sup>126</sup> In the subsequent appeal in *Nova v Mazooma*,<sup>127</sup> the dramatic work point was not further argued.

## Musical works

A musical work is one consisting of music, exclusive of any words or action intended to be sung, spoken or performed with the music. A song will, therefore, have two copyrights: one in the music and one in the words of the song, the latter being a literary work. This is convenient as it is common for different persons to write the music and the lyrics. Once again, the work must be reduced in writing or otherwise. The

<sup>120</sup> *Norowzian v Arks Ltd (No 2)* [2000] FSR 363.

<sup>121</sup> One slight reservation is that although one normally talks about a live performance, a film is *played* (not performed) before an audience. A distinction is also made between performing, showing or playing a work in public in s 16 setting out the acts restricted by copyright.

<sup>122</sup> Copyright Act 1956 s 48(1).

<sup>123</sup> Article 14<sup>bis</sup>.

<sup>124</sup> [2006] RPC 379.

<sup>125</sup> [2000] FSR 363 at 366.

<sup>126</sup> [1989] RPC 700.

<sup>127</sup> *Nova Productions Ltd v Mazooma Games Ltd* [2007] RPC 589.

Copyright, Designs and Patents Act 1988 gives no guidance as to what a musical work is, but in practice this does not seem to cause any problems; what is beautiful music to one man might be a dreadful cacophony to another. It would seem that a relatively small number of notes and chords are sufficient for copyright protection as a dispute as to the ownership of the copyright in a previous piece of Channel 4 logo music, comprising a four-note theme in an orchestral setting, demonstrated.<sup>128</sup>

<sup>128</sup> *Lawson v Dundas, The Times*, 13 June 1985.

Making an arrangement of an existing piece of music may attract its own copyright in addition to, and running alongside, the copyright subsisting in the prior work. For example, a musician who expends a reasonable amount of skill in arranging and adapting a piece of music originally written for a rock group so that it is suitable for a traditional orchestra will have a copyright in the orchestral work.<sup>129</sup> Of course, he could be guilty of infringing the copyright in the earlier piece of music, should copyright still subsist in it, if he makes his arrangement without the permission of the copyright owner.<sup>130</sup>

<sup>129</sup> *Wood v Boosey* (1868) LR 3 QB 223.

<sup>130</sup> This falls within the meaning of making an adaptation, one of the acts restricted by copyright: Copyright, Designs and Patents Act 1988 s 21(3)(b).

<sup>131</sup> [2005] RPC 808.

Making a new performing edition of an incomplete old work of music out of copyright may itself be worthy of copyright protection even if few or no new notes are added. In *Hyperion Records Ltd v Dr Lionel Sawkins*,<sup>131</sup> Dr Sawkins wrote new performing editions of some of Lalande's baroque musical compositions. He added a figured bass (numbered guidance to musicians, giving them some flexibility in playing the piece of music) and he also corrected notes that he considered wrong or unsatisfactory. In the Court of Appeal, Mummery LJ rejected Hyperion's argument that Dr Sawkins had not written any new music so his work was not a musical work. Mummery LJ said (at paras 55 and 56):

In principle, there is no reason for regarding the actual notes of music as the only matter covered by musical copyright, any more than, in the case of a dramatic work, only the words to be spoken by the actors are covered by dramatic copyright. Added stage directions may affect the performance of the play on the stage or on the screen and have an impact on the performance seen by the audience. Stage directions are as much part of a dramatic work as plot, character and dialogue.

It is wrong in principle to single out the notes as uniquely significant for copyright purposes and to proceed to deny copyright to the other elements that make some contribution to the sound of the music when performed, such as performing indications, tempo and performance practice indicators, if they are the product of a person's effort, skill and time . . .

This is a sensible way of looking at what a musical work is. Although 'musical work' is not defined in the Copyright, Designs and Patents Act 1988, it cannot be restricted only to the actual notes to be played. Mummery LJ made the point that a musical work can be infringed even without taking the actual notes.<sup>132</sup> In *Hyperion*, it was clear that the music could not have been played at all without Dr Sawkins' work in creating the performing editions.

<sup>132</sup> In *Austin v Columbia Gramophone Co Ltd* [1917–1923] MacG CC 398 it was held that infringement of copyright in music is not a question of note for note comparison but falls to be determined by the ear as well as by the eye. See also *Francis Day & Hunter Ltd v Bron* [1963] Ch 587.

<sup>133</sup> [1987] FSR 97.

Rap music is heavily influenced by the lyrics, although the lyrics are a literary work. They influence (one might say 'dictate') the beat and rhythm of the musical work. However, they are still two distinct forms of work. This needs no confirmation and is a matter that should be beyond doubt. But in *Williamson Music Ltd v The Pearson Partnership Ltd*,<sup>133</sup> Judge Baker QC explained his understanding of the relationship between the lyrics and the music by saying (at 109):

It is, I think, misleading to think of them in mutually exclusive compartments. The words by themselves are or may be the subject of literary copyright. But those same words when sung are to me part of the music. After all one gets enjoyment from hearing a song sung in a language with which one is totally unfamiliar. The enjoyment could well be diminished if the vocal line were replaced by another instrument, eg, the piano or a flute. I should say, although I do not wish to take up time by going into it in any detail, that I do not myself see anything in section 8(5) of the Copyright Act which depends upon the absolute division between the words and the music.

In the rap music case, *Peter Hayes v Phonogram Ltd*,<sup>134</sup> Blackbourne J sought to explain the above quote by saying that Judge Baker QC could only have meant that the human voice could represent an instrument in the orchestra and he could not have meant to suggest that the lyrics could in some way form part of the musical work. This would be quite wrong, even in a rap song.

<sup>134</sup> [2003] ECDR 110.

## Artistic works

The artistic work category is a diverse one and includes several different types of works. It is a category that causes special problems because it overlaps with design law and the relationship between copyright and design law is not at all clear-cut. The Copyright, Designs and Patents Act 1988 s 4(1) defines ‘artistic work’ as meaning:

- (a) graphic work, photograph, sculpture or collage, *irrespective of artistic quality*,
- (b) a work of architecture being a building or a model for a building, or
- (c) a work of artistic craftsmanship. (emphasis added)

According to Jacob LJ in *Nova Games Ltd v Mazooma Productions Ltd*,<sup>135</sup> all the things falling within the artistic work category have one thing in common in that they are all static, non-moving. Although a screen display shown during the playing of a computer game is undoubtedly a graphic work, there is no separate copyright in a series of such images. This view is supported by the existence of films as a separate category of copyright work. However, this probably goes too far and it is possible to have a moving sculpture, for example, in the case of some moving water features and fountains. Certainly a series of graphic images cannot be a compilation which, being a literary work, is written, spoken or sung.<sup>136</sup>

<sup>135</sup> [2007] RPC 589 at para 16.

As copyright is stated to subsist in the first category irrespective of artistic quality, a painting of coloured rectangles by Mondrian or a Jackson Pollock painting made up of coloured squiggles is as deserving of copyright protection as is a portrait or a landscape painted in a traditional manner. Relatively simple things such as football club badges are works of artistic copyright<sup>137</sup> as are crests applied to porcelain articles and patterns applied to tableware.<sup>138</sup> The formula ‘irrespective of artistic quality’ ensures that personal taste or preference is no bar to copyright protection, and it also safeguards utilitarian and functional works such as drawings for engineering equipment, photographs made for scientific or record purposes, weather charts and plans for civil engineering and building works. However, it appears that for works falling into the last category of artistic works, that is, works of artistic craftsmanship, some qualitative characteristic is required, as will be discussed later.

<sup>136</sup> See the definition of literary work in s 3(1).

The Copyright, Designs and Patents Act 1988 s 4(2) expands on the definitions and states that a graphic work includes:

- (a) any painting, drawing, diagram, map, chart or plan, and
- (b) any engraving, etching, lithograph, woodcut or similar work.

<sup>137</sup> See, for example, *Football Association Premier League Ltd v Panini UK Ltd* [2004] 1 WLR 1147.

<sup>138</sup> *X Ltd v Nowacki (t/a Lynton Porcelain Co)* [2003] EWHC 1928 (Ch).

Like literary, dramatic and musical works, artistic works must be ‘original’. However, there is no requirement for them to be recorded as their very existence implies some form of tangibility. With the exception of works of artistic craftsmanship, artistic copyright is very generous in what it can protect and in the scope of the protection. Some fairly simple things have been afforded artistic copyright, such as a bare design of a hand,<sup>139</sup> chartlets (simplified coastal maps), a simple label,<sup>140</sup> a working sketch of machinery,<sup>141</sup> a label for a whisky bottle<sup>142</sup> and an inverted ‘R’ with a dot in the loop which looked like a rabbit’s head.<sup>143</sup>

<sup>139</sup> *Hildesheimer and Faulkner v Dunn & Co* (1891) 64 LT 452. But see also *Kenrick v Lawrence* (1890) 25 QBD 93 involving a simple design of a hand showing voters how to cast their votes.

<sup>140</sup> *Charles Walker Ltd v British Picker Co Ltd* [1961] RPC 57.

<sup>141</sup> *B O Morris Ltd v F Gilman (BST) Ltd* (1943) 60 RPC 20.

<sup>142</sup> *William Grant & Sons Ltd v McDowell & Co Ltd* [1994] FSR 690.

<sup>143</sup> *Hutchison Personal Communications Ltd v Hook Advertising Ltd (No 2)* [1996] FSR 549.

The scope of some of the artistic works is very difficult to fix with any certainty. This is inevitable given the breathtaking range of things that could potentially fall within this

category. Unlike some of the other categories of artistic works, graphic works should cause little difficulty. Where there is an issue of subsistence it will be most likely a question of whether the work in question is the result of sufficient skill or judgment.

## Photographs

A photograph means a recording of light or other radiation on any medium on which an image is produced or from which an image may by any means be produced, and which is not part of a film. The definition is media-neutral so, for example, it matters not whether the photograph is captured on celluloid film or on a digital sensor. A still image from a film is not a photograph. Copyright may subsist in a photograph of a painting provided skill and judgment has been expended, for example, by selecting part of the painting only and/or choosing lighting conditions, aperture settings, etc. In *Groves' Case*<sup>144</sup> it was held that copyright subsisted in a photograph of an engraving taken from a picture – three potential copyrights!

Copyright in photographs of paintings, and for that matter other types of work, which are themselves out of copyright can prove valuable commercially. But what is required to confer copyright on such a photograph? Making a slavish copy where there is little of no skill or judgment in its making cannot create a new work of copyright. For example, taking a photograph of a painting with a digital camera using automatic settings where the digital image comprises the whole painting and nothing else would seem to lack skill and judgment unless, perhaps, the photographer made arrangements for the painting to be lit in a particular way. In *Interlego AG v Tyco Industries Inc.*,<sup>145</sup> Lord Oliver said (at 262–63): ‘skill, labour or judgment merely in the process of copying cannot confer originality’. Making a faithful reproduction of a painting by photography was held not to confer copyright in the photograph regardless of the fact that more skill would be required than in the case of making a photocopy in the US case of *Bridgeman Art Library Ltd v Corel Corp.*<sup>146</sup> The judge applied UK and US copyright law,<sup>147</sup> coming to the same conclusion in both cases. He also rejected an argument that the change in medium was sufficient to confer copyright. In *Bridgeman v Corel* the works in question were photographs of old masters. It has current resonance as the National Portrait Gallery has recently complained about the use of images of paintings on Wikimedia Commons.<sup>148</sup> At the present time, all that can be said is that the position of photographs of paintings is unclear. On the other hand, a photograph of a three-dimensional article such as a sculpture carved from stone may have its own copyright because of the skill and judgment in positioning the article, lighting it, selecting angle from which it is to be photographed, lens aperture and shutter speed.<sup>149</sup>

## Sculptures

The meaning of ‘sculpture’ could be particularly wide. It could depend on whether it is intended that sculptures are artistic works in the sense they have been created by ‘creative’ artists or whether any three-dimensional object can be said to be a sculpture even if the purpose of the object is wholly functional with no aesthetic merit or any intention by its creator or designer that it should have eye-appeal. Section 4(2) provides a non-exhaustive definition stating that sculpture includes a cast or model made for the purpose of sculpture. While a three-dimensional object carved from a block of wood or stone or cast in bronze or made in clay as models from which porcelain figures will be made are obviously sculptures, it is doubtful that any three-dimensional article would qualify. Presumably a collection of bricks laid out in an art gallery is a sculpture, but a casing for a gearbox, a moulded plastic chair and a bath are not. What about a moving sculpture such as a ‘mobile’ or Chinese windcharms? Dictionary definitions of

<sup>144</sup> (1869) LR 4 QB 715.

<sup>145</sup> [1989] 1 AC 217. A case before the Judicial Committee of the Privy Council.

<sup>146</sup> 36 F Supp 2d (SD NY 1999).

<sup>147</sup> In relation to UK copyright law, the judge was heavily influenced by Lord Oliver in *Interlego v Tyco*.

<sup>148</sup> *Amateur Photographer*, 1 August 2009, p 5. Wikimedia Commons is operated by the Wikipedia Foundation.

<sup>149</sup> See *Antiquesportfolio.com plc v Rodney Fitch & Co Ltd* [2001] FSR 345, discussed earlier in this chapter.

‘sculpture’ are suggestive of works of art, but this contradicts the phrase ‘irrespective of artistic quality’. If we require the work to have been produced by a sculptor, this is difficult to reconcile with the fact that graphic works are not required to be made by an artist as engineering drawings qualify as artistic works.

There is relatively little case law on sculptures. In *J & S Davis (Holdings) Ltd v Wright Health Group Ltd*<sup>150</sup> it was held that a cast for making a denture was not a sculpture because it was not made for the purposes of sculpture. A generous view of the meaning of sculpture was taken in the New Zealand case of *Wham-O Manufacturing Co v Lincoln Industries Ltd*,<sup>151</sup> in which it was held that a wooden model, from which moulds were made in order to produce plastic flying discs known as Frisbees, was a sculpture.<sup>152</sup> The moulds were held to be engravings, following the decision of Judge Paul Baker in *James Arnold & Co Ltd v Miafern Ltd*,<sup>153</sup> in which he said that the term ‘engraving’ encompassed not only the final image made by the engraved plate but the plate itself. Correspondingly, in *Breville Europe plc v Thorn EMI Domestic Appliances Ltd*<sup>154</sup> plaster shapes made for die-cast moulds for the heating plates of sandwich toasters were held to be sculptures.<sup>155</sup>

This generous application of the artistic copyright in sculptures may owe something to the lack of any requirement for artistic quality. Does the absence of artistic quality as a threshold for protection mean that any person, whether an artist or not, may make an artistic work? Certainly, in the case of a draughtsman preparing an engineering drawing or a plan for a house that would seem to be the case (even more so perhaps in these days of computer-aided design). Does this mean a sculpture can be made by someone who is not a sculptor in the artistic sense? Is an ‘Anglepoise’ lamp a sculpture? Or a domestic heating radiator? Or a ‘desk tidy’ made up of a number of tubes to hold pencils, pens and other bits and pieces? In *Metix (UK) Ltd v GH Maughan (Plastics) Ltd*,<sup>156</sup> Laddie J accepted that it was not possible to say with precision what is and what is not a sculpture. However, he considered that counsel’s submission that a sculpture is a three-dimensional work made by an artist’s hand was near to the mark. However, this is difficult to reconcile with the requirement that copyright subsists irrespective of artistic quality, as pointed out by Christopher Floyd QC in *Hi-Tech Autoparts Ltd v Towergate Two Ltd (No 2)*<sup>157</sup> involving metal plates for making rubber floor mats for cars having a non-slip underside. It was held that the plates were engravings for copyright purposes. It could hardly be claimed that the person who engraved the plates was an artist even though he used skill and judgment in creating them.

The test for subsistence of artistic copyright does not seem to be whether the object is permanent or transient, and an ice sculpture is no less a sculpture because it will melt as it gets warm, assuming that a chef is an artist.<sup>158</sup>

There are, however, limits to what can be a sculpture. An arrangement of objects and people, including a white Rolls-Royce car lowered into a swimming pool, for the purpose of taking a photograph of the scene for the album sleeve for a new recording by the band Oasis, was held not to be a sculpture in *Creation Records Ltd v News Group Newspapers Ltd*.<sup>159</sup> Nor was it a collage. Such a work involved, as an essential element, the sticking of two or more items together. Also, as the arrangement was ephemeral, its continued existence being only as represented in the photograph, it was distinguishable from Carl Andre’s bricks in the Tate Modern and installation art generally.

A distinction was made by Mann J in *Lucasfilm Ltd v Ainsworth*<sup>160</sup> between the Tate bricks and an identical pile of bricks left at the end of a drive for a forthcoming building project. The former was a sculpture because an artist made it for artistic purposes whilst the latter was not a sculpture because a builder made it for building purposes. In *Lucasfilm*, Mann J had to decide, *inter alia*, whether the helmets worn by the Imperial Stormtroopers in the Star Wars film were sculptures. The defendant made the Stormtrooper’s armour for the film and had retained the tools and moulds from which

<sup>154</sup> [1995] FSR 77.

<sup>155</sup> However, in *Lucasfilm Ltd v Ainsworth* [2009] FSR 103, discussed *infra*, Mann J doubted the correctness of the *Wham-O* and *Breville* decisions.

<sup>156</sup> [1997] FSR 718.

<sup>157</sup> [2002] FSR 270.

<sup>158</sup> Laddie J approved of this example in *Metix (UK) Ltd v GH Maughan (Plastics) Ltd* [1997] FSR 718, where he disapproved of Whitford J’s distinction between a carved wooden model and a model fashioned in plasticine in *J & S Davis (Holdings) Ltd v Wright Health Group Ltd* [1988] RPC 403.

<sup>159</sup> [1997] EMLR 444. Although the claimant failed to show a sufficiently arguable case on the basis of copyright, an interim injunction was granted on the ground of breach of confidence.

<sup>160</sup> [2009] FSR 103 at para 118.

the armour, including helmets, was made. In 2004 he started selling the helmets and armour to the public, advertising them on his website. The claimants which had made the film and subsequently licensed the relevant intellectual property rights brought proceedings in England for copyright infringement, breach of confidence and passing off.<sup>161</sup> In holding that the helmets were not sculptures, Mann J reviewed the authorities above and set out what he called ‘guidance factors’ (as opposed to points of principle or rigid requirements) to assist in determining whether a particular thing is a sculpture for the purposes of the Copyright, Designs and Patents Act 1988. They can be summarised accordingly (not wholly verbatim):

<sup>161</sup> The claimants also sought to enforce a United States judgment of infringement of US copyright.

- (i) some regard has to be had to the normal use of the word ‘sculpture’;
- (ii) nevertheless, the concept can be applicable to things going beyond what would normally be expected to be art in the sense of the sort of things expected to be found in art galleries;
- (iii) it is inappropriate to stray too far from what would normally be regarded as sculptures;
- (iv) no judgment is to be made about artistic worth;
- (v) not every three dimensional representation of a concept can be regarded as a sculpture because, otherwise, every three dimensional construction or fabrication would be a sculpture, and that cannot be right;
- (vi) it is of the essence of a sculpture that it should have, as part of its purpose, a visual appeal in the sense that it might be enjoyed for that purpose alone, whether or not it might have another purpose as well. The purpose is that of the creator. This reflects the reference to ‘artist’s hand’ as per Laddie J in *Metix*. An artist (in the realm of the visual arts) creates something because it has visual appeal which he wishes to be enjoyed as such. He may fail, but that does not matter (no judgments are to be made about artistic merit). It is the underlying purpose that is important;
- (vii) The fact that the object has some other use does not necessarily disqualify it from being a sculpture, but it still has to have the intrinsic quality of being intended to be enjoyed as a visual thing. It explains why the Frisbee itself should be excluded from the category, along with the moulds in *Metix* and *Davis*;
- (viii) the process of fabrication is relevant but not determinative. I do not see why a purely functional item, not intended to be at all decorative, should be treated as a sculpture simply because it is (for example) carved out of wood or stone.

Mann J said that his approach would exclude the wooden model in *Wham-O* and the plaster casts in *Breville*, and he respectfully disagreed with the conclusions reached by the judges in those cases that those things were sculptures. He said that those decisions did not accord with the ordinary view of what a sculpture is. The reason being that there was no intention that the articles in question should have visual appeal for their own sake. There was every intention that they would be purely functional.

Mann J must be right. It is a fallacy to conclude that the absence of a requirement of artistic quality means that the purpose for designing or making the article is question also has nothing to do with art in a wide sense. Artistic purpose must be present whether or not the finished product achieves that purpose, objectively or subjectively. The phrase ‘irrespective of artistic quality’ must be intended to prevent challenges to copyright subsistence based on a perceived lack of artistic merit rather than an intention to confer copyright protection on three-dimensional articles designed for purely functional or utilitarian purposes. For such articles, there are other forms of protection such as unregistered design law. Strong support for this view is given by the underlying rationale of the Copyright, Designs and Patents Act 1988 and the introduction of shorter term protection for functional designs.

## Works of architecture

A work of architecture is a building or a model for a building. A building includes any fixed structure, and a part of a building or fixed structure.<sup>162</sup> Buildings effectively have double protection, as works of architecture and through the plans drawn up for the buildings. Models for buildings, such as a model made for a proposed building to show to prospective investors and clients, are specifically protected, but models of buildings are not. However, if a model made of an existing building is copied, the copyright in the building itself and in the drawings made for the construction of the building will be infringed.

<sup>162</sup> *MacMillan Publishers Ltd v Thomas Reed Publications Ltd* [1993] FSR 455.

## Typefaces

Typefaces are not specifically mentioned among the categories of artistic works in the Copyright, Designs and Patents Act 1988 s 4. Nevertheless, it is beyond doubt that a typeface is an artistic work. Indeed, there are references in the Act to typefaces as a form of artistic work. For example, ss 54 and 55 (permitted acts in relation to typefaces) are stated in terms of the ‘copyright in an artistic work consisting of the design of a typeface’. In the past, registered design law was not particularly appropriate to protect typefaces (common features such as a new design of serif might have been registrable) but, following the changes to domestic registered design law (and the introduction of the Community Design), typefaces are expressly mentioned amongst the list of things that fall within the definition of ‘product’ for the purposes of the UK registered design and the registered and unregistered Community design.

## Artistic craftsmanship

Works of artistic craftsmanship give rise to the greatest difficulty amongst artistic works. Normally, one might expect this category to include such things as jewellery to a special design, ‘designer’ goods such as furniture and clothing, and quality hand-made items intended to appear attractive or ‘rustic’ in some way and as found in craft shops.<sup>163</sup> Certainly, the phrase ‘artistic craftsmanship’ conjures up items made by hand by skilled workers which are bought because of the quality of workmanship and because of their eye-appeal. Better examples of hand-carved cuckoo clocks made in Switzerland should clearly be works of artistic craftsmanship. But where is the line drawn? What about mass-produced cuckoo clocks which are crudely assembled from machine jugged plywood, incorporating a cheap timepiece and a plastic cuckoo? And what about a mock-up for furniture to be mass-produced, roughly made with a light timber frame held together with nails and covered in upholstery but too flimsy to be able to support a person sitting on it? The case of *George Hensher Ltd v Restawhile Upholstery (Lancs) Ltd*<sup>164</sup> concerned such a prototype made for a suite of furniture, described as ‘boat-shaped’. The House of Lords held that the prototype was not a work of artistic craftsmanship and that for something to fall into this category it must, in addition to being the result of craftsmanship, have some artistic quality. None of their Lordships seemed able to lay down a workable test for the required artistic quality, but agreed that the work must be viewed in a detached and objective manner. The question of whether a particular item possesses that quality is one of fact and evidence; in particular, expert evidence is an important factor in reaching a decision. Lord Reid said that a work of artistic craftsmanship would have the necessary artistic quality if any substantial section of the public genuinely admired and valued the thing for its appearance even though others may have considered it common or vulgar.

<sup>163</sup> In some cases, an article which might properly be considered to be a work of artistic craftsmanship might also qualify for protection as a sculpture: for example, a three-dimensional wood carving.

<sup>164</sup> [1976] AC 64.

Lord Reid and Kilbrandon considered that the intention of the maker of the article was an important though not conclusive issue. While Viscount Dilhorne considered that mass-produced articles could not be works of artistic craftsmanship, Lord Simon

of Glaisdale said that the word ‘artistic’ was not incompatible with machine production. However, the claim of copyright infringement concerned the appellant’s prototype, not the furniture made from it, and the real obstacle standing in the way of copyright protection for it was that the appellant was unable to convince any of their Lordships that the prototype was, in any sense, artistic. It was likely that the design of the mock-up chair would have been accepted for registration under the Registered Designs Act 1949, as the Act then was, because it was new and designed for eye-appeal,<sup>165</sup> albeit somewhat vulgar, and the failure to apply for this relatively inexpensive form of protection against copying reduces the sympathy one can feel for the appellant. Nevertheless, a substantial amount of thought lay behind the design, aimed at reviving falling sales, and the respondent simply copied the appellant’s furniture made in accordance with the prototype, saving itself the trouble of designing furniture that would appeal to the public and sell in large numbers. The respondent took unfair advantage and the decision in the House of Lords is difficult to square with Peterson J’s oft-quoted dictum that a thing worth copying is worth protecting.<sup>166</sup>

<sup>165</sup> Eye-appeal is no longer required for registration but the design must be new and have an individual character. The designs of articles normally hidden from view are not registrable.

<sup>166</sup> *University of London Press Ltd v University Tutorial Press Ltd* [1916] 2 Ch 601 at 610.

The *Hensher* case did nothing to clarify the meaning of ‘artistic craftsmanship’, and while items such as Chippendale chairs, hand-crafted jewellery and fashion clothing are clearly within the meaning, utilitarian and mass-produced works are left vulnerable in terms of copyright protection even though they will often be subject to large commercial investment and risk. For once, the pragmatic and commercially sound approach of copyright law founders on the rock of taste, and one might ask why atrocious or feeble paintings and sculptures are protected by copyright law while other things, such as furniture, that have proven visual appeal, fail to attract protection, and why the *Hensher* principles have not been discarded by the Copyright, Designs and Patents Act 1988. The one saving grace is that many of the articles that will fail to be classed as works of artistic copyright will be protected either as registered designs or under the unregistered design right.<sup>167</sup> However, the former requires registration and the payment of a fee, and these rights require a standard of novelty or originality, as the case may be, that is probably higher than is the case for copyright.

<sup>167</sup> Or, under the Community design system.

<sup>168</sup> [1986] RPC 115. The case went to the Court of Appeal, but only on the issue of whether there had been an infringement of the copyright in the drawings of the garment concerned.

The question of artistic craftsmanship was considered again later in the High Court in *Merlet v Mothercare plc*.<sup>168</sup> Walton J, applying *Hensher*, held that a prototype cape for a baby, called a ‘Raincosy’, was not a work of artistic craftsmanship. He said that the test was whether the thing itself was a work of art and, consequently, the garment had to be considered by itself and not as worn or containing a baby. The ‘Raincosy’ was a work of craftsmanship only and not a work of artistic craftsmanship because the garment itself was not aesthetic, although seeing the ensemble of mother, child and garment may have given an onlooker some sense of aesthetic satisfaction. On the issue of the maker’s intention, he said that the purpose of the garment was to protect a child from the rigours of the Scottish climate and the claimant had not been concerned with the creation of a work of art.

<sup>169</sup> [1994] 3 NZLR 216.

In the New Zealand case of *Bonz Group (Pty) Ltd v Cooke*<sup>169</sup> Tipping J noted that the expression ‘artistic craftsmanship’ was a composite one. The notion of craftsmanship relates more to the execution of the work rather than its design and, conversely, the requirement that the work be artistic relates more to its design than its execution. Thus, the author of the work must be both an artist and a craftsman, an inconsistently high standard. However, Tipping J did recognise that the author would usually be a single person, but one person could provide the artistic element while another provided the craftsmanship. This decision has been applied in England in *Vermaat and Powell v Boncrest Ltd*.<sup>170</sup> That case involved designs for patchwork bedspreads and cushion covers. The designs were set out in drawings having small samples of fabric attached to them indicating the colours of the patches and their arrangement and the colour of the border material. The drawings were sent to a manufacturer in India which made

<sup>170</sup> [2001] FSR 43, deciding a preliminary issue of copyright subsistence.

samples made by seamstresses to send back to the designers. Unfortunately, the Indian manufacturer also made other bedspreads and cushion covers to the designs and supplied the defendant with them. It was held that the test of artistic craftsmanship was that the work must derive from an author who is both an artist and a craftsman. Where a number of people combine to design and execute the finished work, it may still qualify as a work of artistic craftsmanship providing the requirements of artistry and craftsmanship are present. In this sense, an artist is someone who has the creative ability to produce something which has aesthetic appeal. A craftsman is someone who takes pride in his workmanship and who makes something in a skilful way. Applying this test to the bedspreads and cushion covers, it was held that they may have been works of craftsmanship, having been made by a seamstress, but they lacked sufficient artistic quality. Although the designs were pleasing to the eye, they did not possess the necessary requirement of creativity. However, it was held that the drawings themselves were graphic works under s 4(1)(a).

In *Merlet*, Walton J distilled the judgments in the House of Lords in *Hensher* and developed what now seems to be the accepted two-stage test for artistic craftsmanship as applied in *Vermaat*. The test is usually set out in what one might think to be reverse order, that is as follows:

- 1 Did the creation of the work involve an exercise of craftsmanship by a person who exercises skill in its manufacture and who takes a pride in what he creates?
- 2 Was the work created by an artist such that it has aesthetic appeal?

Logically, conception ought to precede manufacture but the test has a number of other problems. The use of the term ‘artist’ could set the test too high and, in *Guild v Eskandar Ltd*,<sup>171</sup> this possibly led Rimer J into saying that he would have to be satisfied that the garments under consideration were works of art. Another difficulty is whether the test is subjective, that is, whether the intention of the creator is relevant. In *Guild*, Rimer J said it was a matter of evidence but a primary consideration was whether the creator had a conscious purpose of making a work of art. He was happy to contemplate that, if that intention existed, it would be a work of art unless he failed manifestly to bring that purpose to fruition. Another implication of the test is that it seems to make it fairly clear that machine-made articles cannot be works of artistic craftsmanship. In *Guild v Eskandar*, the garments were machine-made.<sup>172</sup>

171 [2001] FSR 645.

The outcome of all the cases on artistic craftsmanship seems to be that it is very limited in its scope even though there is recognition that two or more people may combine to create such a work. Although this category of works seems out of step with other forms of artistic works, design law steps in to rescue the situation for most works, whether aesthetic or not, which fail to meet the high standards required for copyright as works of artistic craftsmanship. Indeed, in *Guild v Eskandar*, it was held that the unregistered design right subsisting in the garments had been infringed.

172 It was also held in this case that, for the purposes of assessing whether a garment is a work of artistic craftsmanship, it is acceptable to view the garment both in its unworn state and also as worn by a mannequin.

The distillation of *Hensher* and the above cases now seems fairly predictable in practice. In *Lucasfilm Ltd v Ainsworth*, Mann J considered that, although the Imperial Stormtroopers helmets were undoubtedly works of craftsmanship, the design had no aesthetic purpose. The helmet design was intended to convey a particular impression in the Star Wars film. Mann J said (at para 134):

A work of artistic craftsmanship does not have to be something of which William Morris would have been proud, but it is a not wholly irrelevant test in a case like the present to consider whether he would recognise it as having anything at all with what his movement was seeking to do. I do not think he would.

In the present case, the helmets would not stand up to close scrutiny as a work of artistic craftsmanship should. What looked like corrugations of a glass tube were, in fact,

painted on. Mann J also held, on similar grounds, that the rest of the Stormtroopers' armour was not a work of artistic craftsmanship. It is arguable that Mann J placed too much emphasis on the Arts and Crafts movement but probably reached the correct conclusion nonetheless.<sup>173</sup>

<sup>173</sup> The designs could have had protection by design law, though that would have expired by now.

## SOUND RECORDINGS, FILMS OR BROADCASTS

These are sometimes referred to as derivative works. They are usually based on original literary, dramatic, musical and artistic works: for example, a recording of pop tunes, where the record is protected as a sound recording and each tune will have musical copyright and literary copyright in any lyrics. Sometimes, however, a work in these categories is not based on one of the 'original' works. For example, a recording of the noise of the Flying Scotsman train engine building up steam will be a sound recording but there is no other underlying work. Sound recordings, films and broadcasts need protection so that the investors and entrepreneurs involved in such works can take direct action in case of infringement. The fact that several different original works may be encapsulated in a single film or sound recording makes it much more convenient for the owner of the rights in the latter to sue directly for any infringement. To take an example, consider a musical film such as *South Pacific*; there may be separate copyrights in the music, the lyrics to the songs and the dramatic parts of the film. If a part of the film is copied without permission, the owner of the copyright in the film can sue, otherwise it would be necessary to identify which rights were affected and who owned those rights and what the relationships were between those persons and the owner of the film. The situation could become very complex and this could work to the detriment of the film industry, the ensuing confusion making it easier for film piracy to flourish. Of course, if the owner of the copyright in a film successfully sues for infringement of copyright, he may distribute part of the award in damages to the various copyright owners in accordance with pre-existing contractual arrangements. In the case of an award of account of profits in respect of concurrent rights under an exclusive licence, the court will apportion the profit between the licensor and licensee.<sup>174</sup>

<sup>174</sup> Copyright, Designs and Patents Act 1988 s 102(4).

Compared to the 'original' works of copyright, these derivative works give rise to far fewer problems relating to the question of copyright subsistence. There is no requirement that these works be original because many would fail: for example, in a broadcast of a play, the play may be an original dramatic work in the copyright sense, but the broadcast cannot be original in the popular sense.

### Sound recordings

Under the Copyright, Designs and Patents Act 1988 s 5A(1), a sound recording is:

- (a) a recording of sounds, from which the sounds may be reproduced, or
- (b) a recording of the whole or any part of a literary, dramatic or musical work, from which sounds reproducing the work or part may be produced, regardless of the medium on which the recording is made or the method by which the sounds are reproduced or produced.

Under s 5A(2) copyright does not subsist in a sound recording which is, or to the extent that it is, a copy taken from a previous sound recording.<sup>175</sup>

<sup>175</sup> Section 5A was inserted by the Duration of Copyright and Rights in Performances Regulations 1995, SI 1995/3297. The definition is identical to the previous one in the old s 5.

Note that the language of the Act talks of 'sound' not music, so that recordings of non-musical sounds will come within the definition and a recording of a person reciting a passage from a book or a poem falls within the meaning of a sound recording. The definition is very wide in terms of storage media to take account of changes in technology. There is nothing to prevent several persons making recordings of the same

thing at the same time and each having their own copyright. For example, if several persons made a sound recording of Concorde passing through the sound barrier, each will own the copyright in their own recording, and can sue for infringement if someone makes a copy of *their* recording without permission.

## Films

Films are defined in s 5B(1) and are a recording on any medium from which a moving image may by any means be produced. Again, notice the width of the definition – ‘any medium’ and ‘by any means’. Until 1 January 1996, the definition only referred to the image and a film sound track was not included. Now, however, by s 5B(2), the sound track accompanying a film is treated as part of the film.<sup>176</sup> It may also have a separate copyright as a sound recording.<sup>177</sup> Film copyright can subsist in a series of graphic images produced during the playing of a computer game.<sup>178</sup> Copying an old film does not bring about a new copyright, for, under s 5B(4), copyright does not subsist in a sound recording or film which is, or to the extent that it is, a copy taken from a previous sound recording or film.

Under the 1956 Act, a film could not be a dramatic work<sup>179</sup> but it now appears that there can be an overlap and a film can be a dramatic work in itself or it can be both a dramatic work and a recording of a dramatic work.<sup>180</sup> This can give the owner of the copyright in the film an advantage as there are some differences between dramatic works and films in terms of infringement.

## Broadcasts

Until 31 October 2003 broadcasts and cable programmes were distinct works of copyright, the former being transmitted by wireless means, through the ether, the latter being transmitted by cable. Now broadcasts have been redefined to include cable programmes and ‘broadcast’ is, under new s 6(1) of the Copyright, Designs and Patents Act 1988:

- an electronic transmission of visual images, sound or other information which –
- (a) is transmitted for simultaneous reception by members of the public and is capable of being lawfully received by them, or
  - (b) is transmitted at a time determined solely by the person making the transmission for presentation to members of the public;
- and which is not excepted by subsection (1A).

Section 6(1A) excludes from the definition most forms of internet transmission – for example, where a person decides to access a website, unless it is:

- a transmission taking place simultaneously on the internet and by other means,
- a concurrent transmission of a live event, or
- a transmission of recorded moving images or sounds forming part of a programme service offered by the person responsible for making the transmission, being a service in which programmes are transmitted at scheduled times determined by that person.

In other words, internet transmissions which are analogous to conventional radio or television broadcasts are within the meaning of ‘broadcast’.<sup>181</sup> Under s 6(2), if a transmission is encrypted it is still regarded as capable of being lawfully received by members of the public if decoding equipment has been made available to the public by or with the authority of the person making the transmission or the person providing the contents of the transmission. Under s 6(6), copyright does not subsist in a broadcast which infringes (or to the extent that it infringes) the copyright in another broadcast.

Although wireless broadcasts and cable programmes are now treated collectively as broadcasts, there is still a distinction between the two for certain purposes. The meaning of ‘wireless broadcast’ is important for this reason and is defined in s 178 as

<sup>176</sup> There are some limitations to this treatment under s 5B(3), for example, references to playing or communicating to the public a sound recording do not include playing or communicating the film sound track to accompany the film.

<sup>177</sup> Copyright, Designs and Patents Act 1988 s 5B(5) states that nothing in this section affects any copyright subsisting in a film sound track as a sound recording.

<sup>178</sup> This appears to have been accepted without question in *Nova Productions Ltd v Mazooma Games Ltd* [2007] RPC 589 but an allegation of infringement of the computer game as a film was not pursued either at first instance or in the Court of Appeal.

<sup>179</sup> Copyright Act 1956 s 48(1).

<sup>180</sup> *Norowzian v Arks Ltd (No 2)* [2000] FSR 363, discussed above.

<sup>181</sup> In *Australian Performing Right Association Ltd v Telstra Corp Ltd* [1994] RPC 299, the Federal Court of Australia held that transmissions to mobile telephones from base stations were not broadcasts for the purposes of the Australian Copyright Act 1968.

a broadcast by means of wireless telegraphy which itself is defined as the sending of electro-magnetic energy over paths not provided by a material substance constructed or arranged for that purpose, *but does not include the transmission of microwave energy between terrestrial fixed points.*<sup>182</sup>

<sup>182</sup> The italicised words were added by the Copyright and Related Rights Regulations 1996, SI 1996/2967 reg 8.

It is important to know from where a wireless broadcast is made as this will determine whether it attracts UK copyright. This could be an issue where the broadcast is made by satellite; s 6(4) states that a wireless broadcast is made from the place where, under the control and responsibility of the person making the broadcast, the programme-carrying signals are introduced into an uninterrupted chain of communication. Where the transmission is via a satellite, that includes the chain leading to the satellite and down towards earth.<sup>183</sup>

<sup>183</sup> This is a slight change in definition made by the Copyright and Related Rights Regulations 1996, SI 1996/2967 reg 5, as from 1 December 1996. These regulations implement, *inter alia*, Council Directive 93/83/EEC of 27 September 1993 on the coordination of certain rules concerning copyright and rights related to copyright applicable to satellite broadcasting and cable retransmission, OJ L 248, 06.10.1993, p 15.

The area of reception of a broadcast, its ‘footprint’, is likely to overlap national boundaries and further complications arise where a wireless broadcast originates from another country, particularly if it is outside the European Economic Area (EEA).<sup>184</sup> There are some special provisions, inserted by the Copyright and Related Rights Regulations 1996, which are designed to give rights to persons involved in the broadcast who are located in the EEA where the country from which the wireless broadcast originates does not provide adequate protection in terms of broadcast rights, performers’ rights and rights of authors of sound recordings and performers to share in a single equitable remuneration in respect of the broadcasting of sound recordings.

<sup>184</sup> Under s 172A(1), the EEA means the European Economic Area and an EEA state is a Member State, Iceland, Liechtenstein and Norway. Although not expressly defined there are sufficient references in the Act to make it clear that ‘Member State’ refers to a Member State of the European Economic Community.

These special provisions (termed ‘safeguards’) are contained in s 6A. Figure 3.1 shows a typical situation covered by the safeguards. The signals are broadcast by wireless telegraphy from a non-EEA country and are received by a station in an EEA country from where they are transmitted to a satellite to be received in that and/or other countries. That station is known as the uplink station. Where, as in the example, the broadcast is made from a country outside the EEA and which does not afford an adequate level of protection as described above, if the uplink station is located in an EEA state, that state is treated as the place from where the broadcast is made, and the person making the broadcast is deemed to be the person operating the uplink station: s 6A(2). Where the uplink station is not located in an EEA state then, under s 6A(3), a broadcast may still qualify for the protection of the appropriate EEA state if it was commissioned by a person established in an EEA state. The person so established is deemed to

Figure 3.1 Satellite broadcast via uplink station

be the person making the broadcast, and the place from which the broadcast is treated as having been made is the place in which he has his principal establishment within the EEA. For example, a company registered and established in England commissions a broadcast transmitted from Israel. It is received in Turkey where it is instantaneously re-transmitted to a satellite from where it can be received in a number of EEA states. The English company is deemed to be the maker of the broadcast, and it is deemed to have been made in the UK and subject, therefore, to UK copyright.

Before the revocation of section 7 which used to define cable programmes and cable programme services, it was held that a passive ‘website’ on the internet could be a cable programme service and items contained within that website could be cable programmes. So it was held in *Shetland Times Ltd v Dr Jonathan Wills*<sup>185</sup> in the Court of Session, Outer House in Scotland in granting an interim interdict to the claimant which published a newspaper called the *Shetland Times* and which also made it available on the internet. Even though the information passively awaits access by callers to the website, Lord Hamilton considered that there was an arguable case that the process involved the sending of information as required by s 7(1). Additionally, although the service had an interactive element in that callers to the site could send comments and suggestions, this was not within s 7(2)(a) which excluded from the definition of ‘cable programme service’ services (or part of a service) an essential feature of which was that while visual images, sound or other information were being conveyed by the person providing the service there will or may be sent from each place of reception, by means of the same system (or same part of it), information (other than signals sent for the operation or control of the service) for reception by the person providing the service or other persons receiving it. In other words, the interactive element has to be an essential feature of the service to be excluded from the definition. Lord Hamilton considered that the interactive element was not an essential feature of the service, the primary purpose of which was to distribute news and other items. In any case, even if it was, it was arguable that it was a severable feature. Changes to copyright law by the Copyright and Related Rights Regulations 2003<sup>186</sup> strengthened the protection of materials made available online and rendered the separate treatment of cable programmes redundant.

185 [1997] FSR 604.

186 These Regulations implemented Directive 2001/29/EC of the European Parliament and of the Council of 22 May 2001 on the harmonisation of certain aspects of copyright and related rights in the information society, OJ L 167, 22.06.2001, p 10, discussed in more detail in Chapter 8.

## TYPOGRAPHICAL ARRANGEMENTS OF PUBLISHED EDITIONS

This form of copyright did not exist until provided for by the Copyright Act 1956, largely as a result of pressure from publishers. The purpose of this form of copyright was to protect the skill expended in designing the pages of the publication and the labour and capital in setting up the type and keeping it standing. But publishing has changed since then and computer technology has taken away the skill involved in setting up metal type. Now, the skill and labour in a publication is principally expressed in its overall design. This is particularly so in relation to a newspaper and, in *Newspaper Licensing Agency Ltd v Marks & Spencer plc*,<sup>187</sup> it was suggested that the skill and labour used in the creation of the typographical arrangement could not be expressed in anything less than a full page.

187 [2003] 1 AC 551.

The Copyright, Designs and Patents Act 1988 s 8 defines a published edition, in the context of a typographical arrangement of a published edition, as a published edition of the whole or any part of one or more literary, dramatic or musical works. Copyright in the typographical arrangement of published editions gives some protection to the publisher of a work which is itself out of copyright, and also gives some recognition to the skill expended in work such as selection of typestyles, format and typesetting. Artistic works are not included. If a publisher produces a book of a literary work which is still in copyright and a person copies a substantial part of the book, say by photocopying,

**188** However, if the person types the text of the book into a computer, there will be an infringement of the literary work but not of the typographical arrangement. Scanning the book into a computer will infringe, however, as this will create a facsimile copy: s 17(5).

**189** [2003] 1 AC 551.

**190** *Newspaper Licensing Agency Ltd v Marks & Spencer plc* [1999] RPC 536.

**191** *Newspaper Licensing Agency Ltd v Marks & Spencer plc* [2001] RPC 76.

**192** Section 8(1).

**193** Approving Wilcox J, at first instance, in the Federal Court of Australia in *Nationwide News Pty Ltd v Copyright Agency Ltd* (1995) 128 ALR 285.

**194** Assume that neither publisher copies the other's typographical arrangement and that the copyright in the poem has expired or that both publishers have the consent of the owner of the copyright subsisting in the poem.

**195** The apparent paradox is answered, according to Lord Hoffmann in the *Newspaper Licensing Agency* case above, by focusing on the issue of substantiality rather than granting overlapping copyrights in typographical arrangements in a composite work.

then both the copyright in the literary work and the copyright in the typographical arrangement will be infringed.<sup>188</sup> If the copyright in the content of the book has expired, for example in the case of a Shakespeare play, copying the book, say by photocopying or scanning into a computer, will infringe the typographical arrangement only.

A number of issues relating to the scope of protection of typographical arrangements of published editions have been resolved in the House of Lords in *Newspaper Licensing Agency Ltd v Marks & Spencer plc*.<sup>189</sup> Newspaper publishers assigned their copyrights in the typographical arrangement of their newspapers to the claimant which granted licences allowing licensees to make copies of articles of interest or provide copies of such articles to others. One of the licensees, a press cutting agency, supplied copies of newspaper articles to others. Generally, the articles supplied had been cut from their surrounding articles and rearranged to fit on a blank sheet of A4 paper. The defendant subscribed to the agency and received photocopies of newspaper articles. However, on receiving these copies, the defendant made further copies of some of the articles and other items of interest and distributed these further copies to members of its staff. The claimant's action for infringement of the copyright subsisting in the typographical arrangements was successful at first instance<sup>190</sup> but the defendant successfully appealed to the Court of Appeal.<sup>191</sup> The claimant's appeal to the House of Lords was dismissed.

In the House of Lords, the primary issues were the meaning of 'edition' and the scope of protection of this form of copyright in relation to a newspaper and whether substantiality was to be judged differently to the test applicable to the original works of copyright. It had been argued that each article in a newspaper could be subject to a typographical arrangement and that substantiality should be judged by reference to quantity rather than quality.

The definition of a published edition in the Act is a published edition of the whole or any part of one or more literary, dramatic or musical works.<sup>192</sup> It was held that this confirms that there is no congruence between the concept of an 'edition' and the underlying works contained in it and, in relation to a composite work, such as a newspaper, this means the entire 'between the covers' work.<sup>193</sup> Whilst accepting that literary copyright can subsist in an individual work published as part of a compilation, in addition to a separate literary copyright in the compilation as a whole, this was held not to be the case with published editions. This leads to an apparent paradox. Consider the following scenario: one publisher (publisher 'A') decides to publish a collection of 20 poems in a book. One of those poems is relatively short; say it is called 'Ode to a Butterfly', and is also published by another publisher (publisher 'B').<sup>194</sup> However, publisher 'B' publishes the poem on its own, say in a leaflet comprising one or two pages only. Both publishers have expended skill in designing the layout of their publications. It is beyond doubt that publisher 'B' will have a typographical arrangement copyright in relation to 'Ode to a Butterfly' but this is not so clear in the case of publisher 'A'. The situation is even more bizarre when considering a newspaper article. A single article of, say, 1,000 words and taking up less than one side of A4, if published separately, will enjoy protection through the copyright in the typographical arrangement yet it will not if published along with many other articles and other items in a newspaper. In terms of newspapers, this form of copyright owes more to the overall design of the newspaper than the detail applied to a particular article, such as font size and line-spacing and horizontal and vertical alignment of paragraphs within that article. Particularly in the context of composite works, this form of copyright, therefore, operates on a macro-scale rather than a micro-scale and it is the interrelationship and interaction between the individual items that is paramount.<sup>195</sup>

In spite of this serious limitation to this right, typographical arrangement copyright is increasingly important because of advances in photocopying technology. Of

course, if copyright subsists in the individual works in a composite work, an action for infringement of that copyright should be more likely to succeed. It appears, however, that relatively few words may be required to be a typographical arrangement. *X Ltd v Nowacki (t/a Lynton Porcelain Co)*<sup>196</sup> concerned, *inter alia*, a dispute regarding copyright in a stamp applied to exclusive porcelain products such as dinner services. An example of the stamp is given below. It carries the crest of the customer, SO, for whom the porcelain was made, together with wording.

[Customer's crest]  
SPECIALLY MADE FOR  
SO  
by  
*The Claimant*  
*Finest Bone China*  
MADE IN ENGLAND

Mr Christopher Floyd QC, sitting as deputy judge of the High Court, said that when the crest is put to one side, what is left looks a bit like a typographical arrangement. He also suggested that the choice of different fonts and their use in combination with the crest went further than a mere typographical arrangement and that artistic copyright might subsist in the whole. He admitted being cautious about his suggestions as it had not been fully addressed by counsels' argument. That a stamp applied to porcelain which contains a number of words or phrases can be protected by typographical arrangement copyright is surely wrong. It would be bizarre if a porcelain dinner plate could be described as a published edition. In any case, the judge did not mention any cases on typographical arrangements. Consideration of the *Newspaper Licensing Agency* case above would surely have led him to ignore the possibility that such a copyright could subsist in the stamp.

In order to prevent publishers extending the life of their typographical arrangement copyright indefinitely, copyright is declared not to subsist in the typographical arrangement of a published edition if, or to the extent that, it reproduces the typographical arrangement of a previous edition.

## QUALIFICATION

For copyright to subsist in a work, under the Copyright, Designs and Patents Act 1988 s 1(3), the qualification requirements must be satisfied. This can be achieved in the following ways: either by reference to the author of the work, or by reference to the country of first publication or, in the case of a broadcast, the country from which the broadcast was made.<sup>197</sup> In most cases, qualification will be easily satisfied, such as where the work is created by a UK citizen (or an individual domiciled or resident in the UK) or is first published in the UK. Also, international copyright conventions will give protection to works that would not otherwise qualify. Basically, these conventions, of which there are two, afford reciprocal protection to member countries, and most developed countries belong to one or other or both. The UK is a signatory to both the Berne Convention<sup>198</sup> and the Universal Copyright Convention.<sup>199</sup> As a result, if a work is first published in or transmitted from a convention country, or if the author of the work is a citizen of or is domiciled in a convention country, the owner will be able to take action for infringement in the UK. Similarly, works first published or transmitted in the UK, or having an author who is British or is domiciled in the UK will be protected in all the other convention countries.<sup>200</sup>

196 [2003] EWHC 1928 (Ch).

197 Copyright, Designs and Patents Act 1988 s 153. In relation to Crown Copyright, the qualification requirements are waived in the case of a work made by an officer or servant of the Crown in the course of his duties: s 163(1)(a). Similarly in respect of parliamentary copyright: s 165(1). There are now also provisions in relation to Bills of the Scottish Parliament, Northern Ireland Assembly and the National Assembly of Wales: ss 166A to 166D. Separate provisions also apply in the case of copyright vesting in certain international organisations.

198 The Berne Convention for the Protection of Literary and Artistic Works, 1886.

199 Universal Copyright Convention 1952.

200 See Article 5, Berne Copyright Convention. Authors from another convention country shall enjoy the same rights which are granted to nationals. The Copyright and Performances (Application to Other Countries) Order 2008, SI 2008/677, makes the necessary legislative provisions. This Order revoked the previous Order and came into force on 6 April 2008.

## Qualification by reference to the author

As will be seen in the following chapter, authorship and ownership of copyright are two distinct concepts and it is quite common for copyright to be owned by artificial legal persons, such as corporations. However, it is self-evident that the author of a literary, dramatic, musical or artistic work will be a living (or lately deceased) person. In the case of computer-generated literary, dramatic, musical and artistic works and sound recordings, films and broadcasts, the Copyright, Designs and Patents Act 1988 still defines the author in terms of a 'person', that is the person who makes the arrangements necessary for the creation of the work, makes the work or the broadcast or provides the service, but in relation to these works it would seem that all forms of legal persons, including artificial persons such as corporations, can be the author of the work. The author of the typographical arrangement of a published edition is the publisher and this will often be a corporation such as a limited company. For this reason, the qualification requirements cover the situation where the author is a corporate body.

Under s 154(1) a work will qualify for copyright protection if the author comes within any of the following categories:

- (a) a British citizen, a British overseas territories citizen, a British national (Overseas), a British Overseas citizen, a British subject or a British protected person within the meaning of the British Nationality Act 1981;
- (b) an individual domiciled or resident in the UK or another country to which the relevant copyright provisions apply;
- (c) a body incorporated under the law of a part of the UK or another country to which the relevant copyright provisions apply.

The countries to which these provisions apply can be extended by Order in Council to the Channel Islands, the Isle of Man or any colony.<sup>201</sup> A work also qualifies if at the 'material time' the author was a citizen of or a subject of or domiciled or resident in another country, or if the author was a body incorporated under the law of another country to which the provisions have been extended.<sup>202</sup> Parties to the Berne Convention for the Protection of Literary and Artistic Works, the Universal Copyright Convention and countries which otherwise give adequate protection under their law are included.

The 'material time' is defined in s 154(4) as being, in the case of an unpublished literary, dramatic, musical or artistic work, the time it was made; or, if it was made over a period of time, a substantial part of that period. If published, the material time is the time of first publication. If the author dies before first publication, the material time is the time immediately before the author's death. For sound recordings, films and broadcasts, the material time is the time they were made. For a typographical arrangement of a published edition it is the time when the edition was first published.

A work of joint authorship qualifies for copyright protection if, at the material time, any of the authors satisfy the requirements for qualification by reference to the author, and only those who do satisfy those requirements are to be taken into account for the purpose of first ownership of copyright and duration of copyright.<sup>203</sup>

## Qualification by reference to country of first publication or transmission

There is a distinction between broadcasts and all other forms of works. In the case of the latter, under s 155, they qualify for protection if they are first published in the UK or any other country to which the relevant provisions extend or in respect of which an Order has been made under s 159. A publication can still be a first publication even if it is simultaneously published elsewhere, and a period not exceeding 30 days is considered simultaneous. As an example, if a musical work is made by an author who fails

<sup>201</sup> Copyright, Designs and Patents Act 1988 s 157.

<sup>202</sup> Copyright, Designs and Patents Act 1988 s 159.

<sup>203</sup> Copyright, Designs and Patents Act 1988 s 154(3).

to meet the qualification requirements (such as an Iranian living in Tehran) and the work is first published in Iran but is then published in the UK within the following 30 days, the music will attract UK copyright protection under the provisions contained in s 155. The music will be deemed to have been simultaneously published in Iran and the UK.

The meaning of ‘publication’ is central to these provisions and it is defined in s 175 as being the issue of copies to the public, including by means of electronic retrieval systems in the case of literary, dramatic, musical and artistic works. The construction of a building is equivalent to publication of the work of architecture it represents and any artistic works incorporated in the building.<sup>204</sup> In order to clarify the meaning further, some specified acts are declared not to amount to publication: for example, a performance of a literary, dramatic or musical work, an exhibition of an artistic work, the playing or showing of a sound recording or film in public, or the communication to the public<sup>205</sup> of a literary, dramatic, musical or artistic work or a sound recording or film. Also excluded are the issue to the public of copies of a graphic work (for example, a sketch) representing, or photographs of, a work of architecture in the form of a building or a model for a building, a sculpture or a work of artistic craftsmanship.<sup>206</sup>

Thus, selling sheet music or video films to the public will be regarded as publication, but selling photographs depicting an original sculpture will not be. Whether the sale of the original sculpture to a member of the public is to be regarded as publication is a moot point and it may be stretching the language of s 175 too far, especially as it talks in terms of the plural. This is reinforced by s 175(5) which excludes publication which is ‘merely colourable and not intended to satisfy the reasonable requirements of the public’. This means that a non-qualifying author who intends to sell copies of his work to the public in large numbers in a non-convention country cannot obtain the international benefits of the conventions simply by putting a few copies on sale at the same time in a convention country. However, selling or offering for sale small numbers of copies may still be deemed to be publication if the intention is to satisfy public demand, as in *Francis Day & Hunter Ltd v Feldman & Co*<sup>207</sup> in which the sale of six copies of the song ‘You Made Me Love You (I Didn’t Want To Do It)’ was deemed to be good publication because of the publisher’s intention from the outset to satisfy public demand in the UK. Section 175(6) states that no account is to be taken of any unauthorised acts; therefore, publication by a person without the permission of the copyright owner will not have any consequences as regards the qualification requirements for the work involved.

For broadcasts, the qualification requirements are satisfied if they are made from the UK or any country to which the copyright provisions are extended by Order in Council. Qualification is determined by reference to the country from which the broadcast is made and not the country or countries of reception. There is no provision here for dealing with simultaneous broadcasts within a 30-day period.

It can be seen that qualification for copyright protection will rarely be in issue, particularly as a result of the operation of the Berne Convention for the Protection of Literary and Artistic Works and the Universal Copyright Convention and the reciprocity they provide for. Under s 160, provisions may be made under an Order in Council to deny protection to citizens or bodies not giving adequate protection to British works. No such Orders have been made.

## DURATION OF COPYRIGHT

The Copyright, Designs and Patents Act 1988 simplified the provisions relating to the duration of copyright. For example, under the Copyright Act 1956 there were three rules for the duration of copyright in artistic works, depending on which variety of artistic work they were.<sup>208</sup> There were also different rules for works published or unpublished

<sup>204</sup> Copyright, Designs and Patents Act 1988 s 175(3).

<sup>205</sup> Communication to the public means communicating to the public by electronic transmission (for example, broadcasting): s 20.

<sup>206</sup> Copyright, Designs and Patents Act 1988 s 175(4).

<sup>207</sup> [1914] 2 Ch 728.

<sup>208</sup> Copyright Act 1956 s 3.

209 Copyright Act 1956 s 2.

210 See Copyright, Designs and Patents Act 1988 Sch 1, para 12.

This Directive has now been replaced by a codified version Directive 2006/116/EC of the European Parliament and of the Council of 12 December 2006 on the term of protection of copyright and certain related rights, OJ L372, 27.12.2006, p 12.

212 537 US 186 (2003).

213 Copyright, Designs and Patents Act 1988 Sch 1, para 12.

214 An EEA state is a state which is a Contracting Party to the EEA Agreement signed at Oporto on 2 May 1992, adjusted by the Protocol signed at Brussels on 17 March 1993: 1995 Regulations reg 2.

215 Copyright, Designs and Patents Act 1988 s 12(2) (substituted by the Duration of Copyright and Rights in Performances Regulations 1995, SI 1995/3297). Note that there has been some renumbering of the subsections of s 12.

216 The meaning of 'country of origin' is described near the end of this chapter in the section on extended and revived copyright.

at the time of the author's death.<sup>209</sup> Things are now much clearer, although the transitional arrangements which apply to works in existence at the time when the 1988 Act came into force are not particularly straightforward.<sup>210</sup> The duration of copyright in most of the 'original works' and in films was extended to 'life plus 70 years' by the Duration of Copyright and Rights in Performances Regulations 1995 (the '1995 Regulations').<sup>211</sup> A number of countries outside Europe also extended their term of copyright, notably Australia and the United States. The latter raised the period to life plus 70 years by the Sonny Bono Copyright Term Extension Act 1998. This was challenged as being unconstitutional in *Eldred v Aschcroft*<sup>212</sup> but the challenge was rejected by the US Supreme Court.

The rules for determining the duration of copyright depend on the nature of the work in question but, as a basic rule of thumb, copyright lasts for the life of the author plus 70 years for literary, dramatic, musical and artistic works (the 'original works') and films, and at least 50 years for sound recordings, 50 years for broadcasts and 25 years for typographical arrangements of published editions. Copyright in certain types of artistic works that have been commercially exploited is also limited to 25 years. There are also special rules for the duration of Crown copyright, that is in respect of works of which Her Majesty the Queen is the first owner of the copyright, and parliamentary copyright. Perpetual copyright previously enjoyed by the Universities of Oxford and Cambridge and the Colleges of Eton, Winchester and Westminster in relation to certain works under the Copyright Act 1775 was abolished and such works existing at the time the Copyright, Designs and Patents Act 1988 came into force were given a 50-year copyright, commencing at the end of 1989.<sup>213</sup>

The increase to the duration of copyright in the 'original works' and films had a number of implications, especially in terms of extending the duration of existing copyright and reviving copyright in some works which had fallen into the public domain in the UK. One feature of the modified provisions on duration of copyright is that they are set in the context of the European Economic Area (EEA) and not just the European Community.<sup>214</sup> Thus, Iceland, Norway and Liechtenstein are included in the provisions.

Apart from the new rules for determining the duration of copyright for the original works and films, extended and revived copyright and some other aspects of the 1995 Regulations are described towards the end of this chapter.

### Literary, dramatic, musical and artistic works

As a rule, the identity of the author of a work will be known and commonly the author will have produced his work on his own, not in collaboration with another author. The copyright in a literary, dramatic, musical or artistic work of known authorship, having a single author, expires at the end of the period of 70 years from the end of the calendar year during which the author dies.<sup>215</sup> Therefore, when the work is made it is impossible to pinpoint the exact time when the copyright will expire; a work created by a relatively young author should have a long copyright, perhaps close to or even exceeding 120 years. If the work is the result of the collaboration of two or more authors and the contribution of each is not distinct from the other or others, it is a work of joint authorship and, under s 12(8), the 70-year period runs from the end of the calendar year during which the last surviving author dies. If the identities of all the authors are not known, the period is calculated by reference to the end of the calendar year during which the last surviving known author dies.

If the country of origin of the work is a non-EEA state and the author is not a national of an EEA state, the duration of copyright is limited to that in the country of origin provided it is not greater than life plus 70 years.<sup>216</sup> Thus, if the country of origin is New Zealand and the author is a citizen of New Zealand, the duration of copyright

as far as the countries within the EEA are concerned remains at life plus 50 years, the present term in New Zealand.

It is conceivable, though unlikely, that a work might be created by a person unknown.<sup>217</sup> The work may still qualify for protection on the basis of the country of first publication and s 12(3) makes provision for the duration of copyright for works of unknown authorship. Copyright expires at the end of the period of 70 years from the end of the calendar year in which the work was made or, if made available to the public during that period, the 70-year period runs from the end of the calendar year in which the work was first made available to the public.<sup>218</sup> ‘Making available to the public’ includes, in the case of a literary, dramatic or musical work, a performance in public or communication to the public. For artistic works, it includes public exhibitions, showing a film including the work in public or communication to the public. The definitions are not exhaustive and should also cover acts such as selling or offering to sell to the public copies of the work. In determining whether the work has been made available to the public, no account is taken of any unauthorised act, so that the period of 70 years does not start to run if the work has been performed in public without the permission of the copyright owner. Before the changes made by the 1995 Regulations, copyright in a work of unknown authorship potentially was perpetual, that is if the work was not made available to the public, which seemed to be an anomaly difficult to justify. Even so, the practical effect of this was diluted because, under s 57(1), the copyright in a literary, dramatic, musical or artistic work was not infringed if it was not possible, by reasonable inquiry, to ascertain the identity of the author and it was reasonable to assume that the copyright had expired or that the author died 50 years or more before the beginning of the calendar year in which the relevant act was done.<sup>219</sup> If the work involved is truly anonymous, there may be considerable difficulties regarding the ownership and enforcement of the copyright, although in such circumstances s 104(4) contains a presumption that the publisher of the work as first published was the owner of the copyright at that time. If the identity of the author becomes known before it would have expired under s 12(3), then the normal rule applies under s 12(2).

The final form of literary, dramatic, musical or artistic work having special provision is where the work is ‘computer-generated’, being a work generated by computer in circumstances such that there is no human author.<sup>220</sup> Without the life of a human author to measure the term of copyright, the starting date for the 50-year period (which is retained for such works) is sensibly calculated, under s 12(7), from the end of the calendar year in which the work was made.<sup>221</sup> Apart from works of unknown authorship, this is the only form of literary, dramatic, musical or artistic work in which the actual time the work was made is relevant to the duration of copyright.

The duration of protection of certain types of artistic work will be considerably shortened if they are ‘commercially’ exploited. Under s 52, where an artistic work has been exploited by or with the licence of the copyright owner by making articles which are copies of the work by an industrial process and marketing them, the copyright subsisting in the artistic work will be largely ineffective from the end of the period of 25 years from the end of the calendar year during which the articles were first marketed. The copyright in the artistic work still runs its full course notionally but, after the 25-year period, the work may be copied by making articles of any description or doing anything for making such articles without infringing the copyright. The fine detail was left to the Secretary of State, and by the Copyright (Industrial Processes and Excluded Articles) (No 2) Order 1989<sup>222</sup> an artistic work is deemed to have been exploited for the purposes of s 52 if more than 50 articles have been made or goods manufactured in lengths or pieces not being hand-made have been produced.<sup>223</sup> Certain types of artistic work are excluded from this provision: for example, works of sculpture, wall plaques, medals, medallions and printed matter primarily of a literary or artistic character.

<sup>217</sup> Of course, there may be situations when, for reasons of his own, the author does not want to be identified and his identity remains a secret between the author and his publisher. In such circumstances, it would appear that the work would be one of unknown authorship for copyright purposes.

<sup>218</sup> Copyright, Designs and Patents Act 1988 s 12(3).

<sup>219</sup> This presumption still applies but now by reference to the 70-year period: Duration of Copyright and Rights in Performances Regulations 1995, SI 1995/3297 reg 5(2).

<sup>220</sup> Copyright, Designs and Patents Act 1988 s 178. Computer-generated works are fully explained and discussed in Chapter 8.

<sup>221</sup> Unchanged by SI 1995/3297, though previously this provision was contained in old s 12(3).

<sup>222</sup> SI 1989/1070.

<sup>223</sup> SI 1989/1070 reg 2.

Typically, works of artistic craftsmanship will be caught by this reduction in terms of copyright, if exploited. The purpose of these provisions was to prevent artistic works which were to be mass-produced and which were registrable as designs enjoying the longer term of protection under copyright.<sup>224</sup> However, domestic registered design law was changed significantly to comply with a harmonising Directive but neither s 52 nor the 1989 Regulations were modified to reflect the changes to the scope of what can be registered as designs. Consequently, some artistic works that are commercially exploited may enjoy the full term of copyright protection in addition to the monopoly rights given by registration. Examples are designs of computer icons and typefaces. The new system of design law is fully explored in Part Five of the book.

<sup>224</sup> The maximum term of protection as a registered design is 25 years.

## Sound recordings

Until 1 January 1996, both sound recordings and films were governed by the same rules and, for either, the duration of copyright depended on when the work was made or, in some circumstances, when it was released. Now, for sound recordings, under s 13A(2) of the Act, sound recordings are protected for 50 years from the end of the calendar year during which they were made. However, there are two provisos to this and the overall term of copyright in a sound recording can be extended by delaying the time when it is published or, if not published, when it is played or communicated to the public. Thus, if a sound recording is published within 50 years from the end of the calendar year during which it was made, a new 50-year period commences at the end of the calendar year when it was first published. If, during that first 50-year period, instead of being published,<sup>225</sup> the sound recording is played in public or communicated to the public (for example, by broadcasting), the new 50-year period runs from the end of the calendar year when it was so played or communicated. No account is taken of any unauthorised act in determining duration. Where the author of a sound recording is not a national of an EEA state, the duration is limited to that available in the country of which he is a national providing this is not longer than under s 13A(2) – unless this would be at variance with an international obligation to which the UK became subject prior to 29 October 1993 (the date of the term of copyright Directive), in which case the rule in s 13A(2) applies.

<sup>225</sup> In this context, 'publication' means issuing copies to the public: see the Copyright, Designs and Patents Act 1988 s 175, discussed above.

## Films

Until 1 January 1996, the duration of copyright in films was as for sound recordings but the changes wrought by the Duration of Copyright and Rights in Performances Regulations 1995 include a similar means of determining copyright in films as applies to the original works, that is, based on life plus 70 years. This reflects the view that certain types of films are more akin to artistic works than derivative works. Indeed, Article 2 of the Berne Convention for the Protection of Literary and Artistic Works includes cinematograph works in the literary and artistic work category. A number of different persons who make a creative contribution to the film are used to provide the relevant 'life'. Under s 13B, copyright in a film expires at the end of the period of 70 years from the end of the calendar year during which the death of the last to die of the following occurs:

- the principal director,
- the author of the screenplay,
- the author of the dialogue, or
- the composer of music specially created for and used with the film.

In the event that there is no person in the above list (that is, where the film was made without a director, screenplay, dialogue or specially written music) the period is 50 years

from the end of the calendar year during which the film was made: s 13B(9). This could be in the case of a film recorded by closed circuit television ('CCTV') or a surveillance camera.

If the identity of the persons referred to above is unknown, under s 13B(4) the duration is 70 years from the end of the calendar year during which it was made. However, if it was made available to the public during that time, a fresh 70-year period commences from the end of the calendar year when it was so made available. Making available to the public means showing in public or communicating to the public (under s 20(2) this means broadcasting or making available by electronic transmission so that members of the public can access the work at a time and place of their choosing: for example, by placing the work on a website). If the identity of any of those persons becomes known before the expiry of copyright under s 13B(4), the normal rules apply.

Where the country of origin is not an EEA state and none of the authors are nationals of an EEA state, the term of protection is limited to that in the country of origin providing it is not longer than under s 13B(2) to (6).

## Broadcasts

A period of 50 years from the end of the calendar year during which the broadcast is made is the duration of copyright in broadcast: s 14(2).<sup>226</sup> Copyright is deemed to exist in a repeat broadcast but this expires at the same time as the original, subject to there being no copyright in a repeat broadcast made after the expiry of the copyright in the original: s 14(5). Copyright in repeats may seem unnecessary as the concept of indirect copying has been accepted by the courts for some time<sup>227</sup> and now has statutory effect under s 16(3). At first sight, copyright in repeats might seem useful when no tangible copy is made, such as where a person without permission receives a broadcast and simultaneously relays it to others, but communication to the public (which includes broadcasting) is amongst the acts restricted by copyright.

Section 14(6) states that a repeat broadcast is one which is a repeat of a broadcast previously made. Under s 14(3), where an author of a broadcast is not a national of an EEA state, the duration is that of the relevant state provided it is not greater than that in s 14(2) unless contrary to an international obligation to which the UK became subject before 29 October 1993: s 14(4).

## Typographical arrangements of published editions

The copyright in a typographical arrangement of a published edition expires at the end of the period of 25 years from the end of the calendar year in which the edition was first published.<sup>228</sup> Under s 175(1)(a), publication for typographical arrangements of published editions occurs when copies were issued to the public. It does not include making available to the public by means of an electronic retrieval system as this applies only to literary, dramatic, musical or artistic works.

## Crown and parliamentary copyright

Crown copyright subsists in works made by Her Majesty or by an officer or servant of the Crown in the course of his duties. Crown copyright in a literary, dramatic, musical or artistic work lasts until the end of the period of 125 years from the end of the calendar year in which the work was made or, if the work is published commercially before the end of the period of 75 years from the end of the calendar year in which it is made, copyright continues to subsist until the end of the period of 50 years from the end of the calendar year in which it was first published commercially.<sup>229</sup> Therefore, if a work of Crown copyright is published in the first year it was created, it will have copyright protection for only 50 years from the end of that year. Commercial publication in relation

<sup>226</sup> As amended by the Copyright and Related Rights Regulations 2003, SI 2003/2498.

<sup>227</sup> For example, see *British Leyland Motor Company Ltd v Armstrong Patents Co Ltd* [1986] 2 WLR 400 and *Purefoy Engineering Ltd v Sykes Boxall Ltd* (1955) 72 RPC 89.

<sup>228</sup> Copyright, Designs and Patents Act 1988 s 15.

<sup>229</sup> Copyright, Designs and Patents Act 1988 s 163(3).

to a literary, dramatic, musical or artistic work means, under s 175(2), issuing copies to the public at a time when copies made in advance of the receipt of orders are generally available to the public or when the work is available to the public by means of an electronic retrieval system.

There are no special provisions for Crown copyright as regards the other types of copyright work, so the usual rules will apply. In the case of a work of joint authorship where one or more of the authors, but not all, fall within the requirement for Crown copyright, the provisions in s 163 apply only in relation to those authors and the copyright subsisting by virtue of their contribution to the work.<sup>230</sup> Does this mean that the rights of the other joint author(s) are unaffected by Crown copyright? This could be problematical as s 10(1) provides that, by definition, a work of joint authorship is a collaborative one in which the work of each joint author is not distinct. Taken to its logical conclusion, this could mean that the copyright subsisting in such a work of joint authorship would have, theoretically, two durations, which is a nonsense.

Her Majesty is entitled to copyright in every Act of Parliament, Act of the Scottish Parliament, Measure or Act of the National Assembly for Wales, Act of the Northern Ireland Assembly and Measures of the General Synod of the Church of England which are protected by copyright from Royal Assent until the end of the period of 50 years from the end of the calendar year in which the Act or Measure received the Royal Assent (or, in the case of a Measure of the National Assembly for Wales, 50 years from the end of the calendar year during which the Measure was approved by Her Majesty in Council).<sup>231</sup> No other copyright or right in the nature of copyright subsists in an Act or Measure. Thus, there can be no publication right or database right in relation to Acts and Measures.

Parliamentary copyright applies to works made by or under the direction or control of the House of Commons or the House of Lords. Parliamentary copyright in a literary, dramatic, musical or artistic work continues to subsist until the end of the period of 50 years from the end of the calendar year in which the work was made.<sup>232</sup> Works within this category include reports of select committees. The duration of copyright in sound recordings, films and broadcasts is in accordance with the usual rules. Parliamentary Bills are separately provided for under s 166, and copyright in a Bill expires when the Bill receives the Royal Assent, at which time the copyright in the new Act commences, or, if the Bill does not receive Royal Assent, copyright expires when the Bill is withdrawn or rejected or at the end of the Session. There are similar provisions for Bills of the Scottish Parliament, Northern Ireland Assembly and Measures and Bills of the National Assembly for Wales.<sup>233</sup>

Providing for copyright in Acts of Parliament and other legislative material is a controversial issue, especially as Her Majesty's Stationery Office became more active in enforcing that copyright.<sup>234</sup> It could be argued that such works should be in the public domain, as it is in the public interest that Her Majesty's subjects are aware of the law. No less than Laddie J suggested that such materials should be freely available.<sup>235</sup>

There was a significant relaxation in HMSO's approach to use of Crown copyright material by publishers. A 'Dear Publisher' letter was placed on the internet by HMSO, dated 1 March 1996. It allowed reproduction without permission or charge of Acts of Parliament, Statutory Instruments and Statutory Rules and Orders and certain Press Releases (though not for providing a commercial Crown Press Release Service). This was all subject to the text being 'value-added' (for example, where the publisher has included annotations or comments), the source being acknowledged as Crown copyright and the material being reproduced accurately and in such a way as not to be misleading. Reproduction could be worldwide and by electronic means. Since then, unrestricted copying of certain categories of Crown copyright material is allowed. This includes legislation and court forms and, although copyright still subsists in such

<sup>230</sup> Copyright, Designs and Patents Act 1988 s 163(4).

<sup>231</sup> Copyright, Designs and Patents Act 1988 s 164(2).

<sup>232</sup> Copyright, Designs and Patents Act 1988 s 165.

<sup>233</sup> See ss 166A to 166D.

<sup>234</sup> The Stationery Office Ltd now controls the former HMSO bookshops. A residual HMSO administers Crown copyright.

material, copyright is waived. The condition that the material is reproduced accurately and not in a misleading context remains and it is still required to acknowledge the work correctly and to identify the source and status of the material.

### **Peter Pan by Sir James Matthew Barrie**

As a special concession to the Great Ormond Street Hospital for Sick Children, to which Sir James Barrie donated his copyright in the play *Peter Pan*, a *sui generis* right to continue to receive royalties beyond the life of the copyright was provided for in the Copyright, Designs and Patents Act 1988. This was the result of an amendment moved by Lord Callaghan. The copyright in the play *Peter Pan* expired on midnight 31 December 1987, and under s 301 of and Sch 6 to the Act, royalties are payable to the Hospital for Sick Children, Great Ormond Street, London, in respect of any public performance, commercial publication or communication to the public of the whole or a substantial part of the play or an adaptation of it. The right is not absolute and will come to an end if the hospital ceases to have a separate identity or no longer cares for sick children. However, as a result of the Duration of Copyright and Rights in Performances Regulations 1995,<sup>236</sup> discussed below, it would appear that the copyright in *Peter Pan* was revived and expired in EEA states at the end of the year 2007. Presumably, the above provisions are suspended until that time as the Great Ormond Street Hospital now has full rights of ownership, as any owner of revived copyright, in relation to the work. Indeed, the special jurisdiction of the Copyright Tribunal to determine the royalty in the absence of agreement has been removed by reg 24(2)(b) of the Copyright and Related Rights Regulations 1996.<sup>237</sup> However, as the copyright has been revived, it will be subject to licences as of right following notice and, in the absence of agreement as to royalty, referable to the Copyright Tribunal under reg 25 of the 1995 Regulations instead. Although achieved in a different manner, the result is the same.

The position in the United States as regards *Peter Pan* is somewhat doubtful. Great Ormond Street Hospital claims *Peter Pan* is protected by copyright there until the end of 2023 on the basis of a script for the play first published there in 1928.<sup>238</sup>

### **Extended copyright, revived copyright and other aspects of the 1995 Regulations**

The Duration of Copyright and Rights in Performances Regulations 1995 increased the term of copyright for original literary, dramatic, musical and artistic works and films.<sup>239</sup> There are some important transitional provisions to deal with cases where existing copyright is extended, for example, as to who will own the extended copyright and the position in respect of pre-existing licences, and where copyright is revived. Before looking at these provisions and other aspects of the 1995 Regulations, it is important to note the appropriate definitions which are contained in regs 12 and 14.

An ‘existing work’ is one made before commencement of the 1995 Regulations (1 January 1996) and an ‘existing copyright work’ is one in which copyright subsisted immediately before commencement (that is, 31 December 1995). ‘1988 provisions’ means the provisions of the Copyright, Designs and Patents Act 1988 immediately before commencement of the 1995 Regulations. The ‘new provisions’ are those of the Act as amended by the 1995 Regulations.

Under reg 15(1), copyright in an existing copyright work will continue to subsist until the date it would have expired under the 1988 provisions if that date is later than provided for under the 1995 Regulations. This preserves the duration of works that were, prior to the Copyright, Designs and Patents Act 1988, works of perpetual copyright or unpublished works or where the work was published after the author’s death. For example, perpetual copyright was conferred on works of certain universities and

<sup>236</sup> SI 1995/3297.

<sup>237</sup> SI 1996/2967.

<sup>238</sup> The US Copyright Act 1976 (17 USC) allowed a maximum of 95 years (being made up of 28 and 67 years) to certain pre-existing works: § 304.

<sup>239</sup> There are some changes in respect of rights in performances also, for which see Chapter 9 pp 310–12.

<sup>240</sup> Copyright Act 1956 s 2(3).

<sup>241</sup> Copyright, Designs and Patents Act 1988 Sch 1, para 1.

colleges by the Copyright Act 1775 and this was reduced to 50 years from the end of the year of commencement of the 1988 provisions. As regards works published after an author's death, consider an author of a literary work who died in 1958. His work was not published until 1987. Under the Copyright Act 1956, his copyright would not expire until the end of 2037 (50 years after publication).<sup>240</sup> The 1988 provisions maintained this rule with a cut-off from the end of the year of commencement.<sup>241</sup> Under the new provisions, copyright would be based solely on the year of the author's death and would expire at the end of 2028. As a result of the transitional provisions, the copyright will continue until the end of 2037.

Changes to the method of calculating the duration of copyright in sound recordings brought about by reg 29 of the Copyright and Related Rights Regulations 2003 could prejudice the saving in reg 15 of the 1995 Regulations but reg 39 of the 2003 Regulations preserves the effect of reg 15 of the 1995 Regulations if this would result in copyright expiring later than under the changes made by the 2003 Regulations.

Under reg 15(2), there is a saving such that where the above rule applies the provisions in s 57 (assumptions as to expiry of copyright in anonymous or pseudonymous works) are unmodified (that is, where it is reasonable to assume that the author died 50 years ago). The 1995 Regulations increase that period to 70 years in other cases.

The new provisions as to duration, as described earlier, apply to:

- copyright works made after commencement;
- existing works which first qualify for copyright protection after commencement (for example, where the author, being a Taiwanese citizen, created the work in 1992, but the work is first published in the UK after 1 January 1996);
- existing copyright works (subject to reg 15 above);
- existing works in which copyright expired before 31 December 1995 but which, on 1 July 1995, were protected in another EEA state (1 July 1995 is the date that the Directive on harmonising the term of copyright and certain related rights should have been complied with).

### **Extended and revived copyright**

Regulation 17 defines 'extended copyright' and 'revived copyright' as follows:

- extended copyright is any copyright which subsists by virtue of the new provisions after the date on which it would have expired under the 1988 provisions;
- revived copyright is any copyright which subsists by virtue of the new provisions after having expired under the 1988 provisions or any earlier copyright enactment.

Regulation 18 states the rules for determining who the owner of extended copyright is and it is the person owning the copyright immediately before commencement of the new provisions. However, if that person did not own the copyright for the full term under the 1988 provisions, the extended copyright is part of the reversionary interest. For example, if Mary owns the copyright in a literary work and the copyright was to expire at the end of 1999, it will continue to subsist until the end of 2019 and Mary will continue to be its owner. If, on 31 December 1990, Mary assigned the copyright to Jacob for seven calendar years, on 1 January 1998 the copyright will revert to her and she will be the owner of the remaining term of copyright (that is, from 1 January 1998 to 31 December 2019, when it will finally expire).

The owner of revived copyright is, under reg 19, the owner at the time the copyright expired. If the former owner died before commencement of the new provisions (or ceased to exist if a corporation), the revived copyright vests in:

- for films the principal director or his personal representatives;
- for other works the author or his personal representatives.

The personal representatives hold the revived copyright for the benefit of the person who would have been entitled to it had it been part of the director or author's estate immediately before his death and devolved as part of that estate.

There are provisions for prospective ownership of extended or revived copyright which are similar to those applying to prospective ownership of future copyright, as discussed in the following chapter. Under reg 20, where, by an agreement made before commencement of the new provisions, the prospective owner of extended or revived copyright purports to assign that copyright wholly or partly, in writing and signed by the prospective owner, then if on commencement the assignee or person claiming through him would be entitled as against all other persons to require the copyright to be vested in him, the copyright shall so vest in the assignee or successor in title.

Any licence granted by the prospective owner will, as under normal copyright rules, bind every successor in title of his except a purchaser in good faith for valuable consideration without actual or constructive knowledge of the licence. Persons deriving title from such a person will also take free of the licence.

There has to be provision for dealing with pre-existing licences and other rights and obligations. Under reg 21, any copyright licence, term or condition of an agreement relating to the exploitation of a copyright work or waiver or assertion of moral rights will continue to have effect during the extended term of copyright, subject to agreement to the contrary, provided:

- the licence, term, waiver, etc existed immediately before commencement of the new provisions in relation to an existing copyright work, and
- it is not to expire before the end of the copyright period under the 1988 provisions.

There is an equivalent provision regarding licences, terms or conditions imposed by order of the Copyright Tribunal, subject to any further order of the Copyright Tribunal. Revived copyright could cause particular concern. For example, what about a person who, *bona fide*, performs acts within the scope of copyright in relation to a work in which copyright has expired in the UK. Suddenly, that person could be prevented from doing something he was previously doing quite lawfully. Regulation 23 contains some savings to cover such a situation to the effect that:

- no act done before commencement infringes revived copyright;
- it is not an infringement of revived copyright
  - to do anything after commencement in pursuance of arrangements made before 1 January 1995 at a time copyright did not subsist in the work, or
  - to issue to the public after commencement copies of a work made before 1 July 1995 at a time copyright did not subsist in the work;
- there are equivalent provisions for literary, dramatic, musical, artistic works and films containing copies or adaptations of works in which revived copyright subsists;
- it is not an infringement of revived copyright to do after commencement anything which is a restricted act in relation to the work if the act is done at a time when (or in pursuance of arrangements made at a time when) the name and address of a person entitled to authorise the act cannot by reasonable inquiry be ascertained;
- it is not an infringement of a moral right to do anything which, by the above provisions, does not infringe copyright.

Where these savings do not apply, licences are available as of right in relation to revived copyright (unless a licensing body could have granted the relevant rights) under reg 24. The licence as of right is subject to payment of a reasonable royalty, to be fixed by the Copyright Tribunal in default of agreement. However, the person intending to take advantage of the licence of right provisions must give reasonable notice of his intention

to the copyright owner, stating when he intends to begin the acts concerned. Absence of a notice will mean the carrying out of the acts will not be treated as licensed.

Revived copyright could apply in many cases. Before the changes resulting from the Directive on the term of copyright, Germany already granted protection for life plus 70 years.<sup>242</sup> One hypothetical example of revived copyright could be where Hans, a German composer, wrote a piece of music in 1935. He published it both in Germany and in the UK (within a few days of the German publication) during that year, hence gaining German and UK copyright. Hans died in 1944. The UK copyright expired at the end of 1994, but the German copyright was still in existence at 1 July 1995. Therefore, the UK copyright was revived on 1 January 1996 and will continue to subsist until the end of 2014.

Now imagine that the music was created instead by Edward, a British citizen, who also died in 1944. The work was not published in Germany within the 30-day rule,<sup>243</sup> so he had no German copyright. Say that Edward's work was copied without permission in Germany during 1997 and his estate brought an action in Germany on the basis of the Berne Convention for the Protection of Literary and Artistic Works. If the German court held that the action must fail because the UK copyright had expired, this could be deemed to be discrimination on the ground of nationality contrary to Article 12 of the EC Treaty. The reason is that, had Edward been a German citizen, his copyright would still subsist and be enforceable in Germany. One of the implications of Joined Cases C-92/92 and C-362/92 *Collins v Imtrat Handelsgesellschaft mbH*<sup>244</sup> is that such discrimination is not permissible and, on that basis, it is at least arguable that Edward's UK copyright also should be revived. In other words, all works in which copyright expired in the UK between 1 January 1975 and 31 December 1995 should be revived, whether or not they had copyright in another EEA state on 1 July 1995.

The utility of revived copyright was seen in *Sweeney v MacMillan Publishers Ltd.*<sup>245</sup> The claimants were the trustees of the late James Joyce and the defendant published in 1997 a reader's edition of the James Joyce novel *Ulysses*. Under the Copyright Act 1956, the copyright expired at the end of 1991 as James Joyce died during 1941. However, the copyright was revived as from 1 January 1995, after the work had spent four years in the public domain. The defence in reg 23 was not available as most of the work was done after 1 January 1995 and not during the four-year 'limbo' period and could not properly be said to have been done in pursuance of arrangements made during that period. However, reg 24 applied and the defendants could take a licence of right in return for payment of a reasonable royalty. The only problem for the defendant was that its book contained material from other sources, also administered by the trustees, which were still subject to conventional copyright and, in respect of those parts, the trustees could simply refuse to grant a licence to the defendant.

### Other aspects

The country of origin of a work may be important in some cases in the determination of duration of copyright. Basically, if the country of origin is an EEA state, the provisions on duration in the 1995 Regulations will apply. If the country of origin is a non-EEA state, then the duration will be that provided for by the country of origin though not longer than that set out in the 1995 Regulations. The test for determining the country of origin is not a simple one.

Country of origin is defined in the Copyright, Designs and Patents Act 1988 s 15A (inserted by reg 8), as being:

- if first published in a Berne country and not published simultaneously elsewhere, that country;
- if first published simultaneously in two or more countries, one of which is a Berne country, the Berne country is the country of origin;

<sup>242</sup> Spain granted life plus 80 years.

<sup>243</sup> Under the Copyright Act 1911 s 35(3), the publication in the other country would have to be within 14 days, not 30 days.

<sup>244</sup> [1993] ECR I-5145. This case is discussed further in Chapter 24, see p 864.

<sup>245</sup> [2002] RPC 651.

- if first published simultaneously in two or more Berne countries
  - if any is an EEA state, that country;
  - if none is an EEA state, the country of origin is the Berne country providing the shortest term of protection;
- if first published in a non-Berne country:
  - if a film and the maker has his headquarters or is domiciled in or resident in a Berne country, that country;
  - if the work is a work of architecture constructed in a Berne country or an artistic work incorporated in such a building, the Berne country is the country of origin;
  - in any other case, the country of origin is the country of which the author is a national.

There is a permitted act in relation to films: the Copyright, Designs and Patents Act 1988 s 66A.<sup>246</sup> The copyright in a film is not infringed if:

- it is not possible by reasonable inquiry to ascertain the identity of any of the persons (by reference to whom duration can be fixed), and
- it is reasonable to assume that copyright has expired or the last of those persons has been dead for 70 years or more before the beginning of the calendar year during which the relevant act was done or arrangements are made.

This is equivalent to s 57 (assumptions on expiry of copyright in anonymous or pseudonymous literary, dramatic, musical or artistic works).

Regulation 13 deals with the case where a film is protected but not as a film. Where a film is protected not as a film, but as an original dramatic work or by virtue of photographs forming part of the film, reference to copyright in a film includes references to other such copyrights.

The sound track of a film is now considered as part of the film and the definition of ‘film’ is amended accordingly.<sup>247</sup> References in the Act to showing a film now include playing the sound track, though playing a sound recording does not include playing the film sound track to accompany the film.<sup>248</sup> There are some further provisions in terms of moral rights and amendments to the law relating to rights in performances (see Chapters 5 and 9 on pp 120 and 308).

Appropriate consequential amendments are made to the Copyright, Designs and Patents Act 1988 to account for the new term of copyright and the new definitions.

## PUBLICATION RIGHT

A person may own an old original manuscript which is out of copyright, the author having died more than 70 years ago. Perhaps the manuscript has never been published, but the current owner would like to publish it and sell copies, or grant a licence to a publisher to do so. With no copyright to protect against unauthorised copies being made and sold, the economic incentive to publish would be limited. To overcome this problem, a publication right was introduced by the Copyright and Related Rights Regulations 1996.<sup>249</sup> It has some of the appearances of a copyright and, under reg 16(1), is declared to be a property right equivalent to copyright. The publication right applies where a literary, dramatic, musical or artistic work or a film is, after the expiry of copyright, published for the first time. It then endures for 25 years from the end of the calendar year during which it was first published. Publication includes any making available to the public, in particular:

- the issue of copies to the public,
- making the work available by means of an electronic retrieval system,

<sup>246</sup> Inserted by the Duration of Copyright and Rights in Performances Regulations 1995, SI 1995/3297 reg 6(2).

<sup>247</sup> Copyright, Designs and Patents Act 1988, s 5B. Section 5A defines a sound recording which is as before.

<sup>248</sup> Copyright, Designs and Patents Act s 5B(3). This now also applies to communicating a sound recording to the public, copying a sound recording or issuing, rental or lending to the public of copies of a sound track. The changes to s 5B(3) were made by the Performances (Moral Rights, etc.) Regulations 2006, SI 2006/18 as from 1 February 2006.

<sup>249</sup> SI 1996/2967. The publication right came from Article 4, Council Directive 93/98/EEC of 29 October 1993 harmonising the term of copyright and certain related rights, OJ L 290, 24.11.1993, p 9. This Directive has since been repealed and replaced by Directive 2006/116/EC of the European Parliament and of the Council of 12 December 2006 on the term of protection of copyright and certain related rights (codified version), OJ L372, 27.12.2006, p 12. The equivalent provision is Article 4.

250 SI 1996/2967 reg 16(2).

- the rental or lending of copies to the public,
- the performance, exhibition or showing in public, or
- communicating the work to the public.<sup>250</sup>

Unauthorised acts, being without the consent of the owner of the physical medium in or on which the work is embodied or recorded, are not taken into account. Consequently, the publication right can only belong to a person who makes the publication subject to such consent. As the right cannot arise until there has been first publication (with the consent of the owner of the physical medium), any prior unauthorised act cannot infringe the publication right. There may, however, be other legal remedies, such as breach of confidence, conversion or even under the Theft Act 1968 s 1. Unauthorised copying and publication could be deemed to be an assumption of the rights of the owner and, even if the physical medium is only ‘borrowed’, the circumstances could be such to be equivalent to an intention permanently to deprive the owner.

As with normal copyright, there are some qualification requirements being that the first publication must take place in the European Economic Area (EEA) and the publisher is, at that time, a national of an EEA state or, in the case of a joint publication, at least one of the joint publishers is. There is no provision for the 30-day period of grace which applies to qualification for copyright protection under the Copyright, Designs and Patents Act 1988 s 155 (simultaneous publication). The right cannot arise in relation to works which were subject to Crown copyright or parliamentary copyright.

Under reg 17, most of the copyright provisions will apply to the publication right as they do to copyright,<sup>251</sup> subject to some omissions and modifications. In particular:

251 Thus, infringement of the publication right is the same as for copyright.

- there are no moral rights in respect of the publication right;
- a small number of the permitted acts do not apply (ss 57, 64, 66A and 67);
- the presumptions as to the identity of the author, owner, director, producer, etc in ss 104–106 do not apply;
- the exception to the licensing scheme provisions in Chapter VII (for licences or licensing schemes covering works of more than one author for licences or schemes covering only single collective works or collective works of which the authors are the same, or works made by, or by employees of or commissioned by, a single individual, firm, company or group of companies) does not apply to the publication right;
- the maximum penalty for the offences of making or dealing with infringing articles is only three months and/or a fine not exceeding level five on the standard scale.

Other relevant provisions, including Chapter VIII of the Copyright, Designs and Patents Act 1988 on the Copyright Tribunal, apply *mutatis mutandis*, and other enactments relating to copyright apply in relation to the publication right as they do to copyright, unless the context requires otherwise.

The publication right provisions came into force on 1 December 1996. No act done before this date can infringe the right, nor can anything done in pursuance of an agreement made before 19 November 1992 (the date of adoption of the rental-right Directive, which was also implemented by the 1996 Regulations).

The publication right could encourage the greater dissemination of old works where, until now, the owner of the physical medium has declined to publish because of concerns about unauthorised copying or piracy. It could now be worth considering publishing a book of old legal documents such as wills, deeds of conveyance, leases and even copyright assignments. Anyone discovering an old, hitherto unknown, music score by a great composer might similarly be tempted to publish.

Table 3.1 shows the duration of copyright as it applies to the various types of works, including the publication right (this is of course a simplification).

**Table 3.1** Duration of copyright

<i>Type of work</i>	<i>Event</i>	<i>Duration: from end of year of event</i>
<b>Literary, dramatic, musical or artistic</b>		
Known author	Author dies	70 years
Unknown author	Work made	70 years
	Or, if made available to the public within that 70 years	70 years from the end of the calendar year during which it was first so made available
<b>Computer-generated work</b>		
	Work made	50 years
Joint authors	Death of last surviving known author	70 years
<b>Sound recordings</b>		
	Sound recording made	50 years
	Or, if during that period it is published	50 years from publication
	Or, if during that period it is not published but made available to the public or communicated to the public	50 years from making available or communicating to the public
<b>Films</b>		
	Last to die among: Author of screenplay Author of dialogue Composer of music specially created for and used for the film	70 years
<b>Broadcasts</b>		
	Broadcast made	50 years
<b>Typographical arrangements of published editions</b>		
	First publication	25 years
<b>Crown and parliamentary copyright, etc.</b>		
Literary, dramatic, musical or artistic	Work made	125 years
	Or, if published commercially within first 75 years	50 years from the end of the calendar year of commercial publication
<b>Acts and Measures</b>		
	Royal Assent	50 years
Parliamentary copyright	Work made	50 years
Parliamentary Bills <sup>252</sup>	Bill made (presumably)	Until Royal Assent or rejection
<b>Publication right</b>		
	First publication with consent of the owner of the medium containing the work	25 years

**Notes:**

Duration is measured from the end of the calendar year in which the event occurred.

Copyright subsists before the commencement of the period shown, from the time at which the work is first recorded or made.

In effect, copyright in certain types of artistic works which have been exploited is reduced to 25 years (at least copying articles which are copies of artistic works does not infringe). The types of artistic works covered by this were those which would generally have been registrable as designs (though the changes to design law have somewhat compromised this aim).

<sup>252</sup> Including Bills of the Scottish Parliament, National Assembly for Wales and the Northern Ireland Assembly.

# AUTHORSHIP AND OWNERSHIP OF COPYRIGHT

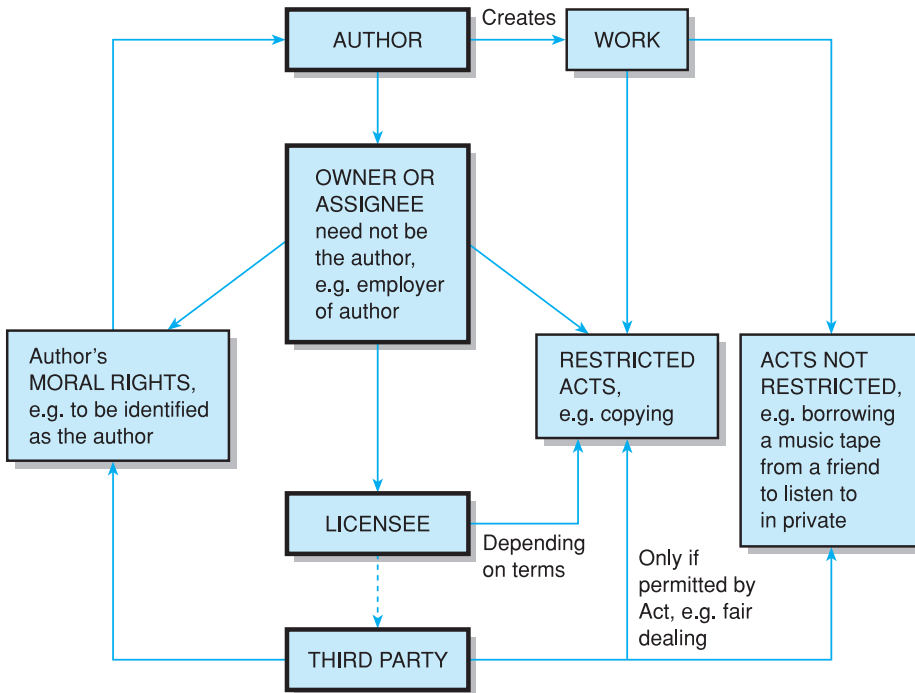

## INTRODUCTION

As copyright is a property right, this raises important questions about ownership and the mechanisms for exploiting copyright. Authorship and ownership are, in relation to copyright, two distinct concepts, each of which attracts its own peculiar rights: the author having moral rights, and the owner of the copyright possessing economic rights. Sometimes, the author of a work will also be the owner of the copyright in the work, but this is not always so, and many works have separate authors and owners as far as copyright is concerned. Ownership flows from authorship; the person who makes the work is normally the first owner of the copyright in the work, provided that he has not created the work in the course of employment, in which case his employer will normally be the first owner of the copyright.<sup>1</sup> The owner of the copyright in a work may decide to exploit the work by the use of one or more contractual methods. He may grant a licence to allow another person to carry out certain acts in relation to the work, such as making copies, in which case he retains the ownership of the copyright. Alternatively, the owner may assign the copyright to another, that is, transfer the ownership of the copyright to a new owner, relinquishing the economic rights under copyright law. One point to bear in mind is that a third party can carry out certain acts in relation to the whole or a part of a work protected by copyright without the permission of the owner of the copyright in the work and without infringing the copyright in the work, for example, by performing one of the acts falling within the fair dealing provisions, or because the act is not restricted by the copyright. There is little that the owner of the copyright can do about these limitations and exceptions to copyright protection apart from denying access to the work itself, for example, by refusing to publish the work.

Consider a single work in which copyright subsists. There may be several relationships and activities connected with the work and the copyright to the work. Figure 4.1 shows the relationships that might exist in relation to a work.

- 1 The author is the person who has created the work in question.
- 2 The copyright in the work is owned by a person who might be the author or the author's employer or a person who has become the owner of the copyright because the title to the copyright has been transferred to him.
- 3 With respect to the work, there are certain acts which are restricted by the copyright. These 'restricted acts' (an example is making a copy of a work) can be carried out only by the owner of the copyright or by someone having the owner's permission, such as a licensee. Otherwise, subject to certain exceptions and limitations, the copyright in the work will be infringed.
- 4 The copyright owner can grant licences in respect of the work which will allow the licensee to do all or some of the restricted acts, in accordance with the terms of the licence. Sometimes, a licensee will be permitted to grant sub-licences to others.

<sup>1</sup> There are other exceptions: see below.

**Notes:**

- 1 The third party may be a member of the general public or a sub-licensee.
- 2 The licensee may also carry out the permitted acts and any acts not restricted by the copyright, subject to the terms of the agreement.
- 3 A licence may impose obligations on the licensor preventing him from doing certain acts himself.

**Figure 4.1 Mechanism of copyright**

- 5 The copyright owner and any licensees and sub-licensees, subject to the terms of the licence agreement, will be able to carry out all or some of the restricted acts.
- 6 A third party, for example, a member of the general public, can carry out a restricted act *only* if it is permitted by copyright law (for example, the permitted acts of fair dealing for criticism or review) or some other defence applies, such as the public interest defence.
- 7 Any person can carry out acts in relation to the work that are *not* acts restricted by copyright, such as lending to a friend a book or a music CD to listen to in private, or reading a book. There may, however, be contractual restrictions affecting such acts.
- 8 All persons, including the owner of the copyright, licensees, sub-licensees and members of the public generally, must respect the author's moral rights. The author may be able to enforce his moral rights irrespective of the identity of the present owner of the copyright (provided that the author has asserted his right to be identified as author and has not otherwise waived it).

**AUTHORSHIP**

The author of a work is the person who creates it.<sup>2</sup> In terms of some types of works this will be self-evident: for example, the author of a work of literature is the person who writes it; the author of a piece of music is its composer; the author of a photograph is

<sup>2</sup> Copyright, Designs and Patents Act 1988 s 9(1). Unless otherwise stated, statutory references are to the Copyright, Designs and Patents Act 1988.

the photographer and so on. The author of a compilation is the person who gathers or organises the material contained within it and who selects, orders and arranges that material.<sup>3</sup> The author does not have to be the person who carries out the physical act of creating the work, such as by putting pencil to paper. An amanuensis taking down dictation is not the author of the resulting work. In *Cala Homes (South) Ltd v Alfred McAlpine Homes East Ltd*,<sup>4</sup> drawings were made by draughtsmen, but another person had told them what features were to be incorporated in the designs for new houses. In some cases, that information was imparted by means of sketches, in other cases, verbally. The person giving the instructions also marked up the preliminary drawings with alterations he required to be incorporated in the finished drawings. Laddie J said that what is protected by copyright is more than just the skill of making marks on paper or some other medium, and that it was wrong to think that only the person who performs the mechanical acts of fixation is the author. He held that the person giving the instructions was a co-author of the drawings and, hence, the claimant, for whom he worked as design director, was a joint owner of the copyright.

According to Lightman J in *Robin Ray v Classic FM plc*,<sup>5</sup> where he reviewed the decision in *Cala Homes* above, the author of a work does not have to exercise penmanship but something akin to penmanship is required. Someone acting as a mere scribe, producing the copyright expression accurately in accordance with instructions but without making any creative contribution whatsoever, can never be an author or co-author of a work. Lightman J was of the view that there must be that essential creative input, a ‘direct responsibility for what actually appears on the paper’, to satisfy the test of authorship. Apart from cases of amanuensis, circumstances where a person has not produced the form of expression but is still deemed to be an author or co-author will be rare. In this respect *Cala Homes* was exceptional as the design director gave very detailed instructions to the architects who prepared the plans and could be said to have made a very significant contribution to the finished work.

With some types of works, further explanation of authorship is required and this is furnished by the Copyright, Designs and Patents Act 1988. Under s 9(2), the author of a broadcast is the person making the broadcast, including, in the case of a broadcast relaying another broadcast by reception and immediate re-transmission, the person making that other broadcast. The publisher of the typographical arrangement of a published edition is considered to be its author. If the work is a computer-generated literary, dramatic, musical or artistic work, which is generated by computer in circumstances such that there is no human author, the author is deemed to be the person by whom the arrangements necessary for the creation of the work are undertaken,<sup>6</sup> a formula similar to that for sound recordings.

The author of a sound recording or film used to be simply the person by whom the arrangements necessary for its making are undertaken. As a result of the Copyright and Related Rights Regulations 1996,<sup>7</sup> the author of a sound recording is the producer<sup>8</sup> and the joint authors of a film are the producer and principal director.<sup>9</sup> Unless the producer and principal director are one and the same, a film is treated as a work of joint authorship under s 10(1A). The term ‘producer’ is defined in s 178, in relation to a sound recording or film, as the person by whom the arrangements necessary for the making of the sound recording or film are undertaken. Hence, for sound recordings the result is the same as before, but for films this is a major change. Previously, a film director was not the author or one of the authors, although film directors did enjoy moral rights in respect of their films. This change applied as from 1 December 1996 in relation to films made on or after 1 July 1994. The reason for the latter date is that the European Community Directives on rental and lending rights and on the term of protection of copyright, both of which contained this provision, allowed Member States to choose not to apply it to films made before that date.

<sup>3</sup> *Waterlow Publishers Ltd v Rose* [1995] FSR 207, which concerned, *inter alia*, the authorship of *The Solicitors’ Diary and Directory*.

<sup>4</sup> [1995] FSR 818.

<sup>5</sup> [1998] FSR 622.

<sup>6</sup> Copyright, Designs and Patents Act 1988 s 9(3).

<sup>7</sup> SI 1996/2967.

<sup>8</sup> Copyright, Designs and Patents Act 1988 s 9(2)(aa).

<sup>9</sup> Copyright, Designs and Patents Act 1988 s 9(2)(ab).

Copyright protects only the expression of an idea, so there may be occasions when the originator of the information that forms the basis of the work in question will not be considered to be the author of the work. For example, in *Springfield v Thame*<sup>10</sup> the claimant, a journalist, supplied newspapers with information in the form of an article. The editor of the *Daily Mail*, from that information, composed a paragraph which appeared in the newspaper. It was held that the claimant was not the author of the paragraph as printed in the newspaper. Similarly, a person making a speech in public will not be the author of a report of the speech made by reporters. In *Walter v Lane*,<sup>11</sup> reporters for *The Times* made reports of the speeches of Lord Roseberry which were printed verbatim after they had been corrected and revised. It was held that the reporters were the authors of the reports and, as a result of the terms of the reporters' employment, the copyright in the reports belonged to *The Times*. In the latter case, it can be argued that the reporters had used skill and judgment in making, correcting and revising the reports and adding punctuation and structure. However, as noted above, if a person is simply writing down dictation, the person dictating will be the author for copyright purposes, as the person doing the writing is simply the agent by which the work is made.<sup>12</sup> The distinction is a fine but important one, as authorship will determine first ownership of the copyright.

In principle, there is nothing to prevent a corporate body being the author of a work, as s 154(1)(c) recognises that a work may qualify for copyright protection if the author is a body incorporated under the law of the UK. This may apply in the case of a sound recording, where the work in question is the result of arrangements made by senior officers of a music company or under the direction or delegated powers of such senior officers,<sup>13</sup> in which case the company can be deemed to be the author. If the person who makes the arrangements in practice is lower down in the company hierarchy so that his actions are not automatically deemed to be the actions of the company, the company will probably still *own* the copyright (as opposed to being the author) on the basis of the employer/employee relationship or because of some contractual provision. The identification of the author is important for determining the first ownership of copyright and also for measuring the duration of the copyright. In the case of many of the original works, the copyright expires at the end of the period of 70 years from the end of the calendar year during which the author died.<sup>14</sup>

The Copyright, Designs and Patents Act 1988 recognises that the identity of the author may not always be known. A work is of 'unknown authorship' if the identity of the author is unknown or, in the case of a work of joint authorship, the identity of none of the authors is known. The identity of an author is regarded as unknown if it is not possible for a *person* to ascertain the identity of the author by reasonable inquiry.<sup>15</sup> It is not clear who the 'person' referred to might be. One possibility is that it is the person wishing to copy the work, making the test subjective;<sup>16</sup> on the other hand, it may be the ubiquitous 'reasonable man', an objective test. The work may be truly anonymous or it may be pseudonymous, that is the author does not wish his identity to be disclosed. The Berne Convention for the Protection of Literary and Artistic Works, by Article 15, makes presumptions in the case of anonymous and pseudonymous works and there is no requirement under UK copyright law that the identity of the author be disclosed to ultimate purchasers of material incorporating the copyright work, for example purchasers of books written by the author. This has little significance, other than with respect to the duration of the copyright in the work concerned, and may be relevant in terms of infringement,<sup>17</sup> and evidentially as regards ownership.

Frequently, a work will be the result of the efforts of more than one person. Several employees may work together to produce a written report, a team of computer programmers and systems analysts together may produce a computer program, two or more persons may collaborate in the writing of a work of literature, a piece of music or

<sup>10</sup> (1903) 19 TLR 650. Originality would be in issue now.

<sup>11</sup> [1900] AC 539.

<sup>12</sup> The principle cannot apply when a person at a séance produces a work under the influence of a person long since dead. In *Cummins v Bond* [1927] 1 Ch 167, the medium who had written down the work was the author, not the extraterrestrial psychic being. The judge said he must confine his inquiry to persons alive at the time the work was made.

<sup>13</sup> An analogous principle in criminal law is that of corporate liability, where a company can be criminally liable on the basis of acts or omissions of its senior officers who are deemed to be the 'brains' or directing mind of the company. See the judgment of Lord Denning MR in *HL Bolton (Engineering) Co Ltd v T J Graham & Sons Ltd* [1957] 1 QB 159 at 172 and *Tesco Supermarkets Ltd v Nattrass* [1972] AC 153. This might be an issue in relation to whether a failure to renew a patent is the fault of the patentee on the basis of whether the person at fault was the directing mind of the patentee; see *Textron Inc's Patent* [1989] RPC 441, per Lord Oliver and Lord Goff, discussed in Chapter 11 (see p 397).

<sup>14</sup> Duration of Copyright and Rights in Performances Regulations 1995.

<sup>15</sup> See Copyright, Designs and Patents Act 1988 s 9(4) and (5). Section 9(5) further states that once the author's identity is known, it cannot subsequently be regarded as unknown.

<sup>16</sup> See Merkin, R. (1989) *Copyright, Designs and Patents: The New Law*, Longman, p 50.

<sup>17</sup> The Copyright, Designs and Patents Act 1988 s 57(1) provides for permitted acts on the basis of certain assumptions as to the expiry of copyright or death of the author in relation to anonymous and pseudonymous works. See Chapter 7.

the painting of a landscape in oils. Collaboration between two or more persons will result in a work of joint authorship only if their respective contributions to the finished work are not distinct from each other, under s 10(1); that is, the work cannot be broken down so that each author's contribution can be separately identified. Thus, an abstract oil painting created by two painters applying paint to create an effect previously agreed by them would be a work of joint authorship. A book comprising separate chapters written by different authors is not a work of joint authorship; neither is a song where one person has written the music and another has written the words, as in a Gilbert and Sullivan operetta. In the latter cases, each person involved will be the author of his own distinct work, and, in the case of a song, the person writing the music will be the author of the musical work while the person writing the lyrics will be the author of those lyrics, as a literary work. Two copyrights will exist in the song, each having different authors (and, possibly, different owners) and the duration of the copyright in the music and the lyrics will differ according to the dates when the composer and lyricist die.

There is no requirement that the authors intend to create a work of joint authorship: the question is simply that the authors collaborated and created a work in which their contributions are not separate. In *Hodgens v Beckingham*,<sup>18</sup> counsel submitted that there must be an intention to create a work of joint authorship.<sup>19</sup> This was rejected by the Court of Appeal, which confirmed the decision below that an artiste known as Bobby Valentino wrote part of the music for the song 'Young at Heart'. Jonathan Parker LJ said that there was nothing in the statutory wording to require the imposition of such a requirement.<sup>20</sup>

The act of collaboration may involve taking part of an existing work and reworking it so as to make it significantly different. In *Fisher v Brooker*<sup>21</sup> the claimant was the organist who played the organ solo in the famous work by Procul Harum known as 'Whiter Shade of Pale'. The part had originally been written for the piano by the first defendant but the claimant reinvented it for the organ. Blackburne J said at para 42:

it is abundantly clear to me that Mr Fisher's instrumental introduction (i.e. the organ solo as heard in the first eight bars of the Work and as repeated) is sufficiently different from what Mr Brooker had composed on the piano to qualify in law, and by a wide margin, as an original contribution to the Work. The result in law is that Mr Fisher qualifies to be regarded as a joint author of the Work and, subject to the points to which I shall next turn, to share in the ownership of the musical copyright in it.

The claimant was awarded a 40 per cent share in the song as a musical work.<sup>22</sup> However, because of his inordinate delay in bringing the action, Mr Fisher was held to have gratuitously licensed the defendants to exploit the work. Blackburne J made the following declarations:

- 1 [Mr Fisher] is a co-author of . . . 'A Whiter Shade of Pale' as recorded by . . . Procol Harum ('the work') and released as a single on 12 May 1967.
- 2 [Mr] Fisher is a joint owner in the musical copyright in the work, with a share of 40 per cent.
- 3 The [defendants'] licence to exploit the work was revoked on 31 May 2005.

On appeal to the Court of Appeal,<sup>23</sup> the majority judges held that defences of acquiescence and laches applied so as to deprive Mr Fisher from a share in the future exploitation of the song. The Court still recognised that he had a 40 per cent share in the copyright. Because of the delay in bringing the claim, the defendants had not suffered any detriment and had received royalties, part of which would have otherwise gone to Mr Fisher. Unlike proprietary estoppel, there is no requirement for detriment. It is not altogether clear whether the organ solo could be considered to be a collaborative work given that the finished organ solo was so different to what had been written

18 [2003] EMLR 376.

19 This was based on a decision of the Canadian Supreme Court in *Nuedorf (Darryl) v Netzwerk Expressions* [2000] RPC 935 where the judge said that there must be an intention to combine the contributions into a unitary whole and each joint owner must have intended the other to be a joint author.

20 This aspect of the case turned on the wording of s 11(3) of the Copyright Act 1956 which was very similar to s 10(1) of the 1988 Act; the only significant difference was that the former said the contributions were not separate whereas the latter said that they were not distinct.

21 [2007] FSR 255.

22 Defences based on estoppel failed; see the discussion of this aspect of the case in Chapter 7 (see pp 205–207).

23 *Brooker v Fisher* [2008] FSR 629. The defence of impossibility of a fair trial due to the passing of time failed as did the defence of proprietary estoppel. Detriment is an essential element of that defence and the defendants failed to show detriment.

by the defendant considering that a work of joint authorship is one where the contribution of each author is not distinct. The House of Lords overturned the Court of Appeal decision and reinstated the declarations of Blackburne J.<sup>24</sup> Lord Neuberger suggested that acquiescence was essentially another form of estoppel as well as being an example of the doctrine of laches. As laches is an equitable doctrine, it cannot apply to a declaration of a statutory right to property. It may be relevant to an application for an injunction, leaving the claimant with a right to damages only. The majority decision in the Court of Appeal recognised that Mr Fisher had a 40 per cent share in the copyright but refused, on equitable grounds, to declare that the right existed. That was clearly wrong in principle.

<sup>24</sup> *Fisher v Brooker* [2009] UKHL 41.

A person may make a significant contribution to the creation or development of a work of copyright and yet may fail to be a joint author. It is a matter of looking at the process of creation of the work and identifying the nature of the contribution. It must be a contribution which relates to bringing about the subsistence of copyright rather than the creation of the subject matter of that copyright. In other words, the joint author must have made a significant contribution in terms of the skill and judgment required to endow copyright on the subject matter. For example, in *Fylde Microsystems Ltd v Key Radio Systems Ltd*,<sup>25</sup> the defendant claimed that he was co-author of computer software used in mobile and portable radios of the sort used by security guards. The defendant's contribution was substantial in testing the software and reporting errors and making suggestions as to the cause of some of the faults. The defendant's employees had also been involved in developing the specification for the software. However, the software was entirely written by the claimant's employees. It was held that the defendant was not a joint owner of the copyright subsisting in the software as the contribution made by the defendant's employees did not amount to an act of authorship. Considerable time may have been saved by the efforts of the defendant's employees. Their work, particularly in testing the software, involved skill and judgment but it was not an authorship skill. An analogy between testing software and proofreading a conventional literary work found favour with the judge.

<sup>25</sup> [1998] FSR 449.

A person who contributes suggestions, ideas and information to assist the author create a work will not, without more, be a joint author of the finished work. In *Robin Ray v Classic FM plc*,<sup>26</sup> the late Robin Ray was a recognised expert on classical music with very extensive knowledge of the subject. He was commissioned by the defendant to advise on its repertoire of classic music to be played on its radio station. He produced and submitted proposals for detailed classifications of musical works in five documents and wrote a catalogue of music. Some information in the catalogue was provided to him by the defendant's employees who also made some suggestions. However, it was accepted by the judge that Robin Ray provided the most important input by his selection of tracks and assessment of the popularity of those tracks. The defendant's contribution was primarily to assist Robin Ray in his work of creating the catalogue. Lightman J said (at 637):

<sup>26</sup> [1998] FSR 622.

the plaintiff was solely responsible as author for the writing of the five documents and the catalogue and the way the ideas were expressed in them. He was not, as submitted by the defendant, 'the team scribe'. The fact that the documents in part (and in fact only in a relatively small, though significant, part) reflect the defendant's representatives' input is totally insufficient to make the defendant joint author.

This reinforces the view that even a significant contribution cannot guarantee co-authorship; it has to be inexorably linked with the creative input required to produce a work of copyright. If a person says to an artist, 'Why don't you go down to the river and paint the arch-bridge with the church spire in the background at sunset?' that does not mean that the person who made that suggestion will be a joint author of the completed

<sup>27</sup> See *Cala Homes (South) Ltd v Alfred McAlpine Homes East Ltd* [1995] FSR 818.

<sup>34</sup> Copyright, Designs and Patents Act 1988 s 104(2).

painting, even if he helped to carry the artist's canvas and paints and helped to mix the paints. Of course, this does not prevent a person who has not put pen to paper from being a joint author providing the contribution is towards the creation of the work in which copyright subsists.<sup>27</sup> This will apply only in exceptional cases. Changes to a dramatic work made during rehearsals after input by the director of the play were not sufficient to give the director joint authorship. It might have been different if the director and writer had collaborated to develop the plot even if the finished play was written by the writer only.<sup>28</sup>

Refusing to give joint authorship to a person who contributes ideas only is entirely consistent with the principle that copyright protects expression not ideas. Whilst a significant or substantial input into the creative spark that gives rise to copyright is required for joint authorship, it is clear that the contributions of joint authors need not be equal. In determining whether a contribution is significant or substantial, it is suggested that regard ought to be had to the relative quantitative and qualitative contributions of the joint authors.<sup>29</sup>

Joint authorship in terms of films is unlikely to be contentious as the general rule is now that a film is a work of joint authorship. The producer and principal director are joint authors, unless they are one and the same person.<sup>30</sup>

In the case of a broadcast, s 10(2) provides that it will be treated as a work of joint authorship where more than one person is to be taken to be making the broadcast. References to the person making the broadcast or a transmission which is a broadcast are, under s 6(3), to the person transmitting the programme if he has responsibility to any extent for the content of the broadcast and to any person providing the programme who makes, with the person transmitting it, the arrangements necessary for its transmission. References to 'programme' in the context of broadcasting are to any item included in a broadcast.

## OWNERSHIP

The Copyright, Designs and Patents Act 1988 s 11 states the basic rule that the author of a work is the first owner of the copyright. This will apply in a good number of cases, for example to persons creating works for their own pleasure or amusement, independent persons not employed under a contract of employment and even to employed persons if the work in question has not been created in the course of their employment. However, there are some exceptions to this basic rule, and where a literary, dramatic, musical or artistic work or a film is made by an employee in the course of his employment, his employer is the first owner of the copyright subsisting in the work subject to any agreement to the contrary.<sup>31</sup> It is not required that the agreement to the contrary has to be between the employer and employee, whether express or implied, but can be between the employer and a third party. In *Cyprotex Discovery Ltd v University of Sheffield*,<sup>32</sup> an employee of Cyprotex wrote computer programs for Sheffield University under a sponsorship scheme. The agreement to the contrary was between Cyprotex and the University which provided for ownership of intellectual property rights arising from a research project under which the employee worked. An example of an implied term to the contrary between employer and employee is given in *Noah v Shuba*<sup>33</sup> where it was held that the copyright in a work created by an employee in the course of his employment could still belong to the employee on the basis of a term implied on the ground of past practice. If the employee's name appears on the work or copies of the work, there is a presumption that the work was not made in the course of employment.<sup>34</sup>

Other exceptions relate to Crown copyright and parliamentary copyright. Her Majesty the Queen is the first owner of the copyright in her own works and in works

produced by an officer or servant of the Crown in the course of his duties, and of the copyright subsisting in Acts of Parliament, the Scottish Parliament, Measures and Acts of the National Assembly of Wales, Acts of the Northern Ireland Assembly and Measures of the General Synod of the Church of England.<sup>35</sup>

One issue in respect of Crown copyright is whether works created by some types of organisation, such as NHS Trusts, can be regarded as being Crown copyright. Can persons working for such organisations be properly described as officers or servants of the Crown? Under the 1956 Act, the test was wider in that it required the work to be made under the direction or control of the Crown, or was so published.<sup>36</sup> This could have applied to a situation where a body was exercising powers devolved from the appropriate Secretary of State. There seems to be no relevant authority under copyright law, but there are some patent cases. For example, in *Pfizer Corp v Minister of Health*,<sup>37</sup> use of a patented drug to treat patients in an NHS hospital was deemed to be use for the services of the Crown, and in *Dory v Sheffield Health Authority*<sup>38</sup> it was accepted that a health authority was a government department for the purposes of the Patents Act 1977 s 55,<sup>39</sup> exercising powers of the Secretary of State on his behalf. However, the test under patent law is more widely expressed than under the 1988 Act, being in relation to acts done ‘for the services of the Crown’. Determination of this issue may be important where an NHS Trust has created a work, for example computer software, for its own purposes, but then realises that it can exploit it commercially, by licensing its use to other NHS Trusts.

If a work is made by or under the direction or control of either or both Houses of Parliament, the first owner of the copyright is the appropriate House or Houses.<sup>40</sup> This includes Bills, public, private and personal. There are equivalent provisions for Bills of the Scottish Parliament and the Northern Ireland Assembly and proposed Measures and Bills of the National Assembly for Wales.<sup>41</sup>

A final exception to the general rule applies to original literary, dramatic, musical or artistic works made by an officer or employee of certain international organisations, or published by the organisation and which do not otherwise qualify for copyright by reference to the author or country of first publication. In such cases, under s 168(1), copyright is declared to subsist in the work and the organisation concerned is deemed to be the first owner of the copyright in the work. The relevant international organisations are designated by Order in Council and include the United Nations and the Organisation for Economic Co-operation and Development. Unlike the position under the Copyright Act 1956, the copyright in certain commissioned works no longer vests in the first instance in the commissioner of the work.<sup>42</sup>

The ownership of the copyright subsisting in anonymous works can present problems, as there is no author available or willing to give evidence as to the ownership. To cope with the evidential difficulties associated with anonymous works, s 104(4) contains a presumption that the publisher of an anonymous work is the owner of the copyright in the work at the time of first publication unless the contrary is proved, provided that the work qualifies for protection by reason of the country of first publication and the name of the publisher appears on copies of the work as first published. In *Warwick Film Productions Ltd v Eisinger*,<sup>43</sup> the claimant failed to rebut the equivalent presumption under the Copyright Act 1956 in relation to an anonymous work, *Oscar Wilde: Three Times Tried*, first published in or around 1911.

If a work is a work of joint authorship, unless the authors are employees acting in the course of employment, the joint authors will automatically become the joint first owners of the copyright in the work.<sup>44</sup> They will own the copyright as tenants in common and not as joint tenants: *Lauri v Renad*.<sup>45</sup> This means that effectively each owner’s rights accruing under the copyright are separate from the others, and he can assign his

<sup>35</sup> Copyright, Designs and Patents Act 1988 ss 163 and 164.

<sup>36</sup> Copyright Act 1956 s 39.

<sup>37</sup> [1965] AC 512.

<sup>41</sup> Copyright, Designs and Patents Act 1988 ss 166A to 166D.

<sup>42</sup> This applied to commissioned photographs, portraits (painted or drawn) and engravings provided they were made for money or money’s worth: Copyright Act 1956 s 4(3).

<sup>43</sup> [1967] 3 All ER 367.

<sup>44</sup> Subject to other provisions relating to Crown copyright, parliamentary copyright, etc.

<sup>45</sup> [1892] 3 Ch 402. However, where the co-owners have some relationship such as husband and wife, it may be reasonable to infer that they hold the copyright as joint tenants and not as tenants in common: see *Mail Newspapers plc v Express Newspapers plc* [1987] FSR 90. On the death of one joint tenant, the other automatically takes the whole copyright.

rights to another without requiring the permission of the other owners, and on his death his rights will pass, as part of his estate, to his personal representatives. Where the whole or a part of a copyright is assigned to two or more persons, they will hold as tenants in common, unless the agreement states otherwise. As copyright can be considered as a bundle of rights, an assignment might be partial. For example, the owner, C, of a copyright in a dramatic work might assign the right to perform the work in public to new joint owners X and Y, and the right to publish paper copies of the work to W and Z jointly. The original owner, C, will remain the sole owner of the remainder of the copyright which will include, *inter alia*, the right to translate the work. However, simply granting one right to one person and another right to another person does not make them joint owners. Each will be the sole owner of that part of the copyright, for example, where there is an assignment of the paper publication right to X and an assignment of the public performance right to Y.

Contractual agreements providing for ownership of copyright (and other intellectual property rights) can present problems of interpretation, particularly if the performance of the contract is not precisely as envisaged or definitions are imprecise. In *Cyprotex Discovery Ltd v University of Sheffield*,<sup>46</sup> the University had developed computer programs to simulate the effects of new drugs on the human body under the Symcyp Project. The software was not suitable for commercial use and it was decided to write it in a form suitable for a Windows-based environment under a sponsorship deal. The plan was that sponsors would be given royalty-free non-exclusive licences and that the intellectual property rights would belong to the University. A research agreement was drawn up between the University and Cyprotex under which Dr Edwards, an employee of Cyprotex, would carry out the programming work. Before the work was completed, there was a dispute as to the ownership of the copyright. Unlike the position with other sponsors, the University agreed to pay a contribution towards the costs of Cyprotex's programmer. Clause 9(b) of the agreement stated that intellectual property rights resulting from the project conceived or made by employees and agents of the University alone or jointly with employees of the sponsors in relation to the performance of the project ('Resulting IPR') would belong to the University. However, clause 9(d) stated that intellectual property rights made solely by employees of the sponsor ('Sponsor IPR') should belong to the sponsor. The Court of Appeal held that clause 9(d) must be read as subject to clause 9(b) and the work carried out by Dr Edwards fell within clause 9(b) as an agent of the University. Clause 9(d) covered work *related* to the project whereas clause 9(b) concerned the project itself. This gave a commercially sensible result as the other sponsors had provided funding for the project in the expectation that the University would own the rights and grant them royalty-free licences.

46 [2004] RPC 887.

### Beneficial ownership and implied licences

There may be occasions when the operation of the basic rule regarding first ownership results in an injustice. For example, a consultant may produce a work for a client in circumstances in which the client expects that he will own the copyright in the finished work and pays the consultant accordingly. However, if there is no provision for the assignment of the copyright and the consultant cannot be classed as an employee working in the course of his employment, the consultant will be the first owner of the copyright. The consultant may realise the implications of this position and may decide later either to interfere with the client's exploitation of the work or to deal with the work himself without the client's permission. The first possibility, that is where the consultant attempts to interfere with the client's use or marketing of the work, should be defeated on the basis of non-derogation from grant,<sup>47</sup> or alternatively on the basis of an implied

<sup>47</sup> See *British Leyland Motor Corp Ltd v Armstrong Patent Co Ltd* [1986] 2 WLR 400.

licence. Both the first and second possibility can be overcome if the court is willing to use equitable principles to infer beneficial ownership.<sup>48</sup> This was done in the case of *Warner v Gestetner Ltd*,<sup>49</sup> in which Warner, who was an expert in the drawing of cats, agreed orally to produce some drawings to be used by Gestetner to promote a new product at a trade fair. Gestetner subsequently used the drawings for promotional literature, and Warner complained that this went beyond the agreement and infringed his copyright. Warner remained the owner of the copyright in the drawings because it had not been assigned to Gestetner.

However, Whitford J found that he could imply a term granting beneficial ownership of the copyright to Gestetner. Thus, the copyright had two owners, one at law and one at equity, and Gestetner, as beneficial owner, could deal with the work as it wished, Warner's legal interest in the copyright being of little practical significance (although infringement actions are much less effective if brought by a beneficial owner without the legal owner being joined as a party).<sup>50</sup> The concept of two owners, one legal and one beneficial, is used extensively in the law of real property, but there have been other examples of its application to intellectual property law. For example, in *Ironsides v Attorney-General*<sup>51</sup> it was held that an agreement for the design of the reverse face of coins gave rise to an assignment in equity, or alternatively an implied licence.<sup>52</sup> Of course, to be able to imply beneficial ownership, the creator of the work should have been paid a fixed sum rather than a royalty, as the latter is inconsistent with a transfer of ownership. Both the above cases involved a lump sum payment.

The use of beneficial ownership has to be consistent with the overall tenor of the agreement. *Warner v Gestetner* was distinguished in *Saphena Computing Ltd v Allied Collection Agencies Ltd*<sup>53</sup> where a software developer had developed new computer software under the agreement. It is common for software developers to licence their software to other customers in the future. The grant of non-exclusive licences in respect of computer software, even if written for a particular client, is common and this is inconsistent with beneficial ownership. Furthermore, the Court of Appeal considered that, in order to give the agreement business efficacy, there was no reason to imply a term that beneficial interest should pass to the client. This is not to say that beneficial ownership can never arise in relation to computer software. It depends on the circumstances. If the common intention is that the client will be the only person using the software, such an implied term might be appropriate. For example, in *John Richardson Computers Ltd v Flanders*,<sup>54</sup> computer software developed by an ex-employee acting as a consultant to his former employer gave rise to beneficial ownership in favour of the latter.

A less contrived approach than implying beneficial ownership which would, in many cases, have the same effect in practical terms, would be for the court to imply a term to the effect that the commissioner of a work has a licence to continue to use the work. This approach was taken by Lord Denning MR in *Blair v Osborne & Tomkins*<sup>55</sup> in which an architect was commissioned to draw building plans for the purpose of obtaining planning permission for some houses. The site for which the plans had been drawn was then sold with the benefit of the planning permission and the plans were transferred to the purchaser, who employed his own surveyors who modified the plans for building regulations approval and put their name on the plans. Eventually, houses were built in accordance with the plans, and the architect sued for infringement of copyright. It was held that the architect owned the copyright in the plans and there had been an infringement by the surveyors who had submitted the plans to the council in their own name, but only nominal damages were appropriate as no harm was suffered by the architect as a result of this.<sup>56</sup> On the issue of the building of houses by the purchaser of the land in accordance with the architect's plans, it was held that the purchaser had an implied licence to use the plans for this purpose. The person who commissioned the architect had such an implied licence which extended to the making of copies of the plans to be

48 If beneficial ownership is found, the courts are likely to order a formal assignment of the legal title to the copyright to the beneficial owner.

49 [1988] EIPR D-89.

50 Generally, on his own, a beneficial owner will be entitled to interim remedy only. See also *Bookmakers' Afternoon Greyhound Services Ltd v Wilf Gilbert (Staffordshire) Ltd* [1994] FSR 723 at 735–37 per Aldous J. In that case, equitable title to copyright in race cards was based on an intention to assign copyright.

51 [1988] RPC 197.

52 See also *Performing Right Society Ltd v London Theatre of Varieties Ltd* [1924] AC 1, discussed later.

53 [1995] FSR 616.

54 [1993] FSR 497.

55 [1971] 2 WLR 503.

56 Nowadays, the architect would have an action under the Copyright, Designs and Patents Act 1988 s 77 for infringement of his right to be identified as the author, provided he had asserted this right.

used in respect of that site only and not for any other purpose, and this implied licence extended to any purchaser of the site. The rationale for thus deciding this case was that the architect had received his fee once, and failure to imply a licence would have meant that the architect would have been able to charge a second fee to the purchaser of the site without having to carry out any further work. It must be noted that the scope of the licence was limited to building the houses on that site only, and the purchaser would have been prevented from building further houses in accordance with the plans on other sites.

Architects usually operate under a standard form contract that provides that the copyright in the architectural plans remains with the architect. Where, part way through a development, a builder goes into administration, the administrator may wish to sell the partly completed development and pass on the architectural drawings to the buyer. Subject to confidentiality issues, there will not normally be a problem if all that is done is to pass on the drawings for use by the buyer. It is only when copies are made that copyright issues may come into play. In *Thurgood v Coyle*,<sup>57</sup> the contract under which the development was being carried out appeared to limit the use of the drawings to works under the contract. Lewison J did not read the contract as having that effect, as a matter of construction and also for practical reasons. For example, the builder would have wanted to be able to continue to use the drawings if the contract was terminated for whatever reason. It was held that the licence was transferable and the buyer would be able to use and reproduce the drawings.

Sometimes a licence may be implied in unexpected circumstances because it is needed to give business efficacy to a contract. In *Taylor v Rive Droit Music Ltd*,<sup>58</sup> it was held that a licence would be implied to a song writer to continue working on a song after the copyright in the unfinished draft had vested to a publisher under a publishing agreement. Such a licence would not, however, extend to enable others to collaborate on further work to the song as this could compromise the publisher's ability to exploit the work (for example, by giving the others joint ownership of the copyright in the version they had worked on).<sup>59</sup> This would amount to derogation from grant. A licence was implied in *Brighton v Jones*<sup>60</sup> in respect of work done by the defendant on a draft script for a play sent to the defendant by the claimant.

In deciding whether to grant beneficial ownership or an implied licence, a minimalist approach should be used, granting the least rights required to satisfy the commercial reality of the circumstances. There is no justification for granting beneficial ownership when an implied licence will produce a fair and reasonable result that is workable in practice. Perhaps the best analysis of the considerations to be taken into account is that set out by Lightman J in *Robin Ray v Classic FM plc*<sup>61</sup> in the context of a contractor (creator of the work) working for a client. What he said is summarised below.

- 1 The contractor is entitled to ownership subject to any express or implied term to contrary effect.
- 2 The contract may itself expressly provide for entitlement to ownership.
- 3 The mere fact that a contractor has been commissioned to create the work in question is insufficient to entitle the client to the copyright.
- 4 The implication of terms into a contract was firmly established in *Liverpool City Council v Irwin*<sup>62</sup> (the term must be reasonable and equitable, must be necessary for business efficacy to the contract and no term will be implied if the contract is effective without it, the term must be so obvious that 'it goes without saying', it must be capable of clear expression and, finally, it must not contradict any express term).
- 5 Where it is necessary to imply a term to fill some lacuna in the contract, a minimalist approach should be taken in deciding which of the alternatives should be used, implying that which is necessary and no more.

57 [2007] EWHC 2539 (Ch).

58 [2004] EWHC 1605 (Ch).

59 However, the Court of Appeal put a different construction on the agreement which meant that there was no need to imply a licence: *Taylor v Rive Droit Music Ltd* [2006] EMLR 52.

60 [2005] FSR 288.

61 [1998] FSR 622 at 641ff.

62 [1977] AC 239.

- 6 If it is necessary to imply some term in respect of a copyright work and either an assignment or the grant of a licence will do, then the grant of a licence only should be implied.
- 7 Circumstances may exist where an assignment may be appropriate, including where the client needs in addition to the right to use the work, the right to prevent the contractor from using it and the right to enforce it against third parties (for example, where the purpose was to allow the client to make and sell copies of the work in the absence of competition from the contractor or third parties) or where the work is derivative of an existing work belonging to the client or where the contractor is part of a team made up of employees of the client to create a composite or joint work in circumstances such as the contractor is unable, or cannot have been intended to be able, to exploit the work for his own benefit (including any distinct contribution of his). Lightman J said '[i]n each case it is necessary to consider the price paid, the impact on the Contractor of assignment of copyright and whether it can sensibly have been intended that the Contractor should retain any copyright as a separate item of property'.
- 8 If necessity only requires the grant of a licence, the ambit must be the minimum to secure to the client the entitlement to which the parties must have intended. The price paid may be a factor.
- 9 The licence accordingly is to be limited to what is in the joint contemplation of the parties at the date of the contract, and does not extend to enable the Client to take advantage of a new unexpected profitable opportunity.

Implying beneficial ownership or a licence, as the case may be, may only be made if it is necessary and then only of what is necessary and no more. The test is, therefore, one of strict necessity.<sup>63</sup>

In *Griggs Group Ltd v Evans (No 2)*,<sup>64</sup> there was some criticism of point 7 above, particularly where Lightman J asked whether it could be sensibly intended that the contractor should be able to retain the copyright as a separate item of property. This appears to contradict the first point which raises a presumption that it is the contractor who is entitled to the copyright in the absence of any express or implied terms to the contrary. Jacob LJ said (at para 15) that this could be resolved by putting the question another way round, being 'given that Parliament vests the first ownership in the author, is it sensible that the parties intended that to remain the position?' Otherwise, he thought Lightman J's summary of the position masterful.

In *Griggs Group Ltd v Evans*, the claimant made and sold boots under the Dr Martens trade mark.<sup>65</sup> It also used its own trade mark 'AirWair' with its boots. Eventually, it decided to combine the two marks and engaged the first defendant, Mr Evans, who worked for a small advertising agency, Irwin Jordan Ltd. He created the combined logo for the claimant in 1988. Irwin Jordan ceased trading but not before it purported to assign the copyright in the combined logo to the claimant but this was ineffective as Mr Evans was an independent contractor and not an employee. He had been paid £15 per hour by Irwin Jordan for the work in designing the logo. There was no evidence of any agreement as to copyright ownership and it was accepted that Mr Evans was indeed the owner of the legal title to the copyright.

Later, after failed negotiations between the claimant and Mr Evans concerning an assignment of the copyright to the claimant, Mr Evans assigned the copyright to the second defendant and competitor of the claimant, an Australian Footwear Company, called Raben Footwear Pty Ltd.

At first instance,<sup>66</sup> the judge held that the claimant was entitled to beneficial ownership of the copyright subsisting in the logo. It was argued that, adopting Lightman J's minimalist approach, all the claimant needed was an implied licence to use the logo

<sup>63</sup> Per Mr Robert Ham QC, as deputy judge of the High Court, applying the 'Robin Ray' guidelines in *Meridian International Services Ltd v Richardson* [2007] EWHC 2539 (Ch) at para 60. The term sought to be implied would have assigned copyright in software but, at the relevant time, there was only a draft oral agreement with terms to be negotiated. The Court of Appeal upheld his decision in *Meridian International Services Ltd v Richardson* [2008] EWCA Civ 609.

<sup>64</sup> [2005] FSR 706.

<sup>65</sup> This was under a licence from the successors in title of the German doctors who originally developed the Dr Martens boot.

<sup>66</sup> [2004] FSR 939.

in the UK as it appeared that the parties thought that the logo was to be used only in the UK. Jacob LJ said that this conclusion was fantastic. If the ‘officious bystander’ was present when the agreement to design the logo was made and asked whether Mr Evans was to retain any rights in the logo and could use it as against the claimant, the answer would surely have been ‘of course not’. Jacob LJ also agreed that the judge was right to find that Mr Evans had been paid the proper rate for the job and rejected the notion that he would have charged more had he known about the wider intended use.

An implied licence may be appropriate to cover some prior use and exploitation of a work preceding a decision affecting copyright ownership. This will be quite rare. One example is the case of *Fisher v Brooker*<sup>67</sup> in which it was held that the claimant who played the organ solo in ‘Whiter Shade of Pale’ was a joint author and owner of the copyright in the musical work. It was nearly 40 years before the claimant attempted to establish his claim for joint authorship and, in the meantime, he had ‘sat back and permitted two [collecting] societies to account to the defendants for royalties . . .’ In the circumstances, Blackburne J held that the claimant must be taken to have gratuitously licensed the exploitation of his copyright. That implied licence lasted until March 2004 when his solicitors first intimated the claim to the defendant. However, in the Court of Appeal, in *Brooker v Fisher*,<sup>68</sup> the majority judges held that there was an irrevocable licence in favour of the defendant. An important factor was that, had Mr Fisher been a joint owner of the copyright in the song, he might have been able to prevent its future exploitation by seeking injunctive relief. However, David Richards J, dissenting, said that it would be unconscionable to deprive a person of his property right for the future in a case where he has not agreed, expressly or impliedly, for consideration to give up that right. David Richards J said (at para 139):

a property right should not in effect be extinguished without either consideration or detriment, although delay amounting to laches may properly be a bar to equitable remedies such as an injunction. Nor do I consider the result to be unjust. Where the defendants retain all past earnings and have suffered no detriment from Mr Fisher’s delay, there is in my view no injustice if his interest in the copyright is now established for the future.

The House of Lords agreed with Blackburne J and the dissenting judgment of David Richards J in the Court of Appeal.<sup>69</sup>

The Limitation Act 1980 has no bearing on late claims to ownership of copyright although, of course, it would bar a claim to past royalties paid more than six years before. The views of the majority judges in *Brooker v Fisher* are difficult to reconcile with the notion of inviolability of property rights. Indeed, Article 1 of Protocol 1 to the Council of Europe Convention for the Protection of Human Rights and Fundamental Freedoms states that ‘no one shall be deprived of his possessions except in the public interest and subject to the conditions provided for by law and by the general principles of international law’.<sup>70</sup>

The courts have some flexibility in whether to decide on an implied or beneficial assignment of copyright or an implied licence to overcome a failure to address ownership or licensing issues in the consultancy agreement.<sup>71</sup> Beneficial ownership is most likely to be appropriate if the justice of the case suggests that the client should have complete control over the restricted acts, even to the exclusion of the consultant who remains the legal owner, and the ability to enforce the copyright against third parties. An implied licence is most appropriate where the circumstances are such that continued exploitation (including the granting of further licences) by the consultant is not incompatible with the use of the work by the client as originally contemplated by the parties. Where a licence is implied it should be the minimum consistent with the original intention of the parties.<sup>72</sup> The price paid by the client is obviously an important factor.<sup>73</sup> Although both beneficial ownership and implied licences are often important

<sup>67</sup> [2007] FSR 255.

<sup>68</sup> [2008] FSR 629.

<sup>69</sup> *Fisher v Brooker* [2009] UKHL 41.

<sup>70</sup> This provision was used in relation to copyright before the European Court of Human Rights in *Balan v Moldova* [2009] ECHR 53, discussed in Chapter 6.

<sup>71</sup> In *Pasterfield v Denham* [1999] FSR 168, it was held that the person who commissioned the work had an equitable interest in the copyright but, even if he did not, he had an implied licence to use the finished work.

<sup>72</sup> In *Robin Ray v Classic FM plc* [1998] FSR 622, the claimant had been paid around £250,000 to create the works and it was accepted that the implied licence extended to use of the works for the purposes of its broadcasting operations in the UK. It did not, however, extend to the grant of licences by the defendant allowing foreign radio stations to make use of the works in relation to their broadcasts.

<sup>73</sup> For a useful description of factors used in deciding whether an assignment of licence is most appropriate, see Lightman J in *Robin Ray v Classic FM plc* [1998] FSR 622 at 642.

retrospectively, for example, to cure some alleged past infringement, they are also useful in terms of future conduct. In such cases, it seems possible that the courts have the power to order specific performance and require that a formal assignment or licence is drawn up between the parties.

### Copyright in work created by a fiduciary

Where a person is in a fiduciary relationship to another and creates the work in question in the context of that relationship, then he will hold the copyright in the work on trust for the other. In *Vitof Ltd v Altoft*,<sup>74</sup> the defendant was a director of the claimant company.<sup>75</sup> He wrote source code for the company's labelling machines. It seems some of the source code was written before the company was formed, though most was written after that event. However, it also appeared that the source code might have infringed the copyright in source code belonging to another company which the defendant had previously worked for. As the defendant was a director of the claimant company, he owed the company fiduciary duties and Richard Arnold QC<sup>76</sup> had no doubt in deciding that he held the source code on trust for the company. Had the defendant been able to retain the source code for himself, this would mean that he would have had a conflict of interests. The fact that a small part had been written prior to the formation of the company did not matter as it was written in contemplation of the formation of the company. As he held the source code on trust for the company as legal owner, the defendant would be required to assign the copyright to the company and it was irrelevant whether it infringed a third party copyright. Where a work infringes a third-party copyright, it might still be a work of copyright itself.<sup>77</sup>

Holding that a person in a fiduciary position is a trustee is common in the case of company directors and other senior officers of companies and other organisations.<sup>78</sup> In *Ultraframe (UK) Ltd v Fielding*,<sup>79</sup> the Court of Appeal held that a director with 100 per cent shareholding of the companies he operated through held the design rights in designs he created as trustee for the companies. In *Ball v Eden Project Ltd*,<sup>80</sup> a director of the defendant company through which a charitable trust ran the famous Eden Project in Cornwall registered 'The Eden Project' as a trade mark. By doing so, he was clearly in breach of his fiduciary duty to the company. In such cases, it is usual for an order to assign the right in question to the person or body to whom the fiduciary duty is owed.

### Employees

The main difficulty with the ownership provisions concerns the employer/employee relationship and the meaning of 'in the course of his employment', or, in the case of Crown copyright, 'in the course of his duties'. There will be many situations where it will be obvious that the work has been made by an employee in the course of his employment, for example a sales manager who, during his normal working hours, writes a report on the last quarter's sales figures for the board of directors of the company he works for. However, difficulties arise if an employee has created the work in his own time, whether or not using his employer's facilities, or if the nature of the work is not that which the employee is normally paid to create. To some extent the expectations of the employee and employer as manifested in the contract of employment are important: for example, the employee's job description and whether the nature of the thing produced sits comfortably with that job description, either expressly or by implication. To take an extreme example, say that a person who is employed as a cleaner writes some music during his own time. He will be the first owner of the copyright in the musical work because he is employed as a cleaner, and not as an author of musical works. Even

<sup>74</sup> [2006] EWHC 1678 (Ch).

<sup>75</sup> It did not appear that the director was classed as an employee of the company. There was no contract of employment. However, the judge could not decide this issue in the present applications for summary judgment.

<sup>76</sup> Sitting as Deputy High Court Judge.

<sup>77</sup> *ZYX Music GmbH v King* [1965] FSR 566, at first instance.

<sup>78</sup> See, for example, *Regal (Hastings) Ltd v Gulliver* [1967] 2 AC 134.

<sup>79</sup> [2004] RPC 479. This case is discussed at length in Chapter 18 (see p 618).

<sup>80</sup> [2002] FSR 686, discussed in Chapter 20 (see p 702).

81 A soldier in the SAS is not employed to write a book describing his experiences in the Falklands War. However, the Ministry of Defence sought to claim copyright in such a book as a means of preventing publication: Alberge, D. 'MoD Will Claim Copyright on SAS Book if Ban Fails', *The Times*, 5 August 1995, p. 3.

82 [1952] RPC 10.

if our cleaner writes the music during the time he should be performing his employment duties, he still will be the first owner of the copyright, but may have to answer to his employer for this breach of the contract of employment.<sup>81</sup>

The situation changes if the employee is employed under a contract with a very wide job description, for example as a research and development engineer, and he prepares a work of copyright which is useful to his employer's business. The copyright will probably belong to his employer, even if the employee created the work on his own initiative outside normal working hours. A complicating factor may be that the employee's formal job description no longer completely and accurately describes his present duties, in which case the actual type of work carried out by the employee will be relevant. A basic test is whether the skill, effort and judgment expended by the employee in creating the work are part of the employee's normal duties (express or implied) or within any special duties assigned to him by the employer. If the answer is 'no', then the employee will be the first owner of the copyright, even if he has used his employer's facilities or assistance. In *Stephenson Jordan & Harrison Ltd v MacDonald*,<sup>82</sup> an employed accountant gave some lectures, which he later incorporated into a book. It was held that, even though his employer had provided secretarial help, the copyright in the lectures belonged to the accountant because he was employed as an accountant to advise clients, and not to deliver public lectures. However, part of the book was based on a report that the accountant had written for a client of his employer, so the copyright in this part belonged to his employer.

Employees sometimes perform work which is outside the contract of employment, that is, a contract of service. In such a case, the work is created under a contract for services rather than a contract of service, and the employee will be the first owner of the copyright. The point is illustrated well by Lord Denning in *Stephenson Jordan & Harrison* where he said:

[In] *Byrne v Statist* [1914] 1 KB 622 . . . a man on the regular staff of a newspaper made a translation for the newspaper in his spare time. It was held that the translation was not made under a contract of service but under a contract for services. Other instances occur when a doctor on the staff of a hospital, or a master on the staff of a school, is employed under a contract of service to give lectures or lessons orally to students. If he, for his own convenience, puts the lectures into writing, then his written work is not done under a contract of service. It is most useful as an accessory to his contracted work but it is not really part of it. The copyright is in him and not in his employers.<sup>83</sup>

83 [1952] RPC 10 at 22.

Thus, an academic teacher, such as a university lecturer, will own the copyright in the notes he has prepared for the purpose of presented lectures and will be able to exploit those notes, for example, by granting a licence to a publisher, provided there is not an express term in his contract of employment to the contrary. Presumably, the same can be said in respect of 'handouts' distributed to students during lectures, unless these could be seen as an integral part of the lecturing duties. However, the changing nature of teaching and lecturing duties driven by the greater drive towards improving standards of quality has probably modified Lord Denning's robust view and it is likely that certain written materials produced by teachers and lecturers, such as module outlines, lecture plans and handouts, to be distributed to pupils or students in printed form or electronically, are prepared in the course of employment. The same would not apply to research papers, journal articles and books produced by teachers and lecturers unless specifically covered by the contract of employment. In the main, writing such materials may be encouraged by educational establishments but is not a required part of the teaching or lecturing duties.

If the employer wishes, he may allow the employee to be the first owner of the copyright, as s 11(2) includes the phrase 'subject to any agreement to the contrary'.

Normally, transfer of ownership of copyright must be in writing and signed by or on behalf of the copyright owner,<sup>84</sup> but in this case it would appear that a verbal or even implied agreement will suffice because this is not a case of assignment, since the copyright does not exist until the time it has a first owner.<sup>85</sup> On the other hand, if an employee produces a work, the creation of which lies outside his normal duties (that is, it is not created in the course of his employment), any agreement that the employer will be the owner of the copyright must comply with s 90(3) and must be in writing and signed by or on behalf of the employee. The reason is that the employee automatically will be the first owner and the copyright must, therefore, be assigned to the employer. If there is such an agreement, but the formalities are not complied with, the employer may have an implied licence or may be deemed to be the beneficial owner of the copyright.

Freelance workers and consultants may be difficult to classify as employees in the normal sense of the word. Under s 178 ‘employed’, ‘employee’, ‘employer’ and ‘employment’ refer to employment under a contract of service or of apprenticeship. The categorisation of a person as an employee or self-employed person is so crucial to the question of ownership of copyright that it requires further exploration, and employment law may provide some guidance as to how the distinction may be made. A person’s status as employee or self-employed is important in employment law as many of the statutory safeguards, such as the right to claim unfair dismissal and the entitlement to redundancy pay, depend upon this question. Although the case law on this subject is far from satisfactory, questions such as who controls the work, whether the person is entitled to sick pay, who provides a pension, the method of payment (for example, weekly or monthly or on the basis of a lump sum for an agreed item of work), whether tax is deducted at source and financial responsibility (for example, for faulty work) may combine to provide an overall test.<sup>86</sup> In *Beloff v Pressdram Ltd*<sup>87</sup> the question of ownership of a memorandum written for the editor of the *Observer* newspaper had to be determined. The claimant, the author of the memorandum and who worked for the *Observer*, sued the publisher of *Private Eye* for infringing the copyright in the memorandum. The claimant could sustain the action only if she were the owner of the copyright in the memorandum. She would be the owner only if she was not an employee of the *Observer*.<sup>88</sup> Ungood-Thomas J referred to a number of indicia which could be used to determine whether the contract was a contract of service (in which case the claimant would be an employee) or a contract for services. He decided that the former was the case.

Factors in favour of the arrangement being a contract of service were that the *Observer* provided the claimant with office space, equipment and resources, including a secretary; she did not use her own capital and her remuneration was not affected by the success or otherwise of the newspaper; deductions from her earnings were made in respect of PAYE and a pension scheme and, finally, the claimant’s job was an integral part of the newspaper’s business. The fact that the editor did not have full control over her work was not particularly relevant, and the judge pointed out that the greater an employee’s skill, the less significant the question of control becomes. Control might be a more important determining factor in the case of employees carrying out lowly tasks under supervision. Lack of supervision and control by the client together with other factors such as working from home at times of his own choosing except when required to attend meetings was indicative of a contract for services in *Robin Ray v Classic FM plc*.<sup>89</sup> The agreement between the parties explicitly stated that it was not a relationship of employer and employee but between an independent contractor and the client. However, this is not decisive and the courts will go beyond such statements to look at the substance of the agreement.

None of the factors mentioned above is conclusive as such. In *Hall v Lorimer*<sup>90</sup> Mummery J said that the court could not run through a checklist of items pointing one

<sup>84</sup> Copyright, Designs and Patents Act 1988 s 90(3).

<sup>85</sup> *Noah v Shuba* [1991] FSR 14 provides an example of an implied agreement that the employee owned the copyright in a work created during normal working hours.

<sup>86</sup> *Market Investigations Ltd v Minister of Social Security* [1969] 2 QB 173 at 185 per Cooke J.

<sup>87</sup> [1973] 1 All ER 241.

<sup>88</sup> A purported assignment of the copyright to the claimant was ineffective.

<sup>89</sup> [1998] FSR 622.

<sup>90</sup> *The Times*, 4 June 1992.

way or the other. He went on to suggest that a whole picture should be painted and viewed from a distance to reach an informed and qualitative decision. Emphasis has been placed on ‘mutuality of obligation’, described by Kerr LJ in *Nethermere (St Neots) Ltd v Taverna*<sup>91</sup> in the following terms:

[The alleged employees] must be subject to an obligation to accept and perform some minimum, or at least reasonable, amount of work for the alleged employer.

91 [1984] IRLR 240.

A case which seems to push the boundaries in favour of employers is *King v South African Weather Service*<sup>92</sup> before the Supreme Court of Appeal of South Africa. The claimant was employed as a meteorological officer in charge of one of the defendant’s offices. The defendant developed an automated weather system using a number of computer programs. The claimant later wrote some computer programs to facilitate his task of collecting meteorological data and transmitting them to the defendant’s head office. The claimant’s duties varied over time but did not include writing computer programs. At first he wrote the programs mainly after hours or at home but later began to work on the programs during working hours. His claim for ownership of the copyright in the computer programs he had written failed and his appeal to the Supreme Court of Appeal was dismissed.<sup>93</sup> The court accepted that it was not possible to lay down hard and fast rules as to whether a work was created in the course of employment. It was a factual issue to be decided on the basis of the terms of the employment contract and the particular circumstance in which the work was created. Important factors in this case which pointed to the employer being the first owner of the copyright were:

92 [2009] FSR 324.

93 Having refused to hand over the source code, the employee had been subject to a disciplinary hearing and then dismissed.

- the programs were integrated into the employer’s automated weather system and were of advantage to the employer;
- although the duties of a meteorologist did not ordinarily include writing computer programs, they had been developed to assist in his duties of collecting and transmitting data – although he may have written the programs to make his job easier, he had done it because of his job;
- there was a close causal connection between the claimant’s employment and the creation of the programs – some of the programs had been written for other weather stations at the employer’s request – they had not been created for external use and the employer had specified the format of these programs which had to be approved by the employer before implementation and use;
- the job description had not been all-embracing – a later fuller description was issued which stated that a work could be created in the course of employment without having been created in terms of the contract – furthermore, a contract of employment could change either expressly or by implication.

Some particular facts help explain the decision. King had submitted quarterly reports to his employer in which he stressed his programming activities. In a job evaluation he stated that he was responsible for system development and programming and calibration of the employer’s automatic weather station network. He was at that time spending about 50 per cent of his working time on developing the computer programs in question. It would seem that there was a degree of mutual though tacit understanding between employee and employer that program development was part and parcel of his duties even though no mention was made in the express terms of the contract of employment. This case is distinguishable from *Stephenson Jordan & Harrison* on a number of grounds, including the fact that creating the programs was intimately tied up with the meteorologist’s duties.

In the United States, the author of a work is generally the first owner of the copyright but where a work is ‘made for hire’ the situation is that the employer or other person for whom the work was prepared is considered to be the author and will own the copyright

subject to an agreement to the contrary.<sup>94</sup> Section 101 of the US Copyright Act 1976 defines a work made for hire as, *inter alia*, a work prepared by an employee within the scope of his or her employment.<sup>95</sup> In determining whether a work is prepared within the scope of employment, the Supreme Court case of *Community for Non-Creative Violence v Reid*<sup>96</sup> which involved a sculpture commissioned to be made by Reid is instructive. The Court applied the general common law of agency and to determine whether a hired party is an employee consideration should be given to:

the hiring party's right to control the manner and means by which the product is accomplished. Among the other factors relevant to this inquiry are the skill required; the source of the instrumentalities and tools; the location of the work; the duration of the relationship between the parties; whether the hiring party has the right to assign additional projects to the hired party; the extent of the hired party's discretion over when and how long to work; the method of payment; the hired party's role in hiring and paying assistants; whether the work is part of the regular business of the hiring party; whether the hiring party is in business; the provision of employee benefits

This is not unlike the tests in *Market Investigations Ltd v Minister of Social Security* and *Beloff v Pressdram Ltd*, discussed above (see p 100).

Given the difficulty of predetermining the status of a person carrying out work for another, it is preferable, if there is any doubt whatsoever, to provide contractually for the ownership of copyright subsisting in anything produced by the worker. Certainly, there is a good deal of confusion about the ownership of commissioned works, the commissioner often believing, mistakenly, that he will automatically own the copyright subsisting in the work created.<sup>97</sup> In these situations, the person commissioning the work should insist that the contract contains provisions for the assignment of the future copyright.<sup>98</sup> Of course, in terms of the relationship between employer and employee and between client and consultant, there is the additional factor of the obligation of confidence owed by one to the other.<sup>99</sup> The law of confidence may help the employer or the client prevent the subsequent use of commissioned material by the employee or consultant, regardless of the question of copyright ownership.

## Complexity of rights

For the derivative works of copyright there will usually be several rights associated with the work, and the exploitation of works in which numerous rights exist can be fairly complex, although collecting societies such as the Performing Right Society bring some simplification. As an example of the number of rights that can subsist in a work, consider a song which has been recorded as a sound recording. The following rights can exist:

- musical copyright,
- literary copyright,
- copyright in the sound recording,
- rights in a live performance of the song (these are neighbouring rights to copyright – the performers and recording company have rights),
- rental and lending rights,
- the composer's moral rights, and
- the lyricist's moral rights.

The exploitation of the sound recording must take account of all these rights by way of assignments, licences or waivers. The rights themselves can be subdivided. For example, in the above case the following cross-cutting rights are important:

- the right to make copies of the sound recording,
- the right to play the sound recording in public,
- the right to permit rental of copies of the sound recording.

<sup>94</sup> US Copyright Act 1976, 17 USC 201.

<sup>95</sup> Certain specially ordered or commissioned works are also deemed to be works made for hire: s 101(2) of the Copyright Act 1976.

<sup>96</sup> 490 US 730 (1989).

<sup>97</sup> This problem came to light as regards the ownership of the 'Lightman Report' commissioned by the National Union of Mineworkers. A publisher intended to publish the report with the permission of Mr Lightman QC, in the face of strong objection by the Union which believed it owned the copyright in the report – see *The Times*, 1 October 1990, p 3. However, unless there was a signed written assignment of the copyright, the person commissioned, Mr Lightman, would be the first legal owner of the copyright in the report, although the Union might have had some rights as beneficial owner of the copyright in equity.

<sup>98</sup> Copyright, Designs and Patents Act 1988 s 91 provides for prospective ownership of copyright.

<sup>99</sup> See Chapter 10 (pp 356–361) for a discussion of the operation of the law of confidence as regards employees.

A film may be subject to many rights. The screenplay will be a dramatic work and may be based on a novel produced as a book. The novel will have literary copyright which will initially be owned by the novelist. The copyright in the film as a film will be owned, in the first instance, jointly by the producer and the principal director, unless they are employees making the film in the course of employment. Even so they will be joint authors and will consequently have a right to authorise or prohibit rental or lending.<sup>100</sup> Add to this the various rights associated with the sound track, performance rights and moral rights and it becomes clear that lawyers will be kept busy in drawing up all the necessary agreements and consents. Mechanisms for exploiting works of copyright are described in the subsequent sections of this chapter.

<sup>100</sup> See Dworkin, G. 'Authorship of Films and European Commission Proposals for Harmonising the Term of Copyright' [1993] 5 EIPR 151.

## DEALING WITH COPYRIGHT

As has been previously mentioned, copyright is a property right, and as such the owner of that right can deal with it. He can transfer the right to another, or he can grant licences to others, permitting them to do some or all of the acts restricted by copyright in relation to the work. However, it must be remembered that the author of a work has certain moral rights, and the owner of the copyright and his assignees or licensees, indeed the public in general, must take notice of and respect these moral rights. Therefore, the ultimate owner of a copyright is not entirely free to do as he wishes with the work that is the subject matter of the copyright. Nevertheless, in most cases, respecting the author's moral rights will not be a hindrance to the economic exploitation of copyright.

Why should the owner of a copyright wish to transfer his ownership of the copyright or grant licences in respect of it? Bearing in mind that the author of a work of copyright will often be the owner of the copyright, the owner may not be in the best position to exploit the work commercially. For example, the author of a work of literature such as a romantic story (if he is the first owner of the copyright, as will usually be the case) will find it more advantageous in terms of the balance between financial reward and the degree of risk involved to approach a well-established publisher who will arrange for the printing, marketing and sale of books of the story. Not only that, but the publisher will also be better placed to take legal action against persons infringing the copyright. Similarly, the composer of a piece of music may approach a record company which might arrange for the recording of the music by a well-known orchestra and for the manufacture, distribution and sale of records, cassettes and compact discs on a world-wide scale. Copyright can also be a form of investment. A lump sum can be invested to acquire the copyright in works which will continue to provide income over many years.<sup>101</sup> Alternatively, copyright may be used as security for a loan or other financial transaction. Finally, transfer of ownership of copyright will occur on the death of the owner or a part-owner of the copyright.

<sup>101</sup> This may be advantageous in terms of tax liabilities. For the tax implications of intellectual property see Gallafent, R.J., Eastaway, N.A. and Dauppe, V.A.F. (2003) *Intellectual Property Law and Taxation* (6th edn) Sweet & Maxwell.

<sup>102</sup> Copyright, Designs and Patents Act 1988 ss 90(3) and 92(1).

<sup>103</sup> However, under s 85(1), the commissioner of a photograph or film made for private and domestic purposes has certain rights: for example, a right not to have the work issued to the public.

<sup>104</sup> See the discussion above on *Warner v Gestetner Ltd* [1988] EIPR D-89.

Two main ways of dealing with copyright are considered below: by assignment and by licensing. Licences may be exclusive or non-exclusive. In the case of an assignment of copyright or an exclusive licence, the transaction, to be effective, must be in writing and signed by or on behalf of the present copyright owner.<sup>102</sup> Although this can be seen as a safeguard for the copyright owner, who may be negotiating with powerful publishing organisations from an unequal bargaining position, it can lead to difficulties in the case of commissioned works because it clearly means that the commissioner cannot have any legal rights of ownership under copyright law unless a written signed agreement exists.<sup>103</sup> The language of the statute is very clear on this point, so the implication by the courts of terms into the contract for the commissioned work dealing with ownership is unlikely, though not an impossibility.<sup>104</sup>

One co-owner of a copyright may not perform or authorise restricted acts to be done in relation to the work without the permission of his co-owners.<sup>105</sup> Where the copyright is owned by more than one person (or a certain aspect such as the right to perform in public is jointly owned), references in Part I of the Act are to all the owners. In particular, this means that where there are joint owners, the licence of all of them is required. This is because infringement is defined in relation to doing (or authorising another to do) any of the acts restricted by copyright without the licence of the copyright owner under s 16(2). Section 173(2) makes it explicit that, where there are joint owners, the licence of every one is required. It is no answer for one joint owner to argue that he is free to licence the performance of a restricted act in the face of objection from another joint owner provided he accounts to that other joint owner for a share in the profits realised from the licence.

As an example, consider the copyright subsisting in a sound recording that has joint owners either because it was created by joint authors, or because the copyright has been assigned to more than one person. The sound recording is to be reproduced and sold commercially and each joint owner will be entitled to an agreed share of the profits arising from the sales. One joint owner may be anxious to obtain some immediate capital. To do this, he will be able to 'sell' his future share of the profits to a third party for a lump sum, assigning his copyright interest to that person. He can do this without having to seek or obtain the permission of the other co-owners. However, the co-owner cannot grant a licence to a third party allowing that third party to make and sell copies of the sound recording without the agreement of all the other co-owners. Another example is where a co-owner of a copyright dies leaving all his property to his widow. In such a case, his copyright interests pass to his widow who will, from then on, be entitled to a share of the royalties or profits accruing from the sale or other commercial exploitation of the work.

<sup>105</sup> *Cescinsky v George Routledge & Sons Ltd* [1916] 2 KB 325. This restriction on co-owners should be compared to patent law, where one co-patentee can exploit the patent without the permission of his co-patentees, but cannot licence, assign or mortgage his share without the consent of the others: Patents Act 1977 s 36. In the context of copyright, see *Robin Ray v Classic FM plc* [1998] FSR 622.

## Assignment and transmission of copyright

One point that must be made at this stage is that physical possession of an object containing or representing a work of copyright or a copy of such a work does not by itself give any rights under copyright law. For example, mere possession of a book does not give a right to perform any of the restricted acts such as making copies of the book. The same principle applies to a painting, and the sale of a painting, no matter how expensive, does not automatically assign the copyright in it. The purchaser obtains a property right in the physical object but, in the absence of an assignment or licence, no interest in the copyright. This may be inconvenient and the courts will construe any documents, such as a receipt, generously to keep the two forms of property together. For example, in *Savory (EW) Ltd v The World of Golf Ltd*,<sup>106</sup> it was held that a written receipt for card designs 'inclusive of all copyrights' was sufficient to assign the copyright to the purchaser. In *Cray Valley Ltd v Deltech Europe Ltd*,<sup>107</sup> Jacob J confirmed that the written document does not have to expressly refer to copyright and it may be sufficient if it refers to 'assets'. He said (at para 69):

<sup>106</sup> [1914] 2 Ch 566.

<sup>107</sup> [2003] EWHC 728 (Ch).

Of course a word such as 'assets' will take its meaning in any written agreement not from its acontextual or mere dictionary meaning but from its context. In the present case where the evident commercial intention behind the lost agreements was to transfer everything to the assignee I see no reason to suppose if the assignment used the words 'assets' there would or could have been any intention to hold anything, and specifically copyright, back.

There is a convention or custom amongst artists that where an artist creates a work in a medium such that multiple copies may be made and the artist limits the number

108 [1996] EMLR 364.

109 [1967] 1 WLR 1421.

actually made, such as in a limited edition print, the artist has a right to make and retain or sell up to two additional copies. However, that convention usually applies where an artist sells to purchasers and, in *Danowski v The Henry Moore Foundation*<sup>108</sup> the Court of Appeal declined to imply such a term into a contract of service, between employer and employee. Additionally, referring to Ungoed-Thomas J in *Cunliffe-Owen v Teather & Greenwood*,<sup>109</sup> for a practice to amount to recognised usage, it must be notorious. That was not the case here, nor was the convention certain. Anyway, an implied term based on such a convention would be inconsistent with the express terms of the agreement and its overall tenor.

An assignment of copyright can be thought of as a disposal of the copyright by way of sale. Copyright may also pass under a testamentary disposition or by operation of law. The present owner (the assignor) can assign the copyright to another and, under s 90(3), such an assignment must be in writing signed by or on behalf of the assignor. However, the assignment, and other transmission, of the copyright need not be total and absolute; it can be partial. Under s 90(2), the assignment or other transmission of copyright can be limited either in terms of the things the copyright owner can do, or in terms of the period of subsistence of copyright. As an example, consider a play, a dramatic work, the copyright in which will expire in 40 years' time (William, the author, having died some 30 years ago). The current owner, William's widow Ann (the assignor), may decide to assign the total copyright in the play to another person, Frances. Alternatively, she might decide to assign only the public performance right to Frances for the remainder of the duration of the copyright while retaining the other rights, allowing her to make and issue printed copies of the play either personally or by granting a licence to Richard to do this. Finally, she might decide to assign all the rights to Frances for a period of five years only, after which the copyright will revert to her.

110 [2009] EWHC 600 (Ch).

The agreement under which copyright is assigned may provide for a reversion of the copyright under specified conditions. In *Crosstown Music Company 1 LLC v Rive Droite Music Ltd*,<sup>110</sup> the agreements under which two writers of musical composition assigned their copyright to Rive Droite, to exploit in return for payment of royalties, contained a clause which provided for reversion of the relevant copyrights to the writers should Rive Droite be in material breach of the agreements and fail to remedy such breaches within a specified time of being sent 'cure' notices by the writers. Subsequently to numerous breaches and failures to remedy breaches as set out in the cure notices, Rive Droite purported to assign the copyrights to Crosstown. Mann J noted that s 90(2) allowed for reversion of copyright after a period of time and a reversion clause could provide for that to happen earlier if material breaches were not remedied in accordance with the clause.

111 (1862) 6 LT 348.

Assignments limited in time need careful thought as to what happens to any copies of the work that have not been sold at the time of the reversion of the copyright. In *Howitt v Hall*<sup>111</sup> it was held that the defendant who had been assigned the copyright in a book for four years could continue to sell copies printed during those four years after the copyright reverted to the original owner.

If the formalities of the Act are not complied with, it may be that a court will be prepared to infer that there has been an assignment of the copyright in equity only: see *Warner v Gestetner*, above (p 94). In these circumstances, there will be a legal owner of the copyright and an equitable owner, the legal owner being the purported assignor; and he will still be the legal owner because of some defect in the formalities: for example, the written assignment was not signed by him or on his behalf, or the attempted assignment was made orally.<sup>112</sup> Being an owner in equity only does have some disadvantages. In *Performing Right Society Ltd v London Theatre of Varieties Ltd*,<sup>113</sup> it was held that the owner of an equitable interest in the performing rights of a song entitled 'The Devonshire Wedding' could not obtain a perpetual injunction without joining the

112 In some cases, it is possible that equitable ownership may arise in the absence of agreement: see *Massine v de Basil* [1933–1945] MacG CC 223 and Lea, G. 'Expropriation of Business Necessity?' [1994] 10 EIPR 453.

113 [1924] AC 1.

legal owner of the copyright as a party to the action. This case was applied in *Weddell v JA Pearce & Major*,<sup>114</sup> a bankruptcy case, in which it was held that although an equitable assignee could sue in his own right, he could not obtain damages or a perpetual injunction without joining as a party the assignor in whom the legal title of a chose in action was vested.<sup>115</sup> Normally, joining another party in an action would mean both appearing as co-claimants, but it is sufficient if the other party is the defendant. For example, in *John Richardson Computers Ltd v Flanders*<sup>116</sup> the owner in equity sued the legal owner.

The rationale for the rule that a beneficial owner cannot obtain a permanent injunction or damages is based on the principle of double jeopardy.<sup>117</sup> If the beneficial owner obtained damages without joining the legal owner, the latter could come along subsequently and bring a fresh action for damages. Of course, apart from joining the legal owner in the action, another way around the difficulty is for the beneficial owner to take an assignment of the copyright. It appears that this will be effective at any time before judgment provided the assignment includes preceding rights of action.<sup>118</sup>

Of course, the person who executes the assignment may be acting as the agent of the assignor and the general rules of agency apply. It is in the intended assignee's interests to satisfy himself as to the authority of the agent. The case of *Beloff v Pressdram Ltd*<sup>119</sup> involved the publication of a memorandum written by the claimant (an employee of the *Observer* newspaper) by *Private Eye*. The memorandum referred to a conversation between the claimant and a prominent member of the government, in which the latter said that if the Prime Minister were to run under a bus, he had no doubt that a certain Mr M would take over as Prime Minister. The *Observer* owned the copyright in the memorandum and the editor attempted to assign it to the claimant so that the claimant could sue the publishers of *Private Eye*. However, as the editor had never before executed an assignment on behalf of the *Observer* and had no express authority to do so, the purported assignment was ineffective. Neither could there be any imputed authority because any representation made by the editor that he had authority had not induced the claimant to enter into the assignment or take any relevant step.<sup>120</sup>

Sometimes, there may be an assignment of copyright in a work which has not yet come into existence. Such prospective ownership of copyright and its assignment is provided for under s 91. If an author decides to write a play, he will be the first owner of the copyright in the play when it is written, provided he is not writing the play as an employee in the course of his employment. The author is the prospective owner of the future copyright, and he can deal with that future copyright by assigning it to another. Under s 91(2), 'future copyright' means copyright which will or may come into existence in respect of a future work or class of works or on the occurrence of a future event. The prospective owner can assign the copyright by an agreement signed by him or on his behalf and the actual assignment will take effect automatically when the copyright in the work in question comes into existence. The assignment can be whole or partial. Before the Copyright Act 1956, it was not possible to assign a future copyright, even if in writing and signed by the prospective owner.<sup>121</sup> This was changed by the 1956 Act and in *Chaplin v Leslie Frewin (Publishers) Ltd*<sup>122</sup> it was held that a contract for writing an autobiography between the infant son of Charlie Chaplin and a publisher was effective to transfer the copyright in the work when it came into existence.<sup>123</sup>

An assignment may be declared by the court to be unenforceable if it is unconscionable or contrary to public policy being in restraint of trade. In *Schroeder Music Publishing Co Ltd v Macaulay*<sup>124</sup> a young and unknown songwriter assigned the worldwide copyright in any musical composition produced by him for five years to a music publishing company. The agreement was very one-sided, the company did not undertake to publish any of the writer's work and could terminate by giving one month's notice. The songwriter could not terminate and was paid only £50 (although he would

<sup>130</sup> [2005] FSR 706.

receive royalties on any of his songs actually published). The House of Lords held that the agreement was unenforceable, being in restraint of trade.<sup>125</sup> It required total commitment from the songwriter, but virtually no obligation was placed upon the company. Lord Diplock said that it was not without significance that successful and established songwriters were not offered the standard form agreement given to the respondent in this case.

It has been common for an assignment to include the formula ‘X, as beneficial owner, hereby assigns . . .’. The use of the phrase ‘beneficial owner’ was thought to imply covenants contained in the Law of Property Act 1925 by virtue of s 76.<sup>126</sup> The Law of Property (Miscellaneous Provisions) Act 1994, which came into force on 1 July 1995, made some changes to the content of the implied covenants, repealing s 76 of the 1925 Act. Now, an assignment of copyright (or other intellectual property right) should take account of the new formulae of full title guarantees and limited title guarantees. Under s 8(1) of the 1994 Act, the parties are free to extend or limit the implied covenants. The phrase ‘as beneficial owner’ should now be replaced by the appropriate title guarantee.<sup>127</sup>

An assignment of UK copyright cannot be defeated by the law of another state which attempts to confiscate that copyright if the agreement is not presented for approval or does not warrant approval. In *Peer International Corp v Termidor Music Publishers Ltd*,<sup>128</sup> the claimant music publisher claimed to own the copyright (or alternatively to be exclusive licensees) in music composed by Cuban nationals. Agreements made in the 1930s and 1950s were supplemented by ‘confirmations’ and ‘addendum’ made around 1989 or 1990. Taken together, the Court of Appeal accepted that these were effective to assign the UK copyright in the music to the claimants. However, in 1960, following the revolution, Cuba passed a law (Cuban Law 860) which provided for a Cuban organisation to administer copyright and which forbade certain contracts relating to copyright: for example, where an author assigned the copyright in his future works or where the agreement was of unlimited or more than 10 years’ duration. Furthermore, in respect of existing agreements, Decree 10 of Chapter VIII of Law 860 required presentation of those agreements for approval, which could be withheld. If presentation was not made within 60 days or approval was withheld, the rights assigned would be forfeit and the authors would be free to sign new contracts with others in respect of the same rights. Generally, the laws of one state cannot affect the ownership of property situated in another state, unless there are compelling public policy reasons for doing so. In any case, such laws will not be effective in the UK if they are confiscatory in nature. That was the position here in that failure to present agreements or withholding approval of any agreement presented would result in confiscation. Therefore, the claimant was entitled to the UK copyrights and subsequent purported assignments by the Cuban organisation which administered copyright to the defendant were ineffective.

This rule that laws of one state cannot affect the ownership of property situated in another state is not an absolute one. In *Griggs Group Ltd v Evans*,<sup>129</sup> the judge, having found the claimant entitled to beneficial ownership of the copyright in a drawing of a logo applied to Doc Marten shoes, ordered the assignment of the copyright from the defendant to the claimant. Although it was not made explicit in the judgment, it became clear that this order affected not just UK copyright but all the other copyrights in the drawing in other jurisdictions. It was submitted that the court did not have jurisdiction to order the assignment of copyrights in other countries in *Griggs Group Ltd v Evans (No 2)*.<sup>130</sup> That claim was rejected by Peter Prescott QC sitting as a deputy judge of the High Court. The claimant had an equity in England arising from a contract subject to English law and it was not shown that the laws of foreign countries would extinguish that equity. The alternative would have meant that the claimant would have

to bring proceedings in numerous other countries and this could have seriously frustrated or hindered the claimant from exploiting the copyright in countries other than the UK. The decision is a very pragmatic one based on fairness and reason, especially as the second defendant, to whom the first defendant had assigned the copyrights, knew of the facts giving rise to the equity and could not be described as the ‘darling of equity’.<sup>131</sup> It is an exception to the basic rule. However, had evidence been adduced that the laws of one country or another would not also have ordered an assignment of copyright, it is likely that the court would have taken account of that and the order would not have extended to those other countries.

<sup>131</sup> That is, the *bona fide* purchaser for value without notice.

## Licensing of copyright

A licence is, in essence, a permission granted by the owner of a right or interest to another person allowing him to do something in respect of that right or interest. For example, it may be a licence to enter land for some purpose, such as for accommodation or to take a short cut across a field. Licences may be contractual, in which case they can be enforced in a court of law: for example, the owner of a field allows a neighbour to graze his sheep there in return for an annual fee of £100. In relation to copyright, a licence is an agreement between the owner of the copyright (the licensor) and another person (the licensee) whereby that person is permitted to do certain acts in connection with the work involved that would otherwise infringe the copyright in the work. In return for this arrangement, the licensee will pay the licensor either by way of a lump sum, or by making royalty payments. For example, the owner of the copyright in an artistic work such as an oil-painting might agree with a publisher of art works that the publisher can make and sell prints made of the painting, and in return the publisher will pay the copyright owner £5 for each print he sells. Normally making the prints would be an infringement of copyright, being an act restricted by copyright, that is making a copy of the work.<sup>132</sup>

Where a copyright has joint owners, any licence granted under it must have the consent of all the joint owners. This is a consequence of ss 16(2) and 173(2). The former provision states that copyright is infringed by doing, or authorising another to do, any of the acts restricted by the copyright without the licence of the copyright owner. The latter provision states that references to the owner, where there are joint owners, are references to all of them.

Like an assignment of copyright, a licence can be limited in terms of either the scope or the duration, or both. Scope can be limited either in terms of the acts the licensee is permitted to do or territorially. The licence may be for the whole of the remainder of the period during which copyright will continue to subsist in the work, or may be for a shorter period. There will usually be provisions in the licence agreement for its earlier termination: for example, if one of the parties is in breach of an important obligation under the agreement or on the insolvency of one of the parties.

A licence may be exclusive. Under s 92(1), an exclusive licence is a licence in writing signed by or on behalf of the copyright owner authorising the licensee, to the exclusion of all other persons *including the owner*, to exercise a right that would otherwise be exercisable exclusively by the copyright owner. The licensee is exclusively granted rights to do certain things in relation to the work and the owner (licensor) will not grant those equivalent rights to anyone else, or even exercise them himself. For example, the owner of the copyright in a work of literature may grant an exclusive licence to a book publisher for the purpose of publication of the work. The owner of the copyright will not grant the right of publication to anyone else while the exclusive licence is in existence, and indeed, if he attempts to do so, he will be in breach of the exclusive licence. However, although the licence is exclusive, it need not apply to all the acts restricted by

<sup>132</sup> For infringement generally see Chapter 6. Making a copy of a literary, dramatic, musical or artistic work is defined as reproducing the work in any material form: Copyright, Designs and Patents Act 1988 s 17(2).

copyright and may encompass only one or some of them, such as publishing a book, and the owner will be free to deal with other rights, such as the broadcasting of extracts of the work recited by a famous actor. In the case of a non-exclusive licence, the licensor may make several agreements in respect of the same acts restricted by copyright. For example, the owner of the copyright in a play may allow several theatrical companies to make public performances of the play.

Under s 90(4), a licence granted by a copyright owner is binding on every successor in title to his interest in the copyright, except a purchaser in good faith for valuable consideration without actual or constructive notice and persons deriving title from such a person. So, 'equity's darling', the *bona fide* purchaser for value without notice, is given protection that overrides the interests of licensees, which is one reason why a commercial organisation, such as a publisher, wishing to exploit a work of copyright might prefer to take an assignment of the copyright rather than to operate on the basis of an exclusive licence. However, in practice it would be very difficult for a purchaser of the copyright to show that he did not have constructive notice, especially if the work had already been exploited commercially. Note that only a purchaser of the copyright is protected, and a person who receives the copyright as a gift or on the death of the owner must respect any existing licences covering the work regardless of knowledge.

Although licences are, subject to what has been said above, binding on assignees, care must be taken when assigning copyright to ensure that the assignee can enforce the licence against the licensee. In the Scots case of *Profile Software Ltd v Becogent Ltd*<sup>133</sup> the liquidator of a software company granted new and wider software licences to existing licensees of the company and then assigned the intellectual property rights in the software to the pursuer, Profile. The assignment was badly drafted and it was argued that it did not carry the title to sue under the licence agreements which remained with the liquidator. The judge rejected this submission, noting that it would have the effect that the assignee had an interest to sue but no right to do so whilst the liquidator had a right to sue but no interest in doing so.

Future copyright can be licensed by the prospective owner under s 91(3), but again protection is given to a purchaser in good faith for valuable consideration without actual or constructive notice as against a licensee. Thus, when a work is eventually created that is subject to a previously executed licence agreement, the owner of the copyright will be bound by the terms of the licence. If the owner later dies and, for example, the copyright passes to the surviving spouse, he or she will also be bound. If that person then assigns the copyright to Andrew, a person who knows about the licence, he will be bound. If Andrew then gives the copyright to Bernard who does not know, or could not be expected to know of the licence, Bernard will be bound by the licence because he has not purchased the copyright but has taken it by way of a gift. However, if Bernard then assigns the copyright to Cyril, who acts in good faith and does not know of the licence and could not be expected to know of it, Cyril will take free of the licence. Furthermore, if Cyril later disposes of the copyright to Duncan, who knows of the licence and is acting in bad faith, Duncan can take free of the licence because he has derived his title from a purchaser in good faith. The licence is effectively destroyed by the intervention of the purchaser in good faith for valuable consideration without notice. It may be, however, that the licensee has a remedy against his licensor under the original agreement, as there may be a contractual provision in the agreement requiring successors in title of the owner to be given notice before the copyright is assigned. However, this measure can be really effective only until the chain of notification of the licence between assignors and assignees is broken.

As an example of the exploitation of the various rights associated with the copyright in a particular work, consider the author (and owner of the copyright) of a dramatic play. He decides to deal with the play in terms of its publication, its performance in

133 [2005] CSOH 28.

**Figure 4.2** Assignment and licensing

public and also, because of the popularity of the play, is able to negotiate the making of a film based on the play and the making of sound recordings of famous actors reading the play. Figure 4.2 shows the types of relationships in terms of assignments and licensing that could ensue. In the case of a work such as a computer program, the use of which normally involves a restricted act, the ultimate ‘purchaser’ of a copy will usually receive a non-exclusive sub-licence.

### Differences between assignments and licences

An exclusive licence agreement can appear, at first sight, to look like an assignment and it is sometimes difficult to distinguish between the two.<sup>134</sup> Both an assignment and a licence agreement may provide for the payment of royalties, which might be thought of normally as being associated with a licence. In *Jonathan Cape Ltd v Consolidated Press Ltd*,<sup>135</sup> there was an agreement between the author (being the first owner of the copyright) and the claimant publishing company, granting the latter, its successors and assigns ‘the exclusive right to print and publish an original work . . . provisionally entitled “A Mouse is Born” in volume form’. The agreement was partial in terms of the copyright acts (printing and publishing) and in the territorial scope (a specified area including Australia). The defendant substantially reproduced the work, but argued that the agreement was a licence and that, as a result, the claimant could not bring an action without joining the author. It was held that the question of whether an agreement was an assignment or a licence was a matter of construction and, in this case, the words used implied that the agreement was a partial assignment of the copyright. Even the use of the words ‘licensor’ and ‘licensee’ in an agreement is not conclusive that it is a licence.<sup>136</sup>

The payment of royalties is inconsistent with an assignment and is, therefore, highly suggestive of a licence. Indeed, the owner of a copyright would be foolish to assign that copyright in return for royalty payments. If the copyright is subsequently re-assigned to a third party, the terms providing for royalty payments could be unenforceable against that third party, on the basis of privity of contract.<sup>137</sup> It was held in *Barker v Stickney*<sup>138</sup> that a person acquiring a copyright is not bound by mere notice of a personal covenant by a predecessor in title.

In *JHP Ltd v BBC Worldwide Ltd*,<sup>139</sup> Norris J had to decide whether an agreement between the late Terry Nation who devised the Dalek characters in the *Dr Who*

<sup>134</sup> The implied covenants under the Law of Property (Miscellaneous Provisions) Act 1994 will not apply to a licence agreement.

<sup>135</sup> [1954] 3 All ER 253.

<sup>136</sup> See, for example, *Messager v British Broadcasting Co Ltd* [1929] AC 151.

<sup>137</sup> Though now this has to be subject to the effect of the Contracts (Rights of Third Parties) Act 1999. In Scotland, the doctrine of *ius quaesitum tertio* could give enforceable rights under a contract to a third party: see *Beta Computers (Europe) Ltd v Adobe Systems (Europe) Ltd* [1996] FSR 367.

<sup>138</sup> [1919] 1 KB 121.

<sup>139</sup> [2008] FSR 726.

television series and various books and the predecessor in title to the claimant was an assignment or an exclusive licence. The agreement spoke of the grant of a sole and exclusive right to publish the work in book form. This was highly suggestive of an exclusive licence. The word ‘grant’ had been used rather than ‘assign’ or ‘transfer’. Even though the agreement had a reverter clause,<sup>140</sup> it was held that it was an exclusive licence rather than an assignment. Furthermore, it would have been highly improbable that Mr Nation would have assigned his rights in the Daleks at that time as he was still actively engaged in the creative development of the Daleks for future television series.

Other differences between assignments and licences are that only the owner has a right to sue (although an exclusive licensee may sue after joining the owner or by leave of the court) and a right to alter,<sup>141</sup> subject to the author’s moral rights. In the absence of express provisions to the contrary, an assignment will generally be assignable, but a licence will not be assignable unless expressly provided for. There are also differences as regards the effect of the insolvency of the assignee or licensee.

### New forms of exploitation

In time, new ways of exploiting a work of copyright might be discovered and the effect on existing licence agreements may be disputed: for example, whether the new form of exploitation falls within the scope of the licence. It will be a question of construction of the licence on the basis of what was properly regarded as being in the contemplation of the parties when the agreement was made. In *Hospital for Sick Children v Walt Disney Productions Inc*<sup>142</sup> the question arose as to whether a licence granted in 1919 by Sir James Barrie in respect of all his literary and dramatic works was limited to silent films or extended to sound films.<sup>143</sup> In the United States of America, Peggy Lee was awarded \$3.8 million in respect of her contributions to the Walt Disney cartoon film *The Lady and the Tramp* on the basis that her contract with Walt Disney did not extend to selling videos of the film.<sup>144</sup> The contract was drawn up before video technology existed.

## COLLECTING SOCIETIES

It may be inconvenient for the owner of copyright to agree licences and collect fees, or alternatively the copyright owner may want the backing of a powerful body to help to defend his or her rights in a court of law, if it comes to that. On the other hand, it is much more convenient if a user of copyright material can negotiate a single licence with respect to a range of works rather than having to agree separately with all the individual owners. Therefore, a proprietor of a hairdressing salon can obtain a licence from the Performing Right Society (PRS) and Phonographic Performance Ltd (PPL), to be able to play music to the shop’s clients. Of course, there is a danger that bodies such as the PRS and PPL may abuse their positions. The PRS operates by taking an assignment of the copyright in the performance and broadcasting of musical works, administering that copyright, collecting fees and distributing them amongst its members.<sup>145</sup> Normally, the person wishing to play or broadcast musical works will obtain a blanket licence to do so in respect of all the works managed by the PRS. As a result of the very large number of works administered by the PRS, it clearly has a dominant position and might be tempted to try to control the proportion of music played during a broadcast or the relative proportions of live and recorded work, or to charge high fees. To prevent such abuse, the Performing Right Tribunal was set up by the Copyright Act 1956 to regulate the licensing of performing rights, and this has now become the Copyright Tribunal, having extended jurisdiction and powers in comparison with the Performing Right Tribunal. The Copyright Tribunal may, for example, confirm or vary the terms, including royalty or fees to be paid, in a licence granted by collecting societies.

<sup>140</sup> In the case of a licence a reverter clause is unnecessary as rights under a licence in relation to the use of a copyright work in question come to an end when it expires or is terminated.

<sup>141</sup> *Frisby v British Broadcasting Corporation* [1987] Ch 932. A licensee, expressly or by implication, may not be allowed to alter the work.

<sup>142</sup> [1966] 1 WLR 1055.

<sup>143</sup> The first sound film shown to cinema audiences was *The Jazz Singer* in 1927.

<sup>144</sup> *The Times*, 7 October 1992, p 16.

<sup>145</sup> Other collecting societies include the Copyright Licensing Agency, operating in the field of copying. The need for such a scheme can be equated with developments in the technology of photocopying and other means of copying. The issue of a blanket licence is one way that copyright owners can obtain at least some recompense for the vast amount of reproduction of copyright material that takes place nowadays.

A collecting society usually operates by owning and enforcing the relevant copyrights. For example, Phonographic Performance Ltd (PPL) takes assignments of rights in sound recordings relevant to performing and broadcasting those sound recordings. Being in such a powerful position, it may be tempting for a collecting society to refuse to grant a licence to someone who has infringed those rights in the past unless they agree to pay for the past infringement (perhaps at a higher than usual royalty) and agree to pay for future use of the copyrights. Such a practice was considered by the Court of Appeal, in *Phonographic Performance Ltd v Saibal Maitra*,<sup>146</sup> and the following points were made:

146 [1998] FSR 749.

- generally, although discretionary, where copyright infringement was established as well as a threat of continued infringement in the future, an injunction would be granted,
- a collecting society, *prima facie*, had the same rights as any ordinary copyright owner and should be treated the same by the court and granted the same relief,
- a copyright owner who exploits his copyright by licensing should be entitled to refuse to grant a licence unless it is granted on his own terms and conditions, including the payment of fees and it is not therefore an abuse to refuse to grant a licence without an appropriate payment being made for past infringement and an agreement to pay for future use.

In the particular case the judge, from whose decision the appeal was brought, stayed the injunctions for 28 days. The Court of Appeal held that this was wrong as it would allow the defendant to continue infringing for a further 28 days. Such further infringement, on the facts, would also constitute a criminal offence. In *Ludlow Music Inc v Robbie Williams*,<sup>147</sup> although not a collecting society case, the question of availability of injunctions was considered by Nicholas Strauss QC, sitting as a deputy judge of the High Court in the Chancery Division. He said (at 278):

147 [2001] FSR 271.

[counsel for the claimant] rightly submits that, in considering whether to grant a permanent injunction, the balance of convenience is irrelevant. Although the remedy is discretionary, in the absence of special circumstances, the law will protect property rights; a person is not to be forced to sell his property for its reasonable market value, and a defendant is not to be permitted to buy the ability to infringe rights by the payment of damages.

However, in distinguishing *Phonographic Performance Ltd v Saibal Maitra*,<sup>148</sup> he went on to say that, although a copyright owner was legally entitled to charge whatever he wished, it was arguable that to do so was oppressive if he intended to exploit a defendant's weak position and had not asked for a reasonable payment but made excessive demands.

148 A very different type of case, being brought by a collecting society.

## LICENSING SCHEMES

The provisions in the Copyright, Designs and Patents Act 1988 concerning licensing schemes are designed to prevent abuse of monopoly powers by copyright owners. The Copyright Tribunal is given control over licensing schemes and over licences granted by licensing bodies. The Tribunal can also grant compulsory licences, discussed later. A *licensing scheme* is, under s 116(1), a scheme setting out the classes of case in which the operator of the scheme, or the person on whose behalf he acts, is willing to grant copyright licences, and the terms on which licences would be granted in those classes of case. That is, it is a scheme concerning the licence fees to be charged in respect of specific types of works, for example a tariff of licence fees to be charged for performing musical works in public. A *licensing body* is a society or other organisation that has as its main object, or one of its main objects, the negotiation or granting of copyright licences,

including the granting of such licences covering the works of more than one author. The body will be negotiating or granting licences either as owner or prospective owner of the copyright, or as the agent of the owner or prospective owner.<sup>149</sup>

The provisions for references and applications in respect of licensing schemes apply, under s 117,<sup>150</sup> to schemes operated by licensing bodies covering the work of more than one author (or publisher in relation to the publication right), so far as they relate to licences for:

- (a) copying the work,
- (b) rental or lending copies of the work to the public,
- (c) performing, showing or playing the work in public, or
- (d) communicating the work to the public.

The copyright licensing provisions apply generally to the publication right as they do to copyright. However, the exception to the licensing provisions in s 116(4) in relation to a single collective work or collective works of which the authors are the same, or certain commissioned works, does not apply to the publication right. Hence, a collective work comprising previously unpublished works of one author which is out of copyright will, on publication, be subject to the publication right and to the licensing provisions of the Act, unlike the case of a collective work of one author which is still in copyright.

Any of the above schemes can be referred to the Copyright Tribunal. In the case of a proposed scheme to be operated by a licensing body, referral to the Tribunal can be made by an organisation claiming to be representative of users of the copyright material to which the scheme would apply under s 118.<sup>151</sup> If a licensing scheme is already in operation and there is a dispute between the operator of the scheme and a person claiming that he requires a licence under the scheme or an organisation representing users, under s 119, that person or organisation may refer the matter to the Tribunal. The Tribunal may, in either case, confirm or vary the scheme (existing or proposed) as the Tribunal thinks reasonable in the circumstances. There are also provisions for reference to the Tribunal if a person has been refused a licence by the operator of the scheme, or the operator has failed to procure a licence for him, for example if the person is seeking a licence for a work that is in a category of case excluded from the scheme.

The Copyright, Designs and Patents Act 1988 ss 124–128 apply to licences such as those in s 117 above granted by a licensing body but otherwise than in pursuance of a licensing scheme: for example, the Copyright Licensing Agency's licence with education authorities. The provisions are very similar to those for licensing schemes in respect of the works covered and the scope of the licences.<sup>152</sup> However, reference must be by a prospective licensee in the case of a proposed licence or, in the case of an existing licence, by the licensee on the ground that it is unreasonable that the licence should cease to be in force: that is, if the licence is due to expire under the terms of the licence. An application by an existing licensee cannot be made until the last three months before the licence is due to expire. The Tribunal may confirm or vary the terms of a proposed licence or may, in the case of an existing licence, extend the licence either for a fixed period or indefinitely. Under s 127, applications may be made by the licensing body or the person entitled to the benefit of the order to the Tribunal asking for it to review the order.

The Tribunal may also review the reasonableness of licences or licensing schemes referred to it by the Secretary of State under s 128B in respect of excepted sound recordings, following notification under s 128A. An excepted sound recording is one whose author is not the author of the broadcast in which it is included and which is a recording of music with or without words spoken or sung.<sup>153</sup> Sections 128A and 128B were inserted to overcome the problem that the copyright in excepted sound recordings would be infringed by broadcasts played under s 72. This section provides for the free

<sup>149</sup> Copyright, Designs and Patents Act 1988 s 116(2).

<sup>150</sup> This is a new section substituting the old s 117, by virtue of the Copyright and Related Rights Regulations 1996, SI 1996/2967.

<sup>151</sup> See, for example, *British Phonographic Industry Ltd v Mechanical Copyright Protection Society Ltd (No 2)* [1993] EMLR 86.

<sup>152</sup> Copyright, Designs and Patents Act 1988 s 124.

<sup>153</sup> Section 72(1A) inserted by the Copyright and Related Rights Regulations 2003, SI 2003/2498.

public showing or playing of broadcasts to an audience that has not paid for admission to the place where the broadcast is shown or played.<sup>154</sup> At first sight, ss 128A and 128B seem to apply only in relation to excepted sound recordings (that is, those included in broadcasts where the author is not also the author of the broadcast). This was the interpretation of the Copyright Tribunal on a reference made to it. This would mean, for example, where a shop or restaurant played broadcasts which included sound recordings but also played sound recordings on CDs, it would need to subscribe to two separate licensing schemes. In *Phonographic Performance Ltd v British Hospitality Association*,<sup>155</sup> Kitchen J held that the Tribunal had jurisdiction on reference under s 128B to consider licensing schemes in respect of media neutral methods of delivery. Thus a mixed scheme could be ruled on by the Tribunal even if it included both excepted sound recordings played in broadcasts and sound recordings on tape or CD. Although s 128A which provides for notifications of licensing schemes to the Secretary of State in relation to excepted sound recordings only, s 128B which covers references to the Tribunal does not seem so limited. Section 128B(2)(b) states that the Tribunal can take into account any other factors it considers relevant. This could include consideration of a scheme which extends also to non-excepted sound recordings. Kitchen J said (at para 29):

I agree . . . that to divide up the consideration of a licensing single scheme in this way is inconvenient, cumbersome, expensive and involves a waste of judicial and public resources. I should not conclude this was the intention of the draftsman unless compelled to do so by clear language and that I do not find.

This approach has the merit of avoiding a twin-track approach with all the negative features pointed out by Kitchen J. However, the decision is not altogether convincing notwithstanding that delivery system neutral schemes are obviously preferable. Both s 128A and s 128B were inserted to deal specifically with excepted sound recordings. Furthermore, s 128B is headed ‘References to the Tribunal by the Secretary of State under section 128A’ and s 128A(1) states that the section:

only applies to a proposed licence or licensing scheme that will authorise the playing in public of excepted sound recordings included in broadcasts, in circumstances where by reason of the exclusion of excepted sound recordings from section 72(1), the playing in public of such recordings would otherwise infringe the copyright in them.

The Copyright Tribunal has to make its determinations on the basis of what is reasonable in the circumstances, and under s 129 this means that the Tribunal shall have regard to the availability of other schemes, or the granting of licences to other persons in similar circumstances and the terms of those schemes or licences. Furthermore, the Tribunal shall exercise its powers so that there is no unreasonable discrimination between licensees (existing or prospective) under the scheme or licence that is subject to the referral, and licensees under other schemes operated by, or other licences granted by, the same person. Further guidelines relating to specific works or forms of use are given in ss 130–134. For example, s 130 covers the reprographic copying of published literary, dramatic, musical or artistic works or the typographical arrangement of published editions. With respect to such works, the Tribunal shall have regard to the extent to which published editions of the works are available, the proportion of the work to be copied and the nature of the use to which the copies are to be put. Also, for these types of works, under s 137 the Secretary of State can extend a licensing scheme under ss 118–123 operated by a licensing body, or a licence under ss 125–128 to works of a description similar to those covered by the scheme or licence that have been unreasonably excluded from the scheme or licence. This is provided that making them subject to the scheme or licence would not conflict with the normal exploitation of the works or unreasonably prejudice the legitimate interests of the copyright owners. Appeal from

<sup>154</sup> In some circumstances under s 72(1B), copyright in excepted sound recordings is not infringed, for example, where the showing or playing of the sound recording to the public is part of the activities of a not for profit organisation.

<sup>155</sup> [2008] EWHC 2715 (Ch).

s 137 orders lies with the Copyright Tribunal which can confirm, discharge or vary the order.

Section 140 gives the Secretary of State powers of investigation as to the need for a licensing scheme or general licence to authorise educational establishments to make for the purposes of instruction reprographic copies of published literary, dramatic, musical or artistic works or the typographical arrangement of published editions. The Secretary of State may within one year of making a recommendation under s 140 grant a statutory licence free of royalty if provision has not been made in accordance with the recommendation.

Additionally, under s 143, the Secretary of State may certify licensing schemes on application from the person operating or proposing to operate the scheme in question.<sup>156</sup> The Secretary of State shall certify the scheme by way of statutory instrument, if he is satisfied that the scheme enables the works to which it relates to be sufficiently identified by persons likely to require licences, and clearly sets out the terms of the licences and charges payable, if any. Such schemes cover some of the acts permitted under copyright, such as the educational recording of broadcasts, or the making of copies of abstracts of scientific or technical articles, so that, if a certified licensing scheme is in operation, anyone carrying out one of the particular permitted acts included in the certified licensing scheme will infringe copyright, unless covered by the scheme. Some of the permitted acts can thus be nullified by certification.<sup>157</sup>

Most references to the Copyright Tribunal are likely to concern royalty rates set by collecting societies and under the statutory licensing scheme under s 135A permitting inclusion of sound recordings in broadcasts. As noted above, the Tribunal has wide discretion to have regard to all relevant circumstances and determine terms as the Tribunal considers reasonable. In *British Phonographic Industry Ltd v Mechanical-Copyright Protection Society Ltd*,<sup>158</sup> the Tribunal reiterated that it had a discretion of the widest and most general form. An important purpose of the Tribunal was to curb any unwarranted gain by virtue of the monopoly collecting societies enjoyed and to strike a balance between copyright owners and users. The Tribunal had to consider licences with numerous bodies offering online and off-line delivery. Webcasting was a particular issue and differed from terrestrial broadcasting where the broadcasters were required to offer a substantial quantity of non-music content. In webcasting, the music had a greater impact on the listener and, consequently, a greater connection with revenue generated by the webcaster.

In *British Sky Broadcasting Ltd v Performing Right Society Ltd*,<sup>159</sup> the licensee offered a royalty of £1.9 million per year to broadcast musical works from the repertoire of the PRS which wanted some £17 million per year. Looking at comparable licences, under s 129, and all the relevant circumstances, the Tribunal decided £2.75 million per year was a reasonable royalty. The Tribunal considered it was wrong to calculate the royalty on the basis of revenue as the PRS had done. Music was just one component of the licensee's broadcasting operations and was not necessarily linked to the overall revenue.

The comparable licence approach is the most appropriate one to use, if such licences exist, unless there are special circumstances. A profits available approach, in which a collecting society takes a percentage of the profit made by the licensee, is not useful in this context as it leaves the collecting society vulnerable to the choice of a low profit margin by the licensee.<sup>160</sup> Tariffs used by foreign collecting societies may be useful where the licensee operates on an international scale. However, they need to be treated with caution, especially if there are several overlapping collecting societies and licensees are able to drive rates down by playing one off against the other. Apart from other difficulties, a major problem is determining how much the licence is worth to the licensee, especially if his main business is not the provision of entertainment but it is merely ancillary to his business. Both the preceding points would apply to an airline

<sup>156</sup> For the purposes of ss 35, 60, 66, 74 and 141; an example being the Copyright (Certification of Licensing Schemes for Educational Recording of Broadcasts) (Open University) Order 2003, SI 2003/187.

<sup>157</sup> This is acknowledged in the Copyright, Designs and Patents Act 1988 Chapter III, which deals with the permitted acts. See, for example, ss 35(2), 60(2) and 66(2).

<sup>158</sup> [2008] EMLR 147. The Mechanical-Copyright Protection Society was involved (as well as the Performing Right Society) because downloading music necessarily involves making a copy of the music.

<sup>159</sup> [1998] RPC 467.

company with many destinations in other jurisdictions, competing with airlines from those other jurisdictions, and which provided in-flight entertainment which not all passengers would want.<sup>161</sup>

<sup>161</sup> See *British Airways plc v Performing Right Society Ltd* [1998] RPC 581.

Educational establishments make use of licences for multiple copying of materials to be issued to students, such as handouts and resource packs. In *Universities UK v Copyright Licensing Agency Ltd*,<sup>162</sup> the Copyright Licensing Agency ('CLA') ran such a scheme covering the making of photocopies of parts of copyright works by staff and students (including copies made to distribute to students) in Universities and other Higher Education Institutions (collectively referred to below as 'HEIs') in return for payment of an annual fee based on the number of full-time educational students ('FTES') at the institution. The licence operated as a blanket licence (the 'Current Licence') and the amount payable for the year 2000/2001 was £3.25 per FTES. The fees collected were distributed by CLA to publishers and authors.

<sup>162</sup> [2002] RPC 693.

The Current Licence required separate clearance to be obtained for the making of resource packs for distribution to students. These packs were defined in the licence agreement as four or more photocopied extracts from licensed material from one or more sources which exceeded 25 pages, intended to be provided to students with a compilation of materials designed to support the teaching of a course of study and prepared and distributed in advance of or during the course of study either piecemeal or in batches. There were limitations on the proportions of books, etc. from which copies could be made under the scheme. The system for obtaining clearance for course packs was known as 'CLARCS' (Copyright Licensing Agency's Rapid Clearance Service). Not all publishers subscribing to the blanket licence were subject to CLARCS. On giving individual clearance, the CLA would inform the applicant of the fee payable if clearance was available. The system was cumbersome and incurred heavy administrative costs both for the CLA and the HEIs.

The CLA licence excluded separate artistic works from the scope of the licence. Later, the CLA introduced an Artistic Works Protocol which allowed copying under the scheme to extend to artistic works found in licensed material. Universities UK was formerly the Committee of Vice Chancellors and Principals of the United Kingdom. It made a number of references to the Copyright Tribunal for decisions as to certain aspects of the CLA's licensing scheme, concerning matters such as the payment to be made under the scheme, whether there should be a unitary system or two-tier system (a blanket licence plus CLARCS) and the scope of the exclusion relating to artistic works described as 'separate illustrations, diagrams and photographs'.

The Copyright Tribunal held:

- Sections 118 and 119 provide that proposed or current licensing schemes can be referred to the Tribunal which can confirm or vary the scheme as it determines is reasonable in the circumstances. Under s 129, the Tribunal is required to look at comparable licensing schemes to ensure that there is no discrimination between licensees under the scheme and licensees under other schemes operated by the same person.
- Section 130 provides guidance in respect of reprographic copying of published literary, dramatic, musical or artistic works. The Tribunal is required to have regard to the extent to which published editions of the works in question are available, the proportion of the works to be copied and the nature of the use to which the copies are likely to be put. The Tribunal must also have regard to all relevant considerations under s 135.
- In deciding what the fee under the blanket licence should be, consideration must be given to the amount of material that could be copied under the permitted acts without infringing copyright. In particular, consideration should be given to copying

within the fair dealing provisions under s 29 (which can include, under s 29(3), limited copying by librarians for students).

- It is fair dealing for a student to take an article from a journal or a short passage from a book for purposes associated with his course of study. On the other hand, material provided by staff for distribution to a number of students would not in general amount to fair dealing, nor would it be fair dealing for a lecturer to instruct every member of his class to make copies of the same material (this would not be the case, however, in respect of the mere distribution of a reading list without instructions to copy).
- A comparable licence was that used for schools and, in respect of which, the fees were considerably lower than under the Current Licence. However, the material copied in schools is different to that copied in HEIs and there are economies of scale in terms of publishing for schools, being a much bigger market. Furthermore, school books are cheaper than academic books and very little copying of journals takes place in schools. The differences in the charges for schools and HEIs could be described as being within a reasonable band, though the HEI charges were clearly at the top end of that band. The school licence comparator, therefore, exerted a downward pressure on future royalties for HEIs.
- Comparison with licences for Further Education Institutions lent support to the reasonableness of the Current Licence as such institutions simply adopted what the HEIs had done.
- It was acceptable to take into account other factors such as what the applicant was prepared to offer in negotiations.
- CLARCS, on its own, was not a licensing scheme within the meaning in s 116(1) of the Act. However, this fact alone did not deprive the Tribunal of jurisdiction over CLARCS, nor did the Tribunal believe that bringing the resource packs licensed under CLARCS within the standard blanket licence (the 'Current Licence') meant that the Tribunal was engaging in compulsory licensing. One of the terms in the Current Licence was to the effect that there was a restriction on copying course packs and this meant that the Tribunal had jurisdiction to consider whether that restriction was reasonable in the circumstances.
- The evidence showed that there existed high levels of dissatisfaction with CLARCS. It was unwieldy, expensive to administer, it took a long time to obtain clearances and the system was complex and burdensome. Furthermore, the Tribunal was not persuaded that the provision of resource packs had a significant impact on the level of textbooks sold.
- The Tribunal considered that it would be highly desirable to dispense with the two-tier system and bring an end to CLARCS but the provision of resource packs should give an entitlement to a higher royalty rate compared to other forms of copying.
- The only type of artistic works excluded from the Current Licence were those appearing on separate pages from the text and which were unnecessary for an understanding of the text.
- A formula based on the notional average number of pages copied multiplied by the number of FTES at an institution and a notional cost per page was not appropriate although it was sensible to base the fee payable on the number of FTES.
- The basic fee should be set at £2.75 per FTES with an uplift of £1.20 per FTES for including CLARCS in the basic blanket licence and an uplift of £0.05 per FTES for including artistic works appearing with text. This would give an overall figure of £4.00 per FTES.<sup>163</sup> The new licence would run for five years commencing on 1 August 2001. On each anniversary of that date, the fee would be increased in accordance with the retail price index.
- 147 Universities UK had suggested £0.60 per FTES and the CLA suggested £10.25.

<sup>163</sup> Universities UK had suggested £0.60 per FTES and the CLA suggested £10.25.

## COMPULSORY LICENCES AND LICENCES AS OF RIGHT

Compulsory licences may be granted by order of the Secretary of State in respect of the lending to the public of copies of literary, dramatic, musical or artistic works, sound recordings or films under s 66, unless there exists a certified licensing scheme under s 143. In its previous form, s 66 was restricted to rental to the public of copies of sound recordings, films or computer programs. Should s 66 ever be used, under s 142, the Copyright Tribunal has the power to settle the royalty payable if the parties cannot agree on a royalty.

Licences as of right may become available following a reference to the Competition Commission (previously the Monopolies and Mergers Commission) under s 12(5) of the Competition Act 1980 or under a number of provisions in the Enterprise Act 2002. Under s 144(1) this applies where there are restrictive conditions in licences or where the copyright owner refuses to grant licences on reasonable terms. Such conditions may be cancelled or modified or it may be provided that licences shall be available as of right.<sup>164</sup> The terms of the licence will be settled by the Copyright Tribunal in the absence of agreement. A proviso is that the powers under s 144 may be exercised only if to do so will not contravene the conventions to which the UK is a party, that is the Berne Copyright Convention and the Universal Copyright Convention.

There are provisions under s 144A for the compulsory exercise of rights in literary, dramatic, musical or artistic works, sound recordings or films in respect of cable re-transmission of wireless broadcasts from another EEA state in which the work is included.<sup>165</sup> The right is referred to as the ‘cable re-transmission right’, and it may be exercised against a cable operator only through a licensing body. If the copyright owner has not acted to transfer this right to the appropriate licensing body, it will be deemed to be transferred, but such a person must claim his rights within three years from the date of the relevant cable re-transmission. A ‘cable operator’ means a person responsible for cable re-transmission of a wireless broadcast, and ‘cable re-transmission’ means the reception and immediate re-transmission by cable, including the transmission of microwave energy between terrestrial fixed points of a wireless broadcast.<sup>166</sup>

Sections 135A–135C provide a right to use certain sound recordings in broadcasts, being recordings where the appropriate licence could have been granted by or procured by a licensing body. Either one of two conditions must be present, being (a) refusal to grant or procure a licence at terms acceptable to the person including the recordings (or at terms set by the Copyright Tribunal) and which permits unlimited ‘needletime’ or such as demanded by that person or (b) where the person holds a licence, but the needletime is limited. There are requirements for the person desiring to include the sound recording in the broadcast to give notice to the licensing body and to the Copyright Tribunal. Section 135D covers applications to the Copyright Tribunal to settle terms of payment and further provisions as to references and applications for review are contained in ss 135E–135G.<sup>167</sup>

<sup>164</sup> The powers are exercisable by the Secretary of State, the Office of Fair Trading or the Competition Commission as the case may be.

<sup>165</sup> Inserted by the Copyright and Related Rights Regulations 1996, SI 1996/2967 and modified by the Copyright and Related Rights Regulations 2003, SI 2003/2498.

<sup>166</sup> Thus, for these purposes wireless broadcasts are treated differently to broadcasts by cable.

<sup>167</sup> These provisions were inserted by the Broadcasting Act 1990.

## COPYRIGHT TRIBUNAL

The Copyright Tribunal is the old Performing Right Tribunal with more powers and a much wider scope of operation, as has been noted above. Section 145 states that the Performing Right Tribunal, which was established under the Copyright Act 1956 s 23 to regulate the licensing of performing rights, is renamed the Copyright Tribunal. The Copyright Tribunal is made up of a chairman and two deputy chairmen appointed by the Lord Chancellor after consulting the Secretary of State, and between two and eight ordinary members appointed by the Secretary of State. A person appointed as chairman

**168** Previously, the general period was seven years but this was changed to five years by virtue of the Tribunals, Courts and Enforcement Act 2007, with effect from 21 July 2008.

**169** Copyright, Designs and Patents Act 1988 s 148.

**170** The basic rule is that the concept of equitable remuneration must be applied uniformly in Member States though models based on a number of factors may be used; Case C-245/00 *Stichting ter Exploitatie van Naburige Rechten v Nederlandse Omroep Stichting* [2003] ECR I-1251.

**171** Copyright, Designs and Patents Act 1988 ss 135A–135G were inserted by the Broadcasting Act 1990 as a result of a Monopolies and Mergers Commission report proposing compulsory licensing of broadcasts of sound recordings and the abolition of the Phonographic Performance Ltd's imposition of restrictions on 'needletime'. In *AIRC v PPL and BBC* [1994] RPC 143, the Tribunal set royalty value rates and rejected the rates proposed by PPL. The Tribunal also pointed out that ss 135A–135G had deprived PPL of injunctive relief.

**172** Copyright Tribunal Rules 1989, SI 1989/1129, as amended.

or a deputy chairman must have satisfied the judicial-appointment eligibility condition on a five-year basis, be an advocate or solicitor in Scotland of at least five years' standing, be a member of the Northern Ireland Bar or a solicitor of the Supreme Court of Northern Ireland of at least five years' standing or who has held judicial office.<sup>168</sup> The Copyright, Designs and Patents Act 1988 s 146 contains provisions for the resignation or removal of members of the Tribunal and provision is made for the payment of members in s 147, as well as for the appointment of staff for the Tribunal.

The constitution of the Tribunal for the purpose of proceedings is to comprise a chairman, either the chairman or a deputy chairman, and two or more ordinary members.<sup>169</sup> Voting on decisions is by majority, with the chairman having a further casting vote if the votes are otherwise equal. The jurisdiction of the Tribunal is set out in s 149 and includes:

- 1 the determination of royalty or other remuneration to be paid with respect to re-transmission of a broadcast including the work;
- 2 applications to determine amount of equitable remuneration where rental right is transferred;<sup>170</sup>
- 3 applications and references in respect of licensing schemes;
- 4 applications or references with respect to use as of right of sound recordings in broadcasts;
- 5 appeals against the coverage of a licensing scheme or licence;
- 6 applications to settle the terms of copyright licences available as of right;
- 7 applications under s 135D in respect of the terms of payment for licences of right to include sound recordings in broadcasts.<sup>171</sup>

Section 72 provides for a permitted act of free public showing or playing of broadcasts, *inter alia*, as part of the activities of not-for-profit organisations. However, this does not extend to sound recordings of music included in the broadcasts (unless the author is the same person as the author of the broadcast). These are described as excepted sound recordings but, under s 128A, licences or licensing schemes may apply to such sound recordings in those circumstances and the Secretary of State may make a reference to the Tribunal to determine whether the licence or licensing scheme is reasonable.

Other areas of jurisdiction of the Copyright Tribunal are provided for elsewhere: for example, with respect to rights in performances.

The Copyright, Designs and Patents Act 1988 has further provisions as regards the making of procedural rules for the Tribunal<sup>172</sup> and fees to be charged, and, under s 151, the Tribunal can make orders as to costs and, under s 151A, award interest in some cases. Finally, under s 152, appeals may be made to the High Court, or to the Court of Session in Scotland, on any point of law arising from a decision of the Tribunal. It should be noted that the Tribunal is not a proactive body and can only respond to applications and references made to it.

# Chapter 5

## AUTHORS' RIGHTS

### INTRODUCTION

This chapter looks at the rights of authors which are independent of the economic rights under copyright law. Some of the rights are known as 'moral rights' and are described as such in the Berne Convention for the Protection of Literary and Artistic Works 1886 (the 'Berne Copyright Convention'), Article 6<sup>bis</sup>. These are the right to claim authorship and the right to object to modification and derogatory treatment of the author's work. These rights are important in that they give the author some control over his work in the future. This is particularly important where the author no longer has any economic rights in the work enabling him to control how it is used or modified in the future. The categories of moral rights under the UK's Copyright, Designs and Patents Act 1988 includes some other 'rights' under the heading moral rights including a right not to have a work falsely attributed and rights to privacy in certain photographs and films.

This chapter also looks at another right recently introduced which gives authors or works of art and manuscripts a royalty when the work is resold in the future. This right, known as the *droit de suite*, derives from Article 14<sup>ter</sup> of the Berne Copyright Convention. It has existed in some countries for some time, first introduced in France shortly after the First World War to compensate widows of artists killed during that war. It can be justified on the 'genius in the garret' principle. Many artists sell their works cheaply (reputedly, in some cases, giving them in return for a meal). Later, when they become famous, their earlier works may sell for vast sums of money and it is thought that a modest royalty payable to the artist, or his estate after his death, goes some way to reduce the apparent inequity.

The artists' resale right was brought into the UK as a result of implementing a European Directive. The fact that some Member States, such as the UK, did not have such a right was seen as giving rise to potential discrimination on the grounds of nationality contrary to Article 12 of the EC Treaty. It has to be said, however, that the introduction of the right was not generally welcomed in the UK and auction houses were particularly concerned about the effects that the right might have on their business. The artists' resale right and the Directive are discussed towards the end of this chapter.

### MORAL RIGHTS

In tardy recognition of parts of the Berne Copyright Convention<sup>1</sup> and in acknowledgement of the importance with which moral rights are regarded in much of the rest of Europe, the Copyright, Designs and Patents Act 1988 gave overt recognition and legal

<sup>1</sup> The Rome Act 1928 added the *droit moral* to the Berne Convention, being the right to claim first authorship of a work and the right to object to any distortion, mutilation or other modification which would be prejudicial to the honour or reputation of the author.

effect to such rights given to the creator of a work in which copyright subsists. UK copyright law has a tradition of emphasising the economic rights associated with copyright, while the French model stresses the author's rights to control and be identified with his work regardless of the ownership of the economic rights. The Copyright, Designs and Patents Act 1988 bundles a collection of rights together under the appellation 'moral rights', even though some might not be thought to fall within this description, an example being the false attribution right and the right to privacy in certain photographs and films. There are four rights within the 'moral right' designation, being:

- 1 the right to be identified as the author of a work or director of a film, the 'paternity right' (ss 77–79);
- 2 the right of an author of a work or director of a film to object to derogatory treatment of that work or film, the 'integrity right' (ss 80–83);
- 3 a general right, that every person has, not to have a work falsely attributed to him (s 84);
- 4 the commissioner's right of privacy in respect of a photograph or film made for private and domestic purposes (s 85).

<sup>2</sup> This was a result of changes made by the Copyright and Related Rights Regulations 1996, SI 1996/2967, with effect from 1 December 1996. It applied to films made on or after 1 July 1994.

<sup>3</sup> See Cornish, W.R. 'Authors in Law' (1995) 58 MLR 1.

<sup>4</sup> Article L 121–1 of Law No 92–597 of 1 July 1992 on the Intellectual Property Code, as amended. That moral rights may be perpetual is allowed under the Berne Convention for the Protection of Literary and Artistic Works; Article 6<sup>bis</sup>.

<sup>5</sup> [2007] ECDR 205.

<sup>6</sup> Victor Hugo died in 1885.

<sup>7</sup> The same applied in respect of employee-directors.

<sup>8</sup> De Freitas, D. 'The Copyright, Designs and Patents Act 1988 (2)' (1989) 133 *Solicitors Journal* 670 at 675. De Freitas recognises correctly that the right not to have a work falsely attributed to a person is of older vintage: see Copyright Act 1956 s 43.

Until 1996, a film director had only moral rights and no other rights of authorship.<sup>2</sup> Now, the principal director of a film is a joint author along with the producer unless, of course, they are the same person, in which case the principal director will be the sole author.

In typically half-hearted fashion, these moral rights do not apply globally to all types of copyright work and, additionally, there are many exceptions to the application of the rights. The rights can be waived, or even fail for lack of positive assertion on the part of the author or director. That the rights can be waived at all is unsatisfactory bearing in mind the economic pressure the creator of a work may be subject to. Others may argue that the UK is wise to take a cautious approach to these rights on the basis of experience elsewhere, particularly in France where the exercise of moral rights forced a television channel to complete making a series of programmes against its wishes and where any objectionable treatment of a work is likely to attract a claim that it infringes the integrity right.<sup>3</sup> Although authors seem keen on enforcing their moral rights in France, there has been relatively little activity in the UK.

French copyright law is more robust when it comes to moral rights. The right of an author to enjoy respect for his name, his authorship and his work is perpetual, inalienable and imprescriptible.<sup>4</sup> The descendants of Victor Hugo are still in litigation in France against Walt Disney in relation to an animated version of *The Hunchback of Notre Dame*. In *Hugo v Plon SA*,<sup>5</sup> an action was commenced against an author who recently wrote a sequel to Hugo's novel. It was Victor Hugo's wish that no sequel be written and, at first instance, the court agreed that his moral rights had been infringed. However, on appeal, the *Cour de Cassation* remitted the case back for reconsideration as the court below failed to properly consider whether, in fact, Victor Hugo's moral rights had been infringed. Under the UK Act, the rights to be identified as author and to object to a derogatory treatment last only as long as the economic rights.<sup>6</sup>

To supporters of moral rights, the way in which they have been dealt with in the UK by the Copyright, Designs and Patents Act 1988 seems to be very much a compromise. Often there will be a conflict between a moral right and an economic right, an example being in the case of employee-authors or directors. Bearing in mind that, as regards a literary, dramatic, musical or artistic work made by an employee in the course of his employment, the employer will be the first owner of the copyright under s 11(2), the Act effectively overrides the author's right to be identified as the author in relation to anything done by or with the authority of the copyright owner.<sup>7</sup>

Moral rights were hailed as a novelty in UK copyright law.<sup>8</sup> However, this is not really so – other areas of law could give remedies to the author. A licence agreement or an

assignment of copyright can contain terms requiring that the author's name be placed prominently on copies of the work and that the work must not be modified. A treatment of an author's work which is derogatory or the false attribution of a work might give rise to an action in defamation. For example, an eminent and distinguished author, Edward, might write a serious and noble play about love conquering adversity and assign the copyright to a television company. If that television company then rewrites the play and changes it into a smutty farce and broadcasts it, and Edward's name appears in the credits as being associated with the writing of the play, Edward will have an action in defamation on the basis that this would significantly harm his reputation.<sup>9</sup> The same might apply if an inferior and tasteless musical work has been falsely attributed to a celebrated and highly regarded composer with an international reputation.

An author's moral rights can be protected indirectly because the act complained of might also involve a normal infringement of copyright. For example, if another person, without permission of the copyright owner, makes a parody of the work, the author might feel aggrieved and the copyright owner might decide to sue for infringement because the parody contains a substantial part of the original work. However, only the copyright owner could bring a legal action and an author who did not own the copyright in his work would have to stand by helplessly unless the treatment of the work was defamatory.<sup>10</sup> It should be noted that the right to object to a derogatory treatment of the work is likely to be actionable in wider circumstances than would be the case in defamation because it extends to treatment which distorts or mutilates the work without necessarily affecting the author's reputation. In fact, a distortion or mutilation of a work is, from the language of s 80(2)(b), prejudicial to the honour or reputation of the author or director *per se*.

<sup>9</sup> That is, it would be likely to lower him in the estimation of right-thinking people generally.

<sup>10</sup> Unless the author had asserted his right to be identified and he had not been identified as such.

## RIGHT TO BE IDENTIFIED AS THE AUTHOR OR DIRECTOR OF A WORK (THE 'PATERNITY RIGHT')

The right to be identified as the author of a literary, dramatic, musical or artistic work, or as the director of a film, was an innovation for UK copyright law. But it is not as wide-ranging as it should be, and there are a number of exceptions to it. Additionally, the author or director must assert the right for it to be effective. The right does not apply to other types of works, such as sound recordings and broadcasts where it would be inappropriate in any case; neither does the right apply to works in which copyright does not subsist – the work must be a 'copyright' work. Furthermore, the right does not apply to all forms of the works included – for example, the right does not apply to computer programs, even though these are literary works.<sup>11</sup>

The Copyright, Designs and Patents Act 1988 s 77(1) states that the right to be identified as author or director applies to literary, dramatic, musical and artistic works, and to films. However, the right is not infringed unless it has been asserted in accordance with s 78 so as to bind the person who carries out an activity which gives rise to the right to be identified. Under s 78(2), the right may be asserted generally or in relation to specified acts either:

- (a) on assignment, by including a statement in the instrument effecting the assignment – for example, a term in the assignment stating that the author or director asserts his moral right to be identified as such (an assignment must, of course, be in writing and signed by or on behalf of the assignor by s 90); or
- (b) by written instrument signed by the author or director – for example, by including a suitable term in a licence agreement. However, it may simply be a written notification of the right and not part of some contractual document.

<sup>11</sup> Though the right may apply to copyright databases.

There is no requirement that the right must be asserted before or at the time of any assignment or licence, and it would appear that the right might be asserted at any time even subsequent to the transfer of the economic rights in the work. However, there may be a term in an assignment or licence agreement to the effect that the author or director must not at some future date assert this right. If this is so, the author or director will be in breach of contract if he subsequently asserts the right.<sup>12</sup> The Act does not make clear whether the effect of any written notice is retrospective, that is whether an author or director can make this right apply to things done prior to the assertion. This could be extremely awkward for an assignee or licensee but for the fact that the Act does allow a court to take into account any delay in asserting the right when considering remedies.<sup>13</sup> As s 78(2) refers to signature by the author, it would seem that the right to be identified as author (or director) cannot be brought to life after his death, say by his widow.

<sup>12</sup> It might also be a breach of an express or implied term in respect of quiet enjoyment.

<sup>13</sup> Copyright, Designs and Patents Act 1988 s 78(5).

<sup>14</sup> The commencement date of the copyright provisions of the Copyright, Designs and Patents Act 1988 is 1 August 1989.

Under the transitional arrangements contained in the Copyright, Designs and Patents Act 1988 Sch 1, paras 22–24, the right to be identified as author applies to literary, dramatic, musical and artistic works made before the commencement of the 1988 Act if the author was still alive at that date.<sup>14</sup> Therefore, the right to be identified as author can be asserted in respect of a pre-existing work, by a written instrument signed by the author. There are certain safeguards – for example, nothing done before the commencement date is actionable as an infringement of moral rights, and assignees and licensees may continue to perform acts covered by an assignment or licence granted before the commencement date.

There are additional means of asserting the right to be identified that apply in relation to public exhibitions of artistic works. Under s 78(3), when the author or first owner of copyright parts with possession of the original, or a copy is made under his direction or control, the right may be asserted by identifying the author on the original or copy, or on a frame, mount or other thing to which it is attached. Also, in relation to a public exhibition of an artistic work made in pursuance of a licence agreement, the right may be asserted by including, in a licence authorising the making of copies of the work, a statement to that effect.

It is one thing to assert a right, but quite another to enforce it against third parties, and therefore there must be provisions for determining whether a person is bound by the assertion and whether notice, actual or constructive, is required. In terms of the paternity right, the formula depends on the mode of assertion, and s 78(4) states the circumstances in which assignees, licensees and the like are bound by an assertion of the right to be identified as the author or director. In the case of an assignment, the assignee and anyone claiming through him are bound by the right regardless of notice. For example, if a person takes an assignment of the copyright in a literary work and the agreement includes a statement to the effect that the author asserts his right to be identified as author or director, and that person, the original assignee, subsequently assigns the copyright to a third person, then the latter will be bound by the right even if he has no knowledge of it and could not reasonably be expected to know of its existence. This will apply also to subsequent licensees, and even to a situation where a person obtains ownership of the copyright by way of a gift. Any person without knowledge of the assertion subsequently obtaining rights in the copyright will be bound even if he is acting in good faith, provided that he derives his right or interest in the copyright through the original assignee. If observing the right to identification is likely to be inconvenient, a person acquiring a licence or assignment of copyright in a literary, dramatic, musical, artistic work or film should, if at all possible, have sight of the original assignment of the rights he now wants to acquire before concluding the agreement.<sup>15</sup>

<sup>15</sup> Of course, in most circumstances, applying the author's name to copies of the work will not be onerous.

Where the assertion is other than by assignment, only persons to whom notice of the assertion is brought are bound by it. The plain language of s 78 seems to be to the effect

that the notice must be actual notice and that constructive or imputed notice will not suffice to bind the person with respect to the right. It is clear, therefore, that as far as the author or director is concerned, the right to be identified is far better asserted through an assignment than by any other means. Of course, if the author or director is also the first owner of the copyright, he may make contractual provision safeguarding this right, for example by including a term that infringement of the right is to be considered a breach of condition and that sub-licences may not be granted except with the owner's consent and such sub-licences must include a term asserting the right. Least effective of all is the position where the right is asserted by a written and signed non-contractual document.

In relation to public exhibitions of artistic works, terms in licences asserting the right to be identified as author bind everyone, regardless of notice, into whose hands a copy made in pursuance of the licence comes. In the case of identification placed on the original or copy, frame, mount or other thing to which the artistic work is attached, any person into whose hands the original or copy comes is bound even if the identification is no longer present or visible. Therefore, the right is not to be defeated simply because an intermediate possessor of the artistic work deliberately or accidentally removed the identification.

### Scope of the right to be identified as the author or director

The right to be identified as the author or director does not apply to every act that can be performed in relation to the work. For example, the right does not apply when a dramatic work is performed privately, say to a group of friends, or in the case of non-commercial publication. The scope of the right varies according to the nature of the work, as is to be expected, and is provided for in s 77. It is interesting to note that the classification of copyright works given in s 1 is not followed precisely and some regrouping is required to make sense of the scope of the right. In particular, a literary work consisting of words intended to be sung or spoken with music is treated the same as a musical work.<sup>16</sup>

In relation to literary works (other than words intended to be sung or spoken with music) and dramatic works, the author has the right to be identified whenever:

- (a) the work is published commercially, performed in public or communicated to the public, or
- (b) copies of a film or sound recording including the work are issued to the public.<sup>17</sup>

Communicating a work to the public means communication by electronic means and includes broadcasting a work or making available to the public by electronic transmission so that members of the public may access the work from a place and at a time individually chosen by them: s 20(2).<sup>18</sup> The former form of communication can include conventional television or radio broadcasts through the air or by cable and the latter is intended to cover situations where, for example, works are placed on internet websites for access.

The right also applies to these acts in respect of adaptations; that is, the author has the right to be identified as the author of the work from which the adaptation was made. For example, if an author, Florence Smith, writes a story in English and another person later translates the story into German and publishes copies of the German translation commercially, then, provided that Florence has asserted her right to be identified as author, copies of the German version must contain a clear and reasonably prominent notice to the effect that the story has been translated from the original English version written by Florence Smith.

<sup>16</sup> Copyright, Designs and Patents Act 1988 s 77(3).

<sup>17</sup> Copyright, Designs and Patents Act 1988 s 77(2).

<sup>18</sup> Substituted by the Copyright and Related Rights Regulations 2003, SI 2003/2498.

The author of a musical work or literary work consisting of words intended to be spoken or sung with music, for example the lyrics of a song, has the right to be identified as the author of the work whenever:

- (a) the work is published commercially, or
- (b) copies of a sound recording of the work are issued to the public, or
- (c) a film of which the sound track includes the work is shown in public or copies of such a film are issued to the public.<sup>19</sup>

<sup>19</sup> Copyright, Designs and Patents Act 1988 s 77(3).

As with dramatic works and the remainder of literary works, the right also applies to the above events in relation to an adaptation, namely that the original author has the right to be identified as the author of the work from which the adaptation was made.

The author of an artistic work has, under s 77(4), the right to be identified whenever:

- (a) the work is published commercially or exhibited in public, or a visual image of it is communicated to the public, or
- (b) a film including a visual image of the work is shown in public or copies of such a film are issued to the public, or
- (c) in the case of a work of architecture in the form of a building or model for a building, a sculpture or a work of artistic craftsmanship, copies of a graphic work representing it, or of a photograph of it are issued to the public.

Also, under s 77(5), the author of a work of architecture in the form of a building (that is, the architect) has the right to be identified on the building as constructed or, where more than one building is constructed to the design, on the first to be constructed. However, it is unlikely that names of architects will be found on the first example of a mass-produced design, such as on a speculative builder's housing estate, because, as will be seen below, all moral rights can be waived. It is likely that a property developer commissioning an architect will press for a waiver of this moral right unless, of course, the architect is very famous and the fixing at or near the entrance of the finished building of a suitable plaque upon which the architect's name is inscribed would be a good selling point. Alternatively, the fame and reputation of the architect may be such that he is in a strong bargaining position and can insist on exercising his right to be identified. There is no provision for the right in respect of adaptations of artistic works, the reason being that it is not an infringement of an artistic work to make an adaptation of it.<sup>20</sup>

<sup>20</sup> See Copyright, Designs and Patents Act 1988 s 21.

Section 77(6) gives the director of a film the right to be identified whenever the film is shown in public or communicated to the public or copies of the film are issued to the public. An example of the last would be when video recordings of the film are made available to the public by way of sale or rental.

The Act provides that the right to be identified applies in relation to the whole or any substantial part of the work.<sup>21</sup> For example, if a short extract from a literary work is printed and published commercially, the right still applies provided that the extract represents a substantial part of the whole work. It would be ridiculous if the copying and publication of a short extract would infringe the economic right but not the moral right, and therefore it is to be expected that 'substantial' in the context of moral rights will have the same meaning developed by the courts for economic rights, remembering that under s 16(3)(a) acts restricted by copyright apply in relation to the work as a whole or any substantial part of it. The transitional provisions in Sch 1 confirm this approach in that para 23(3) links infringement of moral rights to infringement of the economic rights under copyright, although this is in the context of things permitted under assignments or licences. It would seem sensible that infringement of moral rights should be on all fours with the infringement of economic rights concerning the requirement for substantiality.

<sup>21</sup> Copyright, Designs and Patents Act 1988 s 89(1).

## Method of identification

Having the right to be identified as the author or director would be greatly diluted if there were not also provisions relating to the prominence of the notice containing the identification. Section 77(7) deals with this important matter and requires that the identification must be clear and reasonably prominent. The manner of identification depends to some extent on the nature of the act making the work available. In the case of the commercial publication of the work or the issue to the public of a film or sound recording, the author or director (or both if appropriate) should be identified on each copy or, if that is not appropriate, in some other manner likely to bring his identity to the notice of a person acquiring a copy. Where the identification relates to a building, it should be by appropriate means visible to persons entering or approaching the building: for example, by means of a plaque on the wall adjacent to the entrance. In any other case, the author or director should be identified in such a manner likely to bring his identity to the attention of a person seeing or hearing the performance, exhibition, showing or communication in question. For example, if a play is performed in public, notices, advertisements and the like, and programmes or brochures sold to the audience, should contain the author's name in a prominent place. If there are no written or printed materials, the author's name should be clearly stated to the audience prior to the performance.

Simply naming the author is not sufficient to comply with the right to be identified and the acknowledgement must be to the author *as author*. Under s 77(8), the author or director may specify a pseudonym or initials, or some other form of identification, and if he does that form shall be used as the means of identification. In all other cases, any reasonable form of identification may be used. In *Hyperion Records Ltd v Dr Lionel Sawkins*,<sup>22</sup> the composer of performing editions of old musical works required that a copyright notice be used in the following form:

© Copyright 2002 by Lionel Sawkins

CDs had been issued to the public which included a booklet carrying the acknowledgement 'With thanks to Dr Lionel Sawkins for his preparation of performance materials for this recording'. The judge at first instance considered that this was insufficient to identify Dr Sawkins as the author and the Court of Appeal agreed. This was hardly a surprising result in the light of the fact that it was Hyperion's case that no new copyright had been created by Dr Sawkins.

Some forms of works may pose serious problems in terms of identifying authors or directors. For example, a multimedia product such as an encyclopaedia on CD-ROM. There may be thousands of authors and directors involved in making such a product. If the credits had to be 'rolled' as is common in the case of a cinematograph film or television drama, this could take several minutes before the person consulting the encyclopaedia could proceed. There are ways of overcoming this problem, the first being to ensure that all moral rights have been waived. Another way is to give the person using the CD-ROM an option to see details of the contributors should he choose to do so. Whether this is likely to bring the identity of the authors and directors to the notice of the person acquiring a copy is debatable, as few may elect to view this information, at least all the way through. It does, however, accord with pragmatism. A further approach might be to include details of contributors in any printed matter supplied with the multimedia product. However, under s 79(6) there is an important exception to the right to be identified where the work has been made for the purpose of publication in, *inter alia*, an encyclopaedia or where it has been made available with the consent of the author for the purposes of such publication. Note: it is the consent of the author and not the owner of the copyright which is important, and the statutory exception does not cover

<sup>22</sup> [2005] RPC 808.

films, presumably because the draughtsman of these provisions was thinking of paper publication only. Therefore, although the exception may be useful, it is not a universal exception in the case of electronic publication.

### Exceptions to the right to be identified

The exceptions to the right to be identified as the author or director are contained in s 79. These exceptions have the effect of significantly weakening the right to be identified in respect of certain types of works or as regards authors with a particular status. Coupled with the fact the right must be asserted and that the right, in common with the other moral rights, is capable of being waived by the person entitled to it, this reduces the practical importance of the right to what is, perhaps, a regrettable extent.<sup>23</sup> If an author has been commissioned to create the work, he might be under pressure to waive his moral rights by his paymaster, who may be of the view that moral rights are an undesirable hindrance to the commercial exploitation of the work, or just plain inconvenient.

The exceptions to the right to be identified as the author or director of a relevant work are classified by reference to:

- 1 *The type of work* (s 79(2)). Computer programs, designs of typefaces and computer-generated works are excluded from the province of the paternity right. This confirms the uncomfortable categorisation of computer programs as literary works. However, other items of computer software such as databases,<sup>24</sup> preparatory design material and other works stored in computers may be subject to moral rights. A typeface includes an ornamental motif used for printing and would normally fall within the graphic work category of artistic works. If justification is required for the first exception, it may be on the basis that a large number of persons could be involved in the design, development and subsequent modification of the program and that it would be inconvenient to allow the right.<sup>25</sup> Another argument could address the fact that computer programs and typefaces are more of a commercial character and less of an 'artistic' nature than the other works to which the right applies. As computer-generated works have no human author by definition (s 178), it seems reasonable that they must be excluded.<sup>26</sup>
- 2 *The employment status of authors and directors* (s 79(3)). If the first owner of the copyright in the work is the author's or director's employer by virtue of s 11(2), then the right does not apply in respect of acts done by or with the authority of the copyright owner.
- 3 *The permitted acts*. There are exceptions relating to some specific permitted acts which are:
  - (a) s 30, fair dealing to the extent that it relates to the reporting of current events by means of a sound recording, film or broadcast;
  - (b) s 31, incidental inclusion of a work in an artistic work, sound recording, film or broadcast. It would obviously be troublesome and difficult to give credits identifying the author or director, for example, if, in a live television news report, some music could be heard playing in the background;
  - (c) s 32(3), examination questions. However, it is normal practice for the author of a work quoted in an examination paper to be acknowledged;
  - (d) s 45, parliamentary and judicial proceedings, and s 46(1) and (2), Royal Commissions and statutory inquiries. Again, it is unlikely that the author or director would not be acknowledged as a matter of courtesy;
  - (e) s 51, permitted acts in relation to design documents and models, and s 52, relating to copyright in artistic works that have been exploited in a commercial sense; and

<sup>23</sup> Waiver of moral rights is provided by the Copyright, Designs and Patents Act 1988 s 87.

<sup>24</sup> But not in respect of the database right.

<sup>25</sup> This could also be true for many works of architecture.

<sup>26</sup> A nice conundrum is that a computer-generated work is one created in circumstances such that there is no human author (s 178), yet s 9(3) states that the author for computer-generated works is the person making the arrangements necessary for the creation of the work. This will often be a human being (it could also be an artificial legal person such as a corporation). If the author, so defined, is a human then surely the work cannot, by definition, be computer-generated because it has a human author after all.

- (f) s 57 or s 66A, in respect of acts permitted on assumptions as to the expiry of copyright, or the death of the author in the case of anonymous or pseudonymous works.
- 4 *Works made for the purpose of reporting current events* (s 79(5)). A matter of convenience again. To some extent, the difficulty in identifying the author depends on the nature of the work involved. In the case of newspaper reports, there should be no real difficulty except in so far as the report has been ‘taken’ from another source, such as a rival newspaper, or if the original report has been edited and rewritten by one or more other persons. The problem is worse in the case of a television newscast that will include a good number of reports written by different individuals or teams of individuals, and may have been edited or modified by others. While long credits may be acceptable in the case of feature films, it would be burdensome to have to identify all the various authors (and film directors), and the time taken to roll the credits might be nearly as long as the newscast itself.
  - 5 *Publication in various types of publications* (s 79(6)). This exception applies to literary, dramatic, musical and artistic works that are published in newspapers, magazines or other similar periodicals and in an encyclopaedia, dictionary, yearbook or other collective work of reference. However, for the exception to apply, the author must have created the work for the purpose of such publication or have made the work available with the consent of the author for the purposes of such publication. In many works falling into these categories, authors tend to be identified anyway, if only by way of a list of contributors. However, if there are many authors, identifying each would be onerous, especially if their contributions are interleaved in any way. A question arises as to whether this provision is limited to materials published in paper form as many of the works described are available, additionally or alternatively, in electronic form. If it is so limited then presumably the exception will not apply to these things if they are published in electronic form. For example, certain journals are available using the LexisNexis computer-based legal information retrieval system.<sup>27</sup> If the exception extends only to hard copy publications, the author must be identified in the case of works stored electronically, including computer storage, magnetic storage and compact discs, an irrational and absurd result. The exception does not apply to films.
  - 6 *Crown and parliamentary copyright* (s 79(7)). As might be expected, works in which Crown or parliamentary copyright subsists are excepted from the author’s or director’s right to be identified. Also excluded are works in which the copyright originally vested in an international organisation by virtue of s 168. This exception does not apply if the author or director has previously been identified as such in or on published copies of the work.

<sup>27</sup> Some publishers of journals seek the agreement of authors to the inclusion of the author’s article in such a computer database.

## RIGHT TO OBJECT TO DEROGATORY TREATMENT OF THE WORK

In addition to having a right to be identified as author or director (subject to exceptions and conditions), the author of literary, dramatic, musical or artistic work and the director of a film has an ‘integrity right’, a right to object to derogatory treatment of the author’s or director’s work. It has always been possible for a copyright owner to limit the extent and nature of alterations that can be made to a work by a licensee. A copyright owner who is also the author can thus provide for the continuing integrity of the work by contractual means. Before the right to object to derogatory treatment existed, in the absence of express or implied terms in a licence agreement, the licensee had the right to make alterations, but this was not necessarily an absolute right and in *Frisby v*

28 [1967] Ch 932.

29 The BBC wished to remove words from a script which it considered would be offensive to a large proportion of the viewing public, even though the claimant author considered that the words were important.

30 See Copyright, Designs and Patents Act 1988 Sch 1, paras 22–25. The provisions are similar to those for the right to be identified as author or director.

31 [2003] EWHC 1724 (Ch).

*British Broadcasting Corp*<sup>28</sup> it was said that the court would, in appropriate circumstances, limit that right to make alterations.<sup>29</sup>

The integrity right is described in s 80(1) as the right belonging to the author or director not to have the work subjected to derogatory treatment. For the right to apply, the work must be a 'copyright' work, that is a work in which copyright subsists; furthermore, the right is subject to exceptions and applies only as regards certain acts carried out in relation to the work. As with all other moral rights, the right can be waived with the consent of the person entitled to the right, who might be the author or director, or a person taking the right after the death of the author or director. The integrity right also applies to works which existed prior to the commencement date of the Copyright, Designs and Patents Act 1988, subject to certain conditions.<sup>30</sup>

'Derogatory treatment' is described in s 80(2) as being a treatment which amounts to distortion or mutilation of the work, or is otherwise prejudicial to the honour or reputation of the author or director. The insertion of the word 'otherwise' suggests that a distortion or mutilation, *per se*, is not enough and that there must be prejudice to honour or reputation. In *Confetti Records v Warner Music UK Ltd*,<sup>31</sup> a track called 'Burnin' was composed. In its original form it was described as consisting of an insistent instrumental beat accompanied by the vocal repetition of the word 'Burnin' (or variants of it). It was alleged that a version of the track which had been overlain with a rap containing references to violence and drugs was a derogatory treatment of it. Lewison J said (at paras 150 and 151):

I hold that the mere fact that a work has been distorted or mutilated gives rise to no claim, unless the distortion or mutilation prejudices the author's honour or reputation. The nub of the original complaint, principally advanced by Mr Pascal, is that the words of the rap (or at least that part contributed by Elephant Man) contained references to violence and drugs. This led to the faintly surreal experience of three gentlemen in horsehair wigs examining the meaning of such phrases as 'mish mish man' and 'shizzle (or sizzle) my nizzle'.

It appeared that the words of the rap were difficult to decipher and this itself tended to militate against a finding that the treatment was derogatory. Another weakness in the case was that there was no evidence of the honour or reputation of the composer of 'Burnin', nor any prejudice to either of them. The judge rejected an invitation to infer prejudice.

Other forms of treatment that could injure the honour or reputation of an author or director could include a situation where, for example, the work is not itself altered but it is placed alongside or between other works which may affect adversely the perception of the work. This could happen where a short but respectable 'nature' film is broadcast among a selection of pornographic film clips or where a poem which happens innocently to contain some potential innuendos is placed on a website amongst a collection of lewd poems. However, such forms of treatment fall outside the provisions and would not give rise to a cause of action because of the relatively narrow definition of 'treatment'.

If the treatment does injure the honour or reputation of the author or director, it is possible that it may give rise to a claim in defamation in addition to an action for infringement of the moral right. 'Treatment' is defined as meaning the addition to, deletion from or alteration to or adaptation of the work, but not including a translation of a literary or dramatic work or an arrangement or transcription of a musical work involving no more than a change of key or register. Notice that the meaning of 'treatment' is not the same as the very technical meaning of 'adaptation' given in s 21. In some respects, treatment is wider than adaptation because it includes additions and deletions, but narrower in the sense that translations and arrangements are not included. The definition of 'treatment' is directed towards the activities that could

offend the author, whereas a straightforward translation of a literary work should not upset any author. The right to object applies in relation to the whole or any part of the work under s 89(2). There is no stipulation that the part must be substantial and, theoretically, the right could arise in relation to a small part (in terms of quality or quantity), although the smaller the part, the less likely it is that its treatment would be considered to be derogatory.

An important aspect of the integrity right is the question of what amounts to a derogatory treatment of a work. Certainly, reducing the aesthetic content or damaging the literary style of the work by altering it – in other words, reducing the merit or quality of the work – would probably fulfil the requirements; for example, where a parody is made of music intended to be taken seriously, or in the case of a performance of a send-up of a worthy drama. An indication of the meaning can be gleaned from the French case of *Rowe v Walt Disney Productions*,<sup>32</sup> heard in the *Cour d'Appel* in Paris. In this case it was argued that moral rights under French law had been infringed, including the author's right to integrity. The claimant, a citizen of the USA, resident in France, had written a story about an aristocratic family of cats living in one of the better, more elegant areas of Paris, believing that a film would be made using live animals. Eventually, the defendant made a film based on the story, not using live animals but in the form of an animated cartoon, called *The Aristocats*. The claimant, the author of the story, claimed, *inter alia*, damages for the harm done to the integrity of his work.<sup>33</sup> The claimant's various claims failed because of a number of factors, not the least being that the original assignment was subject to English law, and the then current English copyright legislation, the Copyright Act 1956, did not expressly recognise moral rights.<sup>34</sup>

The right to object to a derogatory treatment is couched in fairly strong terms. It is not enough if the author is simply aggrieved at the treatment of his work. In *Pasterfield v Denham*,<sup>35</sup> the author of an artistic work which included a pictorial representation of a formation of German Second World War bombers used to promote the Plymouth Dome objected to a treatment of his work which included colour changes and a number of omissions and inaccuracies. He alleged that this resulted in a diminution of the 'vibrancy and excitement' of the original work. The judge, at Plymouth County Court, considered that the differences were relatively trivial and could have been the subject of a 'Spot the Difference' competition in a children's comic. Such differences were not a distortion or mutilation of the original work and it would be wrong to elevate such differences to a finding that there had been a derogatory treatment of the original work.

The Berne Convention for the Protection of Literary and Artistic Works uses a slightly different formula for what amounts to a derogatory treatment. Article 6<sup>bis</sup> gives the author the right, *inter alia*, '... to object to any distortion, mutilation or other modification of, or other derogatory action in relation to, the said work, which would be prejudicial to his honour or reputation'. Some states seem to take a liberal approach to this and the right can be interpreted as applying to any modification. The fact that a work has been modified without the author's consent seems to be taken to be prejudicial to the author's honour or reputation, *per se*. For example, in *Google Inc v Copiepresse SCRL*,<sup>36</sup> Copiepresse, a copyright management society, brought an action alleging that Google News infringed the copyright in newspaper articles belonging to its members by placing extracts on the Google News website. In addition to finding infringement of copyright, the Court of First Instance in Brussels found that the moral rights of the authors had been infringed. The Court held that an author has a right of respect for his work and this means that he can challenge any modification to it. There is no need to show that the author has suffered any harm. A modification can include a change in the environment of the work, its title or classification.<sup>37</sup> By placing extracts of articles together by theme, the editorial or philosophical approach of the author could be altered.<sup>38</sup>

32 [1987] FSR 36.

33 Initially, the author had asked for further payment in respect of his authorship of the story.

34 A citizen of the US resident in France enjoys the same moral rights as French authors. However, the law of the country in which the contract is signed becomes the law of the parties, and neither the Universal Copyright Convention nor any other provisions of international law could give the claimant moral rights afforded by French law which were denied to him under the law of contract. The assignment had been signed in London.

35 [1999] FSR 168.

36 [2007] ECDR 125.

37 This would seem to include placing an extract of a work which was published in paper form on the internet.

38 As the authors' names were not mentioned on Google News, there was a further breach of the authors' moral rights.

39 [2005] FSR 829.

In the High Court of Delhi, it was accepted in *Sehgal v Union of India*,<sup>39</sup> that destruction of the work in question was a mutilation of the work in the sense used in the Berne Convention. The work was very large bronze mural sculpture which had been removed, and severely damaged in the process of removal, from the building it had first been commissioned to be displayed in.

### Scope of the right to object to derogatory treatment

There are, as might be expected, some similarities in the scope of this right when compared to the right to be identified. However, the scope of this particular right is expressed in terms of a classification of works which is more faithful to that given in s 1. In the case of literary, dramatic and musical works, the right is infringed by a person who:

- (a) publishes commercially, performs in public or communicates to the public a derogatory treatment of the work, or
- (b) issues to the public copies of a film or sound recording of, or including, a derogatory treatment of the work.<sup>40</sup>

40 Copyright, Designs and Patents Act 1988 s 80(3).

In the case of an artistic work, under s 80(4), the right is infringed by a person who:

- (a) publishes commercially or exhibits in public a derogatory treatment of the work, or communicates to the public a visual image of a derogatory treatment of the work;
- (b) shows in public a film including a visual image of a derogatory treatment of the work or issues to the public copies of such a film; or
- (c) in the case of a work of architecture in the *form of a model for a building*, a sculpture or a work of artistic craftsmanship, issues to the public copies of a graphic work representing, or of a photograph of, a derogatory treatment of the work. (emphasis added)

41 The consequences of failing to provide for this can be seen in a Swiss case reported in [1994] 10 EIPR D-267.

However, unlike the right to be identified, this right does not apply to works of architecture in the *form of a building*.<sup>41</sup> Nevertheless, under s 80(5), where the author is identified on the building and the building is subjected to a derogatory treatment, the author has the right to have the identification removed. Other remedies will not, therefore, be applicable in this latter situation.

As regards films, the right to object to a derogatory treatment is infringed by a person who:

- (a) shows in public or communicates to the public a derogatory treatment of the film;
- (b) issues to the public copies of a derogatory treatment of the film.<sup>42</sup>

42 Copyright, Designs and Patents Act s 80(6).

Section 80(7) provides that the right extends to apply to the treatment of parts of a work resulting from a previous treatment by a person other than the author or director, if those parts are attributed to, or are likely to be regarded as, the work of the author or director. Thus, derogatory treatments of versions of the work that have already been altered by a third party are covered by the right. For example, an author, Joe Brown, writes a story in English and assigns the copyright to a publishing company. The story becomes well known. Another person is engaged by the publishing company to translate the story into French. The publishing company grants a licence to a French theatre company permitting the latter to perform the French version in public. The French theatre company decide to perform a parody of the story in the form of a farce. If this treatment is judged to be derogatory and the work is likely to be attributed to him, Joe Brown's moral right has been infringed. Ironically, the enhanced position given to authors and directors by the right to be identified as such increases the possibility that the author or director will have his integrity right infringed. The stronger the association between the author or director and the work, the greater the likelihood of the

integrity right, as regards treatments of previous treatments, being infringed, as indeed is the likelihood that a treatment will harm the honour or reputation of the work. Some authors and directors may find it embarrassing to be so clearly identified as such.

### Exceptions and qualifications to the right to object to the derogatory treatment of a work

The right is limited in its scope by exceptions and qualifications provided for under ss 81 and 82, respectively. The right to object to derogatory treatment of a work is subject to exceptions as follows:

- 1 *The right does not apply to computer programs and computer-generated works* (s 81(2)). Although there may be a great deal of creative effort involved in computer programs and, indirectly, in computer-generated works, any right to integrity could be seen as an unwanted potential restriction on the future modification of the work. Nevertheless, professional reputation will be associated with computer programs particularly and it seems anomalous to omit computer programs from the ambit of this right and, indeed, the right to be identified as author. Computer programs are the result of a great deal of skill, judgment and experience and the author-work bond will be as great as with any other form of literary work, and in many cases it will be greater.<sup>43</sup> As regards computer-generated works, it is accepted that the right, at first sight, seems inappropriate. Computer-generated works are defined as being created in circumstances such that there is no human author under s 178, and there should not be a human author to feel aggrieved if the work is subsequently subjected to derogatory treatment. However, under s 9(3), a computer-generated work does have an author, being the person making the arrangements for the creation of the work, who is likely to be a living individual and who may feel angry or distressed by the treatment of the work by a subsequent copyright owner or licensee. For example, the work may be subjected to treatment which makes it derisory and this reflects on the author.
- 2 *The right does not apply in relation to any work made for the purpose of reporting current events* (s 81(3)). As with the right to be identified, this reflects worries expressed by the media during the passage of the Copyright, Designs and Patents Bill through Parliament, that providing for moral rights in such circumstances would be very onerous.
- 3 Under s 81(4), the right does not apply in relation to the publication of a literary, dramatic, musical or artistic work in:
  - (a) a newspaper, magazine or other similar periodical, or
  - (b) an encyclopaedia, dictionary, yearbook or other collective work of reference.

However, for the exception to apply, the author must have made the work for the purposes of such publication, or the work must have been made available with the consent of the author for the purposes of such publication. Furthermore, the right does not apply to any subsequent exploitation elsewhere of such a work without modification of the published version. As the author's work will be one of many in the publication, the purpose of this exception is to facilitate the modification of the works included in the publication and, for example, later storage in a computer database. If only one author could object on the basis of his right to integrity, it could hamper or delay the subsequent publication of the entire work. In many cases, editors of collective works reserve the right to modify the author's original manuscript to produce the finished version for publication. An example of a case in which a single author could hamper publication is where the editor of the compendium work wishes to reduce the length of a submitted article by leaving out a few paragraphs against the wishes of the author. This exception can be seen as recognising the

<sup>43</sup> Some computer programs and suites of programs are the result of many years of work.

editor's role, his skill and judgment, and allows the editor the discretion he needs to carry out his work.

- 4 *The right is not infringed by an act which by virtue of ss 57 or 66A would not infringe copyright* (s 81(5)). Section 57 deals with permitted acts based on assumptions as to the expiry of copyright or the death of the author in the case of anonymous or pseudonymous works. Section 66A contains equivalent provisions in respect of films.
- 5 Under s 81(6), the right is not infringed by anything done for the purpose of:
  - (a) avoiding the commission of an offence;
  - (b) complying with a duty imposed by or under an enactment; or
  - (c) in the case of the British Broadcasting Corporation (BBC), avoiding the inclusion in a programme broadcast by them of anything which offends against good taste or decency, or which is likely to encourage or incite crime, or to lead to disorder or to be offensive to public feeling.

If the author or director is identified at the time of the relevant act or has previously been identified in or on published copies of the work, there must be a sufficient disclaimer. One of the main purposes of this exception is to allow the BBC to censor parts of works which are to be broadcast without falling foul of the integrity right. The last exception applies only to the BBC, therefore the independent television companies, and, for that matter, other broadcasters and, for example, organisations and persons making works available online, must choose whether to run the risk of being sued for infringement of the right if they make cuts, whether to screen the work in full or whether to refuse to use the work at all.<sup>44</sup> A sufficient disclaimer would be to the effect that certain scenes which, for example, would be offensive to many people, have been omitted. Examples of scenes that could fall within this provision are:

- explicit or pornographic sex,
- showing how a terrorist makes bombs,
- violence at a demonstration.

Section 82 is described in the sub-heading as 'qualification of right in certain cases'. It is really just another list of exceptions to the right and applies to employee works (where the first owner of the copyright is the author's or director's employer), Crown and parliamentary copyright and works in which the copyright originally vested in an international organisation under s 168. In respect of these works, the right to object to derogatory treatment does not apply to anything done by or with the authority of the copyright owner unless the author or director:

- is identified at the time of the relevant act, or
- has previously been identified in or on published copies of the work.

In other cases concerning the works included in the provisions of s 82, that is where the right still does apply (for example, if the author is not and has not been identified), the right is not infringed if there is a sufficient disclaimer.

### Infringement by possession of or dealing with an infringing article

Almost as a parallel to the secondary infringements of copyright, the right to object to derogatory treatment can be infringed by possessing or dealing with infringing articles. An infringing article is defined under s 83(2) as a work or a copy of a work that has been subjected to derogatory treatment and that has been or is likely to be the subject of any of the acts within the scope of the right in circumstances infringing that right.<sup>45</sup> Under s 83(1), a person also infringes the integrity right if he:

- (a) possesses in the course of business, or
- (b) sells or lets for hire, or offers or exposes for sale or hire, or

<sup>44</sup> Alternatively, the author or director may be asked to waive his integrity rights.

<sup>45</sup> Note that the definition is different to that for 'infringing copies' as given by the Copyright, Designs and Patents Act 1988 s 27(2) which relates to secondary infringement of copyright.

- (c) in the course of business exhibits or distributes, or
- (d) distributes otherwise than in the course of business so as to affect prejudicially the honour or reputation of the author or director,

an article which is, and which he knows or has reason to believe is, an infringing article.

These activities are the same as or very similar to those relating to some of the secondary infringements of copyright and the associated criminal offences. However, the above activities do not, in terms of the integrity right, give rise to criminal liability, but there is a requirement for knowledge on the part of the person infringing the right. The criminal penalties provided under s 107 are expressed in terms of an ‘infringing copy’ and it therefore would seem that the criminal penalties do not apply to infringement of the integrity right alone, as this is expressed in terms of an ‘infringing article’. An infringing copy is an article, the making of which infringed copyright (or would have done so if made in the UK where it has been or is proposed to import it into the UK). In some circumstances, a copy of a work may be made which is an infringing copy for the purposes of s 107 but which is also an infringing article for the purposes of s 83. For example, the work in question may have been parodied and recorded and the recording may include a substantial part of the work.

## FALSE ATTRIBUTION OF A WORK

Any person could be angered or distressed if a work of poor quality or a work containing scandalous or outrageous comment were falsely attributed to him. For example, an artist with a high standing in the art world would be likely to object if another person painted a substandard work in the artist’s style and tried to pass it off as being made by the artist. Obviously, the artist’s reputation could be harmed by this unless the painting was an obvious ‘fraud’. Of course, the law of defamation may be available to give some remedy to the person to whom an inferior work is attributed, and substantial damages may be available in appropriate cases.<sup>46</sup> In cases such as the one described, an action in defamation may be the most attractive route to follow for the aggrieved person, especially as such cases tend to attract considerable publicity.

However, the ingredients necessary for an action in defamation may be missing. The work that has been falsely attributed might be of a high standard. The person who has created it may be hoping to ‘cash in’ on the reputation and standing of a famous person, or may be intending to embarrass some other persons.<sup>47</sup> An example of the latter situation is the work of the exceptionally skilled artist, the late Tom Keating, who produced many paintings in the style of important artists such as Constable, Turner and Palmer. The paintings were not copies of original paintings, but Mr Keating adopted the style used by famous artists and his work was of such a high standard that several reputable art dealers and art collectors were fooled.<sup>48</sup> Mr Keating later appeared in a television series showing how he created his ‘masterpieces’.

It is difficult to know whether the ‘false attribution right’ is a moral right in the true sense, as it does not concern any work created by the person to whom the right accrues. Nevertheless, the Copyright, Designs and Patents Act 1988 places the right firmly amongst the other moral rights, and includes another right which is somewhat out of place in terms of traditional moral rights, that is a right to privacy in relation to certain photographs and films.

The false attribution right is not new and was originally provided for in the Copyright Act 1956 s 43. For example, in *Moore v News of the World Ltd*,<sup>49</sup> the claimant, Mrs Edna May Moore (known professionally as Dorothy Squires and one-time wife of Roger Moore who played the lead in *The Saint* television series), alleged that an article

<sup>46</sup> Defamation cases usually are heard before a jury and the amount awarded to a successful claimant can be seen as being something of a lottery, as it is the jury which decides the measure of damages.

<sup>47</sup> In such circumstances, there may be an action in passing off.

<sup>48</sup> Criminal proceedings against Mr Keating in respect of his activities were halted because of his ill-health.

<sup>49</sup> [1972] 1 QB 441. The case was notable in that it was the first to come before the UK courts on the question of false attribution.

which appeared in the *News of the World* falsely attributed authorship to her and was defamatory. The article was entitled 'How My Love For The Saint Went Sour' and was claimed to be by Dorothy Squires talking to a reporter, Weston Taylor. The claimant claimed that the article implied that she was an unprincipled woman who had prepared sensational articles about her private life for substantial payment. The case was heard before a jury which awarded £4,300 for the libel and £100 for false attribution.

Where there is a court action which involves a claim in defamation together with a claim in respect of false attribution, the general rule is that double damages will not be awarded – there can be no duplication of damages, but the jury might properly take the defamation award into account in quantifying damages. In the above case, Lord Denning considered that the jury had decided upon an overall figure of £4,400 and had split this between defamation and false attribution in the proportions £4,300 and £100 respectively.

There must be a 'work' that has been attributed, and in *Noah v Shuba*<sup>50</sup> it was held that two short sentences by themselves could not be a work for copyright purposes. The defendant had quoted, with acknowledgement in a magazine article, the whole of a passage from a guide on hygiene and sterilisation procedures with respect to electrolysis (a method of hair removal) written by the claimant. Two sentences in the passage had not been written by the claimant and they gave the impression that the claimant agreed with the defendant's view that, if proper procedures were followed, there would be no risk of viral infections after treatment. It was held that the whole of the quoted passage had been attributed, and because it was not taken verbatim from the claimant's work the *whole of the passage* had been falsely attributed even though the differences were small. Even a slight change in wording can significantly alter the meaning of a written work. The claimant was awarded £250 for the false attribution and a further £7,250 in respect of defamation.<sup>51</sup>

Persons quoting extracts from the works of others must be careful to use verbatim extracts only and check carefully for typographical errors. For example, if the word 'not' is omitted from a quoted passage and the author's name is acknowledged, it would seem that the whole passage has been falsely attributed. The omission of the word would change the meaning of the passage or part of it and would, therefore, amount to a distortion of the work, making an action on the basis of the integrity right an alternative or additional claim.

The false attribution right applies to the same categories of works (original works and films) as do the other moral rights, but there are no exceptions. Therefore, unlike the right to be identified, it applies to computer programs, typefaces and computer-generated works. A 'person', which presumably can also be an artificial legal person, has the right not to have a literary, dramatic, musical or artistic work falsely attributed to him as author, or to have a film falsely attributed to him as director.<sup>52</sup> Attribution means an express or implied statement as to who is the author or director of the work. The right is infringed in a number of circumstances as follows:

- 1 issuing copies of a falsely attributed work to the public (s 84(2)(a));<sup>53</sup>
- 2 exhibiting a falsely attributed artistic work or copy thereof in public (s 84(2)(b));
- 3 performing in public or communicating to the public a literary, dramatic or musical work as being the work of a person, knowing or having reason to believe that the attribution is false (s 84(3)(a));
- 4 showing in public or communicating to the public a film as being directed by a person, knowing or having reason to believe that the attribution is false (s 84(3)(b));
- 5 with respect to the above acts, issuing to the public or publicly displaying material containing a false attribution (s 84(4)) – this would include publicity materials such

50 [1991] FSR 14.

51 There was a further award of £100 for copyright infringement. The judge refused to award additional damages in respect of the copyright infringement. A company which has a work falsely attributed to it could, presumably, also have an action in malicious falsehood.

52 Copyright, Designs and Patents Act 1988 s 84.

53 The false attribution may be in or on the offending copy of the work.

- as leaflets distributed informing the public of a performance or posters advertising some event;
- 6 possessing or dealing with a copy of a falsely attributed work (a work with a false attribution in or on it) in the course of business, knowing or having reason to believe that there is such an attribution and that it is false (s 84(5)). In the case of artistic works, possessing and dealing with the work itself is caught if the relevant knowledge is present. Dealing is defined in s 84(7) as selling or letting for hire, offering or exposing for sale or hire, exhibiting in public, or distributing; or
  - 7 in the case of an artistic work, dealing with a work, which has been altered after the author parted with possession of it, as being the unaltered work of the author or dealing with a copy of such a work as being a copy of the unaltered work of the author, knowing or having reason to believe that this is not the case (s 84(6)). 'Dealing' has the same meaning as above.

The false attribution provisions also apply to adaptations of literary, dramatic and musical works and to copies of artistic works that are falsely represented as being copies made by the author of the artistic work: s 84(8). Under s 89(2), the right of a person not to have a work falsely attributed to him applies in relation to the whole or any part of a work. As regards false attribution before the commencement date of the 1988 Act, the Copyright Act 1956 s 43 applies.<sup>54</sup>

As before, it is unlikely that many persons will feel the need to turn to the false attribution provisions except as an alternative or additional cause of action, as in serious cases the law of defamation is more appropriate and, if the false attribution has affected the commercial sales of some article incorporating a copyright work, an action in passing off might be relevant and provide greater recompense.

With the assistance of computer technology it is now possible to re-use and manipulate old film clips and photographs to create 'new' images and film action including deceased persons. For example, it is possible to make a new film starring Marilyn Monroe, or a new television advertisement with Alfred Hitchcock or an advertising hoarding featuring Sid James. Relatives and persons who were friends with such celebrities might feel aggrieved at the use of their images (and voices) in this way. The following points can be made about exploiting the characteristics and appearance of deceased persons:

- 1 there can be no false attribution right actionable by their personal representatives because there is no work in respect of which authorship is falsely attributed to them;
- 2 there is no action in defamation as deceased persons cannot be defamed;
- 3 the photographer or director of the original photographs or film clips used to make the new work could have an action for false attribution if the new work is indeed attributed to either of them;
- 4 the owner of the copyright, if any, subsisting in the original photograph, film or broadcast may be able to use his economic rights, bearing in mind that a single frame is a substantial part of a film;
- 5 in some cases, if the original work is a recording of a film or sound recording of a live performance, there will be rights in that performance which last for 50 years from the end of the calendar year during which the performance took place. The person entitled to the performer's rights on his death should be able to obtain injunctive relief and/or damages, as too should the person having an exclusive recording contract with the performer.

In some cases, there will be no way in which close relatives of deceased performers can prevent the making of the new work including images of the deceased person. It is possible that the owner of the economic copyright will be happy to licence the use of

<sup>54</sup> Copyright, Designs and Patents Act 1988 Sch 1, para 22(2).

the original work for such purposes. Of course, the copyright owner may be the person making the new work. It is arguable that a *sui generis* right ought to be introduced to control the use of old images of deceased persons for a substantial period of time after their death. That might entail the introduction of an image right for living persons.<sup>55</sup>

<sup>55</sup> Certain forms of processing images of persons may invoke individuals' rights under data protection law though these rights only apply to living individuals.

## RIGHT TO PRIVACY IN PHOTOGRAPHS AND FILMS

Prior to the Human Rights Act 1998, English law recognised no general right to privacy. Prior to the 1988 Act, the right to privacy in relation to photographs or films could be achieved only through the application of the economic rights, for example by obtaining an injunction to prevent publication. In *Mail Newspapers plc v Express Newspapers plc*,<sup>56</sup> an injunction was granted to prevent the publication of wedding photographs of a married couple. The wife had suffered a brain haemorrhage when 24 weeks pregnant and was kept on a life-support machine in the hope that the baby could be born alive. The husband had granted exclusive rights to the claimant in respect of the photographs, together with an undertaking that he would pose for photographs with the baby within 24 hours of its birth. The defendants had intimated that they would also publish copies of the couple's wedding photographs.<sup>57</sup>

<sup>56</sup> [1987] FSR 90.

<sup>57</sup> The case hinged on whether the husband could grant exclusive rights, as it appeared that the husband and wife were joint owners of the copyright in the wedding photographs. However, it was questionable whether the wife was alive or clinically dead. If the former, her consent would be required for the exclusive licence, but plainly she was not in a position to give it.

<sup>58</sup> [1960] 1 WLR 1072. See Chapter 6 for a discussion of this case.

<sup>59</sup> The Copyright Act 1956 had a different rule. Under s 4(3), a person commissioning a photograph for money or money's worth would be entitled to the copyright.

The inclusion of the right to privacy in photographs and films was considered necessary because of the power of visual media and the danger that photographs and films made for private purposes would later be published against the wishes of the persons who commissioned them, as happened in the case of *Williams v Settle*.<sup>58</sup> One reason this right is required is that the first owner of the copyright in, for example, a commissioned photograph is the photographer and not the commissioner.<sup>59</sup> The first owner of the copyright in a film is the director (and producer if a different person) unless an employee making the film in the course of employment, in which case the employer will be the first owner of the copyright. Therefore, commissioners of films and photographs, in common with other works of copyright, will not be able to control the subsequent use of the work through the medium of ownership. Of course, it is open to the commissioner to make contractual arrangements to protect privacy, or by taking an assignment of the copyright or becoming an exclusive licensee. However, it will often be the case that the person commissioning the photograph or the film gives no thought to this matter. This new right gives him some safeguards to prevent a publication that would be an unwelcome invasion of his privacy or that of the persons appearing in the photograph or film, or at least to provide him with some legal redress.

Under s 85, the right to privacy applies in the case of a copyright photograph or film which has been commissioned for private and domestic purposes. The scope of the right is not to have:

- (a) copies of the work issued to the public (here the difficulty with the scope of this phrase is unlikely to be a problem as it will usually be the first issue to the public that causes the complaint);
- (b) the work exhibited or shown in public; or
- (c) the work communicated to the public.

The right may be infringed indirectly, such as where a person authorises the act complained of. There are some minor exceptions to the application of the right connected with a number of the permitted acts.<sup>60</sup> However, the right does not apply to photographs and films made before the commencement of the 1988 Act. The right does apply in relation to a substantial part of the film or photograph, as well as the whole of it.<sup>61</sup> This will include a single frame from a film.

<sup>60</sup> The relevant permitted acts are those under the Copyright, Designs and Patents Act 1988 ss 31, 45, 46, 50 and 57.

<sup>61</sup> Copyright, Designs and Patents Act 1988 s 89(1).

## JOINT WORKS

The fact that many works are the result of the effort of joint authors (or joint directors), defined as being collaborative works where the respective contributions of the authors or directors are not distinct from the others,<sup>62</sup> requires that the moral rights provisions in the Act have to contain some rules to be applied in such cases. Not only does the Act have to address infringement of the paternity and integrity rights associated with joint works, but it also has to consider the possibility that a work might be falsely attributed to joint authors or that a photograph or film may be subject to a joint commission. Section 88 deals with joint works and briefly makes the following provisions:

- 1 for a joint author (or director) to take advantage of the right to be identified, he must assert the right himself. An assertion by one joint author will not benefit the other;
- 2 the right to object to derogatory treatment applies to each joint author or director individually. The consent of one to the treatment does not prejudice the right of the other;
- 3 the false attribution right is infringed by any false statement as to the authorship of a work of joint authorship and by falsely attributing joint authorship to a work of sole authorship. Similar provisions apply to film directors; and
- 4 the right to privacy in certain films and photographs applies to each commissioner individually. The consent of one to the relevant act does not prejudice the right of the other.

A principal director of a film is a joint author of the film along with the producer, where the producer is a different person. However, film producers do not have moral rights. Note that, although only principal directors and producers can be authors of films, the duration of copyright in a film is determined by the death of the last to die of the principal director, author of the screenplay, author of the dialogue or composer of music specially created for and used with the film under s 13B(2).

## DURATION AND TRANSMISSION ON DEATH

The duration of moral rights is provided for in a fairly straightforward way by s 86. In all cases except the false attribution right, they endure as long as copyright subsists in the work in question. As the duration of copyright is, in most cases where moral rights are likely to be in issue, the life of the author plus 70 years, this can be seen as fairly generous. However, it could be argued that the right to be identified and the integrity right should have no time limit.<sup>63</sup> Why should a person be able to make a derogatory treatment of a Shakespeare play yet be prevented from doing the same in respect of a work written by an author who is still living or who died not more than 70 years ago? One possible answer is that, given the passage of time, it is less likely that anyone would feel aggrieved personally (others might feel angered simply because the work of a great author was being debased). If the rights were perpetual, eventually it would be difficult to say who had a right of action, that is *locus standi*; it might no longer be clear who could enforce the right. Finally, the law tends to dislike perpetual property rights, as evidenced by the development of technical rules to prevent the tying up of rights in the law of real property, and especially as exhibited in the Act itself which removes perpetual copyright from certain universities and colleges granted under the Copyright Act 1775.<sup>64</sup>

After the author's (or director's, or commissioner's) death, the right to be identified, the integrity right or the right to privacy in relation to certain photographs and films will pass as provided for in the testamentary disposition; or, in the absence of an

<sup>62</sup> Copyright, Designs and Patents Act 1988 ss 10 and 88(5).

<sup>63</sup> Indeed, in France there is no time limit and the moral rights are declared to be perpetual and inalienable: Article L 121-1 Law No 92-597 of 1 July 1992, on the Intellectual Property Code, as amended.

<sup>64</sup> Copyright, Designs and Patents Act 1988 Sch 1, para 13.

appropriate direction, the rights pass with the copyright, should it form part of his estate or, failing this, the rights will be exercisable by the author's personal representatives: s 95(1).

Where the copyright is part of the person's estate but is divided, for example, by passing one part to one person and another part to another person, any moral right which passes with the copyright is correspondingly divided under s 95(2). An example is where Bernard is the author of and owns the copyright in a dramatic work and he dies leaving the publication rights to Angela and the remaining rights to Claire. Similarly the copyright could be left to two or more persons consecutively, such as where Bernard leaves his entire copyright to Lynne for five years, after which it reverts to his estate. Lynne will be able to enforce the moral rights for the five-year period, following which the rights will be exercisable by whomsoever took under Bernard's estate.

As regards the right not to have a work falsely attributed to a person, this continues to subsist for a period of 20 years after the person's death.<sup>65</sup> Of course, in this case there is no copyright of which the person concerned is the author, in order to measure the duration of the right. It is questionable whether 20 years is sufficient to give the widow or children of the person falsely attributed an action to prevent or claim damages for false attribution. There seems to be no good reason why this right should not endure for a longer period of time, say 50 years, after the person's death.

Any infringement of the false attribution right is, following the person's death, actionable by his personal representatives: s 95(5). Any damages recovered by personal representatives in respect of this and the other moral rights will devolve as part of the person's estate (as at the time of his death): s 95(6).

<sup>65</sup> This was the period provided for under the Copyright Act 1956 s 43.

## CONSENT AND WAIVER

Under s 87(1) it is not an infringement of a moral right to do any act to which the person entitled to the right has consented. Such consent may be implied or the law of estoppel may be relevant.

The major chink in the armour in moral rights in the UK is that they may be waived by the author or director by whom they are owned. It is very likely that copyright owners (unless the owner is the author or director), assignees and licensees will seek to avoid the inconvenience of having to respect the author's or director's moral rights and that pressure may be brought to bear in the hope of obtaining a waiver. Those authors and directors who are in a weak bargaining position may be tempted to acquiesce.

One safeguard for the author or director is that the waiver must be by written instrument signed by the person giving up the right by s 87(2), and the waiver may be conditional or unconditional and may be expressed to be subject to revocation (s 87(3)(b)). The waiver may relate to a specific work or specified description of works or to works generally and may cover existing and future works. For example, an author of plays (dramatic works) may agree in writing to waive his moral rights in:

- 1 a play entitled *A Long Summer*, or
- 2 all the existing plays in a series written for television, or
- 3 all his works up to 31 December 2008, or
- 4 a play, yet to be written, entitled *A Short Winter*.

If the author or director intends to waive all or some of his moral rights in an assignment or licence agreement, he would be wise to insist on a term to the effect that the waiver is to be revoked if the assignor or licensee commits a breach of the agreement.

If the author has created the work under a commission in circumstances such that the person commissioning the work has beneficial ownership of it or an implied licence to make use of it, this does not automatically mean that the author has waived his moral rights in respect of the work.<sup>66</sup> This confirms that economic rights and moral rights are independent of each other. A waiver of moral rights cannot be implied simply on the basis that a licence in respect of the economic rights has been implied. This reinforces the need to deal with both economic rights and moral rights in respect of commissioned works.

There is a presumption that a waiver, made in favour of the owner or prospective owner of the copyright in the works affected by the waiver, extends to licensees and successors in title unless a contrary intention is expressed. The author or director will be bound, in respect of the waiver, as regards third parties who subsequently acquire economic rights in the work or works involved unless there is a term in the agreement to the contrary effect. If the formalities required for a waiver are imperfect – for example, a written unsigned waiver coupled with an oral agreement – the general law of contract or estoppel may be available. An example would be where the author was the first owner of the copyright and he assigned the copyright to another person who was acting in good faith, and the author orally assured the other that he would waive his moral right to be identified as author. If the author later attempted to exercise that right, he might be estopped by the courts on the basis of his conduct.<sup>67</sup> Generally, a waiver by a joint author or joint director does not affect the moral rights of the others.<sup>68</sup>

## REMEDIES

An infringement of a moral right is actionable as a breach of statutory duty owed to the person entitled to that right.<sup>69</sup> Mandatory injunctions will be relevant, such as where a judge orders that the author's name is added to copies of the work remaining in stock and to future copies, or that an architect's name is placed in a prominent place at or near to the entrance of a building. Prohibitory injunctions may be granted to prevent subsequent infringement of the integrity right and a *quia timet* injunction may be appropriate to prevent the planned publication of, or broadcast of, a derogatory treatment of the work.

Normally damages are available for a breach of a statutory duty, and in the case of infringement of moral rights this would appear to include damages for non-economic loss for the simple fact that moral rights are not economic in nature. Whether aggravated or exemplary damages are available is difficult to say with any certainty. Additional damages were granted in *Williams v Settle*,<sup>70</sup> a case involving the publication of a photograph showing a man who had been murdered. Although the effect of the case was to give a remedy for compromising privacy in relation to a photograph, it was done on the basis of an infringement of the economic rights of copyright for which the remedy of additional damages was clearly available, and this remains so under s 97(2).<sup>71</sup> However, the case of *Moore v News of the World Ltd*<sup>72</sup> indicates that damages for false attribution may be slight, certainly in comparison with those available for defamation.

It appears that the guidelines for assessing damages under reg 3 of the Intellectual Property (Enforcement, etc.) Regulations 2006<sup>73</sup> also apply to damages for breaches of moral rights. Under reg 3, where the defendant knew or had reason to believe that he engaged in infringing activity, the damages awarded shall be appropriate to the actual prejudice to the claimant and all appropriate aspects are to be taken into account including the moral prejudice suffered by the claimant.

The final point on remedies is that a court has a discretion, in a case involving the alleged infringement of the right to object to derogatory treatment, conditionally to

<sup>66</sup> *Pasterfield v Denham* [1999] FSR 168.

<sup>67</sup> For examples of the doctrine of promissory estoppel in contract law, see *Central London Property Trust Ltd v High Trees House Ltd* [1947] KB 130 and, in the context of a non-exclusive licence in respect of a patented process, *Tool Metal Manufacturing Co Ltd v Tungsten Electric Co Ltd* [1955] 2 All ER 657.

<sup>68</sup> Copyright, Designs and Patents Act 1988 s 88(3) and (6).

<sup>69</sup> Copyright, Designs and Patents Act 1988 s 103(1).

<sup>70</sup> [1960] 1 WLR 1072.

<sup>71</sup> In principle, exemplary damages are more appropriate for infringement of moral rights than they are in respect of infringements of economic rights.

<sup>72</sup> [1972] 1 QB 441.

<sup>73</sup> SI 2006/1028. The Regulations implemented, *inter alia*, Directive 2004/48/EC of the European Parliament and of the Council of 29 April 2004 on the enforcement of intellectual property rights, OJ L 157, 30.04.2004, p 45.

74 Copyright, Designs and Patents Act 1988 s 103(2).

grant a prohibitory injunction requiring that a disclaimer is made dissociating the author or director from the treatment of the work, the disclaimer being in such terms and in such manner as may be approved by the court.<sup>74</sup> This could be appropriate where the copyright owner intends to broadcast a much-abbreviated version of a play and the author objects, complaining that this is a mutilation of his original work. This power is unlikely to be used if the nature of the version subjected to the treatment complained of is such that, despite the disclaimer, the reputation of the author is at some risk, however small. One reason is that the long-term effectiveness of even a strong disclaimer may be doubtful, and that in years to come the author may be causally linked to the work as so treated.

## MORAL RIGHTS AND REVIVED COPYRIGHT

75 SI 1995/3297, implementing the Council Directive 93/98/EEC harmonising the term of copyright and certain related rights, OJ L 290, 29.10.1993, p 9. This Directive was repealed and effectively replaced by a codified version, Directive 2006/116/EC of the European Parliament and of the Council of 12 December 2006 on the term of copyright and certain related rights, OJ L 372, 27.12.2006, p 12. For the main effects of the Directive, see Chapter 3 (p 72).

In some cases, copyright which had expired in the UK was revived as a result of the Duration of Copyright and Rights in Performances Regulations 1995.<sup>75</sup> The 1995 Regulations contain some provisions as to moral rights in respect of works in which copyright has been revived. The duration of the moral rights to be identified, to object to a derogatory treatment and in respect to privacy of certain photographs and films is declared by the Copyright, Designs and Patents Act 1988 s 86(1) to subsist as long as copyright subsists in the work. In terms of duration, therefore, those moral rights are affected in the same way as copyright and will be revived along with the copyright. However, by reg 22(6), the provisions of paras 23 and 24 in Sch 1 to the Act still apply (no moral rights in respect of which the author died or the film or photograph was made before commencement, 1 August 1989).

By reg 22(3), moral rights are exercisable by the author (or director of a film) in relation to revived copyright, or, if the author or director died before commencement, by his personal representatives. Any waiver or assertion subsisting immediately before the expiry of copyright will continue to have effect during the revived period.

Any damages recovered by personal representatives for infringement after the author's/director's death devolve as part of his estate as if the right of action had subsisted and been vested in him immediately before his death: reg 22(5).

## ARTISTS' RESALE RIGHT

Article 14<sup>ter</sup> of the Berne Copyright Convention provides that 'the author, or after his death the persons or institutions authorised by national legislation, shall, with respect to original works of art and original manuscripts of writers and composers, enjoy the inalienable right to an interest in any sale of the work subsequent to the first transfer by the author of the work'. This is expressed in the Convention as being an option for convention countries and the detail of the remuneration and method of collection are left to national legislation.

Some Member States did not have an artists' resale right and this could result in discrimination on the ground of nationality where laws in Member States that provided such a right could deny reciprocal protection to nationals of other Member States contrary to Article 12 of the EC Treaty.<sup>76</sup> A Directive was adopted to prevent such discrimination, which could prejudice the single market, to provide for an artists' resale right throughout the Community.<sup>77</sup> The Directive was implemented in the UK by the Artists' Resale Right Regulations 2006.<sup>78</sup>

Under Article 1 of the Directive, the author of an original work of art is given an inalienable right, which cannot be waived even in advance, to receive a royalty payable

76 Joined Cases C-92/92 and C-326/92 *Collins v Imtrat Handelsgesellschaft mbH* [1993] ECR I-5145.

77 Directive 2001/84/EC of the European Parliament and of the Council of 27 September 2001 on the resale right for the benefit of the author of an original work of art, OJ L 272, 13.10.2001, p 32.

78 SI 2006/346.

by the seller on the price obtained from any subsequent sale of the work except where the sale is a private sale, being a sale between two private individuals. Sales by professional sellers such as in salerooms, by auctioneers, in art galleries and, in general, by any dealer in works of art are subject to the royalty. Member States may disapply the right where the seller has obtained the work directly from the author less than three years before the resale where the sale price does not exceed €10,000. The UK took advantage of this derogation. The seller is liable to pay except where Member States provide that the buyer, art market professional or art dealer is liable alone or jointly with the seller. Reg 13 of the Artists' Resale Right Regulations 2006 imposes liability jointly and severally on the seller and 'relevant person', being the seller's agent or, where there is no seller's agent, the buyer's agent or, where there are no such agents, the buyer.

The type of works covered are, by Article 2, original works of art, being works of graphic art or 'plastic art'<sup>79</sup> such as pictures, collages, paintings, drawings, engravings, prints, lithographs, sculptures, tapestries, ceramics, glassware and photographs which have been made by the artist himself. Also included are 'copies considered to be original works of art'. Limited edition copies are also included. These are where the artist has made or authorised the production of the copies: for example, limited edition prints made of an original painting. Normally, such copies will be numbered, signed or otherwise duly authorised by the artist. The right does not cover original manuscripts of writers or composers. Article 3 of the Directive allows Member States to set the minimum threshold before the right is triggered, providing it is not more than €3,000. The UK chose to set the threshold at €1,000.

The scale of royalty payment is set out in Article 4 on a sliding scale as in Table 5.1. Note that the royalty is calculated based on the portion of the sale within the relevant price range. Therefore, if the sale price is €250,000, the royalty is:

$$4\% \text{ of } €50,000 + 3\% \text{ of } €150,000 + 1\% \text{ of } €50,000 = €7,000$$

For a sale price of up to €50,000, the royalty will be 4 per cent (Member States were allowed to set this figure at 5 per cent instead if they wish – the UK uses 4 per cent). Where the sale price is over €500,000, the rate is 0.25 per cent subject to a cap of €12,500 maximum royalty.<sup>80</sup> The royalty is net of tax and is payable to the author or, if deceased, to his estate. Royalties may be collectively managed and appropriate arrangements may be made where the author is a national of another Member State. Nationals of third countries have a right to receive the royalty on resale if their country affords reciprocal rights to nationals of EC Member States.

By Article 8, the right to receive the resale royalty endures as long as copyright – that is, life plus 70 years. However, under Article 8(3), Member States which did not previously have a resale right may, by way of derogation, not apply the right for the benefit of the author's estate after his death not later than 1 January 2010.<sup>81</sup> Exceptionally, a further two years may be added on the grounds that it is necessary to enable economic operators in the Member State to adapt gradually to the system while maintaining their economic viability before they apply the right for the benefit of those entitled after the author's death. Where this derogation is taken advantage of, there are provisions

<sup>79</sup> The term is not defined in the Directive apart from the examples given.

<sup>80</sup> This would be achieved when the sale price is €2,000,000.

<sup>81</sup> In relation to rights after the death of the artist. This derogation was implemented in the UK.

**Table 5.1** Resale royalty rates

<i>Sale price</i>	<i>Royalty per cent</i>
Up to €50,000	4.00
€50,000.01 up to €200,000	3.00
€200,000.01 up to €350,000	1.00
€350,000.01 up to €500,000	0.50
Exceeding €500,000	0.25

for notification, giving reasons and opinions from the Commission. On 18 December 2008, the Secretary of State for Innovation, Universities and Skills wrote to the European Commission setting out that the UK intended to extend its use of the derogation for a further two years because of the current economic climate.

Authors and persons entitled after the death of the author have a right, up to three years from the sale in question, to obtain information necessary to secure payment of the resale royalty from art market professionals (this also appears to apply to collecting societies where Member States provide that payments shall be made to a collecting society): Article 9. The type of information involved might be confirmation of the sale price and the identity and whereabouts of the person liable to pay.

The European Commission will review the scheme and the threshold and royalty rates not later than 1 January 2009 and every four years thereafter. At the time of writing no review has been published.

As the Directive contained a number of options and derogations, some particular features of the UK's implementing regulations, the Artist's Resale Right Regulations 2006, are described below.

- For the royalty to be payable the resale must be such that the buyer, seller, or either's agent, if there is one, is acting in the course of business of dealing in works of art: reg 12. So a private sale from one individual to another where neither is operating in the course of business of dealing in works of art is not a resale to which the right applies. However, a sale may be a resale even though the first transfer of ownership of the work of art was not made for consideration: for example, where it passed by testamentary disposition or by way of a gift (although this is not expressly mentioned). There is also a lower threshold of €1,000. If the sale price is less than this figure, the resale right does not apply.
- The threshold of €10,000 applies where the resale takes place by a seller who previously acquired the work of art directly from the author less than three years before the sale.
- The UK has chosen not to use the 5 per cent option where the sale price is under €50,000.
- The right may be enforced by nationals of the EEA and other countries providing reciprocal rights or a 'qualifying body' (generally, a body having charitable status) or, where the right has vested by operation of law, a personal representative or receiver in bankruptcy.
- There is a rebuttable presumption that the name of an artist on a work of art is that of the author: reg 6.
- A work is of joint authorship where two or more authors created the work (there is no requirement that their contributions are not distinct) and joint authors hold the right as owners in common in equal shares: reg 5. Where they choose to hold in unequal shares this must be by written agreement signed by or on behalf of each party.
- The right is not assignable and any charge on it is void. It may be held by a trustee for the benefit of the author (for example, where the author lacks capacity to hold personal property). However, the right may pass by way of testamentary disposition or the rules on intestacy and the person so taking the right may then transfer it to any natural person or to a qualifying body. A qualifying body may subsequently transmit it to another qualifying body. The right may transfer *bona vacantia*.<sup>82</sup>
- Any purported waiver of the right is void as is any agreement to share or repay resale royalties.
- The seller is liable to pay jointly and severally with the relevant person who is the agent of the seller or, where there is no such agent, the agent of the buyer or, where

<sup>82</sup> That is, pass to the Crown or the Duchies of Cornwall or Lancaster in a situation where there is no person apparently entitled to it: for example, where the author dies intestate without issue.

neither the seller nor the buyer have an agent, the buyer. Liability to pay arises on completion of the sale although it may be withheld pending evidence of entitlement. Where two or more persons are entitled to the royalty as owners in common, the obligation to pay is satisfied by paying the full amount to one of them.

- The right may only be managed through a collecting society to whom holders of resale rights transfer their right of management: reg 14. If holders of resale rights do not transfer the management of their right, the collecting society is mandated to manage it without prejudice to the holder's rights. Where there is more than one collecting society, the holder can choose to which to transfer his right of management. For the purposes of the resale right, a collecting society is one which has, as its main object, or one of its main objects, the administration of rights on behalf of more than one artist. A fixed fee or percentage of the royalty may be charged by the collecting society.
- A request for information should be satisfied within 90 days of the receipt of the request; failure to furnish the information (such as the royalty payable and, where not payable by the person to whom the request was sent, the name and address of the person liable to pay) can be dealt with by application for a court order. Any information provided will be treated as confidential.
- The resale right will apply to sales made on or after commencement of the statutory instrument even if the work was created before.
- Where the author died before commencement, the right cannot be exercised in respect of sales before 1 January 2010. There are provisions for deemed transfer of the right where the author dies before commencement.

The resale right is likely to be difficult to administer, at least initially. If this is so, it may be that the management of the right by collecting societies might be quite expensive and result in authors paying a significant proportion of their royalty to the collecting society. Not surprisingly, auction houses in the UK are concerned about the impact the new right will have on them. The introduction of the right in the UK might lead to an increase in online 'auction sales' using, for example, eBay, which is careful to ensure it is not treated as an agent or as an auction house as such. Auctions of valuable works of art could be diverted from London to New York or Geneva, as neither of these jurisdictions presently has such a right.<sup>83</sup> However, the ceiling on the maximum payable of €12,500 (which will apply to sale prices of €2m and over) is quite modest. Nonetheless, collectors buying works of art directly from artists might need to reflect on the fact that they may have to pay the royalty on any future sale, for example, through an auction house. Even a modest price of £1,000 will attract a royalty of £40, and this is on top of the auctioneer's commission.

<sup>83</sup> There is an artists' resale right in California, however.

# RIGHTS, INFRINGEMENT AND REMEDIES

## RIGHTS OF COPYRIGHT OWNERS

The Copyright, Designs and Patents Act 1988 marks out the rights of copyright owners by reference to certain acts which only the owner can do or authorise; he is given exclusive rights in respect of these acts. These are the *acts restricted by copyright*. Other activities, which are mainly of a commercial nature, such as dealing with infringing copies of a work, if they are done without the licence of the copyright owner, are described as secondary infringements. Anyone who does one of the acts restricted by the copyright, including the secondary infringements, without the permission or licence of the copyright owner, infringes copyright, unless a defence or any of the exceptions known collectively as the *permitted acts* apply.<sup>1</sup> Strictly speaking, the permitted acts, although so described in the 1988 Act, are better described as exceptions to copyright infringement. This is because any activity in relation to a copyright work which is neither a restricted act nor a secondary infringement of copyright can be performed by anyone without the permission of the copyright owner. For example, lending a book to a friend does not infringe copyright; neither does making an artistic work from a literary work.<sup>2</sup> Therefore, unless there is an issue of infringement, the relevance of the permitted acts does not enter into the equation. If there is no infringement, there is no need to rely on the permitted acts to excuse the particular activity concerned.

Copyright may be infringed vicariously, where a person without the permission of the copyright owner *authorises* another to do a restricted act.<sup>3</sup> Simply playing a major role in selecting material to include in the infringing work is not, by itself, sufficient to make a person liable by authorising infringement.<sup>4</sup> ‘Authorise’ means to grant or purport to grant to a third person the right to do the act complained of.<sup>5</sup>

As well as giving an aggrieved copyright owner civil remedies for copyright infringement, the Act also provides for criminal offences which generally, though not exactly, mirror some of the secondary infringements of copyright. Offences will normally be dealt with by the Crown Prosecution Service on reference from the police or by Trading Standards Officers. Of course, private prosecutions may be possible, and there are signs that more will be brought, for example, by collecting societies as in *Thames & Hudson Ltd v Design and Artists Copyright Society Ltd*.<sup>6</sup>

## THE ACTS RESTRICTED BY COPYRIGHT

The copyright owner has, under the Copyright, Designs and Patents Act 1988 s 16(1), the exclusive right:

- to copy the work;
- to issue copies of the work to the public;

<sup>1</sup> See Chapter 7.

<sup>2</sup> *Brigid Foley Ltd v Elliott* [1982] RPC 433. It was held that a literary work comprising the words and numerals in a knitting guide was not infringed by the making of garments by the defendant using the knitting guide. But see the section on making an adaptation later in this chapter (pp 171–2).

<sup>3</sup> Copyright, Designs and Patents Act 1988 s 16(2). Statutory references in this chapter are, unless otherwise stated, to the Copyright, Designs and Patents Act 1988.

<sup>4</sup> *Keays v Dempster* [1994] FSR 554.

<sup>5</sup> *CBS Songs Ltd v Amstrad Consumer Electronics plc* [1988] AC 1013.

<sup>6</sup> [1995] FSR 153. In England and Wales, the Director of Public Prosecutions has certain powers in respect of private prosecutions, including a power to intervene and undertake the conduct of proceedings even if the purpose is to offer no evidence and thereby abort those proceedings: Prosecution of Offenders Act 1985 s 6.

- to rent or lend the work to the public;
- to perform, show or play the work in public;
- to communicate the work to the public;
- to make an adaptation of the work or do any of the above in relation to an adaptation.

The copyright subsisting in a work is infringed by any person who does or authorises another to do any of these acts restricted by copyright without the licence (that is, without permission, contractual or otherwise) of the copyright owner.<sup>7</sup> Copyright may be infringed if the act complained of relates to only a part of the work for, under s 16(3), the doing of an act restricted by copyright includes doing it to any *substantial* part of the work. The question of substantiality has been taken by the courts as referring to the quality of what has been taken rather than its quantity in proportion to the whole. In *Ladbroke (Football) Ltd v William Hill (Football) Ltd*, Lord Pearce said:

Whether a part is substantial must be decided by its quality rather than its quantity. The reproduction of a part which by itself has no originality will not normally be a substantial part of the copyright and therefore will not be protected.<sup>8</sup>

However, to speak of the reproduction of a part which has no originality *per se* is misleading. Many works have nothing original, if viewed in terms of their constituent parts, yet it is clear that compilations of commonplace material may still be works of copyright; the rationale is that sufficient skill, effort or judgment has been expended in making the compilation.<sup>9</sup> Therefore, taking part of a compilation of unoriginal material may still be deemed to be a substantial part of the entire work if the part of the compilation reflects a substantial application of skill or judgment on the part of the person creating the compilation.

In *Ladbroke v William Hill*, Lord Evershed alluded to the substantial significance of the part taken and suggested that the question of substantial reproduction is incapable of precise definition but is, rather, a matter of fact and degree.<sup>10</sup> On this basis it is clear that copying a small portion of a work can infringe copyright if that part is important in relation to the whole work. For example, in *Hawkes & Sons (London) Ltd v Paramount Film Service Ltd*,<sup>11</sup> a newsreel contained 28 bars comprising the main melody of the well-known march ‘Colonel Bogey’. This portion lasted only 20 seconds, whereas the full march lasted for some four minutes. Nevertheless, the newsreel was held to infringe the copyright in the march. It was said that what is substantial is a matter of fact, and value as well as quantity must be considered. The importance of the part taken to the copyright work as a whole is often taken to be the litmus test for substantiality and judges so often refer to quality in the context of the relative importance of the part taken. For example, in *PCR Ltd v Dow Jones Telerate Ltd*,<sup>12</sup> Lloyd J said that quality was at least as important as quantity and that the defendant had infringed copyright because he had taken the most important and interesting parts of the claimant’s reports on the world status of cocoa crops.

Taken to its extreme limits, this emphasis on importance as a way of determining substantiality can deflect consideration from the only valid approach to the question, at least in terms of the original works of copyright. Such works, if they are to merit copyright protection, must be the result of skill or judgment.<sup>13</sup> Substantiality must, therefore, be measured in relation to the skill or judgment expended to create the work of copyright. In other words, has there been an appropriation of sufficient of that skill or judgment to amount to an unwarranted intrusion into the property right which is the copyright which will be regarded as unlawful? This question must require consideration in terms of both quality and quantity. There is a danger that, by concentrating on quality, the courts may fall into the trap of looking at the merit of the copyright work. Fortunately, the courts appear to have resisted that temptation.<sup>14</sup>

<sup>7</sup> Copyright, Designs and Patents Act 1988 s 16(2).

<sup>8</sup> [1964] 1 WLR 273 at 293.

<sup>9</sup> For example, see *Macmillan & Co Ltd v K & J Cooper* (1923) 93 LJPC 113.

<sup>10</sup> The Copyright Act 1956 contained a restricted act of reproducing a work in a material form, broadly equivalent to copying a work under the Copyright, Designs and Patents Act 1988. Indeed, for literary, dramatic, musical and artistic works, copying is defined in s 17(2) as reproducing the work in any material form.

<sup>11</sup> [1934] Ch 593.

<sup>12</sup> [1998] FSR 170.

<sup>13</sup> Some judges still use the term ‘labour’ as an alternative. This is now questionable.

<sup>14</sup> See, for example, *Ludlow Music Inc v Robbie Williams* [2001] FSR 271.

Another difficulty with deciding substantiality by looking at the importance of the part taken is that it may reflect very little skill or judgment. For example, in *Cantor Fitzgerald International v Tradition (UK) Ltd*,<sup>15</sup> an argument that a small part of a computer program could be a substantial part of the program if the program would not work without it or if it was used frequently during the execution of the program was firmly rejected. Taken to its extreme, this argument would mean that a single command or even a single piece of punctuation could be a substantial part of a computer program on the basis that the program would not function correctly without it.

15 [2000] RPC 95.

The emphasis on skill or judgment in testing for substantiality was made in *Newspaper Licensing Agency Ltd v Marks & Spencer plc*<sup>16</sup> in which the Agency, which took assignments of the copyright in the typographical arrangement of published editions of newspapers, complained of the defendant making further copies of articles and items from newspapers which had been supplied legitimately by a press cutting service. The House of Lords reiterated that substantiality is more a question of quality rather than quantity but it is a matter of looking at what copyright was designed to protect. In the case of typographical arrangements of published editions, it is the 'skill and labour' used in creating the overall design of the edition. It is in that context that substantiality should be decided rather than looking at the proportion of the part taken to the whole of the edition.

16 [2003] 1 AC 551.

Where the defendant has added to the parts of the copyright work he has taken, in evaluating substantiality, the court should focus on the parts of the claimant's work reproduced by the defendant rather than concentrating on the defendant's entire work. In *Spectravest Inc v Aperknit Ltd*,<sup>17</sup> Millett J said (at 170):

17 [1988] FSR 161.

In considering whether a substantial part of the claimant's work has been reproduced by the defendant, attention must primarily be directed to the part which is said to have been reproduced, and not to those parts which have not.

The test seems to be, therefore, to identify the parts taken by the defendant, to then isolate them from the remainder of the defendant's work and then, finally, to consider whether those parts represent a substantial part of the claimant's work.<sup>18</sup> That comparison will be based on a test that is, according to Millett J, qualitative and not, or not merely, quantitative.

18 This approach was confirmed by Lord Millett in *Designers Guild Ltd v Russell Williams (Textiles) Ltd* [2001] FSR 113 at para 38.

An alternative and, at first sight, very attractive test is to consider whether the act complained of is likely to harm the copyright owner's economic interests. In *Cooper v Stephens*,<sup>19</sup> it was said that copying even a small portion of an author's work would be restrained if used in a work which competed with the author's work or with a work that the author might publish in the future. However, such a test, taken literally, would be very difficult to apply and could mean that copying even a small unimportant part could infringe copyright, which plainly is not the result intended by the Act. Basically, if the part taken is significantly important, regardless of actual size, it is very likely to be detrimental to the copyright owner's interests. Another point is that, in a number of situations, the copyright owner may not wish to exploit the work commercially. For example, the work may have been produced for personal pleasure or interest, such as in the case of a private diary.

19 [1895] 1 Ch 567.

Another issue is the extent to which the author of the copyright work has based his work on the common stock of information or ideas that everyone is free to use. Certain 'design features' may be commonplace in a particular profession or business and it would seem to be wrong to consider such aspects of the copyright work in looking at infringement. In *Jones v London Borough of Tower Hamlets*,<sup>20</sup> an architect created architectural drawings including floor plans for a proposed housing development. The defendant's housing development had similarities compared to that designed by the claimant. It was held that, in considering whether a substantial part of the plans had

20 [2001] RPC 407.

been copied, account should be taken of the common stock of architectural ideas that anyone was free to use. Infringement was found only in respect of a plan for a bathroom in which the claimant had developed a unique design solution. Although this recognition of the ‘public domain’ in copyright law is attractive, it should be remembered that copyright can subsist in a compilation of commonplace material. If there is skill or judgment in selecting, arranging or combining elements from the public domain, copyright should subsist and infringement should be found if a substantial part of that skill or judgment has been ‘borrowed’ by the defendant. However, taking an underlying idea is unlikely to infringe, particularly if it is fairly abstract or simple. This is because abstract and simple ideas are unlikely to be deemed to be a substantial part of the copyright work.<sup>21</sup>

The Copyright, Designs and Patents Act 1988 explicitly provides for indirect infringement of copyright under s 16(3), regardless of whether any intervening acts themselves infringe copyright.<sup>22</sup> This is particularly valuable in the context of articles made to drawings, so that a person making copies of the articles will indirectly infringe the copyright subsisting in the drawings. In *LB (Plastics) Ltd v Swish Products Ltd*,<sup>23</sup> the claimant manufactured a plastic ‘knock-down’ drawer system of furniture, known as ‘Sheer Glide’, in accordance with working drawings. The House of Lords upheld the claimant’s claim that the copyright subsisting in the drawings had been infringed by the defendant who had copied the drawers. There was some evidence that the defendant had directly used the drawings in question, but the trial judge, Whitford J, based his judgment on indirect copying of the drawings by the defendant’s use of the claimant’s drawer as a model for making similar drawers, and this approach was affirmed in the House of Lords.

Recalling that copyright subsists in drawings as artistic works irrespective of artistic quality, even functional articles sometimes were afforded protection through their working drawings under the Copyright Act 1956. However, the 1988 Act, while expressly reinforcing the notion of indirect infringement of copyright, reduces its scope because of an overlap with design law.<sup>24</sup> The Copyright, Designs and Patents Act 1988 s 51(1) states that the copyright in a design document (or model recording or embodying a design) is not infringed by making articles to the design unless the design is, itself, an artistic work. A design document is, under s 263, any record of a design, whether in the form of a drawing, a written description, a photograph, data stored in a computer or otherwise.<sup>25</sup>

The individual infringing acts will now be considered in more detail. Sections 17–21 of the 1988 Act expand upon the meaning and scope of the acts restricted by copyright. Infringements of the rights associated with the restricted acts were described in the 1956 Act as ‘primary infringements’. They are no longer so called, although the 1988 Act still classifies some activities as secondary infringements and some writers still refer to primary infringements to distinguish them from the secondary infringements. It should be noted at this stage that the scope of the acts restricted by copyright varies according to the nature of the work involved.

## Copying

Making a copy of a work is the act which most people think of in terms of copyright infringement: for example, making a photocopy of pages in a book or a recording of music. But ‘copying’ has a technical meaning which varies depending on the nature of the work in question. Section 17 of the 1988 Act comprehensively deals with the concept of copying and, generally, copying is a restricted act for all categories of copyright works.<sup>26</sup> When considering the definitions of copying, it is essential to recognise that many of the words and terms used are themselves widely defined in the Act.

<sup>21</sup> *Designers Guild Ltd v Russell Williams (Textiles) Ltd* [2001] FSR 113 at para 26 per Lord Hoffmann. But see Chapter 8 (p 256) in relation to non-literal copying.

<sup>22</sup> An example may be where the intervening act is committed outside the jurisdiction of the UK.

<sup>23</sup> [1979] RPC 551.

<sup>24</sup> Designs created before 1 August 1989 were still protected through their drawings as a result of the transitional provisions until, at the latest, 1 August 1999. In *Valeo Vision SA v Flexible Lamps Ltd* [1995] RPC 205 it was held that there was an infringement of the copyright subsisting in drawings of vehicle lamp clusters.

<sup>25</sup> This definition applies to the Copyright, Designs and Patents Act 1988 Part III which concerns the design right subsisting in original designs.

<sup>26</sup> Copyright, Designs and Patents Act 1988 s 17(1).

27 Under the 1956 Act, this was held to extend to the display of a work on a television monitor: *Bookmakers' Afternoon Greyhound Services Ltd v Wilf Gilbert (Staffordshire) Ltd* [1994] FSR 723.

28 [1995] FSR 77.

29 However, it was held that the registered design in the claimant's toaster had been infringed.

30 [1900] 1 Ch 122.

31 Copyright, Designs and Patents Act 1988 s 17(4).

32 [1981] RPC 283.

33 [2008] FSR 789.

34 Copyright, Designs and Patents Act 1988 s 4(2) states that a photograph cannot be a part of a film.

Section 17(2) defines copying, in relation to a literary, dramatic, musical or artistic work, as reproducing the work in any material form.<sup>27</sup> This does not extend to taking the idea underlying the work. For example, in *Breville Europe plc v Thorn EMI Domestic Appliances Ltd*,<sup>28</sup> it was held that taking the idea of using triangular dividers in a sandwich toaster would not infringe the copyright in the claimant's drawings. The defendant's toaster was created independently and no use was made of the skill, labour and effort expended in creating the drawings.<sup>29</sup>

Reproducing in a material form is stated by s 17(2) to include storing the work in any medium by electronic means. Thus, recording a copy of any of the 'original' works of copyright in modern computer storage media falls within the meaning of copying, acknowledging the fact that a work can be stored electronically in an intangible form and copied without the need for paper. 'Electronic' has an extremely wide meaning going well beyond an engineer's understanding of the word. Under s 178, 'electronic' means actuated by electric, magnetic, electro-magnetic, electro-chemical or electro-mechanical energy. However, s 17(2) is phrased in terms of storing the work *in* any medium rather than storing the work *in* or *on* any medium, although this is unlikely to cause problems in practice because the phrase 'reproducing the work in any material form' should be wide enough in its own right to include any form of storage, given the spirit of the Act.

The inclusion of electronic storage as a means of reproducing a work in a material form means that a musical work recorded on magnetic tape, CD or DVD will infringe unless the recording was made with the copyright owner's licence. In the past, there have been problems with some forms of storing works. For example, in *Boosey v Whight*<sup>30</sup> it was held that the manufacture of a paper roll with perforations in it so that it could be used to play music on a mechanical organ did not infringe the copyright in the music so represented. However, this case was decided under the Copyright Act 1842 s 15, which was in terms of the author's right being to prevent copying sheet music regarded as a book. That is, it envisaged copying sheet music as sheet music. It is submitted that making a 'piano roll' will infringe under the current legislation. By analogy, storing a work on punched card or paper is no different to storing the work as magnetic pulses on a disc. Music generated from a recording on punched tape is reproduced in a material form.

As regards films or broadcasts, copying includes making a photograph of the whole or any substantial part of any image forming part of the film or broadcast.<sup>31</sup> Therefore, taking a single photograph of a substantial part of one frame of a film, or a photograph capturing a substantial part of a momentary display on a television, infringes copyright. In *Spelling-Goldberg Productions Inc v BPC Publishing Ltd*,<sup>32</sup> the claimant made a 'Starsky and Hutch' film and the defendant copied and published a photograph of one frame of the film. It was held that the making of a copy of a single frame of the film was an infringement of the copyright in the film because a single frame was a part of the film within the meaning of the Copyright Act 1956 s 13(10). The same applies to a photograph taken of a screen display of an internet webpage. However, in *Football Association Premier League v QC Leisure (No 2)*,<sup>33</sup> it was held that a frame of a film, not being a photograph, is not a substantial part of a film. Kitchin J said (at para 224) that '... four frames [of a film] do not constitute a substantial part of the film works. They occupy a fraction of a second and there is no suggestion that they have any inherent value than as part of the whole.' The frames in question were held not to be photographs because they were still part of a film.

The generous definition of 'photograph' contained in the 1988 Act should be considered in relation to this form of copying and the fact that photographs and films are mutually exclusive.<sup>34</sup> It should also be noted that s 17(4) states that copying includes making a photograph, and that making a film of a film or a film of a broadcast will fall

within the act of copying. It is possible in such examples that photographs of some kind may be used in an intermediate process, in which case there will be an infringement in respect of the intermediate copies as, under s 17(6), copying includes the making of copies which are transient or incidental to some other use of the work.<sup>35</sup> A limitation on the act of copying a film is that it appears that it requires that the recording of the film must itself have been copied.<sup>36</sup> It is not enough if a film is ‘copied’ by making a new film based on the first, for example, by using the same ideas and techniques.

Copying in relation to a typographical arrangement of a published edition simply means making a facsimile copy of the arrangement.<sup>37</sup> Section 178 offers some assistance with the meaning of ‘facsimile copy’, stating that it includes a copy which is reduced or enlarged in scale. It is reasonable to assume that the word ‘facsimile’ has its ordinary dictionary meaning, an exact copy or duplicate of something, especially in relation to printed material. This is obviously intended to catch copying by the use of photocopying technology. It will also apply to copies transmitted using ‘fax’ machines (facsimile transmission machines) and conversion into digital form for storage on computer media so that it may be reproduced faithfully in the future. Not only can the copyright in the typographical arrangement of published editions be infringed by digital storage or the use of a fax machine, but also copyright in other works, especially the original works, may be infringed. For example, a person faxing a drawing will infringe the copyright in the drawing because he has made a copy of it, unless, of course, he has permission from the copyright owner to do this. Facsimile transmission is carried out by the sender’s machine scanning a document and converting the data contained in the document into digital codes which are then transmitted over the telecommunications system to the receiving machine, which converts the digital data back to an image. The person receiving a facsimile will obtain a faithful copy of the original although there may be some degradation in print quality.<sup>38</sup>

Care should be taken in framing a claim for copyright infringement in specifying the work alleged to be copied where this is not the entire work in question. For example, where only certain aspects of a work have been taken, it may be tempting to try to identify those aspects collectively as being a work of copyright separate from and independent of the entire work. This is unacceptable and, in such cases, it is far better to base the claim on the entire work and allege that the parts taken represent a substantial part of the whole work.<sup>39</sup> In *Coffey v Warner/Chappel Music Ltd*,<sup>40</sup> the claimant was a songwriter who claimed that a song written by Madonna and another person infringed the copyright in her earlier song. The claim was based not on the song as an entirety but on ‘. . . an original musical work comprising the combination of vocal expression, pitch contour and syncopation of or around the words “does it really matter”’. The defendants applied to strike out the claim on the basis that it stood no reasonable prospect of success. Blackburne J allowed the application and said (at para 10):

What the copyright work is in any given case is not governed by what the claimant alleging copyright infringement chooses to say that it is. Rather, it is a matter for objective determination by the court.

The claimant had, in effect, embarked upon a cherry-picking exercise, formulating the claim in such a way that the copyright work alleged to have been infringed had been tailored to suit the parts or elements alleged to have been copied.

In an earlier case, Laddie J spoke of the dangers of excision in relation to the formulation of a claim. In *IPC Media Ltd v Highbury-Leisure Publishing Ltd*,<sup>41</sup> he said (at para 11):

Furthermore, it may be necessary to be alert to the possibility of being misled by what may be called similarity by excision. Michelangelo said of one of his sculptures ‘I saw the angel in the marble and I carved until I set him free’. In copyright cases, chipping away and ignoring all the

<sup>35</sup> A transient copy is one that exists for a short duration and is deleted automatically, such as copies made on computer during the acts of browsing or caching: *Case 5/08 Infopaq International A/S v Danske Dagblades Forening*, Court of Justice, 19 July 2009. Printing part of a work on paper during a data capture process which depends on a person to later delete it is not a transient copy.

<sup>36</sup> *Norowzian v Arks Ltd (No 1)* [1998] FSR 394, at first instance.

<sup>37</sup> Copyright, Designs and Patents Act 1988 s 17(5).

<sup>38</sup> Similar considerations apply to documents transmitted electronically as e-mail attachments or downloaded from internet sites.

<sup>39</sup> However, such an approach might be possible where the entire work is itself made up of individual works of copyright, such as in the case of a compilation or database.

<sup>40</sup> [2005] FSR 747.

<sup>41</sup> [2005] FSR 434.

bits which are undoubtedly not copied may result in the creation of an illusion of copying in what is left. This is a particular risk during a trial. Inevitably the court will be invited by the claimant to concentrate on the respects in which his work and the alleged infringements are similar. But with sufficient concentration one may lose sight of the differences. They may be just as important in deciding whether copying has taken place. The effect can be explained by an analogy. Two individuals drop similar small quantities of sand on the floor. If one removes all the grains of sand which are not in equivalent positions, all you are left with are those which are in equivalent positions. If you look at those remaining grains it is possible to say that similar patterns of distribution exist. It is even possible to say that these similarities are surprising. But the similarities and the surprise they elicit are an artefact created by the very process of ignoring all the other grains. This type of artefact created by close attention only to the areas of similarity is a risk in any court proceedings.

Despite such sentiments, it is not always an easy matter to determine precisely what the copyright work relied on should be. What about a book? Is it the whole book or each individual chapter? In the case of a film, we have seen that capturing a single frame can infringe. That being so, it might be legitimate to claim copyright in the single frame alleged to have been taken. On the other hand, typographical arrangement copyright infringement looks to the whole of the published edition rather than single articles within it.<sup>42</sup> It is suggested that the test for identifying the work in which copyright is claimed to subsist requires consideration of the following factors:

- 1 Does the 'work' claimed stand on its own as a discrete item which represents skill and judgment in its own right sufficient for copyright subsistence?
- 2 An important factor is the type of work. One might expect that, in terms of musical works, it is a single piece of music though, perhaps, in relation to classical music it may be a single movement in, for example, a symphony or concerto.
- 3 A further factor is the form of infringement and the statutory tests – for example, infringement by copying for films and broadcasts covers making a photograph of a single image, as mentioned above.
- 4 In the case of non-literal copying, where the allegation is based on the skill and judgment expended in creating and developing the detailed scheme underlying the finished work (this could be described as the ephemeral version of the work prior to its tangible expression) it is important to identify it with some precision. In this respect, reliance on preliminary design materials, sketches and the like might help.<sup>43</sup>

Table 6.1 summarises the scope of the restricted act of copying as it applies to different categories of works. It should be recalled that, generally, copying is a restricted act for all types of work.<sup>44</sup>

### Copying – an accumulation of insubstantial taking

A defendant may have taken small parts of a work over a period of time where each small part would not, by itself, be regarded as substantial. In *Cate v Devon & Exeter Constitutional Newspaper Co*,<sup>45</sup> the defendant extracted and reproduced small amounts of material from the claimant's newspaper on a regular and systematic basis. The defendant's purpose was to include the material in his own newspaper. It was held that he had infringed copyright, even though the amount taken each week was small.

The logical problem of holding that the regular taking of insubstantial parts being, eventually, considered to be a substantial taking was highlighted by Laddie J in *Electronic Techniques (Anglia) Ltd v Critchley Components Ltd*<sup>46</sup> where he said, criticising *Cate v Devon* (at 409):

At its most extreme it could be put this way: a competitor who, because he only took insubstantial amounts, did not infringe yesterday, does not infringe today and will not infringe tomorrow, will be held to infringe if he continues not infringing for long enough.

<sup>42</sup> *Newspaper Licensing Agency Ltd v Marks & Spencer plc* [2003] 1 AC 551.

<sup>43</sup> *Electronic Techniques (Anglia) Ltd v Critchley Components Ltd* [1997] FSR 401.

<sup>44</sup> There is a limitation in respect to film sound tracks in that references to copying a sound recording does not include copying the film sound track to accompany the film: s 5B(3)(c). There are equivalent limitations for sound recordings in respect of the acts of playing, communication, copying, issuing, rental or lending: s 5B(3).

<sup>45</sup> As copyright can be infringed indirectly, it may be that such things, if expressed in tangible form, may be deemed to be works of copyright in their own right and infringed by the defendant.

<sup>46</sup> (1889) 40 Ch D 500.

**Table 6.1** The restricted act of copying

<i>Work</i>	<i>Restricted act</i>
Literary, dramatic, musical, artistic: s 17(2)	Reproducing the work in any material form, including storing the work in any medium by electronic means
Artistic (additional): s 17(3)	Includes making a copy in 3-D of a 2-D work and making a copy in 2-D of a 3-D work: for example, making a painting of a sculpture or constructing a building from an architectural drawing
Film, TV broadcast: s 17(4)	Includes making a photograph of the whole or any substantial part
Typographical arrangement of a published edition: s 17(5)	Making a facsimile copy of the arrangement
All works: s 17(6)	Includes the making of copies which are transient or are incidental to some other use of the work

*Note:* 'Photograph' has the meaning given in s 4(2); 'material form' is not defined but should include invisible means of storage such as on CDs, DVDs, magnetic tape, computer disks and integrated circuits.

Laddie J's sentiment holds true where each insubstantial taking is in relation to a different work of copyright, as in *Cate v Devon*. However, in respect of a single work, that approach is flawed. What if, over a period of time, the defendant takes the entire work? A better way to look at an accumulation of insubstantial takings is to consider them as part of a continuing act, as was recognised as a possible explanation by Laddie J in *Electronic Techniques*. That case involved applications for summary judgment only and Laddie J did not come to any firm conclusion on the matter, although he did suggest it might be timely if *Cate v Devon* was reconsidered. A line of authorities, including this case, appears to take the defendant's behaviour into account when determining substantiality. That is, a deliberate and repeated taking of small parts might be held to infringe. However, the language of s 16 of the Act does not suggest any such thing.

The status of an accumulation of the repeated taking of insubstantial parts of a film was considered in *Football Association Premier League v QC Leisure (No 2)*.<sup>47</sup> Some of the defendants were publicans who had obtained unauthorised decoders and showed football matches which had been transmitted in encrypted form by the claimants which owned the relevant copyrights. The decoders only stored a few frames of the films of the football matches at a time. They were held for a very short period of time before being destroyed as the next few frames were processed. Although s 17(6) of the Act extends the meaning of copies to transient copies, Kitchen J considered that, to infringe, a substantial part must be embodied in the transient copy and this did not apply to a series of transient copies which are stored one after the other. He approved of the judgment of Emmett J in *Australian Video Retailers Association Ltd v Warner Home Video Pty Ltd*,<sup>48</sup> a decision under the Australian Copyright Act of 1968 where he said (at 65):

<sup>47</sup> [2008] FSR 789.

<sup>48</sup> (2001) 53 IPR 242.

It is clear that neither the whole nor any substantial part of a cinematograph film or motion picture is ever embodied in the RAM of a DVD player or personal computer at any given time. The mere fact that, over a period of time, being the time taken to play the motion picture or cinematograph film, tiny parts of it are sequentially stored in the RAM of the DVD player or personal computer does not mean that the motion picture or cinematograph film is embodied in such a device.

There are differences between Australian and UK copyright law but Kitchen J thought this also represented the position under the UK Act. If correct, it has significant implications for the use of computer technology to view and/or listen to films, music and audio-visual works, recordings and copyright works and the control of copyright. It is

<sup>49</sup> However, Kitchen J referred a number of questions to the Court of Justice including questions about the scope of the reproduction right.

<sup>50</sup> Directive 2001/29/EC of the European Parliament and of the Council of 22 May 2001 on the harmonisation of certain aspects of copyright and related rights in the information society, OJ L 167, 22.06.2001, p 10.

<sup>51</sup> Directive 96/9/EC of the European Parliament and of the Council of 11 March 1996 on the legal protection of databases, OJ L 77, 27.03.1996, p 20.

<sup>52</sup> [2008] ECR I-0000; [2009] 1 CMLR 213.

<sup>53</sup> An example of this form of infringement is discussed in Chapter 8 in relation to the database right.

<sup>54</sup> Copyright, Designs and Patents Act 1988 s 17(3).

<sup>55</sup> Sometimes referred to as 'reverse analysis', especially in terms of computer programs. See Chapter 8.

<sup>56</sup> [1986] 2 WLR 400.

respectfully submitted that Kitchen J is wrong on this point.<sup>49</sup> Although *Cate v Devon* has been subject to criticism, it concerned repeated insubstantial takings from each of a series of publications, not from the same publication. *Football Association v QC Leisure* concerned the repeated and systematic taking of insubstantial parts of the same work amounting to the entire work. Criticism of Kitchen J's view is based on three factors:

- Article 9(1) of the Berne Convention for the Protection of Literary and Artistic Works states that 'Authors of literary and artistic works protected by this Convention shall have the exclusive right of authorizing the reproduction of these works, *in any manner and form*' (emphasis added). This is very wide and contradicts the very technical approach taken by Kitchen J and, in Australia, Emmet J.
- Article 2 of the Directive on copyright and related rights in the information society<sup>50</sup> also provides for a reproduction right which is the exclusive right to authorise or prohibit *direct or indirect, temporary or permanent reproduction by any means and in any form, in whole or in part* for, *inter alia*, the producers of the first fixations of films, in respect of the original and copies of their films (again, emphasis added).
- The database Directive<sup>51</sup> contemplates infringement of the database right by the repeated and systematic extraction and/or reutilisation of insubstantial parts of the contents of a database protected by the database right. In Case C-304/07 *Directmedia Publishing GmbH v Albert-Ludwigs-Universität Freiburg*<sup>52</sup> the Court of Justice confirmed that, to infringe, the accumulation of individual extractions must be equivalent to a substantial taking. Although not explicit in relation to copyright in databases, it would be unlikely that it was intended that the protection afforded to a copyright database was less extensive in this respect than that available through the database right. An accumulation of repeated acts should infringe copyright if equivalent to a substantial part.

Copyright is concerned, *inter alia*, with securing the economic rights of owners and, consequently, the test for substantiality should be related in some way to the issue of whether the claimant's economic rights have been prejudiced by the defendant's acts. Perhaps more than anything else, that explains why quality has been important in determining substantiality. The systematic taking of small parts can, in some circumstances, injure the claimant's economic advantage in owning the copyright in the work. A computer database is an example. Indeed, reg 16(2) of the Copyright and Rights in Databases Regulations 1997 specifically accepts that the repeated and systematic extraction or re-utilisation of insubstantial parts of a database may amount to the extraction or re-utilisation of a substantial part.<sup>53</sup>

### Copying – dimensional shift

In respect of artistic works, copying is extended to include the making of a copy of a two-dimensional work in three dimensions and vice versa.<sup>54</sup> Thus, making a three-dimensional model from a drawing is copying, as is making a drawing of a three-dimensional sculpture. As mentioned earlier, copyright can be infringed indirectly and this means that the process of 'reverse engineering',<sup>55</sup> copying an article by inspecting it, taking measurements and examining details of its construction and using the knowledge thus gained to make the copies, may infringe the copyright in any original drawings of the article concerned. In *British Leyland Motor Corp Ltd v Armstrong Patents Co Ltd*,<sup>56</sup> the claimant designed and made motor cars and also made spare parts for its cars. The claimant also granted licences to other companies permitting them to copy and sell spare parts for the claimant's cars in return for a royalty payment. The defendant refused to obtain a licence and manufactured replacement exhaust pipes for the claimant's cars by copying the shape and dimensions of the exhaust pipes made by the

claimant for the Morris Marina car. The defendant simply bought a Morris Marina and removed the exhaust pipe and examined it to see how it was made, what its contours and dimensions were. The claimant claimed that the defendant's exhaust pipes infringed the copyright in the original drawings of the exhaust pipes. It was held that the defendant had infringed the copyright subsisting in the drawings of the exhaust pipes by the process of reverse engineering, but the claimant would not be allowed to assert its rights under copyright law. It was said, in the House of Lords, that car owners have an inherent right to repair their cars in the most economical way possible, and for that purpose it was essential that there was a free market in spare parts. This required the adoption of the non-derogation from grant principle in *Browne v Flower*<sup>57</sup> in which Parker J said (at 225):

the implications usually explained by the maxim that no one can derogate from his own grant do not stop short with easements.

Lord Templeman thought this principle could apply to a car just as easily as to land. He said:

The principle applied to a motor car manufactured in accordance with engineering drawings and sold with components which are bound to fail during the life of the car prohibits the copyright owner from exercising his copyright powers in such a way as to prevent the car from functioning unless the owner of the car buys replacement parts from the copyright owner or his licensee.<sup>58</sup>

Therefore, although there had been a technical infringement of copyright, the claimant was not allowed to derogate from or interfere with the car owner's right to a free market in spare parts. This case is important because it shows how the courts are prepared to control actual or potential abuse of a copyright, but changes to copyright and design law have removed the possibility of infringing artistic copyright by copying an article made to a drawing if the article is subject to a design right and is not itself an artistic work.<sup>59</sup> However, this did not apply until 1 August 1999 to design documents and models which were created before 1 August 1989.<sup>60</sup> Nevertheless, it is clear that the *British Leyland* defence survived the 1988 Act, both in respect of the transitional provisions<sup>61</sup> and in relation to infringements occurring thereafter: see *Flogates Ltd v Refco Ltd*.<sup>62</sup> But it does not appear that the defence will be developed further and, on the contrary, the modern trend seems to be to keep it on a tight leash.

The *British Leyland* principle, that the owner of a complex article which will require replacement parts over its lifetime cannot be deprived of a free market in such parts, can be criticised in that it interferes with and curtails a clear statutory right, particularly as the 1988 Act contains numerous permitted acts, excusing what would otherwise infringe. The principle should be applied, therefore, only sparingly. The Judicial Committee of the Privy Council, indicating that the principle should not be extended in its application and scope, went so far as to direct some criticism at it, saying that it was constitutionally questionable for a judicially declared head of public policy to override or qualify an express statutory provision. In *Canon Kabushiki Kaisha v Green Cartridge Co (Hong Kong) Ltd*,<sup>63</sup> which concerned the spare parts market ('aftermarket') for cartridges for laser printers and photocopiers, it was held that the principle could not be regarded as being founded upon any principle of the law of contract or property, but was based on an overriding public policy. Lord Hoffmann, delivering the judgment of their Lordships, said (at 826):

Their Lordships consider that once one departs from the case in which the unfairness to the customer and the anti-competitive nature of the monopoly is as plain and obvious as it appeared to the House in *British Leyland*, the jurisprudential and economic basis for the doctrine becomes extremely fragile.

<sup>57</sup> [1911] 1 Ch 219.

<sup>58</sup> [1986] 2 WLR 400 at 430.

<sup>59</sup> See Chapter 18 on the design right.

<sup>60</sup> See the transitional provisions in the Copyright, Designs and Patents Act 1988 Sch 1, para 19(1). An example of the working of these provisions is the case of *Valeo Vision SA v Flexible Lamps Ltd* [1995] RPC 205.

<sup>61</sup> See Copyright, Designs and Patents Act 1988 Sch 1, para 19(9).

<sup>62</sup> [1996] FSR 935.

<sup>63</sup> [1997] FSR 817, an appeal from the Court of Appeal in Hong Kong.

A number of factors in the *Canon* case distinguish it from *British Leyland*. The toner cartridges would normally be replaced when nothing was wrong with the printer or copier that could be described as requiring repair. It would have simply run out of toner. The cost is more like a normal running cost, such as servicing a car, rather than a repair. The aftermarket itself was different in that the cost of new cartridges was a much higher proportion of the cost of the printer or copier compared with the cost of an exhaust pipe in relation to the cost of a car. Cartridges are replaced much more frequently than exhaust pipes. Basically, the decision is a triumph for market forces. Lord Hoffmann accepted that customers are likely to calculate the lifetime cost of a printer or copier, taking into account the cost of cartridges, in comparing different manufacturers' products. If customers do this, it cannot be said that controlling the aftermarket is anti-competitive<sup>64</sup> and a manufacturer who charges too much for his cartridges is likely to sell fewer machines.

The Judicial Committee of the Privy Council in *Canon* also directed some criticism at a line of authorities including *Dorling v Honnor Marine Ltd*<sup>65</sup> and *LB (Plastics) Ltd v Swish Products Ltd*<sup>66</sup> on copying by reproducing an article represented in a drawing or other graphic work. The Committee had been invited to depart from these authorities and decide that copying a functional three-dimensional object is not an indirect reproduction of the drawings. Lord Hoffmann said that such cases did not sufficiently distinguish between the reproduction of an artistic work (whether in two-dimensional form or three-dimensional form) and the use of the information contained in an artistic work, such as a drawing together with additional text as the instructions for making a three-dimensional object. Although plainly derived from the drawing, the object does not reproduce the drawing. For example, in *Burke and Margot Burke Ltd v Spicers Dress Designs*<sup>67</sup> it was held that a frock made by the defendant (whether spread out or held up to view) was not a reproduction of the claimant's sketch of the frock. However, as the sketch showed the frock worn by a woman, Clauson J said that there might have been an infringement had the complaint been that the frock had been worn by a woman posing as in the sketch.<sup>68</sup> The Committee declined to depart from previous law, partly because the law had changed and, in *British Leyland*, the House of Lords decided after much consideration to follow the earlier cases.

Under previous law, there was a defence under the Copyright Act 1956 s 9(8) to the effect that there was no infringement of artistic copyright by a 'dimensional shift' if the alleged infringing object would not appear to persons, not being experts in relation to such objects, to be a reproduction of the artistic work. In other words, for an infringement, the object copied in a different number of dimensions from an artistic work would have to look like the artistic work in the eyes of the layman. He should have been able to recognise the artistic work in the copy. This test became known as the 'lay recognition test', and was neither easy nor fair to apply as many drawings, particularly engineering drawings, do not appear to be much like the objects they represent in the eyes of a layman.<sup>69</sup> For example, in *Merlet v Mothercare plc*<sup>70</sup> the defendant had copied a baby's rain cape designed by the claimant. On the question of infringement of the drawings made by the claimant for the cape, it was held in the Court of Appeal that the s 9(8) defence succeeded because the layman would not recognise the claimant's drawing by comparison with garments made by the defendant. The drawing was in the form of a cutting plan and it was not permissible for the purposes of applying the 'lay recognition test' to unstitch the defendant's garment.<sup>71</sup> However, that test, which limited the strength of protection in relation to three-dimensional articles offered primarily through the medium of drawings, was abandoned by the 1988 Act. The test itself was criticised by senior judges and clearly had failed to achieve its purpose of limiting the scope of copyright. It also provided some indefensible anomalies. For example, simple objects produced from simple drawings would be protected, while complex equipment

<sup>64</sup> There was no evidence of any abuse of the monopoly position.

<sup>65</sup> [1965] Ch 1.

<sup>66</sup> [1979] RPC 551.

<sup>67</sup> [1936] Ch 400.

<sup>68</sup> On the basis of *Bradbury, Agnew & Co v Day* (1916) 32 TLR 349, where a *tableau vivant* infringed the copyright in cartoons from *Punch* magazine.

<sup>69</sup> In *Merchant Adventurers v M Grew & Co Ltd* [1971] 2 All ER 657, it was held by Graham J that the test was whether the drawings were such that, after inspecting them, a man of reasonable and average intelligence would be able to understand them to such a degree that he could visualise in his mind what a three-dimensional object made from the drawings would look like.

<sup>70</sup> [1986] RPC 115.

<sup>71</sup> The claimant also failed to show that the finished garment was a work of artistic craftsmanship.

produced from engineering drawings, difficult for the layman to comprehend, would fail to attract such protection because the notional non-expert would fail to recognise one from the other. Judges had even shown an inclination to fail to take account of differences in scale when applying the test. For example, in *Guildford Kapwood Ltd v Embস্য Fabrics Ltd*,<sup>72</sup> although the defendant's fabric, greatly magnified, did resemble part of the claimant's lapping diagram, Walton J, regarding himself as the notional non-expert, did not think that the fabric appeared to be a reproduction of the lapping diagram.

The 'lay recognition test' emphasised visual appearance. In *Interlego AG v Tyco Industries Inc*<sup>73</sup> it was said that what mattered in relation to artistic works, especially drawings, is that which is visually significant. Indeed, in *Anacon Corp Ltd v Environmental Research Technology Ltd*<sup>74</sup> Jacob J held that making a printed circuit board from a circuit diagram did not infringe the artistic copyright in the diagram because the finished board did not look anything like the diagram.<sup>75</sup> However, Jacob J failed to note that, under s 17(2), 'reproducing in a material form' includes storage by electronic means which cannot, by its nature, have any relevant visual significance. It is submitted that, in respect of that part of the judgment, Jacob J was unduly influenced by the 1956 Act.

'Dimensional shift' copying applies only to artistic works. For example, in *Bradbury, Agnew & Co v Day*,<sup>76</sup> the claimant owned the copyright in a cartoon in *Punch* magazine. Some actors who enacted the cartoon on stage by dressing up and posing to look like the cartoon were held to have infringed the copyright in the cartoon. The actors formed a three-dimensional representation of a two-dimensional artistic work, that is, the cartoon. However, in *Brigid Foley Ltd v Elliott*,<sup>77</sup> it was held that converting a two-dimensional literary work, a knitting pattern, into a three-dimensional object, a woolly jumper, was not an infringement of the copyright subsisting in the knitting pattern, and was not a reproduction in a material form for the purposes of copyright.

## Copying and alteration

Significant difficulties may arise in infringement actions if the defendant has produced his work based on a previous original work but has made considerable alterations. Two approaches are possible: first, it is a question of whether the second work is sufficiently the result of skill and labour so that it becomes itself an original work of copyright; second, the distinction between idea and expression may be relevant to this situation. A person might freely admit that he has used another work during the preparation of his own, but may claim that he has not copied the expression of the first work and that his use of it was simply to determine the unprotected ideas contained therein. In other words, he has not made use of the copyrightable elements of the work, but only of the underlying ideas. *Glyn v Weston Feature Film Co*<sup>78</sup> provides an example of the former approach, that is whether the second person has used sufficient skill and effort to produce a new and distinct original work of copyright. In that case, a film entitled *Pimple's Three Weeks (without the Option)*, which was a send-up of a risqué play, *Three Weeks*, was held not to infringe copyright in the play because very little of the original remained. It could not be said that the film was a reproduction of a substantial part of the incidents described in the play.

It may be the case that the defendant's work contains a number of similar elements but nothing identical to parts of the claimant's work. In *Designers Guild Ltd v Russell Williams (Textiles) Ltd*,<sup>79</sup> the claimant owned the copyright in a fabric design comprising horizontal stripes of irregular thickness with flowers scattered around the design in a manner described as somewhat impressionistic. The defendant created a similar design based on stripes and scattered flowers but, whilst it looked very similar, there were many detailed differences. In such cases, the test for infringement is in two stages,

<sup>72</sup> [1983] FSR 567.

<sup>73</sup> [1989] 1 AC 217.

<sup>74</sup> [1994] FSR 659.

<sup>75</sup> Jacob J went on to hold that the circuit diagram was also a literary work because it was intended to be read and, by making a 'net list', a list of components and their interconnections, the defendant had infringed the literary copyright.

<sup>76</sup> (1916) 32 TLR 349.

<sup>77</sup> [1982] RPC 433. However, in *Autospin (Oil Seals) Ltd v Beehive Spinning* [1995] RPC 683, Laddie J suggested that, in principle, there was no reason why a literary work could not be infringed by making a three-dimensional reproduction of it, in spite of authority to the contrary.

<sup>78</sup> [1916] 1 Ch 261.

<sup>79</sup> [2001] FSR 113.

the first being a comparison of the two works, looking at both the similarities and the differences so as to assess whether the second work has been copied from the first. If there is no copying, then there can be no infringement. Once the court is satisfied that there has been copying, the question is then whether the copied parts represent a substantial part of the claimant's work. The focus should then be on similarities rather than differences and whether the parts now accepted to have been copied represent a substantial part of the claimant's work. Where what has been copied is not identical but similar, the court has to decide whether the defendant's work incorporates a substantial part of the skill and labour involved in the creation of the claimant's work and where, as in the present case, there were a number of similarities, the cumulative effect of those similarities ought to be considered.<sup>80</sup>

<sup>80</sup> The House of Lords reinstated the finding of the judge at first instance that the defendant had copied a substantial part of the claimant's design. There was some criticism of the Court of Appeal decision and the way it had revisited the judge's conclusion as to substantiality, absent an error in principle by the trial judge.

<sup>81</sup> At para 25. As regards idea/expression, Lord Hoffmann noted that the TRIPs Agreement states that copyright protection extends to expression and not to ideas.

<sup>82</sup> As in *Kenrick v Lawrence* (1890) 25 QBD 99. The basic idea of a fabric design comprising stripes and flowers would be an unprotectable idea. The defendant's design in *Designers Guild* went further than this though.

<sup>83</sup> [1980] RPC 213, an interim hearing.

If all that can be shown to be taken is a basic idea, bearing in mind the oft-used phrase 'copyright protects expression not idea', it is unlikely that infringement will be found. In *Designers Guild*, Lord Hoffmann<sup>81</sup> distinguished two categories of ideas. Some he said were not protected because they had no connection with the literary, dramatic, musical or artistic nature of the work, such as a drawing disclosing an inventive concept. Other ideas, whilst they may be ideas of a literary, dramatic, musical or artistic nature, were not protected if they lacked originality or were so commonplace that they could not be a substantial part of the work, such as the idea underlying a drawing showing illiterate persons how to vote.<sup>82</sup>

Judges are generally unsympathetic to a person who has created a work by making use of a prior work of copyright. It seems wrong in principle that someone can take a short cut to producing his own work by relying on the skill and effort of others. If there is evidence that the defendant has used the claimant's work in some way, judges appear to be reluctant to find for the defendant, regardless of fine distinctions between idea and expression. For example, in *Elanco Products Ltd v Mandops (Agrochemical Specialists) Ltd*,<sup>83</sup> the defendant started to sell a herbicide invented by the claimant and called 'Trifluralin' after the expiry of the patent. The defendant sold the herbicide together with a leaflet and label which were partly identical to those used by the claimant. After the claimant complained, the defendant produced a second leaflet using a different format and language. The claimant still complained, and eventually the defendant started using a third version based on the second one, claiming that the information in the claimant's leaflet was in the public domain and that, although copyright protected the expression of language, it did not protect the content of it. As a matter of fact, it was found that most of the information in the defendant's leaflet could be traced to the public domain. Nevertheless, it was held that there was an arguable case of infringement of copyright, although the claimant was refused an injunction. Plainly, if the defendant had simply taken the trouble to locate and use information in the public domain in the preparation of its leaflet there would have been no infringement. But the fact that the defendant had used the claimant's original leaflet did not help its case and Buckley LJ said that, concerning infringement, the question was whether, by using the claimant's literature, the defendant was making use of the skill and judgment of the claimant.

Of course, if there is a substantial amount of language copying and the same characters and incidents are used, then the fact that the two works may have other differences will not help the defendant's cause. In *Ravenscroft v Herbert*,<sup>84</sup> the defendant wrote a work of fiction but had used the claimant's non-fictional work as a source to provide credibility in relation to historical facts. The claimant's work concerned a spear reputed to have been the one used to wound Christ at the crucifixion, and to have been a source of inspiration for Nazi Germany. The spear is part of the Hapsburg treasure in the Hofburg Museum in Vienna. The defendant's claim to have used only historical facts from the claimant's work was rejected on the basis of substantial copying, particularly in terms of language copying, incidents and in the interpretation of events. Altogether,

<sup>84</sup> [1980] RPC 193.

it was held that the infringing part represented only 4 per cent of the defendant's work, but, in assessing damages, that 4 per cent was rated as being worth 15 per cent in terms of its value to the whole of the work.

Copyright owners have occasionally complained about parodies of their works, that is satirical or comic send-ups. A parody usually involves a fair amount of alteration, but the link with the first work is quite blatant since the effect of the parody might largely be lost otherwise. Of particular importance, since the passing of the 1988 Act, in addition to the question of whether a substantial part of the first work has been copied, is that infringement of the author's moral rights may also be a significant issue.<sup>85</sup> In *Joy Music Ltd v Sunday Pictorial Newspapers (1920) Ltd*,<sup>86</sup> a song entitled 'Rock-a-Billy' was parodied in another song which used the words 'Rock-a-Philip, Rock' in the chorus but, otherwise, the words of the two songs were different. It was held that the parody did not infringe the copyright in the original song. However, in *Schweppes Ltd v Wellingtons Ltd*,<sup>87</sup> the defendant produced a label for a bottle which was very much like the claimant's famous bottle labels, except instead of using the word 'Schweppes' the defendant used the word 'Schlurppes'. Even though it was accepted that the defendant's label was a parody, it was held that the claimant's copyright had been infringed. There is no reason why parodies should be treated any differently to other works which are derived from or based on prior works, although they do seem to have been looked on more kindly by the judiciary. Any difference in treatment runs counter to the Act and confirmation that the same principles apply to parodies as to other copies of works was indicated in *Williamson Music Ltd v Pearson Partnership Ltd*,<sup>88</sup> a case involving a parody of the Rodgers and Hammerstein song 'There is Nothin' Like a Dame' for the purpose of advertising a bus company on television. It was held that the test for determining whether a parody amounted to an infringement of the parodied work was whether the parody made substantial use of the expression of the original work. In other words, to find an infringement by the restricted act of copying, the second work must contain a reproduction in a material form of a qualitatively substantial part of the first work. To this must be added the fact that the 'author' of the second work must have made use of the first work in creating the second, that is there must be some causal connection between the works.<sup>89</sup>

In some countries, making a parody of a work does not infringe copyright. For example, in France, once a work has been disclosed, the author may not prohibit the making of a parody, pastiche or caricature of his work providing it is within the rules of the genre.<sup>90</sup> It is proposed to allow this also in the UK. The proposal initially came from the *Gowers Review of Intellectual Property*<sup>91</sup> and a detailed discussion together with suggested proposals are contained in a consultation document.<sup>92</sup>

## Copying – causal connection

The infringing work must be derived from the claimant's work. There must be a causal connection as independent creation of a similar work does not infringe. In an action for copyright infringement by copying, proof of copying and the question as to which party bears the burden of proof are frequently important issues. Of course, the claimant has the burden of proving that the defendant has copied but, having discharged that burden, it can fairly be said that the burden of proof then shifts to the defendant in that he then is given the opportunity to rebut the inference of copying by offering an alternative explanation of the similarities between his work and the claimant's work.<sup>93</sup> In *Francis, Day & Hunter Ltd v Bron*,<sup>94</sup> it was alleged that the defendant had reproduced the first eight bars of the song 'In a little Spanish Town' in his song 'Why?' ('I'll never let you go/Why? Because I love you'). The case is also of interest because it deals with the

<sup>85</sup> Especially the right to object to derogatory treatment and the right not to have a work falsely attributed to the author. Cases on parodies prior to the 1988 Act must be viewed in the light of subsequent strengthening of the author's moral rights.

<sup>86</sup> [1920] 2 QB 60.

<sup>87</sup> [1984] FSR 210.

<sup>88</sup> [1987] FSR 97.

<sup>89</sup> For the 'original' works of copyright, the act of copying is defined as reproducing the work in any material form. 'Reproduction' implies some creative relationship between the works, a causal link.

<sup>90</sup> Art L 122-5 of Law No 92-957 of 1 July, 1992 on the Intellectual Property Code, as amended.

<sup>91</sup> Commissioned by the then Chancellor of the Exchequer, Gordon Brown, HMSO 2006 available at [http://www.hm-treasury.gov.uk/media/6/E/pbr06\\_gowers\\_report\\_755.pdf](http://www.hm-treasury.gov.uk/media/6/E/pbr06_gowers_report_755.pdf).

<sup>92</sup> UK Intellectual Property Office, *Taking Forward the Gowers Review of Intellectual Property: Proposed Changes to Copyright Exceptions*, 2007, pp 31ff, available at <http://www.ipo.gov.uk/consult-copyrightexceptions.pdf>.

<sup>93</sup> *Creative Technology Ltd v Aztech Systems Pte Ltd* [1997] FSR 491, Court of Appeal, Singapore.

<sup>94</sup> [1963] Ch 587.

possibility of subconsciously infringing copyright. Willmer LJ accepted counsel's submission that in order to constitute reproduction:

- 1 there must be a sufficient objective similarity between the two works (an objective issue, that is, would the 'reasonable man' consider the two works sufficiently similar), and
- 2 there must also be some causal connection between the two works (a subjective question but not to be presumed as a matter of law merely upon proof of access).

In his judgment, Diplock LJ described the issue of proof of copying in very clear terms:

The degree of objective similarity is, of course, not merely important, indeed essential, in proving the first element in infringement, namely, that the defendant's work can properly be described as a reproduction or adaptation of the copyright work; it is also very cogent material from which to draw the inference that the defendant has in fact copied, whether consciously or unconsciously, the copyright work. But it is not the only material. Even complete identity of the two works may not be conclusive evidence of copying, for it may be proved that it was impossible for the author of the alleged infringing work to have had access to the copyright work. And, once you have eliminated the impossible (namely, copying), that which remains (namely, coincidence) however improbable is the truth; I quote inaccurately, but not unconsciously, from Sherlock Holmes.<sup>95</sup>

<sup>95</sup> [1963] Ch 587 at 627.

As indicated by Diplock LJ, factual similarity coupled with proof of access does not raise an irrefutable presumption of copying; at most it raises a *prima facie* case for the defendant to answer. Thus, in such cases, the burden of proof will shift to the defendant who will then have to satisfy the court, on a balance of probabilities, that he had not copied the first work and that any similarity is the result of coincidence, not copying. This approach was later accepted by the House of Lords in *LB (Plastics) Ltd v Swish Products Ltd*<sup>96</sup> where it was held, *inter alia*, that a striking similarity combined with proof of access raised a *prima facie* case of infringement that the defendant had to answer.

<sup>96</sup> [1979] RPC 551.

The nature of the similarities is also important. If the information copied is incorrect in its original form, this may be excellent proof of copying. For example, in *Billhöfer Maschinenfabrik GmbH v T H Dixon & Co Ltd*,<sup>97</sup> Hoffmann J said (at 123):

<sup>97</sup> [1990] FSR 105.

... it is the resemblances in *inessentials*, the small, redundant, even mistaken elements of the copyright work, which carry the greatest weight. This is because they are least likely to have been the result of independent design. (original emphasis)

This is a very good reason why authors may deliberately include redundant material, mistakes or dummy entries in their work. It will be very hard for a defendant to give a plausible reason for their existence in his work. Unless admitted by the defendant, the claimant has to prove his work is a work in which copyright subsists, that he is the owner of that copyright (or the exclusive licensee), that the defendant has copied from it and that he has taken a substantial part. The inclusion of a few 'deliberate mistakes' in his work will remove one of those barriers. As subsistence and ownership will not frequently be in issue, the outcome will be determined solely on the issue of whether a substantial part has been taken unless the defendant is relying on a particular defence to infringement. *IBCO Computers Ltd v Barclays Mercantile Highland Finance Ltd*<sup>98</sup> clearly demonstrates the effectiveness of errors and redundant material in proving copying. It also shows that the amount of such material does not have to be great to convince a judge that copying has occurred.

<sup>98</sup> [1994] FSR 275. This case is discussed in Chapter 8.

The presence of similarities may raise a presumption of copying, especially where the person creating the alleged offending work has had access to the first work. But differences may also be important in that they may lead to an inference that the second work has been independently created.<sup>99</sup> As Lewison J put it in respect of an inference of copying in *Ultra Marketing (UK) Ltd v Universal Components Ltd*<sup>100</sup> (at para 14):

<sup>99</sup> Per Lord Millett in *Designers Guild Ltd v Russell Williams (Textiles) Ltd* [2001] FSR 113.

<sup>100</sup> [2004] EWHC 468 (Ch).

However, like most evidential presumptions, this evidential presumption is merely a tool. At the end of a trial, once all the evidence has been heard, it is a question of fact whether a drawing has been produced as a result of copying a copyright work or as a result of independent design.

Of the complaint in that case that the defendant had copied the claimant's drawing of extruded aluminium frames incorporating pips, the judge said that what it came down to was not that the drawing had been copied but that the defendant had copied the idea.

The possibility of subconscious copying has already been mentioned above. Musical works are particularly susceptible to this form of copying, where the author of the second piece of music has heard the first music some time before, but has no contemporary conscious recollection of the first piece of music and certainly does not deliberately set out to copy it. This is what was alleged in the *Francis, Day & Hunter Ltd v Bron* case, where it was accepted by the judge at first instance that there had been no conscious copying. Nevertheless, the first eight bars of each song were virtually identical (these are reproduced in the law report). Even so, there must be some causal link between the works – truly independent and coincidental similarity is not copyright infringement. In the Court of Appeal, Willmer LJ said (at 614):

... in order to establish liability [on the grounds of subconscious copying] it must be shown that the composer of the offending work was in fact familiar with the work alleged to have been copied.

At first sight, the notion of subconscious copying might appear bizarre, but it appears to be accepted also in the law of breach of confidence.<sup>101</sup> Of course, if the first song has been popular, it will be difficult for a defendant to claim that he has not heard of it and has truly written his work independently in ignorance of it. In terms of music and, to some extent also, computer programs, the author should consider taking deliberate measures to make sure that his work does not appear to be similar to an existing work.

The ultimate safeguard against allegations of subconscious copying is for the author to cut himself off from the rest of society, or that part of society knowledgeable about the particular class of works, and to create his work in a 'clean-room' environment. But, surely, copyright law does not and should not intend that authors should have to take such extreme measures. Nevertheless, proof that the defendant has taken such measures will help his argument that he has not infringed copyright. In *Plix Products Ltd v Frank M Winstone (Merchants)*<sup>102</sup> the fact that the defendant had instructed his designer to work alone without talking to others involved in the design of kiwifruit packs and without referring to existing packs showed that there had been no direct copying. However, it was held that the defendant had copied through the medium of the New Zealand Kiwifruit Authority's specification for kiwifruit packs which was, in turn, derived from the claimant's design. This New Zealand case is also notable in that it accepts that copyright can be infringed by copying from a verbal description, as is, in principle, also a possibility under UK law as s 16(3)(b) admits infringement by indirect copying.<sup>103</sup>

Giving a design brief to a person engaged to create a work of copyright can itself infringe. It is all a matter of design freedom. For example, if a person after seeing a copyright work instructs another person to create something similar, the first might be guilty of infringement if the design freedom is so limited that the creation of a work substantially similar is almost inevitable. The same might apply if one person instructs another to create a number of works which are somewhat like the copyright work if the first, having knowledge of the copyright work, then selects the one most like the copyright work for commercial exploitation.<sup>104</sup>

Certainly, the restricted act of copying should be construed as being concerned with an intentional act. The remedies available for copyright infringement give some support to this approach because, by s 97(1), the claimant is not entitled to damages if it is

<sup>101</sup> *Seager v Copydex Ltd* [1967] RPC 349.

<sup>102</sup> [1986] FSR 63.

<sup>103</sup> As, at the time, only the claimant's design had been accepted by the Authority (giving the claimant a monopoly in kiwifruit packs), the application of the idea/expression merger doctrine from US copyright law, discussed in Chapter 8, would probably deny copyright protection to the claimant's packs. However, the law of designs and passing off could also apply to this type of situation.

<sup>104</sup> *Stoddard International plc v William Lomas Carpets Ltd* [2001] FSR 848.

shown that the defendant did not know and had no reason to believe that copyright subsisted in the first work at the time of the infringement. The difficulty is that, if the burden of proof shifts to the defendant, he may find it almost impossible to show that he did not base his work on a previous work which has become very well known, even though it was popular several years earlier.

105 [1998] FSR 803.

If there is evidence that the defendant has copied in the past, this may be admissible as similar fact evidence. In *Designers Guild Ltd v Russell Williams (Textiles) Ltd*,<sup>105</sup> at first instance, the claimant had evidence that a third party had made an allegation of copying of one of its designs by the defendant. Evidence of copying in one case only is not, *per se*, evidence of copying in another case but may be relevant when judging the truth of any denial of copying or other explanation of the reason for an objective similarity by the defendant. In *Stoddard International plc v William Lomas Carpets Ltd*,<sup>106</sup> the claimant relied, *inter alia*, on similar fact evidence relating to two other instances of producing carpet designs which were lookalikes of carpet designs owned by a third party. However, this evidence was very unsatisfactory and failed to indicate a propensity to copy or produce lookalikes.

106 [2001] FSR 848.

Where a defendant has been convicted of a criminal offence in relation to the same acts that give rise to a claim for copyright infringement, s 11(2)(a) of the Civil Evidence Act 1968 states that in civil proceedings evidence of a conviction is proof that a person has committed the offence unless the contrary is proved and s 11(2)(b) makes admissible in evidence the contents of the indictments to identify the facts on which the convictions were based. In *Microsoft Corp v Alibhai*,<sup>107</sup> the defendants had been convicted in 2002 of conspiracy to defraud by distributing and selling counterfeit copies of Microsoft products. They had been sentenced to 4½ years' imprisonment. Later in 2002, Microsoft commenced a civil action against them for copyright infringement. The effect of s 11(2) of the Civil Evidence Act 1968 was to establish that the defendants had committed the tort of conspiracy in the absence of any evidence to the contrary adduced by the defendants. The judge granted summary judgment to the claimant but he did decline to make an order for interim payment as the conviction and the indictment provided no evidence of the amount of Microsoft's losses or the profits made by the defendants.<sup>108</sup>

107 [2004] EWHC 3282 (Ch).

108 It appeared that the defendants' activities had brought in £2.2m but Microsoft had claimed nearly £11.8m in damages. The judge did, however, grant an interim costs award of £200,000.

109 See, for example, *Corelli v Gray* [1913] TLR 570; *Rees v Melville* [1911–1916] MacG CC 168; *Glyn v Weston Feature Film Co* [1916] 1 Ch 216; and, in the United States, *Nichols v Universal Pictures Co* (1930) 45 F 2d 119.

110 Munch created a number of versions of *The Scream*.

### Non-literal copying

It has long been accepted that copyright can be infringed by non-literal copying;<sup>109</sup> that is, where the defendant does not take the literal text (or a substantial part of it) of the work copied but instead uses the skill and judgment expended in non-literal elements of a copyright work. The principle is not necessarily limited to literary works and should also apply to other forms of works, such as artistic, musical or dramatic work or even films, broadcasts and typographical arrangements of published editions. For example, a person may copy from an existing work of copyright aspects such as a detailed plot of a play, a very particular and unusual theme for a painting, such as *The Scream* by Edvard Munch,<sup>110</sup> or the set of algorithms underlying a complex suite of computer programs.

The central question for the court in an allegation of copying at a level of abstraction from the work as expressed is whether what is alleged to have been copied represents sufficient skill and judgment in the creation of the work. A plot for a novel can be expressed at a number of levels of abstraction. For example, at its highest level of abstraction, a novel about a spy might simply be expressed in terms of a secret agent having adventures on the trail of a megalomaniac set on blackmailing a country's government by threatening to set off some incredibly destructive weapon unless he is paid a huge sum of money. That clearly does not go beyond a basic idea not protected

by copyright. It cannot represent a substantial part of the skill and judgment that would be expended in writing the finished novel. As copyright is concerned about protecting the skill and judgment used in expression, simply taking that basic idea cannot infringe the copyright in the novel. But what is the position where the plot is taken at a level much closer to the finished text of the novel? Say that the copyist takes the same events in the same sequence with similar characters, intermediate occurrences, outcomes and the same denouement? There has been no copying of the literal text of the novel, any similarities being coincidental only.

Going back to *The Scream*, what would be the position if an artist, having seen the painting, decided to create a painting of a person standing on a bridge or pier, running diagonally from top left to bottom centre, face clasped with his or her hands and with two figures in the background all set at dusk with a dramatic red sunset as a backdrop? No further reference is made in creating the second painting. Ignoring any possibility of subconscious copying, would the second painting infringe the copyright in Munch's painting?<sup>111</sup> One could argue that copyright should protect not only the paint on the canvas as such but the ideas underlying the painting and its composition at a level one step away from the actual execution of the painting, what was in the artist's mind and what he wanted to achieve. Munch could have executed the painting in a number of different ways: for example, in oil paints (as he did), in water-colour paints or coloured pencils or even with charcoal in black and white. That being so, should copyright protection extend not just to the physical painting but also to colourable imitations of it in different forms and in different media? Should such copies infringe because they are substantially similar to the lowest level of abstraction, being that closest to the finished painting, rather than being substantially similar to the physical embodiment of the painting itself? After all, it is the level of abstraction one step removed from the finished work that represents the greatest result of the application of human creativity. From there to completing the work requires skills associated with execution rather than creativity. Although clearly an oversimplification and ignoring editorial and artistic changes made during the application of paint to canvas, it could be argued that the final stage requires little more than the skill of an artisan proficient in applying paint to canvas.

The concept of non-literal copying is used mainly in the context of computer programs and is discussed in Chapter 8 in more detail. It does not come up often in relation to other works nowadays though there have been a couple of interesting cases, the first in relation to the layout and overall appearance, or 'look and feel', of glossy magazines. The second case involved a claim of non-textual copyright of the 'plot' of the book *The Holy Blood and the Holy Grail* by the author of *The Da Vinci Code*.

In *IPC Media Ltd v Highbury-Leisure Publishing Ltd*,<sup>112</sup> the claimant published the *IDEAL HOME* magazine. The defendant published a rival magazine entitled *HOME*. There was no allegation of direct copying of text or images but it was argued that the defendant was liable for non-literal infringement of copyright on the basis that the defendant had copied the 'look and feel' of *IDEAL HOME*. Particular allegations related to the front covers of the magazines and some internal sections in a number of issues. The defendant said that any similarities were trivial, being no more than 'design tricks' common in glossy magazines. The front cover of *IDEAL HOME* included the logo (being the name of the magazine), the straplines (lines of text immediately above and below the logo) and the hot-spot (so-called because, being just under the logo, it would be visible on racks of magazines for sale and would be important to attract buyers). The background to the cover was a photograph, typically of a room interior.

Laddie J did not accept that there had been copying of each of these elements *per se*. Because of the way the pleadings had been worded and amended, the allegation descended into claims targeted at individual elements of the magazines alleged to have been copied rather than at the overall format. Original claims were directed at the

<sup>111</sup> As Edvard Munch died in 1944, the copyright in *The Scream* will last until the end of 2014.

<sup>112</sup> [2005] FSR 434.

design, subject matter, theme and presentational style of *IDEAL HOME*. Laddie J said (at para 23):

It may be that a substantial part of the copyright consists of the Design Elements, so that unlicensed copying of them by Highbury would amount to copyright infringement, but the way in which the Re-Amended Particulars of Claim and IPC's evidence have been drafted has the effect of drawing one's attention away from the covers and articles as a whole and concentrating only on the areas of alleged similarity as if those areas were covered by copyright in their own right.

He also said that '... copyright is not a legal millefeuille with layers of different artistic copyrights'. However, it does appear from the judgment that Laddie J recognised that copyright can subsist and be infringed in respect of a level of abstraction, though probably a level quite close to the final form of expression. He also quoted from the speech of Lord Hoffmann in *Designers Guild Ltd v Russell Williams (Textiles) Ltd*<sup>113</sup> where he said (at para 25):

[C]ertain ideas expressed by a copyright work may not be protected because although they are ideas of a literary, dramatic or artistic nature, they are not original, or so commonplace as not to form a substantial part of the work. *Kenrick & Co v Lawrence & Co* (1890) 25 QBD 99, is a well-known example. It is on this ground that the mere notion of combining stripes and flowers would not have amounted to a substantial part of the plaintiff's work. At that level of abstraction, the idea, though expressed in the design, would not have represented sufficient of the author's skill and labour as to attract copyright protection.

On the basis of this impressive authority, it seems fair to say that non-literal copying is a theoretical possibility if a substantial part of the skill and judgment used by the person in the creation of the first work has been taken.<sup>114</sup> Skill and judgment and substantiality must be measured in relation to the finished work only and infringement tested accordingly. On the continuum between idea and expression, the threshold is likely to be towards the expression end of the scale. In other words, it must be perhaps no more than one step removed from the literal text of a literary work or very detailed scheme for other works, perhaps representing the penultimate step before 'putting pen to paper'. Anything at a higher level of abstraction is likely to be too vague or lacking the input of sufficient creativity to warrant protection. Therefore, the dramatic format for a talent show<sup>115</sup> and the business logic for computer software<sup>116</sup> have been held not to be protected by copyright. Although in themselves they may have been the subject of much work and research and the exercise of substantial skill, they are too far removed from the finished work to be considered to be a substantial part of it.

Allegations of non-literal copying rarely succeed. The reasons are that the non-literal parts taken do not form a substantial part of the work or the detail of the claim is poorly formulated, or both. A good example was given in the case of *Baigent v The Random House Group Ltd*.<sup>117</sup> This concerned an allegation of non-literal copying, referred to by the judge as 'non-textual',<sup>118</sup> by the author of *The Da Vinci Code* novel ('DVC'), Dan Brown, from an earlier work known as *The Holy Blood and The Holy Grail* ('HBHG'). The claimants were two of the three authors of HBHG and the action was taken against the publisher of DVC.<sup>119</sup> There were few textual similarities between the literal texts of the books and the claimants did not allege copyright infringement in relation to these. Instead they relied on an allegation of copying the 'Central Theme' of HBHG.<sup>120</sup>

The Central Theme itself was broken down into 15 points. They included assertions that Jesus had married Mary Magdalene and had children, and that after the crucifixion, Mary had fled to France with the Royal Blood (that is, Jesus' bloodline). Other assertions were that the bloodline intermarried with the royal line of the Franks and eventually resulted in the Merovingian dynasty. Around the end of the eleventh century Godfroi of Bouillon, Duke of Lorraine, emerged and embarked on the first crusade in 1099 to

<sup>113</sup> [2001] FSR 113.

<sup>114</sup> Although there have been very few recent examples where claims of non-literal copying have succeeded. One partial success was in *John Richardson Computers Ltd v Flanders* [1993] FSR 497, discussed further in Chapter 8.

<sup>115</sup> *Green v Broadcasting Corporation of New Zealand* [1989] RPC 700.

<sup>116</sup> *Navitaire Inc v EasyJet Airline Co Ltd* [2006] RPC 111.

<sup>117</sup> [2006] FSR 893.

<sup>118</sup> An appropriate description as the work alleged to have been copied was a literary work.

<sup>119</sup> At the time of the trial, the defendant also published HBHG. This aroused suspicions that the true reason for the action was to publicise both books.

<sup>120</sup> Any textual copying was described as being secondary footprints supporting the allegation of copying the Central Theme.

regain the throne of Palestine, which was his birthright. He had a circle of counsellors, eventually known as the Priory of Sion, who set up the Knights Templar. The Priory used France as its main base and acted as protectors and custodians of the Merovingian bloodline, the Holy Grail. Grandmasters of the Priory were claimed to include Leonardo Da Vinci, Sir Isaac Newton and Victor Hugo. At first instance, Peter Smith J had to decide whether the Central Theme was a work of literary copyright, whether it had been copied by Dan Brown and, if so, whether the part taken represented a substantial part of the Central Theme.<sup>121</sup>

Peter Smith J referred to *Ravenscroft v Herbert*.<sup>122</sup> In relation to a historical book, as HBHG was claimed to be, it could be argued that the author intended the reader to use the facts imparted in the book. He said (at para 176):

... the facts and the themes and the ideas cannot be protected but how those facts, themes and ideas are put together ... can be. It follows from this that the Claimants must show that there is a putting together of facts, themes and ideas by them as a result of their efforts and it is that which Mr Brown has copied.

Peter Smith J held that the Central Theme was not a genuine Central Theme of HBHG and was ‘an artificial contrivance designed to create an illusion of a Central Theme for the purposes of alleging infringement of a substantial part of HBHG’. He said that if there was a Central Theme to HBHG it was the merger of the Merovingian bloodline with the Royal Bloodline of Mary Magdalene but that was at too general a level of abstraction to be capable of protection under copyright law.<sup>123</sup> It was almost incredible that the claimants could not formulate their own Central Theme which must have been in their minds always when writing HBHG.<sup>124</sup> Consequently, it was held that the DVC did not infringe the copyright in HBHG.

The claimants’ appeal to the Court of Appeal was dismissed.<sup>125</sup> There was some criticism of the judgment of Peter Smith J which showed some confusion between subsistence of copyright and infringement. These are two distinct issues. The identity of the copyright work was that it was HBHG itself and, per Mummery LJ (at para 132):

it is wrong to divide up the whole copyright work into parts and to destroy the copyright in the whole by concluding that there is no copyright in the individual segments. Similarly, on the issue of infringement, it is wrong to take the parts of the original copyright work that have been copied in the alleged infringing work, to isolate them from the whole original copyright work and then to conclude that ‘a substantial part’ of the original copyright work has not been copied because there was no copyright in the copied parts on their own.

It all comes back to the essential copyright questions. First, does copyright subsist in the claimants’ work? Only if this is decided in the positive and a relevant act or acts of copying are found, is the question of whether the part or parts taken represent a substantial part of the claimants’ work. Thus, in the present case, the issue is not whether the Central Theme or its elements were sufficient to qualify as an original literary work.

Although this form of copying was described as non-textual copying, Mummery LJ was not comfortable with that epithet and said that it could be potentially confusing. Although ‘non-textual copying’ and ‘language copying’ do not appear in the Act, the latter may be used to describe word for word copying. He gave the example of an anthology of poems which were themselves out of copyright. Word for word copying of the poems is not relevant to infringement of the anthology, being a literary compilation. The question is whether the selection and arrangement of the poems has been copied, that selection and arrangement could properly be described as the text of the anthology.

It was accepted that the Central Theme and its elements were important to the claimants, resulting from years of research, discussion and speculation. But they were not in themselves a substantial part of HBHG in a copyright sense ‘any more than a

<sup>121</sup> Originally, the claims included allegations of copying the structure or architecture of HBHG. These were abandoned.

<sup>122</sup> [1980] RPC 193. This case is discussed earlier in this chapter.

<sup>123</sup> See also, *Nova Productions Ltd v Mazooma Games Ltd* [2007] RPC 589, discussed in Chapter 8, where it was held, *inter alia*, that non-literal features of a computer game alleged to have been copied were at too high a level of abstraction.

<sup>124</sup> There is a mystery in the judgment in that it appears that Peter Smith J inserted his own code into it. Certain letters are inexplicably italicised. They are, in order (as far as can be made out), ‘smithycodejaeixextost-psacgreamqwfkadpmqzv’.

<sup>125</sup> *Baigent v The Random House Group Ltd* [2007] FSR 579.

**126** *Per Mummery LJ* at para 153.

**127** There was no 'architectural' similarity between the works as the 11 elements of the Central Theme found to have been copied were differently expressed, collected, selected, arranged and narrated in DVC.

fact or theory that took a lifetime to establish, or a discovery that took a fortune to make.<sup>126</sup> These individual elements were not sufficiently developed to constitute a substantial part of HBHG.<sup>127</sup>

### Issuing copies of the work to the public

Under s 18(1), the issue to the public of copies of a work is an act restricted by the copyright in every description of copyright work. Article 4(1) of the Directive on copyright and related rights in the information society<sup>128</sup> provides for a distribution right which is the equivalent to issuing copies to the public. Article 4(1) goes on to say that the exclusive right is to authorise or prohibit any form of distribution to the public by sale or otherwise. The UK Act does not use the phrase 'or otherwise' but its meaning came up for consideration before the Court of Justice in Case 456/06 *Peek & Cloppenburg KG v Cassina SpA*.<sup>129</sup> In that case, which involved furniture placed in a store and in a shop window for display purposes only, it was argued that the reproduction right included distribution by way of possession as well as sale. The Court of Justice referred to the WIPO Copyright Treaty 1996 ('WCT') and the WIPO Performers and Phonogram Treaty 1996 (WPPT). The equivalent provisions in those Treaties refer to distribution by sale or 'other transfer of ownership'.<sup>130</sup> As Article 4 of the Directive on copyright and related rights in the information society was intended to implement the relevant provisions of the Treaties, it was clear that the distribution right must involve a transfer of ownership and not merely possession of the original or copies of the work in question.

The doctrine of exhaustion of rights is concerned with the freedom of movement of goods. Thus, a person who has put his goods into circulation cannot prevent someone, who lawfully acquires them, from reselling them or importing them into another country for resale. His rights to prevent further commercialisation of the goods are said to have been exhausted by the placing of the goods on the market by or with the consent of the owner of the goods. The doctrine is one of the cornerstones of the Common Market. The market would be too easily distorted if a company could sell identical products in different Member States at different prices. Of course, exhaustion of rights should not and does not prejudice the right of a person to put goods into circulation for the first time.

Issuing copies of a work to the public is a restricted act that applies to all categories of works; s 18(1).<sup>131</sup> Under s 18(2) this means (a) the act of putting into circulation in the European Economic Area (EEA)<sup>132</sup> copies not previously put into circulation in the EEA by or with the consent of the copyright owner, or (b) the act of putting into circulation outside the EEA copies not previously put into circulation in the EEA or elsewhere. This does not include any subsequent distribution, sale, hiring or loan of copies previously put into circulation,<sup>133</sup> or any subsequent importation of such copies into the UK or another EEA state except so far as (a) above applies to putting into circulation in the EEA copies previously put into circulation outside the EEA.

The main thrust of these complicated provisions is that the copyright owner can take action against anyone who issues a copy of his work to the public for the first time without his consent. However, as in the exhaustion of rights doctrine, in respect of copies already put into circulation by or with the consent of the owner, he loses effective control over them. He cannot, for example, take action against someone who has lawfully bought copies of his work in France and who now wishes to import them into the UK for the purpose of selling them to the public. The precise application of these provisions depends to some extent on whether the relevant act takes place in the EEA.

Placing a carrier on which a copyright work exists in an overseas postal service for delivery in the EEA is putting it into circulation within the EEA. In *Independiente Ltd v*

*Music Trading Online (HK) Ltd*,<sup>134</sup> a Hong Kong company accepted orders online for CDs and DVDs which had not previously been put into circulation in the EEA. Its website was in English and directed at customers in the UK. It was held that, by posting the CDs and DVDs in Hong Kong for delivery to customers in the UK, the company was putting them in circulation in the EEA within s 18(2). The effect of s 32(4) of the Sale of Goods Act 1979, as amended, was that in a consumer sale, delivery to a carrier was not delivery to the buyer. The CDs and DVDs were, therefore, put into circulation in the UK by the defendant.

134 [2007] FSR 525.

It should be noted that this restricted act applies to each and every copy of the work and, under s 18(4), includes the original. Thus, the issue to the public of some copies of a work does not exhaust the right in respect of other copies not yet issued to the public.

As an example of the workings of s 18 consider the following possibilities in respect of 100 copies of a book:

- 1 if they are infringing copies – issuing them to the public anywhere will infringe under s 18;
- 2 if they are copies made for the copyright owner, but he has not consented to their sale (expressly or impliedly) – issuing them to the public anywhere will infringe under s 18;
- 3 if the owner consented to their sale in the UK – the buyer can resell them or export them for resale anywhere within the EEA;
- 4 if the owner consented to their sale in Norway (an EEA state) – as 3 above;
- 5 if the owner consented to their sale in the USA – the buyer can resell them or export them anywhere except to an EEA state.

The subsequent acts that can be done include hiring or loan, but this may infringe under s 18A which controls rental or lending.

It can be seen from the examples above that the owner's right to issue to the public is not restricted to the issue of infringing copies, and it is possible to infringe by issuing to the public copies which were authorised by the copyright owner.<sup>135</sup> This will be rare as in most cases the person in possession of the copies will have the copyright owner's express or implied consent to issue the copies to the public: for example, in the case of a publishing agreement. One example where the issue of authorised copies may infringe under s 18 is where copies have been made by a printer on behalf of the copyright owner, but an employee of the printer has stolen and sold some of them.

135 As noted by Laddie J in *William Nelson v Mark Rye and Cocteau Records Ltd* [1996] FSR 313.

136 SI 1996/2967, implementing, *inter alia*, Council Directive 92/100/EC of 19 November 1992 on rental right and lending right and on certain rights related to copyright in the field of intellectual property, OJ L 346, 27.11.1992, p 61 and Council Directive 93/83/EC of 27 September 1993 on the coordination of certain rules concerning copyright and rights related to copyright applicable to satellite broadcasting and cable re-transmission, OJ L 248, 6.10.1993, p 15. Council Directive 92/100/EEC has been repealed and replaced by codifying Directive 2006/115/EC of the European Parliament and of the Council of 12 December 2006 on rental right and lending right and on certain rights related to copyright in the field of intellectual property, OJ L376, 27.12.2006, p 28.

137 This provision is now contained in Article 3(2) of Directive 2006/115/EC.

## Rental and lending right

The Copyright and Related Rights Regulations 1996<sup>136</sup> introduced, as from 1 December 1996, comprehensive rental and lending rights in relation to copies of works. Previously, only sound recordings, films and computer programs enjoyed specific protection in relation to rental.

Renting or lending copies of a work to the public is now a restricted act, the scope of which is set out in s 18A. The right applies to the 'original' works of copyright (literary, dramatic, musical or artistic works), films and sound recordings. However, there is an exception as regards some of the artistic works and the right does not apply to works of architecture in the form of a building or model for a building nor to works of 'applied art'. This latter phrase derives from Article 2(3) of Directive 92/100/EC (no further indication of its meaning is given there either).<sup>137</sup> It is likely to cover those commercially exploited artistic works falling within s 52.

'Rental' and 'lending' are defined in s 18A(2). Rental is 'making a copy of the work available for use, on terms that it will or may be returned, for direct or indirect economic or commercial advantage', and 'lending' is 'making a copy of the work available

for use, on terms that it will or may be returned, otherwise than for direct or indirect economic or commercial advantage, through an establishment which is accessible to the public'. There are some exceptions to the definitions. Neither includes making available for the purpose of public performance, playing or showing in public, communication to the public, exhibition in public or for on-the-spot reference use. Furthermore, lending does not cover making available between establishments accessible to the public (for example, where a library obtains a copy of a book from another library although, of course, the ultimate loan to the borrower is still within the meaning of lending). A charge may be made for lending which, provided it does not go beyond the operating costs of the establishment, will not take the transaction out of the meaning of lending. A higher charge will result in the act being considered to be rental. The rights apply to the original work as well as to copies of the original.

Under s 36A lending by educational establishments does not infringe, and s 40A contains an appropriate exception where lending is in respect of a book under the public lending right scheme or lending by prescribed libraries or archives (other than public libraries) which are not conducted for profit.

Films and sound recordings usually include other works of copyright. For example, the dialogue of a film may be based on a novel or have been written as a screenplay. Music may be included in the sound track. Where an author of an original work agrees with a film producer to its inclusion in the film, unless the agreement provides otherwise, there is a presumption that the author has assigned his rental rights in relation to that film under s 93A. The right is replaced by a right to an equitable remuneration on the transfer of the right. However, the presumption does not apply in respect of any dialogue, screenplay or music *specifically* created for and used in the film and, in such cases, express assignment would be required. Where the presumed assignment operates, the absence of any signature on the part of the author does not prevent the operation of s 91(1) (purported assignment of future copyright). If a film producer and principal director make an agreement with the author of a pre-existing piece of music to include the music in the film and the agreement is silent on rental rights, and before the film is made the producer and director sign an agreement with a third party assigning to that third party the copyright in the film, the copyright will automatically vest in the third party and include the relevant rental rights in relation to the music.

Section 93B deals with the detail in relation to the right to equitable remuneration. The right arises where there has been a transfer of the rental right concerning a sound recording or film (including presumed transfer in respect of the inclusion of a copy of a work in a film) and applies to authors of original works and the principal director of a film.<sup>138</sup> The right itself may only be assigned to a collecting society, although it is transmissible by testamentary disposition or operation of law as personal property<sup>139</sup> and may then be assigned by the person into whose hands it passes. The restriction on assignment to a collecting society only no longer seems to apply in such cases. The remuneration is payable by the person for the time being entitled to the rental right. Any purported agreement excluding or restricting the right to an equitable remuneration is to that extent of no effect. The Copyright Tribunal is given the power to determine the amount payable in default of agreement and to vary the amount, and its jurisdiction is modified accordingly.<sup>140</sup> Under s 93C(4), a remuneration shall not be considered inequitable merely because it is made in a single payment, or at the time of the transfer of the rental right.

Arguments that the rental right distorted competition and was contrary to the fundamental right to pursue a trade or profession were rejected by the European Court of Justice in Case C-200/96 *Metronome Musik GmbH v Music Point Hokamp GmbH*.<sup>141</sup> Sale or other distribution did not exhaust rental rights which reflect that rental is a further form of commercial exploitation and recognised that authors and performers should

<sup>138</sup> Although the producer and the principal director are now considered co-authors of a film, this right does not apply to film producers.

<sup>139</sup> In Scotland, moveable property.

<sup>140</sup> Copyright, Designs and Patents Act 1988 ss 93C and 149(zb).

<sup>141</sup> [1998] ECR I-1953.

be better able to recoup the substantial investment in the creation of new works. Rental right was held to be in accordance with the Community objectives of general interest and the right to pursue a trade or profession was not absolute and restrictions were acceptable providing they fell within the scope of general Community objectives and were not disproportionate. In the *Metronome* case, the claimant had released for sale a music CD called 'Planet Punk'. The defendant had offered copies of the CD for rental. Clearly, such rental, without the licence of the copyright owner, could seriously prejudice the economic rights under copyright law. However, the defendant's argument was not entirely without merit. Whilst copyright owners may choose to grant licences to traders desiring to rent copies to the public, they may decide not to do so, forcing persons wishing to have access to the work to buy a copy. Of course, that will be an economic decision and many copyright owners will be happy to licence their rental rights. This is very common in respect of films made available for hire on video tape or DVD.

### Public performance, showing or playing a work in public

Public performances and the public playing or showing of certain types of works infringe copyright unless done with the permission of the copyright owner. These performing rights are, in a great many cases, administered by the Performing Right Society which grants 'blanket' licences in respect of music and broadcasts to be played or shown in public. The performance of a work in public is an act restricted by the copyright in literary, dramatic and musical works. It does not apply to other forms of works. Section 19(2) expands upon the meaning of performance and states that it includes delivery of lectures, addresses, speeches and sermons and, in line with modern technology, it includes in general any mode of visual or acoustic presentation, including by means of a sound recording, film or broadcast. Under s 19(3), playing or showing a sound recording, film or broadcast in public is an act restricted by the copyright in the work. Therefore, playing music to members of the public, for example background music in a café or restaurant to which the public have access, is a restricted act.

An important element is that the performance, showing or playing must be in 'public', a word which has been responsible for much judicial consideration. A consistent strand in the courts' interpretation has been the question of whether the copyright owner's interests have been harmed by the performance complained of. For example, would the copyright owner expect to be paid a royalty for the performance? Does the performance satisfy part of the public demand for the work and thereby reduce the copyright owner's potential income? In *Duck v Bates*,<sup>142</sup> the defendant performed a dramatic piece in a room in a hospital for the entertainment of nurses, attendants and other hospital workers without the consent of the copyright owner. No admission charge was made, but approximately 170 persons attended each performance. It was held that the room where the drama was presented was not a place of public entertainment and that, consequently, the defendant was not liable to the copyright owner in damages. Lord Brett MR said that such a private representation of the drama would not harm the copyright owner, although a public representation in any place where the public were freely admitted with or without payment would.

However, any distinction which might be drawn in this case between the public at large and an audience limited by vocation or membership does not provide a workable formula as there have been several cases involving an audience limited in such a way in which the performance has been deemed to be a performance in public. For example, in *Ernest Turner Electrical Instruments Ltd v Performing Right Society Ltd*,<sup>143</sup> the owner of a factory relayed music broadcast by the British Broadcasting Corporation and from gramophone records to his 600 employees. Strangers were not allowed access to the factory. Nevertheless, it was held that the performance was a performance in public

<sup>142</sup> (1884) 13 QBD 843.

<sup>143</sup> [1943] 1 Ch 167. See also *Jennings v Stephens* [1936] Ch 469 concerning the performance of a play in which the audience was limited to members of a Women's Institute.

for the purposes of the Copyright Act 1911 s 1(2). Lord Greene MR suggested that it was important to consider the relationship between the audience and the copyright owner rather than the relationship between the audience and the person arranging the performance, that is the employer. Economic considerations were also important in that the ‘statutory monopoly’ granted by the Copyright Act would be, in Lord Greene’s opinion, largely destroyed if performances to such groups of persons were permitted.

Some performances can be said to be in the copyright owner’s best interests because they publicise his work and whet the public appetite and, as a result, increase ultimate sales of the work. Such an argument can be raised in terms of radio and television broadcasts of pop music. For example, *Top of the Pops* and similar programmes can influence sales of particular pieces of music. Nevertheless, broadcasters have to pay for such broadcasts. Since 1976, as a result of a change in policy, even record shops have to pay fees for playing recordings of works written by members of the Performing Right Society over loudspeakers in the shops. In *Performing Right Society Ltd v Harlequin Record Shops Ltd*,<sup>144</sup> the owner of some record shops refused to pay the requisite fee, arguing that playing the records over loudspeakers in the shops promoted sales and increased the composer’s royalties and that this playing of recordings did not constitute a performance in public and, consequently, was not an infringement of copyright. However, injunctive relief was granted to the claimant and it was held that the performances were in public. The audience comprised members of the public present in shops to which the public at large were permitted and encouraged to enter. Furthermore, it was shown that a prudent record shop owner would pay the society’s fee rather than discontinue playing the recordings.

144 [1979] 2 All ER 828.

For a performance not to be deemed to be a public performance, it must be to an audience of a domestic nature. It is clear that playing a video film to a group of friends or relatives will not be ‘playing the work in public’ and enacting a play in the presence of a few friends will not be a performance of the play in public, but the habitual playing of recordings to employees in a factory will be in public even though the employees are not charged anything for this benefit. There are, however, some instances where it is more difficult to draw a line. For example, a private hospital may transmit video films to its patients from a central machine to television monitors in individual rooms. A hotel may provide a similar service for its guests. It is probable, in these circumstances, that the performance or playing will be in public if the service is provided for all the guests or patients and, taken together, they can be said to form part of the public at large, even though only a proportion of them take advantage of the service. If a charge is made, then the question is beyond doubt.

Section 19(4) limits the personalities who can be liable for infringement by performance, showing or playing a work in public. The performers taking part in a public performance are not themselves to be regarded as being responsible for the infringement. In the case of the performance, playing or showing of the work in question by means of apparatus for receiving visual images or sounds conveyed by electronic means, the person by whom the visual images or sounds are sent is not to be regarded as responsible for the infringement. Therefore, a disc jockey at an unlicensed disco will not be liable to be sued for infringement of the public performance right. The language of the subsection appears to be difficult and inconsistent with s 19(2)(b), which is expressed in terms of ‘any mode of visual or acoustic presentation’, whereas s 19(4) deals only with presentation by electronic means and uses the word ‘sound’ rather than ‘acoustic’. Taking a strictly literal interpretation of s 19(4) could produce absurd results. For example, what is the position where the performers have also arranged the infringing public performance? Section 19(4) appears to excuse their infringement, as it clearly states that the performers shall not be regarded as responsible for the infringement. It

is unlikely that the courts will take this interpretation, as it plainly runs counter to the spirit of the Act.

It is inevitable that, given the size and complexity of the Act, there will be interpretational difficulties and it would have been better if, towards the end of s 19(4), the words ‘to the extent that the infringement relates to their activity as performer’ were added to put the matter beyond doubt.

## Communication to the public

Section 20 was substituted by the Copyright and Related Rights Regulations 2003 which replaced the previous restricted act of broadcasting or inclusion in a cable programme service. New s 20 sets out the meaning of the act of communication to the public. It covers not only broadcasts (redefined to include what were formerly classed separately as cable programmes) but also making material available to the public by placing it on internet websites, for example.

Under s 20(1), the communication to the public is a restricted act in relation to:

- (a) a literary, musical, dramatic or artistic work,
- (b) a sound recording or film, or
- (c) a broadcast.

Communication to the public means communication by electronic transmission and, under s 20(2), this includes:

- (a) the broadcasting of the work;
- (b) the making available to the public of the work by electronic transmission in such a way that members of the public may access it from a place and at a time individually chosen by them.

Guests staying in hotel bedrooms are considered to be part of the public and broadcasts received by them on television sets provided by the hotel fall within the restricted act. So it was held in Case C-306/05 *Sociedad General de Autores y Editores de España (SGAE) v Rafael Hoteles SA*.<sup>145</sup> Although the mere provision of television sets did not constitute a communication to the public, the distribution of a signal by means of television sets to customers staying in the rooms was a communication to the public despite the private nature of hotel bedrooms. The Court of Justice took a wide view of this act in line with the Directive on copyright and related rights in the information society.<sup>146</sup>

Generally, broadcasts are simultaneous transmissions to the public: for example, as in the case of terrestrial, satellite or cable transmissions of scheduled television or radio programmes. This includes such transmissions by internet. However, excluded from the meaning of broadcasts are other forms of internet transmission,<sup>147</sup> a major example being where material is placed on a website or made available for downloading by individuals as and when they choose. Although such transmissions are outside the definition of broadcast, they are still within the restricted act of communication to the public. The impetus for ensuring that copyright extended to making works available online came from the Directive on copyright and related rights in the information society.<sup>148</sup>

Therefore, placing a work on a website or facilitating its downloading from a website (for example, by providing a hypertext link to it) will infringe if the work can be and has been downloaded by any member of the public in the UK, no matter where the computer on which the website is hosted is physically located. Recital 25 to the Directive describes this form of making available as interactive on-demand transmissions and makes it clear that all holders of copyright and related rights should have an exclusive right in respect of it.

Before the changes, it appeared that the courts were prepared to consider placing material on a website for access or downloading as falling within the meaning of a

<sup>145</sup> [2006] ECR I-11519.

<sup>146</sup> Directive 2001/29/EC of the European Parliament and of the Council of 22 May 2001 on the harmonisation of certain aspects of copyright and related rights in the information society, OJ L 167, 22.06.2001, p 10. Although ‘communication to the public’ is not defined in the Directive, recital 23 thereto makes it clear that a wide view should be taken, stating that the right should be understood in a broad sense.

<sup>147</sup> Section 6(1A).

<sup>148</sup> Directive 2001/29/EC of the European Parliament and of the Council of 22 May 2001 on the harmonisation of certain aspects of copyright and related rights in the information society, OJ L 167, 22.6.2001, p 10.

149 [1997] FSR 604.

cable programme service. In *Shetland Times Ltd v Dr Jonathan Wills*,<sup>149</sup> the defendant included headlines from the claimant's website in articles published on the internet. The headlines fell within the meaning of a cable programme, being any item included in a cable programme service. Lord Hamilton found that the defendant infringed copyright by including cable programmes in a cable programme service. As a cable programme service was defined as a '... service which consists wholly or mainly in sending visual images, sounds or other information ...' this form of infringement was very wide, as the meaning of cable programme extended to information, whether or not it was a work of copyright. At least the recent changes put infringement by making available on the internet on all fours with other forms of infringement.

### Making an adaptation

In terms of the Copyright, Designs and Patents Act 1988, the word 'adaptation' has some very special meanings, depending on the nature of the work concerned, and should not be taken in its usual sense. Making an adaptation does not simply mean the same as modifying a work. The restricted act of making an adaptation applies only to literary, dramatic and musical works. Of the original works, artistic works are not covered by the act of making an adaptation. Therefore, if a person represents an existing drawing by producing a list of coordinates, he is not making an adaptation of the drawing and does not infringe the copyright in the drawing unless the list of coordinates can be considered to be a copy of the drawing.<sup>150</sup> If the drawing contains information to be used in the manufacture of an article, it may also be deemed to be a literary work, in which case taking a list of coordinates from the drawing will infringe: see *Anacon Corp Ltd v Environmental Research Technology Ltd*.<sup>151</sup>

An adaptation is made when it is recorded in writing or otherwise, under s 21(1). 'Writing' is defined in s 178 as including any form of notation or code, whether by hand or otherwise, regardless of the method by which, or medium in or on which, it is recorded. This definition is very wide and should present no problems in the context of making an adaptation. 'Adaptation' is defined in s 21(3) and means:

- (a) in relation to a literary work other than a computer program or a database, or in relation to a dramatic work:
  - (i) a translation of the work;
  - (ii) a version of a dramatic work in which it is converted into a non-dramatic work or, as the case may be, of a non-dramatic work in which it is converted into a dramatic work;
  - (iii) a version of the work in which the story or action is conveyed wholly or mainly by means of pictures in a form suitable for reproduction in a book, or in a newspaper, magazine or similar periodical;
- (ab) in relation to a computer program, means an arrangement or altered version of the program or a translation of it;<sup>152</sup>
- (ac) in relation to a database, means an arrangement or altered version of the database or a translation of it;<sup>153</sup>
- (b) in relation to a musical work, an arrangement or transcription of the work.

A 'translation' would typically include a work of literature or a play that has been translated from French to English. But, as literary works include computer programs, the word takes on a special meaning in relation to computer programs, and under s 21(4):

... a 'translation' includes a version of the program in which it is converted into or out of a computer language or code or into a different computer language or code [otherwise than incidentally in the course of running the program].<sup>154</sup>

<sup>150</sup> If the existing work is a sculpture and a person produces a set of coordinates describing its form, that will infringe because a 'dimensional shift' has occurred which brings s 17(3) into play. Note that by s 21(5) no inference is to be drawn from s 21 as to what does or does not amount to copying.

<sup>151</sup> [1994] FSR 659.

<sup>152</sup> Inserted by the Copyright (Computer Programs) Regulations 1992, SI 1992/3233.

<sup>153</sup> Inserted by the Copyright and Rights in Databases Regulations 1997, SI 1997/3032.

<sup>154</sup> The words in square brackets were repealed by the Copyright (Computer Programs) Regulations 1992, SI 1992/3233.

The significance of making an adaptation in terms of computer programs and databases is considered further in Chapter 8 (see pp 268–9).

The dramatic/non-dramatic conversion covers situations such as where a biographical book or a true story is dramatised or, alternatively, where the script for a play is reworked as a novel. For example, in *Corelli v Gray*,<sup>155</sup> the defendant was found to have written a dramatic sketch by taking material from the claimant's novel. The third form of adaptation in relation to literary and dramatic works is where the story or action has been changed to a form which mainly comprises pictures. An example is where a story has been converted into a strip cartoon. To do the converse is not to make an adaptation, however. To change a cartoon or other graphical means of portraying a story into a written work does not fall within the meaning of making an adaptation; it may, however, fall within the meaning of copying. The rationale for this apparent inconsistency is that, presumably, to convert a story told mainly by pictures to a written work requires a great deal of skill, effort and judgment and all that is really taken is the plot or the idea underlying the pictorial work.<sup>156</sup> The wordsmith has many gaps to fill in. On the other hand, to draw pictures depicting a written work leaves less to the imagination of the artist in terms of the telling of the story, although, of course, he will have free rein to express that story in his preferred way. The Act presumably considers artistic licence to be more constrained than literary licence.

As far as musical works are concerned, arrangements and transcriptions of existing works are adaptations and will, if copyright subsists in the existing work, infringe that copyright. An example of an arrangement is where a piece of music written for one instrument is rewritten so that it is suitable for another, or an operatic aria is rewritten as an orchestral piece. If there is a sufficient amount of skill and judgment involved in the arrangement, it too might attract its own copyright,<sup>157</sup> although the permission of the owner of the copyright in the first piece of music would be required before the arranged piece could be exploited.<sup>158</sup>

Under s 21(2), the doing of any of the other restricted acts, described in ss 17–20, in relation to an adaptation, is also an act restricted by the copyright in a literary, dramatic or musical work. This extends to s 21(1), so that making an adaptation of an adaptation also infringes copyright if done without the permission or licence of the copyright owner. For example, if Albert writes a novel in English and Barry, without Albert's permission, translates the novel into French, Barry is making an adaptation and infringes Albert's copyright. If Celia then makes copies of Barry's translation, Celia also infringes the copyright in the original novel (regardless of whether or not she has Barry's permission to do so). Finally, if Duncan translates Barry's French version of the novel into German, Duncan infringes copyright by making an adaptation of an adaptation. In addition to the economic rights, Albert's moral rights might be infringed by the above actions, for example if he is not identified as the author. Albert will have the right to object to derogatory treatment of his work only if the translations have some additions or deletions and the treatment amounts to a distortion or mutilation of the work, or is otherwise prejudicial to Albert's honour or reputation.

## AUTHORISING INFRINGEMENT OF COPYRIGHT

Copyright is infringed by a person who performs any of the acts restricted by the copyright without the licence of the copyright owner or authorises another person to perform the infringing act under s 16(2). There is nothing in the Act to require the authorisation to be given in the UK provided the infringing act itself is carried out in the UK. In *ABKCO Music & Records Inc v Music Collection International Ltd*,<sup>159</sup> a Danish company granted a licence to an English company to manufacture and issue to the

155 [1913] TLR 570.

156 However, see the discussion on the requirement for tangibility in Chapter 3.

157 For example, see *Wood v Boosey* (1868) LR 3 QB 223.

158 Apart from infringing the copyright owner's rights, the moral rights of the author must be considered. By the Copyright, Designs and Patents Act 1988 s 80, the author of, *inter alia*, a musical work has a right not to have his work subjected to derogatory treatment. 'Treatment' in relation to a musical work does not include an arrangement or transcription involving no more than a change of key or register.

159 [1995] RPC 657.

public recordings of the claimant's sound recordings in the UK and Eire. It was held that it did not matter where the authorisation was given as long as the restricted act was carried out within the jurisdiction. The act of authorisation was not limited territorially unlike the restricted acts themselves.

<sup>160</sup> *Ash v Hutchinson & Co (Publishers) Ltd* [1936] Ch 489.

Performing a restricted act and authorising its performance are separate torts.<sup>160</sup> However, the authorisation is a tort only if the act authorised is restricted by copyright in the UK. Thus, if a US resident authorises persons in England to place infringing material on the internet, the US resident infringes under s 16(2) and this is within the jurisdiction of the English courts.

If an Australian makes a copy in Australia of a work subject to UK copyright, that does not infringe the UK copyright (notwithstanding the effect of the Berne Copyright Convention and any proceedings brought in Australia on the basis of an equivalent Australian copyright). If that Australian then places a copy of the work on his website and invites persons in the UK to access it and make copies, then the Australian infringes the UK copyright by authorisation. The persons accessing the work also infringe copyright by performing a restricted act, bearing in mind that simply accessing the work will produce a transient copy in the computer's memory. There is no need for a hard copy print to be made or for the work to be saved to a disk as copying includes making transient copies under s 17(6).

A director of a company who is the directing mind of the company may be liable for authorising the company's infringement by the mere fact of being a director executing his normal duties and carrying out his constitutional role in the company's governance. The same applies to a controlling shareholder. On the other hand, a person who is not a *de jure* director but who is a *de facto* director may be liable for authorising the company's infringement.<sup>161</sup>

<sup>161</sup> *MCA Records Inc v Charly Records Ltd* [2002] FSR 401.

### What is authorisation?

Earlier cases show that the concept of authorisation is fairly wide, being 'sanction, countenance or approve' in *Evans v Houlton*,<sup>162</sup> and turning a blind eye may amount to authorisation. In *Performing Right Society Ltd v Ciryil Theatrical Syndicate Ltd*<sup>163</sup> it was said that 'indifference, exhibited by acts of commission or omission, may reach a degree from which authorisation or permission may be inferred'. Failing to inform users of a library with photocopying facilities about copyright law and failing properly to supervise the use of the copiers was held to authorise infringement of copyright in the Australian case of *Moorhouse v University of New South Wales*.<sup>164</sup> Placing a notice in proximity to photocopiers but otherwise not policing their use was authorisation. However, in *Law Society of Upper Canada v CCH Canadian Ltd*,<sup>165</sup> the Supreme Court of Canada thought that this approach went too far and shifted the balance too far in favour of copyright owners. The Supreme Court of Canada distinguished between authorising a person to use copying equipment and authorising infringement. It could be assumed that the former, *per se*, did not mean that infringement was authorised. As a matter of law, it should be presumed that a person who authorises an activity does so only in as much as it is in accordance with the law.

<sup>162</sup> [1923–1928] MacG CC 51.

<sup>163</sup> [1924] 1 KB 1.

<sup>164</sup> [1976] RPC 151.

<sup>165</sup> [2004] FSR 871.

<sup>166</sup> [1988] AC 1013.

<sup>167</sup> [1926] 2 KB 474. See also *Monckton v Pathé Frères Pathephone Ltd* [1914] 1 KB 395 at 499.

<sup>168</sup> Furthermore, Amstrad was not guilty of incitement to commit either a tort or a criminal offence.

In *CBS Songs Ltd v Amstrad Consumer Electronics plc*,<sup>166</sup> Lord Templeman agreed with Atkin LJ in *Falcon v Famous Players Film Co*<sup>167</sup> where he said that, in the context of copyright, authorisation means '... the grant or purported grant, which may be express or implied, of the right to do the act complained of'. Although *CBS v Amstrad* concerned authorisation under the Copyright Act 1956 s 1(2), that meaning should still apply under the 1988 Act. In that particular case, Amstrad was not authorising infringement of copyright by the sale of its twin cassette tape machines, it was merely facilitating unauthorised copying. In any case, the machines could be used for legitimate purposes.<sup>168</sup>

It is submitted that the correct approach to authorisation by making copying equipment available is that a person is liable for the infringing acts of others if that person actively encourages infringement or turns a blind eye to the fact that infringement is likely to take place where the circumstances are such that a reasonable person would be concerned that infringement might be taking place and would want to investigate and take any action appropriate to prevent it.

## Contributory infringement

The concept of contributory infringement (sometimes referred to as vicarious infringement) is well established in the US. The UK does not have such a form of infringement as a distinct concept but it could give rise there to claims of authorising infringement or joint infringement. In the US a person may be liable on the basis of contributory infringement even though he does not carry out the infringing act personally. In *Religious Technology Center v Netcom OnLine Communication Services Inc*<sup>169</sup> it was said that internet service providers could be liable for contributory infringement if they had knowledge of the infringement but had not taken any steps to put a stop to it.<sup>170</sup> The concept of control was important. An analogy with a building lease was rejected by the court. It had been argued that a lessor of premises later used, for example, to make infringing copies of a work, would not be liable. The court considered that an internet service provider, unlike a lessor of premises, does retain a measure of control over the use of the system. In the past, Netcom had suspended accounts of subscribers who had used the system to post infringing software.

Contributory infringement can be likened to authorising infringement, but is not so extensive. For example, it appeared that contributory infringement in the US requires actual knowledge, whereas authorising infringement in the UK can be inferred, for example, where a person is indifferent as to whether infringing material is involved.

Contributory infringement or vicarious infringement in the US are based on well-settled common law principles which were set out in *Sony Corp of America v Universal City Studios Inc*.<sup>171</sup> In that case, Sony made video cassette recorders which could be used to record television programmes including films broadcast by television. These machines could be used for making unauthorised copies of television programmes and films. They could also be used to make copies that did not infringe copyright, examples being where a copy was made for time shifting<sup>172</sup> or where the broadcast was itself out of copyright or with the copyright owner's permission. The Supreme Court held that Sony was not liable for contributory infringement of copyright by its customers even though it knew that the machines would be used by large numbers of persons to make infringing copies of copyright works.

Peer to peer file sharing software has caused the film and music industries considerable concern. This software is downloaded on to individuals' computers enabling them to share files by copying the files from one computer to another. No central computer is required. Literally billions of files are shared across peer to peer networks each month.

Napster was one company which facilitated the transmission of MP3 format files between and among its users through peer to peer file sharing. It provided free software which allowed its users to make MP3 music files stored on individual computer hard drives available for copying by other Napster users, search for MP3 music files stored on other users' computers and transfer exact copies of the contents of other users' MP3 files from one computer to another via the internet. Napster also provided technical support for the indexing and searching of MP3 files, as well as for its other functions, including a chat room, where users could meet to discuss music, and a directory where participating artists could provide information about their music. <sup>171</sup> 464 US 417 (1984).

<sup>172</sup> Recording a programme to watch at a more convenient time. This is acceptable under US copyright law and, in the UK, is specifically provided for under s 70 of the Copyright, Designs and Patents Act 1988.

173 239 F 3d 1004 (9th Cir 2001).

174 545 US 913 (2005). The other defendant in the case was Streamcast Networks Inc.

175 [2005] EWHC 3191 (Ch).

176 It could, however, prevent an award of damages, though this is without prejudice to any other remedy: s 97(1).

177 An order for discovery against a person who is not a wrongdoer but who may have information identifying the wrongdoer or evidence of a wrong. The name comes from the case of *Norwich Pharmacal Co v Commissioners of Customs and Excise* [1974] AC 133 where the claimant sought information as to the identity of companies importing chemicals alleged to infringe the claimant's patent. An equivalent order was implemented in Scotland by the Intellectual Property (Enforcement, etc.) Regulations 2006 SI 2006/1028, reg 4.

178 [1986] FSR 159.

179 *The Koursk* [1924] P 140, per Scrutton LJ at 156, approved by Lord Templeman in *CBS v Amstrad*, above.

180 *MCA Records Inc v Charly Records Ltd* [2002] FSR 401.

*v Napster Inc*,<sup>173</sup> the Court of Appeals for the 9th circuit varied an injunction imposed by the district court, confirming that contributory liability may be imposed only to the extent that Napster received reasonable knowledge of specific infringing files, knowing that such files were available on the Napster system (or where Napster should have known this), and where it failed to act to prevent distribution of these works.

Distinguishing *Sony v Universal City Studios*, the Supreme Court in *Metro-Goldwyn-Meyer Studios Inc v Grokster Inc*,<sup>174</sup> the Supreme Court found that distributing peer to peer file sharing software did amount to contributory infringement of copyright. There were a number of important differences between the cases, in particular that Grokster had actively encouraged copyright infringement such as by advertising the software as suitable for making copies of films or music and instructing users how to engage in infringing use. The Supreme Court held that distributing a device with the object of promoting its use to infringe copyright made one liable for contributory infringement even though the device could be used lawfully. This was contrasted with the situation where devices are distributed with mere knowledge that they may be used to infringe copyright. It was noted that where a device is widely shared to cause infringements on a massive scale, the only practical recourse for copyright owners is to go against the distributor for contributory infringement rather than the individuals liable for direct infringement.

There has been little case law of file sharing software in the UK but, in *Polydor Ltd v Brown*,<sup>175</sup> Collins J held that '... connecting a computer to the internet, where the computer is running P2P [peer to peer] software, and in which music files containing copies of the claimant's copyright works are placed in a shared directory' constituted primary infringement of copyright. He also confirmed that such infringement occurred regardless of the knowledge of the person responsible and innocence or ignorance is not a defence to primary infringement.<sup>176</sup> In that case, the identity of the defendant in question (he was one of a number of defendants) was obtained following a *Norwich Pharmacal* order<sup>177</sup> made against a number of internet service providers whose facilities were used by the defendants.

In the UK, in *Amstrad Consumer Electronics plc v British Phonograph Industry Ltd*<sup>178</sup> it was held that supplying machines which would be likely to be used unlawfully to copy prerecorded cassettes subject to copyright protection was insufficient to make the manufacturer or supplier a primary infringer of copyright or a joint tortfeasor even though the reality of the situation was that Amstrad knew that the machine would be used to infringe copyright in many cases. Nor could this be seen as authorising infringement of copyright because the supplier had no control over the way the machines were used once sold. Although the advertising mentioned that users could '... make a copy of your favourite cassette', a small warning about copyright infringement was also present. As in the *Sony v Universal City Studios*, in contrast with the *MGM v Grokster* case, Amstrad did not actively encourage users to infringe copyright.

Joint infringers are two or more persons who act in concert pursuant to a common design to infringe.<sup>179</sup> In the case of twin cassette tape machines, Amstrad had no control, nor was there any common design between Amstrad and purchasers of its machines. In the context of a company, it appears that a company director who is the directing mind of the company may be liable with the company for copyright infringement as a joint tortfeasor.<sup>180</sup>

## SECONDARY INFRINGEMENTS OF COPYRIGHT

In addition to infringement of copyright through the acts restricted by the copyright in the work, there are certain other infringements known as secondary infringements.

Some of the criminal offences provided for under the 1988 Act closely follow the equivalent secondary infringements and the same level of knowledge is required, for example, in some cases knowing or having reason to believe that the article concerned is an infringing copy. The distinction between primary infringement and secondary infringement is that the former involves making the infringing copy or making the infringing performance, etc. while the latter involves ‘dealing’ with infringing copies, providing the premises or apparatus for the performance or making an article for the purpose of making infringing copies. If a secondary infringement has been committed, there will almost certainly have been a corresponding infringement of one or more of the acts restricted by copyright.<sup>181</sup> For a secondary infringement the person responsible must have knowledge or reason to believe that the copies are infringing copies or whatever. It would seem from the wording that the person involved must have either actual knowledge or, at least, a subjective reasonable belief that the relevant activity involves a secondary infringement. Under the Copyright Act 1956, only actual knowledge was sufficient for the corresponding secondary infringements, but nevertheless the courts tended to take a liberal view of this and in *Columbia Picture Industries v Robinson*<sup>182</sup> it was held that, *inter alia*, the knowledge required extended to the situation where a defendant deliberately refrained from inquiry and shut his eyes to the obvious. The phrase ‘has reason to believe’ in the Copyright, Designs and Patents Act 1988 ss 22–26 was new and, in *LA Gear Inc v Hi-Tec Sports plc*,<sup>183</sup> it was said that it could not be construed in accordance with the 1956 Act. The test must be objective in that it requires a consideration of whether the reasonable man, with knowledge of the facts known to the defendant, would have formed the belief that the item was an infringing copy. In the trial at first instance, Morritt J suggested that, once apprised of the facts, the defendant should be allowed sufficient time to evaluate those facts so as to be in a position to draw the conclusion that he is dealing with infringing copies.<sup>184</sup> This is not inconsistent with an objective approach – the reasonable man also may need time for the facts to ‘sink in’<sup>185</sup> but facts from which a reasonable person *might suspect* that the copies were infringing copies alone is not enough;<sup>186</sup> though one would expect that, once a suspicion is raised, enquiries would be made to see if it was well-founded. Seeking an indemnity from a supplier after being warned that infringing articles were to be supplied indicates the presence of a ‘reason to believe’.<sup>187</sup> Situations where it may be plausible for a defendant not to have ‘reason to believe’ include where he believes that the copyright has expired, where copyright does not subsist in the work or where the copies have been made with the copyright owner’s permission.<sup>188</sup>

Where legal proceedings have been initiated against a defendant alleging secondary infringement of copyright, this fact alone does not necessarily mean that he has reason to believe that he is, for example, making or selling infringing copies. Nor does the fact that the defendant had put money aside for a fighting fund for the pending litigation show that he has the requisite knowledge: *Metix (UK) Ltd v GH Maughan (Plastics) Ltd*.<sup>189</sup> After all, the defendant may consider that he has a good chance of successfully defending the action because he does not think, and has no reason to believe, that the copies are infringing copies. Where a person is threatened with legal action and makes enquiries with the supplier of the alleged infringing copies, he may have reason to believe if those enquiries are not answered satisfactorily, being sketchy and providing no credible answers to questions put by the claimant’s solicitors: *Nouveau Fabrics Ltd v Voyage Decoration Ltd*.<sup>190</sup> Mann J said that an allegation of infringement does not have to be accepted by a defendant but he has to consider it. He cannot ignore it but has to evaluate the claim and this would normally involve making reasonable enquiries. A second defendant who did not make any independent enquiries but simply relied upon the first defendant was also held to have reason to believe that the articles, patterned fabrics, were infringing copies.

<sup>181</sup> But, the ‘primary infringement’ may have been carried out by another person, hence the need for the secondary infringements. This is especially useful when the primary infringer is outside the jurisdiction of the UK courts.

<sup>182</sup> [1987] 1 Ch 38. See also *Infabrics Ltd v Jaytex Shirt Co Ltd* [1978] FSR 457.

<sup>183</sup> [1992] FSR 121.

<sup>184</sup> [1992] FSR 121 at 129.

<sup>185</sup> Where secondary infringement is planned in the future the claimant does not have to wait to see if it is actually carried out when seeking a *quia timet* injunction: *Linpac Mouldings Ltd v Eagleton Direct Export Ltd* [1994] FSR 545.

<sup>186</sup> *Vermaat and Powell v Boncrest Ltd (No 2)* [2002] FSR 331.

<sup>187</sup> *Pensher Security Door Co Ltd v Sunderland City Council* [2000] RPC 249.

<sup>188</sup> Putting a person on notice that his actions may infringe is not sufficient. The question is whether the reasonable man would believe that he was a secondary infringer: *Hutchison Personal Communications Ltd v Hook Advertising Ltd* [1995] FSR 365.

<sup>189</sup> [1997] FSR 718.

<sup>190</sup> [2004] EWHC 895 (Ch).

The need to show a mental element on the part of a secondary infringer must be contrasted with the acts restricted by copyright under ss 16–21, in which the question of the infringer’s mental element does not arise. If he commits or authorises one of the acts, he infringes copyright regardless of whether he knows that copyright subsists in the existing work and regardless of whether or not it is reasonable for the infringer to suspect that copyright subsists in the work. The strictness of this state of affairs is tempered by the fact that the availability of the remedy of damages is dependent upon the infringer’s mental state.<sup>191</sup>

<sup>191</sup> On the basis of the same formula: Copyright, Designs and Patents Act 1988 s 97(1).

Secondary infringement of copyright involves any of the following activities:

- 1 importing an infringing copy into the UK, other than for private or domestic use (s 22);
- 2 possessing or ‘dealing’ with an infringing copy; this includes possession in the course of business, selling, letting for hire, offering or exposing for sale or hire,<sup>192</sup> exhibiting or distributing in the course of business or distributing (otherwise than in the course of business) to such an extent as to affect prejudicially the owner of the copyright (s 23);
- 3 making, importing into the UK, possessing in the course of business or selling, letting for hire, offering or exposing for sale or hire an article specifically designed or adapted for making infringing copies of a work knowing or having reason to believe that it will be used to make infringing copies (s 24(1));
- 4 transmission of the work by means of a telecommunications system (otherwise than by communication to the public) without the licence of the copyright owner, knowing or having reason to believe that infringing copies of the work will be made by means of reception of the transmission in the UK or elsewhere (s 24(2));
- 5 permitting the use of premises, being a place of public entertainment, for an infringing performance of a literary, dramatic or musical work; a ‘place of public entertainment’ includes places that are only occasionally made available for hire for the purposes of public entertainment – for example, a room in a public house which is hired out from time to time for functions such as weddings (s 25);
- 6 where copyright is infringed by a public performance of the work, or by playing or showing the work in public, supplying the apparatus or a substantial part of it for the playing of sound recordings, the showing of films or the receiving of visual images or of sounds conveyed by electronic means. The person supplying the apparatus or a substantial part of it must know or have reason to believe that it was likely to be used to infringe copyright or, in the case of apparatus whose normal use involves a public performance, playing or showing, he did not believe on reasonable grounds that it would not be used so as to infringe copyright (s 26);
- 7 an occupier of premises who gives permission for the apparatus to be brought onto those premises will also be liable for the infringement if when he gave permission he knew or had reason to believe that the apparatus was likely to be so used as to infringe copyright (s 26(3));
- 8 supplying a copy of a sound recording or film used to infringe copyright if the person supplying it knew or had reason to believe that it, or a copy of it, would be used so as to infringe copyright (s 26(4)).<sup>193</sup>

<sup>192</sup> Exposing an article for sale is an invitation to treat and modern statutes use this or a similar formula to overcome the problem that this does not constitute a contractual offer, as identified in cases such as *Fisher v Bell* [1961] 1 QB 394 and *Partridge v Crittenden* [1968] 2 All ER 421.

<sup>193</sup> Strangely, this provision does not extend to computer programs.

In all cases, apart from those involving public performances, to be liable the person concerned must have actual knowledge or have had reason to believe, for example, that the copy is an infringing copy or that the copy supplied by him is to be used in such a way so as to infringe copyright. However, there is a subtle difference in the mental element required for the infringement under s 25 in that the person giving permission for the premises to be used for the performance will be liable unless, at the time he gave permission, he believed on reasonable grounds that the performance would not infringe

copyright. A similar expression is used in s 26(2) in terms of providing apparatus the normal use of which involves a public performance. Therefore, for these two instances, the test is a blend of the subjective and the objective. It is plain from the wording that the defendant will carry the burden of proof. He will have to show that he did not believe that copyright would be infringed, and furthermore that this belief was based on reasonable grounds. This might be an onerous burden, but the activities involved give rise to civil liability only, which accounts for the difference in the mental element compared to the other secondary infringements.<sup>194</sup>

Some of the secondary infringements involve ‘infringing copies’ of the work, and the meaning of this phrase is given in s 27 as being:

- 1 an article, the making of which constituted an infringement of copyright, or
- 2 an article which has been or is proposed to be imported into the UK and its making in the UK would have infringed copyright or would have been a breach of an exclusive licence agreement, or
- 3 copies which are infringing copies by virtue of several provisions relating to the ‘acts permitted in relation to copyright works’.<sup>195</sup>

An article for the purposes of s 27 does not have to be permanent and ephemeral copies may be caught. In *Sony Computer Entertainment Inc v Ball*<sup>196</sup> it was confirmed that copies of copyright works loaded into transient computer memory, facilitated by the defendant’s computer chip, may be infringing copies. What mattered was the time that the copy was made and there was no requirement that the copy had any form of permanence.

Under s 27(5), the provisions relating to imported copies are abrogated in favour of any enforceable Community right within the meaning of the European Communities Act 1972 s 2(1). This provision is not really necessary and only restates the effects of the UK’s obligations as a member of the European Community. These obligations are separate from and prevail over inconsistent national law.<sup>197</sup> Therefore, if the importation into the UK of an otherwise infringing copy is permitted by European Community law (for example, under the exhaustion of rights principle), that copy will not be deemed to be an infringing copy and the persons involved in its importation and subsequent dealings with it will not be liable for secondary infringement. However, if a person then makes copies from the imported copy once it is within the UK that person will have infringed copyright, unless this also is permitted by prevailing European Community law, an unlikely possibility.

There is a presumption, under s 27(4), that an article is an infringing copy in any proceedings where the question arises. If it is shown that the article is a copy of the work and copyright subsists or has subsisted at any time in the work, it is presumed that the article was made at a time when copyright subsisted in the work unless the contrary is proved. A person copying or dealing with a copy of any type of work should not only satisfy himself that copyright in the work had expired at the time the copy was made, or that copyright did not otherwise subsist in the work at that time, but should also be able to adduce evidence to that effect to the satisfaction of the court. Bear in mind that, in this matter, regardless of whether the proceedings are civil or criminal, proof on a balance of probabilities will suffice.<sup>198</sup>

In *Pensher Security Door Co Ltd v Sunderland City Council*,<sup>199</sup> the council placed contracts for the refurbishment of blocks of flats which included the provision of new security doors. It was held the doors supplied infringed the transitional copyright in the drawings of the doors<sup>200</sup> and that the council had the requisite knowledge after being warned by the copyright owner that the doors supplied were infringing copies. The council argued, *inter alia*, that once the doors had been fitted to the flats, they were no longer infringing copies for the purposes of s 27. Furthermore, the council did not act in the course of business. Both of these arguments were rejected by the trial judge and

<sup>194</sup> Under s 107(3), the criminal offences relating to public performances are available only against persons who ‘caused’ the work to be performed, played or shown. Furthermore, the mental element is stated to be that the person knew or had reason to believe that copyright would be infringed. It is arguable whether a person providing premises or apparatus ‘causes’ the work to be performed.

<sup>195</sup> The acts permitted in relation to copyright works are described and discussed in Chapter 7.

<sup>196</sup> [2005] FSR 159.

<sup>197</sup> See, for example, Case 6/64 *Costa v ENEL* [1964] ECR 585.

<sup>198</sup> In criminal proceedings, the prosecution must prove the accused’s guilt beyond reasonable doubt and the onus is usually also on the prosecution to negate any defence put up by the accused. However, in some circumstances the accused bears the burden of proving that the defence applies on the balance of probabilities. These circumstances include express or implied statutory provision.

<sup>199</sup> [2000] RPC 249.

<sup>200</sup> Copyright, Designs and Patents Act 1988 Sch 1, para 19(1).

the appeal to the Court of Appeal was dismissed. Aldous LJ said that even though the doors had become part of the block of flats, they remained articles for the purposes of s 23. As regards whether the council possessed the doors in the course of business, Aldous LJ saw no reason for departing from case law in other areas such as trade descriptions law and under the Unfair Contract Terms Act 1977. He said (at 281):

As has been made clear in such cases as *Davies v Sumner* [1984] 1 WLR 1301 and in *R & B Customs Brokers*,<sup>201</sup> transactions which are only incidental to a business may not be possessed in the course of that business. However, doors to flats are not incidental to the business of managing and letting flats. They are an integral part of that business.

<sup>201</sup> Reported at [1998] 1 WLR 321.

## Publication right

From 1 December 1996 a person who publishes for the first time a literary, dramatic, musical or artistic work of a film in which copyright has expired acquires a publication right, equivalent to a copyright.<sup>202</sup> The provisions of Chapter II of the 1988 Act apply to the publication right as they do to copyright and, therefore, infringement of the publication right is the same as for any other work of copyright under ss 16–21. However, the presumptions in ss 104–106 do not apply. These are discussed later in this chapter.

<sup>202</sup> See the discussion of this right in Chapter 3.

## REMEDIES FOR INFRINGEMENT OF COPYRIGHT

The remedies for copyright infringement and supplemental provisions are set out in Chapter VI of the Act in ss 96–115. This chapter of the Act comprehensively covers civil infringement, criminal offences, delivery up and destruction orders.<sup>203</sup> Although previous copyright legislation provided for effective civil remedies, the criminal penalties available for certain types of copyright infringement have been increased very significantly. Under the 1956 Act the maximum penalty was 40 shillings (£2.00) per infringing copy but now a maximum of ten years' imprisonment is available.

<sup>203</sup> Conversion damages were available under the Copyright Act 1956 but appear to be no longer available on the basis that they are not specifically mentioned in the 1988 Act though the use of the phrase 'or otherwise' after listing the civil remedies available for copyright infringement in s 96(2) may have preserved this remedy. Even so, it is unlikely that a court would award conversion damages given the availability of additional damages.

To deny a copyright owner a remedy for infringement of his copyright is to be in breach of Article 1 of Protocol 1 to the Council of Europe Convention for the Protection of Human Rights and Fundamental Freedoms. Article 1 states:

Every natural or legal person is entitled to the peaceful enjoyment of his possessions. No one shall be deprived of his possessions except in the public interest and subject to the conditions provided for by law and by the general principles of international law . . .

<sup>204</sup> [2009] ECDR 53.

In *Balan v Moldova*,<sup>204</sup> Mr Balan was the author of a photograph of a castle in Moldova. He published the photograph but, without his knowledge, the State of Moldova used the photograph, amongst others, as a background for its national identity cards. After some litigation, the Moldovan Supreme Court of Justice eventually held that the identity cards were official documents which were not subject to copyright. The court did, however, accept that Mr Balan had intellectual property rights in the photograph. The European Court of Human Rights distinguished between copyright as a property right and the property right in the identity cards themselves. Having identity cards may have been in the public interest but that could have been satisfied in other ways, such as using another photograph or by seeking a licence from Mr Balan. Thus, there was a breach of Article 1 of Protocol 1 and the court awarded Mr Balan €5,000 for pecuniary and non-pecuniary loss.

Before looking at each of the remedies, it is appropriate to consider first the problem of obtaining evidence, particularly in civil matters. The following discussion is also relevant for other intellectual property rights. (Search and seizure provisions are available for the criminal offences and are discussed later.)

## Obtaining evidence for civil proceedings

In terms of all the forms of intellectual property, the question of obtaining evidence is of vital importance. If the person infringing the right discovers that he is to be sued for that infringement, he may be tempted to destroy materials and articles, such as pirate copies of music CDs and film DVDs, that would incriminate him. There is a limited power given by the 1988 Act to a copyright owner to seize infringing articles, but this will apply only in a small number of cases. Normally, if a copyright owner believes that his rights are being infringed and there is a real danger that the person involved will dispose of the evidence before the trial, the copyright owner should apply to the High Court for a search order (formerly known as an *Anton Piller* order) which will enable him, accompanied by his solicitor, to enter the premises where the offending materials and articles are kept and remove them, or have copies made, so they can be produced at the trial.

The *Anton Piller* order took its name from a case involving the alleged disclosure of confidential information concerning frequency converters for computers. In *Anton Piller KG v Manufacturing Processes Ltd*,<sup>205</sup> it was held that, in exceptional circumstances, where the claimant has an extremely strong prima facie case, where the actual or potential damage to the claimant is very serious, where it was clear that the defendant possessed vital evidence and where there was a real possibility that he might destroy or dispose of such material so as to defeat the ends of justice, the court had the jurisdiction to order the defendant to ‘permit’ the claimant’s representatives to enter the defendant’s premises and inspect and remove such materials. The object of a search order in this context is the preservation of evidence. When an order is granted, the claimant has to give an undertaking in damages in case the claimant is wrong and the defendant suffers damage as a result of the execution of the order. However, before the court will grant a search order, the claimant must be able to convince the court that he has a strong case and that the order is indeed essential to the ends of justice.<sup>206</sup> In *Systematica Ltd v London Computer Centre Ltd*,<sup>207</sup> Whitford J said that ‘too free a use is being made of the *Anton Piller* provision’. In this case, the defendant was carrying on his business quite openly and there was only a mere suspicion that he was infringing the claimant’s copyright. There was nothing to stop the claimant from simply walking into the defendant’s shop and buying the articles in question over the counter. Sometimes, there is a suspicion that the motives for applying for the order are not to obtain evidence, but to remove so much material that the alleged infringer is, effectively, put out of business.

It is very important that the claimant does not exceed the provisions of a search order. In *Columbia Picture Industries v Robinson*,<sup>208</sup> the claimants (there were 35 of them) alleged that the defendant was a video pirate and claimed that he had copied 104 films, infringing copyright, registered trade marks and, additionally, being guilty of the tort of passing off. The claimants sought and obtained a search order and a freezing injunction (previously known as a *Mareva* injunction), the purpose of the latter being to freeze the defendant’s assets, preventing him from removing them from the jurisdiction of the court. But the claimants were excessive in their execution of the search order and they took more material than was identified in the order, virtually emptying the defendant’s premises, apparently taking even the defendant’s divorce papers and private correspondence. It appeared that the claimants’ real motive in obtaining the order was to shut down the defendant’s business. It was held that the method of execution was an abuse of the order. While accepting that the defendant had been infringing copyright and awarding an injunction and damages to the claimants, Scott J awarded the sum of £10,000 in compensatory and aggravated damages to the defendant under the claimants’ cross-undertaking in damages.

205 [1976] 1 Ch 55.

206 In *Jeffrey Rogers Knitwear Productions Ltd v Vinola (Knitwear) Manufacturing Co* [1985] FSR 184, Whitford J, in discharging an *Anton Piller* order, said that it was improper to rely on stale evidence used in other proceedings in making application to the court for an order. The applicant must prepare his application to a very high standard, especially if it is made *ex parte* (now without notice), as will usually be the case.

207 [1983] FSR 313.

208 [1987] 1 Ch 38.

Scott J identified five criteria essential to the execution of a search order as follows.

- 1 The order must be drawn so as to extend no further than the minimum extent necessary to achieve its purpose, that is the preservation of documents or articles which might otherwise be destroyed or concealed. After inspection and copying by the claimant's solicitors, the materials should be returned to the owner.
- 2 A detailed record should be made by the solicitors executing the order of the materials to be taken before removal from the defendant's premises.
- 3 Only materials clearly covered by the order should be taken.
- 4 If the ownership of seized material is in dispute, it should be handed over to the defendant's solicitors on their undertaking for its safe custody and production.
- 5 The affidavits in support ought to err on the side of excessive disclosure. In the case of material falling in the grey area of possible relevance, the judge, not the claimant's solicitor, should be the arbiter.

Search orders have been abused in their exercise in the past, so they are now granted sparingly. Further guidelines were suggested by Nicholls V-C in *Universal Thermosensors Ltd v Hibben*<sup>209</sup> which concerned the execution of an order at a private house at 7.15 am. The house was occupied at the time by a woman and her children. The Vice-Chancellor made the following points:

209 [1992] 3 All ER 257.

- (a) the order should be executed during normal office hours so that the defendant could take immediate legal advice;
- (b) if the order was to be executed at a private dwelling and there was a chance that a woman might be alone there, the solicitor executing the order should be accompanied by a woman;
- (c) a list of items taken should be made, giving the defendant an opportunity to check it;
- (d) if the order contained an injunction restraining the defendant from informing others (for example, co-defendants), the period should not be too long;
- (e) in the absence of good reason otherwise, orders should be executed at business premises in the presence of a responsible officer or representative of the defendant's company;
- (f) provision should be made to prevent the claimant going through all the defendant's documents (for example, where the parties were competitors and the claimant could thereby gain useful and sensitive information about the defendant's business unrelated to the alleged infringement);
- (g) ideally, the order should be executed by a neutral solicitor who was experienced in the execution of search orders.

210 Standard forms have also been made for notice of *Mareva* injunctions.

211 [1994] RPC 617.

A standard form was developed for search orders.<sup>210</sup> A copy of the form, which should be used except where the judge hearing the application considers there is good reason for using a different form, is contained in the *Practice Direction: Mareva Injunctions and Anton Piller Orders*.<sup>211</sup> The order requires the addressee to allow the persons listed to enter the named premises, to hand over articles and provide information as required. It also states that the addressee may insist that, apart from the claimant's solicitor, any person who could gain commercially from what he might read or see is not present and that entry may be refused before 9.30 am or after 5.30 am, or on Saturday or Sunday.

The *Practice Direction* itself stresses the use of an independent supervising solicitor who is familiar with the operation of search orders and, *inter alia*, requires a woman to be present when the order is served if it is likely that the premises are occupied by an unaccompanied woman and, where appropriate, that items removed under the order are insured by the claimant.

Although the *Practice Direction* made the use of search orders more satisfactory, controversy about them and their execution remained. The Lord Chancellor's Department issued an advisory paper suggesting, *inter alia*, that the order be placed on a statutory footing.<sup>212</sup> This was done and, in England and Wales, is provided for under s 7 of the Civil Procedure Act 1997. This allows the court to make an order for the purpose of securing the preservation of evidence or property that may become the subject matter of proceedings. The order will describe the steps to be taken which may include carrying out a search for or inspecting anything described in the order or the making or obtaining of a copy, photograph or sample or other record as may be described in the order. The order may also require the provision of information or articles and for the safe keeping or retention of anything described in the order. The right of an individual (or spouse or civil partner) to refuse to do anything on the grounds of self-incrimination is not affected by s 7.

Even though a defendant has behaved wrongfully the grant of a search order is not inevitable apart from any issue of the balance of convenience. For example, a person who has knowingly and wrongfully taken confidential information may still comply with a court order for delivery up. In *Lock International plc v Beswick*,<sup>213</sup> Hoffmann J said that there must be proportionality between the perceived threat to the claimant's rights and the remedy granted. Where the subject matter of a search order is in software form stored on computers in the defendant's possession and there is a serious danger that, although the defendant was likely to comply with an order for delivery up of the computers, he will first erase the software, the grant of an order might well be appropriate.<sup>214</sup>

The Copyright, Designs and Patents Act 1988 does provide the copyright owner with a limited power of seizure. Bearing in mind that pirated copies of copyright works frequently are sold at 'unofficial' markets, car boot sales and the like, s 100 gives the copyright owner a right of seizure of infringing articles at such places. Notice of the proposed seizure must be given to a local police station and the premises at which the infringing articles are located must not be a permanent or regular place of business. Additionally, the copyright owner must leave a prescribed form giving particulars of the person making the seizure and the grounds for the seizure.<sup>215</sup> Force may not be used in effecting the seizure. It is unlikely that this provision will be used frequently because of the limited circumstances in which it is available and because of the attendant conditions.

### Search orders (*Anton Piller* orders) and the privilege against self-incrimination

Infringing intellectual property rights, in some circumstances, may also involve criminal offences. For example, making copies of a work of copyright without permission and selling those copies, knowing or having reason to believe the copies are infringing copies is a criminal offence under the Copyright, Designs and Patents Act 1988 s 107, as well as a civil infringement of copyright under s 16 and, indeed, a secondary infringement under s 23. Making or dealing with counterfeit articles may also attract criminal liability in a number of ways, under specific intellectual property legislation, trade descriptions and related legislation or, where two or more people are involved, as common law conspiracy to defraud. In many cases, civil wrongs will also be committed, such as under the Trade Marks Act 1994.

The rule against self-incrimination is firmly rooted in English law. However, because of the overlap between the civil and criminal law in intellectual property matters, a defendant complying with a court order, such as a search order, may find that he is asked to hand over documents or other materials tending to show that he has committed criminal offences. In *Rank Film Distributors Ltd v Video Information Centre*,<sup>216</sup> the House of Lords upheld the Court of Appeal's decision to the effect that the privilege

<sup>212</sup> *Anton Piller Orders: A Consultation Paper*, Lord Chancellor's Department, November 1992.

<sup>213</sup> [1989] 1 WLR 1269 at 1281.

<sup>214</sup> *Indicii Salus Ltd v Chandrasekaran* [2006] EWHC 680 (Ch).

<sup>215</sup> The form is contained in the Copyright and Rights in Performances (Notice of Seizure) Order 1989, SI 1989/1006.

<sup>216</sup> [1982] AC 380.

against self-incrimination could be invoked in such cases, pointing to practical difficulties including the fact that search orders are intended to take effect immediately. To overcome this decision, which could have significantly weakened if not destroyed the effectiveness of search orders, in England and Wales, the Supreme Court Act 1981 s 72 withdrew the privilege in civil proceedings relating to infringement of intellectual property rights and passing off. In terms of proceedings for intellectual property infringement or passing off, to obtain disclosure of information relating to intellectual property infringement or passing off or to prevent any apprehended infringement of any intellectual property right or for passing off, it states that:

- ... a person shall not be excused, by reason that to do so would tend to expose that person, or his or her spouse or civil partner, to proceedings for a related offence or for the recovery of a related penalty –
- (a) from answering any question put to that person in the first-mentioned proceedings; or
  - (b) from complying with any order made in those proceedings.

The section goes on to say that statements or admissions made in answering questions or complying with an order are not admissible in proceedings for related offences or the recovery of related penalties, except in proceedings for perjury or contempt of court.

The scope of the rule against self-incrimination and the impact of s 72 of the 1981 Act are very important in terms of intellectual property matters, particularly in terms of whether the protection in s 72 is available in respect of civil contempt. Civil contempt may be relevant in terms of failure to comply with a court order: for example, a search order or undertakings given to the court, say, in a consent order. Distinguishing civil contempt from criminal contempt, it was held in *Cobra Golf Inc v Rata*<sup>217</sup> that civil contempt was a related penalty and s 72 applied. In that case, the alleged contempt was in relation to a consent order given by the defendants in an action for trade mark infringement and passing off concerning golf clubs bearing a snake device.

<sup>217</sup> [1997] FSR 317.

### Civil remedies

The Copyright, Designs and Patents Act 1988 provides an ample range of remedies for copyright infringement. Section 96 states that infringement is actionable by the copyright owner but this is not exhaustive as, under s 101, an exclusive licensee has, except as against the copyright owner, the same rights and remedies as the copyright owner which run concurrent with those of the owner.<sup>218</sup> Of course, an exclusive licensee will be able to take action only if the infringement concerns the subject matter of the licence agreement. For example, if an exclusive licence is granted with respect to the public performance rights in a dramatic work, the licensee will be able to sue a person who performs the dramatic work in public, but will not be able to sue a person who simply makes copies of the work. As from 31 October 2003 a non-exclusive licensee may be able to bring proceedings. Section 101A permits this if the act complained of was directly concerned with the prior licensed act, where the licence is in writing and expressly grants the licensee a right of action.<sup>219</sup> Such a non-exclusive licensee has the same rights and remedies as the copyright owner and the provisions concerning the exercise of concurrent rights under s 102 apply as they do to exclusive licensees. A non-exclusive licensee is one authorised by the licence to exercise a right which remains exercisable by the copyright owner.

The civil remedies available for infringement of copyright are damages, injunctions, accounts, 'or otherwise'. These are stated by s 96(2) as being available in respect of a copyright infringement as they are available in respect of any other property right (remembering that s 1(1) describes copyright as a property right). Although the previous legislation included conversion damages, it is conceivable that the addition of the

<sup>218</sup> The Copyright, Designs and Patents Act 1998 s 102 deals with the exercise of concurrent rights. Normally, the copyright owner or an exclusive licensee may not proceed alone without joining the other except with the leave of the court. Section 102 also deals with the matter of remedies in cases involving exclusive licensees and copyright owners having concurrent rights.

<sup>219</sup> Section 101A was inserted by the Copyright and Related Rights Regulations 2003, SI 2003/2498.

phrase ‘or otherwise’ still permits the use of conversion damages, as they are available as a general rule in tort for wrongfully dealing with another person’s property.<sup>220</sup> Nonetheless, it is unlikely that such a remedy would be claimed and even less likely that it would be granted.<sup>221</sup> The phrase will include an order for specific performance, such as an order for a written, signed assignment of copyright in a situation where a purported assignment has turned out to be defective in some way. However, it should be noted that injunctions and accounts of profits are equitable in nature and factors that might be important are whether the claimant acted promptly, whether injustice would be done to innocent third parties and whether the claimant came to the court with ‘clean hands’. Other remedies available are additional damages (s 97(2)) and delivery up (s 99).

Where the alleged infringing work is a work of architecture, it may be possible to register a caution against dealing with land under the Land Registration Act 1925 s 54(1).<sup>222</sup> This may be particularly useful in the case of a house being built for sale which is alleged to infringe the copyright in an architect’s drawings, as the limitation on injunctions under the Copyright Act 1956 s 17(4) (no injunction or other order shall be made to prevent a building from being completed or to require its demolition) has no equivalent under the 1988 Act. Whilst it would be extremely unlikely that an infringing building would be ordered to be demolished, registering a caution could focus the alleged infringer’s mind wonderfully. However, under s 77 of the Land Registration Act 2002, a person lodging a caution must not do so without reasonable cause and is under a duty to any person who suffers damage in consequence of the breach of that duty. Nevertheless, in limited and appropriate cases, it could prove a useful alternative approach to an application for an interim injunction (previously known as an interlocutory injunction), especially where it is doubtful that the court will grant an injunction: for example, where the balance of convenience lies in favour of the defendant.

The claimant has to elect between damages and an account. At one time, the claimant would have had to make that election without knowing what profits the defendant made from the infringement. This was very unsatisfactory and explained why accounts were rarely sought. However, in *Island Records Inc v Tring International plc*,<sup>223</sup> Lightman J said that a claimant should not have to make such a decision in the dark. Rather, it should be an informed decision. Thus, it might be appropriate to require the defendant to supply affidavit evidence setting out sufficient information to allow the claimant to decide. The information does not have to be enormously detailed, imposing a substantial amount of work on the defendant, and, in *Brugger v Medicaid*,<sup>224</sup> it was held that an affidavit setting out numbers of alleged infringing articles made and sold, the sums received or receivable and an approximate estimate of costs, together with a statement as to how that estimate was made would be sufficient. This development might have resulted in an increase in the proportion of cases in which a claimant elects for an account rather than damages, though there seems little evidence of this in practice.

In appropriate cases, a claimant may be able to obtain an order for disclosure of the identities of persons to whom infringing copies have been supplied. This could assist the claimant in putting together a claim for damages or to initiate proceedings against the recipients of infringing copies. However, a court may be reluctant to grant an order for disclosure because of the potential for harming the defendant’s business.<sup>225</sup>

There are special provisions in respect of infringements of a copyright for which a licence is available as of right under s 144 (powers exercisable in consequence of a report of the Competition Commission).<sup>226</sup> In such a case, no injunction shall be granted, there may be no order for delivery up under s 99 and the amount recoverable by way of damages or an account of profits shall not exceed double the amount which would have been payable under the licence as of right provided that, in proceedings, the defendant undertakes to take a licence on terms to be agreed or, failing agreement, on terms to be settled by the Copyright Tribunal under s 144.<sup>227</sup> The undertaking may be given at

<sup>220</sup> Conversion damages were specifically provided for by the Copyright Act 1956 s 18. Section 18 did not apply after commencement of the 1988 Act unless the proceedings began before: Copyright, Designs and Patents Act 1988 Sch 1, para 31(2). Conversion damages could result in a windfall for the claimant, for example if the subject matter of the claimant’s rights was incorporated in some larger material or item.

<sup>221</sup> A judge would surely point to the fact that if Parliament intended to retain conversion damages for copyright infringement it would have mentioned them expressly. The use of ‘or otherwise’ might point to other remedies such as interim remedies or, for example, a declaration.

any time before the final order in the proceedings without any admission of liability. Remedies existing before licences of right were available are unaffected.

## Damages

The copyright owner (or exclusive licensee or non-exclusive licensee with a right to sue under s 101A) will usually ask the court for damages, which can be expected to be calculated, as with other torts, on the basis of putting the claimant in the position he would have been had the tort not been committed, that is to compensate him for the actual loss suffered in so far as it is not too remote.<sup>228</sup>

In *Claydon Architectural Metalwork Ltd v DJ Higgins & Sons*<sup>229</sup> it was said that the normal measure of damages for copyright infringement is the amount by which the value of the copyright as a chose in action has been depreciated.<sup>230</sup> Consequential damages are available in the usual way provided that they arose directly and naturally from the tort. In the *Claydon* case, secondary damages associated with cash flow problems caused to the claimant by the defendant's acts were said to be too remote. Therefore, merely showing a causal link between the act and the loss is not enough.<sup>231</sup>

Some forms of damages might be available in patent cases where they would not be in a copyright case. This is a result, not of the existence of different rules on remoteness for patents and copyright, but of the different nature of the rights. In *Work Model Enterprises Ltd v Ecosystem Ltd*,<sup>232</sup> the defendant copied text from the claimant's brochure for office partitions. The claimant's claim for damages for lost sales of partitions and for price depression was held to be the result of the defendant's competition rather than the copyright infringement and, as a consequence, unrecoverable. Similarly, in *Paterson Zochonis & Co Ltd v Merfarken Packaging Ltd*,<sup>233</sup> the fact that a printer infringed the copyright in the design of packaging did not make him liable for the subsequent passing off by the customer for which he had carried out the printing work. In patent cases, there may be much more of a nexus between the infringement and, for example, lost sales in non-patented products sold alongside the patented product or in the sale of spare parts for such products.<sup>234</sup> This is a consequence of the nature of the monopoly right granted to patent proprietors.

Damages might be assessed as the amount of royalties the copyright owner would have secured had the infringer obtained and paid for a licence to perform whatever the infringing act was.<sup>235</sup> This is a somewhat artificial and rough and ready exercise as the court is trying to put a value on a transaction which did not happen: it is a notional royalty.<sup>236</sup> Where a copyright owner grants licences but the defendant refuses to accept a licence and chooses to infringe instead, it might be reasonable to assume that the damages should be based on the royalty asked by the copyright owner. However, this approach can be criticised as it allows the copyright owner to set the level of damages. In *Ludlow Music Inc v Williams*,<sup>237</sup> a royalty of 50 per cent was asked for but the judge awarded 25 per cent as damages.

Another way of calculating the quantum of damages, depending on the circumstances, might be based on the profit the copyright owner would have derived from sales lost as a result of the infringement. If it would be reasonable for the work to have been produced for a fee, such as an architect's drawings for a building, damages could be set at what would have been a reasonable fee for the drawings.<sup>238</sup> It will generally depend on whether the infringement relates to an 'original' work (for example, a literary work), or to a derivative work such as a film or sound recording; calculation by reference to lost royalties is more appropriate to the former.

One problem for a copyright owner might be proving his losses in a situation where it may appear that the defendant sold more copies of the work than the claimant might have sold. This might be because the defendant has a bigger customer base or has very

<sup>228</sup> Apart from the criminal offences, infringement of copyright is in the nature of a tort.

<sup>238</sup> *Jones v London Borough of Tower Hamlets* [2001] RPC 407. Damages in that case were assessed on that basis, by consent of the parties, at £1,000.

effective marketing. In *Blayney v Clogau St Davids Gold Mines Ltd*,<sup>239</sup> the claimant created a new design for a ring to be made in Welsh gold. He sold these to the first defendant, who sold them on. Eventually their business relationship broke down and the first defendant engaged other craftsmen to make rings to the design. The judge held that the claimant would only have sold around 10 per cent or 25 per cent of the total sold by the defendants (depending on the period and the mode of sale) and awarded damages on the basis of the lost profits on such sales. The final award was £18,492.03 plus interest.

In claiming for lost profits, causation must be shown, that is, that the defendant's infringing activities were the cause of the losses claimed.<sup>240</sup> In *Peninsula Business Services Ltd v Citation plc*,<sup>241</sup> both parties were in the business of providing consultancy services in the field of employment law, health and safety law and related areas. The defendant commenced business in 1995 and engaged an ex-employee of the claimant who had deliberately copied some of the claimant's handbooks which were used as a basis for the defendant's handbooks. The claimant claimed damages of around £600,000 for lost profits on lost sales and additional damages. The judge held that it was not sufficient for such a claim to show that infringing material was used by the defendant in competition with the claimant's business. It also had to be shown that the use of the infringing materials was the cause of the claimant's losses. In the present case, the use of the infringing materials were ancillary to the defendant's otherwise lawful business. The judge awarded £9,000 instead on the basis that that was a fair estimate of the cost of obtaining a non-infringing set of handbooks.<sup>242</sup>

It is wrong to assess damages at a fictitiously high level; compensatory damages must reflect the actual loss to the claimant. The view is reinforced by the fact that the 1988 Act provides for additional damages. In *Michael O'Mara Books Ltd v Express Newspapers plc*,<sup>243</sup> the authors and publisher of *Fergie – Her Secret Life* were aggrieved when the editor of the *Daily Express* acquired two infringing copies of the book. Unknown to him, his wife offered one copy to the *Sun* newspaper for £4,000 but a trap was set and she was arrested for being in possession of an infringing copy. The claimants asked for damages of £8,000 in respect of the two infringing copies. However, the judge did not accept that the copies could have been sold for £4,000 each and he awarded damages of £125 against each of the four defendants.

Where it is not possible to prove any loss, a court may make an award a reasonable sum for the use of the claimant's materials on the basis of the benefit accruing to the wrongdoer. The Court of Appeal approved of this principle in *Experience Hendrix LLC v PPX Enterprises Inc*,<sup>244</sup> applying the restrictive covenant case of *Wrotham Park Estates Co v Parkside Homes Ltd*.<sup>245</sup>

The Intellectual Property (Enforcement, etc.) Regulations 2006 came into force on 29 April 2006.<sup>246</sup> Reg 3 sets out the principles to apply in assessing the quantum of damages where the defendant knows or has reasonable grounds to know that he is engaging in infringing activity.<sup>247</sup> In such a case, damages shall be appropriate to the actual prejudice suffered by the claimant resulting from the infringement.

- (a) All appropriate aspects shall be taken into account, including in particular:
  - (i) the negative consequences, including any lost profits, which the claimant has suffered, and any unfair profits made by the defendant; and
  - (ii) elements other than economic factors, including the moral prejudice caused to the claimant by the infringement; or
- (b) where appropriate, they may be awarded on the basis of royalties or fees which would have been due had the defendant obtained a licence.

The references to the claimant's lost profits and unfair profits made by the defendant seems to suggest that a claimant could, in some circumstances, be awarded more than

<sup>239</sup> [2002] FSR 233.

<sup>240</sup> It is wrong to take account of non-infringing uses such as where mere ideas are taken.

<sup>241</sup> [2004] FSR 359.

<sup>242</sup> The judge also awarded £18,000 for additional damages: see later.

<sup>243</sup> [1999] FSR 49

<sup>244</sup> [2003] FSR 853.

<sup>245</sup> [1974] 2 All ER 321.

<sup>246</sup> SI 2006/1028. The Regulations implemented a number of Community instruments including Directive 2004/48/EC of the European Parliament and of the Council of 29 April 2004 on the enforcement of intellectual property rights, OJ L 157, 30.04.2004, p 45.

<sup>247</sup> Reg 3 applies to all types of intellectual property rights and is not restricted to copyright.

248 Article 3(1) of the Directive requires that measures, procedures and remedies for enforcing intellectual property rights shall be fair and equitable. This would seem to rule out double-counting.

his actual losses. It would be like getting damages and an account profits though traditionally these have always been alternatives. It is submitted that such double-counting will not be carried out in practice, especially as an account of profits remains as an alternative to damages.<sup>248</sup> In most cases, where the claimant exploits his copyright work by granting licences, an appropriate royalty or fee should be the most appropriate formula to use in calculating the quantum of damages. Elements other than economic factors will be relevant where the copyright owner does not exploit his work commercially, such as where a private photograph belonging to the claimant is published without his permission.

Knowledge on the part of the defendant is not required for establishing liability for the 'primary' infringements of copyright, but there is such a requirement before the claimant can be entitled to damages. Section 97(1) states that if it is shown that at the time of the infringement the defendant did not know, and had no reason to believe, that copyright subsisted in the work to which the action relates, the claimant is not entitled to damages against the defendant. This is without prejudice to other remedies that might be available to the claimant, such as an injunction or an account of profits. The formula for the defendant's knowledge is the same as for secondary infringements, and what has been said in that context above should apply here also. An award of damages will sometimes go hand in hand with the granting of an injunction ordering the infringer to cease carrying out the infringing activities. There may also be an order for delivery up (discussed later), for example, of pirate copies of sound recordings in the infringer's possession. A wise copyright owner will apply a prominent copyright notice to copies of his work so that infringers cannot claim to be ignorant of the subsistence of copyright in the work.

## INJUNCTIONS

249 Injunctions are classified as 'prohibitory injunctions' and 'mandatory injunctions'; the latter orders the person to whom it is addressed to carry out some act, such as demolishing a dangerous wall.

An injunction is an order of the court which prohibits an act or the commencement or continuance of an act. Alternatively, the injunction might order a person to perform some act.<sup>249</sup> For example, an injunction may be granted by the court ordering a person to cease making infringing copies of a work of copyright, or to destroy some article in his possession which is used for making infringing copies. Injunctions are equitable and therefore discretionary. They will not generally be granted if ordinary damages would be an adequate remedy. However, in terms of intellectual property rights, injunctions are very commonly asked for and frequently granted.

250 The doctrine of laches ('delay defeats equity') is relevant here.

In a situation where a person is marketing unauthorised copies of articles in which copyright subsists, it is vital that the aggrieved party takes action as quickly as possible.<sup>250</sup> Many items in which copyright subsists have a limited commercial lifespan: for example, copies of recordings of popular music, films, bestselling novels and computer software. Unless the person infringing the copyright can be stopped quickly the damage will be considerable, and it may be some years before a full civil action can be heard, after which time the person responsible for the infringement may have disappeared or dissipated his assets and be a 'man of straw'. Therefore, the availability and use of interim injunctions (formerly known as 'interlocutory injunctions') is extremely important in terms of all intellectual property rights, including copyright. An interim injunction is intended to take effect pending the full trial. The claimant must undertake to pay the defendant's losses resulting from the interim injunction should the defendant succeed at the full trial. Interim injunctions are often sufficient to dispose of a case which never comes to a full trial, either because the defendant loses heart and realises he has little chance of eventual success or because the effects on his business are crippling; therefore, such injunctions are not lightly granted.

Certain criteria are used by the courts in determining whether or not to grant an interim injunction. In *American Cyanamid Co v Ethicon Ltd*,<sup>251</sup> a case concerning an alleged infringement of the patent relating to a surgical suture, the basis for granting an interim injunction was discussed. Lord Diplock said (at 406):

251 [1975] AC 396.

The object of an interlocutory injunction is to protect the claimant against injury by violation of his right for which he could not be adequately compensated in damages recoverable in the action if the uncertainty were resolved in his favour at the trial; but the claimant's need for such protection must be weighed against the corresponding need of the defendant to be protected against injury resulting from his having been prevented from exercising his own legal rights for which he would not be adequately compensated under the plaintiff's undertaking in damages if the uncertainty were resolved in the defendant's favour at the trial. The court must weigh one need against another and determine where the 'balance of convenience' lies.

Obviously, the court must be satisfied that there is a serious issue to be tried. If there is, then the court must weigh the claimant's and the defendant's needs in the balance of convenience. In a wide sense, this will call for a consideration of whether damages would adequately compensate the claimant if the injunction were refused and the claimant succeeds at the trial, and whether the claimant's undertaking in damages to an enjoined defendant would be adequate to protect him should he succeed at the trial. If there is some doubt as to whether damages would adequately compensate either party, depending on the outcome at the trial, a narrow balance of convenience is used involving a variety of factors. This will usually call for a consideration of the impact of granting or refusing the injunction on each of the parties. For example, if the interim injunction would result in the closure of a factory, resulting in unemployment, it would be less likely to be granted.

The test was later modified for cases where the granting or refusal of the injunction would have the effect of finally disposing of the matter (for example, where it would completely close down the defendant's entire business operation). In such cases, in *NWL Ltd v Woods*,<sup>252</sup> which concerned a shipping trade dispute, Lord Diplock said that the likelihood of the claimant succeeding in his claim for an injunction at the full trial was a factor that should be brought into the 'balance of convenience' by the judge in considering the risks of injustice from his deciding the application one way rather than another. The *American Cyanamid* approach is not of universal application. For example, if the complaint concerns an alleged breach of covenant in restraint of trade, an interim injunction will be appropriate if the covenant is prima facie valid.<sup>253</sup> To grant the injunction would be to deprive the covenantee completely of the benefit of the covenant.

252 [1979] 1 WLR 1294.

253 *Office Overload Ltd v Gunn* [1977] FSR 39.

At one time, it was thought that, except in exceptional cases like *NWL v Woods*, all the claimant had to show was a serious issue before the court engaged in a consideration of the balance of convenience. Interim injunctions can be traced back to the Court of Chancery and, before *American Cyanamid*, the courts usually adopted a flexible approach. For example, in *Hubbard v Vosper*,<sup>254</sup> Lord Denning said (at 96):

254 [1972] 2 QB 84.

The remedy by interlocutory injunction is so useful that it should be kept flexible and discretionary. It must not be made the subject of strict rules.

Whilst the sentiment was approved by the House of Lords in *American Cyanamid*, many thought that Lord Diplock had intended that a consideration of the relative strength of the parties' cases should not be made. Of course, one justification for this was that the court would not, in an application for an interim injunction, have the benefit of all the evidence and argument that would be present in a full trial. Nevertheless, Laddie J disagreed with this interpretation of Lord Diplock's judgment in *Series 5 Software Ltd v Philip Clarke*.<sup>255</sup> After looking again at *American Cyanamid*, Laddie J

255 [1996] FSR 273.

said that, when deciding whether to grant interim relief, the court should bear the following matters in mind:

- (a) the grant of an interim injunction was a matter of discretion and depended on all the facts of the case;
- (b) there were no fixed rules;
- (c) the court should rarely attempt to resolve complex issues of disputed fact or law;
- (d) major factors to be taken into account are:
  - (i) the extent to which damages would be likely to be an adequate remedy and the ability of the other party to pay,
  - (ii) the balance of convenience,
  - (iii) the maintenance of the status quo, and
  - (iv) any clear view the court may reach as to the relative strength of the parties' cases.

256 [1997] FSR 891.

This approach of taking the relative strength of the parties' cases into account was followed in *EMAP Publications Ltd v Security Publications Ltd*.<sup>256</sup> An interim injunction was granted which prohibited the defendant from using a magazine cover format bearing some similarities to that of the claimant. The grant of the injunction would have been decisive, as the defendant would not have returned to its original design of cover even if it won at full trial. In such circumstances, the court was entitled to take a view as to the strength of the respective cases of each party.

257 [1992] FSR 332.

An interim injunction will not be granted if the claimant's claim is frivolous or vexatious, or if there is some doubt about whether the claimant would be granted an injunction and substantial damages at the full trial. It was so held in *Entec Pollution Control Ltd v Abacus Mouldings*,<sup>257</sup> in which it was alleged that the defendant had indirectly infringed the claimant's copyright in sketches for flask-shaped septic tanks. It was doubtful that the defendant would have been able to pay substantial damages, but it was equally doubtful whether the claimant would indeed be awarded substantial damages. As the claimant did not have a strong case, the issue would have to be tried at a full trial and not pre-empted. In some cases, the public interest may be relevant, and in *Secretary of State for the Home Department v Central Broadcasting Ltd*<sup>258</sup> it was held that the public interest did not require an interim injunction to prevent the showing of a film, alleged to infringe copyright, which included an interview with the serial killer Denis Nilson. The appellant's argument that the trial judge had taken too narrow a view of the balance of convenience and had failed sufficiently to consider the risk of distress to the relatives of the killer's victims was rejected by the Court of Appeal.

258 *The Times*, 28 January 1993.

As mentioned above, an injunction, including an interim injunction, will not usually be granted by the court if it appears to the court that damages will fairly compensate the claimant. Two questions are relevant in this respect:

- 1 Will the loss to the claimant be adequately compensated for by damages awarded later?
- 2 Is the defendant likely to be able to pay such damages?

The speed with which the claimant seeks the injunction may be relevant, because if the infringement complained of has been tolerated for some time, the assumption is that the effects cannot be that serious. Additionally, failure to apply for an interim injunction may seriously prejudice the claimant's chances of obtaining a permanent injunction at the full trial.<sup>259</sup>

259 *Jaggard v Sawyer* [1995] 1 WLR 269.

The terms of the injunction are important and should not leave the defendant in danger of contempt of court proceedings through no fault of his own. In *Microsoft Corp v Plato Technology Ltd*,<sup>260</sup> the defendant sold five copies of infringing software without realising they were counterfeit. He had bought them from an unauthorised dealer.

260 [1999] FSR 834.

The terms of the injunction were that the defendant undertook not to deal with the claimant's software which he knew or ought upon reasonable inquiry to have known to be counterfeit. An order not to obtain software from unauthorised dealers, whilst it would have met the claimant's concerns, was considered by the judge to be an unreasonable restraint of trade.

Injunctions are available against service providers<sup>261</sup> (anyone providing an information society service: for example, selling goods or services online or providing internet access or hosting a website) where the service provider has actual knowledge that someone is using the service to infringe copyright.<sup>262</sup> In determining whether a service provider has actual knowledge, account is taken of all matters that in the circumstances appear relevant, including whether he has received a notice, for example, sent to his e-mail address under reg 6(1)(c) of the Electronic Commerce (EC Directive) Regulations 2002, and the extent to which the notice includes the full name and address of the sender and the details of the alleged infringement.

<sup>261</sup> The definition is given in the Electronic Commerce (EC Directive) Regulations 2002, SI 2002/2013. Unfortunately the definition then refers to a number of EC Directives.

<sup>262</sup> Section 97A, inserted by the Copyright and Related Rights Regulations 2003, SI 2003/2498.

### Accounts (of profits)

An account of profits may be a useful alternative for the claimant in that the infringer may have made a profit from his actions which exceeds in value what would be the normal award of damages. The purpose of the remedy is to prevent unjust enrichment of the defendant.<sup>263</sup> The quantum of an account is the profit, that is the gain, made by the defendant attributable to the infringement and not the wholesale or retail value of the offending articles or materials. Consider the following hypothetical example which, for the sake of simplicity, ignores income tax and value added tax. Arthur makes 2,000 pirate copies of a popular sound recording, the copyright in which is owned by Zenith Ltd, and has sold the copies to a retailer, Nadir Music Ltd. Arthur charged Nadir £3 for each one and Nadir sells them at £5.50 each. The cost to Arthur of making the pirate copies, packaging and delivery, etc. is £3,750. If Arthur is successfully sued by Zenith for the infringement by making copies, and Zenith asks for an account of profits, Zenith should be entitled to the following sum:

<sup>263</sup> *Potton Ltd v Yorkclose Ltd* [1990] FSR 11 per Millett J.

	[£]
Arthur's income	$2,000 \times £3 = 6,000$
Arthur's expenditure	$= 3,750$
Profit made by Arthur	$= 2,250$

Therefore, an account of profits should yield Zenith £2,250. This may be better than claiming damages, which will not be available in some cases (although it is almost certain in the example that Arthur would have known that copyright subsisted in the original sound recording). Damages could be based on the fact that Zenith has been deprived of 2,000 sales, and if its profit margin is usually 10 per cent and the normal retail price is £7.50, damages would amount to £1,500:  $2,000 \times £7.50 \times 10\% = £1,500$ . Damages based on a notional lost royalty might amount to only: 12.5 per cent of  $2,000 \times £3 = £750$ , assuming a typical royalty of 12.5 per cent.

Attractive though an account of profits might appear, there are likely to be great practical difficulties in determining what the profit was in relation to the infringement, and it may be well nigh impossible to isolate this profit from the other profits made concurrently by the defendant in other, legitimate, dealings. Nevertheless, because, unlike ordinary damages, accounts are available regardless of the defendant's knowledge as to whether copyright subsisted in the work, an account of profits may be the only way in which the copyright owner can recover some monetary compensation for the infringement if the defendant's knowledge is likely to be in issue. It is clear that an account of profits is available, subject to any equitable defences, regardless of the

**264** *Weinerworld Ltd v Vision Video Ltd* [1998] FSR 832. Although s 97(1) states that damages are not available if the defendant did not know and had no reason to believe that copyright subsisted in the work infringed, this is without prejudice to any other remedy.

**265** They may be so described though technically they are not punitive although they may have a punitive element about them.

defendant’s knowledge.<sup>264</sup> In practice, the remedies of damages and accounts should be considered to be alternatives, assuming damages are available. The Act does not expressly make any statement to this effect so that it is, theoretically, possible for the claimant to ask for both. However, if this should happen and an account is ordered, the claimant will be awarded nominal damages only.

### Additional damages

Additional damages are a form of ‘punitive’ damages<sup>265</sup> and such an award may be fitting if the defendant has acted scandalously or deceitfully, or if ordinary damages or an account of profits is not appropriate: for example, where the defendant has published a work of a personal nature such as a diary which the copyright owner wished to keep private. The court has a discretion to award additional damages, and in exercising its discretion must have regard to all the circumstances and in particular to:

- (a) the flagrancy of the infringement, and
- (b) any benefit accruing to the defendant by reason of the infringement.<sup>266</sup>

Additional damages were awarded only rarely, but there is an upward trend in asking for them. In one example, *Cala Homes (South) Ltd v Alfred McAlpine Homes East Ltd*,<sup>267</sup> additional damages were awarded for infringement of an architect’s drawings of houses. It was said that neither flagrancy nor benefit accruing to the defendant were precursors in the decision to award additional damages.

Following this, in *Cala Homes (South) Ltd v Alfred McAlpine Homes East Ltd (No 2)*,<sup>268</sup> Laddie J said that additional damages were quite distinct from ordinary damages, so it was possible to claim additional damages together with an account of profits. However, in the Court of Session, Inner House, Scotland, in *Redrow Homes Ltd v Betts Brothers plc*,<sup>269</sup> it was held that a claim to additional damages under s 97(2) was not a free-standing *sui generis* right and ‘additional’ means additional to normal damages under s 96(2). Therefore, additional damages could only be claimed if normal damages were claimed. Otherwise, it would mean that an infringer could be sued for additional damages even if ordinary damages were not available, for example, because of lack of knowledge. Although Laddie J talked of ss 96 and 97 as being distinct, s 96(3) states that s 96 has effect subject to the following provisions of this chapter, including, of course, s 97.

Additional damages may resemble, but are not, exemplary damages. Rather, they are the result of a specific statutory provision. Unlike exemplary damages, a claim for additional damages can be added in after pleadings, by way of amendment.

Flagrancy was described in terms of deceitful and treacherous conduct in order to steal a march on the claimant in *Nichols Advanced Vehicle Systems Inc v Reese & Oliver*,<sup>270</sup> in which the defendants, including the chief designer and a racing driver who had held positions of responsibility with the claimant’s company, had made use of the claimant’s working drawings for a Formula One racing car to build their own cars. The defendants had inflicted humiliation and loss on the claimant that was difficult to compensate and difficult to assess. In the later follow-up case it was held by Whitford J that the award of additional damages (£2,000) should take account of the damages awarded for infringement (£1,000) and conversion (£11,000).<sup>271</sup>

Deliberately concealing the infringing work or disguising its origins, for example, by removing copyright notices or the name of the copyright owner or otherwise modifying the work, may suggest that additional damages might be appropriate, particularly if coupled with a wilful disregard of the claimant’s rights.<sup>272</sup> An honest belief by the defendant that what he was doing did not infringe, perhaps after taking legal advice, cannot amount to flagrancy to found a claim for additional damages.<sup>273</sup> Even taking a risk that the activity might infringe is, it is submitted, also not sufficient.

Additional damages may be available where an infringer has been subject to successful proceedings for contempt of court where the copyright owner has incurred expense and losses in trying to encourage the infringer to take a licence so as to comply with copyright law. In *Phonographic Performance Ltd v Reader*,<sup>274</sup> the defendant, the owner of a nightclub, refused to take a licence permitting the playing of sound recordings in public. The claimant sought to induce the defendant to take a licence and also policed his activities. Although not recoverable as costs in the action, it was held that the expenses were reasonably foreseeable and were recoverable as additional damages. Pumfrey J awarded as additional damages the cost of hiring enquiry agents and a sum equal to the unpaid licence fees. Describing the damages as additional damages seems wrong for two reasons. First, no award of ordinary damages was sought or awarded and additional damages must be additional to ordinary damages; they cannot exist in a vacuum. Secondly, although the actions of the defendant were flagrant and there was certainly some benefit accruing to him (at least in non-payment of the licence fees), the actual award could surely have been made on the basis of ordinary damages.

274 [2005] FSR 891.

What has previously been said in conversation with a potential purchaser may indicate flagrancy. In *Microsoft Corp v Ling*,<sup>275</sup> a person acting for the claimant enquired about purchasing copies of the claimant's software. What was said by one of the defendants suggested that the defendants had full knowledge that they were offering for sale unlicensed copies of the software. Prices were quoted for licensed and unlicensed copies. In the light of this and other evidence, the judge concluded that the defendants had no real prospect of defending a claim for additional damages in respect of copyright infringement.

275 [2006] EWHC 1619 (Ch).

The Copyright Act 1956 required that the court also considered whether effective relief was otherwise available, but this has disappeared from the 1988 Act. This could encourage the greater use of additional damages where the defendant's behaviour has been particularly despicable or immoral in some way. An example is provided by the case of *Williams v Settle*,<sup>276</sup> in which the defendant, a professional photographer, was commissioned by the claimant to take photographs at his wedding, the copyright in the photographs vesting in the claimant. The father of the claimant's wife was later murdered and the defendant sold photographs of the wedding group, showing the murdered man, to the press. On the basis of additional damages as provided under the Copyright Act 1956 s 17(3), or alternatively because of the court's power to award punitive damages, the claimant was awarded damages of £1,000, which were far in excess of the measure of ordinary damages that would have been awarded, as the defendant received a relatively small sum from the newspaper proprietors for the photographs.

276 [1960] 1 WLR 1072.

## Delivery up

Under s 99, upon application by the copyright owner, a court may order that infringing copies, or articles designed or adapted for making copies of the copyright owner's work, are delivered up to him or such other person as the court may direct.<sup>277</sup> Delivery up is available where a person has an infringing copy of the work in his possession, custody or control in the course of a business, or has in his possession, custody or control an article specifically designed or adapted for making copies of a particular copyright work. In relation to articles, there is an added requirement that the person knows or has reason to believe that the article has been or is to be used to make infringing copies.

277 The order is not based upon any notion that the property in the copies has passed to the claimants: see *Chappell & Co Ltd v Columbia Graphophone Co* [1914] 2 Ch 745 at 756 per Swinfen Eady LJ.

There is a time limit which applies to applications for delivery up, as provided under s 113, which corresponds to limitation of actions. Under s 113(1) the time limit is six years from the time the infringing copy or article was made. However, this may be extended if the copyright owner had been under a disability (for example, a minor or

<sup>278</sup> See Limitation Act 1980 s 38. In Scotland, disability means legal disability within the meaning of the Prescription and Limitation (Scotland) Act 1973 and, in Northern Ireland, has the same meaning as in the Statute of Limitations (Northern Ireland) 1958.

<sup>279</sup> s 114(6).

<sup>280</sup> Copyright, Designs and Patents Act 1988 s 114(5).

person of unsound mind) as in the Limitation Act 1980.<sup>278</sup> Another cause for extension of the period is if the copyright owner is prevented by fraud or concealment from discovering the facts entitling him to apply for the order.

A further requirement before an order for delivery up can be made is that the court also makes, or it appears to the court that there are grounds for making, an order under the Copyright, Designs and Patents Act 1988 s 114, being an order for the disposal of the infringing copies or other articles. The order may state that the infringing copies or other articles be forfeited to the copyright owner or destroyed, or otherwise dealt with as the court thinks fit, but the court shall consider whether other available remedies would be adequate to compensate the copyright owner and protect his interests. If more than one person has an interest in the copy or other article, the court may order that the copy or other article be sold and the proceeds divided accordingly. Other persons who may have an interest include owners of performing rights or registered designs.<sup>279</sup> If the order under s 114 is not made immediately, the person to whom the infringing copies or other articles are delivered shall retain them pending the making of the order. If a decision is taken not to make an order under s 114, the items are to be delivered to the person who had them in his possession, custody or control immediately before being delivered up.<sup>280</sup> Rarely will it be necessary, or even desirable, to deliver up offending articles to the copyright owner – he will normally be fairly compensated by the other remedies. However, an order for destruction of the offending articles under s 114 is a likely proposition, for example, in circumstances where the defendant has a stock of pirate video tapes in his possession.

## PRESUMPTIONS

The 1988 Act provides for certain presumptions which will apply in proceedings for copyright infringement for the purposes of facilitating those proceedings. Given that copyright can endure for a considerable period of time, some presumptions as to the identity of the author, director or publisher of the work are also helpful. Presumptions are made in terms of three classes of works:

- (a) literary, dramatic, musical and artistic works (s 104);
- (b) sound recordings, films and computer programs (s 105);
- (c) works subject to Crown copyright (s 106).

### Presumptions relating to literary, dramatic, musical and artistic works

Where a name purporting to be that of the author appeared on copies of the work as published or on the work when it was made, the person by that name shall be presumed to be the author of the work and to have been the first owner of the copyright in the work.<sup>281</sup> That is, the work was not made in circumstances relating to employees in the course of employment, Crown or parliamentary copyright or copyright of certain international organisations.<sup>282</sup> Similar presumptions apply in the case of works of joint authorship. Even where the identity of the owner is not in dispute, the identity of the author is important for establishing the duration of the copyright and, possibly, its territorial scope.

Where there is no name purporting to be that of the author on copies of the work then, under s 104(4), if the work otherwise qualifies for copyright protection by reference to the country of first publication<sup>283</sup> and a name purporting to be that of the publisher appeared on copies of the work as first published, then that named publisher shall be presumed to have been the owner of the copyright at the time of publication.<sup>284</sup>

<sup>281</sup> Copyright, Designs and Patents Act 1988 s 104(2).

<sup>282</sup> This presumption was used in *Noah v Shuba* [1991] FSR 14 and the defendant was unable to adduce evidence to rebut it.

<sup>283</sup> By virtue of the Copyright, Designs and Patents Act 1988 s 155.

<sup>284</sup> For an example, under the 1956 Act, see *Waterlow Publishers Ltd v Rose* [1995] FSR 207. In that case the presumption was not rebutted.

Although this deals with the question of ownership of the copyright, the identity of the author is still important and s 104(5) provides that if the author is dead, or his identity cannot be ascertained by reasonable enquiry, it shall be presumed in the absence of evidence to the contrary that the work is an original work and the claimant's allegations as to what was the first publication of the work and as to the country of first publication are correct. Therefore, in all these matters, if the defendant wishes to challenge any of them, it is he who bears the evidential burden; he must adduce evidence to the contrary. Of course, in many actions for infringement, the defendant will not wish to dispute these matters, but may base his defence on another point: for example, that he has not, in the circumstances, copied a substantial part of the work. Although the Act recognises the subsistence of copyright in literary, dramatic, musical and artistic works that are computer-generated, there are no presumptions specifically directed to such works.

### Presumptions relating to sound recordings, films and computer programs

Computer programs are literary works, so the presumptions relating to literary works above apply in addition to the presumption in s 105.<sup>285</sup> In the case of sound recordings, where copies are issued to the public bearing a label or other mark stating that a named person was the owner of the copyright in the recording at the date of issue of the copies, or that the recording was first published in a specified year or in a specified country, that label or mark shall be admissible as evidence of the facts stated, and shall be presumed to be correct until the contrary is proved.<sup>286</sup> Similar provisions apply in respect of films where copies are issued to the public bearing statements as to the director or producer of the film, the owner of the copyright in the film, and the year and country of first publication: s 105(2).

Where, under s 105(3), computer programs are issued to the public in electronic form bearing a statement that a named person was the copyright owner at the date of issue, or that the program was first published in a specified country or that copies were first issued to the public in electronic form in a specified year, that statement is also admissible as evidence of the facts stated and shall be presumed to be correct until the contrary is proved.

The utility of this presumption was seen in *Microsoft Corp v Electro-wide Ltd*.<sup>287</sup> The claimant applied for summary judgment under the former Rules of the Supreme Court 1965, Ord 14 in respect of an allegation that the defendant was selling computers loaded with unlicensed copies of the claimant's MS-DOS and Windows software. The defendant argued that discovery might show some hitherto defect in the claimant's title to the copyright. This argument was described by Laddie J, in granting summary judgment, as an unfounded and Micawberish hope. He said that it would be wholly improbable that a company the size of Microsoft, which was clearly alert to the importance of copyright protection, would fail to take the elementary precautions necessary to ensure that it owned the copyrights in its major assets.

All these presumptions apply equally to infringements alleged to have occurred before the date on which the copies were first issued to the public.

A final presumption in s 105 concerns the showing in public or communication to the public of a film and s 105(5) provides that if the film bears a statement:

- (a) that a named person was the director or producer of the film, or
- (aa) that a named person was the principal director of the film, the author of the screenplay, the author of the dialogue or the composer of music specifically created for and used in the film, or
- (b) that a named person was the owner of the copyright in the film immediately after it was made,

<sup>285</sup> Interestingly, the heading to the Copyright, Designs and Patents Act 1988 s 105 does not mention computer programs, even though they are specifically dealt with in s 105(3).

<sup>286</sup> Copyright, Designs and Patents Act 1988 s 105(1). Under the Copyright Act 1956 s 12(6), sound recordings had to be date-stamped to qualify for copyright protection. This is no longer essential, but it is obviously prudent to attach a copyright notice including the year of publication as this fixes would-be infringers with knowledge of the subsistence of copyright and may be important in terms of the availability of damages.

<sup>287</sup> [1997] FSR 580.

then that statement shall be admissible as evidence of the facts stated and shall be presumed to be correct until the contrary is proved.

This presumption applies equally in proceedings relating to an infringement alleged to have occurred before the date on which the film was shown in public, broadcast or included in a cable programme service. For the purposes of s 105, a statement that a person was the director of a film shall be taken, unless a contrary intention appears, as meaning that he was the principal director of the film.

### Presumptions relevant to Crown copyright

The final presumption is contained in s 106 and relates to literary, dramatic and musical works in which Crown copyright subsists. Where there appears on printed copies of a work a statement of the year in which the work was first published commercially, that statement shall be admissible as evidence of that fact and presumed correct until the contrary is proven.

## CRIMINAL OFFENCES

The Copyright, Designs and Patents Act 1988, in line with the Copyright Act 1956, makes provision for certain criminal offences associated with copyright infringement. The seriousness with which certain forms of piracy are now taken, often involving organised crime and money-laundering, has been met by a substantial increase in the maximum penalties now available for the copyright offences. For many of the offences, the maximum term of imprisonment is now ten years. The changes were made by the Copyright, etc. and Trade Marks (Offences and Enforcement) Act 2002 and came into force on 20 November 2002.<sup>288</sup> The Copyright Act 1956 did not provide for imprisonment at all until amended in the 1980s to provide for a maximum of two years' imprisonment and/or a fine on conviction on indictment.<sup>289</sup> This maximum was continued under the 1988 Act until amended by the 2002 Act.<sup>290</sup> It may be of some concern that the *mens rea* for the criminal offences is the same as used for secondary infringement, that is, knowing or having reason to believe. Although this could bring the provisions into conflict with the right to a fair trial under Article 6 of the Council of Europe Convention for the Protection of Human Rights and Fundamental Freedoms 1950, the House of Lords ruled otherwise in relation to the trade mark offences where the standard appears even more harsh on the defendant.<sup>291</sup>

Although it would be reasonable to assume that the criminal offences are suitable only for copyright pirates, there is nothing in the wording of the provisions to so limit them. In *Thames & Hudson Ltd v Design and Artists Copyright Society Ltd*<sup>292</sup> the Design and Artists Copyright Society (DACS) served summonses under s 107 of the 1988 Act on a reputable publishing company and on its directors, who now applied to have the prosecutions stayed as being vexatious and an abuse of process. The application was unsuccessful. Evans-Lombe J said (at 160):

Parliament has elected to provide that breach of copyright can in certain circumstances constitute an offence and that where such an offence is committed by a body corporate the directors of that body corporate who connive at such commission are themselves guilty of an offence. No qualification appears in the statute limiting the types of offender capable of committing the offence to 'pirates'.

In this case, because DACS did not take an assignment of copyright from its members, there was no other way in which it could protect its members' interests.

The criminal offences reflect very closely the secondary infringements of copyright, but there are some omissions. For example, there is no equivalent criminal penalty for

<sup>288</sup> The Copyright, etc. and Trade Marks (Offences and Enforcement) Act 2002 (Commencement) Order 2002, SI 2002/2749.

<sup>289</sup> By the ridiculously titled 'Copyright Act 1956 (Amendment) Act 1982' and the Copyright (Amendment) Act 1983.

<sup>290</sup> Equivalent increases were made in relation to offences under the Trade Marks Act 1994.

<sup>291</sup> This case, *R v Johnstone* [2003] FSR 748, is discussed in Part Six of the book.

<sup>292</sup> [1995] FSR 153.

the secondary infringement of permitting the use of premises for an infringing performance of a literary, dramatic or musical work. Conversely, the criminal offence of making copies for sale or hire relates to the act restricted by copyright of copying and not a secondary infringement.

The offences are not of strict liability and an element of *mens rea* is required, and this mitigates the harshness of making directors of respectable companies potentially liable for infringement under criminal law. Thus, for a person to be guilty of any of the offences he must possess actual knowledge, or have reason to believe that copyright would be infringed or that he was, for example, dealing with infringing copies.

There was soon evidence that magistrates and judges were prepared to take piracy and counterfeiting of copyright works seriously. For example, in *R v Carter*<sup>293</sup> the Court of Appeal confirmed a sentence of imprisonment of nine months suspended for two years for a conviction of making and distributing infringing copies of video films contrary to s 107. It was observed that such an activity was really an offence of dishonesty. The offences are contained in s 107 of the 1988 Act, as amended, and are set out below.

293 [1993] FSR 303.

### Making, dealing, etc. (s 107(1))

A person commits an offence who, without the licence of the copyright owner:

- (a) makes for sale or hire; or
- (b) imports into the UK otherwise than for his private and domestic use; or
- (c) possesses in the course of a business with a view to committing any act infringing the copyright; or
- (d) in the course of a business, sells or lets for hire or offers or exposes for sale or hire or exhibits in public or distributes; or
- (e) distributes otherwise than in the course of business to such an extent as to affect prejudicially the owner of the copyright;

an article which is, and which he knows or has reason to believe is, an infringing copy of a copyright work.

These activities are all commercial in nature with the exception of (e), which would apply, for example, to the situation where a private individual makes a large number of copies of a copyright work and distributes them freely, perhaps acting out of misguided social, political or moral beliefs. Some of the offences in this category are triable either way, that is they can be tried either in the Crown Court or in a magistrates' court. These are the offences relating to making, importing or distributing (whether or not in the course of a business). The maximum penalty available if tried in a Crown Court is a term of imprisonment not exceeding ten years, or a fine or both.<sup>294</sup> There is no upper limit on the fines which can be imposed by the Crown Court. If the offence is tried in a magistrates' court, the maximum penalty is six months' imprisonment, or a fine not exceeding the statutory maximum (presently £5,000) or both. All the other offences are triable summarily only, that is in a magistrates' court, and carry a maximum of six months' imprisonment, or a fine not exceeding level 5 on the standard scale (presently £5,000) or both.<sup>295</sup>

For some of the offences, namely (c) and (d) above, there is a specific requirement that they were committed in the course of a business. The meaning of this might be important if the person involved has other legitimate full-time employment and is carrying out his infringing activities in his spare time or as a hobby. However, it would appear that, in terms of the Trade Descriptions Act 1968, for goods to be dealt with in the course of a trade or business, there must be a degree of regularity in such dealing as part of the normal practice of a business.<sup>296</sup> It would appear, therefore, that if the person involved was carrying out the offending activities on a regular basis, it would be

294 Increased from two years by the Copyright, etc. and Trade Marks (Offences and Enforcement) Act 2002. There was a move to increase the maximum penalties to bring them in line with those already available for the trade mark offences. A Bill which would have increased the maximum term of imprisonment for copyright offences to seven years failed to complete its passage through Parliament in 2000 (Copyright and Trade Marks Bill 2000).

295 The penalties are laid out in the Copyright, Designs and Patents Act 1988 s 107(4) and (5).

296 See *Davies v Sumner* [1984] 1 WLR 1301, adapting the test laid down in *Haverling London Borough v Stevenson* [1970] 3 All ER 609.

considered that he was operating in the course of a business, even if he was doing it in his spare time. However, if the person did whatever it was, regardless of the scale, as a one-off activity, there would be no regularity, and it would appear that the relevant offences would not apply.

### Articles specifically designed or adapted to make copies (s 107(2))

A person commits an offence if he makes an article specifically designed or adapted for making copies of a particular copyright work, or has such an article in his possession knowing or having reason to believe that it is to be used to make infringing copies for sale or hire or for use in the course of a business. This would include making a plate for printing artistic works, or a master copy of a sound recording from which many duplicates could be made. The offence applies only if the article is intended to be used for making copies of a particular copyright work and not for copying works generally. Therefore, the manufacture or possession of a dual cassette tape deck is not caught, as it is not intended to be used to copy a particular work but may be used to copy all sorts of works (some of which may be copied legitimately). The offence is triable summarily only and carries a maximum of six months' imprisonment, or fine not exceeding level 5 on the standard scale or both.

### Communication to the public

This is a new offence inserted by the Copyright and Related Rights Regulations 2003. Under s 107(2A), a person commits an offence if they infringe copyright by communicating a work to the public in the course of business or otherwise than in the course of business to such an extent as to affect prejudicially the copyright owner, knowing or having reason to believe that, by doing so, he is infringing the copyright in the work. This will cover, for example, broadcasting the work or placing it on an internet website from where it may be accessed. Section 107(4A) provides that the offence is triable either way and, on conviction in a magistrates' court, the maximum penalty is a term of imprisonment not exceeding three months and/or a fine not exceeding the statutory maximum. The maximum penalty if convicted on indictment is a term of imprisonment not exceeding two years and/or a fine. It seems strange that the opportunity was not taken to make the maximum penalty ten years' imprisonment as with the equivalent offences in s 107(1) (distributing to the public). Certainly, placing a work on a website could result in infringement on a very large scale.

### Public performances, etc. (s 107(3))

This applies where copyright is infringed, otherwise than by the reception of a communication to the public, by a public performance of a literary, dramatic or musical work, or by the playing or showing in public of a sound recording or film. Any person who caused the work to be so performed, played or shown is guilty of an offence if he knew or had reason to believe that copyright would be infringed. The person who caused the work to be performed, played or shown will normally be the person who made the arrangements necessary and organised the performance. It is unlikely that a person who supplies the equipment necessary or provides the premises will be deemed to be the person 'causing'. Of course, such persons may be charged with being accomplices. An offence under this subsection carries a maximum of six months' imprisonment, or a fine not exceeding level 5 on the standard scale or both, being triable summarily only.

For all the offences in s 107, the presumptions in ss 104 to 106 do not apply to criminal proceedings but this is without prejudice to their application in proceedings for an order for delivery up under s 108.<sup>297</sup>

<sup>297</sup> Section 107(6).

## Liability of officers of corporate bodies

By virtue of s 110, where an offence under s 107 has been committed by a corporate body, for example a limited company, and it is proved that the offence was committed with the consent or connivance of a director, manager, secretary or other similar officer of the body, then that person is also guilty of the offence and is liable to be prosecuted.<sup>298</sup> This also applies to persons holding themselves out to act in such a capacity. Therefore, in the case of an offence by a corporate body, there may be two prosecutions: one against the body itself and another against a high-ranking officer of the body who has been implicated in the offending conduct. This is to prevent persons hiding behind a corporate identity in order to escape prosecution. Normally, in terms of vicarious liability in criminal law, the action of a high-ranking officer of the company will be deemed to be the action of the company, thereby fixing the corporate body with liability.<sup>299</sup> Therefore, there should be no difficulty in a finding of corporate guilt if the activity complained of has been done under the instructions or guidance of a director or company secretary, but there would be difficulty in attaching liability to the individual concerned and this provision in the Act overcomes that problem.

<sup>298</sup> Criminal proceedings were initiated against directors of a reputable publishing company in *Thames & Hudson Ltd v Design and Artists Copyright Society Ltd* [1995] FSR 153.

<sup>299</sup> See the judgment of Lord Denning MR in *HL Bolton (Engineering) Co Ltd v TJ Graham & Sons Ltd* [1957] 1 QB 159 at 172.

## Search warrants, delivery up and forfeiture

Search warrants are available under s 109<sup>300</sup> and now extend to all types of copyright work. Search warrants can be obtained by a constable from a justice of the peace if the latter is satisfied by information given on oath by the constable that there are reasonable grounds for believing that any of the triable either-way offences under s 107 have been committed or are about to be committed and that evidence of this is on the premises to which the search warrant will apply. The warrant will authorise the constable to enter and search the premises using such reasonable force as is necessary. The warrant remains in force for three months<sup>301</sup> and may authorise persons to accompany the constable in his execution of the warrant. Until 31 October 2003, warrants were not available for the offences that were triable summarily only. The Copyright and Related Rights Regulations 2003 changed this and extended the availability of search warrants to all offences including the new offence under s 107(2A). Of course, evidence required to secure a conviction for any of the offences may in most circumstances be obtained in other ways, for example by simply purchasing an infringing copy which is openly on sale. In exercising his duties under the warrant, a constable may seize any article he reasonably believes to be evidence that an offence under s 107(1), (2) or (2A) has been or is about to be committed. The word ‘premises’ in the context of search warrants includes land, buildings, fixed or moveable structures, vehicles, vessels, aircraft and hovercraft.

<sup>300</sup> Search warrants were first provided for by the Copyright Act 1956 s 21A, an amendment made by the Copyright (Amendment) Act 1983.

<sup>301</sup> Increased from 28 days by para 6 Sch 16 Serious Organised Crime and Police Act 2005.

Section 107A was inserted by the Criminal Justice and Public Order Act 1994, s 165 and provided that local weights and measures authorities would be given duties and powers in relation to offences under s 107 as they have under the Trade Descriptions Act 1968.<sup>302</sup> These would include making test purchases and powers of entry and seizure. Obstructing an authorised officer is an offence, and there are provisions for compensation for loss of goods wrongly seized. It is likely that trading standards officers will make significant use of these provisions, and the enactment of them is further evidence that Parliament now takes copyright piracy seriously. However, s 107A has not yet been brought into force.

<sup>302</sup> The relevant provisions are the Trade Descriptions Act 1968 ss 27–29 and 33.

The Copyright, Designs and Patents Act 1988 s 108 also provides for delivery up in criminal proceedings similar in nature to the civil delivery up provisions under s 99. An order for delivery up may be made by the court before which the proceedings are brought if it is satisfied at the time the accused was arrested or charged that:

- 1 he had in his possession, custody or control in the course of a business an infringing copy of the work; or
- 2 he had in his possession, custody or control an article specifically designed or adapted for making copies of a particular copyright work, knowing or having reason to believe that it had been or was to be used to make infringing copies.

The order may be made by the court on its own motion or on the application of the prosecutor, irrespective of whether the accused is convicted of the offence with which he was charged. The provisions contained in s 113 (limitation period) and s 114 (order as to disposal) also apply to delivery up in criminal proceedings. The general provisions as to forfeiture contained in the Powers of Criminal Courts (Sentencing) Act 2000 s 143 are unaffected.<sup>303</sup>

The Act contains some controls over the importation of infringing copies along the lines of the previous Act. Section 111 extends the class of prohibited goods to infringing copies of literary, dramatic and musical works (printed copies of these three types of works) and sound recordings and films. The Commissioners of Customs and Excise must be given notice in writing by the copyright owner to the effect that he is the copyright owner. As regards literary, dramatic and musical works, the notice must also specify the period, not exceeding five years or beyond the duration of the copyright, for which the printed copies are to be treated as prohibited goods. For sound recordings and films the action is pre-emptive in nature and the notice must also specify the time and place at which the infringing copies are expected to arrive and that the copyright owner requests the Commissioners to treat the copies as prohibited goods.<sup>304</sup> The provisions only apply in respect of infringing copies imported from outside the EEA or from within the EEA but not having been entered for free circulation.<sup>305</sup>

The Copyright, etc. and Trade Marks (Offences and Enforcement) Act 2002 inserted a new s 114A which provides for forfeiture of infringing copies.<sup>306</sup> Where infringing copies or articles specifically designed or adapted for making copies of a particular copyright work have come into the possession of any person connected with the investigation or prosecution of a relevant offence (being one under s 107(1), (2) or (2A), under the Trade Descriptions Act 1968, the Business Protection from Misleading Marketing Regulations 2008,<sup>307</sup> the Consumer Protection from Unfair Trading Regulations 2008<sup>308</sup> or any offence involving dishonesty or deception), that person may apply for an order for forfeiture of the infringing copies or articles. A court may make such an order only if satisfied that a relevant offence has been committed in relation to the infringing copies or articles. It is acceptable if the court is satisfied that the offence has been committed in relation to copies or articles which are representative of the infringing copies or articles in question, whether they are of the same design or part of the same consignment or batch or otherwise. Any person aggrieved by an order made or refused by a magistrates' court may appeal to the Crown Court (or county court in Northern Ireland). The court may delay the coming into force of the order pending the making and determination of an appeal. Where an order for forfeiture is made, the copies or article shall be destroyed according to directions given by the court. Alternatively, the court may direct that the infringing copies or articles are forfeit to the copyright owner or dealt with in such other way as the court directs. A copyright owner may wish to obtain infringing copies of his work if the standard of the copies is high and equivalent to the standard of copies made by or authorised to be made by the copyright owner.

### Other offences

A person infringing copyright (and, for that matter, infringing a trade mark or a patent) may commit criminal offences other than those contained in the part of the Copyright,

**303** Of course, there are some differences in terms of search, seizure and delivery up in Scotland and Northern Ireland, but the overall effect is generally the same.

**304** The Copyright, Designs and Patents Act 1988 s 112 gives power to the Commissioners of Customs and Excise to make regulations concerning the service of notices, payment of fees, providing, securing and indemnifying the Commissioners against liability or expense as regards the detention of the articles or things done to the articles in consequence of the notice.

**305** Section 111(3A). Where the situation is within Article 1(1) of Council Regulation (EC) No 1383/2003 of 22 July 2003 concerning customs actions against goods suspected of infringing certain intellectual property rights and the measures to be taken against goods found to have infringed such rights, OJ L 196, 02.08.2003, p 7, s 111 does not apply. Article 1(1) covers goods entering for free circulation, export or re-export.

**306** Section 114A applies to England and Wales and Northern Ireland; s 114B applies to Scotland.

**307** SI 2008/1276.

**308** SI 2008/1277.

Designs and Patents Act 1988 dealing with copyright. For example, there may be an offence under the Consumer Protection from Unfair Trading Regulations 2008.<sup>309</sup> A trader commits an offence if he engages in a commercial practice which is a misleading action or omission. This could be where a trader falsely claims that a copy of a work is a legitimate copy.

There may be offences under s 1 of the Fraud Act 2006, for example, fraud by false representation. A person is guilty of this offence if he dishonestly makes a representation intending by doing so to make a gain for himself or another or to cause loss to another or expose another to a risk of loss.<sup>310</sup> A representation can be implied or express. For example, simply displaying counterfeit film DVDs in a stall at a market can fall within the offence. Possession of articles for use in frauds and making or supplying articles for use in frauds are also offences under ss 6 and 7 of the Act. Being in possession carries a maximum of five years' imprisonment and/or a fine on conviction on indictment whilst making or supplying articles for use in frauds carries a maximum of 10 years' imprisonment and/or a fine on conviction on indictment. 'Article' includes any program or data held in electronic form. Thus, unauthorised copies of computer software will fall into this meaning. It is clear that pirate CDs and DVDs are also within the meaning of article as will a master copy from which pirate copies can be made.

Another offence that could be charged is forgery under the Forgery and Counterfeiting Act 1981, s 1 of which states that a person is guilty of forgery if he makes a false instrument, with the intention that he or another shall use it to induce somebody to accept it as genuine, and by reason of so accepting it, to do or not to do some act to his own or any other person's prejudice. It is also an offence to use a false instrument in such a way. Under s 8 of the 1981 Act, a false instrument includes any 'disc, tape, sound track or other device on or in which information is recorded or stored by mechanical, electronic or other means'. This definition would include sound recordings, films, computer programs and other copyright works stored in or on computer storage media, such as a copy of a computer database. Also covered would be a copy of a work such as the *Encyclopaedia Britannica* stored on CD-ROM discs. However, again there may be problems associated with whether a person would be induced to accept the article as genuine.

If legitimate copies of the original copyright work have a registered trade mark attached to them, anyone making infringing copies who also attaches a sign to his infringing copies, which is identical to, or likely to be mistaken for, the registered mark without permission of the proprietor of the trade mark, may commit an offence under the Trade Marks Act 1994 s 92. This offence is triable either way and carries a maximum penalty, if tried on indictment in the Crown Court, of imprisonment for a term not exceeding ten years, or a fine or both.

It does not appear to be possible to steal a copyright by making copies because the owner of the copyright will still have the original.<sup>311</sup> The copyright owner has not been permanently deprived of the copyright and can still make and license the making of copies. The fact that the copyright owner has been deprived of some of the potential income from the work is not sufficient for theft. In *R v Lloyd*,<sup>312</sup> a projectionist at a cinema, in league with some other persons, surreptitiously removed films from the cinema for a few hours so that they could be copied. The infringing (pirated) copies of the films were then sold, making a considerable profit for the video pirates. It was held that a charge of conspiracy to steal was inappropriate. Obviously, there was no intention to permanently deprive the owners of the films, neither was the copyright in the films stolen. Although borrowing sometimes can be regarded as theft if the period and circumstances are equivalent to an outright taking or disposal, by the Theft Act 1968 s 6(1), this would apply only if the 'goodness' or 'virtue' in the borrowed article had been exhausted by the time it was returned. An example is where a person borrows

<sup>309</sup> SI 2008/1277. These Regulations implement Directive 2005/29/EC of the European Parliament and of the Council concerning unfair business-to-consumer commercial practices, OJ L 149, 11.06.2005, p 22. Numerous provisions of the Trade Descriptions Act 1968 were repealed by the Regulations which came into force on 26 May 2008.

<sup>310</sup> Fraud Act 2006 s 2. Fraud under s 1 carries a maximum penalty of 10 years' imprisonment and/or a fine on conviction on indictment.

<sup>311</sup> See *Oxford v Moss* (1978) 68 Cr App R 183.

<sup>312</sup> [1985] 2 All ER 661.

a radio battery intending to return it when its power is expended, or where a person borrows a football pass intending to return it to the rightful owner at the end of the football season. But in the case of the films, there was still virtue in them when they were returned; they were still capable of being used and shown to paying audiences, so the convictions were quashed. The fact that the owner of the copyright in the films had been deprived of potential ‘sales’ of the films by the circulation of pirate copies was not relevant to the offence of theft.

Whether copyright can be stolen in any circumstances is a moot point.<sup>313</sup> For the purposes of the offence of theft, defined as the dishonest appropriation of property belonging to another with the intention of depriving the other of it permanently,<sup>314</sup> ‘property’ is defined as including money and all other property, real or personal, including things in action and other intangible property.<sup>315</sup> Theoretically theft of copyright is a possibility because copyright, certainly in the context of the acts restricted by the copyright in the work, is a form of intangible property<sup>316</sup> and thus falls within the meaning of ‘property’. However, the question really hinges on whether the owner has been permanently deprived of the copyright.

**313** It is unlikely because the owner will not usually have been deprived of the right.

**314** Theft Act 1968 s 1.

**315** Theft Act 1968 s 4(1).

**316** It seems that copyright is not a thing in action: *see* Chapter 1.

## Chapter 7

# DEFENCES TO COPYRIGHT INFRINGEMENT AND THE PERMITTED ACTS

### INTRODUCTION

The Copyright, Designs and Patents Act 1988 contains a considerable number of what are known as the acts permitted in relation to copyright works or, more simply, the ‘permitted acts’. These are acts that can be performed without attracting liability for copyright infringement, but this is without prejudice to other legal rights or obligations.<sup>1</sup> Therefore, even though something may be done in relation to a copyright work that does not infringe by reason of being a permitted act, it may still result in a breach of confidence or in the tort of passing off, for example. There are likely to be some changes to the permitted acts in the near future following recommendations made by the *Gowers Review of Intellectual Property*.<sup>2</sup> These potential changes are outlined briefly at the end of this chapter.

Defences to copyright infringement are not restricted to the permitted acts, and there are other defences that may excuse or justify an act which at first sight infringes copyright. Of course, a person sued for infringement may claim that copyright does not subsist in the work in question,<sup>3</sup> that the courts in the UK do not have jurisdiction to hear the action, that the act done does not fall within the scope of the restricted acts or that the act complained of was not done in relation to a substantial part of the work. As regards the secondary infringements of copyright, some form of knowledge is required on the part of the alleged infringer, or there may be some dispute as to whether the copy dealt with is an infringing copy within the meaning assigned by s 27.

Other issues are whether the copyright owner authorised or consented to the alleged infringement, or whether the defence of public interest is relevant, or whether it is a case of non-derogation from grant. If none of the above points apply, then the defendant may attempt to justify his actions by claiming that they fall within the meaning of the permitted acts. Finally a defence based on European Community law might be applicable.<sup>4</sup> The flowchart in Figure 7.1 indicates a rational way of looking at the question of infringement and the defences.

There is no remedy in copyright law in respect of groundless threats of infringement proceedings as there are, for example, in respect of patents and trade marks. However, in appropriate circumstances, an alleged infringer may be able to mount a malicious falsehood action: for example, where letters before action are sent to persons to whom copies of alleged infringing works have been sent, such as retailers or customers. In *Creative Resins International Ltd v Glasslam Europe Ltd*,<sup>5</sup> the second defendant, a firm of solicitors acting for the first defendant, sent a letter to a customer of the claimant (with a copy sent to the claimant with a letter before action) alleging that the door panels manufactured by the claimant and sold by the claimant’s customer infringed the first defendant’s artistic copyright. The letter also stated that the first defendant had obtained an injunction against the claimant in Germany and, therefore, the claimant

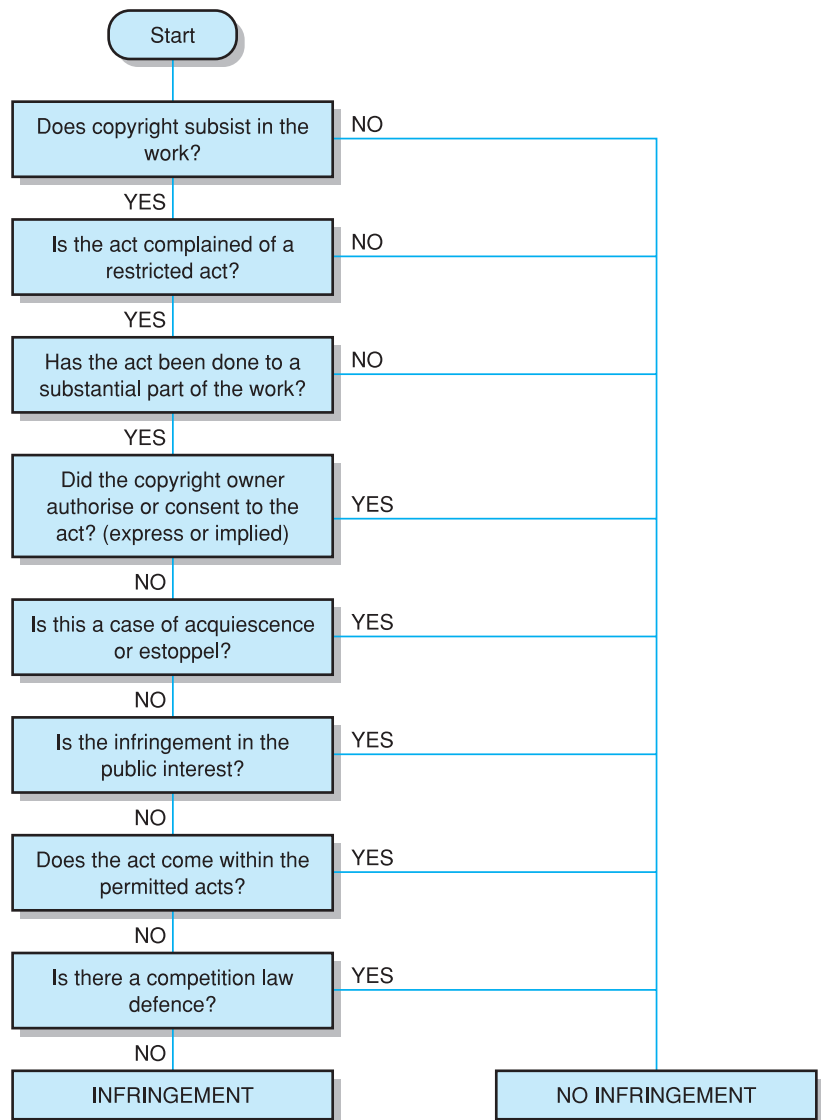

<sup>1</sup> Copyright, Designs and Patents Act 1988 s 28(1). To this extent, they can be classed as defences to copyright infringement. Unless otherwise indicated, in this chapter statutory references are to this Act.

<sup>2</sup> HMSO, 2006.

<sup>3</sup> A claim that the claimant’s work itself infringes copyright is no defence if it is subject to its own copyright: *ZYX Music v King* [1995] FSR 566.

<sup>4</sup> See Chapter 24.

<sup>5</sup> [2005] EWHC 777 (QB).

**Figure 7.1** Infringement and defences

had a history of infringing activity. However, claims to malicious falsehood are not to be advanced lightly and proving malice is particularly difficult. On the facts before him, Tugendhat J thought both the claimant and first defendant had a real prospect of success but in the absence of further information such as the state of the German proceedings where there was some doubt that a finding of infringement had been made, he turned down the claimant's application for summary judgment.

### **COPYRIGHT OWNER AUTHORISED OR CONSENTED TO THE ACT**

Copyright in a work is infringed by a person who performs or authorises another person to perform one of the acts restricted by the copyright unless the licence of the

copyright owner has been obtained.<sup>6</sup> Under s 173, in the case of a work having joint copyright owners the licence of all the joint owners is required. The meaning of ‘licence’ should be considered in terms of the authority of the copyright owner or his permission to carry out particular restricted acts. It would appear that the licence does not have to be formal or contractual, so that the absence of consideration, *per se*, does not affect the status of the authorisation. Of course, if the licence is not contractual, there is the problem that it may be revoked at any time subject to equitable rules and principles, such as the doctrine of estoppel.

Under normal circumstances, the licence given by the copyright owner will be formal and contractual in nature: for example, a non-exclusive licence in respect of a computer software package for a licence fee of £250. Alternatively, it may be informal and/or non-contractual. If there is no express permission or authority to carry out the restricted act concerned, it may be that the courts will be prepared to imply the copyright owner’s licence. This will usually be limited to adding terms to an existing agreement. For example, if a builder commissions an architect to design and draw up plans for a new house to be built by the builder, in the absence of any express licence, there will be an implied licence that the builder may use the plans for the purposes of constructing the house. An implied licence will be restricted to the minimum necessary in the context of the intention of the parties. The builder’s implied licence in the above example would not extend to constructing further houses to the plans unless this was the original intention.<sup>7</sup> In other circumstances, an assignment may be implied. For example, if a person obtains a licence to use a computer program, the court might imply a term in the licence agreement that the licensee will be the beneficial owner of the copyright in any reports produced by running the program. Of course, it becomes impossible or difficult to imply the copyright owner’s authorisation or permission in the face of express terms to the contrary in an agreement, or if the remaining rights of the owner are prejudiced in some way. An implied licence may overcome difficulties resulting from misunderstandings about the future ownership of copyright: for example, where a person commissioning a work of copyright later discovers that he does not own the copyright and the person commissioned to create the work is trying to interfere with the subsequent use of the work.<sup>8</sup> Implying the copyright owner’s licence may also be a way of curbing any unconscionable conduct that is proposed by the owner, such as taking advantage of an imperfect assignment or a badly drafted licence agreement.

Commercial reality must also be considered when deciding whether an implied licence is appropriate. In *Fylde Microsystems Ltd v Key Radio Systems Ltd*,<sup>9</sup> the claimant and defendant collaborated in the design of software for mobile and portable radios. The claimant was a software developer and the defendant was engaged in the manufacture and sale of mobile and portable radios. There was no contract between the parties covering the development of the software. The circumstances were such that the defendant had no ownership rights in the copyright subsisting in the software which had been written solely by the claimant. Laddie J rejected the notion that the defendant had an implied licence of a general nature allowing it to exploit the software as it thought fit. This would allow the defendant to exploit the software without making any payment to the claimant even after the claimant had spent four years developing the software. Also rejected was the argument in the alternative that the defendant had an implied licence to copy the software to replace printed circuit boards supplied by the claimant which were defective and not of merchantable quality (the current requirement is satisfactory quality). In respect of defective printed circuit boards, the defendant would have the remedy of requiring the delivery of replacement boards or a claim in damages. The implication of a licence was, therefore, completely unnecessary.

<sup>6</sup> Copyright, Designs and Patents Act 1988 s 16(2).

<sup>7</sup> For example, see *Blair v Osborne & Tomkins* [1971] 2 WLR 503.

<sup>8</sup> See, for example, *Warner v Gestetner Ltd* [1988] EIPR D-89 and *Blair v Osborne & Tomkins* [1971] 2 WLR 503, discussed in Chapter 4.

<sup>9</sup> [1998] FSR 449.

## ACQUIESCENCE, DELAY AND ESTOPPEL

The copyright owner may be aware of activities that could infringe his copyright and yet choose to do nothing about it for a long time. Inactivity by the copyright owner in enforcing his rights may encourage the infringer to continue infringing or even scale up his activities. In other cases, the behaviour of the copyright owner may be such that an estoppel is raised against him. This might be the case where a licence might be implied where the copyright owner knows full well of what would otherwise be infringing activities and does nothing about it, leading the infringer to believe that he has the implied consent of the copyright owner. Problems may arise when the copyright owner suddenly and, perhaps, unexpectedly takes objection to the activities and commences legal proceedings.

The normal time limit for bringing proceedings for tort is, under s 2 of the Limitation Act 1980, six years from the time the cause of action arose. Where proceedings are commenced more than six years after the infringing acts started, damages only in respect of the six years immediately preceding the commencement of action can be awarded. Any delay might also affect the availability of equitable remedies such as an injunction. It is not an easy matter to lay down hard and fast rules about this and the exercise of the discretion to grant an injunction will be heavily influenced by the facts of the case and the conduct of the parties. An extreme example is given by *Cluett Peabody & Co Inc v McIntyre Hog March & Co Ltd*,<sup>10</sup> where it was held that a 30-year delay prevented a claim for injunctive relief in respect of an infringement of a trade mark. Until the action, it had been a case of 'live and let live'.

<sup>10</sup> [1958] RPC 355.

A considerable delay may not deprive the claimant of an injunction. In *Experience Hendrix LLC v PPX Enterprises Inc*,<sup>11</sup> a settlement had been reached in 1973 between the defendant and other parties including the present claimant's predecessor in title with respect to recordings made by the late Jimi Hendrix and others. At various times since the settlement, the defendant exploited a number of recordings which it was not authorised to do under the terms of the settlement. The claimant, successor in title to the estate of Jimi Hendrix now sought, *inter alia*, an injunction and an order for delivery up of the master recordings. Buckley J rejected the defendant's argument that an injunction should not be granted on the basis of the long delay in bringing the action. He said (at para 45):

<sup>11</sup> [2003] FSR 853.

... it would be very difficult and probably undesirable to attempt to define categories of case in which mere delay would preclude the grant of equitable relief.

He went on to say that an example might be where there was no apparent reason for the delay other than indifference and no sufficient reason for a sudden decision to seek a remedy. Where a bare licence can be implied from the circumstances, it may be that the licence can be revoked at any time. However, if the defendant has acted to his detriment as a result of the claimant's acts (or inactivity) and the claimant knows this, he may not be able to revoke the licence at all or without giving reasonable notice on the basis of estoppel. The classic modern case on estoppel is *Taylor's Fashions Ltd v Liverpool Victoria Trustees Co Ltd*<sup>12</sup> where Oliver J said (at 151):

<sup>12</sup> [1982] QB 133.

Furthermore the more recent cases indicate, in my judgment, that the application of the *Ramsden v Dyson* L.R. 1 H.L.129 principle – whether you call it proprietary estoppel, estoppel by acquiescence or estoppel by encouragement is really immaterial – requires a very much broader approach which is directed rather at ascertaining whether, in particular individual circumstances, it would be unconscionable for a party to be permitted to deny that which, knowingly, or unknowingly, he has allowed or encouraged another to assume to his detriment than to enquiring whether the circumstances can be fitted within the confines of some preconceived formula serving as a universal yardstick for every form of unconscionable behaviour.

Essentially, what is required for an estoppel to arise is an expectation created or encouraged by the claimant which results in the defendant incurring expenditure or some other detriment with the knowledge of the claimant and without objection from him. In such cases, the courts may compel the claimant to give effect to the expectation where it would be unconscionable for the claimant to do otherwise. The emphasis now seems to be on unconscionability. In *Confetti Records v Warner Music UK Ltd*<sup>13</sup> there was a purported agreement expressed as being subject to contract. The claimant had sent a memorandum of the deal, a copy of a cleared track of music and an invoice. This was held to be a representation that a licence had been granted in respect of the track. However, Lewinson J said that the agreement headed subject to contract could not by itself give rise to a licence but this could not prevent the sending of the track giving rise to a bare licence.<sup>14</sup> The question whether the claimant would be prevented from revoking the bare licence was answered in the negative by the judge who dismissed the claims in their entirety.

An important and arguably essential ingredient of estoppel and laches is the presence of detriment as a result of an expectation that the other person's behaviour encouraged an expectation that the right would not be asserted. If the other remains silent and does nothing to suggest that he will not assert his right, that is not sufficient to raise an estoppel. In *Fisher v Brooker*,<sup>15</sup> after a period of over 37 years, the claimant asserted his co-authorship of the music 'Whiter Shade of Pale'. He had written the organ solo and other organ parts for the song. If anything, the defendants had benefited by the claimant's silence as they had been paid royalties from collecting societies in respect of the song. At first instance,<sup>16</sup> it was held that the claimant was entitled to a 40 per cent share in the copyright in the music and a declaration was made to that effect. However, it was also held that there was an implied gratuitous revocable licence in favour of the defendants. This came to an end when the claimant began legal proceedings in 2005, after which he would be entitled to his share of the economic benefit resulting from subsequent exploitation of the work. The Court of Appeal, by a majority, whilst recognising the claimant's authorship, held that the implied licence was irrevocable because the claimant's acquiescence made it unconscionable for him now to seek to enforce his share of the copyright.<sup>17</sup> The House of Lords restored the decision at first instance. Acquiescence, estoppel and laches are equitable doctrines and could apply, for example, if the claimant sought to enforce his rights against the others by way of an injunction. However, copyright is a property right and a claim to copyright may be brought at any time. There is no provision for limitation of actions.<sup>18</sup> A declaration as to the existence of a property right is not equitable relief. Lord Neuberger said that, notwithstanding that, such a declaration might be refused on the basis of laches if it was sought solely for the purpose of obtaining equitable relief such as an injunction. He also said that in certain cases, such as the present one, estoppel and laches could be characterised as forms of acquiescence.

An estoppel might not be raised where the later commencement of proceedings can be explained by a change in the circumstances which render the earlier expectation that rights would not be enforced superseded. A copyright owner may not take action because the level of infringement is not really worth the trouble and expense of going to court. But if the defendant's use of the work suddenly takes on wholly unexpected proportions, the owner may be entitled to enforce his rights as to the future unless the newly found success of the work is the result of the defendant's work and expenditure carried on with the knowledge of the owner and without his complaint.

In *Hodgens v Beckingham*,<sup>19</sup> the defendant's stage name was Bobby Valentino and he was involved in writing the violin part for a song entitled 'Young at Heart'. During 1984 it was performed by a group known as the Bluebells, the leader of which was the claimant. There had been a dispute over the authorship of the violin part but, after

<sup>13</sup> [2003] EMLR 790.

<sup>14</sup> That an estoppel could arise where an agreement is headed 'subject to contract' was recognised in *Attorney-General for Hong Kong v Humphreys Estate (Queen's Gardens) Ltd* [1987] AC 114. However, the Privy Council thought that this would be unlikely in circumstances presently foreseeable.

<sup>15</sup> [2009] UKHL 41.

<sup>16</sup> *Fisher v Brooker* [2007] FSR 255.

<sup>17</sup> *Brooker v Fisher* [2008] FSR 629. Although recognising the claim to authorship, the Court of Appeal discharged the declaration that the claimant was entitled to a 40 per cent share in the copyright.

<sup>18</sup> The Limitation Act 1980 does not apply to claims of ownership of copyright. Although, the position is not clear in Scotland under the Prescription and Limitation (Scotland) Act 1973.

<sup>19</sup> [2003] EMLR 376.

taking legal advice, Mr Valentino made it clear in 1984 he did not want to take it to court. The group disbanded in 1986. In 1993, their version became very popular as the background music for an advertisement for Volkswagen cars and even made it to the top of the record charts. Following this Mr Valentino asked for future royalties as being the joint author and joint owner of the copyright in the music. During 1993 Mr Hodgins assured Mr Valentino that he would 'see him right' and also said things along similar lines to Mr Valentino's girlfriend. Mr Valentino told Mr Hodgins that if he did not 'see him right' he would go to law. It was held that an implied licence existed from 1984 but that this was revoked during 1993. Mr Hodgins argued that Mr Valentino was estopped from revoking the licence. This was rejected by the judge at first instance and confirmed by the Court of Appeal. Important factors were that Mr Valentino was not claiming a share in any royalties received by Mr Hodgins before 1993, in which case Mr Hodgins' claim to have spent all the royalties he received up to 1993 was irrelevant. The fact that Mr Valentino had told Mr Hodgins in 1984 that he would take no action merely confirmed the existence of an implied licence which was revocable on giving reasonable notice. It might have been different if the second and greater success of the song had been the result of the hard work of the defendant where the claimant had known about it and stood by and done nothing.<sup>20</sup>

<sup>20</sup> See *Godfrey v Lees* [1995] EMLR 307.

<sup>21</sup> [2008] FSR 726.

In *JHP Worldwide Ltd v BBC Worldwide Ltd*,<sup>21</sup> copyright in a number of books about the Daleks had been written by the late Terry Nation (who had created the Dalek characters). The claimant had an exclusive licence to exploit in respect of these books. The copyright passed to the estate of Terry Nation. Mr Fishman was the sole director of the claimant and contacted the BBC to see if they were interested in republishing the books in a new form which involved some re-working and the addition of new material. With the consent of Mr Fishman, two other writers worked on *The Dalek Survival Guide*. Before it was published, there was a falling out between Mr Fishman and BBC Worldwide. An attempt was made to exclude material derived from Mr Fishman and substitute it with fresh material. In the meantime, BBC Worldwide had been in negotiations with a representative of the Terry Nation estate. It was alleged that an informal agreement had been reached between them. Although the court rejected the copyright infringement claims, it went on to hold that BBC Worldwide had a licence by estoppel from the estate. In such a case, a defendant sued by an exclusive licensee has a defence under s 101(3) which states that in an action brought under s 101 by an exclusive licensee a defendant can avail himself of any defence which would have been available to him had the action been brought by the copyright owner.

## PUBLIC INTEREST

'Public interest' is a nebulous concept which can, in some cases, provide a defence for copyright infringement. Cases where the public interest is at issue often concern the publication of information, and frequently questions of confidence also will be raised.<sup>22</sup> Typically, a person will, without authority of the copyright owner, publish something which embarrasses the copyright owner or some other person. For example, in *Lion Laboratories Ltd v Evans*,<sup>23</sup> the defendant, a newspaper editor, wished to publish information concerning doubts about the reliability of the Lion Intoximeter 3000, a device used to measure levels of intoxication by alcohol. The device had been used to 'breathalyse' approximately 700 motorists suspected of being unfit to drive through drink. The claimant had obtained an injunction preventing the defendant from publishing the information on the basis that the information was confidential, and because publication would infringe copyright. The defendant appealed against the injunction.

<sup>22</sup> The defence of public interest in relation to copyright infringement is different to that in breach of confidence: *Hyde Park Residences Ltd v Yelland* [2000] RPC 604 at paras 64 and 66 per Aldous LJ.

<sup>23</sup> [1984] 2 All ER 417.

The defendant's appeal was allowed. The defence of public interest applied to both the confidence and the copyright issues because it was in the public interest that the information be published; further, the operation of the defence was not limited to cases where there had been any wrongdoing on the part of the claimant. The court identified matters relevant to the application of the defence of public interest as follows:

- 1 there was a difference between what was interesting to the public and what was in the public interest;
- 2 it was a fact that the media, for example newspaper proprietors, had a private interest to increase circulation by publishing what appealed to the public;
- 3 the public interest might be best served by giving the information to the police or some other responsible body rather than to the press;
- 4 the public interest did not arise only when there was an iniquity to be disclosed, and the defendant ought not to be restrained solely because what he wanted to publish did not show misconduct on the part of the claimant.

If the defence of public interest is raised, the court should weigh up the competing interests. In this particular case, it was unquestionable that it was in the public interest that the information be published. The third point above is a little worrying. Surely something either is or is not in the public interest, and this test suggests that publication for gain might injure the prospects of the defence succeeding. Surely the motive for publication should be irrelevant – it is the nature of the information that is crucial. In any case, giving the information to a 'responsible body' might lead to a 'cover-up' – if there is some matter which the public should be aware of, the press can serve a very useful function, albeit financially motivated. In *Initial Services Ltd v Putterill*,<sup>24</sup> Salmon LJ recognised that there was very little authority on the status of the person to whom documents or information were given. It was suggested by counsel for the claimant that information should have been given to the Registrar appointed under the Restrictive Trade Practices Act 1956<sup>25</sup> and not to the press. However, Salmon LJ said that the law should not lend assistance to anyone proposing to commit or committing a clear breach of statutory duty imposed in the public interest.

Public interest will cover situations involving the disclosure of criminal conduct, both past and contemplated,<sup>26</sup> or matters prejudicing the nation's security.<sup>27</sup> In *Attorney-General v Guardian Newspapers Ltd*<sup>28</sup> it was indicated in the House of Lords that the copyright in the *Spycatcher* novel would not be enforced by the courts because of the conduct of the book's author, Peter Wright, in divulging national secrets. It could be said that Peter Wright had harmed the public interest in keeping secret the activities of 'secret agents' and the like, and the nation's security could have been harmed as a result of his disclosures. As the law of confidence could provide no remedies, the book having been published elsewhere and being widely available, the House of Lords was punishing Mr Wright the only way it could. The implication was that anyone could publish the book or extracts from it without being liable for copyright infringement.

Freedom of speech can be said to lie within the public interest and as such will not be restrained by way of an interim injunction if the defence of fair dealing is likely to be raised. In *Kennard v Lewis*<sup>29</sup> the claimant had published a pamphlet entitled *30 Questions and Answers about CND* and the defendant had published a pamphlet called *30 Questions and Honest Answers about CND*, using a layout which was substantially similar. The claimant sought an interim injunction to restrain publication of the defendant's pamphlet and the defendant raised a defence of fair dealing. It was held that, as a principle, interim injunctions should not be used to restrain free speech and, *a fortiori*, should not be used to restrain political controversy.<sup>30</sup>

The scope of the defence of public interest came under some scrutiny in the Chancery Division and the Court of Appeal in *Hyde Park Residence Ltd v Yelland*.<sup>31</sup> Briefly, the

<sup>24</sup> [1968] 1 QB 396.

<sup>25</sup> Now repealed; replaced by the Restrictive Trade Practices Act 1976, in turn repealed by the Competition Act 1998.

<sup>26</sup> Per Lord Denning in *Initial Services Ltd v Putterill* [1968] 1 QB 396. This case involved the disclosure of the operation of a price-fixing ring between laundries.

<sup>27</sup> Per Ungood-Thomas J in *Beloff v Pressdram Ltd* [1973] 1 All ER 241.

<sup>28</sup> [1988] 3 All ER 567.

<sup>29</sup> [1983] FSR 346.

<sup>30</sup> See also *Hubbard v Vosper* [1972] 2 QB 84.

<sup>31</sup> In the Chancery Division reported at [1999] RPC 655 and, in the Court of Appeal, reported at [2000] RPC 604.

facts were that the claimant company provided security services to Mr Mohammed Al Fayed, including the use of video surveillance at his Paris house. The day before Diana, Princess of Wales, and Mr Al Fayed's son, Dodi, were killed in a car crash, they had been recorded on video going into and out of the house. An employee of the claimant made stills from the film showing them arriving and leaving with the date and time visible. These stills found their way to the *Sun* newspaper, which published them. When sued for copyright infringement, the defendant put forward the defences of public interest and fair dealing for the purpose of reporting current events.

In the Chancery Division, both defences succeeded. After reviewing the authorities Jacob J pointed out that the public interest defence was available only in rare cases but that there were two forms of public interest. One was to deny copyright altogether in the work concerned. This could be the case where the work was grossly immoral. In other cases, it took effect as a recognised defence to copyright infringement. Most of the authorities where the defence applied were breach of confidence cases and copyright was only relied on peripherally.<sup>32</sup> *Lion Laboratories* was a different case in that the balance between copyright and confidence was more equal and the judges all accepted the defence as being available for copyright infringement. Furthermore, s 171(3) of the 1988 Act states that:

... nothing in this Part [the Part relating to copyright] affects any rule of law preventing or otherwise restricting the enforcement of copyright, on grounds of public interest or otherwise.

The only sensible view is that Parliament was happy to accept developments in cases like *Lion Laboratories* which were decided prior to the 1988 Act. Furthermore, one can only agree with Jacob J when he said in *Hyde Park Residence*:<sup>33</sup>

I think the better view is that that provision [s 171(3)] was intended to recognise a defence of public interest – either by way of refusing to recognise copyright altogether ('preventing enforcement') or by way of a defence in the particular circumstances of the case ('restricting enforcement').

The Court of Appeal overturned Jacob J's decision and gave judgment for the claimant for copyright infringement.<sup>34</sup> However, it accepted that, generally, there was such a defence of public interest. Noting that the circumstances in which the defence might be available were not capable of precise definition, the court pointed out that the circumstances must derive from the nature of the work itself and not those relating to the owner. The reasons for this emphasis on the work rather than the owner was because copyright is assignable and the identity of the owner may change. Aldous LJ identified some circumstances when the court might choose not to enforce copyright, being where the work:

- (a) is immoral, scandalous or contrary to family life;
- (b) is injurious to public life, public health and safety or the administration of justice;
- (c) incites or encourages others to act in a way referred to in (a).

It was held that there was no justification for publishing the stills as there was nothing in them that could justify the court in refusing to enforce the statutory right provided for by the Act. The information of interest contained within them (the times of arrival and departure) could have been made available without publishing the stills. Even though the stills might have been of interest to the public, it did not follow that publication was in the public interest.<sup>35</sup>

Where public interest is at issue, it may be important to have regard to the impact of the Council of Europe Convention for the Protection of Human Rights and Fundamental Freedoms.<sup>36</sup> In particular, Article 10, concerning freedom of expression, may be relevant as copyright and other intellectual property rights can be seen as being

<sup>32</sup> Examples being *Beloff v Pressdram Ltd* [1973] 1 All ER 241 and *Hubbard v Vosper* [1972] 2 QB 84.

<sup>33</sup> [1999] RPC 655 at 667.

<sup>34</sup> [2000] RPC 604.

<sup>35</sup> The other defence, fair dealing, is considered below.

<sup>36</sup> Brought into UK law by the Human Rights Act 1998.

a restriction on the right to exercise freedom of expression. Article 10(2) allows conditions or restrictions as prescribed by law necessary in a democratic society.<sup>37</sup> However, in *Ashdown v Telegraph Group Ltd*,<sup>38</sup> the Vice-Chancellor said that the Human Rights Act 1998 was not a reason for interpreting the Copyright, Designs and Patents Act 1988 any differently than before and he concluded that the Court of Appeal decision in *Hyde Park Residence* as to the scope of s 171(3) was binding on him even though the decision in that case preceded the coming into force of the Human Rights Act 1998. This was confirmed in *Imutran Ltd v Uncaged Campaigns Ltd*,<sup>39</sup> where it was accepted that the claimant was most likely to establish that publication by reproducing extracts of its documents should not be allowed. Although, by s 12(4) of the Human Rights Act 1998, the court must have particular regard to the right of freedom of expression, s 12(3) of the Act states that no relief shall be granted to restrain publication ‘. . . unless the court is satisfied that the applicant is likely to establish that publication should not be allowed’. Sir Andrew Morritt VC said at para 33:

Equally, given the interaction between the law of copyright and Article 10 ECHR [the right of freedom of expression] as I consider it to be, the importance of the Convention right to freedom of expression to which s 12(4) . . . requires me to pay particular regard does not lead to the conclusion that injunctive or other relief in respect of the copyright claim should be refused.

The copyright claim concerned the publication of parts of documents belonging to the claimant, who was engaged at the time in research into xenotransplantation (the replacement of human organs by those of pigs), by the defendant which was a company having the aim of campaigning peacefully against experimentation with animals.

There is a public interest in disclosing material which may be subject to intellectual property rights such as copyright under particular legislation such as the Environmental Information Regulations 2004.<sup>40</sup> A public authority may refuse to disclose information in respect of which access is sought if it would adversely affect intellectual property rights. In *R (on the application of the Office of Communications) v Information Commissioner*,<sup>41</sup> the Court of Appeal considered how the balance between the public interest in disclosure and the public interest in maintaining the exception to disclosure should be applied. More than one intellectual property could be involved and, where this was the case, they should be considered in the aggregate rather than individually.<sup>42</sup>

## NON-DEROGATION FROM GRANT

The exercise of an intellectual property right could unduly interfere with the subsequent use of an article in which such rights subsist. We can see the way in which the law balances the rights of the intellectual property owner with those of persons using or acquiring articles in the doctrine of exhaustion of rights, or in the way in which the law has implied a ‘right to repair’ in relation to patented products.<sup>43</sup> The nature of copyright law is such that the exercise of a copyright is less likely to conflict with the subsequent use or sale of articles. For example, if I wish to repair a book, I can do this without the copyright owner’s permission (unless, of course, I wish to photocopy or scan into a computer an old, moth-eaten copy of a book). However, even with copyright there must be some ultimate control of the owner’s rights where these could be unfairly used. In *British Leyland Motor Corp Ltd v Armstrong Patents Co Ltd*,<sup>44</sup> discussed in Chapter 6 (see p 153), the House of Lords, while accepting that there had been a technical infringement of the copyright subsisting in the claimant’s drawings, refused to enforce that copyright on the basis of non-derogation from grant. That is, once an article has been sold by the rights owner, he can no longer use those rights to interfere with the purchaser’s ‘right’ to a free market in spare parts.

<sup>37</sup> Article 8, the right to respect for private and family life, may also be relevant. This right also is subject to derogations.

<sup>38</sup> [2001] RPC 659. The facts of the case are discussed below in relation to fair dealing.

<sup>39</sup> [2002] FSR 20.

<sup>40</sup> SI 2004/3391.

<sup>41</sup> [2009] EWCA Civ 90.

<sup>42</sup> Reg 12(5)(c) gives an exemption for intellectual property rights and reg 12(5)(e) gives an exemption for confidential information.

<sup>43</sup> This is on the basis of an implied licence: see *Solar Thomson Engineering Co Ltd v Barton* [1977] RPC 537.

<sup>44</sup> [1986] 2 WLR 400.

The *British Leyland* case was concerned with spare exhaust pipes, and the law has changed so that design law is more appropriate to deal with such matters. Nevertheless, the non-derogation from grant principle survived the coming into force of the 1988 Act<sup>45</sup> and may be relevant in terms of some types of copyright work. In particular it should still be relevant for works incorporated into articles where further use or modification will involve a restricted act. One obvious example is a computer program that has errors contained within it. Although the copyright owner may be prepared to correct errors, to allow him to prohibit error correction by the licensee or a third party would be to deprive the licensee of a free market in software maintenance. This principle may also apply to more traditional types of works, such as sound recordings, photographs or films, and could allow the owner of a copy to re-record it to reduce or eliminate the presence of some defect caused by, for example, fair wear and tear.<sup>46</sup> Whether this would extend to enhancing the original – for example, by digitally re-recording an old scratchy vinyl sound recording or improving a photographic image by means of computer technology – is less likely, as this probably would compromise the copyright owner's interests.

It could be argued that the principle of non-derogation from grant is inconsistent with copyright law, except in the context of a licence agreement, where a term in the agreement contradicts or is inconsistent with the general rights granted by the licence. As the permitted act provisions in the Act are comprehensive, the courts should be slow to enlarge or extend defences to copyright infringement by judicial decision making only. It might be fairly thought that Parliament gave detailed consideration to defences to copyright infringement during the passage of the Bill<sup>47</sup> and any further development of the *British Leyland* principle should be eschewed. This was recognised in *Canon Kabushiki Kaisha v Green Cartridge Co (HK) Ltd*<sup>48</sup> by the Judicial Committee of the Privy Council, which said that the principle was based on overriding public policy. Nevertheless, the Committee considered it to be questionable in a constitutional and jurisprudential sense for such a policy to override a clear, express statutory right and, consequently, any prospect of extending the principle should be treated with some caution.

## THE PERMITTED ACTS

The acts permitted in relation to copyright works are contained in the Copyright, Designs and Patents Act 1988 Chapter III. The permitted acts are complex and wide-ranging in their scope and application, now occupying no less than 66 sections of the Act, but at least the Act conveniently classifies them by using appropriate sub-headings such as 'Education', 'Libraries and archives', etc. and this classification will be retained in the following description of the permitted acts. At the end of this chapter Table 7.2 shows the basic elements of the permitted acts. The rationale for the permitted acts, allowing what would otherwise be an infringement of copyright, can be seen as a way of limiting the strength of the rights associated with copyright. The justification for this restriction is that it provides a fair balance between the rights of the copyright owner and the rights of society at large.<sup>49</sup> The 'Berne Copyright Convention' provides for certain forms of free uses of copyright works such as in respect of quotations and teaching.<sup>50</sup> Generally, the permitted acts excuse activities which, although technically infringing the copyright in a work, do not unduly interfere with the copyright owner's commercial exploitation of the work. For example, a person writing an academic article is able to include attributed quotations from the writings of other authors. The permitted acts are, therefore, on the whole relatively restricted in their effect on commercial exploitation.

<sup>45</sup> *Flogates Ltd v Refco Ltd* [1996] FSR 935.

<sup>46</sup> This is more controversial and a copyright owner would be likely to object to such copying.

<sup>47</sup> And subsequently in relation to further forms of permitted acts inserted into the Act.

<sup>48</sup> [1997] FSR 817.

<sup>49</sup> *Law Society of Upper Canada v CCH Canada Ltd* [2004] FSR 871.

<sup>50</sup> Article 10, Berne Convention for the Protection of Literary and Artistic Works 1886.

It should be noted that the application of some of the permitted acts depends on the amount of the first work that has been copied or otherwise used, whereas in other cases the permitted act relates to the whole work. For example, in terms of the permitted act of fair dealing for the purposes of criticism or review it appears that it would not be fair dealing to copy the whole of an existing work of copyright, that fair dealing is limited by some measure which is based on quality or quantity, or perhaps a combination of the two. On the other hand, it is permissible to perform the whole of a dramatic work before an audience of teachers and pupils at an educational establishment.<sup>51</sup>

There are proposals afoot to modify some of the permitted acts and to introduce some new ones, as a result of the *Gowers Review of Intellectual Property*.<sup>52</sup> These are summarised at the end of this chapter.

<sup>51</sup> Copyright, Designs and Patents Act 1988 s 34.

<sup>52</sup> HMSO 2006.

## GENERAL, INCLUDING FAIR DEALING

### Making of temporary copies

The Copyright and Related Rights Regulations 2003<sup>53</sup> inserted s 28A into the Act. This provides for the making of temporary copies which are transient or incidental and are an integral and essential part of a technological process, the sole purpose of which is to enable:

- (a) the transmission of the work in a network between third parties by an intermediary; or
- (b) a lawful use of the work

and which has no independent economic significance.<sup>54</sup>

The works covered by this permitted act are:

- literary works (other than computer programs and databases),
- dramatic, musical or artistic works,
- typographical arrangements of published editions, and
- sound recordings or films.

The exception is required because the restricted act of copying includes making transient and incidental copies. The types of activities covered will include the situation where a file containing one of the above-mentioned works is transmitted from one person to another as an e-mail attachment or by the use of peer-to-peer file sharing software. In such a case, the permitted act will apply to excuse the intermediaries such as the internet service provider whose service is used to transmit the copy. This is notwithstanding that the third parties (and possibly the person supplying the peer-to-peer file sharing software) may well infringe copyright by their activities.

In Case C-5/08 *Infopaq International A/S v Danske Dagblades Forening*,<sup>55</sup> the Court of Justice held that printing out an extract of 11 words on paper did not fulfil the condition of being transient for the purposes of the equivalent provision in the Directive on copyright in the information society. The Court of Justice held (at para 64) that an act is transient:

... only if its duration is limited to what is necessary for the proper completion of the technological process in question, it being understood that that process must be automated so that it deletes that act automatically, without human intervention, once its function of enabling the completion of such a process has come to an end.

Where the destruction of the reproduction in question depends on a person destroying the paper on which it is printed, it cannot be regarded as transient.

<sup>53</sup> SI 2003/2498. These Regulations implemented Directive 2001/29/EC of the European Parliament and of the Council of 22 May 2001 on the harmonisation of certain aspects of copyright and related rights in the information society, OJ L 167, 22.06.2001, p 10.

<sup>54</sup> In *Football Association Premier League Ltd v QC Leisure (No 2)* [2008] FSR 789, Kitchen J thought the meaning of 'independent economic significance' was not clear and he referred a question relating this, amongst a great many other questions to the Court of Justice for a preliminary ruling.

<sup>55</sup> 16 July 2009.

## Fair dealing

The notion of permitting some use of a copyright work which is considered to be 'fair' is common in many jurisdictions. For example, in the USA, copyright law has its 'fair use' provisions. In the UK, 'fair dealing' is allowed in relation to a copyright work. It must be noted at once that this has nothing to do with 'dealing' in a trade sense. It can be roughly equated to 'use'. Thus, fair dealing covers research (now only non-commercial research) or private study, criticism, review and reporting current events. The fair dealing provisions allow the copying or other use of the work which would otherwise be an infringement, and in many circumstances the amount of the original work used is very relevant. It may be fair dealing to include 5 per cent of another work for the purpose of criticism or review. It would not normally be fair dealing to incorporate the whole of the other work. The proportion of work taken can be relevant to whether the second author can successfully plead the fair dealing provisions, so this immediately brings into question the relationship between fair dealing and the taking of a substantial part of a work. If the part taken is not substantial, then there is no infringement of copyright and no need to rely on the permitted acts.

It may be that, in some cases, the existence of the permitted acts is illusory. The problem lies in the determination of the relative thresholds of substantiality and the permitted act in question. In *Independent Television Publications Ltd v Time Out Ltd*,<sup>56</sup> Whitford J said:

Indeed, once the conclusion is reached that the whole or a substantial part of the copyright work has been taken, a defence under section 6(2) or (3) [of the Copyright Act 1956, some of the fair dealing provisions] is unlikely to succeed.

If this is true, then there is no such thing as a defence of fair dealing. If the part taken is not substantial, there is no infringement and fair dealing is irrelevant, but if the part taken is substantial then, according to Whitford J, the defence will rarely excuse the defendant's use of the work. It is respectfully submitted that this is wrong and that the whole purpose of the fair dealing provisions is to permit, in appropriate circumstances, the taking of a substantial part of a copyright work. It is, however, difficult to say where the boundaries circumscribing substantiality and fair dealing lie.<sup>57</sup> However, in *Law Society of Upper Canada v CCH Canadian Ltd*,<sup>58</sup> the Supreme Court of Canada said that fair dealing should not be given a restrictive interpretation. The Court went on to say that the manner of dealing might be relevant and it might be unfair where multiple copies were widely distributed. But, where a single copy had been made and destroyed after being used for its intended purpose, this might be regarded as fair.<sup>59</sup>

Consider the case where an author wishes to write a learned article for an academic journal. The author wishes to discuss and critically analyse the work of an eminent professor in the appropriate field. To do this, the author will wish to include extracts from the writings of the eminent professor. But how much does fair dealing allow him to take? Lord Denning gave a good description of the scope of fair dealing for the purposes of criticism or review in *Hubbard v Vosper*, where he said:

You must first consider the number and extent of the quotations . . . Then you must consider the use made of them. If they are used as a basis of comment, criticism or review, that may be fair dealing. If they are used to convey the same information as the author, for a rival purpose, they may be unfair. Next you must consider the proportions. To take long extracts and attach short comments may be unfair. But short extracts and long comments may be fair. Other considerations may come to mind also. But it must be a matter of impression.<sup>60</sup>

Apart from the purpose of the inclusion of copyright materials, their overall proportion to the whole must be considered. Although substantiality is determined by a qualitative test, it appears from the above quote that the scope of this particular permitted act is determined at least partly by means of a quantitative test. Hence the difficulty. Consider

<sup>56</sup> [1984] FSR 64.

<sup>57</sup> In the New South Wales case of *Copyright Agency Ltd v Haines* [1982] FSR 331 it was suggested that fair dealing does not permit as much copying as a licensing scheme permitting photocopying by educational establishments.

<sup>58</sup> [2004] FSR 871.

<sup>59</sup> In some countries (for example, Canada, Australia and the US), fair dealing or fair use for research purposes can cover commercial research, unlike the position now in the EC.

<sup>60</sup> [1972] 2 QB 84 at 94.

**Table 7.1** Proportions of extracts and fair dealing

<i>Total of extracts: percentage of article written by</i>	
<i>Plato</i>	<i>Aristotle</i>
5	5
5	10
5	20
10	5
10	10
10	20
20	5
20	10
20	20
35	5
35	20
35	50

the following in connection with hypothetical journal articles: the author of the new article is called Aristotle and the author of the earlier article is called Plato. Aristotle uses attributed extracts from Plato's article and quotes and discusses them in his own article. Table 7.1 indicates different proportions of the total volume of the extracts used in relation both to Plato's original article and to Aristotle's new article.

For example, in the second entry in Table 7.1, Aristotle has copied 5 per cent of Plato's article and this occupies some 10 per cent of Aristotle's work. (In this case, Aristotle's article must be about half the length of Plato's.) It should be apparent from the table that it is not easy to decide which, if any, of these examples represents an infringement of copyright, even assuming a good motive on the part of Aristotle. In some cases, for example, where the total of the extracts represents 5 per cent of both works, it might be considered to be fair dealing, yet this might be irrelevant because a substantial part of Plato's work has not been taken. In other cases, such as the last one in the table where the extracts amount to 35 per cent of Plato's work and 50 per cent of Aristotle's work, it can be said with some certainty that a substantial amount of Plato's work has been taken and that this does not fall within the scope of the permitted act of fair dealing. However, there is a range of cases in between where it is difficult to say with any certainty. It depends on other things such as motive and the nature of the two works. In some cases it may be that the minimum percentage representing a substantial part is the same as the maximum percentage falling within the fair dealing provisions. In other words, there is coincidence in the infringement and permitted act thresholds and, thus, the permitted act is of no consequence.<sup>61</sup>

In some circumstances fair dealing may allow the copying of an entire work. For example, it may be fair dealing for criticism or review to publish a photograph of a painting if the purpose is to criticise the painting in terms of its style, content or composition. There is nothing in the Act to prevent fair dealing from being relied upon in respect of copying the whole work. However, such taking is unlikely to be deemed to be fair if it seriously prejudices the commercial value of the copyright work, not because of any criticism of course, but because of the widespread publication of the work.

'Fair dealing' is not defined in the Copyright, Designs and Patents Act 1988 and it is only by reference to case law that the factors that might be considered by a court can be determined. Only sometimes will the factors identified below be said to be conclusive one way or the other; in most cases it will be a matter of combining and weighting the factors. The only thing that can be said with any degree of certainty is that whether a particular act falls within the meaning of 'fair dealing' depends very much upon the circumstances surrounding that act.

<sup>61</sup> Of course, it is unsatisfactory to talk in terms of percentages, as substantiality is a mainly qualitative measure. This is one reason why it is so difficult to map out the start of infringement and the end of the permitted acts.

<sup>62</sup> See, generally, *Hubbard v Vosper* [1972] 2 QB 84 and Lord Denning's judgment in particular, and the quote earlier in this chapter. See also *Walter v Steinkopff* [1892] 3 Ch 489.

<sup>63</sup> *Walter v Steinkopff* [1892] 3 Ch 489. However, this may not apply to a photograph. For example, if one is critiquing a photograph, it may require the inclusion of most if not all of the work: *Fraser Woodward Ltd v British Broadcasting Corporation* [2005] FSR 762. The same must apply to other forms of artistic work.

<sup>64</sup> *Weatherby v International Horse Agency & Exchange Ltd* [1910] 2 Ch 297. Parker J said that the issue of competition is often important and may even be a determining factor in some cases, although he did say that unfair use was wider than this.

<sup>65</sup> *British Oxygen Co Ltd v Liquid Air Ltd* [1925] 1 Ch 383; *Belloff v Pressdram Ltd* [1973] 1 All ER 241.

<sup>66</sup> *Hyde Park Residence Ltd v Yelland* [2000] RPC 604 at para 40.

<sup>67</sup> [2000] RPC 604 at 616.

<sup>68</sup> Motive was also an important factor according to Robert Walker LJ in *Pro Sieben AG v Carlton UK Television Ltd* [1999] FSR 610.

<sup>69</sup> For example, *Hubbard v Vosper* [1972] 2 QB 84; *Kennard v Lewis* [1983] FSR 346. It should be noted that *Hubbard v Vosper* pre-dates the *American Cyanamid* guidelines (see Chapter 6, p 188).

<sup>70</sup> [1986] RPC 515.

<sup>71</sup> Unreported, 29 June 1990 (an appeal against a decision not to grant interim relief). In the subsequent full trial, *BBC v British Satellite Broadcasting Ltd* [1991] 3 WLR 174, it was held by Scott J that the defence of fair dealing was available.

<sup>72</sup> However, there may be a problem with the underlying work or works if still in copyright.

- 1 *Purpose*. Conceivably, it might be fair dealing to take a copy of an entire work, such as a journal article, for the purposes of non-commercial research or private study. But it will not normally be fair dealing to take a large amount of another's work for the purpose of criticism or review.<sup>62</sup> Commercial use is acceptable for some forms of fair dealing (criticism or review and reporting current events) but not for research.
- 2 *Proportion*. Within a particular form of fair dealing, proportion might be important. For example, it may be fair dealing for the purposes of criticism or review to take 5 per cent of a work, but not to take 40 per cent.<sup>63</sup>
- 3 *Motive*. If the motive for the act was to compete with the other work, this is unlikely to be fair dealing.<sup>64</sup>
- 4 *Status of other work*, that is whether confidential or published. It is unlikely to be fair dealing if the work taken has not been published, or in the case of a leak to the press.<sup>65</sup>
- 5 *Extent of use*, if the work is used to an excessive extent, that might take it out of the fair dealing provisions relating to criticism or review.<sup>66</sup>
- 6 *Prejudice to the copyright owner*. Article 9(2) of the Berne Convention for the Protection of Literary and Artistic works allows countries of the Union to permit the reproduction of works in special cases provided it does not conflict with the normal exploitation of the work or unreasonably prejudice the legitimate interests of the author.

In *Hyde Park Residence Ltd v Yelland*,<sup>67</sup> Aldous LJ said that, in determining whether a defendant could fall within the fair dealing exceptions (in that case, fair dealing for the purpose of reporting current events) required a two-stage test. The first task was to ascertain whether the publication was for a purpose within the fair dealing permitted acts. For example, could the purpose properly be described as the reporting of current events. If the court was satisfied that the purpose applied, it must ask itself whether the dealing was fair. That involved consideration of a number of factors, being the motive behind the publication,<sup>68</sup> the extent and purpose of use, whether the extent of the publication was necessary for the purpose in question. A final point was that, if the work had not previously been published or circulated to the public, this was an important indication that the dealing was not fair.

One thing to note is that an interim injunction will not normally be granted if the defendant is going to raise the defence of fair dealing and has at least an arguable case. This reluctance to grant interim injunctions stems from the desire of the courts to protect freedom of speech, particularly as regards the press, or in a political or quasi-political sphere.<sup>69</sup> However, there has to be genuine conflict and a danger that freedom of speech will be prejudiced. For example, in *Associated Newspapers Group plc v News Group Newspapers Ltd*,<sup>70</sup> an injunction was granted because there had been no interference with the press's freedom of speech, which would only be interfered with when someone was prevented from saying the truth. The principle that interim injunctions should not be granted when the defendant raises the fair dealing defence was questioned by Dillon LJ in *BBC v British Satellite Broadcasting Ltd*,<sup>71</sup> a case concerning excerpts from broadcasts of World Cup football matches made by the BBC, which BSB intended to include in its broadcasts. Nevertheless, the BBC's application for an interim injunction was refused.

There have been a number of changes over the years to the fair dealing provisions. At one time it appeared that fair dealing for the purposes of research and private study could extend to commercial research providing, of course, that it was 'fair'. Generally now fair dealing for research purposes is limited to non-commercial purposes except in the case of typographical arrangements of published editions.<sup>72</sup> Another change has been the introduction of a requirement for a sufficient acknowledgement for fair

dealing for the purposes of research. Previously, this was required only in respect of fair dealing for the purposes of criticism, review and reporting current events.<sup>73</sup> The meaning of ‘sufficient acknowledgement’ is given in s 178 and this, together with the nature of the acknowledgement, is discussed in the section covering fair dealing for the purposes of criticism, review and reporting current events.

<sup>73</sup> Though not in all cases; see the discussion of this permitted act later.

### Fair dealing for the purposes of research or private study

The permitted act of fair dealing for research or private study is available in relation to literary, dramatic, musical or artistic works.<sup>74</sup> Where the purpose is research, it must be for a non-commercial purpose and there must be a sufficient acknowledgement except where this would be impossible for reasons of practicability or otherwise.<sup>75</sup> Commercial activity does not need to be concurrent with the research to negate the permitted act, it is sufficient if the commercial purpose is contemplated or intended to be carried out in the future at the time of the research.<sup>76</sup> There is no requirement for a sufficient acknowledgement where the purpose is research for private study. Under s 29(2) fair dealing with a typographical arrangement of a published edition for the purposes of research or private study does not infringe the copyright in that arrangement. In this case, fair dealing for the purpose of research is not limited to non-commercial research. It is not fair dealing to perform the acts permitted in relation to computer programs in s 50B (decompilation), removing any possible compromise of the effects of s 50B. It is not fair dealing to observe, study and test the functioning of a computer program in order to determine the ideas and principles which underlie any element of the program under s 29(4A). The reasons for this is that there is a specific permitted act covering this and, again, this removes the possibility of it being compromised by the fair dealing provisions.

<sup>74</sup> Copyright, Designs and Patents Act 1988 s 29(1).

<sup>75</sup> Section 29(1B).

<sup>76</sup> *Controller of Her Majesty's Stationery Office v Green Amps Ltd* [2007] EWHC 2755 (Ch).

Until the changes, fair dealing for the purposes of commercial or industrial research was a distinct possibility, although each case will turn on its particular facts. For example, it would not have been considered to be fair dealing to perform an act restricted by the copyright in a work for the purposes of producing a competing work. In *Independent Television Publications Ltd v Time Out Ltd*,<sup>77</sup> the defendant copied details of forthcoming television programmes from the *TV Times* and the *Radio Times*. The defence of fair dealing (in this case under the head of fair dealing for criticism and review) failed because the purpose was to provide a television programme listing service and had nothing to do with criticism or review.<sup>78</sup>

<sup>77</sup> [1984] FSR 64.

<sup>78</sup> But now, as a result of the Broadcasting Act 1990 s 176, there is a duty to make information about forthcoming programmes available to other publishers. European Community law also may be appropriate here, especially Article 82 of the EC Treaty: see Joined Cases C-241/91P and C-242/91P *RTE & ITP v EC Commission* [1995] ECR I-743.

In relation to fair dealing for research or private study, factors to determine whether it is fair may be the nature of the research or study and the funds available to the researcher or student. Questions such as whether the person concerned is copying simply to save himself the expense of buying a copy of the work, or whether it is reasonable to expect a copy to be purchased, are important. Take, for example, a postgraduate research student. He will need to refer to hundreds of different journal articles and books. The student will not be able to purchase more than a handful of these; he will have to be selective. The student may decide to purchase those materials which he will need to use over and over again during the research. But many of the articles and books will be used less frequently and only small portions will be referred to. It would not be realistic to expect the student to purchase a book when he wants to refer to only a small part of it. Similarly, in the case of an article in a journal – the student would not be expected to buy the issue of the journal or have to subscribe to the journal just to have access to and refer to one particular article.<sup>79</sup>

<sup>79</sup> In some cases, a blanket licence scheme will be in operation allowing more extensive copying, such as that administered by the Copyright Licensing Agency.

It is difficult to draw the limits of fair dealing for private study; perhaps it can be suggested, partly on the basis of the permitted acts in respect of librarians, that copying the whole of one article from an academic journal would be fair dealing, or the

<sup>80</sup> See Copyright, Designs and Patents Act 1988, ss 38 and 39.

copying of part of a book, say, no more than one chapter.<sup>80</sup> Any more would not be fair dealing. However, it must be noted that a great deal of copying in relation to private study is carried out by students, and it is difficult to control and monitor the use that students make of photocopying facilities in libraries. Of course, in many cases, the charges made for photocopying (usually around 10p per sheet) mean that it is not economically viable to copy a whole book – in many cases purchasing the book would be cheaper than copying it. Although photocopying immediately springs to mind, it should be remembered that copyright can be infringed by making a handwritten copy. It is less likely that a substantial part will be taken because of the effort and time required. Making handwritten notes is a selective process, and only the materials that are of direct use to the student are likely to be copied out in this way. Also, the materials are read and, usually, analysed by the student during the process. It may be that the notes taken by the student have their own copyright because of the student's expenditure of skill, effort or judgment in adding comments and supplemental notes.

The act involved in fair dealing can be done by another, such as where a librarian makes a copy of an article in a periodical for a student who requires the copy for the purposes of research or private study. However, this is limited under s 29(3), which restricts the making of copies to cases where there are not multiple copies being made or supplied to more than one person at a similar time for purposes that are substantially the same. For example, in *Sillitoe v McGraw-Hill Book Co (UK) Ltd*,<sup>81</sup> the defendant had published 'study notes' intended to assist students taking GCE 'O' level examinations in literature, and had reproduced a substantial part of the claimant's works in the study notes. The defendant contended, *inter alia*, that the study notes fell within the fair dealing provisions under the Copyright Act 1956 s 6(1), that is fair dealing for the purposes of research or private study. This submission failed to find favour, as the defendant was not engaged in research or private study, but was merely facilitating this for others, the students purchasing copies of the study notes.

<sup>81</sup> [1983] FSR 545.

### Fair dealing for the purposes of criticism, review and reporting current events

Fair dealing for the purpose of criticism or review applies to any form of work or a performance of a work and does not infringe copyright provided that is accompanied by a sufficient acknowledgement.<sup>82</sup> Section 30(1) makes it clear that the criticism or review may be directed towards the work in question or another work or the performance of a work. For example, it is fair dealing to include extracts from a work by T.S. Eliot in a work which is a critical analysis of the work of E.M. Forster.<sup>83</sup> But otherwise the work must be subjected to criticism or review. The equivalent defence under the Copyright Act 1956 was held not to apply when correspondence between the Duke and Duchess of Windsor was published without any such criticism or review.<sup>84</sup> This form of fair dealing may also apply where an extract from a dramatic work is used in the criticism or review of a stage play based on the dramatic work.

The requirement for the works to have been made available to the public was inserted by the Copyright and Related Rights Regulations 2003 and, under s 30(1A), this applies where the work has so been made available by any means, including:

- (a) the issue of copies to the public;
- (b) making the work available by means of an electronic retrieval system;
- (c) the rental or lending of copies of the work to the public;
- (d) the performance, exhibition, playing or showing the work in public;
- (e) the communication to the public of the work,

but no account is to be taken of any unauthorised act.

<sup>82</sup> Copyright, Designs and Patents Act 1988 s 30(1). Criticism may be positive or negative: *David Geva v Walt Disney Corp* [1995] 2 EIPR D-39, Sup Ct of Israel.

<sup>83</sup> Both authors are deceased but literary copyright still subsists in their works.

<sup>84</sup> *Associated Newspaper Group plc v News Group Newspapers Ltd* [1986] RPC 515.

Section 178 contains a definition of ‘sufficient acknowledgement’ and requires that it identifies both the work by its title or other description, and the author. However, if the work is published anonymously,<sup>85</sup> or if the work is unpublished and the author’s identity cannot be ascertained by reasonable inquiry, there is no requirement for the author’s name to be included in the acknowledgement. In *Sillitoe v McGraw-Hill Book Co (UK) Ltd*<sup>86</sup> it was held that a sufficient acknowledgement must recognise the position or claims of the author.

An acknowledgement does not have to be express and may be implied where some of a series of works used are acknowledged and a reasonably attentive person would infer that the others were by the same author. In *Fraser Woodward Ltd v British Broadcasting Corporation*,<sup>87</sup> of the 14 photographs used in the television programme, some were acknowledged expressly on screen (for example, by panning down to the author’s name at the bottom of the photograph), for some the commentator verbally identified the author. It was held that a moderately attentive person would realise all the photographs were by the same author and, consequently, there was a sufficient acknowledgement for the purposes of s 30.

In giving a sufficient acknowledgement, it is not necessary to give the author’s full name or even any name at all provided the acknowledgement is sufficient to convey to a reasonably alert member of the audience to which the work, including the copyright work, is directed. So it was held at first instance in *Pro Sieben Media AG v Carlton UK Television Ltd*,<sup>88</sup> where the defendant had included in its television programme a 30-second video of a woman who was then pregnant with eight foetuses. The extract contained the initials of the claimant’s television programme, TAFF, and its logo, a pale, stylised number 7. It was also held that it is not necessary for criticism or review to be the only or the predominant purpose, provided that it was a significant purpose. The purpose itself is something to be tested subjectively from the point of view of the person relying on the permitted act.<sup>89</sup> However, in *Pro Sieben*, the defendant’s purpose was to show that the defendant was above the cheque-book journalism allegedly carried on by the claimant. In the Court of Appeal,<sup>90</sup> it was accepted that transmission of a company’s television logo could be a sufficient acknowledgement, especially if that was the manner in which the company tended to identify itself. Furthermore, in holding that the extract was fair dealing under s 30(1) (criticism or review) and fair dealing under s 30(2) (reporting current events), it was held that criticism need not be directed at the style of the copyright work but could go beyond that and be criticism of the ideas contained within it and the social and moral implications. Walker LJ said (at 620):

‘Criticism or review’ and ‘reporting current events’ are expressions of wide and indefinite scope. Any attempt to plot their precise boundaries is doomed to failure. They are expressions which should be interpreted liberally, but I derive little assistance from comparisons with other expressions such as ‘current affairs’ or ‘news’.

If the work copied is not criticised, the criticism must be directed at another work rather than the actions of a particular person. In *Ashdown v Telegraph Group Ltd*,<sup>91</sup> Paddy Ashdown, then leader of the Liberal Democrats, attended a meeting with the Prime Minister and others. He later dictated a minute of that meeting. Substantial extracts from the minute were copied by the defendant in a newspaper article about secret plans to form a coalition with the Labour Party. In granting summary judgment for Paddy Ashdown, it was held that it was not necessary to publish the minute at all as the criticism was directed at the claimant and the Prime Minister, not at the minute itself. As the Vice-Chancellor stated (at para 24):

... I accept that it is necessary to have regard to the true purpose of the work. Is it ‘a genuine piece of criticism and review or is it something else, such as an attempt to dress up the

<sup>85</sup> See *PCR Ltd v Dow Jones Telerate Ltd* [1998] FSR 170.

<sup>86</sup> [1983] FSR 545.

<sup>87</sup> [2005] FSR 762.

<sup>88</sup> [1998] FSR 43.

<sup>89</sup> This was doubted in the Court of Appeal, where it was said that motive was more likely to be relevant to the question of whether the dealing might be fair: *Pro Sieben Media AG v Carlton UK TV Ltd* [1999] FSR 610 at 620.

<sup>90</sup> [1999] FSR 610.

<sup>91</sup> [2001] RPC 659.

infringement of another's copyright in the guise of criticism, and so profit unfairly from another's work'.

<sup>92</sup> See also *Pro Sieben Media AG v Carlton UK TV Ltd* [1999] FSR 610. However, although a defendant may avail himself of the fair dealing defence in such a case, the claimant's remedy may lie in an action for defamation or malicious falsehood.

<sup>93</sup> [1972] 2 QB 84.

<sup>94</sup> [2005] FSR 762.

<sup>95</sup> [1994] EMLR 1. For a discussion of this case see Benson, C. 'Fair dealing in the UK' [1995] 6 EIPR 304.

<sup>96</sup> [2000] RPC 604.

<sup>97</sup> However, the defence failed as the purpose was not to report the events shown in the stills.

Criticism can be scathing and can involve a substantial part of another work, and yet still be fair dealing.<sup>92</sup> In *Hubbard v Vosper*,<sup>93</sup> the defendant had been a member of the Church of Scientology for some 14 years. After leaving, he wrote a book which was highly critical of the cult of Scientology and used in his book substantial extracts from books, bulletins and letters, some of which were confidential, written by the claimant. The defence of fair dealing for the purposes of criticism and review was successfully raised as regards the copyright issues.

In criticising a work other than the one reproduced under the permitted act, it seems that it must relate to a work in the copyright sense. This does not, however, prevent the criticism being levelled at the underlying ideas or philosophy manifested in the work. In *Fraser Woodward Ltd v British Broadcasting Corporation*,<sup>94</sup> the defendant screened a programme called *Tabloid Tales*: it used 14 photographs of David Beckham and his family which had been taken by Mr Fraser and published in newspapers. The purpose was to criticise or review tabloid journalism. Mann J confirmed that it was acceptable in this case to use the photographs to criticise or review the tabloid press, being the newspapers and ideas behind them. He confirmed that there was no need specifically to identify the other works and also rejected a submission that a valid test was whether the criticism or review could be carried out without using the works in question. Nor was this a case of copyright infringement dressed up to look like criticism or review. Although the use by the defendant was a commercial use as could have competed with the claimant's exploitation of the photographs, there was no evidence to show that the commercial value of the photographs was seriously diminished by their use in the programme.

The motive behind the use of the claimant's work is an important factor. As Lord Denning confirmed in *Hubbard v Vosper*, it would not be fair dealing for a rival to take copyright material belonging to someone else to use as his own. In *Time Warner Entertainment Co Ltd v Channel 4 Television Corp plc*<sup>95</sup> the claimant obtained an injunction to prevent the screening of a programme entitled *Forbidden Fruit* which contained extracts of scenes from the notorious film *Clockwork Orange*, which was withdrawn in the UK some 20 years earlier for fears of copycat violence. The defendant's programme was based on a criticism of the decision to continue to refuse to allow the film to be shown. The Court of Appeal lifted the injunction on the basis that the defendant could rely on the defence of fair dealing for criticism or review under s 30 of the 1988 Act. The court held that the criticism or review need not be directed primarily at the work itself, and this is confirmed in s 30(1). Although the copy of the film had been obtained, in the claimant's words, 'in an underhand manner' (it had been bought legitimately in Paris), this was not a case where it had been obtained in breach of confidence. In any case, of more relevance was how the work was treated, not how it had been obtained. An argument by the claimant for limiting review by third parties to a total of four minutes' duration failed to impress the court, which confirmed that, in order to criticise a film seriously, sufficient time must be spent showing extracts from the film.

In terms of fair dealing for reporting current events, the events in question do not have to be very recent but they must still be related to other events which are of current interest. In *Hyde Park Residence Ltd v Yelland*,<sup>96</sup> the publication was of stills taken from video footage recorded by security cameras which showed Diana, Princess of Wales, and Dodi Fayed arriving at and later leaving the Villa Windsor in Paris. The date of publication was nearly one year after. However, and for the purposes of the appeal, Aldous LJ held that the media coverage could be described as current events as the purpose of the reporting was to attempt to discredit what had been said, much more recently, by Mohammed Al Fayed.<sup>97</sup>

Fair dealing for the purpose of reporting current events does not apply in the case of a photograph. It is common practice for newspapers to copy extracts from stories in other newspapers. For example, one newspaper may have an ‘exclusive’ in its early morning issue and other newspapers carry the story in their later editions giving, of course, a sufficient acknowledgement. This they may do, provided a photograph is not copied without permission. Lightman J confirmed that the practice of newspapers of copying a photograph from another newspaper with the intention of obtaining a licence retrospectively was clearly unlawful.<sup>98</sup> Nor could such use of a photograph be considered to be fair dealing for criticism or review, such a proposition being described as totally unreal.

The fair dealing provisions are wider than under the previous Act because, apart from the exception of photographs, they are not limited to any particular type of work and can, therefore, apply to broadcasts. Indeed, according to Scott J in *BBC v British Satellite Broadcasting Ltd*,<sup>99</sup> this fair dealing provision is not limited to general news bulletins and could apply to a major sporting event such as the World Cup football competition. In this case, there had been an acknowledgement given by BSB as to the source of the film, but according to s 30(3) there is no need to give an acknowledgement in the case of reporting current events by means of a sound recording, film or broadcast where this would be impossible for reasons of practicality or otherwise.<sup>100</sup> It seems strange that an exception is made in the case of photographs but not broadcasts.

### Incidental inclusion of copyright material

The use of movie and video cameras, still cameras, CCTV and live broadcasts means that, frequently and inevitably, copyright works will be included in the films, photographs or broadcasts whether by design or accident. To facilitate the making of photographs (and other artistic works), films or broadcasts, the incidental inclusion of a copyright work does not infringe the copyright subsisting in that work: s 31(1). Otherwise, it would be very difficult arranging to make a film or whatever, because it would be necessary to avoid the chance inclusion of copyright works. For example, in the case of a television broadcast made in the streets of a city, the copyright subsisting in buildings (artistic works) would be infringed,<sup>101</sup> as might be the copyright in advertising hoardings. The broadcast may also include a glimpse of the front page of a newspaper on sale and pick up the strains of a popular tune being played loudly further down the street. The inclusion must be incidental. It must be ‘casual, inessential, subordinate or merely background’.<sup>102</sup>

The exception goes further in that the copyright in the work incidentally included is not infringed by other acts, such as issuing copies to the public, playing, showing or communicating to the public anything that was made without infringing copyright under s 31(1). However, as regards musical works and sound recordings and broadcasts including musical work, incidental inclusion does not extend to deliberate inclusion. This also applies to words spoken or sung with music: for example, the lyrics of a song.

The word ‘incidental’ is not restricted to unintended or accidental inclusion but there is no distinction between a situation where the work in question is an integral or incidental part of the work objected to. In *Football Association Premier League Ltd v Panini UK Ltd*,<sup>103</sup> the defendant published cards bearing photographs of football players wearing their club strips which bore the badges of the football clubs and, in some cases, the Premier League badge. People bought these cards to stick in albums. The Football Association Premier League (‘FAPL’), 14 of the football clubs and an exclusive licensee sued for infringement of copyright in the FAPL emblem and club badges. The Court of Appeal confirmed that the defendant could not rely on the s 31 defence of incidental inclusion. Chadwick LJ said (at para 26):

<sup>98</sup> *Banier v News Group Newspapers Ltd* [1997] FSR 812.

<sup>99</sup> [1991] 3 WLR 174.

<sup>100</sup> Note that, in relation to criticism or review, a sufficient acknowledgement is an absolute requirement.

<sup>101</sup> A work of architecture is an artistic work by the Copyright, Designs and Patents Act 1988 s 4(1)(a). Section 62 would also excuse – see below (p 230). As with other works except typographical arrangements, the copyright in an artistic work can be infringed communicating the work to the public (s 20).

<sup>102</sup> *IPC Magazines Ltd v MGN Ltd* [1998] FSR 431, per Richard McCombe QC sitting as a deputy judge of the Chancery Division.

<sup>103</sup> [2004] 1 WLR 1174.

I would accept that, in principle, there is no necessary dichotomy between ‘integral’ and ‘incidental’. Where an artistic work in which copyright subsists appears in a photograph because it is part of the setting in which the photographer finds his subject it can properly be said to be an integral part of the photograph: if it is part of the setting in which the photographer finds his subject, it will, necessarily, appear in the photograph unless edited out.

He went on to say that a consideration was the purpose for which the work was created and that it was artificial to test the ‘incidentalness’ of the inclusion by artistic consideration where the purpose of the inclusion was commercial. The cards would not have been of such interest to buyers if the players were not pictured in their club strips.

104 [2008] FSR 789.

In *Football Association Premier League Ltd v QC Leisure (No 2)*,<sup>104</sup> transmissions of football matches included the player line-up before the start of the match, during which the Premier League Anthem could be heard being played in the background. The case involved numerous issues relating to the use of unauthorised decoders used to receive transmissions of Premier League football matches. It was held that as regards the Anthem, the defence of incidental inclusion under s 31 applied. Kitchen J accepted that neither the broadcasters nor the viewers attached any great importance to whether the Anthem could be heard. The objective was to show the players lining up before the match so as to convey the excitement and anticipation in the stadium. The inclusion of the Anthem, in so far as it could have been heard at all, was purely incidental.

105 [2005] FSR 762.

Although the inclusion does not have to be unintentional, a deliberate treatment of how the work is included may take it out of the permitted act. In *Fraser Woodward Ltd v British Broadcasting Corporation*,<sup>105</sup> of the 14 photographs of the Beckhams used in a television programme, an alternative defence of incidental inclusion was run in respect of two of the photographs. In one case, the photograph was shown as it appeared on the page of a newspaper and then the television picture zoomed in on the headline on that page. It was a deliberate way of showing the photograph in the context of the overall story (about a plot to kidnap Victoria Beckham and one of her children). It was held not to be incidental inclusion for the purposes of s 31 even though a defence under s 30(1), criticism or review, succeeded.

## VISUAL IMPAIRMENT

The Copyright (Visually Impaired Persons) Act 2002 inserted ss 31A to 31F into the Copyright, Designs and Patents Act 1988 to permit the making of accessible copies of literary, dramatic, musical or artistic works and published editions by or on behalf of visually impaired persons.<sup>106</sup> An accessible copy is one which gives a visually impaired person improved access to a work.<sup>107</sup> Examples might be where an enlarged copy of a book or television listings is made or a copy of a book is made available on a computer for reading on a computer screen where the person concerned is unable to hold a book or turn the pages or where a blind person has access to computer software capable of reading text out loud. It should already be clear that visual impairment is not limited to sight and a visually impaired person is, under s 31F(9), a person:

<sup>106</sup> These provisions were brought into force on 31 October 2003.

<sup>107</sup> Section 31F(3). Under s 31F(4) an accessible copy may include facilities for navigating around a version of the work but may not include changes unnecessary to overcome problems caused by visual impairment or changes that infringe the author’s right to object to a derogatory treatment under s 80. Section 31F contains the definitions for ss 31A to 31E.

- (a) who is blind;
- (b) who has an impairment of visual function which cannot be improved, by the use of corrective lenses, to a level that would normally be acceptable for reading without a special level or kind of light;
- (c) who is unable, through physical disability, to hold or manipulate a book; or
- (d) who is unable, through physical disability, to focus or move his eyes to the extent that would normally be acceptable for reading.

The focus is on reading text or music but as artistic works are included in the list of works for which accessible copies may be made, the definition of a visually impaired person must be read in the context also of seeing an artistic work, such as a photograph or some other image.

Section 31A covers the making of a single accessible copy for the personal use of a visually impaired person if that person has the lawful use of a copy of the whole or part of a work (the ‘master copy’) which is not accessible to him because of his impairment. In such a case an accessible copy may be made without infringing copyright: s 31A(1). This does not apply if the work is a musical work, or part thereof, and the making of an accessible copy would involve recording a performance of the music or part of it. Therefore, if the music is in the form of sheet music, it is not permissible for someone to play it, say on piano, and record it on audio tape to give the visually impaired person to listen to. What is allowed is making an enlarged copy of the sheet music which will enable the visually impaired person to be able to read it sufficiently well to play the music himself. Also excluded is making an accessible copy of a database or part of a database if that would infringe the copyright in the database.<sup>108</sup> This appears to lead to a contradiction. Under s 31A(1) making an accessible copy of a database for the personal use of a visually impaired person does not infringe copyright (a database is a form of literary work). But s 31A(2) disapplies s 31A(1) if making the copy would infringe the copyright in the database or part of it. It seems that the intention must have been to exclude databases from the permitted act but it is notable that the exclusion refers to the copyright in the database and not that in the contents of the database. Therefore, it might be acceptable to make an accessible copy of some of the contents of a database providing this does not infringe the copyright in the database as a database. No mention is made of the *sui generis* database right which, if it subsists in the database, may be infringed even if the copyright is not because of differences in the scope of infringement between the two rights.

The permitted act does not apply if, or to the extent that, accessible copies are made commercially available by, or with the authorisation of, the copyright owner.<sup>109</sup> This only applies in respect of the actual form of impairment a particular individual has. For example, if the copyright owner sells large print copies of books, that is no answer to a person who is blind or physically unable to turn the pages of a book. A copy in a form accessible to that person may still be made.

An accessible copy must be accompanied by a statement that the copy was made under s 31A together with a sufficient acknowledgement. If a charge is made by a person making an accessible copy on behalf of a visually impaired person, that charge must not exceed the cost of making and supplying the copy. Records must be kept by the approved body in accordance with s 31C, as discussed below.

Accessible copies will be treated as infringing copies where a person holds an accessible copy when not entitled to have it made under s 31A(1) or where a person transfers an accessible copy made under s 31A(1) to another person unless the person making the transfer has reasonable grounds for believing that the person to whom he is making the transfer is the person entitled to have it made or has possession of the master copy and intends to transfer the accessible copy to the visually impaired person entitled to have the copy.<sup>110</sup> Subsequent dealing with accessible copies has the effect of their being treated as infringing copies and, if that dealing itself infringes copyright, they are treated as infringing copies for all subsequent purposes.<sup>111</sup> Dealing covers selling, letting for hire, offering or exposing for sale or hire or communication to the public.

Multiple copies of accessible copies may be made for visually impaired persons by approved bodies under s 31B. An approved body is an educational establishment<sup>112</sup> or a body that is not conducted for profit. Unlike the case with single copies made under s 31A, the master copy must be of a *commercially* available work or edition, but the

<sup>108</sup> The exceptions for musical works and databases are contained in s 31A(2).

<sup>109</sup> Section 31A(5).

<sup>110</sup> This is the combined effect of s 31A(6) to (8).

<sup>111</sup> Section 31A(9).

<sup>112</sup> Section 174 defines educational establishments as schools and other forms of educational establishment designated by the Secretary of State. Schools are defined in s 174(3) by reference to the relevant Act or Order as appropriate for England and Wales, Scotland and Northern Ireland. See the section on Education (p 224) for further details.

forms of works covered are the same, being literary, dramatic, musical or artistic works and published editions. Similar provisions apply otherwise in respect of the exceptions for musical works and databases. There is a slight change where accessible copies are commercially available in that they must be accessible ‘to the same or substantially the same degree’ whereas, for single copies made under s 31A, they must be in a form ‘that is accessible to that person’. This reflects the fact that multiple copies may be made for a group of persons with varying levels of impairment.

There are also requirements for an accompanying statement to the effect that the copies have been made under s 31B together with a sufficient acknowledgement. Any charges made by the approved body must not exceed the cost of making and supplying the copies.<sup>113</sup> A further requirement where the approved body is an educational establishment is that it must ensure that the copies are used only for its educational purposes.

<sup>113</sup> ‘Supplying’ includes lending under s 31B(13).

Unlike the case with single copies made under s 31A, where the master copy is in copy-protected electronic form, any copies made must, as far as practicable, incorporate the same, or equally effective, copy-protection unless the copyright owner agrees otherwise.

There are similar provisions in respect of subsequent dealing, making the copies infringing copies<sup>114</sup> and, if the approved body is no longer entitled to make or supply copies under s 31B, any copies it continues to hold are treated as infringing copies.<sup>115</sup>

<sup>114</sup> Section 31B(10).

<sup>115</sup> Section 31B(9).

Section 31C applies to intermediate copies made under s 31B by approved bodies and records which they must keep of such copies. Under s 31C(1), an approved body may hold an intermediate copy of a master copy necessarily created during the production of accessible copies as long as the approved body continues to be entitled to make accessible copies for the purposes of production of further accessible copies. Any intermediate copy made in breach of s 31C(1) is treated as an infringing copy: s 31C(2). An example of an intermediate copy could be a version of a literary work which has been scanned into a computer where a navigation system has been incorporated into the copy which is then saved to a CD for loading on to computers used by visually impaired persons.

Intermediate copies made by approved bodies may be lent or transferred to other approved bodies providing the body lending or transferring the intermediate copy has reasonable grounds for believing that the other is also an approved body entitled to make accessible copies under s 31B and will not use it except for the purposes of making such copies.<sup>116</sup> Any charge made must not, under s 31C(5), exceed the cost of the loan or transfer. For the purposes of ss 31B and 31C, lending means making available for use, otherwise than for direct or indirect economic or commercial advantage, on terms that it will or may be returned. A charge not exceeding the cost of making and supplying the copy may be made.<sup>117</sup>

<sup>116</sup> Section 31C(3) and (4).

<sup>117</sup> Section 31F(6) and (7).

Records must be kept by approved bodies of accessible copies made under s 31B and of the persons to whom they are supplied; intermediate copies lent or transferred under s 31C and of the persons to whom they are lent or transferred. The approved body must allow the copyright owner or person acting for him, on giving reasonable notice, to inspect the records at any reasonable time. The approved body must, within a reasonable time of making an accessible copy under s 31B or lending or transferring an intermediate copy under s 31C, notify a relevant representative body. This is a body which represents copyright owners (whether particular owners or owners of the type of copyright concerned). If no such body exists, the approved body must give notice to the copyright owner. A representative body must have given notice to the Secretary of State of the copyright owners or classes of owners represented by it otherwise the copyright owner must be notified directly.<sup>118</sup> In the absence of relevant representative bodies, the requirement to notify the copyright owner directly does not apply if it is not reasonably possible for the approved body to ascertain the name and address of the copyright owner.<sup>119</sup>

<sup>118</sup> At the time of writing no relevant representative bodies have been notified to the Secretary of State.

<sup>119</sup> The provisions relating to keeping records and notification are contained in s 31C(6) to (9).

Section 31D provides for licensing schemes and, where such a scheme is in force, s 31B does not apply. The scheme must be one operated by a licensing body granting

licences permitting the making and supply of copies of the work in a particular form or accessible copy. The scheme must not be unreasonably restrictive and the scheme and any modification of it must have been notified to the Secretary of State by the licensing body. A scheme is unreasonably restrictive if it includes a term or condition which purports to prevent or limit the steps that may be taken under ss 31B or 31C or which has that effect. However, this does not apply if the copyright work is no longer published by or with the authority of the copyright owner and there are reasonable grounds for preventing or restricting the making of accessible copies of the work. Therefore, it may be acceptable for a licensing body to prohibit the making of accessible copies of previous editions of a book which have been replaced by newer editions or where the work is out of print and no longer available for sale. If ss 31B or 31C are displaced by a licensing scheme, ss 199 to 222 apply to the scheme as if it were one under s 117. These provisions include references to the Copyright Tribunal.

The Secretary of State is given the power to make Orders if it appears to him that the making of copies under s 31B or under a s 31C licence has led to infringement of a copyright work on a scale that would not, in his opinion, have occurred if s 31B had not been in force at the time or the licence had not been granted.<sup>120</sup> Such Orders may target one or more specific approved bodies or disapply the provision in respect of making copies of a specific description. Before making the Order, the Secretary of State must consult such bodies representing copyright owners and representing visually impaired persons as he thinks fit.

Where the Order includes a prohibition, the Secretary of State must also consult the approved body or bodies concerned or, where the Order is to apply to one or more specified categories of approved bodies, any such body representing that category or categories of approved bodies. An approved body prohibited by an Order from acting under a licence may not apply to the Copyright Tribunal under s 121(1) in respect of a refusal or failure of a licensing body to grant such a licence.<sup>121</sup>

The introduction of these complex provisions allowing accessible copies of copyright works to be made could be described as a sledgehammer to crack a walnut. A copyright owner who insisted on exercising his full economic rights to prevent the making of accessible copies for visually impaired people could only be described as miserly. In some cases, accessible copies of works are already made at no or little cost with the consent of copyright owners.<sup>122</sup>

## EDUCATION

Education is treated as a special case by copyright law, and there are several exceptions to infringement contained in the 1988 Act.<sup>123</sup> Some control is retained – for example, reprographic copying is permitted only in limited circumstances, and some of the permitted acts can be done only for or at educational establishments.<sup>124</sup> Section 174 of the Act defines ‘educational establishments’ as being any school and any other establishment specified by order of the Secretary of State. By the Copyright (Educational Establishments) Order 2005,<sup>125</sup> other establishments include universities established by Royal Charter or Act of Parliament, most institutions for further or higher education and theological colleges. ‘School’ is defined by reference to the appropriate legislation – for example, in England and Wales it is as defined in the Education Act 1944.<sup>126</sup> The expressions ‘teacher’ and ‘pupil’ include, respectively, any person who gives and any person who receives instruction. Another control is that, in some circumstances where it is permitted to make copies of copyright works, if those copies are subsequently dealt with they are treated as infringing copies. ‘Dealt with’ generally means sold or let for hire, or offered or exposed for sale or hire or communicated to the public.

<sup>120</sup> Section 31E(1).

<sup>121</sup> At the time of writing no licensing schemes have been notified to the Secretary of State and no Orders have been made under s 31E.

<sup>122</sup> The author made a copy of an earlier edition of this book available in software form for no charge to a blind solicitor who used reading software with the consent of the publisher.

<sup>123</sup> Copyright, Designs and Patents Act 1988 ss 32–36.

<sup>124</sup> Reprographic copying has a wider meaning than simply making photocopies of a work: see s 178.

<sup>125</sup> SI 2005/223.

<sup>126</sup> See Copyright, Designs and Patents Act 1988 s 174(3) for the meaning of ‘school’ in Scotland and in Northern Ireland.

Section 32 deals with things done either for the purpose of instruction, or for examination purposes. Unusually, for the 'education permitted acts' there is no requirement for the instruction or examination to be done by or on behalf of an educational establishment. However, in some cases, the instruction may only be for a non-commercial purpose. Copying in the course of instruction or in preparation for instruction of a literary, dramatic, musical or artistic work is permitted as long as the copying is done by the person giving or receiving the instruction, for example the teacher or the pupil, and the copying is not by a reprographic process. The copy must be accompanied by a sufficient acknowledgement and the instruction may only be for a non-commercial purpose. For example, it is permissible for a teacher to ask a pupil to write out by hand a substantial extract from a work of literature. Another example is where a teacher reproduces an artistic work on a blackboard in a classroom for the purpose of instruction. Copying by making a film or a film sound track in the course of, or in preparation for, instruction in the making of films or film sound tracks does not infringe the copyright in a sound recording, film or broadcast. Again, the copying must be done by a person giving or receiving instruction, a sufficient acknowledgement is required and the instruction must be for a non-commercial purpose.

Where a literary, dramatic, musical or artistic work has been made available to the public, it is not infringed by being copied in the course of instruction or preparing for instruction providing the copying is fair dealing with the work, it is done by the person giving or receiving instruction, is not done by a reprographic process and is accompanied by a sufficient acknowledgement.<sup>127</sup> Under s 32(2B), making available to the public has the same meaning as set out in s 30(1A).

<sup>127</sup> Section 32(2A) inserted by the Copyright and Related Rights Regulations 2003, SI 2003/2498.

As might be expected, examinations are also privileged in that anything may be done for the purposes of the examination by way of setting questions, communicating questions to candidates or answering the questions without infringing copyright, providing the questions are accompanied by a sufficient acknowledgement. However, there is an exception to this in the case of reprographic copies of musical works for use by an examination candidate in performing the work. Therefore, if the examination requires the candidates to play some music, authorisation to make copies must be obtained from the copyright owner or additional copies of the sheet music purchased. The requirement to give a sufficient acknowledgement under s 32 does not apply if it would be impossible for reasons of practicability or otherwise.

The Act prohibits the subsequent dealing with copies made under s 32 by considering such copies to be infringing copies. 'Dealt with' means sold or let for hire, offered or exposed for sale or hire or communicated to the public unless that communication does not infringe copyright under s 32(3), being anything done for the purposes of examination.

Anthologies are dealt with under s 33, which permits the inclusion of a short passage from a published literary or dramatic work in a collection provided that the collection is intended for use in educational establishments and consists mainly of material in which no copyright subsists. Such material would include works in which the copyright has expired.<sup>128</sup> The collection must be described in its title and in any advertisements as being for use in educational establishments. Furthermore, a sufficient acknowledgement is required. But how short is a short extract? If it is not substantial in copyright terms, then there can be no infringement anyway, and the requirements of the exception are meaningless. A further requirement is that no more than two excerpts from the copyright works by the same author can be included in anthologies published by the same publisher over any period of five years. It would seem that this permitted act is extremely parsimonious. Presumably, if there is some criticism or review of the extracts the fair dealing provisions would come into play and larger extracts could be used. Just to place a final and unnecessary imposition, s 33(4) limits the provision to the educational purposes of the educational establishment.

<sup>128</sup> It could also cover material published in a country which is not a member of the copyright conventions and fails otherwise to attract protection in the UK.

Performances of literary, dramatic and musical works are permitted provided the audience is made up of teachers and pupils at the educational establishment and other persons directly connected with the activities of the establishment.<sup>129</sup> A parent of a pupil is not to be taken as directly connected with the school by reason of being a parent only. Therefore, a play performed by pupils before an audience of parents will fall outside the scope of this permitted act. The performance may be by a teacher or pupil in the course of the school's activities, or by any person for the purposes of instruction. For the latter it is required that the performance takes place at the school, but as far as teacher and pupil performances are concerned, this limitation does not apply. However, the wording of s 34 seems to suggest that only sole performances fall within the section. The section is termed in the singular as regards the performers. There are similar provisions in respect of the playing or showing of a sound recording, film or broadcast for the purposes of instruction before such an audience as described above.

Under s 35(1), recordings of broadcasts and copies of such recordings can be made by or on behalf of educational establishments for their educational purposes without infringing copyright in the broadcast provided there is not an appropriate licensing scheme under s 143<sup>130</sup> and the recording is accompanied by a sufficient acknowledgement of the broadcast and the educational purposes are non-commercial. Under s 35(1A), it is not an infringement of the copyright where a recording of a broadcast or copy of such a recording whose making did not infringe copyright under s 35(1) for a person situated within the premises of an educational establishment to communicate it to the public provided it cannot be received by any person situated outside those premises. This would allow, for example, the playing of a recording of a broadcast to pupils, teachers and parents on an internal network of televisions within a school. There is no relaxation of the requirement to accompany the recording with a sufficient acknowledgement under s 35, the reason being, presumably, that it should always be possible to determine the identity of the work, by its title or other description, and the identity of the author. In any case, the definition of sufficient acknowledgement under s 178 excuses the naming of the author if the work is published anonymously or where it is not possible by reasonable enquiry to determine the identity of the author. Subsequent dealing is not permitted.

Section 36(1) permits the reprographic copying of passages of published literary, dramatic or musical works by or on behalf of educational establishments for the purposes of instruction, provided the copies are accompanied by a sufficient acknowledgement and the instruction is for a non-commercial purpose. No acknowledgement is required where this would prove impossible by reasons of practicability or otherwise. Section 36(1B) permits the making by or on behalf of educational establishments of reprographic copies of passages from published editions, to the extent permitted under s 36 (that is, 1 per cent per quarter unless a licence scheme is in operation), for the purposes of instruction without infringing the copyright in the typographical arrangement of the edition. The amount that can be copied is extremely small, being not more than 1 per cent of any work in any quarter, and the authority to copy given by s 36 is subject to the availability of licences where the person making the copies knows or ought to have been aware of the availability of such licences. A licence may not attempt to reduce the portion that can be copied under s 36. Again, this provision must be considered in the light of what is a substantial part of a work. It is submitted that, in most cases, a substantial part of a work will exceed 1 per cent of the total quantity of a work. If this is so, s 36 has no effect whatsoever, it is just so many empty words. Of course, it is very difficult to predict how a court will decide the issue of substantiality, the test being based mainly on quality. However, it would be unlikely that a mere 1 per cent would capture the essence of a work. In *Hawkes & Sons (London) Ltd v Paramount Film Service Ltd*<sup>131</sup> around 8 per cent was adjudged to be substantial, but here the basic melody had

<sup>129</sup> Copyright, Designs and Patents Act 1988 s 34. Such performances are deemed not to be public performances.

<sup>130</sup> Copyright, Designs and Patents Act 1988 s 35. An example of a licensing scheme is that under the Copyright (Certification of Licensing Scheme for Educational Recording of Broadcasts) (Educational Recording Agency Limited) Order 2005, SI 2005/222.

<sup>131</sup> [1934] Ch 593.

been taken. Perhaps a better test would be to look at the effect, if any, on the copyright owner's interests. Has the extent of the copying been such that it would be reasonable to expect that copies of the original work be purchased instead? However, the rapid improvements made in recent times to copying technology perhaps account for the attempts to limit unauthorised copying to tiny amounts only.

As usual, subsequent dealing, which includes communication to the public, has the effect of treating copies made under this section as infringing copies for the purposes of that dealing. Where the dealing itself infringes copyright, the copies are treated as infringing copies for all subsequent purposes.

Section 36A was inserted by the Copyright and Related Rights Regulations 1996<sup>132</sup> and was needed to create a new permitted act in relation to lending by educational establishments as the 1996 Regulations created a right to prevent rental and lending of copyright works under s 18A of the Copyright, Designs and Patents Act 1988. Section 36A simply states that copyright in a work is not infringed by the lending of copies of the work by an educational establishment.

<sup>132</sup> SI 1996/2967.

## LIBRARIES AND ARCHIVES

These provisions apply only to 'prescribed' libraries and archives, that is those prescribed by statutory instrument, which may also provide that, in some cases (also prescribed), a librarian or archivist may make a copy only if the person requesting the copy satisfies the librarian or archivist that he requires the copy only for non-commercial research or private study and makes a signed declaration in the prescribed form.<sup>133</sup>

In such cases, a librarian or archivist may rely on a signed declaration by a person requesting a copy of part or whole of a work in which copyright subsists, unless he is aware that the declaration is false in a material particular. A signed declaration will usually contain a statement to the effect that the copy is required for the purposes of research or private study and that the person requesting the copy has not previously been supplied with a copy from the same work. If a signed declaration is false in a material particular, the copy supplied is considered to be an infringing copy and the person requesting the copy is liable for infringement of copyright as if he made the copy himself. The 1988 Act acknowledges that a librarian or archivist may delegate his duties and responsibilities to others.<sup>134</sup> In general, where the copying is permitted of certain types of work, there will be no infringement of accompanying illustrations or in the typographical arrangement.

Under s 38, a librarian may make and supply a copy of an article in a periodical to a person requiring the copy for the purposes of research or private study. The person supplied must pay at least the attributable cost, which includes a contribution to the general expenses of the library, that is overheads. No person may be supplied with more than one copy of the same article, or with more than one article from the same issue of the periodical. Similar provisions in s 39 permit the making and supplying of a copy of a part of a published edition of a literary, dramatic or musical work (other than an article in a periodical). The section refers to copying a part of a work without giving any guidance as to the maximum proportion that may be copied. Section 40 of the Act seeks to restrict the making or supplying of multiple copies of the same material by way of regulations made for the purposes of ss 38 and 39.<sup>135</sup>

Section 40A, inserted by the Copyright and Related Rights Regulations 1996, provides for the lending of books by public libraries where the book is within the public lending right scheme under s 1 of the Public Lending Right Act 1979 and the book falls within the scheme's provisions for eligibility, whether or not it is in fact eligible. Furthermore, lending of copies of a work by a prescribed library or archive, not being

<sup>133</sup> The Copyright (Librarians and Archivists) (Copying of Copyright Material) Regulations 1989, SI 1989/1212 specify prescribed libraries and archives and expand on the prescribed conditions, and also contain the forms to be used for declarations and written statements required in the Copyright, Designs and Patents Act 1988 ss 38–43. For example, the prescribed conditions generally include a requirement for a signed declaration or statement.

<sup>134</sup> These preliminary issues are contained in s 37.

<sup>135</sup> The Copyright (Librarians and Archivists) (Copying of Copyright Material) Regulations 1989, SI 1989/1212.

a public library, and which is not conducted for profit, is permitted without infringing copyright.

Provisions also exist so that one prescribed library may make and supply copies to other prescribed libraries of:

- (a) articles in periodicals, or
- (b) the whole or part of a published edition of a literary, dramatic or musical work.<sup>136</sup>

However, (b) does not apply if, at the time the copy is made, the librarian making it knows or could by reasonable enquiry ascertain the name and address of the person entitled to authorise the making of copies of the work. In the vast majority of cases this will be so – most published editions contain the name of the publisher and the author; and whichever of these is the copyright owner, the librarian should be able, without undue difficulty, to make contact in order to ask permission.

Subject to certain conditions, the making for another prescribed library or archive of replacement copies of literary, dramatic or musical works which have been lost, destroyed or damaged is permitted under s 42. Making copies in order to preserve the original is also permitted, for example, so that the copy may be displayed and the original placed in safe storage. However, such copying is not permitted if it is reasonably practicable to purchase a copy of the item. The copying of certain unpublished works for the purposes of non-commercial research or private study is also permitted,<sup>137</sup> as is the making of copies of articles of cultural or historical importance or interest which are to be exported from the UK, it being a legal requirement that such a copy is made.<sup>138</sup>

Under s 15 of the Copyright Act 1911, a copy of any book, serial or other printed publication was required to be deposited in one of six nominated libraries, being the British Library, the National Libraries of Scotland and Wales, the Universities of Oxford and Cambridge and Trinity College Dublin. These are collectively known as the Legal Deposit Libraries. However, s 15 of the 1911 Act applied only to materials in printed form and changes were needed to bring the provisions up to date to cover publication in other media such as on the internet. The Legal Deposit Libraries Act 2003<sup>139</sup> gives the Secretary of State the power to extend the system of legal deposit to cover online publication, such as on the internet, and offline publication, such as on CD-ROM. As a result of these provisions, it was necessary to insert a new permitted act in s 44A covering copying by or on behalf of deposit libraries. Copyright is not infringed in such cases by copying a work from the internet where the work is of a description prescribed by Regulations made under s 10(5) of the 2003 Act, where its publication on the internet or the person publishing it there is connected with the UK in a manner to be prescribed and the copying is done in the manner prescribed. The libraries, persons acting on their behalf and readers may not use the material, copy it, adapt any accompanying computer program or database, lend or transfer to a third party or dispose of the material unless authorised by Regulations. At the time of writing no Regulations, except for a commencement Order, have been made under the 2003 Act.<sup>140</sup>

## PUBLIC ADMINISTRATION

Copyright is not infringed by certain things done in connection with what might loosely be described as in the course of public administration. This includes parliamentary and judicial proceedings, Royal Commissions and statutory inquiries, and materials open to public inspection, on a statutory register or contained in a public record. Further, acts done under statutory authority do not infringe copyright, unless the relevant Act of Parliament provides otherwise, and the Crown may copy and issue copies to the public of materials communicated to the Crown in the course of public business.<sup>141</sup>

<sup>136</sup> Section 41. Copies may only be supplied to a person satisfying the librarian or archivist that he requires the copy for non-commercial research or private study and will not use the copy for any other purpose.

<sup>137</sup> Section 43.

<sup>138</sup> Copyright, Designs and Patents Act 1988 s 44.

<sup>139</sup> This Act repealed s 15 of the Copyright Act 1911.

<sup>140</sup> The Legal Deposit Libraries Act 2003 (Commencement) Order 2004, SI 2004/130. The Act was brought into force on 1 February 2004.

<sup>141</sup> For the meaning of ‘Crown’ in this context, see s 48(6).

Thus, the copying of documents for a court trial does not infringe copyright, neither does playing a piece of music in court as part of the proceedings: for example, if the case concerns a dispute involving an alleged infringement of copyright in a piece of music. Copyright is not infringed by doing anything for the purpose of reporting parliamentary and judicial proceedings, or the proceedings of Royal Commissions or statutory inquiries that are held in public. This does not, of course, authorise the copying of published reports of such proceedings. It is permissible to make copies of entries in registers such as the Data Protection Register, the Register of Patents and the Register of Trade Marks, to make copies of information contained in electoral registers or to obtain copies of birth, marriage and death certificates, etc. without infringing copyright. The Copyright (Material Open to Public Inspection) (Marking of Copies of Plans and Drawings) Order 1990 contains the text of a statement to be applied to copies of plans and drawings supplied under s 47.<sup>142</sup> Further details of the public administration exceptions to copyright infringement are given in Table 7.2 at the end of this chapter.

<sup>142</sup> SI 1990/1427. The statement is contained in art 2. A similar provision applies to copies of maps open to public inspection under art 2 of the Copyright (Material Open to Public Inspection) (Marking of Copies of Maps) Order 1989, SI 1989/1099.

<sup>143</sup> SI 1992/3233.

<sup>144</sup> SI 1997/3032.

<sup>145</sup> SI 2003/2498. This replaced the previous exception, slightly differently worded, which was buried in s 286A(1)(c).

## COMPUTER PROGRAMS AND DATABASES

The Copyright (Computer Programs) Regulations 1992<sup>143</sup> inserted ss 50A–50C providing for some specific exceptions to copyright infringement. Under certain conditions, lawful users of computer programs may make back-up copies of computer programs, decompile programs to achieve interoperability and copy or adapt a computer program. There is also a non-derogation from grant exception in relation to databases in s 50D, inserted by the Copyright and Rights in Databases Regulations 1997<sup>144</sup> and, under s 50BA, a permitted act allowing observing, studying and testing of computer programs inserted by the Copyright and Related Rights Regulations 2003.<sup>145</sup> These exceptions are dealt with fully in the following chapter.

## DESIGNS, TYPEFACES AND WORKS IN ELECTRONIC FORM

The provisions relating to designs are discussed in Part Five which deals with design law; however, these provisions are still contained in Table 7.2 at the end of this chapter for completeness. Basically, the typeface provisions are to limit artistic copyright protection for the design of a typeface<sup>146</sup> which will fall within the graphic work category of artistic works. Using a typeface in the ordinary course of typing, composing text, typesetting or printing, possession of an article for such use or doing anything in relation to the material so produced does not infringe the artistic copyright subsisting in the design of a typeface even if the article is an infringing article.<sup>147</sup> However, s 54(2) goes on to apply certain provisions, including secondary infringement of copyright, to persons making, importing, dealing or possessing for the purpose of dealing with articles specifically designed or adapted to produce material with a particular typeface.<sup>148</sup> Section 55 of the Act limits the duration of copyright in an artistic work consisting of the design of a typeface to 25 years from the end of the calendar year during which articles specifically designed or adapted for producing material in that typeface have been marketed by or with the permission of the copyright owner.<sup>149</sup>

Many works are now made available in electronic form, which is defined in s 178 as being in a form usable only by electronic means, ‘electronic’ having a wide meaning. For example, computer programs, sound recordings, films, information and data are frequently made available in this form. The provision contained in s 56 raises a legal presumption that where a copy of work in electronic form is transferred, the transferee may do anything the original purchaser could do without infringing copyright. Before

<sup>146</sup> A typeface includes an ornamental motif used in printing: Copyright, Designs and Patents Act 1988 s 178.

<sup>147</sup> Copyright, Designs and Patents Act 1988 s 54.

<sup>148</sup> ‘Dealing with’ means selling, letting for hire, offering or exposing for sale or hire, exhibiting in public or distributing.

<sup>149</sup> ‘Marketed’ means sold, let for hire or offered or exposed for sale or hire anywhere in the world.

the provision can apply, the terms under which the copy had been purchased must have allowed, whether expressly, by implication or by operation of law, the purchaser to make copies, to adapt the work or make copies of the adaptation. Furthermore, there must be no express terms interfering with the transfer of the copy or with the transferee's rights. Any copies, whether or not adaptations or copies of adaptations, that were made by the purchaser and not transferred are treated as being infringing copies of the work. The provisions also apply to subsequent transfers of the copy of the work. As an example of the workings of s 56, imagine that a person, George, obtains a copy of a word-processing computer program to use on his computer. He may make a back-up copy if the licence agreement permits this, or if it is necessary to his lawful use. Suppose the licence allows George to assign it in the future. After a year or two, George wants to obtain a more powerful word-processor program and wants to 'sell' his old one to Robert.<sup>150</sup> George may then:

- 1 give Robert the original disk containing the word-processing program and the back-up copy (duplicate), or
- 2 give Robert the original disk and destroy the back-up copy.

If George retains the back-up copy, this will be treated as an infringing copy. Once Robert receives the original disk, he will be able to make his own back-up copy of the program.

**150** Strictly speaking, George does not sell the system to Robert; instead, he assigns the benefit of his licence to Robert. For assignment generally, see Chapter 4 (pp 104–108).

## MISCELLANEOUS – LITERARY, DRAMATIC, MUSICAL AND ARTISTIC WORKS

Sections 57–65 contain a hotchpotch of provisions relating to various permitted acts in relation to literary, dramatic, musical and artistic works. Section 57 applies to anonymous and so-called 'pseudonymous' literary, dramatic, musical and artistic works and covers the situation where it is not possible by reasonable enquiry to trace the author, it being reasonable to assume that the copyright has expired or that the author died at least 70 years ago. In such a case, copyright is not infringed even if it is later discovered that copyright continues to subsist in the work. Notice that it is the identity of the author and not the owner of the copyright which is at issue. This provision does not apply to works of Crown copyright or in respect of designated international organisations. If a work is of joint authorship, the provision does not apply if any one of the authors could have been traced by reasonable enquiry, or if it is not reasonable to assume that all of the joint authors died at least 70 years ago.

Other permitted acts include:

- 1 the use or copying of a record of spoken words or material from it for the purposes of reporting current events or communicating to the public the whole or part of the work, subject to certain conditions (s 58);
- 2 the public reading or recitation of a reasonable extract of a published literary or dramatic work, subject to a sufficient acknowledgement (s 59);
- 3 copying and issuing to the public abstracts of scientific or technical subjects published in periodicals, subject to the existence of a statutory licensing scheme (s 60);
- 4 recording songs for the purpose of inclusion in an archive maintained by a designated body (s 61);<sup>151</sup>
- 5 making graphic works, photographs, films or broadcasts of visual images of buildings and, if accessible by the public, sculptures, models for buildings and works of artistic craftsmanship (s 62);
- 6 copying an artistic work and issuing copies to the public in order to advertise the forthcoming sale of the work, for example, to distribute photographs of an oil painting

**151** A list of designated bodies is given in the Copyright (Recordings of Folksongs for Archives) (Designated Bodies) Order 1989, SI 1989/1012. The Copyright, Designs and Patents Act 1988 s 61 is headed 'Recordings of Folksongs' but the Act nowhere defines a 'folksong' except that, from reading s 61, it appears that a folksong is a song where the words are unpublished and of unknown authorship. In many cases, although they may have qualified under the 1956 Act, such songs will be too old for copyright protection under the 1988 Act.

<sup>152</sup> *Thurgood v Coyle* [2007] EWHC 2696 (Ch), per Lewison J at para 8.

<sup>153</sup> It would be unlikely that copyright would be infringed if the artist did not repeat or imitate the main design as required by s 64.

- to be sold at an auction (s 63) – it seems that this may extend to making a copy of an architectural drawing to facilitate the sale of a house;<sup>152</sup>
- 7 the making of subsequent artistic works by the author of a previous work (permits an artist to use and develop his style and technique for future works) (s 64);<sup>153</sup>
  - 8 reconstructing buildings (s 65).

## MISCELLANEOUS – OTHER WORKS

A miscellany of permitted acts is provided for in ss 66–75. Previously, s 66 concerned rental of sound recordings, films and computer programs, and gave the Secretary of State power to order the rental to be treated as licensed, subject to the payment of a reasonable royalty. A more curious provision in s 66(5) was that copyright in a computer program was not infringed by rental to the public after 50 years from the end of the calendar year during which the program was first issued to the public. Section 66 conflicted with the Directive on rental and lending rights, and was replaced by a new s 66 by the Copyright and Related Rights Regulations 1996<sup>154</sup> with effect from 1 December 1996.

<sup>154</sup> SI 1996/2967.

Now, s 66 gives the Secretary of State power to order, in such cases as are specified in the order, that the lending of copies of literary, dramatic, musical or artistic works, sound recordings or films are to be treated as licensed by the copyright owner, subject only to the payment of a reasonable royalty. No order will be made if, or to the extent that, there is a licensing scheme under s 143 providing for the grant of licences.

Section 66A contains a permitted act in relation to films. The copyright in a film is not infringed by an act done at a time, or in pursuance of arrangements made at a time when it was not possible by reasonable enquiry to ascertain the identity of any of the persons by which the duration of copyright in the film and it is reasonable to assume that copyright has expired or the last to die of those persons died 70 years or more from the beginning of the calendar year during which the act was done or the arrangements made.<sup>155</sup>

<sup>155</sup> This does not apply to films subject to Crown copyright or, where an Order has been made specifying a copyright period of longer than 70 years, to films in which the copyright first vested in an international organisation under s 168.

The playing of a sound recording will not infringe copyright if done for charitable, religious, educational or social welfare purposes if the organisation is not established or conducted for profit, and the proceeds of any charge for admission are applied solely for the purposes of the organisation: s 67. The sound recording must be played by a person acting primarily and directly for the benefit of the organisation and not acting with a view to gain. Under s 67(1), the playing must be part of the activities of, or for the benefit of, a club society or other organisation. The proceeds from any goods or services sold by or on behalf of the organisation at the time and place of playing the recording must be applied solely for the purposes of the organisation. A local authority is not an ‘other organisation’ as the term should be interpreted *ejusdem generis* in respect of the preceding words. Furthermore, a local authority is not an organisation whose main objects are charitable, as required by s 67(2)(a).<sup>156</sup> Nor is the fact that the objects of a local authority are in some way related to the advancement of social welfare sufficient to bring it within s 67. They had to be directed to social welfare in a manner like a charitable organisation. Thus, in *Phonographic Performance Ltd v South Tyneside Metropolitan Borough Council*,<sup>157</sup> the playing of sound recordings by the local authority in its premises used for adult education, sports centres, swimming pools, libraries, parks and museums were not permitted acts and would require a licence from the claimant.

<sup>156</sup> *Phonographic Performance Ltd v South Tyneside Metropolitan Borough Council* [2001] RPC 594.

<sup>157</sup> [2001] RPC 594.

Incidental recording for the purposes of broadcasting is permitted under certain circumstances. It is possible to make a sound recording or film of a literary, dramatic or musical work, or an adaptation of such a work, or to make a photograph of an artistic work, or to make a copy of a sound recording or film. Such activities are treated as

licensed by the owner where a person is authorised to broadcast the work by virtue of a licence or assignment of copyright. The recording, film, photograph or copy in question must not be used for any other purpose, and must be destroyed within 28 days of its first being used in the broadcast. Failure to adhere to either of those conditions results in the recording, film, photograph or copy being considered to be an infringing copy.

Section 69 permits the making or use of recordings of broadcasts for the purposes of supervision and control of broadcasts and other services by the BBC and OFCOM and under a number of provisions of the Broadcasting Acts of 1990 and 1996 and the Communications Act 2003.

A large number of video recorders are used domestically to record television programmes for viewing at a later time: for example, where the persons concerned are away from home or doing something else at the time the programme is broadcast. This is known as ‘time-shifting’ of broadcasts, and is permitted by s 70 if carried out on domestic premises and done for private and domestic use where the purpose is solely to enable it to be viewed or listened to at a more convenient time. Nor is the copyright in any work included in the broadcast infringed. There is no time limit, although one of 28 days was proposed at one stage during the passage of the Bill through Parliament, but this was finally dropped because it was totally unenforceable.

The restriction to recording on domestic premises might have been prompted by *Sony Music Entertainment (UK) Ltd v Easyinternetcafe Ltd*<sup>158</sup> in which the defendant ran an internet café and provided a CD burning service for customers in respect of music available on the internet. The defendant argued that this fell within the time-shifting provisions in s 70 and the copying was for private and domestic use. The defendant failed to adduce any evidence to support this argument, which was rejected by the judge in giving summary judgment to the claimant.

Strangely, s 71 permits the making on domestic premises, for private and domestic use, of a photograph of an image which is part of a broadcast. The copyright in the broadcast and any included film will not be infringed. Presumably, copyright in other works could still be infringed, such as taking a photograph of a television screen when it is showing a painting or some other artistic work. It is unclear why anyone would want to take photographs from screen images on a television set, although such photographs could be used in advertising and promotions. Where copies are made under ss 70 or 71, if they are subsequently dealt with, the copies will be treated for that dealing as infringing copies. If the dealing itself infringes copyright, the copies will continue to be treated as infringing copies for all subsequent purposes.

The free public showing or playing in public of broadcasts is permitted under s 72: for example, to the residents of an old people’s home or to members of clubs or societies (unless this is not incidental to the main purpose of the club or society).<sup>159</sup> The copyright in any included sound recording or film likewise will not be infringed. However, certain sound recordings are excepted from this, being one whose author is not the author of the broadcast in which it is included where the sound recording is of music, with or without words spoken or sung.<sup>160</sup> Reception and immediate re-transmission by cable of broadcasts is permissible under certain circumstances under s 73.<sup>161</sup> Where the re-transmission falls outside the area covered by the area for reception of the broadcast the copyright in any work included in the broadcast is treated as licensed subject to a reasonable royalty under s 73(4). An application to settle the royalty or other sums payable may be made to the Copyright Tribunal under s 73A.

Designated bodies may, under s 74, modify copies of broadcasts for persons who are hard of hearing or disabled (for example, by adding subtitles), subject to the existence of statutory licensing schemes; and, under s 75, recordings of certain broadcasts may be made by bodies such as the British Film Institute and the British Library for archival purposes.<sup>162</sup>

<sup>158</sup> [2003] FSR 882.

<sup>159</sup> The European Commission initiated infringement proceedings on the basis that s 72 conflicted with Council Directive 92/100/EEC of 19 November 1992 on rental right and lending right and on certain rights related to copyright in the field of intellectual property, OJ L 346, 27.11.1992, p 61, but this was withdrawn after the Commission was satisfied that the UK later complied by modifying s 72 by the Copyright and Related Rights Regulations 2003, SI 2003/2498. Council Directive 92/100/EEC has since been repealed and replaced by codifying Directive 2006/115/EC of the European Parliament and of the Council of 12 December 2006 on rental right and lending right and on certain rights related to copyright in the field of intellectual property, OJ L 376, 27.12.2006, p 28.

<sup>160</sup> Section 72(1A), inserted by the Copyright and Related Rights Regulations 2003, SI 2003/2498. Section 72(1B) contains an exception to this exception and it will not infringe the copyright in the sound recording if part of the activities of a not for profit organisation or is necessary for repairing broadcast equipment, demonstrating that the repair has been carried out or demonstrating such equipment for sale or hire.

<sup>161</sup> The re-transmission by cable must be in pursuance of a relevant requirement imposed by the Communications Act 2003 or where the broadcast is part of a qualifying service, which includes BBC television and teletext, Channels 3, 4 and 5, etc.

<sup>162</sup> The other bodies are the Music Performance Research Centre and the Scottish Film Council: Copyright (Recording for Archives of Designated Class of Broadcasts and Cable Programmes) (Designated Bodies) Order 1989, SI 1989/2510.

## ADAPTATIONS

It is possible for the permitted acts to apply to a work which is an adaptation of another work. In these cases, the copyright in the first work (that is, the work from which the adaptation was made) is not infringed. This is the effect of s 76, which prevents infringement of the underlying work from which the adaptation (being a literary, dramatic or musical work) was made, provided the act in relation to the adaptation is permitted.

## STATUTORY LICENCE TO USE SOUND RECORDINGS IN BROADCASTS

The UK ratified the Rome Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organisations in 1963. One provision of the Rome Convention was that ephemeral fixations of phonograms could be made by broadcasting organisations for their own broadcasts. This led to the Copyright, Designs and Patents Act 1988 s 68, which allows, *inter alia*, the incidental recording of sound recordings by persons authorised under a licence or assignment of copyright to broadcast a sound recording. In order to comply with the Rome Convention, a condition was that the copy was destroyed within 28 days of first being used for the broadcast.

Later, a report of the Monopolies and Mergers Commission (now the Competition Commission) was critical of the way in which licensing bodies such as Phonographic Performance Ltd (PPL) exercised the rights assigned to them by copyright owners in relation to royalty rates, common tariffs and imposing restrictions on performances. From this followed the introduction of a statutory licence scheme, allowing the use as of right of sound recordings in broadcasts, contained in ss 135A–135G of the Act.<sup>163</sup> The right is available where a licensing body could grant a licence or procure the grant of a licence and the person making the broadcast including the sound recording gives notice to the licensing body. A further condition is that the person does not have a licence and the licensing body refuses to grant or procure the grant of a licence on acceptable terms, or to comply with an order of the Copyright Tribunal, allowing unlimited needletime, or that the person holds a licence which limits needletime and the licensing body refuses to substitute or procure the substitution of the term with one which does allow unlimited needletime. ‘Needletime’ is the time in any period that the sound can be included, whether calculated by hours or by a proportion of the period or otherwise.

Section 135C contains the conditions for the exercise of the right. The person making the broadcast must comply with any reasonable condition or notice given to him by the licensing body, providing that body with such information as it may reasonably require and making payments to the licensing body at not less than quarterly intervals in arrears.

In *Phonographic Performance Ltd v AEI Rediffusion Music Ltd*,<sup>164</sup> the defendant claimed that s 135C(1) gave him a right to keep copies longer than the 28 days under s 68. The main reason was that it was inconvenient and troublesome for the defendant to stay within the 28-day period. It was held that the purpose of s 135C(1) was to grant a right to make broadcasts of sound recordings and which did not extend to making copies. Any other construction would put the UK in breach of the Rome Convention and, in any case, it was not necessary to make a copy to make the broadcast. Lightman J said that the court should be slow to imply a term which encroached upon the rights of copyright owners beyond that which was clearly provided for by the Act.

<sup>163</sup> Inserted by the Broadcasting Act 1990.

<sup>164</sup> [1997] RPC 729.

## SUMMARY

Table 7.2 provides a summary of the permitted acts discussed in detail in this chapter.

**Table 7.2** The permitted acts: outline

<i>Permitted act</i>	<i>Types of works covered by permitted act</i>	<i>Comments</i>
<b>General and fair dealing</b>		
Making temporary copies: s 28A	Literary works (other than computer programs and databases), dramatic, musical or artistic works, typographical arrangements of published editions, sound recordings or films	Applies to transient and incidental copies transmitted in a network between third parties by an intermediary or a lawful use of the work, in either case, which has no independent economic significance.
Fair dealing – research or private study: s 29	Literary, dramatic, musical or artistic works and typographical arrangements of published editions	In most cases, there must be a sufficient acknowledgement and research must be for a non-commercial purpose. Exceptions to this permitted act apply in relation to computer programs (provided for elsewhere).
Fair dealing – criticism, review and news reporting: s 30	Any work or performance of it, for criticism or review Any work (other than a photograph) for reporting current events	Must be accompanied by a sufficient acknowledgement (in most cases) and work must have been made available to the public.
Fair dealing – incidental inclusion: s 31	Any work – not infringed by inclusion in an artistic work, sound recording, film or broadcast	Extends also to issuing copies to public, playing, showing or communication to the public.
<b>Visual impairment</b>		
Making accessible copies for visually impaired persons: ss 31A to 31F	Literary, dramatic, musical or artistic works and published editions	Single copies may be made or multiple copies by approved bodies. A statement that the copy has been made under the relevant provision and a sufficient acknowledgement is required. There is also provision for licensing schemes and prohibitions may be ordered by the Secretary of State where the making of copies leads to infringement that would not have occurred but for the making of a copy or copies.
<b>Education</b>		
Copying in the course of instruction or preparation for instruction: s 32(1)	Literary, dramatic, musical or artistic work	Must be done by the person giving or receiving instruction and not by a reprographic process. There must be a sufficient acknowledgement and the instruction must be for a non-commercial purpose.

Table 7.2 *cont'd*

<i>Permitted act</i>	<i>Types of works covered by permitted act</i>	<i>Comments</i>
Copying by making a film or film sound track in the course of instruction or preparation for instruction in the making of films or film sound tracks: s 32(2)	Sound recording, film or broadcast	Must be done by the person giving or receiving the instruction and be accompanied by a sufficient acknowledgement and be done for a non-commercial purpose.
Copying a work which has been made available to the public for the purpose of instruction or preparation for instruction: s 32(2A)	Literary, dramatic, musical or artistic work	The copying must be fair dealing and be done by the person giving or receiving the instruction, is not done by reprographic copying and is accompanied by a sufficient acknowledgement.
Anything done for the purpose of examination by way of setting questions, communicating the questions to students and answering the questions: s 32(3)	Any work	The questions must be accompanied by a sufficient acknowledgement. Making a reprographic copy of a musical work for use by a candidate in performing the work is not permitted.
Inclusion of a short passage in a collection intended for use in educational establishments and so described in its title and advertisements. The collection must consist mainly of material in which no copyright subsists: s 33	Published literary or dramatic work	Must be accompanied by a sufficient acknowledgement and the work itself must not be intended for use in such establishments, and not more than two excerpts from copyright works of the same author may be included in collections by the same publisher published over any period of five years.
Performances before an audience of teachers and pupils at an educational establishment and other persons directly connected with the activities of the establishment: s 34(1)	Literary, dramatic or musical works (such performance is not considered to be a public performance)	Performance must be by a teacher or pupil in the course of the activities of the establishment or the performance may be by any person at the establishment for the purposes of instruction. A person is not directly connected simply because he is a parent of a pupil.
Playing or showing before an audience of teachers and pupils at an educational establishment and other persons directly connected with the activities of the establishment for the purposes of instruction: s 34(2)	Sound recording or broadcast (such playing or showing is not considered to be a playing or showing in public)	A person is not directly connected simply because he is a parent of a pupil.

Table 7.2 *cont'd*

<i>Permitted act</i>	<i>Types of works covered by permitted act</i>	<i>Comments</i>
Making a recording by or on behalf of an educational establishment or making a copy of such a recording for educational purposes of that establishment: s 35(1)	Broadcast (extends to any work included in a broadcast)	Must be accompanied by a sufficient acknowledgement and the educational purposes must be non-commercial. The permitted act does not apply if or to the extent there is a certified licensing scheme under s 143.
Communication to the public of a recording of a broadcast or copy made without infringing copyright under s 35(1): 35(1A)	Broadcast (extends to any work included in a broadcast)	Communication must be by a person situated in the premises of an educational establishment and cannot be received by a person situated outside the premises.
Reprographic copying of passages not exceeding 1 per cent of a work in any quarter by or on behalf of an educational establishment for the purposes of instruction: s 36	Published literary, dramatic, musical or artistic works and associated typographical arrangements	Must be accompanied by a sufficient acknowledgement and purpose must be non-commercial. The permitted act does not apply if and to the extent that licences are available and the person making the copies knows or ought to have been aware of that fact.
<b>Libraries and archives</b>		
Librarians of a prescribed library may, if the prescribed conditions are complied with, make and supply:		<i>Prescribed conditions:</i>
(a) a copy of an article in a periodical: s 38	Literary work (text) and accompanying artistic works (illustrations) including the typographical arrangement	(a) person supplied must satisfy the librarian that he requires the copies for non-commercial research or private study and will not use them for any other purpose;
(b) a copy of part of a published edition: s 39	Literary, dramatic or musical works including the typographical arrangement of such works	(b) not more than one copy of periodical article (or copies from more than one article in the same issue) is supplied or, with respect to published literary, dramatic or musical works, not more than one copy of the same material or a copy of more than a reasonable proportion of any work is supplied;
		(c) the person to whom the copies are supplied must pay at least the cost of making and supplying the copies.

Table 7.2 *cont'd*

<i>Permitted act</i>	<i>Types of works covered by permitted act</i>	<i>Comments</i>
Lending of a book by a library if the book is in the public lending right scheme: s 40A	Any work	
Librarian of a prescribed library may make and supply to another prescribed library, a copy of: (a) an article in a periodical, or (b) the whole or part of a published edition: s 41	An article in a periodical or literary, dramatic or musical works, including the typographical arrangement of such works	The prescribed conditions above must be complied with. (b) does not apply if the librarian knows or could by reasonable enquiry ascertain the name and address of the person entitled to authorise the making of the copy.
Librarian or archivist of a prescribed library or archive may, if the prescribed conditions are complied with, make a copy from any item in the permanent collection of that library or archive: (a) in order to preserve or replace the item (b) to replace a lost, destroyed or missing item in the permanent collection of another prescribed library or archive: s 42	Literary, dramatic or musical works plus accompanying illustrations (artistic works) and including the typographical arrangement	Prescribed conditions include restricting the making of such copies to cases when it is not reasonably practicable to purchase a copy of the item to fulfil the purpose.
Librarian or archivist of a prescribed library or archive may, if the prescribed conditions are complied with, make and supply a copy of the whole or part of a work from an unpublished document, provided that the copyright owner has not prohibited copying to the actual or constructive knowledge of the person making the copy: s 43	Literary, dramatic or musical works (extends also to accompanying illustrations)	<i>Prescribed conditions:</i> (a) person supplied must satisfy the librarian or archivist that he requires the copies for research or private study; (b) no person is supplied with more than one copy of the same material; (c) the person to whom the copies are supplied must pay at least the cost of making and supplying the copies.
Making a copy of an article of cultural or historical importance or interest which cannot be exported from the UK unless a copy is made and deposited in an appropriate library or archive: s 44	Any work	
Copying from the internet by a legal deposit library: s 44A	Works to be prescribed by Regulations	Regulations are to be made under the Legal Deposit Libraries Act 2003.

**Table 7.2** *cont'd*

<i>Permitted act</i>	<i>Types of works covered by permitted act</i>	<i>Comments</i>
<b>Public administration</b>		
Anything done for the purposes of parliamentary or judicial proceedings or for the purposes of reporting such proceedings: s 45	Any work	Does not authorise copying a work which is itself a published report of the proceedings.
Anything done for the purposes of the proceedings of a Royal Commission or statutory inquiry or for the purpose of reporting such proceedings held in public or issuing to the public copies of the report of a Royal Commission or statutory inquiry: s 46	Any work	Does not authorise copying a work which is itself a published report of the proceedings.
Copying material open to public inspection pursuant to a statutory requirement, or on a statutory register, e.g. entries in the Data Protection Register or the Register of Trade Marks: s 47	Material as a literary work in as much as it contains factual information of any description. Any work where issued to the public to enable the material to be inspected at a more convenient time or place or where material contains information of general scientific, technical, commercial or economic interest for purposes of disseminating information	Copying must be by or with authority of appropriate person. Does not include issuing copies to the public except when material contains information about matters of general scientific, technical, commercial or economic interest or to enable the material to be inspected at a more convenient time or place. Includes EPO (European Patent Office) and WIPO (World Intellectual Property Organisation) materials.
Copying and issuing copies to the public of works which have been communicated to the Crown by or with the licence of the copyright owner and an item containing the work is in the custody or control of the Crown providing the work has not previously been published otherwise. Communication must have been in the course of public business, which includes any activity carried on by the Crown: s 48	Literary, dramatic, musical or artistic works	Applies only as regards the purpose or related purposes for which the work has been communicated.

**Table 7.2** *cont'd*

<i>Permitted act</i>	<i>Types of works covered by permitted act</i>	<i>Comments</i>
Copying and supplying a copy of material contained in public records: s 49	Any work	Must be by or with the authority of any officer appointed under the Public Records Act 1958 or equivalent legislation for Scotland, Northern Ireland or Wales.
Acts specifically authorised by an Act of Parliament unless the Act provides otherwise: s 50	Any work	This does not exclude any defence of statutory authority otherwise available under or by any enactment.
<b>Computer programs: lawful users</b>		
Making back-up copy necessary for lawful use: s 50A	Computer program	Must be by a lawful user. A lawful user is a person having a right to use the program (whether under a licence or otherwise).
Decompiling a computer program by a lawful user: s 50B	Computer program	A number of conditions apply, e.g. it must be necessary to decompile to obtain the information necessary to create an independent program that can be operated with the program decompiled or another program.
Observing, studying and testing of computer programs by lawful user: s 50BA	Computer program	Must be in order to determine the ideas and principles underlying any element of the program by doing acts of loading, displaying, running, transmitting or storing the program as the lawful user is entitled to do.
Copying or adapting by a lawful user: s 50C	Computer program	For example, for the purposes of error correction. Does not apply to copying and adapting permitted under ss 50A, 50B or 50BA. Unlike the three permitted acts above, it appears that this can be restricted or prohibited by a term in a licence agreement, possibly subject to non-derogation from grant.
<b>Databases</b>		
Doing anything necessary for the purposes of access to and use of the contents of a database or part of a database by a person having a right to use the database: s 50D	Database	Any term or condition purporting to prohibit or restrict this is void.

**Table 7.2** *cont'd*

<i>Permitted act</i>	<i>Types of works covered by permitted act</i>	<i>Comments</i>
<b>Designs</b>		
Making an article to a design or copying an article made to that design. The exception extends to issuing to the public, including in a film, or communicating to the public anything which was not an infringement of copyright under s 51(1): s 51	Design document or model recording or embodying the design for anything other than an artistic work or typeface. A design document could be a drawing, written description, photograph or data stored in a computer	Relates to articles which are protected by the unregistered design right and may also extend to some registrable designs (though by no means all).
Copying by making articles, doing anything for the purpose of making articles and doing anything in relation to articles, 25 years from end of calendar year in which articles first marketed: s 52	Certain artistic works that have been exploited by making articles by an industrial process and marketing the articles in the UK. Films are not 'articles' for s 52. See Copyright (Industrial Processes and Excluded Articles) (No 2) Order 1989 for meaning of 'exploitation'	Effectively limits copyright in certain types of artistic works (e.g. works of artistic craftsmanship) that are commercially exploited by making articles which will normally be taken to be copies of the artistic work. Marketing means selling, letting for hire or offering or exposing for sale or hire. Such designs may be registrable and the intention was to limit copyright, in effect, to no longer than the protection that was available by registration.
In respect of a design registration: (a) things done in pursuance of an assignment or licence granted by the proprietor of a corresponding design (b) things done in good faith in reliance on the registration without notice of proceedings for cancellation or invalidation of registration: s 53	Artistic work	'Corresponding design' means a design which if applied to an article would be treated as a copy of an artistic work.
<b>Typefaces</b>		
Using a typeface in typing, composing, typesetting or printing; possessing an article for such use; doing anything in relation to material produced by such use: s 54	Artistic work consisting of the design of a typeface	But making, importing, dealing with, possessing articles specifically designed or adapted for producing material in a particular typeface still infringes – see s 54(2).

**Table 7.2** *cont'd*

<i>Permitted act</i>	<i>Types of works covered by permitted act</i>	<i>Comments</i>
Copying by making further such articles, etc. after 25 years from the end of the calendar year in which articles for producing material in a typeface have been first marketed: s 55	Artistic work consisting of the design of a typeface	Limits duration of copyright where the design has been commercially exploited anywhere.
<b>Works in electronic form</b>		
Transferee of a work in electronic form may do anything purchaser was allowed to do if the terms of the original purchase allowed the purchaser to copy, adapt or copy adaptations and there are no express terms prohibiting transfer or otherwise interfering with the transferee's rights: s 56	Any work in electronic form	Terms of original purchase may be express, implied or by virtue of any rule of law. Copies and adaptations not transferred are treated as infringing copies.
<b>Miscellaneous – literary, dramatic, musical and artistic works</b>		
Acts done in relation to works which are anonymous or pseudonymous where it is not possible to trace the author and it is reasonable to assume that copyright no longer subsists in the work: s 57	Literary, dramatic, musical or artistic works	Note: effects of longer duration of copyright, e.g. Crown copyright, on the assumption as to the time since the author died. Special provisions also for works of joint authorship.
Use of a record of spoken words or material from it, copying the record or material taken from it and use of that copy, subject to conditions: s 58	Literary work (recording, in writing or otherwise, of spoken words for purpose of reporting current events or communicating to the public)	Conditions: direct records only not taken from a previous record or from a broadcast, making of which is not prohibited by speaker and did not infringe copyright, use made not of a kind prohibited by speaker or copyright owner, use is by or with authority of lawful possessor of record.
Public reading or recitation of a reasonable extract and also the making of a sound recording or communicating to the public such a reading or recitation: s 59	Published literary or dramatic work	Must be accompanied by a sufficient acknowledgement.

**Table 7.2** *cont'd*

<i>Permitted act</i>	<i>Types of works covered by permitted act</i>	<i>Comments</i>
Copy abstracts of scientific or technical subjects published in periodicals or issue copies to the public: s 60	Not limited but realistically only literary works though may include illustrations	Does not apply if and to the extent that there is a licensing scheme under s 143.
Making a sound recording of a performance of a 'folksong' for inclusion in an archive and subsequent supply of copies for research or private study: s 61	Literary works (words) and musical works (accompanying music)	Certain conditions must be met, words unpublished and of unknown authorship, no other copyright is infringed and not prohibited by any performer. Prescribed conditions include that the person supplied with a copy must satisfy the archivist that he requires it for non-commercial research or private study and will not use it for any other purpose and no person is furnished with more than one copy of the same recording.
Making a graphic work representing it, making a photograph or film of it or broadcasting a visual image of it. Also issuing copies to the public or communicating to the public anything the making of which was not an infringement under this section: s 62	Artistic works being buildings and sculptures, models for buildings and works of artistic craftsmanship if permanently sited in a public place or premises open to the public	
Copying and issuing copies to the public advertising the sale of a work: s 63	Artistic works	For example, in an auction catalogue. However, subsequent dealing excepted.
The making of another work by the author, not being the owner of the copyright in the first work, by copying the first work: s 64	Artistic works	Provided the main design of the earlier work is not repeated or imitated.
Reconstructing a building: s 65	Artistic works, that is, the building itself and drawings and plans from which building constructed	As regards the drawings and plans, the building was originally constructed in accordance with them by or with the licence of the copyright owner.
<b>Miscellaneous – lending of works and playing of sound recordings</b>		
Lending to the public of copies of works by order of the Secretary of State: s 66	Literary, dramatic, musical or artistic works, sound recordings or films	Such lending is treated as licensed subject only to payment of a reasonable royalty. This permitted act does not apply if and to the extent there is a licensing scheme under s 143.

**Table 7.2** *cont'd*

<i>Permitted act</i>	<i>Types of works covered by permitted act</i>	<i>Comments</i>
<b>Miscellaneous – films and sound recordings</b>		
Acts done in relation to films where it is not possible by reasonable enquiry to ascertain the identity of persons referred to in s 13B(2) (e.g. principal director, etc.) and it is reasonable to assume that copyright no longer subsists in the work: s 66A	Films	Inserted by the Duration of Copyright and Rights in Performances Regulations 1995.
Playing a sound recording as part of the activities of, or for the benefit of, a club, society or other organisation not established or conducted for profit, subject to conditions: s 67	Sound recordings	Main objects of organisation must be charitable or for advancement of religion, education or social welfare and proceeds applied solely for the purposes of the organisation. Further conditions apply.
<b>Miscellaneous – broadcasts</b>		
Incidental recording for the purposes of broadcast:		
(a) making a sound recording or film of the work or an adaptation	(a) Literary, dramatic or musical work or adaptation of such a work	Applies where person is authorised to broadcast by virtue of a licence or assignment of copyright.
(b) taking a photograph or making a film	(b) Artistic works	Such recording is treated as if licensed by the copyright owner.
(c) making a copy: s 68	(c) Sound recording or film	Recording, film, photograph or copy must not be used for any other purpose and shall be destroyed within 28 days of being first used.
Making or use of recordings, etc. for the purpose of maintaining supervision and control over programmes by the BBC and exercise of functions by OFCOM etc.: s 69	Any work	Extends to things done in pursuance of certain provisions under the Broadcasting Acts 1990 and 1996 and the Communications Act 2003.
Time-shifting broadcasts to view or listen to at a more convenient time: s 70	Broadcasts and included works	Only for private and domestic use and may only be made in domestic premises.
Making a photograph of the whole or any part of an image forming part of television broadcast or making a copy of such a photograph: s 71	Broadcasts and included films	Only for private and domestic use and may only be made in domestic premises.

**Table 7.2** *cont'd*

<i>Permitted act</i>	<i>Types of works covered by permitted act</i>	<i>Comments</i>
Free showing or playing in public to a non-paying audience: s 72	Broadcasts and included sound recordings (except in so far as it is an excepted sound recording) and films	Section 72 gives guidance as to when an audience has or has not paid admission. An excepted sound recording is one whose author is not the author of the broadcast and which is a recording of music with or without words spoken or sung.
Reception of wireless broadcast made from a place in the UK and immediate re-transmission by cable if re-transmission is in pursuance of relevant requirement, or if and to the extent that the broadcast is made for reception in the area in which it is re-transmitted and forms part of a qualifying service: s 73	Broadcasts and included works	Copyright in included works is not infringed if and to the extent that the broadcast is made for reception in the area in which it is re-transmitted by cable (unless the making of the broadcast was an infringement of copyright). 'Relevant requirement' is one imposed under the Communications Act 2003 and qualifying service includes TV broadcasting and teletext of BBC, regional or national Channel 3 service, Channel 4, Channel 5 and S4C, etc. Any royalties payable under s 73 may be settled by the Copyright Tribunal: s 73A.
Making copies of television broadcasts, issuing copies to public if a designated body for purpose of providing people who are deaf, hard of hearing, physically or mentally handicapped in other ways with copies subtitled or modified for their special needs: s 74	Broadcasts and included works	But not if there is a licensing scheme under s 143.
Recording and making a copy of such recording for placing in an archive: s 75	Broadcasts and included works	Only with respect to designated classes and only for designated archives.
<b>Adaptations</b>		
Any of all of the above acts in respect of an adaptation: s 76	Literary, dramatic or musical works	Does not infringe copyright in the work from which the adaptation was made.
<b>Statutory licensing</b>		
Including in a broadcast a sound recording: s 135C	Sound recordings	Subject to conditions in ss 135A–135C.

## Possible changes to the permitted acts

**165** HMSO 2006, available at [http://www.hm-treasury.gov.uk/media/6/E/pbr06\\_gowers\\_report\\_755.pdf](http://www.hm-treasury.gov.uk/media/6/E/pbr06_gowers_report_755.pdf).

**166** UK Intellectual Property Office, *Taking Forward the Gowers Review of Intellectual Property: Proposed Changes to Copyright Exceptions*, HMSO 2007, available at <http://www.ipo.gov.uk/consult-copyrightexceptions.pdf>.

*The Gowers Review of Intellectual Property*<sup>165</sup> made a number of recommendations concerning the scope of some of the permitted acts under copyright law. Following this a consultation paper was published<sup>166</sup> which set out the relevant recommendations with some further narrative and discussing the possible implementations of these changes and their potential impact. Although it is unlikely that any legislative changes will be made in the near future, some of the possible changes to the permitted acts are set out briefly below.

### Research and private study

Under s 29(1C) and (2) fair dealing for private study extends only to literary, dramatic, musical and artistic works and also to typographical arrangements. It does not cover sound recordings and films. It was felt that this hindered academic study and it is proposed that fair dealing for private study be extended to all forms of work. The Report stresses that this covers copying only and should not extend to distribution.

### Education

Section 35 (making recordings of broadcasts) and s 36 (limited reprographic copying) of the Copyright, Designs and Patents Act 1988 should be amended to cover distance learning and interactive whiteboards. These permitted acts do not apply if, for s 35, there is a licensing scheme in operation or, for s 36, licences are available allowing the copying and the person making the copy knows or ought to be aware of this fact.

The permitted act in relation to broadcasts under s 35 only extends to showing them to students who are on the premises of the educational establishment, putting distance learners at a disadvantage. As regards s 36, the Copyright Licensing Agency provides licences so the permitted act is available in limited cases. However, at the present time, these licences do not cover electronic copying. Thus, under such a licence, it may be permissible to make paper copies of, say, one chapter of a book to distribute to students but it is not permissible to place a copy of a single page electronically in a virtual learning environment so that students can access it.<sup>167</sup>

### Libraries and archives

Section 42 allows the making of a copy of work by libraries and archives for the purpose of preservation of a work. For example, a film or sound recording may be on media that is deteriorating and, if a copy is made only after the copyright has expired, it may by then be too late. The lack of any permitted act allowing format shifting makes the problem worse. It is estimated that copying a single colour film back on to film costs \$40,000 whilst copying one hour of a colour film on to digital media only costs \$200.<sup>168</sup> In many cases, it may be expensive, difficult or even impossible to clear the rights needed to make a copy. Some works are 'orphan works' where the rightholders cannot be identified. In other cases, the technology to play old recordings may no longer be available.<sup>169</sup> It is therefore proposed that s 42 should be amended to permit libraries and archives to copy the master copy of all classes of work in their permanent collections for archival purposes. Furthermore, libraries and archives should be allowed to format shift archival copies to ensure records do not become obsolete.

### New permitted act of parody

A number of jurisdictions permit the making of a caricature, parody or pastiche without infringing copyright. For example, Art L 122-5 of the French Copyright Act<sup>170</sup> permits, once a work has been disclosed, the making of a parody, pastiche or caricature, observing the rules of the genre. Article 5(3)(k) of the Directive on copyright and

**167** Of course, the Copyright Licensing Agency's licences go beyond the 1 per cent allowed under s 36. So, if the change as proposed is made, it will only be possible to place a maximum of 1 per cent of a work in a virtual learning environment.

**168** *Gowers Review*, *op cit* at para 4.82.

**169** For example, a speech by Nelson Mandela in 1964 was recorded on Dictabelt and the hardware for this is no longer available: *Gowers Review*, *op cit* at para 4.83.

**170** Law No 92-597 of 1 July 1992 on the Intellectual Property Code.

related rights in the information society allows Member States to include such a permitted act and the *Gowers Review* recommends that this should also be adopted in the UK, consigning cases such as *Schweppe Ltd v Wellingtons Ltd*<sup>171</sup> to the history book.

<sup>171</sup> [1984] FSR 210.

### **New permitted act of format shifting**

If a person buys a music CD or film on video tape, if he makes a copy of the music on an MP3 player or copies the film to a DVD, he will infringe the copyright in the music or film.<sup>172</sup> It is proposed that such format shifting should be allowed. It would only allow one format shift and only one copy to be made per format and then only for the individual's own private use. The permitted act, if introduced, would probably not be retrospective, allowing individuals to format shift copies they already have. Rightholders, knowing that this limited format shifting would be allowed, might wish to make a very small increase in the price charged to reflect this, thus ensuring they are able to obtain 'fair compensation' as required under the Directive on copyright and related rights in the information society.<sup>173</sup> However, recital 35 to the Directive suggests that where payment has already been received no further payment may be due, providing the prejudice to the rightholders is minimal. The *Gowers Review* does not propose the introduction of a form of levy on blank recording media to compensate rightholders.

<sup>172</sup> There may also be infringements of performing rights.

<sup>173</sup> Directive 2001/29/EC of the European Parliament and of the Council of 22 May 2001 on the harmonisation of certain aspects of copyright and related rights in the information society, OJ L 167, 22.06.2001, p 10.

# COPYRIGHT AND COMPUTER SOFTWARE<sup>1</sup>

<sup>1</sup> For definitions relating to computers and computer software see the Glossary at the beginning of the book.

<sup>2</sup> Unless otherwise stated, in this chapter statutory references are to the Copyright, Designs and Patents Act 1988.

## INTRODUCTION

Copyright law has a history of development that can partly be explained by reference to technological change. Examples of advances in science that have in the past been addressed by copyright law include photography, sound recordings, films and broadcasting. The Copyright, Designs and Patents Act 1988<sup>2</sup> was an attempt to keep abreast of developments in technology coupled with an intention to enact legislation that would take future change in its stride. Of particular concern was the protection of computer programs and of other works stored or transmitted in digital forms. Two points are worth mentioning at this stage: first, computer technology is not new – universal programmable computing machines have existed for nearly 60 years; second, the vast majority of new technical developments involve computer technology, even if the developments themselves do not appear at first sight to be connected with such technology. Modern photocopiers and printers, facsimile transmission machines, electronic mail, cameras, vehicle fuel and ignition systems, even the humble automatic washing machine, all owe something to computer science.

In terms of legal protection for computer software, there are three main concerns for the copyright owners. The first is copying by out and out piracy. This has been particularly rife in relation to games software, operating system software such as Windows, popular applications software, such as word-processing software and, of course, music and films in digital form. The second and third concerns apply particularly to software that has been specially written. Typically, it might be software written for a business or other organisation to help it carry out its functions or operations. It might be software used to book holidays or flights or to control an industrial process or to run accounting functions or stock control. Two forms of copyright are relevant here, the first of which is where a duplicate is made (which may then be modified). The second is where someone undertakes to write new software to emulate the functions and operations carried out by existing software. The latter form of copying is particularly troublesome for copyright law. The new software may even have been written without access to the source code of the first software but a copy of the existing software has been used to gain a deep understanding of how it works, what it does and how it does it. This form of copying is known as non-literal or non-textual copying. As will be seen, it can be done without infringing copyright by relying on some of the specific permitted acts that apply to computer programs. But there are dangers for the person writing software to emulate the functions and operations performed by existing software, as it is possible to infringe copyright indirectly and by taking elements of computer programs not explicitly expressed in the code of the program.

There is no doubting that the information technology stretches the law, which is sometimes slow to react, and one problem has been the manner in which it has been

attempted to adapt existing legal paradigms to deal with the problems posed by technological development. Nowhere can this be seen more strikingly than in the way in which copyright has been used as the main vehicle for the protection of computer programs. Whether copyright is an appropriate method of protection has been a long-running debate that still rages on and the nature of computer programs as property is still a grey area.<sup>3</sup> There is one great difference between computer programs and other works protected by copyright that sets them apart. Conventional works of copyright are passive. They await our attention to be read, viewed or listened to. Computer programs, on the other hand, are active – they do things – they manipulate symbols, transform, modify and retrieve digitally stored information. Even though we now have substantial experience of dealing with computer technology, it continues to cause problems, and not just in terms of substantive law. Evidence and disclosure are other areas in which problems may arise. For example, in *Dun & Bradstreet Ltd v Typesetting Facilities Ltd*,<sup>4</sup> an application for inspection of the defendant's computer database under the Rules of the Supreme Court Ord 29 r 2 was held to be inappropriate as inspecting the computer disks on which a copy of the database was stored would not give the applicant what he really wanted, which was access to the information stored electronically on the disk.<sup>5</sup>

'Computer software' is a phrase that, like many phrases in the computer industry, is incapable of precise definition, but it is usually taken to include computer programs, databases, preparatory material and associated documentation (in printed or electronic form) such as manuals for users of the programs and for persons who have to maintain the programs. It can also include all manner of other works stored in digital form, interfaces (for example, with the user or hardware or other software), programming languages and software tools to be used to develop software systems.

The lack of harmonisation in the European Union coupled with concerns about a lack of a consistent and balanced approach to the protection of computer software and copyright generally in the digital age led to a number of European Directives. In particular, the Directives on the legal protection of computer programs, the legal protection of databases and on copyright and related rights in the information society have had significant and profound influences on the protection of computer software in Europe. All were implemented in the United Kingdom by Regulations, each of which made important changes to the Copyright, Designs and Patents Act 1988. The latest set of Regulations, the Copyright and Related Rights Regulations 2003,<sup>6</sup> made sweeping changes across copyright law and rights in performances and these changes are discussed in appropriate places within this Part of the book where they affected works other than computer programs and databases. Of particular relevance to this chapter was the impact of the introduction of comprehensive measures to control the use of means to overcome technical measures to prevent or restrict unauthorised acts in respect of works and the introduction of specific protection of 'electronic rights management information'. These are described in detail later in this chapter.

Computer programs are considered in detail in this chapter in terms of the extent and scope of copyright protection for them and for the effects that they produce.<sup>7</sup> Particular issues are the 'look and feel' of computer programs in the context of non-literal copying, the decompilation of computer programs, back-up copies, and copying and adapting computer programs in manners consistent with their lawful use. After looking at computer programs, the copyright position of programming languages, databases and other information stored in computer systems and computer-generated works is discussed. Following this, new provisions in respect of technological measures to prevent or restrict unauthorised acts in relation to copyright works and the protection of electronic rights management information are described. There is a description of satellite broadcasting and the problems of unauthorised decoders and, finally, the discussion of copyright in relation to scientific discoveries, genetic sequences and formulae.

<sup>3</sup> See, for example, Gordon, S.E. 'The Very Idea! Why Copyright is an Inappropriate Way to Protect Computer Programs' [1998] 1 EIPR 10 and Moon, K. 'The Nature of Computer Programs: Tangible? Goods? Personal Property? Intellectual Property?' [2009] 8 EIPR 396.

<sup>4</sup> [1992] FSR 320.

<sup>5</sup> The court allowed inspection as if the application had been made under Rules of the Supreme Court Ord 24 r 10 instead. The Rules of the Supreme Court have now been replaced by the Civil Procedure Rules 1998, SI 1998/3132, which came into force on 26 April 1999.

<sup>6</sup> SI 2003/2498. These Regulations implemented Directive 2001/29/EC of the European Parliament and of the Council of 22 May 2001 on the harmonisation of certain aspects of copyright and related rights in the information society, OJ L 167, 22.06.2001, p 10. The Directive was implemented late and this resulted in a declaration to that effect by the European Court of Justice in Case C-88/04 *Commission of the European Communities v United Kingdom*, OJ C 45, 19.02.2005, p 11.

<sup>7</sup> See Chapter 12 for the position of computer programs in patent law.

## COPYRIGHT PROTECTION FOR COMPUTER PROGRAMS

### Background

8 Preparatory design material for a computer program is also a form of literary work: Copyright, Designs and Patents Act 1988 s 3(1)(c).

9 Strictly speaking the test for originality now should be that the computer program is the result of the author's own intellectual creation, following the Directive on the legal protection of computer programs; see *infra*.

10 Application programs are designed to perform a specific task such as processing data, producing reports, word processing, etc. They can be distinguished from operating system programs which supply the basic working environment in which the application programs operate.

11 Laddie, H., Prescott, P. and Vitoria, M. (1980) *The Modern Law of Copyright*, Butterworths, p 93.

12 For example, in *Ager v Peninsular & Oriental Steam Navigation Co* (1884) 26 ChD 637, a book of telegraphic codes was recognised as being suitable subject matter for literary copyright. See also *DP Anderson & Co Ltd v Lieber Code Co* [1917] 2 KB 469 on the same point.

13 A source code program may be written in a computer programming language, such as COBOL or BASIC, which is fairly easy for computer programmers to understand and write programs in. This source code version will usually be written down on paper or printed out. The source code will then be converted into the language of the computer, that is compiled into object code so that it can run on the computer. The object code will, if printed out in that form, be an apparently meaningless collection of numbers and letters.

14 Copyright – Copyright and Design Law, Cmnd 6732, HMSO, 1977.

15 *Reform of the Law Relating to Copyright, Designs and Performers' Protection*, Cmnd 8302, HMSO, 1981, cl 2.

16 The unauthorised copying and selling of computer programs including, in some cases, documentation. The USA was the first country to enact specific legislation directed towards the copyright protection of computer programs: Computer Software Copyright Act 1980, 17 USC §101, 117.

It has already been seen that copyright subsists in computer programs as a form of literary work by the Copyright, Designs and Patents Act 1988 s 3(1)(b).<sup>8</sup> The same prerequisites of originality<sup>9</sup> and qualification must be present as with other forms of literary works for a computer program (or preparatory design material for a computer program) to be the subject matter of copyright. At one time it was not at all clear whether computer programs were protected by copyright. The Copyright Act 1956 made no mention of computers or computer programs. Although at the time that Act was passed computers had been around for a number of years, unauthorised copying of computer programs had not become a serious problem. There were only a few computers in existence and they were expensive and costly to operate and maintain, and there was no black market in application programs.<sup>10</sup> Many such application programs were specially written and maintained by the staff of computer departments for an organisation's own particular needs and would probably have been unsuitable for use by others. However, in spite of the omission of computer programs from the 1956 Act, many writers considered that they were protected as literary works. For example, Laddie *et al.* suggested that:

... a computer program expressed in writing or other notation on a piece of paper is a 'literary work' within the meaning of [s 2 of the 1956 Act] ... and if produced as a result of substantial independent skill or useful labour will be 'original' and so qualify for copyright protection.<sup>11</sup>

The issue may have been fairly straightforward and uncontroversial in the case of computer programs that have been printed out on paper. After all, if copyright had been extended to books of telegraphic codes as early as 1884, why should copyright be refused for computer programs printed out on paper?<sup>12</sup> However, if this view was accepted, it did not give any assistance in terms of computer programs that were stored in a computer, especially if those programs were in object code form having been compiled from source code programs.<sup>13</sup> A committee, known as the Whitford Committee, after its chairman Whitford J, was set up to examine copyright law generally, and its report was published in 1977 at a time when the problems of unauthorised copying of computer programs were beginning to be perceived.<sup>14</sup> The report recognised that copyright law was unsatisfactory as regards computer programs and the committee made recommendations to improve the law in this area and to put it beyond doubt that computer programs and works produced with the aid of a computer were protected by copyright. A Green Paper was published in 1981 covering copyright and related matters, and included recommendations that copyright law be amended expressly to afford protection for computer programs.<sup>15</sup>

Copyright law remained unchanged after the Whitford Committee report, and during the first few years of the 1980s the problem of computer software piracy<sup>16</sup> became a major concern for the computer industry with the loss attributable to piracy being estimated at some £150 million.<sup>17</sup> There were a handful of interim actions brought alleging infringement of copyright subsisting in computer programs; these actions invariably proceeded on the basis that computer programs were protected by copyright and interim relief was invariably granted. For example, in *Sega Enterprises Ltd v Richards*,<sup>18</sup> the claimant owned a computer game called 'FROGGER' which was effected by means of computer programs. The defendant produced a similar program, admitting that his was based on the claimant's program. The defendant argued that he had done much work on the program and that, in any case, copyright did not subsist in computer programs under English law. Goulding J said:

... I am clearly of the opinion that copyright ... subsists in the assembly code program of the game 'FROGGER'.

He went on to say that the object code derived from the assembly code program (source code) was either a reproduction or an adaptation of the assembly code version and, as a result, also protected by copyright. However, these cases were interim hearings only. Not a single case concerning the issue of the subsistence of copyright in computer programs went to full trial and the computer industry remained nervous.

The industry's fears appeared to be justified when, in 1984, the large and successful Apple Computer Corporation sued in Australia an importer of 'clones' of its computers. Appropriately enough, the clones were called 'WOMBATS'. At first instance, in *Apple Computer Inc v Computer Edge Pty Ltd*,<sup>19</sup> it was held that literary copyright did not subsist in the computer programs in question, being the object code programs in the ROM chips in the Apple II computer.<sup>20</sup> A great deal of reliance was placed by the judge on the old English case of *Hollinrake v Truswell*,<sup>21</sup> in which Davey LJ said that a literary work is one intended to 'afford either information and instruction, or pleasure, in the form of literary enjoyment'. Although the appeal by the claimant to the Federal Court of Australia was allowed, reversing the decision at first instance, on the basis that the object code programs were adaptations of the source code programs, the dissenting judgment by Shepherd J was the most elegant and well argued.<sup>22</sup> He said that an adaptation of a literary work should be capable of being seen or heard. To put the matter beyond doubt, the Australian Parliament very quickly enacted the Australian Copyright Amendment Act 1984. A further appeal restored the first instance decision on the object code point but was, of course, based on the Australian Copyright Act before amendment.<sup>23</sup>

The *Apple* case had serious repercussions for the UK, as Australian copyright law was, at the time, very similar to UK law. While in the USA the issue was the scope of the protection offered by copyright, in the UK doubts about whether copyright could subsist in a computer program, whatever its form, increased. Eventually, after vociferous outbursts by a worried but powerful industry, amending legislation was passed in the UK, but only by way of a Private Member's Bill. The Copyright (Computer Software) Amendment Act 1985 made it quite clear that computer programs were protected by copyright as literary works. When it was passed, this piece of legislation was seen as being a temporary measure and did not directly deal with some of the copyright issues related to computer technology, such as the ownership of works produced by or with the aid of a programmed computer.<sup>24</sup> One reason for the brevity and lack of consideration given to the amending legislation was that a wholesale review of copyright and design law was contemplated. That review took place and culminated in the White Paper *Intellectual Property and Innovation*, published in 1986.<sup>25</sup> Many of the recommendations contained in the White Paper found their way into the Copyright, Designs and Patents Act 1988, and it is to this Act and its implications that we will now turn.

## COMPUTER PROGRAMS – BASIC POSITION

The Copyright, Designs and Patents Act 1988 does not attempt to define 'computer program'.<sup>26</sup> This is probably sensible and at least allows the courts to develop the meaning of the phrase in the light of future technological change. In the Irish case of *News Datacom Ltd v Satellite Decoding Systems*<sup>27</sup> it was accepted that a 'smartcard' decoder for use with scrambled satellite television broadcasts was a computer program.<sup>28</sup>

In Australia, in *Powerflex v Data Access Corp*<sup>29</sup> it was accepted, at first instance, that a single word in a computer program, being derived from the programming language used, could itself be a computer program. In a high-level language, a single statement, such as the word 'PRINT' in the BASIC programming language, is equivalent to and

<sup>17</sup> The estimate was produced in 1984 by the Federation Against Software Theft (FAST). A later estimate, for the UK alone, was £540 million: Jervis, J. 'DTI Fires a Shot across Software Pirates' Bows', *Computing*, 1 August 1996 at p 4.

<sup>18</sup> [1983] FSR 73. See also *Gates v Swift* [1982] RPC 339; *Thrustcode Ltd v WW Computing Ltd* [1983] FSR 502; *Apple Computer Inc v Sirtel (UK) Ltd* (unreported) 27 July 1983.

<sup>19</sup> [1984] FSR 246.

<sup>20</sup> A ROM chip is a read only memory integrated circuit which contains, typically, operating system programs. The defendant attacked the copyright in the Apple II programs after it was shown that the names of some of the programmers of the Apple II computer were present in the equivalent programs in the defendant's computer. This raised an almost irrefutable presumption of copying.

<sup>21</sup> [1894] 3 Ch 420, approved in *Exxon Corporation v Exxon Insurance Consultants International Ltd* [1981] 3 All ER 241.

<sup>22</sup> [1984] FSR 481.

<sup>23</sup> *Computer Edge Pty Ltd v Apple Computer Inc* [1986] FSR 537.

<sup>24</sup> HC Deb, 19 April 1985, col 558.

<sup>25</sup> Cmnd 9712, HMSO, 1986.

<sup>26</sup> Nor is 'computer' defined.

<sup>27</sup> [1995] FSR 201, Irish High Court.

<sup>28</sup> The Irish Copyright Acts of 1963 and 1987 were amended by the European Communities (Legal Protection of Computer Programs) Regulations 1993, SI 1993/26.

<sup>29</sup> [1997] FCA 490.

triggers a whole set of instructions in machine language. As such, it is arguable that it is a program. Fortunately, on appeal, the Federal Court saw the fallacy of this proposition, describing such a word as a cipher. It is not the set of instructions, merely the key to access them.<sup>30</sup>

It may sometimes be difficult to distinguish between ‘hardware’ and ‘software’, such as where a computer program is permanently hard-wired in a microprocessor in the form of ‘microcode’ or ‘microprograms’. The view in the USA is that such programs or code still fall within the meaning of ‘computer program’ for the purpose of copyright law. In *NEC Corp v Intel Corp*<sup>31</sup> it was held that, even though the computer programs were permanently stored in ‘read only memory’ (ROM), the programs were still capable of copyright subsistence. The mode of storage did not change the nature of a computer program. In a later hearing between the parties in 1989,<sup>32</sup> an argument that the microcode embedded within a microprocessor was a defining element of a computer and could not, therefore, also be a computer program failed to find sympathy. In the UK, it is beyond doubt that microcode will be considered to be a computer program or part of a program and will be protected by copyright.

The Copyright, Designs and Patents Act 1988 does not elaborate upon the meaning of originality in respect of computer programs. However, the European Directive on the legal protection of computer programs<sup>33</sup> describes originality in terms of a program being the author’s own intellectual creation.<sup>34</sup> This approximates to the requirement under German copyright law that a work be the author’s personal intellectual creation<sup>35</sup> and appears to be more stringent than the UK’s test of originating from the author. It has been rigorously applied in Germany in the past, and in *Sudwestdeutsche Inkasso KG v Bappert und Burker Computer GmbH*<sup>36</sup> it was held that, to be protected by copyright, a computer program must result from individual creative achievement exceeding the average skills displayed in the development of computer programs.<sup>37</sup> However, later case law suggests that the hurdle to subsistence has been significantly lowered, as in the *Buchhaltungsprogram* case<sup>38</sup> in which the German Federal Supreme Court confirmed that copyright could subsist in an accounting program, taking the opportunity to signal a lowering of the standard, though, strictly speaking, this part of the decision was *obiter*.

The two most important acts restricted by copyright in relation to computer programs are those of copying and making an adaptation. Other acts may be relevant in the context of a computer program, such as issuing copies to the public, communicating to the public (for example, by making a program available for downloading from the internet) and the secondary infringements, but it is copying and making adaptations that are of particular interest as regards the scope of protection afforded by copyright. Following the uncertainty as to the copyright protection of computer programs which was finally put to rest by the Copyright (Computer Software) Amendment Act 1985, it was arguable that the pendulum had swung too far in the other direction and the protection afforded by copyright was too extensive. As a result, innovation and competition within the computer software industry could have been unjustifiably inhibited. However, the judgment of Pumfrey J in *Navitaire Inc v easyJet Airline Co*<sup>39</sup> for the first time clearly identified and applied the limitations on copyright protection in the Directive on the legal protection of computer programs and rejected a vague claim based on copying the ‘business logic’ underlying the programs at issue. This important case is discussed later in this chapter.

As with any other literary work, the copyright in a computer program is infringed by making, without the copyright owner’s licence, a copy of the program or of a substantial part of it.<sup>40</sup> Substantiality is an issue of quality and therefore the copyright subsisting in a computer program can be infringed if the ‘essence’ of the program is copied, even if the part copied is relatively small quantitatively. Arguably, even a tiny part of a program could be regarded as substantial as the program probably will not

30 The copyright position of programming languages is discussed later in this chapter.

40 Copyright Designs and Patents Act 1988 s 16. In *MS Associates Ltd v Power* [1988] FSR 242, there was an arguable case that a substantial part of the original program for converting BASIC into C had been copied. The second program had 43 line similarities out of a total of 9,000 lines, although there were structural similarities and the same errors were present in both programs.

function, at all or properly, without it. However, a better approach is to consider whether the part taken was the result of at least a minimal amount of skill on the part of the programmer. In other words, would the part taken, when looked at in isolation, satisfy the basic requirements for copyright subsistence?

In *Cantor Fitzgerald International v Tradition (UK) Ltd*,<sup>41</sup> it was suggested that every part of a computer program could be a substantial part of the program. The reasons for this were that syntactic errors will prevent the program from being compiled and semantic errors will prevent the program from running at all or will produce the wrong answer.<sup>42</sup> In other words, even very small parts of a computer program are important to the operation of the program. It will not run or run properly without them or if they are present but contain errors. Pumfrey J rejected this approach, pointing out that the correct approach to substantiality was determined by considering the function of copyright which is to protect the author's skill and labour used in creating the relevant work. Therefore, a person infringes the copyright in the work if he takes a part which represents a substantial part of the author's skill and labour. The closest analogy Pumfrey J came up with was the compilation cases such as *Macmillan & Co Ltd v K & J Cooper*,<sup>43</sup> but he warned against using the same principles that applied to literary works addressed to humans, such as a novel or poem, and applying those principles uncritically to computer programs. Unlike other forms of literary works, the purpose of computer programs is to make machines operate in a certain manner. The fact that a program will not work without a small part of it does not mean that it is a substantial part of the program, nor does the fact that a small part of a program is used frequently during the operation of the program. This might be the case, for example, where a small sub-routine within a computer program is called upon several or many times during the operation of the program.

Claimants alleging copying of parts of their programs may have difficulty in convincing a judge that a substantial part has been taken because of some judges' lack of technical knowledge. In *Total Information Processing Systems Ltd v Daman Ltd*<sup>44</sup> Judge Paul Baker considered that the data division of a COBOL program did not represent a substantial part of the program because it did not itself produce executable code or tell anything about the program. The data division in a COBOL program defines the nature and structure of files used by the program, and defines variables used. To many programmers, the data division is considered to be an important and essential part of the program and should certainly be considered to be worthy of protection, at the very least, as a non-literal element of the program. Fortunately, in *IBCOS Computers Ltd v Barclays Mercantile Highland Finance Ltd*,<sup>45</sup> Jacob J disagreed with Judge Paul Baker, and he said that there may be considerable skill involved in setting up the data division of a COBOL program such that it could be considered to be a substantial part of the program as a whole.<sup>46</sup> Judge Paul Baker's judgment is flawed in several other respects: for example, he said that the considerable steps taken to preserve confidentiality of the file details were suggestive that copyright did not subsist in that element of the program. This bizarre view is totally unfounded, either in legal principle or in policy, and is another aspect of the judgment in the *Total Information* case which Jacob J criticised.

Judges in cases involving complex technology rely to a greater or lesser extent on the evidence of expert witnesses. That being so, it is important that expert witnesses are objective and do not act as advocates. As Pumfrey J said in *Cantor Fitzgerald*:<sup>47</sup>

Where the subject matter of the action lies in a highly technical area it is of particular importance that the expert is scrupulous in putting forward all relevant considerations which occur to him or her as being relevant to the issue to be decided. The court has no points of reference other than those provided by the expert. It is reprehensible for the expert to hold back relevant information. The danger is manifest. If both experts lack objectivity the court is deprived of any proper basis to arrive at a decision.

<sup>41</sup> [2000] RPC 95.

<sup>42</sup> The Australian case of *Autodesk Inc v Dyason* [1992] RPC 575 provides some authority for this proposition. In that case it was held that a 127-bit look-up table used with a dongle (a device plugged into a computer port and used to enable a computer program to be run) was not a computer program but was a substantial part of a computer program.

<sup>43</sup> (1923) 93 LJPC 113.

<sup>44</sup> [1992] FSR 171.

<sup>45</sup> [1994] FSR 275.

<sup>46</sup> See also *Autodesk Inc v Dyason* [1992] RPC 575, which concerned the copying of a dongle (a device plugged into a computer port and used to enable a computer program to be run). It was accepted that copying a table of codes (a 127-bit look-up table) contained in the program in the dongle infringed copyright.

<sup>47</sup> [2000] RPC 95 at 128.

In relation to literary works, ‘copying’ is defined by s 17 as a reproduction in any material form; this includes storage in any medium by electronic means and making copies which are transient or incidental to some other use of the work.<sup>48</sup> Thus, loading a computer program (or, for that matter, any other form of work) into a computer’s volatile memory (RAM) is copying.<sup>49</sup> That is why a licence is required to use a computer program, in contrast to most other forms of works for which use in private does not involve an act restricted by copyright. Given the wide definition of ‘electronic’ in s 178 there should not be any difficulties concerning existing and future media in or on which a computer program is stored. However, Kitchen J, in *Football Association Premier League v QC Leisure (No 2)*,<sup>50</sup> suggested that a substantial part of the work in question must be held in transient storage at any given time to constitute infringement. If an entire work passes through volatile memory but only a tiny fraction of the work is in the memory at any point in time, copyright protection would be thwarted. It is submitted that he was wrong on this and ‘salami slicing’ a work in this way through transient memory must surely infringe. It would infringe if the work were a database protected by the database right.<sup>51</sup> Of course, larger parts of a work are likely to be held in computer RAM at any given time and may constitute substantial parts of the work in question. The *Football Association* case involved the showing of a film through an unauthorised decoder which only held a small number of frames of the film at any given time. In any case, Kitchen J referred numerous questions to the Court of Justice for a preliminary ruling, including a question about the scope of infringement by transient copies.

### Preparatory design material

The finished code of a computer program is the culmination of a long process involving the creation of a number of preparatory (and intermediate) works. For example, the analysts and programmers working on the development of a new program usually will produce specifications, flowcharts, diagrams, layouts for menus, screen displays, and reports and other materials. Prior to the amendments made to the Act by the Copyright (Computer Programs) Regulations 1992 in compliance with the Directive on the legal protection of computer programs, all these materials would have been protected in their own right as literary or artistic works as appropriate. In *Japan Capsules Computers (UK) Ltd v Sonic Game Sales*<sup>52</sup> Whitford J accepted that these and other ancillary materials, such as music generated by a program, could be protected by copyright.

The separate protection of preparatory design material as a literary work by s 3(1)(c) conflicts with the wording of the Directive, which states that the term ‘computer programs’ shall *include* their preparatory design material.<sup>53</sup> It does mean that the special exceptions for computer programs (ss 50A, 50B, 50BA and 50C) do not apply to preparatory design material. For example, it is not permissible to make a back-up copy of a computer manual unless the other permitted acts generally available for literary works allow this. Why the 1992 Regulations chose to treat preparatory design material separately is inexplicable and unforgivable, given that certainty and predictability are so important to the computer industry.<sup>54</sup> It could affect issues of substantiality in relation to infringement as, according to the Directive, computer programs include their preparatory design material. However, a judge would most likely go straight to the Directive and use the provisions therein. In *Nova Productions Ltd v Mazooma Games Ltd*,<sup>55</sup> an application was made for questions to be submitted to the Court of Justice for a preliminary ruling under Article 234 of the EC Treaty on the basis that the judge at first instance<sup>56</sup> had erred by not considering the preparatory design material as part of the computer programs. Jacob LJ considered that a reference was unnecessary as the issues could be decided on appeal without guidance from the Court of Justice. In any

<sup>48</sup> In Case C-5/08 *Infopaq International A/S v Danske Dagblades Forening* 16 July 2009, the Court of Justice rules that printing 11 words of text on paper was an act of reproduction that was not transient. Automatic deletion without human intervention was required for the act to be transient.

<sup>49</sup> As it is also in the US, *Advanced Computer Services of Michigan Inc v MIA Systems Corp* (unreported) 14 February 1994, discussed in [1994] CLSR 213.

<sup>50</sup> [2008] FSR 789.

<sup>51</sup> See the section on databases, *infra*.

<sup>52</sup> (Unreported) 16 October 1986.

<sup>53</sup> Article 1(1) of Council Directive 91/250/EEC of 14 May 1991 on the legal protection of computer programs, OJ L 122, 17.05.1991, p 42.

<sup>54</sup> See Chalton, S. ‘Implementation of the Software Directive in the UK: The Effects of the Copyright (Computer Programs) Regulations 1992’ [1993] 9 CLSR 115.

<sup>55</sup> [2006] EWCA Civ 1044.

<sup>56</sup> *Nova Productions Ltd v Mazooma Games Ltd* [2006] RPC 379.

case, the claimant's case could be even weaker if the computer program had been taken to include its preparatory design material.

Preparatory design material will include works that would previously have been considered to be artistic works, such as flowcharts and other diagrams.<sup>57</sup> These are now literary works notwithstanding the resulting implications. For example, there is no requirement for an artistic work to be recorded, and infringement and the permitted acts are not precisely the same for literary and artistic works.

<sup>57</sup> An electronic circuit diagram was held to be a literary work as well as an artistic work in *Anacon Corp Ltd v Environmental Research Technology Ltd* [1994] FSR 659.

## LITERAL COPYING OF COMPUTER PROGRAMS

Copying of a computer program can be literal, where the program code itself is copied, in which case the two programs are written in the same computer programming language. Alternatively, copying can be non-literal, where elements of the program such as its structure, sequence of operations, functions, interfaces and methodologies are copied, but the program code is not directly copied.<sup>58</sup> The two programs may be written in the same language or in different computer programming languages. The law's recognition of non-literal copying is important because otherwise it would be too easy to defeat copyright protection of computer programs. Non-literal copying is considered later in this chapter. Literal copying occurs where a person copies an existing program by disk to disk copying (a duplicate is made on to another computer disk), or by writing out or printing the program listing, perhaps to key it into another computer at a later date. In either case, the person making the copy may make some alterations to the copy. These may be to disguise its origins or to enhance the program, for example, by including some additional functions.

<sup>58</sup> Alternative descriptions are 'textual' and 'non-textual' copying.

Literal copying is relatively easy to test for infringement. In essence, there are three axiomatic questions for the court. First, does copyright subsist in the claimant's program? Second, has the defendant copied from the claimant's program? Finally, does the part taken by the defendant represent a substantial part of the claimant's program? If the answer to these questions is in the affirmative then, unless the defendant has a defence or his actions fall within the permitted acts or some other defence, infringement is proved. In practice, the answer to the first question will seldom be negative. Even relatively small programs will be the result of the programmer's skill, experience and judgment. The following case was the first to consider seriously the issues relating to literal copying of computer programs and laid down some important precedents for software copyright law.

In *IBCOS Computers Ltd v Barclays Mercantile Highland Finance Ltd*,<sup>59</sup> the second defendant, a computer programmer called Mr Poole, wrote a suite of programs for accounts and payroll. He owned the copyright in the programs and eventually developed a Mk 3 version. Then, with another person, he set up a firm, PK Computer Services, to provide software for agricultural machinery dealers. When Mr Poole left the company, he signed a note recognising that the company owned all the rights in the software which contained the Mk 3 suite of programs. Mr Poole was then engaged by the first defendant to write similar software. Both suites of programs were written in variants of the same programming language and there was a degree of literal similarity between them. PK Computer Services transferred its assets to the claimant which learnt of Mr Poole's activities, obtained a 'door step search order'<sup>60</sup> and sued for infringement of the copyright in its suite of computer programs.

<sup>59</sup> [1994] FSR 275.

Jacob J held that there had been an infringement of the claimant's copyright. Not only were the individual programs protected by copyright, but also the suite of programs was protected as a compilation, being the result of sufficient skill and judgment (the claimant's computer software comprised 335 programs, 171 record layout files and

<sup>60</sup> An order requiring the defendant to deliver up relevant materials, as opposed to a search order requiring the defendant to allow the claimant to search his premises for evidence.

46 screen layouts). From the defendant's point of view, there were some unfortunate coincidences. Both suites of programs contained many common mistakes in the 'comment' lines (these are lines that are not executed by the computer and are inserted merely to make a program more easy to understand from the programmer's perspective). Both suites of programs contained the same redundant code. In the mind of Jacob J, and in the absence of any plausible explanation from Mr Poole, this proved that there had been disk to disk copying.<sup>61</sup> Jacob J said that copying was a question of fact and could be proved by showing that something trivial or unimportant had been copied.

The issue of substantiality was considered and Jacob J stressed the importance of expert evidence in this respect. In the event, he decided that 28 out of 55 of the defendant's programs infringed the claimant's copyrights. He also found that a later version of the defendant's programs infringed (11 of the defendant's programs infringed and the copyright in the claimant's suite of programs as a compilation was also infringed). Furthermore, Mr Poole was in breach of confidence, the source code to the claimant's program being confidential. He had also signed a note when leaving PK Computer Services which contained a covenant in restraint of trade. However, Mr Poole was not in breach of the covenant, which was construed narrowly by Jacob J.

Jacob J made a number of other interesting points which are set out below with comments:

- fresh copyright could be created when a program was modified. This is a question of whether sufficient skill, labour or judgment has been expended in making the modifications;
- a file record may not be a program within the Act, but it will be a compilation. Thus, the data division of a COBOL program may be protected by copyright acknowledging the work of designing the data structures used by the programs;<sup>62</sup>
- the inclusion of functional elements that could be expressed in only one, or a limited number of ways, does not affect the fact of copyright subsistence;
- the *British Leyland* right to repair principle did not allow copying of a file transfer program. This is a program to convert the structure of a file so that it can be used with other software. However, the decompilation permitted act may allow the necessary information to be discovered to allow the independent writing of a file transfer program.<sup>63</sup>

The case gave Jacob J an opportunity to make a number of criticisms of previous cases. He pointed out that UK copyright law is not the same as US copyright law and questioned the appropriateness of US precedents which Ferris J had found so helpful in *John Richardson Computers Ltd v Flanders*.<sup>64</sup> The judgment in *IBCOS* is comprehensive and is to be welcomed for its realistic approach. Jacob J should be congratulated for his grasp of computer technology and for his application of copyright law to the facts. Of particular importance is the recognition of the work underlying the design of computer software, including the design of the data structures used and the skill and judgment in developing the overall structure of a suite of programs. However, his comments on non-literal copying and the use of US precedents (particularly in the *John Richardson* case) should be treated with caution. *IBCOS* and *John Richardson* are distinguishable, the former being primarily concerned with literal copying. Of course, US precedents can never be binding on the courts in the UK, but they should certainly be treated with due respect in this field where the US experience of litigation is much more extensive, after making due allowances for differences compared with UK law.

Merely being in possession of a disk on which a copy of a copyright work is recorded is not a restricted act, *per se*.<sup>65</sup> So it was held in *Ocular Sciences Ltd v Aspect Vision Care Ltd*<sup>66</sup> where evidence that a reference to the predecessor of the claimant in the program in question had been changed to a reference to the defendant proved that the program

<sup>61</sup> Mr Poole had argued that the similarities were the result of programming style, but this failed to impress the judge.

<sup>62</sup> Now, data files may have protection as a database protected directly by copyright and/or the database right.

<sup>63</sup> Copyright, Designs and Patents Act 1988 s 50B.

<sup>64</sup> [1993] FSR 497 *see below*.

<sup>65</sup> It could be relevant to secondary infringement, however, such as where a person possesses an infringing copy in the course of business: s 23; or if he possesses an article specifically designed or adapted to make infringing copies: s 24(1), subject to the necessary knowledge.

<sup>66</sup> [1997] RPC 289.

must have been saved at some time in its modified form and that act of storing infringed the copyright in the program.

### Indirect copying

It has already been seen that copyright law accepts the notion of indirect copying.<sup>67</sup> Does indirect copying apply to computer programs? Of course there must be copying, which in the *British Leyland* case was done through the medium of a finished exhaust pipe. But consider the position of a person who, having seen a computer program in operation, decides to write a new computer program to perform the same function as the original program. Does that person infringe the copyright subsisting in the original program or preparatory design material even though he has not seen a listing of the program itself or the preparatory materials? In three ways, the Act recognises that copyright can be infringed indirectly: first, by s 16(3)(b) it recognises that the acts restricted by copyright may be done indirectly; second, by s 16(3) the Act contemplates that a work may be infringed even though intervening acts do not infringe copyright; and third, by s 17(6) the Act states that copying includes the making of copies which are transient or are incidental to some other use of the work. However, the program code in the second program would most likely be significantly different from that in the original, especially if it is written using a different programming language. For this reason, the District Court in *Digital Communications Associates v Softklone Distributing Corp*<sup>68</sup> held that the copyright in the underlying program was not infringed by copying a screen display generated by running the program.

<sup>67</sup> See Chapter 6, particularly the case of *British Leyland Motor Corp Ltd v Armstrong Patents Co Ltd* [1986] 2 WLR 400.

<sup>68</sup> 659 F Supp 449 (ND Ga, 1987).

## NON-LITERAL COPYING OF COMPUTER PROGRAMS

With some works of copyright, it is an easy matter to distinguish between the literal and non-literal elements. For example, with a work of literature, perhaps in the form of an historical novel, the literal element comprises the words, sentences and paragraphs as expressed in print, while the non-literal element can be said to consist of the detailed plot, sequence of events, characters and scenes. In some cases, the author of the novel will produce written materials or diagrams expressing these non-literal elements, in which case they may have their own copyright independent of the copyright subsisting in the finished novel. However, in the absence of such materials, it is clear that taking the non-literal elements can infringe.<sup>69</sup> One proviso is that, at a certain stage of abstraction from the literal text of the work, the non-literal elements will be no more than mere idea, though determining the threshold between the protected and the unprotected is not an easy matter. As Lord Hailsham said in *LB (Plastics) Ltd v Swish Products Ltd*, after remarking that it is trite law that there is no copyright in ideas,

But, of course, as the late Professor Joad used to observe, it all depends on what you mean by 'ideas'.<sup>70</sup>

<sup>69</sup> See, for example, *Corelli v Gray* [1913] TLR 570; *Glyn v Weston Feature Film Co* [1916] 1 Ch 261.

<sup>70</sup> [1979] RPC 551 at 629.

Non-literal copying is not a problem restricted to computer programs, and the courts in the USA also have struggled to separate unprotectable ideas from protected expression, including non-literal elements. In *Nichols v Universal Pictures Co*<sup>71</sup> Judge Learned Hand recognised the importance of protecting non-literal elements of copyright works, saying (at 121):

It is of course essential to any protection of literary property . . . that the right cannot be limited literally to the text, else a plagiarist would escape by immaterial variations.

<sup>71</sup> 45 F 2d 119 (2nd Cir, 1930).

He then went on to discuss the various levels of abstraction, from the text to the most general statement of the play (possibly its title only), and the difficulty in determining where, along this spectrum of abstractions, the boundary between copyright and non-copyright material lay. Somewhat discouragingly, he then said, ‘Nobody has ever been able to fix that boundary and nobody ever can.’ In other words, it must depend on the facts of each individual case.

The same principles apply to computer programs. Copyright must not be limited to a comparison of the code of the original and alleged infringing programs. If that were so, copyright law would be easily defeated.<sup>72</sup> It would simply be a matter of rewriting the program in a different computer programming language or, provided changes are made to variable names, remark lines, line numbering etc., using the same programming language. In other words, it would be a simple matter to defeat copyright by making a duplicate of the original program to which a number of cosmetic alterations could be applied. The USA was the first in the field in developing tests for non-literal copying of computer programs, and before looking at the UK position it will be instructive to look at litigation in the USA. Of course, US copyright law is not exactly the same as that in the UK, though there are similarities and many of the basic principles are common. It should be noted that copyright law in both jurisdictions has a common ancestor, the Statute of Anne 1709.

<sup>72</sup> For an argument that the law of passing off may provide some protection to computer programs, in particular screen displays, see Lea, G. ‘Passing off and the protection of program look and feel’ [1994] 10 CLSR 82.

## Developments in the USA

If anything, the idea/expression dichotomy is even more ingrained in US copyright law, going back at least to *Baker v Selden*<sup>73</sup> where it was held that copyright subsisting in a book describing a method of book-keeping did not extend to protect the method so described and illustrated. If copyright protects expression but not idea, it is obviously important for a court to be able to distinguish between them, particularly where the law gives protection to certain non-literal elements of copyright works. However, US law goes further than that in the UK in denying protection to tangible form if it is deemed to be so closely associated with the idea underlying the work that there is no alternative way of expressing it. Hence, it is even more important in the USA to distinguish between protected expression and unprotected idea.

<sup>73</sup> 101 US 99 (1880).

This issue was considered in the context of computer programs in the case of *Whelan Associates Inc v Jaslow Dental Laboratory Inc*,<sup>74</sup> the first so-called ‘look and feel’ case. It was said that, in relation to a computer program designed to carry out a mundane task (running dental laboratories in that case), anything that was essential to the task was ‘idea’ while anything that was not essential and could have been written in different ways was ‘expression’. If these latter parts were copied, then the copyright would be infringed because the expression had been copied. If the programmer had no option but to write a part of the program the way he did because the task to be achieved dictated its form and content then that part was ‘idea’ and not protected by copyright. Similarly, the purpose of a utilitarian program was ‘idea’ and the structure of the program, if there were several different possible structures that could have been adopted, was ‘expression’. Consequently, not just the actual program code but also the structure of a computer program can be protected by copyright if, because of similar structure, the ‘look and feel’ of the programs are similar.

<sup>74</sup> [1987] FSR 1.

*Whelan* was considered in numerous later cases. In *Plains Cotton Cooperative v Goodpasture Computer Service*,<sup>75</sup> an apparent rejection of the *Whelan* case can be explained by concluding that the structure of the claimant’s program was ‘idea’ and not ‘expression’ because the application itself dictated the structure of the program. The program’s application was to assist in the marketing of cotton and this, by its very nature, could be expressed only in computer programs exhibiting a substantially

<sup>75</sup> 807 F 2d 1256 (5th Cir, 1987).

similar structure; it left no room for alternative structures.<sup>76</sup> Other cases have dealt with screen displays. In *Broderbund Software v Unison World*,<sup>77</sup> the court held that, as there were several means by which the screens could have been structured, sequenced and arranged, the actual way selected by the claimant was copyrightable expression.<sup>78</sup> The court also appears to have confirmed that copying the format, structure and sequence of screen displays infringes the copyright in the underlying programs. However, in *Digital Communications Associates v Softklone Distributing Corp*<sup>79</sup> this view was rejected on the basis that a screen display cannot be a copy of part of the program because the same screen display can be produced by various programs in different ways. Nevertheless, the court did afford protection to the screen display in its own right, and differentiated between ‘idea’ and ‘expression’ by regarding the idea of a screen display as being the concept of the screen, whereas the means used to communicate the screen’s manner of operation, that is, the arrangement of terms, highlighting and capitalisation, was the expression of the screen display.<sup>80</sup>

## Spreadsheets

A spreadsheet program is, in essence, one which comprises a grid of cells (usually two-dimensional, but ‘three-dimensional’ grids are now common) into which the user can enter text, numbers and/or formulae. A spreadsheet is useful for preparing an easily updated table of calculations from which graphs and barcharts can be derived. Non-literal elements of spreadsheet software include its menu system, by which the user interacts with the spreadsheet, and the system for denoting cell references, for example, C7, H21, etc.

In *Lotus Development Corp v Paperback Software International*<sup>81</sup> the defendant had developed a spreadsheet program called VP-Planner. The defendant had realised that, because of the success of the claimant’s famous Lotus 1-2-3 spreadsheet program, it was desirable that VP-Planner was compatible with Lotus 1-2-3. To this end, the defendant ensured that the arrangement of commands and menus in VP-Planner conformed to those in Lotus 1-2-3, and this meant that it was possible to transfer spreadsheets from VP-Planner to Lotus 1-2-3 without losing the functionality of any macros in the spreadsheet.<sup>82</sup> Another reason for compatibility and similarity in screen displays and command language was that Lotus 1-2-3 users could transfer to VP-Planner without the need for any further training. When the difference in cost between the two spreadsheets is considered, it is not surprising that Lotus sued the owners of VP-Planner.<sup>83</sup> The defendant claimed that he had not copied the program code of Lotus 1-2-3, so this was a case of ‘non-literal copying’. The central issues, therefore, were whether the non-literal elements of the claimant’s program were protected by copyright, that is the overall organisation of the program (structure), the structure of the command system, the screen displays and, especially, the user interface.

Judge Keeton held that the user interface of Lotus 1-2-3, in particular the two-line moving cursor menu, was protected by copyright and that the defendant had infringed that copyright. The menu command system was said to be ‘copyrightable’ because it was effected in different ways in different spreadsheet programs. For example, some used a list of letters (another spreadsheet program Visicalc used ‘BCDEFGIMPRSTVW-’); others used a three-line menu or pull-down menus. The two-line moving cursor menu used by Lotus 1-2-3 was said to be original and non-obvious and, thus, protected by copyright. Other features such as the rotated ‘L’ used to contain the grid reference letters and numbers, and the use of certain keys to call up commands and perform arithmetical functions (for example, the ‘/’, ‘+’, ‘-’ and ‘\*’ keys), were held not to be protected because they were common to spreadsheets, even though they were not essential.

<sup>76</sup> For an argument that *Plains Cotton* is not inconsistent with *Whelan*, see Taylor, W.D. ‘Copyright Protection for Computer Software after *Whelan Associates v Jaslow Dental Laboratory*’ (1989) 54 *Missouri Law Review* 121.

<sup>77</sup> 648 F Supp 1127 (ND Cal, 1986).

<sup>78</sup> The argument by the defendant that there was no other way to structure the screens or design the input formats was quickly overcome by the claimant who produced another competing program which performed a similar function (to design greetings cards, signs, banners and posters) but which had screen displays and screen sequences that were very different. Taylor, W.D. ‘Copyright Protection for Computer Software after *Whelan Associates v Jaslow Dental Laboratory*’ (1989) 54 *Missouri Law Review* 121 at 151.

<sup>79</sup> 659 F Supp 449 (ND Ga, 1987).

<sup>80</sup> Some commentators argue for strong copyright protection of screen displays subject to a higher standard of originality. See Benson, J.R. ‘Copyright Protection for Computer Screen Displays’ (1988) 72 *Minnesota Law Review* 1123.

<sup>81</sup> 740 F Supp 37 (D Mass, 1990).

<sup>82</sup> A ‘macro’ is a list of commands that are stored in a separate executable file. The purpose usually is to save time. For example, the user might want to combine several spreadsheets, total them, find the average and change the display format and, rather than having to enter a whole series of commands each time he wants to do this, he can store the instructions in a macro which he can call up and execute in the future at a keystroke. The command language of VP-Planner would have to be the same as that in Lotus 1-2-3 for macros to be compatible.

<sup>83</sup> At the beginning of 1991, in the UK, Lotus 1-2-3 was available at around £200–£300 (depending on the version) while VP-Planner was available (for educational use only) at around £8. It must be noted that this version of VP-Planner had a limited overall spreadsheet size compared to Lotus 1-2-3.

It was accepted by the judge that disentangling idea from expression was not an ‘either/or’ or ‘black and white’ matter but a matter of degree, and a distinction must be made between the generality and specificity of conceptualising an idea. A legal test for copyrightability was suggested based on constructing a scale of abstraction from the most generalised conception at one end to the most particularised conception at the other end. The expression being considered was placed on this scale and a decision made based on choice and judgment, but earlier judgments by Judge Learned Hand had suggested that this could be done only in an *ad hoc* way.<sup>84</sup>

<sup>84</sup> For example, *Shipman v RKO Radio Pictures* 100 F 2d 533 (2d Cir, 1938).

<sup>85</sup> [1997] FSR 61. Lotus claimed the Borland’s Quattro spreadsheet infringed the copyright in the Lotus 1-2-3 menu system.

Useful as Judge Keeton’s judgment was in terms of non-literal copying generally, it was overturned in *Lotus Development Corp v Borland International Inc*<sup>85</sup> by the First Circuit Court of Appeals. However, the reason was not so much connected with any disagreement with the way of testing for idea or expression, but a direct consequence of the US Copyright Act s 102(b) which denies copyright protection to ‘any idea, procedure, process, system, *method of operation*, concept, principle or discovery . . .’ (emphasis added). It was held by the First Circuit Court of Appeals that the menu system of Lotus 1-2-3 was a method of operation and, hence, not protected by copyright. This decision has serious implications for the computer industry in that it effectively puts user interfaces into the public domain. The subsequent appeal to the Supreme Court was unsatisfactory in that, whilst the decision of the Court of Appeals was affirmed, it was the result of a split decision and, in such cases, the Supreme Court gives no substantive judgment.<sup>86</sup> The reasoning of the Court of Appeals therefore stands.<sup>87</sup>

<sup>86</sup> See footnote in [1997] FSR 61 and *Computing*, 25 January 1996, p 8.

<sup>87</sup> Some earlier judgments based on *Lotus v Paperback*, such as *Autoskill Inc v National Education Support Systems Inc* 994 F 2d 1476 (10th Cir, 1993) on the use of a keying procedure using the 1, 2 and 3 keys and *Brown Bag Software v Symantec Corp* 960 F 2d 1465 (9th Cir, 1992), suggesting menus and keystrokes could be protected by copyright, must be viewed with some suspicion.

<sup>88</sup> In the UK, program interfaces may be determined by decompilation, but it is at least arguable that user interfaces are protected: see *John Richardson Computers Ltd v Flanders* [1993] FSR 497, discussed below.

<sup>89</sup> Geneva, 2–20 December 1996.

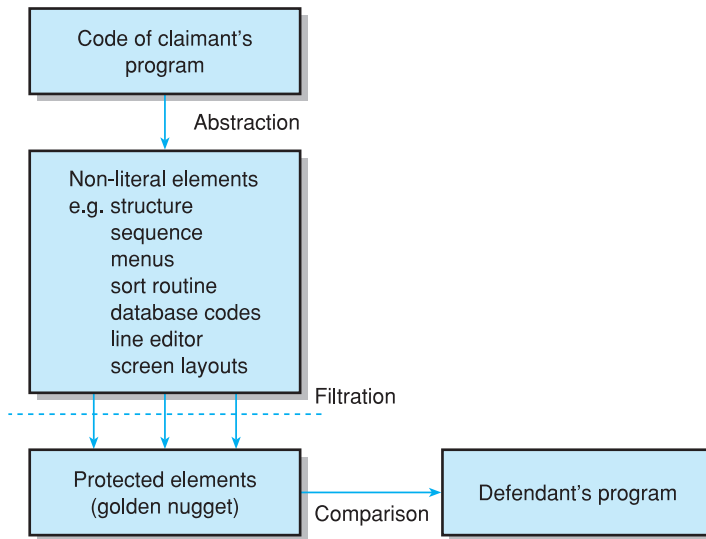

<sup>90</sup> OJ L 122, 17.05.1991, p 42.

<sup>91</sup> 20 USPQ 2d 1641 (1992).

Certainly, *Lotus v Borland* goes much further than any case in the UK has ventured or is likely to do in the near future.<sup>88</sup> On the one hand, it can be said to be a liberating influence, facilitating the development of compatible interfaces, but, on the other hand, it could rob the designer of a new interface technique of any real protection from copying. The World Intellectual Property Organisation Copyright Treaty states in Article 2 that copyright protection extends to expression and not ideas, procedures, methods of operation or mathematical concepts as such.<sup>89</sup> Similar exceptions to protection are also present in European Community Directives: for example, in Council Directive 91/250/EEC of 14 May 1991 on the legal protection of computer programs, Article 1(2) states that ideas and principles which underlie any element of a computer program, including those which underlie its interfaces, are not protected by copyright under the Directive.<sup>90</sup>

### A new test for non-literal copying

*Whelan* and subsequent cases can be explained by the need to deal with non-literal copying of computer programs, where the first program has been unfairly used as a basis for the creation of a second program but there is no literal similarity in the actual program code because different programming languages have been used. Although the *Whelan* test proved troublesome to apply in practice, it has been superseded by a more sophisticated test which still does nothing to aid predictability. The New York Court of Appeals strongly criticised *Whelan* in *Computer Associates International Inc v Altai Inc*<sup>91</sup> as taking insufficient account of computer technology. In *Computer Associates*, the defendant had produced a program known as ‘Oscar’, a job scheduling program for controlling the order in which tasks were carried out by a computer. It had a common interface component allowing the use of different operating systems, and this part had been added by a former employee of the claimant which had a similar program and interface. The former employee was very familiar with the claimant’s program and had even taken parts home to work on. As soon as the defendant company realised the problem, it agreed to pay \$364,444 in damages and engaged other programmers to rewrite the infringing parts of its program. The claimant still sued in respect of the

**Figure 8.1** Test for non-literal copying

defendant's new version, but the judge held there was no infringement. The judgment of the court was given by Judge Walker, who laid down a new three-stage test for non-literal copying as follows and as shown in Figure 8.1.

- 1 *Abstraction* – discovering the non-literal elements by a process akin to reverse engineering, beginning with the code of the claimant's program and ending with its ultimate function. This process retraces and maps out the designer's steps and produces, *inter alia*, structures of differing detail at varying levels of abstraction.
- 2 *Filtration* – the separation of protectable expression from non-protectable expression material. Some elements will not be protected being ideas, dictated by or incidental to ideas, required by external factors (*scènes a faire* doctrine) or taken from the public domain. These elements are filtered out leaving a core of protectable material – the program's 'golden nugget' or protected expression.
- 3 *Comparison* – a determination of whether the defendant has copied a substantial part of the protected expression – whether any aspect has been copied and, if so, whether this represents a substantial part of the claimant's program.

The judge recognised that the test would be difficult to apply, but expressed the hope that it would become less so with further case law.<sup>92</sup> At first sight, it seems significantly to weaken copyright protection for computer programs. Many programs contain parts taken from the public domain (such as commonly used routines to extract data from files, to perform complex arithmetical operations or to sort data into alphabetical order) and other parts will be significantly constrained by ideas or external factors. It would appear that, in some cases, there will be no golden nuggets left after filtration. The claimant's gold prospecting will result in bitter disappointment!

### Merger of idea/expression

There may be occasions when it is impossible to separate idea from expression because of the constraints which severely limit the ways in which the ideas contained in a computer program can be expressed. In *NEC Corp v Intel Corp*,<sup>93</sup> such merger of idea and expression was said not to affect the copyright status of a computer program but was

<sup>92</sup> It has been used subsequently. See, for example, *Gates Rubber Co v Bando Chemical Industries Ltd* (unreported) 19 October 1993, 10th Circuit Court of Appeals, discussed in [1994] 10 CLSR 101.

<sup>93</sup> 10 USPQ 2d (1989).

an issue of infringement. Even though Intel's microcode programs were declared to be 'copyrightable' material in principle, this case reinforces the look and feel approach in its practical effect because, as Intel's programs were dictated by the instruction set of the microprocessors involved and because there were no alternative ways of expressing the ideas, reverse analysis of the programs did not infringe copyright.<sup>94</sup>

### Non-literal copying in the UK

*John Richardson Computers Ltd v Flanders*<sup>95</sup> is the first case in the UK to address fully the look and feel of computer programs and is exceptional in that the test used in the USA for non-literal copying was expressly approved of and applied, at least in part, by Ferris J in a comprehensive judgment. Both parties were in the business of developing and marketing computer programs to be used by pharmacists for the purpose of producing labels for prescriptions and for stock control. The judge found the facts of the case difficult to determine (there were a number of disputed points) and the case provides a good example of the need to document the development of copyright works carefully and to make suitable arrangements for ownership.<sup>96</sup>

Mr Richardson, the chairman and managing director of the claimant company, who was a pharmacist and self-taught computer programmer, developed a program written in BASIC to produce labels suitable for the Tandy computer. He was not an expert at writing programs and he, therefore, engaged a self-employed programmer to help complete the program and make it more reliable. In 1983, Mr Flanders joined the claimant company as an employee to write an equivalent program in machine code that would have the same look and feel as the original program for the BBC computer. In 1986, Mr Flanders left the employment of the claimant company, but did further work for it as a self-employed consultant, during which time he rewrote the program in assembly language, a low-level language, adding some new features. Later, Mr Flanders wrote a new version of the program (in the QuickBASIC language) for the IBM personal computer. The claimant was also working on a version for the IBM computer and sued for infringement of its copyright in the BBC version of the program and for breach of confidence.<sup>97</sup>

The general approach in the *Computer Associates* case attracted Ferris J, who remarked that there was nothing in any English decision which conflicted with it. However, rather than seeking the 'core of protectable expression', an English court would first decide whether the claimant's program as a whole was subject to copyright and then decide whether any similarity in the defendant's program was the result of copying a substantial part of the claimant's program. In particular, Ferris J directed his attention to the non-literal elements of the programs, finding *Computer Associates* helpful in separating idea from expression.

In the event, Ferris J held that there was a limited infringement of the copyright subsisting in the claimant's program based on the non-literal elements of the program. A literal comparison was not helpful as both programs had been written in different languages and bore no literal similarity. He identified 17 objective similarities in the non-literal elements and then went on to consider the reasons for the similarities. The similarities and the reasons for them were classified as follows:

- 1 Similarities that were the result of copying a substantial part of the claimant's program, being the line editor, amendment routines and dose codes. It was in respect of these parts that copyright infringement was found.
- 2 Similarities that were the result of copying, but not in relation to a substantial part of the claimant's program. These were the date option, daily figures reset, operation successful message plus double bleep, data entry by quantity first, four out of eight of the pre-printing options and best day's stock control.

<sup>94</sup> This should be compared to the Australian case of *Autodesk Inc v Dyason* (unreported) 7 August 1989, Federal Court of Australia, in which the reverse analysis of a computer lock (a hardware device, sometimes called a 'dongle', which must be plugged into the computer before a particular computer program can be used) was held to infringe copyright in the computer program contained within the lock. See Goldblatt, M. 'Copyright Protection for Computer Programs in Australia: The Law since *Autodesk*' [1990] 5 EIPR 170. On appeal, the *Autodesk* decision was reversed: see Anon, 'Appellate Court gives Green Light to Reverse Engineering' (1991) 2 *Intellectual Property in Business Briefing* 3. However, finally in *Autodesk Inc v Dyason* [1992] RPC 575 the High Court of Australia reinstated the decision at first instance.

<sup>95</sup> [1992] FSR 497.

<sup>96</sup> The defendant may have been the legal owner of the copyright in parts of the program. The claimant was the owner in equity of that copyright and the difficulty beneficial owners can experience in obtaining remedies was overcome here because the legal owner was joined in the action – as defendant.

<sup>97</sup> The breach of confidence claim was dropped.

- 3 Similarities that *might* have been the result of copying but, in any case, related only to an insubstantial part of the claimant's program. These were the vertical arrangement of prompts and entries and the entry of data within the label routine.
- 4 Similarities that were not the result of copying, being the date entry, use of the escape key, position of label on screen, drug entry routine, secondary access to the full list of drugs on screen and label entry sequence.

The line editor, amendment routines and dose codes were deemed to have been copied and to represent a substantial part of the claimant's program. This approach affects the test of substantiality which has long been accepted as being a question of quality not quantity.<sup>98</sup> As adopted by Ferris J, it implies that relatively trivial elements of a program could be used in the comparison process. The manner of Ferris J's application of the test from *Computer Associates* can be criticised because he did not carry out the second stage.<sup>99</sup> He did not filter out those elements that might have been unprotected, such as ideas or public domain routines. Essentially, the only significant use he made of the *Computer Associates* case was in his acceptance that non-literal elements of computer programs may be protected by copyright. He did not need to rely on US precedents to do this. In the *IBCOS* case, Jacob J criticised the use of US precedents, but agreed with Ferris J that consideration must not be restricted to the actual code of the programs in question.

A concern remains with the judgment of Ferris J in that it may result in the protection of relatively trivial and mundane parts of computer programs. It should be noted that the programs in *Richardson* were by no means exceptional. They performed relatively simple functions. Additionally, both programs made substantial use of what might be termed public domain materials, or at least techniques and methods commonly used by programmers. For example, there is a limited number of ways to correct mistakes using a line editor and these are dictated to some extent by the programming language used and other features relating to the type of computer used and its operating system. It is common for standard routines to perform commonly required operations like line editing to be published in textbooks, computer journals and magazines.<sup>100</sup> Even if a line editor could be considered to be protectable expression, there is no doubt that, in terms of the program's function, it could never be said to form a substantial part of the program. Nevertheless, that is what the judge found.

The consideration of a program as a collection of disparate and relatively small and discrete non-literal elements could make it very difficult for ex-employees to write computer programs that perform functions similar to those performed by programs they have written for their previous employers. In this respect, copyright could now become so strong that it operates as a form of restraint of trade. It is also out of step with the law of breach of confidence which is relatively benign as regards mundane information and which generally will permit an employee to make use of what he remembers as long as he does not copy, provided the information concerned is not a trade secret.<sup>101</sup> Computer programs designed to perform mundane functions such as producing labels for pharmacists and handling stock control can hardly be classed as trade secrets.<sup>102</sup>

Abstraction in relation to conventional literary works may be a matter of considering the plot of a novel or play or the detailed and fleshed out ideas underlying the work. In some cases, it will be at that level that the author's skill and labour lies. In *Cantor Fitzgerald International v Tradition (UK) Ltd*,<sup>103</sup> it was said by Pumfrey J (at 134) that:

[t]he closest analogy to a plot in a computer program lies perhaps in the algorithms or sequences of operations decided upon by the programmer to achieve his object. It seems to be generally accepted that the 'architecture' of a computer program is capable of protection if a substantial part of the programmer's skill, labour and judgment went into it. In this context,

<sup>98</sup> *Ladbroke (Football) Ltd v William Hill (Football) Ltd* [1964] 1 WLR 273.

<sup>99</sup> In fairness to Ferris J, he did not profess to follow the *Computer Associates* test precisely.

<sup>100</sup> However, some of the features in the claimant's program were described by Ferris J as idiosyncratic.

<sup>101</sup> The position is best summarised by Neill LJ in *Faccenda Chicken Ltd v Fowler* [1986] 1 All ER 617.

<sup>102</sup> The phrase 'trade secret' lacks precise definition but has been considered in *Lansing Linde Ltd v Kerr* [1991] 1 WLR 251. See also Coleman, A. (1992) *The Legal Protection of Trade Secrets*, Sweet & Maxwell, pp 4–28.

<sup>103</sup> [2000] RPC 95.

‘architecture’ is a vague and ambiguous term. It may be used to refer to the overall structure of the system at a very high level of abstraction.

Although there had been no allegation of copying the architecture of the claimant’s software, Pumfrey J considered this aspect of the parties’ software<sup>104</sup> and he said (at 134):

It is remarkable that such a similarity can be achieved with copying (so far as either party can detect) of no more than 3.3 per cent of the actual code.

A program’s architecture may also be referred to as its structure.<sup>105</sup> Although *obiter*, what Pumfrey J had to say on the question of non-literal copying is an interesting aspect of the decision in *Cantor Fitzgerald*. He was prepared to accept that program structure can represent the programmer’s skill and labour and that copying it can be an infringement of copyright. That itself is no longer controversial. However, he did not go on to explore other non-literal elements of the kind identified by Ferris J in *John Richardson Computer Ltd v Flanders*.<sup>106</sup> Reading between the lines, it would seem possible that Pumfrey J did not consider that anything other than structure could be protected on the basis of non-literal copying. He did not expressly say so but it is reasonable to imply, from the tenor of his judgment, that that was his view. Furthermore, he suggested that the work of individually compiling and linking modules to a small number of programs had to be seen in the context of the collection of modules as a whole. In that case, the choice of what each module contained was somewhat arbitrary and driven by considerations such as the division of labour amongst programmers and the convenience of debugging and maintenance. He thought that it would be unlikely that the skill and labour expended in making such choices would amount to a substantial part of the copyright subsisting in each module.<sup>107</sup>

As mentioned above, these aspects of the judgment were *obiter*. Pumfrey J found infringement of copyright by the defendant who had copied the claimant’s entire software during development of its own system, in respect of two modules used for testing the defendant’s software and by the defendant’s copying of another module (the origin of which had been disguised) in order to save time. It is noteworthy that he did not once refer to the *John Richardson* case when considering non-literal copying. However, in *Cantor Fitzgerald*, both the claimant’s and defendant’s programs were written in the same programming language, BASIC, and there had been no allegation of non-literal copying. Nonetheless, the decision threw further doubt on the *John Richardson* case, especially given Jacob J’s criticism of it in *IBCOS*.

Mr Justice Pumfrey had the opportunity to revisit the issue of non-literal copying<sup>108</sup> in *Navitaire Inc v easyJet Airline Company*<sup>109</sup> where non-literal copying was among the allegations made by the claimant. Simply stated the facts of the case were that easyJet, the low-cost airline and the first defendant, acquired an airline booking system from Navitaire, called OpenRes. EasyJet used this for some time but eventually commissioned the second defendant, Bulletproof Technologies Inc, to write a similar software system, which was called eRes. An important feature was that eRes should be virtually indistinguishable from the user’s perspective (that is, that the user interfaces were to be the same) and the existing data in the databases built up using OpenRes could be migrated to eRes, that is, transferred from one to the other.

Apart from one item of software, called TakeFlight, neither defendant had access to the OpenRes source code and did not decompile or reverse engineer OpenRes to obtain the source code. In effect, what Bulletproof did was to emulate the operation and functionality of the OpenRes software by carefully studying it in use, for example, to see how it behaved, what functions and operations it could perform, how it manipulated, stored and retrieved information, etc. Navitaire sued for infringement of its copyright, *inter alia*, on the basis of non-textual copying by (i) using the look and feel of the OpenRes software, described as the business logic of OpenRes, (ii) detailed copying of the many

<sup>104</sup> Appendix E to the report of the case shows the overall structure of the software systems: [2000] RPC 95 at 162.

<sup>105</sup> As per Jacob J in *IBCOS Computers Ltd v Barclays Mercantile Highland Finance Ltd* [1994] FSR 275.

<sup>106</sup> [1993] FSR 497.

<sup>107</sup> Compare with the finding of Jacob J in respect of copyright subsisting in a compilation of programs in *IBCOS Computers Ltd v Barclays Mercantile Highland Finance Ltd* [1994] FSR 275.

<sup>108</sup> Described as ‘non-textual’ copying in the case.

<sup>109</sup> [2006] RPC 111.

commands entered by the user to achieve particular results and (iii) copying screen displays and reports displayed on the screen.

Pumfrey J said that if one studied software in operation so as to identify all possible responses to all possible sequences of inputs, it should be possible to create new software that would produce the same results for the same sequences of inputs. If this was done, Navitaire contended that this would infringe the copyright in the source code of the first. To the end user, the functions performed by both software systems were identical. The claimant's case was that by emulating the functions and operation of its software to produce new software that worked in the same way and produced the same outputs amounted to non-textual infringement, notwithstanding that the source code of the defendants' software must be different. The analogy of taking the plot of a literary work as a form of infringement was used by the claimant.<sup>110</sup> Pumfrey J described this, in effect, as a claim to copying without access to the thing copied, directly or indirectly. By emulating existing software, using it, observing what it does, how it handles inputs and what it outputs, the creator of the second software system saves himself the trouble of carrying out systems analysis and producing a functional specification. But this did not release the claimant from the need to show that the defendant had taken something not simply inherent in the nature of the business function. The claimant had to show that the defendant had taken something over and above that. A factor in this case was that the functions carried out by the software were common to flight booking systems.

Pumfrey J noted that two completely different computer programs could produce results identical at any level of abstraction. This is so even though the creator of the second program does not have access to the source code of the first. For this reason, the analogy with the plot of a literary work was not appropriate. A computer program does not really have a plot or any narrative flow. A computer program has a series of pre-determined operations directed to a desired result in response to requests from the person using the program. Once the interfaces had been stripped away, all that was left was the business function performed by the software. The source code of the claimant's software was neither read nor copied by the defendants. Consequently, Pumfrey J held that there was no infringement by non-textual copying.

As to the commands, examples being the simple command 'NP' which gave access to a notepad built into the software and the complex command A13JUNLTNAMS which asked for the availability of flights from Luton to Amsterdam on 13 June, Pumfrey J held that these were not protected in their own right. The simple commands were not protected, being single words, on the basis of *Exxon Corporation v Exxon Insurance Consultants International Ltd.*<sup>111</sup> Of the complex commands, he doubted whether these could be works of copyright as they were not recorded in the program code but simply recognised by it. However, he went on to say that they were excluded as being a computer programming language or user interface as the Directive on the legal protection of computer programs expressly excludes from copyright protection both computer programming languages and interfaces including user interfaces.<sup>112</sup> Recitals 13 and 14 to Council Directive 91/250/EEC of 14 May 1991 on the legal protection of computer programs state:

- 13 Whereas, for the avoidance of doubt, it has to be made clear that only the expression of a computer program is protected and that ideas and principles which underlie any element of a program, including those which underlie its interfaces, are not protected by copyright under this Directive;<sup>113</sup>
- 14 Whereas, in accordance with this principle of copyright, to the extent that logic, algorithms and programming languages comprise ideas and principles, those ideas and principles are not protected under this Directive.

<sup>110</sup> Citing *Harman Pictures NV v Osborne* [1967] 1 WLR 723 and *Designers Guild Ltd v Russell Williams (Textiles) Ltd* [2001] FSR 113, although the latter was a case on artistic copyright.

<sup>111</sup> [1981] 3 All ER 241.

<sup>112</sup> OJ L 122, 17.05.1991, p 42. The same could be said for the set of commands as a whole.

<sup>113</sup> See Article 1(2) which restates this.

Until Pumfrey J's judgment in *Navitaire*, the Directive seemed to have almost gone unnoticed by judges in software copyright cases even though it provides a clear statement of what is excluded from protection, although it excludes from protection logic, algorithms and programming languages only in as much as they comprise ideas and principles. The impact of the Directive in terms of non-literal copying means that computer programs must be treated differently to the 'plot' cases and Pumfrey J was right to reject that analogy when *Navitaire* submitted that the set of commands was akin to the plot of a novel and protected in that way. He said (at para 94):

There is a respectable case for saying that copyright is not, in general, concerned with functional effects, and there is some advantage in a bright line rule protecting only the claimant's embodiment of the function in software and not some superset of that software. The case is not truly analogous with the plot of a novel, because the plot is part of the work itself. The user interface is not part of the work itself. One could permute all the letters and other codes in the command names, and it would still work in the same way, and all that would be lost is a modest mnemonic advantage. To approach the problem in this way may at least be consistent with the distinction between idea and expression that finds its way into the Software Directive, but, of course, it draws the line between idea and expression in a particular place which some would say lies too far on the side of expression. I think, however, that such is the independence of the particular form of the actual codes used from the overall functioning of the software that it is legitimate to separate them in this way, and not to afford them separate protection when the underlying software is not even arguably copied.

The only comfort to *Navitaire* in the case was that Pumfrey J found limited infringement in relation to the *TakeFlight* software, the databases and some of the screen displays containing graphic symbols considered to be artistic works. The symbols included icons which were accepted by Pumfrey J to be the result of sufficient skill and judgment for copyright to subsist in them.<sup>114</sup> Some important questions resulting from the judgment of Pumfrey J were as follows.

<sup>114</sup> It could have been argued that designs for screen displays and reports fell within the meaning of preparatory design materials and literary works in their own right.

<sup>115</sup> It seems reasonable to assume that the structure of a program (or its 'architecture') can be protected, especially when the Directive on the legal protection of databases expressly contemplates copyright protection covering also the structure of the database; see the section on databases, below.

- Is only the actual text of a computer program protected by copyright? In other words, is it no longer possible to infringe the copyright in a computer program by taking non-literal or non-textual elements? Are there any non-literal elements otherwise capable of protection that are not excluded as being ideas and principles? It is submitted that what the Directive on the legal protection of computer programs seeks to achieve is to prevent copyright protecting logic, algorithms and programming languages only to the extent that they comprise ideas and principles. To take an example, the structure of a computer program, as may be represented in a flowchart, is a form of expression.<sup>115</sup> What is intended is that the ideas and principles underlying it are not protected but this does not mean to say that the actual algorithm as so expressed is not protected. Say that there is a mathematical rule that is used to calculate square roots of numbers. That is an idea or principle. It may be implemented in one of a number of ways. The way chosen is potentially protectable even though not explicit in the program code and even though it may be put into effect by program codes that may be different.
- If a user interface is not protected on the basis of it being an idea, does this allow the deliberate copying of user interfaces and, if so, how does one decide what the boundaries of the interface are? Does this mean also that deliberately copying can never infringe the copyright in the computer program? Screen displays for the input of data or to display the results of processing data can properly be described as user interfaces. So too might be command sets. Why is a command set not protected but a user interface containing graphic symbols can be?
- Is a command set used to enter queries, instructions or responses a programming language? Surely a programming language is a language used to write a computer

program rather than being the syntax by which the user interacts with the program? It is submitted that a command set is better classified as a user interface rather than a programming language.

Another case involving non-literal copying of computer programs in the Court of Appeal was *Nova Productions Ltd v Mazooma Games Ltd*.<sup>116</sup> This involved, *inter alia*, allegations of non-literal copying of a video game based on the game of pool. Agreeing with the judge at first instance, Jacob LJ said that the claim could only be regarded as an allegation of copying the very general ideas such as the idea of using a ‘power cue’ having a pulsating power meter. There was no allegation of copying the source code of the computer programs and the claim was not sufficiently refined to cover the architecture of the programs. Jacob LJ said (at para 55):

If protection for such general ideas as are relied on here were conferred by the law, copyright would become an instrument of oppression rather than the incentive for creation which it is intended to be. Protection would have moved to cover works merely inspired by others, to ideas themselves.

Jacob LJ, following Pumfrey J in *Navitaire*, also accepted that merely emulating another program without taking any of the source code and graphics was a legitimate exercise. This probably goes too far if it is accepted that the architecture of a computer program may be protected to the extent that it does not comprise ideas and principles. However, to date, no convincing claim of copying a program’s architecture has been made in a computer program case.<sup>117</sup>

As the Directive on the legal protection of computer programs makes clear, ideas and principles are not protected. So, for example, if the author of the computer game had written a detailed description of the ‘power cue’, providing it was more than trivial, that would be protected as part of the preparatory design material (which is part of the computer program itself). But that protection would only prevent someone copying that description and would not extend to the protection of the idea of using a power cue in the game. In *Nova v Mazooma*, a claim that artistic copyright in the graphic images displayed to the player of the game was also rejected. Each image was undoubtedly a graphic work but the defendant’s images were very different apart from sharing in common representations of a pool table with pockets, balls and a cue. Jacob LJ also rejected the idea that there was a separate artistic copyright in the series of images produced when playing the game. He said that a graphic work was a static work and there was no separate copyright in a series of still images. Support for this conclusion was the fact that there was a separate copyright in moving images as a film.<sup>118</sup>

### The idea/expression merger doctrine

The idea/expression merger doctrine takes on a different significance in the context of UK copyright law. In a case of suspected non-literal copying, the person who wrote the alleged copy is simply likely to deny that he copied, and both the look and feel test and the merger doctrine become important in an evidential sense. The question that falls to be resolved is whether the defendant copied a substantial part of the original computer program. If the look and feel of the two programs are similar, the fact that there are several different ways in which the program could have been written is persuasive evidence that there has been copying; while the fact that because the function dictates the program code or structure there is only one way the program could have been written, significantly weakens the claim that there has been, in fact, copying. Of course, other factors may be relevant, such as whether the defendant had access to the claimant’s program. Nevertheless, as current UK copyright law declares without *caveat* that copyright subsists in original computer programs and the fact that one of the acts restricted by

<sup>116</sup> [2007] RPC 589.

<sup>117</sup> Nor has there been a convincing case recently of copying the architecture of a conventional literary work: see *Baigent v The Random House Group Ltd* [2007] FSR 579, discussed in Chapter 6 (pp 163–5).

<sup>118</sup> The claimant reserved its argument that the game had protection as a film for a possible appeal.

the copyright is copying a substantial part of a program, even copying a program or significant part of a program which is dictated by function will infringe copyright. On the other hand, two independently created programs may be similar because function dictates the program (or simply because of coincidence) and there will be no infringement of copyright. In *Total Information Processing Systems Ltd v Daman Ltd*<sup>119</sup> it was accepted that where there is only one way of expressing an idea, the idea and expression merged and were not the subject of copyright.<sup>120</sup> But this is to confuse the question of subsistence with evidence of copying. In *Kenrick v Lawrence*<sup>121</sup> it was said that a duplicate copy of a simple drawing would infringe.

119 [1992] FSR 171.

120 Disapproved of by Jacob J in *IBCOS Computers Ltd v Barclays Mercantile Highland Finance Ltd* [1994] FSR 275.

121 (1890) 25 QBD 99.

### Limits of look and feel

Perhaps the original program is simply altered in an attempt to disguise its origins or to improve it. Nevertheless, the question of copying still arises, as opposed to adaptation which has a precise legal meaning in terms of computer programs. In many cases, the two programs will be similar enough to raise a presumption of copying, which can shift the burden of proof, as already discussed. But if the alterations are numerous, it may be more difficult to draw this conclusion. It is a relatively simple matter to change constituent parts of a program, for example the screen displays, the names given to variables used in the program and the line numbering. If this is done, a line for line similarity between the two programs will be obscured. If the changes are merely cosmetic, it will still be possible to use a test of objective similarity based on the structure of the programs: for example, whether the flow of the program and the relative positioning of its constituent parts are similar. But even here, a determined programmer can rearrange the parts of the program to defeat this test.

Even more difficult is the situation where the new program is written using a totally different programming technique, using software tools and languages that are fundamentally different from those used to create the original program. In particular, the use of 'fourth generation' languages is relevant to this discussion as they are dissimilar to the older, more traditional programming languages, such as BASIC and COBOL, in a way that goes beyond mere syntax. A program written in a traditional programming language is written sub-routine by sub-routine and line by line. A fourth generation language is effectively a tool which automates the process of developing a computer system to a great extent. It is like a shell into which the developer specifies attributes of the required system, such as the structure of database files and the operations to be carried out by the finished system. The file-handling and other operations are then performed by the fourth generation system itself.

122 (Unreported) 23 August 1989, ChD.

In *Computer-Aided Systems (UK) Ltd v Bolwell*,<sup>122</sup> some of the claimant's ex-employees devised a computer program using a fourth generation language to carry out a similar function to the programs they had written in COBOL for the claimant. The *Whelan* case was cited as authority for the notion that the structure of a computer program was a form of literary expression protected by copyright. However, Hoffmann J did not believe that a seriously triable issue was raised on the questions of copying or the misuse of confidential information. The claimant had argued that the output formats and input layouts of the two computer programs would be very similar, especially as the defendants had designed the new system so that it was compatible with the claimant's system. The defendants had refused to allow the claimant to inspect their program, but it would be highly unlikely that there would be a sufficient similarity in the programs to infer that copying had taken place because of the conceptually different nature of the languages used. Even the structure of the programs would be different.<sup>123</sup> The only plausible similarity might have been in the structure of the databases used by the systems because of the efforts to achieve compatibility in this respect. However, Hoffmann J

123 It is not really appropriate to talk of computer systems developed using fourth generation languages (4GLs) as computer programs. 4GLs are more akin to system development tools. The 4GL provides a set of all-purpose computer programs and the system designer develops a set of specifications concerning file structures, calculations and reports which the programs incorporate to produce the finished system.

expressed the opinion that the claimant's application for inspection of the defendants' program was little more than a 'fishing expedition' and he refused the application. This decision seems eminently sensible in the context of restraint of trade; after all, computer programmers and analysts should be free to exercise their skill and knowledge for other employers subject to copyright and limited confidentiality issues.<sup>124</sup> Although the case did not involve a detailed consideration of the issue of non-literal copying, as far as it went, the decision appears to be in line with more recent developments, as seen in the *Navitaire* case, *supra*. Hoffmann J remarked that satisfying a request to write a new program which would provide much of the information provided by the old one was not copying.

<sup>124</sup> For example, in the South African case of *Northern Office Micro Computers (Pty) Ltd v Rosenstein* [1982] FSR 124 where it was held, *inter alia*, that an ex-employee would not have to 'wipe the slate of his mind clean'. See also *Printers and Finishers Ltd v Holloway* [1965] RPC 239.

## MAKING AN ADAPTATION

The second act restricted by copyright which is highly relevant to computer programs is that of making an adaptation. An adaptation of a computer program is defined by s 21(3)(ab) of the 1988 Act as an arrangement or altered version of the program or a translation of it. For computer programs, a translation includes (by s 21(4)):

... a version of the program in which it is converted into or out of a computer language or code or into a different computer language or code [otherwise than incidentally in the course of running the program].<sup>125</sup>

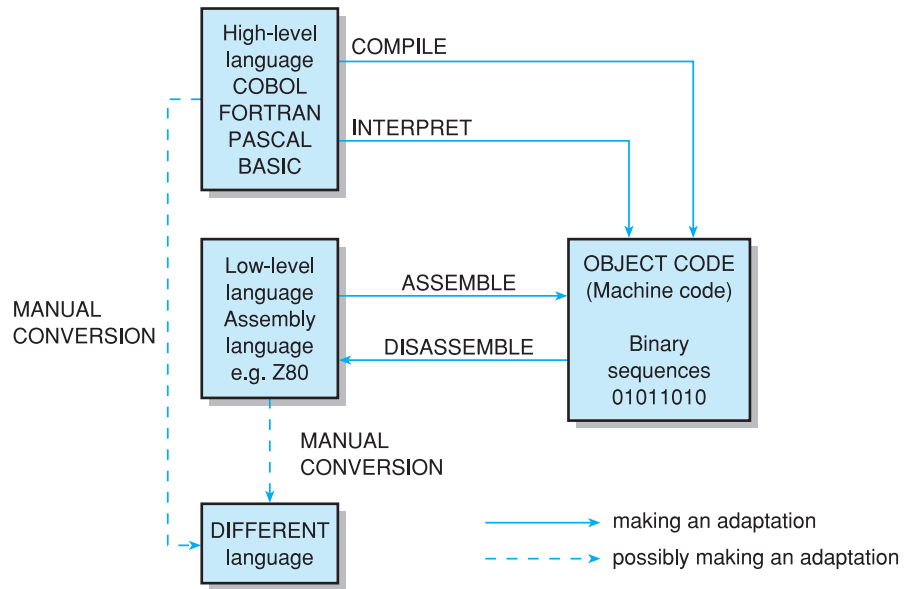

<sup>125</sup> The words in brackets were repealed by the Copyright (Computer Programs) Regulations 1992, SI 1992/3233.

To understand fully the legal issues concerning this definition, it is important that the basic meaning of some computer terms is understood, and the definitions given in the Glossary at the beginning of the book should be referred to again. The following definitions should also be noted. *Compiling* a computer program means converting a high-level language source code program into object code, being the machine code that can be directly understood by the computer. A permanent version of the program in object code is created which can then be operated without the source code version. This must be contrasted with *interpreting*, a process by which a high-level source code computer program is temporarily converted, line by line, into object code during the operation of the program. This is not as efficient as running a compiled version of the program. *Assembling* a computer program means converting a low-level assembly language program into object code. The process of *disassembly* produces assembly language from an object code version of a computer program. Disassembly unlocks the ideas and techniques contained in the object code version of the program.

What, then, in the context of making an adaptation, does this mean? Figure 8.2 shows the relevant acts that can be done in relation to a computer program. Suppose that a computer program has been written, either in a high-level programming language such as Visual Basic or in a low-level assembly language. The legal meaning of 'making an adaptation' would certainly seem to cover the act of compiling or assembling the computer program. If the object code version of a program, produced by compiling or assembling a source code program, is later disassembled, to derive an assembly language version, that too falls within the meaning of making an adaptation.

Now that an adaptation includes an arrangement or altered version of a program, this should cover the situation where a program is manually rewritten in a different computer programming language. The meaning of 'translation' may also extend to a manual translation. There seems to be no reason why translating a computer program cannot be done manually by using a knowledge of grammatical rules and a dictionary of commands and functions. This is highly analogous to translating a work of literature from one natural language into another which is, of course, making an adaptation.

Writing a new computer program after extensively studying the operation of and output from an existing computer program in use is highly unlikely to fall within the

**Figure 8.2** Making an adaptation in relation to a computer program

scope of making an adaptation. This can hardly be described as ‘converting’ the first program. In any case, s 50BA states that it is not an infringement of copyright in a computer program for a lawful user of a copy of a computer program to observe, study or test the functioning of the program in order to determine the ideas and principles which underlie any element of the program if he does so while performing any of the acts of loading, displaying, running, transmitting or storing the program which he is entitled to do.<sup>126</sup>

<sup>126</sup> Section 50BA was inserted by the Copyright and Related Rights Regulations 2003, SI 2003/2498, and replaced the previous imperfect statement of this permitted act in s 296A(1)(c), which has been amended accordingly.

## PERMITTED ACTS IN RELATION TO COMPUTER PROGRAMS

In terms of the permitted acts under copyright law, computer technology may be indirectly relevant in many cases. For example, as a computer program is a literary work, all the provisions affecting literary works apply to computer programs, unless the contrary is stated. For example, a teacher can write a listing of part of a computer program on a blackboard for the purposes of instruction. (Obtaining the listing in the first place might, however, infringe.) A design document includes data stored in a computer for the purposes of s 51 which effectively suppresses copyright in design documents where an article is made to a design.

Although the main purpose of the Directive on the legal protection of computer programs,<sup>127</sup> in pursuance of which the Copyright (Computer Programs) Regulations 1992<sup>128</sup> were passed, was the harmonisation of copyright protection for computer programs, the aspect that stimulated a most heated debate and controversy was the ‘decompilation right’.<sup>129</sup> This is a permitted act under copyright which allows lawful users of computer programs to reverse engineer other computer programs for the purpose of achieving ‘interoperability’ with that or another program. In other words, it allows the act of converting a computer program (the target program) into a form easier to understand (expressed in a higher-level language) so that details of its interfaces can be discovered enabling the new program to be compatible with the target program or any other program. Prior to the amendments made by the Copyright (Computer

<sup>127</sup> OJ L 122, 17.05.1991, p 42.

<sup>128</sup> SI 1992/3233.

<sup>129</sup> Strictly speaking, this is not a right but an exception to infringement.

Programs) Regulations 1992, the most important permitted act in terms of achieving the same result was undoubtedly fair dealing for the purposes of research or private study (s 29). It has been seen in Chapter 7 (*see* pp 216–17) that the scope of this provision is difficult to predict, but it was possible that it would extend to the type of situation mentioned above. Indeed, this seems to be the case in the USA, where the equivalent act of fair use has been relied on successfully to allow reverse engineering of computer programs to discover details of interfaces.<sup>130</sup>

The Directive provided for other specific exceptions to copyright infringement. These have been included in the Copyright, Designs and Patents Act 1988 (amended by the 1992 Regulations) and came into force on 1 January 1993. They are all subject to conditions. Altogether, the special permitted acts for computer programs are:

- decompilation of computer programs
- making back-up copies of computer programs
- making copies or adaptations of computer programs.

Sections 50A, 50B and 50C were inserted into the Copyright, Designs and Patents Act 1988 under the heading ‘Computer programs: lawful users’. These exceptions to infringement apply only to acts done by lawful users of computer programs.

A further ‘permitted act’ was buried deep in the Act in s 296A(1)(c). This made void any term in an agreement under which a person has the use of a computer program which purports to prohibit or restrict the use of any device or means to observe, study or test the functioning of the program in order to understand the ideas and principles which underlie any element of the computer program. This was replaced by s 50BA which permits a lawful user of a copy of a computer program to observe, study or test the functioning of the program in order to determine the ideas and principles which underlie any element of the program if he does so while performing any of the acts of loading, displaying, running, transmitting or storing the program which he is entitled to do. Under s 296A, any term or condition in any agreement under which a person has use of a computer program which attempts to prohibit or restrict this is void to that extent.

### Lawful users

Although the Directive uses the terms ‘licensed user’, ‘person having the right to use’ and ‘lawful acquirer’, depending on the exception concerned, the Act as amended uses the term ‘lawful user’ for all three exceptions. Under s 50A(2), for the purposes of ss 50A, 50B, 50BA and 50C, a lawful user is:

a person who has a right to use the program, whether under a licence to do any acts restricted by the copyright subsisting in the program or otherwise.

This will extend to licensees and, presumably, to persons acting for the licensee such as employees. Unless prohibited by the licence agreement, it should also apply to agents and independent consultants working for the licensee and to many other persons, such as students in respect of a site licence granted to an educational establishment or voluntary workers for a charity that has an institutional licence. Others, too, could fall within the definition of ‘lawful user’. It may include a receiver of a company, an external auditor or anyone acting in pursuance of a legal requirement (for example, a police officer executing a search warrant or a solicitor executing a search order).

The addition of the words ‘or otherwise’ should cause the copyright owner to consider carefully how to exploit the program. For example, it could apply to a person who has obtained a copy of a program by rental or loan. A person who has been given a copy of a program for evaluation purposes should also fall within this category. Of course, if a copy has been made in accordance with the exceptions, at the end of the rental or

<sup>130</sup> *Sega Enterprises Ltd v Accolade Inc* 977 F 2d 1510 (1992).

**131** The Copyright, Designs and Patents Act 1988 s 27(6) includes as infringing copies any copies made in pursuance of some of the permitted acts but that are subsequently dealt with. The omission of copies made in pursuance of ss 50A–50C is clearly an oversight.

**132** The primary infringement of issuing to the public could apply in some cases: Copyright, Designs and Patents Act 1988 s 18.

**133** It is not clear that this could apply in any case because ‘purchase’ is not the same as obtaining a copy under a licence. This provision may be more appropriate in terms of sound and video recordings.

**134** So described in the Directive (Article 6) and in the marginal note to the Copyright, Designs and Patents Act 1988 s 50B, though it is an exception to infringement and not a right as such.

**135** Copyright, Designs and Patents Act 1988 s 50B (inserted by the Copyright (Computer Programs) Regulations 1992 reg 8).

**136** However, this could fall within the normal fair dealing exception in the Copyright, Designs and Patents Act 1988 s 29. This is still available for acts not caught by the meaning of ‘decompilation’.

loan period when the right to use the program ceases, subsequent use will infringe copyright. However, the retained copy will not be an infringing copy because s 27 was not amended to cover this possibility.<sup>131</sup> Selling that copy will not, therefore, be a secondary infringement of copyright.<sup>132</sup> This does not apply where the arrangement by which the person concerned obtained the copy falls within the meaning of s 56 (where a copy of a work in electronic form has been purchased) because any retained copies are treated as infringing copies.<sup>133</sup>

## Decompilation of computer programs

The decompilation right<sup>134</sup> allows (subject to certain conditions) a lawful user of a copy of a computer program expressed in a low-level language:

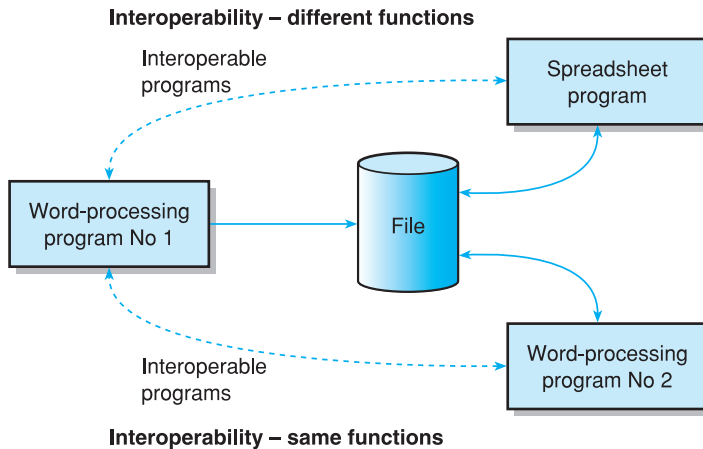

- (a) to convert it into a version expressed in a higher-level language, or
- (b) incidentally, in the course of so converting the program, to copy it.<sup>135</sup>

While it is up to the legislatures of individual Member States to choose their own form of wording to give effect to a Directive, the differences between the language of the modifications made by the Copyright (Computer Programs) Regulations 1992 and that of the Directive, which is expressed in terms of reproduction of the code and translation of its form, a much wider rubric, are unfortunate. The Directive does not use the terms ‘low-level language’ and ‘high-level language’, nor are they defined in the Act. Although someone wanting to gain access to information about the program’s algorithm or its detailed workings would almost certainly want to convert from a low-level language version to a higher-level language version, the Directive is more generous, allowing translation, adaptation, arrangement or alteration. The ‘decompilation right’ as enacted does not expressly cover the conversion of a binary object code program into hexadecimal code, something which is commonly known as performing a ‘hex dump’, as there is no higher-level language involved at that stage. This would be within the exception as expressed in the Directive.<sup>136</sup>

The conditions that must apply for decompilation to be permitted by s 50B of the 1988 Act are stated in s 50B(2) and are that:

- (a) it is necessary to decompile the program to obtain the information necessary to create an independent program which can be operated with the program decompiled or with another program (‘the permitted objective’), and
- (b) the information so obtained is not used for any purpose other than the permitted objective.

The purpose of decompilation is to obtain, typically, interface details. For example, Ace Software may wish to develop a new word-processing program. Ace will need to know details of various computer operating systems (these systems are a collection of computer programs) so that it can work in the computer’s operating environment. Ace must determine how the operating system uses the computer’s memory so that its new program can run properly. Also, to stand any chance of being successful, the new program must be compatible with existing programs. Ace’s new program must be able to accept (import) word-processed files produced using other word-processing programs (and export them in the appropriate format); it would be even better if Ace’s new program could accept files from other types of program such as a spreadsheet program or a graphics program. Hence the need for this interface information. Not only does the exception allow decompilation for the purpose of creating a new compatible program (for example, a new word-processing program that is compatible with an existing spreadsheet program), it also allows, in principle, the creation of new competing programs (for example, a new word-processing program that can import and export files

**Figure 8.3** Interoperability of computer programs

from and to an existing word-processing program). Figure 8.3 shows the concept of interoperability.

The decompilation permitted act, in essence, gives a ‘right’ to information concerning interfaces so that interoperability can be achieved. It does not give a right to take the interface itself. For example, if an interface is expressed in a number of lines of computer code, that code, provided that it meets the requirements for copyright protection (and that it represents a substantial part of the program or is itself deemed to be a computer program), may not be copied because of this permitted act. Thus, taking a copy of a compression table, used to compress data so as to occupy less storage space, for the purposes of file compatibility was deemed to infringe in *Powerflex v Data Access Corp.*<sup>137</sup> This is confirmed by s 50B(3)(d) which states that the permitted act does not apply, *inter alia*, where the information is used to do any act restricted by copyright. Once the information is acquired by the process of decompilation, any interface code written must be done so as not to infringe copyright. This may be difficult in the extreme when the interface detail is in the form of a protocol and no design freedom is permissible.<sup>138</sup> It may be that in such circumstances the courts may be prepared to excuse infringement on policy grounds, otherwise the decompilation permitted act would be defeated. However, it is far from certain that the courts would so decide, given their reluctance to override a statutory provision.

The conditions cannot be met if the lawful user has readily available to him the information necessary to achieve the permitted objective, or if he does not confine the act of decompiling to that objective, if he supplies the information to any person to whom it is not necessary to supply it in order to achieve that objective, or if he uses the information to create a program which is substantially similar in its expression to the decompiled program, or to do any act restricted by copyright.<sup>139</sup> Most of these conditions are reasonable, and indeed the last two are probably redundant in most cases. However, it is what constitutes having the information readily available that could be difficult. Of course, the first step that a person who requires interface details of another’s program should take is to ask for those details. Sometimes, the information may be freely given. In other cases, it may even be published in documentation accompanying a licensed copy of the program.

Importantly, the ‘decompilation right’ cannot be prohibited or restricted by any term or condition in an agreement.<sup>140</sup> Any term in a licence agreement purporting to do this is void, unless the agreement was entered into before 1 January 1993.<sup>141</sup> A considerable number of standard form software licences were amended as a result of this.

<sup>137</sup> [1997] FCA 490, Federal Court of Australia, discussed in FitzSimons, J. ‘*Powerflex v Data Access Corporation* (Reverse Engineers Beware!)’ [1998] 14 CLSR 45.

<sup>138</sup> Assuming the protocol is protected by copyright.

<sup>139</sup> Copyright, Designs and Patents Act 1988 s 50B(3).

<sup>140</sup> Copyright, Designs and Patents Act 1988 s 296A (1)(b).

<sup>141</sup> Copyright (Computer Programs) Regulations 1992 reg 12(2).

**142** Copyright, Designs and Patents Act 1988 s 29(1) and (4).

Apart from the decompilation exception, fair dealing for the purposes of research or private study still exists in relation to computer programs.<sup>142</sup> Therefore, it may be permissible for a person to print out and study a program in use for the purposes of understanding its operation and the techniques represented within it for non-commercial research and private study. However, the prospective author of an academic journal article cannot disassemble the computer program in order to include an extract of the program expressed in a higher-level language. That does not fall within the permitted objective of decompilation and is outside the residual fair dealing exception.

**143** This test comes from the Berne Convention for the Protection of Literary and Artistic Works 1886, Article 9(2).

One final point about the decompilation permitted act is that, under Article 6(3) of the Directive on the legal protection of computer programs, it must not be interpreted in a way as to allow its application to be used in a manner which unreasonably prejudices the legitimate interests of the owner of the copyright subsisting in the computer program or conflicts with a normal exploitation of the computer program.<sup>143</sup> Although not expressly implemented by the Copyright (Computer Programs) Regulation 1992, a judge would have to take this into account in determining whether an act fell within what was allowed by s 50B. It is difficult to predict practical examples where this constraint on s 50B would be applicable but it would be relevant where the exercise of the 'right' under s 50B seriously harmed the commercial viability of the target program.

### Back-up copies of computer programs

**144** Copyright, Designs and Patents Act 1988 s 296A(1)(a).

Section 50A of the 1988 Act permits the making of back-up copies if necessary for the purposes of the lawful use of a copy of a computer program by a lawful user. As with the decompilation right, this right cannot be taken away by any term or condition in an agreement and any such term, in so far as it purports to prohibit or restrict the exercise of this right, is void<sup>144</sup> provided the agreement was made on or after 1 January 1993. Prior to this amendment, there was no equivalent statutory provision, although the courts may have been prepared to imply an appropriate term into a software licence where the making of a back-up copy was necessary to the use of the program in question.<sup>145</sup> Of course, many software companies make express provision allowing the user to make one or more back-up copies. It is common for the installation instructions to ask the licensed user to make a copy of the program first and use this as the working copy, placing the original disks in a safe place in case the working disks become damaged or corrupted.<sup>146</sup>

**145** However, s 56 recognises the possibility that back-up copies may have been made. It makes copies of works purchased in electronic form that are not transferred along with the original, in the case of it being transferred to a third party, infringing copies. However, whether it is right to speak in terms of the purchase of a computer program is uncertain.

**146** It is common for the person acquiring the software to be instructed simply to copy from the supplied media to the computer's hard disk.

Is each lawful user within an organisation that has a site licence or a multiple-user licence entitled under s 50A to make a back-up copy? In such a situation, it is difficult to predict just how many back-up copies would be deemed to be 'necessary'. If the program is available on a network of computers, presumably the effect of s 50A is to allow the making of one back-up copy only, to be held by the network manager. Of course, the licence agreement may make specific provision for the making of a greater number of back-up copies.

### Observing, studying and testing

Computer programs are unlike other works of copyright. Ideas and principles underlying computer programs are, in most cases, not transparent. They are not readily available to a person using the program. In the case of a literary or dramatic work or an artistic work such as a painting, for example, the underlying ideas and principles are available to a person reading, watching or studying work. The plot, idea, concept or message that the author of the work intended to develop or convey is apparent, albeit in some circumstances with difficulty, for example, in the case of abstract art.

As copyright does not protect ideas (notwithstanding the difficulties associated with determining the scope of such a sweeping aphorism), it is important that they are also

made available to persons who have lawful access to computer programs. Otherwise, the monopoly granted by copyright could be perceived as being too strong. In the normal run of things, ideas and principles underlying computer programs can only be gleaned by performing an act restricted by the copyright, unlike the case with traditional works of copyright. The plot underlying a play or story can be determined simply by reading it. If the copyright owner were to be allowed to use his exclusive rights to prevent access to underlying ideas and principles, this would hinder fair competition and make it considerably more difficult for a competitor to create a new computer program to perform the same function, bearing in mind that the function itself, in most cases, will not have its own protection unless it is confidential.

Council Directive 91/250/EEC of 14 May 1992 on the legal protection of computer programs,<sup>147</sup> excluded from copyright protection ideas and principles which underlie any element of a computer program, including those underlying its interfaces.<sup>148</sup> This was first implemented in the UK by the Copyright (Computer Programs) Regulations 1992,<sup>149</sup> which inserted s 269A into the Copyright, Designs and Patents Act 1988. Subsection (1)(c) made void any term in an agreement under which a person has the use of a computer program which purported to prohibit or restrict the use of any device or means to observe, study or test the functioning of the program in order to understand the ideas and principles which underlie any element of the program. This did not follow the wording of the Directive sufficiently closely and changes were made to comply more accurately by the Copyright and Related Rights Regulations 2003 which inserted s 50BA into the Act. This provides that it is not an infringement of copyright for a lawful user of a copy of a computer program to observe, study or test the functioning of the program in order to determine the ideas and principles which underlie any element of the program if he does so while performing any of the acts of loading, displaying, running, transmitting or storing the program which he is entitled to do. Section 296A still makes void any term or condition in an agreement under which a person has the use of a computer program which purports to prevent or restrict the permitted act under s 50BA.

Some examples of acts that can be performed by a lawful user of a computer program under s 50BA are where:

- a licensee of a computer program attaches an oscilloscope or other signal detecting device to his computer to monitor the output of the computer when running to a peripheral device in order to determine the protocol used by the program to send data to the device;<sup>150</sup>
- a licensee of a computer program (the target program) uses another program to record the sequence of operations in the target program, for example, to determine the algorithm used in a sub-routine of the program used to sort data into alphabetic or numeric order;
- a licensee of a computer program submits a batch of carefully prepared test data to the program to determine the logic of a calculation routine.

Current examples of where the s 50BA might be particularly valuable is where a computer program is based on a new algorithm designed to evaluate bids on the futures market or to control an industrial process more efficiently than was previously possible or in relation to the first computer program to have an effective method of triangulation built into it to deal with currency conversions in respect of the euro. The permitted act could be used to try to determine the algorithms.

The denial of protection to ideas and principles is more important than the other permitted acts for computer programs in that its effect is to liberate those ideas and principles and make them, potentially, available to all. Certainly, the permitted act is

<sup>147</sup> OJ L 122, 17.05.1991, p 42.

<sup>148</sup> Article 1(2).

<sup>149</sup> SI 1992/3233.

<sup>150</sup> Although it is not clear whether a protocol is an idea or principle or form of expression.

very wide in scope and could be relied upon by persons writing new computer programs designed to emulate existing programs providing that such persons are lawful users. In jurisdictions outside the European Union, similar exceptions apply in respect of copyright protection of computer programs. In some cases the exceptions are wider: for example, in the US, section 102(b) of the US Copyright Act 1980 states that copyright protection does not extend to any idea, procedure, process, system, method of operation, concept, principle, or discovery, regardless of the form in which it is described, explained, illustrated, or embodied in such work. In Japan, Article 10(3) of the Japanese Copyright Act states that protection does not extend to any programming language, rule or algorithm.

## Copying and adapting

A licence in respect of a computer program will normally state the acts that may be done by the licensee in relation to the program. If it is silent about some particular act which is within the spirit of the agreement, then the courts will imply the appropriate terms permitting that act. Section 50C, in effect, puts this on a statutory footing by allowing a lawful user of a copy of a computer program to copy it or adapt it<sup>151</sup> if that is necessary for his lawful use.<sup>152</sup> Copying or adapting for the purpose of error correction may fall within this exception to infringement and is given as a particular example in s 50C(2).

It is common for agreements regulating the lawful use of computer programs to contain a term prohibiting modification by the client, and such terms are not controlled by the Act as amended unlike the case with the other two exceptions. However, terms seeking to prevent modification by or on behalf of the licensee might be controlled in other ways. The Court of Appeal, in *Saphena Computing v Allied Collection Agencies*,<sup>153</sup> had an opportunity to consider the position at common law with respect to modification and error correction of licensed computer programs. In that case, the licensee had been given a copy of the source code by the licensor and there was, consequentially, an implied undertaking that the licensee could use it for error correction. While the licensor was still testing and modifying the software, the agreement was determined, and it was held that the licensee could continue to use the source code for the purpose of error correction but could not use it for other modifications and improvements to the program. It was said, *obiter*, that there was not an implied duty on a licensor to supply the source code if the agreement provided only for the supply of the object code.

If the supplier is no longer able or willing to provide error correction, the principle of non-derogation from grant may be applicable, with the result that the client can maintain the program himself or approach third parties with a view to their maintaining it. Even if the supplier is prepared to maintain the program and correct errors (for example, by including an obligation to maintain the program in the licence agreement, or by offering a collateral maintenance contract), the licensee may be able to approach others for this service as the non-derogation principle could still apply. For example, in *British Leyland Motor Corp Ltd v Armstrong Patents Co Ltd*,<sup>154</sup> the House of Lords applied the principle to prevent restriction on a free market in spare parts, and extended their refusal to enforce copyright to the manufacturers of spare parts and not just to the purchaser. Their Lordships spoke in terms of articles which, by their nature, would require the fitting of replacement parts during their normal lifespan. This principle is most apposite in terms of computer programs. Virtually all computer programs contain errors, a number of which might not be discovered for some considerable time, and the lawful user of the program will require work to be done to it in order to correct those errors. The owner of the copyright subsisting in the program should not be able

<sup>151</sup> 'Adaptation' in relation to computer programs, by new s 21(3)(ab), means an arrangement or altered version or translation of it. 'Translation' is further defined by s 21(4) in terms of conversion into or out of a computer language or code.

<sup>152</sup> This can be seen as a non-derogation from grant provision.

<sup>153</sup> [1995] FSR 616.

<sup>154</sup> [1986] 2 WLR 400.

to use his right to prevent the lawful user asking other persons to repair the program otherwise the copyright owner could charge exorbitant prices for this work and the lawful user would have little option but to pay.<sup>155</sup> However, the Judicial Committee of the Privy Council has shown its reluctance to extend the *British Leyland* principle further in *Canon Kabushiki Kaisha v Green Cartridge Company Hong Kong Ltd.*<sup>156</sup>

## COMPUTER PROGRAMMING LANGUAGES

Considerable research effort, investment and skill goes into the development of computer languages and instruction sets. Yet, as it could be argued that these are ideas, there is some doubt about their protection by copyright. However, in the USA, an argument that a microcode embedded in a microprocessor representing the computer's instruction set was a defining element of the computer, and therefore an idea, failed to find sympathy (*NEC Corp v Intel Corp*).<sup>157</sup> In the UK, the question of copyright protection for an instruction set was considered in *Microsense Systems Ltd v Control Systems Technology Ltd*.<sup>158</sup> The claimant made traffic control systems and a controller for pelican crossings, these being programmed using a set of *mnemonics* (a set of three-letter symbols, for example SUN for Sunday, MON for Monday),<sup>159</sup> and these were also used to monitor the controllers. The defendant made similar controllers and used a total of 49 of the claimant's mnemonics, arguing that there was no copyright in them because, once the functions had been decided, there was no room for skill and labour in devising the mnemonics. Aldous J thought that there was an arguable case that the list of mnemonics was protected by copyright because of the work in devising the functions and operations of the controller in the first place. He refused an injunction but ordered the defendant to pay a 2 per cent royalty into a joint bank account, this being a case where damages would be an adequate remedy for the claimant should it be determined at full trial that copyright subsisted in the list of mnemonics and that the defendant had infringed that copyright. The defendant had argued that it was important, in terms of safety, that there was some degree of standardisation in instruction sets for traffic controllers. This is an attractive argument, but is the public interest best served by denying a modest royalty to the person who devises a new and original work?

The Directive on the legal protection of computer programs recognises that programming languages (and logic and algorithms), at least to the extent that they comprise ideas and principles, are not to be protected by copyright.<sup>160</sup> This seems to extend also to command sets<sup>161</sup> and it would appear that, following the Directive, *Microsense* no longer represents the true position if the set of instructions used there could be described as a programming language. Whether it could be argued that the instruction set was a user interface rather than a programming language is debatable. After all, the instruction set was the means by which the operator programmed the desired operation of the traffic controller.

Given that programming languages are not protected by copyright, one might wonder wherein lies the incentive to create a new language. The answer lies in the fact that, usually, the program, once written, can be run in a computer only if it is converted into object code, whether temporarily, using an interpreter, or permanently, using a compiler program. The licensing of these interpreter and compiler programs, together with appropriate documentation describing the syntax, semantics and use of the language, is the method by which financial reward is usually sought. These interpreter and compiler programs are, of course, protected by copyright in their own right. The fact that the denial of protection for programming languages applies only to the extent that they comprise ideas and principles does not prevent the protection of these other materials and programs.

<sup>155</sup> In *Digital Equipment Corp v LCE Computer Maintenance Ltd* (unreported) 22 May 1992, it was accepted that there was an arguable case that the non-derogation from grant principle applied to maintenance of computer programs. European Community and UK competition law may also be relevant to this question.

<sup>156</sup> [1997] FSR 817.

<sup>157</sup> 10 USPQ 2d (1989).

<sup>158</sup> (Unreported) 17 June 1991.

<sup>159</sup> Not all the mnemonics were obvious. For example, LIT was used to determine the aspect status of the controller. The instruction set was designed so that the engineer could communicate with, monitor or modify the controller or the way it operated.

<sup>160</sup> Recital 14 to the Directive.

<sup>161</sup> Following *Pumfrey J in Navitaire Inc v easyJet Airline Company* [2006] RPC 111.

## DATABASES<sup>162</sup>

A computer database is a collection of data stored in or on computer media usually in the form of a computer file or files. The variety and scope of databases is enormous. For example, a computer database can contain information which relates to and represents things such as:

- lists of clients and their addresses;
- schedules of parts or articles and their rates or prices;
- lists of bibliographical references;
- engineering or architectural drawings;
- works of art, photographs and other images;
- music and sounds;
- the texts of documents;
- mixed text and graphics;
- films and film extracts;
- computer programs or routines;
- a combination of two or more of the above.

Databases are accessed, manipulated, modified, displayed and printed using computer programs and usually have associated indexes, dictionaries, format and layout files. Anything can be stored on computer media as long as it can be reduced to a digital form, and almost anything can be. In the case of text, this is done by using codes to symbolise the letters of the alphabet, for example using ASCII codes.<sup>163</sup> Types of storage media include magnetic disks and tape, compact discs and silicon 'chips'. In earlier times, punched card and paper tape were commonly used. There is nothing particularly unusual about computer databases compared with collections of information that are written down, typed or printed on paper or index cards. The major difference is that, in the case of a computer database, the information is not stored in its original form, but is translated into a digital representation for the purposes of storage, whereas, in the case of traditional paper files, the information is stored in its original form.<sup>164</sup> A rapidly growing number of computer databases are available online, that is, they are stored on a central computer and are accessible remotely. Computer programs accessing a computer database convert the digital representation to a form from which it can be displayed or printed in readable form.

Whether a computer database generated by computer can be a copyright work is not beyond doubt. In principle, there should be no problem as the Copyright, Designs and Patents Act 1988 s 9(3) contains the rule for determining the identity of the author for copyright purposes of a computer-generated literary, dramatic, musical or artistic work. A database is a form of literary work and, to complete the syllogism, it should be possible to have a computer-generated database in which copyright subsists. Until 1 January 1998, this probably would not have been an issue. However, changes made to the copyright provisions in the Act by the Copyright and Rights in Databases Regulations 1997,<sup>165</sup> suggest that it may no longer be possible to have a copyright database which has been computer-generated.

The test for subsistence of copyright, we have seen, has in the past been quite generous, requiring that the work originated from the author and is the result of a minimum of skill, effort or judgment. This test continues to apply to the original works of copyright, but with the exception of databases which, under s 3A(2), are original for copyright purposes if, and only if, by reason of the selection or arrangement of the contents of the database, the database constitutes the *author's own intellectual creation*. This phrase, 'author's own intellectual creation', is new to copyright in the UK and derives

**163** ASCII stands for the American Standard Code for Information Interchange. In some cases, a form of encryption is used.

**164** As an example of a digital representation of a letter, the letter 'E' is ASCII code 69 which would be represented as '01000101' using binary notation.

**165** SI 1997/3032.

from the Directive on the legal protection of databases.<sup>166</sup> When one looks at the definition of computer-generated work in s 178, being a work generated in circumstances such that there is no human author, this strongly suggests that there can be no such thing as a computer-generated database which is, without more, protected by copyright as a database.<sup>167</sup> It could only be a copyright work if the skill and judgment of the computer programmer was taken into account, a form of indirect authorship. But if this is so, then the work cannot be computer-generated, adding fuel to the argument that there can be no such thing as a computer-generated work.<sup>168</sup> A further argument for computer-generated databases not being works of copyright is the introduction of the *sui generis* database right, discussed later.

Where a database is created by direct human skill or judgment, it may be a work of copyright even if the constituent parts are commonplace or in the public domain. Decisions as to what to include, what to exclude, what sort of information to collect and how that information will be structured and arranged may require an act of intellectual creation. In this respect, earlier judicial statements that compilations can be original even though their constituent parts are not original, such as in *Macmillan & Co Ltd v K & J Cooper*,<sup>169</sup> remain good law.

In general terms, it can be said that many databases are protected by copyright as literary works. A database containing, for example, selected substantial extracts from works of literature will have protection in a number of ways. Assuming it has not expired and all the other requirements are present, each extract will have its own copyright. The database as a whole will have its copyright provided it is the author's own intellectual creation. Furthermore, if the making of the database required a substantial investment, it will also be protected by the new database right, discussed later.

Before 1 January 1998, databases would fall to be protected as compilations but now, as a result of the changes made to the Act, databases are expressly excluded from compilations and are treated separately. Before looking at the changes made by the Copyright and Rights in Databases Regulations 1997, it will be helpful to look at developments in the USA in comparison to the position in the UK prior to 1 January 1998. It is highly likely that developments in the USA influenced the mechanism of protection for databases set out in the European Community Directive.

## Developments in the US and the UK approach before 1 January 1998

The subsistence of copyright in a database *qua* database could be questionable where its creation has not required the expenditure of skill or judgment. Some databases are the result of effort alone; once the nature of its contents have been determined, there is no room for skill or judgment in the selection of material to be entered into the database. Hence there can be no copyright in the compilation, and *GA Cramp & Sons Ltd v Frank Smythson Ltd*<sup>170</sup> is good authority for this proposition. An example is where a company decides to make a simple database of the names and addresses of all its clients. The 'sweat of the brow' doctrine, affording copyright protection to works which are the result of labour only, was rejected in the US Supreme Court in *Feist Publications Inc v Rural Telephone Service Co Inc*,<sup>171</sup> in which it was held that the 'white pages' section in a typical telephone directory was not protected by copyright because of a lack of creativity, not owing its origin to an act of authorship. The court did, however, recognise that a compilation of facts could be the subject of copyright because the author has to choose which facts to include and in what order to place them. Similarly, the 'yellow pages' section of a telephone directory could be protected because of the presence of original material.<sup>172</sup> In *CCC Information Services Inc v Maclean Hunter Market Reports Inc*<sup>173</sup> the court, in determining whether a compilation of second-hand car values was protected by copyright, considered that *Feist* did not raise a high barrier against

<sup>166</sup> Directive 96/9/EC of the European Parliament and of the Council of 11 March 1996 on the legal protection of databases, OJ L 77, 27.03.1996, p 20. This phrase was also used in relation to computer programs in the Directive on the legal protection of computer programs, OJ L 122, 17.05.1991, p 42, but was not included in the implementing regulations, the Copyright (Computer Programs) Regulations 1992, SI 1992/3233. See also the German Copyright Act s 2(2) which requires a work to be a personal intellectual creation.

<sup>167</sup> Of course, the contents of the database may be protected by copyright, independently.

<sup>168</sup> Computer-generated works are discussed in more detail later in this chapter.

<sup>169</sup> (1923) 93 LJPC 113.

<sup>170</sup> [1944] AC 329.

<sup>171</sup> (1991) 111 S Ct 1282.

<sup>172</sup> And the work involved in devising the classification system (a non-literal form of work?). However, in *Bell South Advertising & Publishing Corp v Donnelly Information Publishing Inc* 999 F 2d 1436 (11th Cir, 1993), the court held that taking a large amount of data from a yellow pages directory did not infringe copyright.

<sup>173</sup> (Unreported) 5 December 1994, 2nd Circuit Court of Appeals.

copyright subsistence but merely required that there was some originality, although only those ‘original’ elements would be protected.

There were two major differences between the US and prior UK copyright law in that the UK was probably more generous in terms of originality, and the courts here would be more reluctant to break down a work into its constituent parts and consider whether certain parts were original whilst others were not.<sup>174</sup> However, an opportunity to examine this question was missed in *Waterlow Directories Ltd v Reed Information Services Ltd*<sup>175</sup> which concerned an alleged infringement of copyright in a legal directory containing names and addresses of barristers and firms of solicitors by entering extracts into a word processor.

Bull argued that a single datum, for example, ‘Megatron Shares – 120p’, could have been protected by copyright in the UK if available as electronic text in which case it could have been considered to be a computer program.<sup>176</sup> Although ‘computer program’ is not defined in the Act, it is likely to be required to be some code that is executable by the computer’s processor in a way that controls or conditions the operation of a computer. This is not the case where the datum is stored simply in ASCII code, but could be the case where it is encrypted and includes instructions so that the computer can decrypt it. Of course, a relatively small collection of such data could have qualified as a compilation under the Act before 1 January 1998.

### Protection for databases from 1 January 1998<sup>177</sup>

The Copyright and Rights in Databases Regulations 1997<sup>178</sup> (‘the 1997 Regulations’) implemented Directive 96/9/EC of the European Parliament and of the Council of 11 March 1996 on the legal protection of databases,<sup>179</sup> making some changes to the copyright provisions of the Copyright, Designs and Patents Act 1988 and creating a new ‘database right’. Thus, a two-tier approach to the protection of databases is taken, so that those that are the author’s own intellectual creation will be protected by copyright, and databases which involve in their making a substantial investment in obtaining, verifying or presenting the contents of a database will be protected by a database right of lesser duration than copyright. The 1997 Regulations came into force on 1 January 1998, the date for compliance required in the Directive.

The desire to harmonise the protection of databases throughout the European Community was an important feature of the Directive. The rationale for strong and effective protection can be seen in some of the recitals to the Directive. It is recognised that databases are vital to the development of an information market and in other fields and the exponential growth in the amount of information generated and processed in all sectors of commerce and industry requires significant investment in information systems. Identifying a great imbalance in the investment in databases as between Member States and in comparison to third countries, the creation of a stable and uniform legal protection for databases is seen as essential to ensuring that substantial investment in modern information systems is encouraged.<sup>180</sup> The link between legal protection and investment is seen as important, and commercially valuable databases which would otherwise fail to be protected under copyright law are given their own distinct form of protection.

Before looking separately at the changes to the copyright provisions as they apply to databases and the database right, a number of points should be made.

- 1 The rights provided apply to both electronic and non-electronic databases, reflecting the desire of the European Commission not to distinguish between computer databases and paper databases, so that there can be no regulatory advantage for those who do not adopt and make use of information technology.

<sup>174</sup> An approach rejected by Jacob J in relation to computer programs in *IBCOS Computers Ltd v Barclays Mercantile Highland Finance Ltd* [1994] FSR 275.

<sup>175</sup> [1992] FSR 409. The issue was whether a substantial part had been taken.

<sup>176</sup> Bull, G. ‘Licensing and Distribution of Market Data’ [1994] 10 CLSR 50 at 51. However, in *Powerflex v Data Access Corp* [1997] FCA 490, the Federal Court of Australia rejected the notion that a word in a computer program could itself be a program. Even though a single word in a high-level language program may result in a series of instructions being processed, the word is merely the cipher or trigger for the series of instructions.

<sup>177</sup> For analysis and discussion of the new law on databases, see, for example, Angel, J. and Quinn, T. ‘Database law’ [1998] 14 CLSR 34; Lai, S. ‘Database protection in the UK: The new deal and its effects on software protection’ [1998] EIPR 32 and Chalton, S. ‘The effect of the database directive on UK copyright law in relation to databases: a comparison of features’ [1997] EIPR 278.

<sup>178</sup> SI 1997/3032.

<sup>179</sup> OJ L 77, 27.03.1996, p 20.

<sup>180</sup> Recitals 5–12.

- 2 The database right can be seen as a ‘quasi-copyright’, bearing a number of similarities with copyright. It has been referred to as a *sui generis* right.<sup>181</sup>
- 3 There is a substantial overlap between copyright and rights in databases. Thus, in most cases, a database subject to copyright may also have a database right. This has some implications: for example, the author of a database may be a different person to the maker of a database. Another factor is that the meaning of infringement and the permitted acts differ for the two rights. A given act may infringe one but not the other.
- 4 The structure of a copyright database may be protected as a form of expression but this does not apply in respect of the database right.
- 5 Copyright and the right in a database are both without prejudice to any copyright in the contents of a database. Where a database contains individual works of copyright, they will remain to be protected by copyright. Where a person without authorisation takes one of those works, he will infringe the copyright in the work. If he takes more than one work, he will infringe the copyright in the individual works, may infringe the copyright in the database as a whole and also may infringe the database right.
- 6 Authors of copyright databases have moral rights in the same way as applies to other literary works.<sup>182</sup> However, there are no moral rights in respect of the database right as such.
- 7 The new provisions as to copyright in databases and in relation to the database right do not apply to music compilations on CD-ROM.<sup>183</sup>
- 8 There are no statutory presumptions, where a database is subject to both rights, that an assignment of one right automatically carries an assignment of the other or, indeed, any rights in the works included in the database.

<sup>181</sup> So described in the Directive; see Chapter III of the Directive.

<sup>182</sup> Recital 28 states that the moral rights belong to the natural person who created the database though such moral rights are outside the scope of the Directive. No moral rights are granted to makers of databases in relation to the database right.

<sup>183</sup> Recital 19 of the Directive. Of course, protection will remain available as musical works, literary works (where there are lyrics), and sound recordings in addition to any rights in performances.

### Copyright provisions for databases

The Copyright, Designs and Patents Act 1988 s 3(1) is amended so as to add ‘database’ to the growing, but clearly non-exhaustive, list of things that are literary works and to exclude databases from compilations. Thus, databases are treated separately from other forms of compilation. Though many of the copyright provisions apply identically to each, there are differences, such as in relation to the permitted act of fair dealing.

Section 3A is added, defining a ‘database’ as a collection of independent works, data or other materials which (a) are arranged in a systematic or methodical way, and (b) are individually accessible by electronic or other means.<sup>184</sup> A database is original for copyright purposes if, and only if, by reason of the selection or arrangement of its contents, the database constitutes the author’s own intellectual creation. Recital 16 to the database Directive states that no other criterion should be applied, in particular, no aesthetic or qualitative criterion. This seems bound to narrow the scope of copyright protection for databases as databases in the UK with its traditional generous approach to copyright subsistence. However, pre-existing databases are not to be prejudiced. Thus, where a database was created on or before 27 March 1996 (the date the Directive was published) and was protected by copyright immediately before 1 January 1998, that copyright will continue for its full term, notwithstanding that the database would not qualify for copyright under the new test for originality.<sup>185</sup>

We have seen that copyright protection can extend beyond the literal expression of the literal work to non-literal elements such as, in the case of a computer program, the underlying structure of the work. The same ought to apply to a database and, indeed, recital 15 to the Directive states that copyright protection should cover the structure of a database. But what is the structure of a database? Conventionally, databases are structured into records and fields. A record is simply a set of data relating to one entry in the database. For example, in the case of a database of customers, a record is all the

<sup>184</sup> ‘Other means’ indicating that the provisions apply equally to non-computer databases, confirmed in recital 14 to the Directive.

<sup>185</sup> Recital 60. However, the effect of this derogation is confined to the territory of the Member State concerned.

**Figure 8.4** Structure of a database

information in the database relating to a particular customer. A record is broken down into fields. For example, in our customer database, there may be one field containing the last name of the customer, another for the first name, a field for the first line of his address, one for the second line, and so on. Figure 8.4 gives an example of a database so structured.

Fields in a database may be of different sizes and types. For example, some fields will contain alphabetic information, some may contain numeric information (integer, decimal or exponential), alphanumeric information, dates, etc. In some cases, the size of the field will be dictated by its type; in other cases, such as a field containing information relating to a person's first name, it is a matter of predetermining the longest likely name and sizing the field accordingly.<sup>186</sup> The work in designing the database in terms of the information it will contain and the structure of that information can be considerable. Where the design of computer software comprising computer programs and databases is concerned, the work involved in the design of the database structure can be the most difficult element in the overall design and require the greatest amount of research and development work. The fact that the Directive recognises this is to be welcomed and it is to be hoped that the courts appreciate the importance of protecting the structure of a database.<sup>187</sup>

With modern developments in computer software technology, the issue of database structure has become more complex. No longer is it appropriate to think of distinct and separate databases as in old COBOL systems. In many cases now, databases are relational, with a number of databases linked together by some common element. For example, one database may contain details of individual clients, including a reference number with another database containing transactions including customer reference numbers. By combining these databases, a list of transactions can be generated, grouped by individual customer, for example, for the purpose of sending out invoices. Further examples of database structure may be found in links in internet websites and hypertext links generally. Potentially, all such elements could be the subject of copyright protection.

The restricted act of making an adaptation has some definitions specific to particular forms of work, such as in the case of a musical work or computer program. As databases are treated individually, there is need for clarification of this restricted act for databases and, accordingly, a definition of making an adaptation of a database is inserted into the Copyright, Designs and Patents Act 1988 s 21, being an arrangement or altered version or a translation of it. Specific provision is required for making

<sup>186</sup> In some systems, the size of the field does not have to be specified as it is dynamic, that is, the field will grow or shrink to hold precisely the amount of information in the record in question.

<sup>187</sup> After a shaky start, the signs are now good. See Jacob J in *IBCOS Computers Ltd v Barclays Mercantile Highland Finance Ltd* [1994] FSR 275 and his criticism of Judge Paul Baker in this respect in *Total Information Processing Systems Ltd v Daman Ltd* [1992] FSR 171, discussed earlier in this chapter.

an adaptation but not for the other restricted acts in the Directive which are already covered by ss 17–20.

An arrangement of a database could be a new version in which the contents of the database have been sorted into a particular order. An altered version could be where a person has taken a partial copy of the database by omitting some of the fields. A translation of a database could occur where a person has taken a database used with a particular type of database software, such as Borland dBase, and imported it into a different type of database software, such as Microsoft Access.

The Directive leaves much to Member States as regards the permitted acts under copyright. The UK approach is to adopt the traditional permitted acts that apply to literary works, with the exception of fair dealing for research and private study for which specific provision is made for databases. For example, the fair dealing provisions apply to databases as they do to other literary works, apart from computer programs.<sup>188</sup>

Section 50D was inserted into the Copyright, Designs and Patents Act 1988, being essentially a non-derogation from grant provision for persons having a right to use a database or part of it (whether under a licence to do any of the acts restricted by the copyright in the database or otherwise). It is not an infringement of copyright in a database for such a person to do, in the exercise of that right, anything which is necessary for the purposes of access to and use of the contents of the database or of that part of the database. This provision acknowledges that a person may be restricted to using part only of a database. For example, his use may be restricted to certain records or certain fields. In the case of a database of potential customers in the UK, a person may be permitted to access and retrieve information about persons living in England, or may be permitted to access and retrieve information about all the persons in the database with the exception of credit information relating to them.

This right cannot be prohibited or restricted and s 296B makes void any term or condition in an agreement in so far as it purports to prohibit or restrict the acts permitted under s 50D or any act necessary for the exercise of the rights granted by the agreement.

## The database right

The database right is intended to provide protection to databases which, although they may fail to meet the requirements for copyright protection as a database, are commercially valuable, being the result of a substantial investment. However, the right is not restricted to databases in which copyright does not subsist and many databases subject to copyright should also be subject to the database right. The overlap could be important for the owner of the database because infringement and exceptions to infringement are not identical for both rights. In particular, the repeated and systematic extraction of *insubstantial* parts may infringe the database right in circumstances where the copyright is not infringed. The first major case on the database right, *British Horseracing Board Ltd v William Hill Organisation Ltd*,<sup>189</sup> is discussed in the next section and other cases also referred to the Court of Justice for a preliminary ruling under Article 234 of the EC Treaty involving football fixture lists are mentioned later.

By an Agreement with the European Community signed in Brussels on 26 March 2003, the legal protection of databases by the database right was extended to the Isle of Man with effect from 1 November 2003.<sup>190</sup> Consequently, references to the European Economic Area ('EEA') should be taken to include, *mutatis mutandis*, the Isle of Man.

Subsistence of the database right is unaffected if the database is also a work of copyright or if the works contained in the database are themselves copyright works. Thus, a database of photographs which involved in its making the exercise of skill and judgment (or, more properly now, the author's intellectual creativity) and involved a substantial investment in its making, for example, in presenting its contents will be subject

<sup>188</sup> Initially, databases were treated differently as commercial research was not permitted and an acknowledgement of the source was required. However, these requirements now apply more generally to the original works as a result of the changes made by the Copyright and Related Rights Regulations 2003, SI 2003/2498.

<sup>189</sup> [2001] RPC 612 at first instance. This case went to the Court of Appeal which referred a number of questions on the interpretation of the Directive to the European Court of Justice and then, following the ruling of the Court of Justice, the Court of Appeal applied that ruling: *see infra*.

<sup>190</sup> The Copyright and Rights in Databases (Amendment) Regulations 2003, SI 2003/2501.

to copyright at two levels (the individual photographs and the database as a whole) and also will be subject to the database right.

The database right is set out in Part III of the Copyright and Rights in Databases Regulations 1997<sup>191</sup> and reg 12 contains some of the main definitions, although it should be noted that ‘database’ has the same meaning as for copyright.<sup>192</sup> The other definitions are:

- ‘extraction’, in relation to any contents of a database, means the permanent or temporary transfer of those contents to another medium by any means or in any form;<sup>193</sup>
- ‘investment’ includes any investment, whether of financial, human or technical resources;
- ‘lawful user’, in relation to a database, means any person who (whether under a licence to do any of the acts restricted by any database right in the database or otherwise) has a right to use the database;
- ‘re-utilisation’, in relation to any contents of a database, means making those contents available to the public by any means;<sup>194</sup>
- ‘substantial’, in relation to any investment, extraction or re-utilisation, means substantial in terms of quantity or quality or a combination of both.

Furthermore, under reg 26, expressions used in respect of the database right under Part III of the Regulations which are defined for the purposes of Part I of the Copyright, Designs and Patents Act 1988 (the copyright provisions) have the same meaning as in that Part of the 1988 Act.

Lending a copy of a database (not for direct or indirect commercial advantage) by an establishment accessible to the public does not constitute extraction or re-utilisation of the contents of a database, but this exception does not apply to making available for on-the-spot reference use which could, therefore, fall within extraction or re-utilisation.<sup>195</sup> Exhaustion of rights within the EEA and the Isle of Man applies to copies sold within the EEA and the Isle of Man by or with the consent of the owner of the database right to the extent that further sale of such copies does not constitute extraction or re-utilisation of the contents of the database.<sup>196</sup> For example, where a copy of a database is sold on a CD-ROM, by or with the consent of the owner of the database right, a person buying that copy may resell it or import it into another Member State for resale providing that by doing so he does not make a further copy (permanent or temporary) or does not make the contents available to the public, for example, by making the CD-ROM available on a network to which the public have access. This is, of course, without prejudice to rights, if any, in the contents of the database.

The database right is a property right which subsists in a database if there has been a substantial investment in obtaining, verifying or presenting the contents of the database.<sup>197</sup> Note that investment may be in respect of financial, human or technical resources. The Directive uses the test of an investment consisting of the deployment of financial resources and/or the expending of time, effort or energy.<sup>198</sup> There are also qualification requirements to be satisfied. Under reg 18, the latter are satisfied if, at the material time, the maker (or at least one of them where there are joint makers) is:

- a national of an EEA state (or habitually resident in the state);
- a body incorporated in an EEA state, having its central administration or principal place of business in an EEA state or a registered office in the EEA and the body’s operations linked on an ongoing basis with the economy of an EEA state; or
- a partnership or other unincorporated body formed under the law of an EEA state, having at that time its central administration or principal place of business within the EEA.<sup>199</sup>

<sup>191</sup> SI 1997/3032.

<sup>192</sup> As given by s 3A(1).

<sup>193</sup> This includes copying to another medium and is not confined to removal from the database to another medium: *British Horseracing Board Ltd v William Hill Organisation Ltd* [2001] RPC 612.

<sup>194</sup> This is not limited to the first time the contents are made available to the public: *British Horseracing Board Ltd v William Hill Organisation Ltd* [2001] RPC 612.

<sup>195</sup> Copyright and Rights in Databases Regulations 1997 reg 12(2) and (3). Regulation 12(3) allows the charging of a payment, provided that it does not exceed that necessary to cover the costs of the establishment.

<sup>196</sup> Copyright and Rights in Databases Regulations 1997 reg 12(5).

<sup>197</sup> Copyright and Rights in Databases Regulations 1997 reg 13(1).

<sup>198</sup> Recital 40. For the database right, therefore, the ‘sweat of the brow’ doctrine still applies.

<sup>199</sup> Equivalent rules apply in respect of the Isle of Man.

The ‘material time’ is the time when a database was made or, if its making extended over a period, a substantial part of that period. To give an example, say a database was partially made in Mexico by a Mexican company. The partially completed database and the rights in it were then assigned to a French company which completed the making of the database. Say that the Mexican company completed 40 per cent of the database, which took four months, and the French company completed the remaining 60 per cent, taking six months to do so. It is clear that the database was made by a company established in the EEA over a substantial part of the total period of its making.<sup>200</sup> If, instead of a Mexican company, the first part of the making of the database was by an English company, the whole of the making qualifies. The provisions on qualification mean that, if a database does qualify, it is protected throughout the EEA and the Isle of Man. This approach to qualification for protection is needed because, being a *sui generis* right, reciprocal protection under the Berne Convention for the Protection of Literary and Artistic Works 1886 does not apply.

The qualification requirements do not apply in the case of parliamentary database right: reg 18(3). There is no equivalent exception from the qualification requirements which has not been extended to Crown database right.<sup>201</sup>

The ‘maker’ of a database subject to the database right is defined in reg 14(1) as the person who takes the initiative in obtaining, verifying or presenting the contents of a database and assumes the risk of investing in that obtaining, verification or presentation, such acts constituting the act of making a database. Under reg 15, the maker is the first owner of the database right. There are provisions equivalent to those under copyright law for employees. Thus, where an employee makes a database in the course of his employment, it will be the employer who is the maker of the database, subject to agreement to the contrary. It is arguable whether special provision is required for this, where a database is made by an employee, it will be the employer who normally takes the initiative in the obtaining, verification or presentation of the contents and assumes the risk of that investment. Crown and parliamentary database right are also provided for.<sup>202</sup> Where two or more persons act in collaboration in taking the initiative and assuming the risk of investing, they will be joint makers of the database. Unlike copyright law, there is no requirement that the contribution of each is not distinct.

The term of protection afforded by the database right is set out in reg 17 as 15 years from the end of the calendar year during which the making of the database is completed, although, if it is made available to the public before the end of that period, the right will continue to endure for 15 years from the end of the calendar year during which it was first made available.

A great many commercially exploited databases are subject to modification, either as a continual process or by subsequent releases or updates. The Directive attempted to deal with this by providing for a fresh 15-year term when the changes become substantial, including any substantial change resulting from an accumulation of successive additions, deletions or alterations, provided the database would be considered to be a substantial new investment.<sup>203</sup> The 1997 Regulations follow the same formula. Nevertheless, in practice, it will be extremely difficult to determine when a new database right comes into existence, especially where the database in question is subject to continual modification. Such databases are sometimes referred to as dynamic databases and may be subject to a term of protection that is continually being renewed. Databases made on or after 1 January 1983 in which database right subsists on 1 January 1998 (1 November 2003 for the Isle of Man) shall, under reg 29, qualify for 15 years beginning with 1 January 1998.<sup>204</sup>

Infringing acts are defined in reg 16 as the extraction or re-utilisation of all or a substantial part of the contents of the database without the consent of the owner. Bear in mind that substantiality is a question of quantity or quality or a combination of both.<sup>205</sup>

<sup>200</sup> If the proportions were reversed, that is 60 per cent was made by the Mexican company, it is questionable whether 40 per cent in terms of time and quantity would be deemed to be substantial, though it would appear that it is the proportion of time that is important rather than the proportion of quantity of the database’s contents.

<sup>201</sup> Both Crown copyright and parliamentary copyright are excluded from the normal qualification requirements: s 153(2).

<sup>202</sup> Where a database is made by or under the direction or control of the Scottish Parliament, the Scottish Parliamentary Corporate Body shall be regarded as the maker of the database: reg 14A, inserted by the Scotland Act 1998 (Consequential Modifications) (No 1) Order 1999, SI 1999/1042.

<sup>203</sup> Evaluated qualitatively or quantitatively: Article 10(3).

<sup>204</sup> Copyright and Rights in Databases Regulations 1997 reg 30.

<sup>205</sup> However, in *British Horseracing Board Ltd v William Hill Organisation Ltd* [2001] RPC 612, Laddie J suggested that both quantity and quality should be considered together. It is submitted that the correct approach is to consider each separately and then, if the part taken is not deemed to be substantial under either head, the two factors should then be considered in combination.

Accepting that repeatedly taking insubstantial parts can compromise the owner's economic rights in a database, reg 16(2) provides that the repeated and systematic extraction or re-utilisation of insubstantial parts of the contents of a database *may* amount to the extraction or re-utilisation of a substantial part of those contents (emphasis added). A person could periodically and at frequent intervals extract valuable information from a very large database by searching for particular entries using keywords. It could be difficult to show that a substantial part of the database has been used. This could be particularly important as more databases will be made available online or via the internet.

In terms of 'insubstantial infringement', the Directive further requires that the repeated and systematic extraction or re-utilisation must imply acts conflicting with a normal exploitation of the database or be unreasonably prejudicial to the legitimate interests of the maker of the database. The 1997 Regulations simply state that such taking *may* amount to the extraction or re-utilisation of a substantial part of the contents of the database. Certainly, prejudice to the owner's commercial exploitation should infringe, but it should be much wider than that. The owner of the database may make it available on a non-profit basis to the members of the public who satisfy certain criteria, such as being members of a club or having certain attributes.

In the event of litigation, presumably it will be for makers subject to this right to show that the accumulation of insubstantial extractions or re-utilisations has conflicted with their normal exploitation of the database or prejudiced their legitimate interests within the spirit of the Directive.

There are 'non-derogation' provisions in that a lawful user of a database which has been made available to the public has a right to extract or re-utilise insubstantial parts of the database for any purpose, and any term in an agreement, under which the right to use a database or part of a database has been granted, which purports to prevent the person having the right from extracting or re-utilising insubstantial parts of the contents of the database (or part of that database), shall be void.<sup>206</sup> It does not seem, however, that a wider non-derogation from grant principle, as in *British Leyland*,<sup>207</sup> applies. In *Mars UK Ltd v Teknowledge Ltd*,<sup>208</sup> the claimant designed and made coin-operated machines. These machines contained discriminators designed to detect whether or not a coin was genuine. A new discriminator ('Cashflow'), programmed for new coin data and which could be reprogrammed in the future was introduced by the claimant. The information contained within it had been encrypted to make it difficult for third parties to reverse engineer but the defendant managed to reverse engineer it and was then able to recalibrate other Cashflow machines.

The claimant alleged infringement of the copyright and database right in the computer programs and data, respectively, contained on the computer chips in the discriminators. There was a further claim of breach of confidence.<sup>209</sup> As regards copyright and the database right, the defendant accepted that it had, subject to a defence based on *British Leyland*, infringed those rights. This defence failed. Jacob J noted that there was no specific provision for such a defence in the domestic legislation and the European Community Directives relating to copyright in computer programs and the database right. Where the defence applied was in respect of the public policy in maintaining a free market in spare parts. However, in the present case, persons who bought the discriminators expected that they would be repaired and maintained by the original manufacturer. Furthermore, recalibration of the discriminators so that they could test the authenticity of new coins was far removed from the concept of repair in *British Leyland*.<sup>210</sup>

There is a fair dealing exception to infringement. Where the database has been made available to the public, fair dealing with a substantial part of the contents is allowed if:

<sup>206</sup> Copyright and Rights in Databases Regulations 1997 reg 19.

<sup>207</sup> *British Leyland Motor Corp Ltd v Armstrong Patents Co Ltd* [1986] 2 WLR 400.

<sup>208</sup> [2000] FSR 138.

<sup>209</sup> For which see Chapter 11.

<sup>210</sup> The courts seem increasingly reluctant to extend the principle in *British Leyland*. It is not inconceivable that, taking into account changes to copyright and design law, the defence will wither away.

- the part is extracted by a person who is otherwise a lawful user;
- it is extracted for the purposes of illustration for teaching or research (but not for a commercial purpose); and
- the source is indicated.<sup>211</sup>

<sup>211</sup> Copyright and Rights in Databases Regulations 1997 reg 20.

Further exceptions are set out in Sch 1 to the 1997 Regulations and cover parliamentary and judicial proceedings, Royal Commissions and statutory inquiries, material open to public inspection or on official register, material communicated to the Crown in the course of public business, public records and acts done under statutory authority. These mirror the equivalent permitted acts for copyright in ss 45–50 of the Copyright, Designs and Patents Act 1988. There is also an exception under reg 20A for the benefit of Legal Deposit Libraries which allows copying of works from the internet in accordance with Regulations made for that purpose and certain conditions without infringing the database right.<sup>212</sup> The purpose is to allow copies to be made by Legal Deposit Libraries of works published on the internet to be added to the collections of these libraries which have, since the Copyright Act 1911, a duty to keep copies of all published works.<sup>213</sup>

<sup>212</sup> This was inserted by the Legal Deposit Libraries Act 2003 and came into force on 1 February 2004.

<sup>213</sup> There is also a permitted act in relation to copyright works for Legal Deposit Libraries; see Chapter 7.

Apart from these exceptions and others mentioned above, none of the other permitted acts that apply to literary works apply to the database right. In particular, it should be noted that fair dealing for criticism or review or for reporting current events does not apply in relation to the database right. It is questionable whether fair dealing for private study is available. It depends on whether this would fall within the meaning of research.

There is an exception to infringement of the database right which resembles one of the permitted acts for copyright works. The database right is not infringed where it is not possible by reasonable enquiry to ascertain the identity of the maker of the database and it is reasonable to assume that the database right has expired: reg 21.

There are some useful presumptions that apply to the database right, not dissimilar to some of those for copyright works. Under reg 22, where a name purporting to be that of the maker of the database appears on copies of the database as published, it is presumed that that person is the maker and the database was not made in circumstances where the employer would be the first owner or in the case of Crown or parliamentary database right. Where copies of a database as published bear a label or mark stating that a named person was the maker and that it was first published in a specified year, the label or mark shall be admissible as evidence of those facts and presumed correct until the contrary be proved.

The 1997 Regulations are silent on the burden of proof as to whether there has been a substantial change resulting in a further 15 years' protection. The recitals to the Directive state that it is the maker of the database who has the burden of proof in this respect and in terms of the date of completion of the making of the database. Nevertheless, the effect under English law is probably the same, where a defendant challenges either aspect. Perhaps it is a pity that there is not an equivalent to the presumption that applies in respect of the design right (and infringing copies of copyright works) to the effect that, if it can be shown that the right subsists or subsisted in the design, then it also subsisted at the time of the infringement unless the contrary be proved. However, this would conflict with the Directive.

The provisions for dealing, rights and remedies (including those of exclusive licensees) that apply to copyright works are declared under reg 23 to apply also in respect of the database right. Reg 23 was substituted by the Intellectual Property (Enforcement, etc.) Regulations 2006 to include delivery up, actions by non-exclusive licensees and jurisdictional issues.

Schedule 2 to the 1997 Regulations contains provisions for licensing the database right and deals with licensing schemes and licensing bodies and referral of licensing schemes to the Copyright Tribunal. These are equivalent to the provisions in ss 116–129

and 144 of the Copyright, Designs and Patents Act 1988 that apply to copyright works with necessary changes to take account of legislation such as the Enterprise Act 2002. The jurisdiction of the Copyright Tribunal has been enlarged accordingly.

The 1997 Regulations apply to databases made before or after 1 January 1998.<sup>214</sup> Regulation 28 states that agreements made before 1 January 1998 are unaffected and no act done after 31 December 1997 in pursuance of an agreement made before 1 January 1998 infringes the database right. Regulation 29 provides that if a database was made on or before 27 March 1996 (the date the Directive was published in the *Official Journal*) and was a copyright database immediately before commencement, that copyright continues for the remainder of its term in accordance with s 12 of the Copyright, Designs and Patents Act 1988, that is, in most cases, life of the author plus 70 years.<sup>215</sup>

### The database right and the *BHB v William Hill* case

The first significant case on the database right triggered a reference to the European Court of Justice ('Court of Justice') for a preliminary ruling as to the interpretation of a number of provisions of the Directive. In *British Horseracing Board Ltd v William Hill Organisation Ltd*,<sup>216</sup> the British Horseracing Board ('BHB') maintained a database containing details of racehorse owners, racing colours, trainers and jockeys and pre-race information, such as the runners and riders for a given race. Nearer the date of the race, this pre-race information was updated and expanded to include, *inter alia*, the time of the race, sponsor, weights and stalls the horses start the race from.

The cost of obtaining the data, verification and presentation of the data was around £4 million per annum and fees charged by BHB came to around £1 million per annum. Third parties were allowed to use information contained in the database in return for payment of a licence fee. A declarations feed (up-to-the-minute details of races, times, declared runners and jockeys, distance of race and other details) was made available to subscribers in electronic form and to a company called Satellite Information Services Ltd ('SIS') which transmitted data from the database to its own subscribers in a form known as a raw data feed ('RDF').

The defendant, a bookmaker, established an internet site and an enhanced version went live in 1999 which allowed betting via the internet site with real time changes in odds being offered. This internet site contained information identical to that in the BHB database. BHB claimed that much of the information on the defendant's internet site came indirectly, via the SIS RDF, from the BHB database and that this was an unlicensed use. It also appeared that William Hill took some of the information from newspapers published the day before the race. This information also came, indirectly, from the BHB database. It was alleged that the database right subsisting in the database was infringed in two ways: first, by the extraction or re-utilisation of a substantial part of the database under Article 7(1) of the Directive and, second, by the repeated and systematic extraction of insubstantial parts of the contents of the database under Article 7(5).<sup>217</sup>

Laddie J accepted both allegations and found that the defendant had infringed the database right in both ways. The defendant appealed to the Court of Appeal which decided to refer some questions on the interpretation of the Directive to the Court of Justice.<sup>218</sup> It had been pointed out that a somewhat narrower interpretation of the database right had been taken in Sweden and the Netherlands.<sup>219</sup> In the meantime, the injunction imposed by Laddie J was discharged.

The ruling by the Court of Justice in Case C-203/02 *British Horseracing Board Ltd v William Hill Organisation Ltd*<sup>220</sup> imposed a substantial restriction on the potential for subsistence of the database right, which seems to contradict the reason for its introduction (being to protect the investment in making databases).<sup>221</sup> The Court of Justice

<sup>214</sup> Copyright and Rights in Databases Regulations 1997 reg 27.

<sup>215</sup> There are special provisions for the Isle of Man where the cut-off date in respect of savings is 1 November 2003.

<sup>216</sup> [2001] RPC 612.

<sup>217</sup> It is interesting to note that counsels' arguments and the judgment all refer to the Directive rather than to the Copyright and Rights in Databases Regulations 1997.

<sup>218</sup> [2002] ECDR 41.

<sup>219</sup> *Fixtures Marketing Ltd v Svenska Sp AB* (unreported) 3 May 2001, Swedish Court of Appeal, and *NV Holdingmaatschappij de Telegraaf v Nederlandse Omroep Stichting* (unreported) 30 January 2001, Court of Appeal of The Hague.

<sup>220</sup> [2004] ECR I-10415.

<sup>221</sup> See, in particular, recitals 7 to 12 of the Directive.

grouped together some of the questions referred by the Court of Appeal and looked at the meaning and scope of four aspects of the Directive, being ‘investment’, ‘extraction and re-utilisation’, ‘substantial and insubstantial’ and ‘repeated and systematic extraction and re-utilisation’.

### **Investment**

Investment relates to the creation of the database itself and not to the investment in *creating* the works or materials to be included in the database. The Court of Justice stressed that the recitals to the Directive emphasise the purpose of the *sui generis* database right is to protect the investment in seeking out existing independent materials and collecting them together in a database. However, this is a moot point. It is clear that the Directive uses the word ‘obtaining’ throughout but does not one obtain that which he creates? On the other hand, it may seem reasonable to assume that the Directive would have been much more explicit if it was the intention to include an investment in the creation of the contents of a database.

The Court of Justice went on to say that the investment in question involved in drawing up a list of runners for a race and associated prior checks, for example, as to the identity of the person making up the entry, is not an investment in the obtaining or verification of the contents of the database. The checking was carried out in the process of creating a list of runners for a race and, thus, was in relation to the creation of data (that is, the list of runners) and not in relation to the verification of the contents of the BHB database.

The limitation on the meaning of obtaining significantly reduces the scope of what investment covers. It does seem inconsistent that a person who makes a database but creates the data therein will not get a database right whereas a person who collects together pre-existing materials can, if the other requirements are satisfied.

### **Extraction and re-utilisation**

Referring once more to the recitals in the Directive, the Court of Justice considered that the purpose of the right was to protect the investment of the maker of the database by giving him the right to control access to, and re-utilisation of, the contents of the database in order to guarantee the maker a return on his investment.<sup>222</sup> The scope of protection was, therefore, not limited to parasitic acts of making competing products but covered anything which could cause, quantitatively or qualitatively, detriment to the maker’s investment. Even where the maker of a database has made access to that database available to the public, whether directly or otherwise, he still has the right to prevent access to, and further publication of, substantial parts of the contents of the database as this still requires the authorisation of the maker. This is supported by Article 8(1), setting out the rights of lawful users which allows a lawful user of a database made available to the public to extract and re-utilise insubstantial parts, not substantial parts. Of course, the particular agreement covering access may go further than this but it would have to do so expressly.

Indirect extraction or re-utilisation is also within the maker’s rights as the acid test is whether his investment is prejudiced and, as such, acts of extraction and re-utilisation are not limited to acts involving direct access to the database. This could cover the situation where, for example, the maker of the database licences its use to a third party for publication by a printed newspaper and another person takes extracts from the newspaper to include in his database which is then made available to the public.

### **Substantial and insubstantial**

Copyright law in the UK has tended to emphasise quality rather than quantity in determining whether a part of a work taken is or is not a substantial part. The Directive,

<sup>222</sup> See recitals 41 and 42 to the Directive.

however, expresses substantiality in terms of quantity or quality or both. Apart from infringement based on extracting and/or re-utilising a substantial part, there is another form of infringement based on the repeated and systematic extraction and/or re-utilisation of insubstantial parts. Consequently, the dividing line between what is substantial and what is insubstantial is very important. Extracting or re-utilising a substantial part infringes *per se*. Where there is a repeated and systematic extraction or re-utilisation of insubstantial parts, for infringement, this must conflict with the normal exploitation of the database or unreasonably prejudice the legitimate interests of the maker of the database.

A simplistic view is that what is not substantial must, by definition, be insubstantial. The Directive does not appear to admit any notion of an accumulation of insubstantial takings being viewed as a substantial part of the database. Article 7(5) is not to that effect and a literal interpretation of it suggests that an accumulation of insubstantial takings may infringe even if, collectively, they do not add up to a substantial part. The question is whether this conflicts with the normal exploitation of that database or unreasonably prejudices the legitimate interests of its maker. However, the ruling of the Court of Justice on the scope of Article 7(5) (*see below*) stresses that what is intended is to prevent anyone overcoming the prohibition in Article 7(1) by an accumulation of insubstantial extractions or re-utilisations such that at least a substantial part of the database ends up being extracted or re-utilised.

The UK's Copyright and Rights in Databases Regulations 1997 fail to express Article 7(5) accurately. Regulation 16(2) states that '... the repeated and systematic extraction or re-utilisation of insubstantial parts of the contents of a database may amount to the extraction or re-utilisation of a substantial part of those contents'. No mention is made of acts '... which conflict with a normal exploitation of that database or which unreasonably prejudice the legitimate interests of the maker of the database'. Nevertheless, the wording of the Directive must prevail.

The Court of Justice held that the answer is to the effect that an insubstantial part is a part that is not substantial in terms of quality and is not substantial in terms of quantity. Substantiality in terms of quality is measured by consideration of the scale of investment in relation to the contents extracted and/or re-utilised. A part of the contents of a database, even if negligible, evaluated quantitatively may still be the result of a significant investment in human, technical or financial resources in obtaining, verification or presentation.

A substantial part, evaluated quantitatively, refers to the volume of the data extracted and/or re-utilised compared with the volume of the contents of the whole database. As the Directive does not give rise to any new right in the works, data or other materials in the database, the intrinsic value of the part of the contents taken is not relevant to determining whether the part taken is substantial.

Thus, a possible approach to the question of substantiality in relation to part of the contents of a database is as follows, assuming the database as a whole is the result of a substantial investment.

- 1 Is the part quantitatively significant such that it can be considered to be, in proportion to the entire database, a substantial part of it? If the answer is yes, then it is substantial.
- 2 Is the part the result of a significant investment? If yes, it is substantial even if it is not substantial in a quantitative sense. It may be a relatively small proportion providing it is the result of a significant investment.
- 3 Considering the part in terms of its proportion to the whole database AND in terms of whether it is the result of a substantial investment, is it nevertheless still substantial viewed from a combination of quantitative and qualitative factors? This

possibility was not mentioned by the Court of Justice but Article 7(1) of the Directive states the right is to ‘. . . prevent extraction and/or re-utilisation of the whole or of a substantial part, evaluated *qualitatively and/or quantitatively*, of the contents of that database’ (emphasis added).

4 If none of the above applies, the part is an insubstantial part.

Taking an insubstantial part and rearranging it or modifying its accessibility does not change it into a substantial part.

### **Repeated and systematic extraction and re-utilisation**

The scheme in the Directive is to allow lawful users to extract and/or re-utilise insubstantial parts of a database. Where a database has been made available to the public, any person, whether a lawful user or otherwise, may extract and/or re-utilise insubstantial parts except as provided for by Article 7(5).

The Court of Justice said that the provision was intended to prevent persons circumventing the prohibition on extraction and/or re-utilisation under Article 7(1) by carrying out repeated and systematic acts that would lead to the reconstitution of the database as a whole or, at the very least, a substantial part of it or by making insubstantial parts available to the public in a repeated and systematic manner.

The phrase ‘acts which conflict with the normal exploitation of [a] database or which unreasonably prejudice the legitimate interests of the maker of the database’ refer to unauthorised acts the purpose of which are to:

- (a) reconstitute the whole or a substantial part of the database through the cumulative acts of extraction, or
- (b) make the whole or a substantial part of the database available to the public through the cumulative effect of acts of re-utilisation,

which thus seriously prejudices the investment made by the maker of the database.

Thus, the possibility of the accumulation of extractions or re-utilisations infringing it, collectively, they do not amount to a substantial part of the database has been rejected by the Court of Justice. The actions of William Hill, although repeated and systematic, could not result in the reconstitution of, or the making available to the public of, the whole or a substantial part of the BHB database so as unreasonably to prejudice the legitimate interests of BHB.

### **Application of the Court of Justice ruling by the Court of Appeal**

The Court of Appeal, which referred the questions in the BHB case had the task of applying that ruling to the facts of the case. This it did in *British Horseracing Board Ltd v William Hill Organisation Ltd*,<sup>223</sup> where it was held that, to the extent that the BHB database consisted of officially identified names of runners and riders, it was not subject to the database right.

223 [2005] RPC 883.

BHB submitted that the Court of Justice misunderstood the facts and, applying that part of the ruling relating to investment, its database was not one made by creation but by gathering and checking independent materials as required by Article 7(1). Jacob LJ did not accept this and he said that the Court of Justice did not misunderstand the primary facts put to it in the reference from the Court of Appeal, nor had it indulged in an illegitimate fact-finding exercise. Counsel for BHB quoted a passage from the ruling where the Court said (at para 80):

The resources deployed by BHB to establish, for the purposes of organising horse races, the date, the time, the place and/or name of the race, and the horses running in it, represent an investment in the creation of materials contained in the BHB database. Consequently, *and if, as the order for reference appears to indicate, the materials extracted and re-utilised by William*

*Hill did not require BHB and Others to put in investment independent of the resources required for their creation, it must be held that those materials do not represent a substantial part, in qualitative terms, of the BHB database.*

It was argued that the emphasised words indicated that the Court of Justice was unsure of its understanding of the facts. But Jacob LJ said that the passage did not set out primary facts at all and was based on the material in the order for reference. Furthermore, there was nothing relevantly wrong in the facts set out in the ruling. He went on to say that much more would be needed to show that the Court of Justice had made what could only be seen as an enormous blunder.

According to Jacob LJ, counsel for BHB had come to a conclusion that the database was protected by the database right by a process of deconstruction. But what mattered was the database in its final form as published. It was the official BHB list which could only be provided by BHB. No one else could generate the database by going through a similar process. BHB was the governing body of the British horseracing industry and, therefore, the only organisation able to produce the official list. The only answer to the question whether the published database was a collection of existing independent materials was an emphatic 'NO'. The database contained unique information, the 'official list of riders and runners'. The stamp of official approval meant that the database was different to a mere database of existing material.

This approach made the ruling of the Court of Justice easier to understand. It said that the investment in selecting, for the purposes of organising horse racing, the horses admitted to run in the race concerned related to the creation of data and did not constitute investment in obtaining the contents of the database. The prior checking was at the stage of creating the list for the race in question and constituted investment in the creation of the data and not in obtaining them.

Jacob LJ also said that the same reasoning applied in the case of provisional lists of runners and riders which BHB published in advance of the final declarations in the case of races with a large number of runners.

Pill LJ agreed with Jacob LJ's judgment but made some points of his own. In particular, he said that the Court of Justice was making a distinction between a database as such and the contents of the database on the one hand and, on the other hand, the creation of lists of entries which are independent materials created subsequently. He referred to para 31 of the Court of Justice's ruling:

Against that background, the expression 'investment in . . . the obtaining . . . of the contents' of a database must, as William Hill and the Belgian, German and Portuguese Governments point out, be understood to refer to the resources used to seek out existing independent materials and collect them in the database, and not to the resources used for the creation as such of independent materials. The purpose of the protection by the *sui generis* right provided for by the directive is to promote the establishment of storage and processing systems for existing information and not the creation of materials capable of being collected subsequently in a database.

Clarke LJ agreed with both Jacob and Pill LJ although he said that this meant allowing an appeal against a decision he first thought was correct.

Of course, the work that goes into the creation of information to be placed in a database may be rewarded in other ways. It may be held that there is sufficient skill and judgment to be classed as an intellectual creation for the database to be a work of copyright or the works created may themselves be works of copyright, for example, where an artist decides to create a database of his own paintings or drawings. In a case such as the *BHB* case, the creator of the database who exploits it by licensing may try to control its use by contractual means although a lawful user cannot be deprived of the right to

extract and/or re-utilise insubstantial parts of the database for any purpose where the database has been made available to the public.

The *BHB* case demonstrates that the objectives stated in the recitals to the Directive have not adequately been met. No one would question that both the BHB database and the football fixture lists were the result of a substantial and ongoing investment. Yet neither form of database is protected from activities such as those carried out by the defendants. Where, as in the case of the BHB database, the maker has an effective monopoly in being able to create the database and the database is made available to the public by one way or another, surely a better approach would be to make the extraction and/or re-utilisation of insubstantial parts of the contents of the database subject to licensing schemes or licences of right on payment of a reasonable royalty to be set by the Copyright Tribunal if the parties cannot agree on the rate.

### Football fixture lists

On the same day that the ruling was handed down in the *BHB* case, the Court of Justice also handed down rulings in three cases involving football fixture lists. In all three cases, the claimant was the same, being Fixtures Marketing Ltd, which exploited football fixture lists outside the UK by granting licences on behalf of the organisers of football matches in the English and Scottish football leagues. Separate defendants in Finland, Greece and Sweden which controlled or organised gambling activities in their respective countries made use of information from the fixture lists. Courts in each of the three countries submitted questions to the Court of Justice for a preliminary ruling on the interpretation of certain provisions in the Directive. There was some duplication between the cases and the three sets of rulings and, to some extent, with the *BHB* case. The most informative case was Case C-440/02 *Fixtures Marketing Ltd v Organisation Prognostikon Agonon Podosfairos*,<sup>224</sup> where the Court of Justice ruled that the term ‘database’ referred to any collection of works, data or other materials, separable from one another without the value of their contents being affected, including a method or system of some sort for the retrieval of each of its constituent materials. The Court said, on that basis, a fixture list for a football league such as that exploited by Fixtures Marketing Ltd was a database within the meaning of the Directive.

224 [2004] ECR I-10549.

The Court also confirmed that the investment in obtaining the contents of a database referred to the resources used to seek out existing independent materials and collect them in the database and did not extend to the resources used to create the contents. In relation to the football fixture lists it did not cover the resources used to establish the dates, times and the team pairings for the various matches in the league.<sup>225</sup>

225 The European Court of Justice also came to this conclusion in Case C-46/02 *Fixtures Marketing Ltd v Oy Veikkaus AB* [2004] ECR I-10365 and in Case C-338/02 *Fixtures Marketing Ltd v Svenska Spel AB* [2004] ECR I-10497.

In all these cases, including the *BHB* case, the Court of Justice came dangerously close to making findings of fact, something outside its jurisdiction. The basis for making preliminary rulings under Article 234 of the EC Treaty, *inter alia*, is to give rulings on the interpretation of Community legislation. That provision does not permit the Court of Justice to make findings of fact.

### Subsequent Court of Justice rulings on the database right

In Case C-304/07 *Directmedia Publishing GmbH v Albert-Ludwigs-Universität Freiburg*,<sup>226</sup> one Mr Knoop at the University drew up a list of titles of German verse (the 1,100 most important poems in German literature between 1730 and 1900). The list was published on the internet. Directmedia published a CD-ROM containing many of the poems listed in Mr Knoop’s database. It had selected the poems by consulting Mr Knoop’s internet list but obtained the texts of the poems from its own sources. It was claimed, *inter alia*, that Directmedia had infringed the University’s database right in the internet

226 [2009] 1 CMLR 213.

list of titles. The German Federal Court of Justice referred a question as to the scope of extraction and whether it required physical copying of data.

The Court of Justice ruled that a transfer of data following an on-screen consultation of the protected database could constitute an extraction within the meaning of the Directive. This would infringe the database right if it involved a substantial part of the contents, evaluated qualitatively or quantitatively, of the contents of the protected database or if the operation in question amounted to transfers of insubstantial parts which, by their repeated and systematic nature, resulted in the reconstruction of a substantial part of those contents. In its judgment, the Court of Justice made some interesting points:

- the concept of extraction does not require that the contents of the database extracted should disappear from the original medium;
- the use of the phrase ‘by any means and in any form in Article 7(2)(a) indicate that a wide definition of extraction was intended (here the Court referred to its *British Horseracing Board* judgment) – it is not limited to mechanical reproduction, without adaptation, such as by a ‘cut and paste’ operation;
- the scope of extraction refers to any unauthorised act of appropriation of the whole or a part of the contents of the database and it is apparent from the wording of Article 7(2)(a) that the concept of extraction is not dependent upon the nature and form of the mode of operation used;
- ‘transfer’ occurs when all or part of the contents of the database are to be found in a medium other than that of the original database;
- the objective of the person making the transfer (or series of transfers) is irrelevant – in line with the *British Horseracing Board* judgment, it matters not whether the objective is to create another database, whether it will compete with the original database or not, whether it is of a different size or not and whether it is part of an activity, whether commercial or not, other than the creation of a database;
- displaying all or a substantial part of the contents of a database on another medium so as to allow simple on-screen display of those contents falls within the meaning of extraction – where the maker of the database makes those contents available for access by third parties (whether or not on a paid basis) his database right does not allow him to prevent those third parties from consulting the database – it is only when the consultation involves the permanent or temporary transfer to another medium that the database maker’s authorisation may be required.

The final point is of particular interest as the Court of Justice accepted that displaying the whole or part of the contents of a database on-screen involves an act of extraction as it involves a transfer of those contents to another medium by any means and in any form. The judgment was silent as to whether the medium in such a case is the computer’s volatile memory or the screen itself. It could be either or even both. Where a database is made freely available to the public, such by means of the internet, it is implied that persons accessing the database and viewing the contents on their computer screens have the authorisation of the database owner.<sup>227</sup> Where the database is made available on a paid basis, for example, by subscription, those who have subscribed to access the database are likewise taken to have the implied authorisation of the owner to access the contents.<sup>228</sup>

The *Directmedia* case shows that even where consultation to the contents of a database is impliedly authorised, copying parts of those contents whether by writing them out by hand or simply entering them into another computer<sup>229</sup> will, potentially infringe the database right.<sup>230</sup>

A reference from a Bulgarian court involved a number of questions concerning the database right in relation to a legal information system which contained legislation

<sup>227</sup> This must also apply to copyright works, including database subject to copyright.

<sup>228</sup> Such access is likely to be subject to terms in the agreement under which access is granted. For example, it may be restricted to parts of the database and may allow transfers of the contents to other media, such as by saving in a file or printing on paper.

<sup>229</sup> Whether or not saved permanently in a computer file, whether it be a database or not.

<sup>230</sup> Providing it represents a substantial part of the contents of the first database (qualitatively or quantitatively) or is a repeated and systematic extraction of insubstantial parts which cumulatively amount to a substantial part of the contents.

and case law. Case C-545/07 *Apis-Hristovich EOOD v Lakorda AD*<sup>231</sup> involved a claim by Apis-Hristovich, the maker of the database, that persons who had previously worked in its software department left and set up Lakorda which began to market a rival legal database which included modules on Bulgarian legislation and case law. Apis-Hristovich alleged that this involved the unlawful extraction and re-utilisation of substantial parts of its database modules. Some of the case law in the Apis-Hristovich case law module was previously unpublished and not generally accessible to the public. The Court of Justice ruled:

231 [2009] 3 CMLR 82.

- *Extraction – whether permanent or temporary* – the difference between a permanent transfer of the contents of a database and a temporary transfer is based on the length of time the contents are stored in another medium – a permanent transfer means the contents are stored in a permanent manner in a medium other than the original and a temporary transfer is where the contents are stored for a limited period in other medium, such as in the operating memory of a computer. There is no legal significance in the distinction between whether the transfer is permanent or temporary though it may be relevant in assessing the gravity of the unauthorised act of extraction.
- *Time of extraction* – the time an extraction occurs is when the contents are stored in another medium other than the original.
- *Other aspects of extraction* – the concept of extraction is independent of the objective pursued by the perpetrator of the act, of any modification made to the contents of the materials transferred and any differences in the structural organisation of the databases concerned.
- *Computer program* – the nature of the computer programs used to manage the two databases is not relevant to the existence of extraction although it certainly could be factor in the light of the Directive on the legal protection of computer programs.
- *Impact of modular design* – where a module of a database on its own is protected by the database right, infringement by extraction and/or re-utilisation of all or part of the contents of that module can be assessed in relation to that database. Where modules of a database are not protected in their own right, it is a question of comparing the contents of those modules extracted and/or re-utilised with the contents of the database as a whole.<sup>232</sup>
- *Substantiality* – where this is measured qualitatively, it is a question of considering the scale of the investment in obtaining, verifying or presenting the contents alleged to have been extracted and/or re-utilised, regardless of whether those contents represent a substantial part of the contents measured quantitatively. A quantitatively negligible part may, nonetheless, represent a significant human, technical or financial investment in the obtaining, verifying or presenting those contents. The intrinsic value of the contents is not a relevant factor as the database right does not give rise to a new right in the contents themselves.
- *Issue of whether contents are protected by copyright* – the legislative materials were not protected by copyright because of their official nature. This does not prevent the database right from subsisting as that right applies independently to copyright.
- *Materials not available from public sources* – some of the materials in the databases were obtained from sources not accessible to the public. That might affect the assessment of whether there has been a substantial investment in obtaining those materials and, accordingly, that might affect the classification of those materials as a substantial part of the database, evaluated qualitatively.
- *Evidence* – the fact that the physical and technical characteristics present in the contents of the protected database made by a particular person are also present in the contents of a database made by another person may be evidence of extraction unless that coincidence can be explained by factors other than a transfer between the

<sup>232</sup> The Court of Justice did not consider the position where the database right subsisted in some modules of a modular database but did not subsist in other modules. Presumably, this would require consideration of the issue of infringement in relation to each protected module and then consideration of the database as a whole.

two databases. In other words, in such a case it would be for the defendant to show that the presence of the same materials did not come about by extracting those materials from the protected database. For example, this could be where the makers of both databases independently obtained the materials from publicly accessible sources. The Court of Justice went on to say that the presence of materials not available from public sources which are contained in the protected database and also appear in the second database is not sufficient, *per se*, to prove that there had been an extraction from the protected database. It could, however, provide circumstantial evidence of extraction.

The two cases above build upon the judgments in the *British Horseracing Board* case and the *Football Fixtures* cases and further fleshes out the meaning of extraction. It has to be said that parts of the ruling in the *Apis-Hristovich* judgment state the obvious given the wording of the database Directive.<sup>233</sup> However, some parts of the judgment are helpful, such as the discussion of the distinction between a permanent and temporary transfer and the evidential aspects. Also useful is the discussion of substantiality and the impact of modularisation.

<sup>233</sup> For example, that the nature of the computer programs used to access the contents is irrelevant as is the copyright status of the contents of the protected database.

## COMPUTER-GENERATED WORKS

The Copyright, Designs and Patents Act 1988 has a curious provision in that it recognises computer-generated works as a separate species of work with different rules for authorship and duration of copyright. These provisions apply only to literary, dramatic, musical or artistic works.<sup>234</sup> While it is important that works produced using a computer should not be denied the protection of copyright on the basis that the direct human contribution required to make the work is small or negligible, it may be difficult to differentiate between a computer-generated work and other works that have been created with the aid of a computer system.

<sup>234</sup> See Copyright, Designs and Patents Act 1988 s 9(3).

Section 178 of the Act defines a ‘computer-generated work’ as being a work that is ‘generated by computer in circumstances such that there is no human author’. It is not an easy task to determine the meaning of this definition, nor is it easy to think of examples of such works. All works generated by computer owe their creation to a human being, although the human element may be indirect, such as where a computer program contains all the instructions necessary for the creation of the work and the direct human involvement consists of nothing more than switching on the computer and starting up the program. For example, take the artistic work represented in Figure 8.5. It was produced by the author of this book using a computer program containing formulae to generate fractal geometry based on the work of French mathematician Dr Mandelbrot. The only skill used by the author was to zoom in on an interesting looking part of the main figure. Is this a computer-generated work, or has the skill used in selecting an area to be enlarged prevented this result? If, incredibly, the work becomes popular and prints are made of it and sold, to whom should the royalties be paid – to the author of this book, to Dr Mandelbrot or to the person who wrote the program?<sup>235</sup>

<sup>235</sup> And what is the position if the author did not zoom in selectively and had simply printed the first diagram produced by the programmed computer?

The question of whether a work created using a programmed computer is or is not a computer-generated work is significant because it affects the determination of the authorship and, consequently, the ownership of the copyright subsisting in the work. Of lesser import is the fact that the copyright subsisting in computer-generated works runs from the end of the calendar year in which the work was made and not by reference to the year in which the author dies.<sup>236</sup> Therefore, the duration of copyright in computer-generated works will be shorter than for other original works.

<sup>236</sup> Copyright, Designs and Patents Act 1988 s 12(7).

Indirect human authorship had been recognised by the courts prior to the 1988 Act, even in the case of a programmed computer intended to select random letters for a

**Figure 8.5** A computer-generated work?

competition. In *Express Newspapers plc v Liverpool Daily Post & Echo plc*,<sup>237</sup> the defendant claimed that grids of letters produced by computer for a newspaper competition could not be protected by copyright because the grids had no human author.<sup>238</sup> This was rejected by Whitford J, who said that the computer was no more than a tool with which the winning sequences of letters were produced using the instructions of a programmer. He said that the defence submission that there was no human author was as unrealistic as saying that a pen was the author of a work of literature.

There are two possibilities: first that the provisions in the Act concerning computer-generated works are something of a red herring, that there can never be such a thing, or, second, that the Act overrules the *Express Newspapers* case because it is inconsistent with the Act. If the idea of human authorship can be reconciled with lists of letters drawn randomly by a programmed computer, there seems to be little possibility of a work being considered to be ‘computer-generated’ within the meaning of the Act, because it is difficult to think of a work where the direct human contribution is less. On the other hand, if the concept of a computer-generated work within the meaning assigned to it by the Act is accepted then, as regards works produced with the aid of a computer, it still does not help to draw the line between works that are computer-generated and those that are not.<sup>239</sup> However, at first instance in *Nova Productions Ltd v Mazooma Games Ltd*,<sup>240</sup> Kitchin J accepted that the composite frames making up the visual aspects of a computer game were either created by the programmer, who created them using computer tools such as a mouse and on-screen tools such as notional brushes and pencils and the screen colour palette, or they were computer-generated works. If the latter were correct, the programmer was the author of the computer-generated works as he had made the arrangements necessary for their creation.

## CIRCUMVENTION OF PROTECTION MEASURES

Many works are made available in a form to which technical measures have been applied to prevent or restrict the use that may be made of the work. In the UK this was seen as something that needed controlling, especially when unauthorised copies of computer programs and computer games, video and sound recordings were being made. The response of many copyright owners whose works were issued to the public

<sup>237</sup> [1985] 1 WLR 1089.

A similar example, concerning the making by programmed computer of lists of runners and riders for horse races, is the unreported case of *The Jockey Club v Rahim* (unreported) 22 July 1983.

<sup>238</sup> A similar example, concerning the making by programmed computer of lists of runners and riders for horse races, is the unreported case of *The Jockey Club v Rahim* (unreported) 22 July 1983.

<sup>239</sup> Tapper argues that the computer-generated works provisions are ill-conceived and should be abolished. Tapper, C. ‘The Software Directive: A UK Perspective’ in Lehmann, M. and Tapper, C. (eds) (1993) *A Handbook of European Software Law*, Clarendon Press, pp 143–161, at p 150.

<sup>240</sup> [2006] RPC 379.

was to apply some form of encryption or copy-protection to prevent unauthorised copying. Soon after, others were making devices or software to be used to overcome this protection. Others were publishing information advising on how copy-protection could be overcome or bypassed. The reaction of the UK government was to include provisions in the Copyright, Designs and Patents Act 1988, as originally enacted, to give persons authorised to issue copies of copyright works in electronic form a civil right to bring proceedings against persons dealing with devices (or publishing information) to circumvent copy-protection applied to such copies.<sup>241</sup> It was treated as an infringement of the copyright subsisting in the work. There were a number of deficiencies in that legislation as it gave no remedy against a private individual using such devices or information to overcome copy-protection and there were no criminal penalties available against persons commercialising such devices. The provisions were also targeted at a situation where copies were made available on a physical medium and did not deal effectively where works were made available on the internet or by electronic transmission.

241 Section 296.

The European Community saw the need to give more effective protection of wider scope, particularly in relation to works made available online. Directive 2001/29/EC of the European Parliament and of the Council of 22 May 2001 on the harmonisation of certain aspects of copyright and related rights in the information society<sup>242</sup> required Member States to give adequate legal protection against the circumvention of effective technological measures designed to prevent or restrict unauthorised acts (Article 6). This was implemented in the UK, *inter alia*, by the Copyright and Related Rights Regulations 2003 which modified s 296 so as only to apply to computer programs and inserted new ss 296ZA to 296ZF to deal with other works and other subject matter which include rights in performances, the database right and the publication right. The reason for treating computer programs differently is that they were dealt with by the Directive on the legal protection of computer programs which is unaffected by the information society Directive, except in one respect not relevant here. Article 7(2) of the computer programs Directive states that Member States shall provide remedies against:

242 OJ L 167, 22.06.2001, p 10.

any act of putting into circulation, or the possession for commercial purposes of, any means the sole intended purpose of which is to facilitate the unauthorised removal or circumvention of any technical device which may have been applied to protect a computer program.

Briefly stated, the main provisions relating to the circumvention of technological measures apply to computer programs differently than to other works, potentially give a number of persons involved in the issuing of copies to the public or communication of the work to the public concurrent rights with the copyright owner or exclusive licensee. The act of circumvention is prohibited (with the exception of cryptography research). Dealing with devices and providing services to enable or facilitate overcoming technological measures are now criminal offences and there are also civil remedies for these activities and there is provision for protecting the permitted acts if the technological measures prejudice these. It is also notable that the provisions apply also to other rights related to copyright such as rights in performances, the database right and the publication right.

### Computer programs

Section 296 now applies only in relation to computer programs to which a technical device has been applied, intended to prevent or restrict unauthorised acts that would otherwise infringe the copyright. The imposition of liability under the section is similar to that before but there are some differences. Being in possession for commercial

purposes of ‘... any means the sole intended purpose of which is to facilitate the unauthorised removal or circumvention of the technical device’ has been added to the acts of making for sale or hire, importing, distributing, selling, hiring, offering, exposing or advertising for sale or hire such means. As before, liability also extends to persons publishing information intended to enable or assist persons to remove or circumvent the technical device. Liability is, however, dependent upon the person concerned knowing or having reason to believe that means or information will be used to make infringing copies, as was previously the case.

The persons who have the right to bring an action have the same rights against the person making, etc. the means or publishing the information as does the copyright owner in respect of an infringement of the copyright. The identity of the persons having the right to bring an action are:

- (a) a person issuing to the public copies of, or communicating to the public, the computer program to which the technical device has been applied;
- (b) the copyright owner or his exclusive licensee, if he is not the person specified in (a);
- (c) the owner or exclusive licensee of any intellectual property right in the technical device applied to the computer program.

The rights are concurrent and all have the same rights as regards delivery up or seizure as regards any means intended to remove or circumvent the technical device. As previously, the presumptions under ss 104 to 106 of the Act apply, as does the withdrawal of the privilege against self-incrimination in intellectual property matters.<sup>243</sup>

<sup>243</sup> Supreme Court Act 1981, s 72 and equivalent legislation for Scotland and Northern Ireland.

### Other works – effective technological measures

Sections 296ZA to 296ZF apply where effective technological measures have been applied to a copyright work other than a computer program and, with necessary modifications, rights in performances, database right and publication right. The interpretation section for the purposes of ss 296ZA to 296ZE is section 296ZF. This defines ‘technological measures’ as ‘any technology, device or component which is designed, in the normal course of its operation, to protect a copyright work other than a computer program’. Such measures are ‘effective’ if the use of the work is controlled by the copyright owner through:

- (a) an access control or protection process such as encryption, scrambling or other transformation of the work, or
- (b) a copy control mechanism,

which achieves the intended protection.

Reference to protection of a work is to the prevention or restriction of acts not authorised by the copyright owner that are restricted by copyright and reference to use of a work does not extend to any use outside the scope of the acts restricted by copyright.

Under s 296ZA, a person who circumvents effective technological measures applied to a copyright work other than a computer program, knowing, or with reasonable grounds to know, that he is pursuing the objective of circumventing the measures is liable as if he had infringed copyright. The persons having the right to bring an action are as in the case of computer programs above and the presumptions apply also, as does the withdrawal of privilege against self-incrimination. These provisions also apply, with necessary changes, to rights in performances, the publication right and the database right.

An important exception is in s 296ZA(2) and applies where a person does anything circumventing effective technological measures for the purposes of research into cryptography. This does not give rise to a cause of action under s 296ZA unless by doing so,

or in issuing information from that research, the rights of the copyright owner are prejudicially affected. This is not expressly limited to non-commercial research and there is no requirement that the act itself is fair dealing.

### Criminal offences associated with technological measures

The act of circumventing technological measures does not, *per se*, give rise to criminal liability. However, under s 296ZB, a number of activities give rise to offences being committed. This states that a person commits an offence if he:

- (a) manufactures for sale or hire, or
- (b) imports otherwise than for his private and domestic use, or
- (c) in the course of a business –
  - (i) sells or lets for hire, or
  - (ii) offers or exposes for sale or hire, or
  - (iii) advertises for sale or hire, or
  - (iv) possesses, or
  - (v) distributes, or
- (d) distributes otherwise than in the course of a business to such an extent as to affect prejudicially the copyright owner,

any device, product or component which is primarily designed, produced, or adapted for the purpose of enabling or facilitating the circumvention of effective technological measures.

A person also commits an offence if he provides, promotes, advertises or markets:

- (a) in the course of a business, or
- (b) otherwise than in the course of a business to such an extent as to affect prejudicially the copyright owner,

a service the purpose of which is to enable or facilitate the circumvention of effective technological measures.

The offences are triable either way and the maximum penalty, if tried summarily, is a fine not exceeding the statutory maximum and/or imprisonment for a period not exceeding three months. On conviction on indictment, the maximum penalty is a fine and/or imprisonment not exceeding two years. There is no requirement for *mens rea* but it is a defence for the accused to show that he did not know and had no reasonable grounds for believing that the device, product, component or service enabled or facilitated the circumvention of effective technological measures. When one considers that the maximum penalties for the criminal offences under s 107 have been increased to a maximum of ten years' imprisonment and/or a fine, it is strange to think that the penalties under s 296ZB are significantly less. Presumably, in appropriate situations, a person committing offences under s 296ZB could be charged with inciting or aiding and abetting someone to carry out an offence under s 107 if such offences flow from the circumvention of technological measures.

It should be noted that there is no equivalent offence in relation to the circumvention of copy-protection of computer programs and in respect of the database right, publication right and rights in performances.

Activities of the law enforcement agencies and intelligence services in the interests of national security or for the prevention or detection of crime, the investigation of offences or the conduct of prosecutions are excluded from criminal liability. There are provisions for search warrants and forfeiture under s 296ZC as apply to unauthorised decoders under ss 297B to 297D.

The scope of these provisions was considered by the Court of Appeal in *R v Higgs*.<sup>244</sup> Mr Higgs, had been convicted of 26 offences under section 296ZB for selling ‘modchips’, installing them into computer games consoles and selling games consoles to which these modchips had been fitted. Manufacturers of computer games consoles, such as the Sony Playstation, Nintendo Gamecube and the Microsoft X-Box, embed with the consoles codes that will only allow a game on CD-ROM to be played if it contains a corresponding code. Normally, these codes are not copied if copies are made of the genuine CD-ROMs. The modchips overcame this protection and allowed ‘pirate’ copies of games on CD-ROMs to be played on the games consoles.

The prosecution had alleged that, by selling modchips and modified consoles, Mr Higgs was encouraging and exploiting a market for pirate games. No attempt had been made to prove that by using the modified consoles to play a game from a pirate CD-ROM itself involved any infringement of copyright.

The Court of Appeal confirmed that the ‘technological measures’ under section 296ZF should be narrowly construed and applied to measures which denied access to a copyright work or restricted a person’s ability to make copies where access to the work had been granted. Merely having a general deterrent or discouraging effect was not enough. Infringing copies could be made without circumventing the technological measures but those copies could not be used without such circumvention. The Court of Appeal accepted that playing pirate games involved making transient copies of the works (such as images and sounds) and this infringed copyright. Had the prosecution case been that using a console to which a modchip had been fitted itself involved an infringement of copyright the convictions would have been likely to be upheld. The Court of Appeal did not give leave to the prosecution to appeal to the House of Lords but did certify a question of law of general public importance, being:

Do the provisions of section 296ZF of the Copyright, Designs and Patents Act 1988 in relation to ‘effective technological measures’ apply to devices incorporated into computer games consoles and computer games which do not prevent counterfeit copies being made of such games but which do prevent the counterfeit copies from being played on games consoles?

It is important to understand that the appeal succeeded because the prosecution case was flawed rather than being a reflection of any deficiency in the scope of the offences under section 296ZB and the meaning of effective technological measures under section 296ZF.

### Separate civil remedy in respect of making, importing, etc.

In some cases, acts that fall within the criminal offences under s 296ZB may also attract civil liability. Civil liability under s 296ZD applies where:

- (a) effective technological measures have been applied to a copyright work other than a computer program; and
- (b) a person . . . manufactures, imports, distributes, sells or lets for hire, offers or exposes for sale or hire, advertises for sale or hire, or has in his possession for commercial purposes any device, product or component, or provides services which –
  - (i) are promoted, advertised or marketed for the purpose of the circumvention of, or
  - (ii) have only a limited commercially significant purpose or use other than to circumvent, or
  - (iii) are primarily designed, produced, adapted or performed for the purpose of enabling or facilitating the circumvention of,

those measures.

As with ss 296 and 296ZA, concurrent rights are provided for as are rights of delivery up or seizure and the presumptions apply. Liability under s 296ZD also extends to rights in performances, the publication right and the database right. The privilege against self-incrimination is withdrawn as is usual with certain intellectual property proceedings. One difference to the other civil remedies in relation to overcoming protection measures is that the test for the unavailability of damages for innocent infringement is slightly changed and the test is whether the defendant knew or had reason to believe that his acts enabled or facilitated an infringement of copyright.

### **Remedy where effective technological measures prevent permitted acts**

If copyright owners prevent access to their works by, for example, encryption, scrambling or password systems, this could have the effect of prejudicing the permitted acts. For example, a copyright owner could make his work available to the public by subscription on terms where copying for the purposes of fair dealing for private study or certain educational uses are prohibited. To overcome potential conflicts, s 296ZE provides for voluntary measures or agreements enabling a person to carry out a permitted act. Where a person is prevented from carrying out a permitted act he, or a representative of a class of such persons, may issue a notice of complaint to the Secretary of State who may give directions to the copyright owner or exclusive licensee.

The purpose of the directions may be to establish whether a relevant voluntary measure or agreement exists or where an appropriate measure or agreement does not exist, requiring the copyright owner or exclusive licensee to make available the means of carrying out the permitted act that is the subject of the complaint. This imposes a duty owed to the complainant and failure to act is treated as a breach of statutory duty. Directions must be in writing and may be varied or revoked by subsequent directions.

These provisions do not apply where a copyright work is made available to the public on agreed contractual terms such that members of the public can access the work at a place and time individually chosen by them. They also apply, with necessary changes, to rights in performances, the publication right and the database right but do not apply to computer programs.

A new Schedule 5A lists the permitted acts covered by s 296ZE. Significantly, permitted acts not included are fair dealing for criticism or review and fair dealing for reporting current events and the permitted act of incidental inclusion.

## **ELECTRONIC RIGHTS MANAGEMENT INFORMATION**

A particular concern where works are made available in digital form and may, for example, be downloaded from a website or network, is that any information such as the identity of the copyright owner and what acts are authorised in respect of the work may be removed and the work then circulated or communicated to the public in that modified form. Of course, this does not prevent copyright being infringed but the danger is that third parties who access the work subsequently without such information may believe that they can copy it freely or deal with it how they wish.

Where a work is placed on the internet by or on behalf of the copyright owner and is freely available for others to access, to take an example, it is safe to assume, in the absence of any notice to the contrary, that accessing it online does not infringe copyright on the basis that the copyright owner has impliedly licensed this by his act of making it available in this way. It is not safe to assume, however, that a permanent copy of the work may be made whether by saving it onto a disk or printing it out without infringing copyright. A prudent copyright owner who wants to make his works freely available

online would do well to place a prominent notice on the work stating that he is the copyright owner, when the work was first created and, where relevant, the identity of the author of the work.<sup>245</sup> He may also want to state what may and may not be done in respect of the work: for example, to state that private individuals may make copies for their own personal use only and must not modify the work nor remove the notice.

Recital 57 to Directive 2001/29 of the European Parliament and of the Council of 22 May 2001 on the harmonisation of certain aspects of copyright and related rights in the information society states that there is a:

... danger that illegal activities might be carried out in order to remove or alter the electronic copyright-management information attached to [a work or other subject-matter], or otherwise to distribute, import for distribution, broadcast, communicate to the public or make available to the public works or other protected subject-matter from which such information has been removed without authority.

Article 7 of the Directive therefore required Member States to provide adequate legal protection for electronic rights management information. Rights management information was described in Article 7 as any information provided by rightholders which identifies the work or other subject matter, the author or any other rightholder, or information about the terms and conditions of use of the work or other subject matter, and any numbers or codes that represent such information.

The Directive was implemented in the UK by the Copyright and Related Rights Regulations 2003,<sup>246</sup> s 296ZG of which contains the provisions equivalent to Article 7 of the Directive. ‘Rights management information’ is defined in similar though not identical terms to the Directive, although any differences should be of no consequence. Section 296ZG(7)(b) uses the following definition:

... any information provided by the copyright owner or the holder of any right under copyright which identifies the work, the author, the copyright owner or the holder of any intellectual property rights, or information about the terms and conditions of use of the work, and any numbers or codes that represent such information.

Section 296ZG(8) states that the relevant provisions of s 296ZG apply also, with necessary changes, to rights in performances, the database right and publication right. There is no definition of the entire phrase ‘electronic rights management information’ but this can be taken to mean rights management information applied to electronic copies of a work. This might be where the copy is on a computer disk, including on a server computer linked to the internet, CD-ROM or DVD, etc.

A person who knowingly and without authority removes or alters electronic rights management information knowing or having reason to believe that by doing so he or she is enabling, facilitating or concealing an infringement of copyright is liable as if that person had infringed the copyright subsisting in the work. That liability is owed to the person issuing copies to the public or communicating the work to the public or the copyright owner or his exclusive licensee, all of whom have concurrent rights. For these purposes ‘electronic’ has the same wide meaning as in s 178.

Furthermore, a person will similarly be liable if he knowingly and without authority distributes, imports for distribution or communicates to the public copies of a copyright work from which such information, associated with the copies or appearing in connection with the communication to the public of the work, has been removed or altered without authority. The form of knowledge required is that the person knows or has reason to believe that by so doing he is inducing, facilitating or concealing an infringement of copyright. The usual presumptions apply and the privilege against self-incrimination in intellectual property proceedings is withdrawn.

<sup>245</sup> The moral right to be identified as author (or director of a film) might be engaged.

<sup>246</sup> SI 2003/2498.

## SATELLITE BROADCASTING

The wireless broadcasting of television, films and the like by satellite raises fundamental issues of copyright, such as where the broadcast is made from. For example, is it made from the earth station or from the satellite? This will affect the identity of the national rules of copyright law that will apply. How does the broadcaster control the reception of his broadcast in other countries? According to the ‘Bogsch’ theory, the broadcaster would need to obtain the necessary right in each of the countries within the area of reception of the broadcast (its ‘footprint’).<sup>247</sup> Another difficulty is controlling the capture and re-transmission of a wireless broadcast without permission. A further problem relates to the sale of unauthorised decoders used to receive encrypted broadcasts and ‘smartcards’ for use with decoders.

A satellite broadcast is taken to be made from the place where, under the control and responsibility of the person making the wireless broadcast, the programme-carrying signals are introduced into an uninterrupted chain of communication (including, in the case of a satellite transmission, the chain leading to the satellite and down towards the earth).<sup>248</sup> Subsequently communication to the public, for example, by re-broadcasting, is a restricted act and will infringe without the licence of the copyright owner.<sup>249</sup> There are special provisions for determining the place of making broadcasts in the case of satellite broadcasts originating from a country outside the EEA not providing an adequate level of protection and for determining the maker of such broadcasts.<sup>250</sup>

Some organisations make encrypted transmissions which require a decoder to view the programme. It is an offence to make, import, sell or let for hire or offer or expose for sale or hire any unauthorised decoder; to be in possession of, for commercial purposes, an unauthorised decoder; to install, maintain or replace for commercial purposes or to advertise or otherwise promote for sale or hire an unauthorised decoder for commercial purposes under s 297A.<sup>251</sup> A transmission is any programme included in a broadcasting service provided from a place in the UK or other Member State or an information society service provided from a place in the UK or other Member State (the latter would cover, for example, a subscription service information made available online and accessed only by identification number and password). The maximum penalty on conviction on indictment is now a maximum of ten years’ imprisonment and/or a fine.<sup>252</sup> It is a defence to show that the person charged did not know and had no reasonable ground for believing that the decoder was unauthorised. A ‘decoder’ is defined as any apparatus designed or adapted to enable (on its own or with other apparatus) an encrypted transmission to be decoded. Apparatus is defined widely as including any device, component or electronic data (including software).<sup>253</sup> A decoder is unauthorised if it is designed or adapted to enable an encrypted transmission, or any service of which it forms part, to be accessed in an intelligible form without payment of the fee (however imposed) which the person making the transmission, or on whose behalf it is made, charges for accessing the transmission or service (whether by the circumvention of any conditional access technology related to the transmission or service or by any other means). Conditional access technology is any technical measure or arrangement whereby access to encrypted transmissions in an intelligible form is made conditional on prior individual authorisation. There are provisions for search warrants and forfeiture under ss 297B to 297D.

Directive 98/84/EC of the European Parliament and of the Council on the legal protection of services based on, or consisting of, conditional access<sup>254</sup> uses the term ‘illicit device’ meaning ‘... any equipment or software designed or adapted to give access to a protected service in an intelligible form without the authorisation of the service provider’.<sup>255</sup>

In *Football Association Premier League Ltd v QC Leisure (No 2)*,<sup>256</sup> a host of issues were raised by the importation and use in the UK of decoders that had been provided

**247** Accepted by the Austrian Supreme Court in *Re Satellite Television Broadcasting* [1995] FSR 73. This case pre-dated Austria’s accession to the European Community.

**248** Copyright, Designs and Patents Act 1988 s 6(4) as modified by the Copyright and Related Rights Regulations 1996, SI 1996/2967 and the Copyright and Related Rights Regulations 2003, SI 2003/2498. The former regulations implemented, *inter alia*, the Council Directive 93/83/EEC of 27 September 1993 on the coordination of certain rules concerning copyright and rights related to copyright applicable to satellite broadcasting and cable re-transmission, OJ L 248, 06.10.1993, p 15.

**250** Copyright, Designs and Patents Act 1988 s 6A, inserted by the Copyright and Related Rights Regulations 1996, discussed in more detail in Chapter 3.

**251** Inserted by the Broadcasting Act 1990 s 179 but substituted by the Conditional Access (Unauthorised Decoders) Regulations 2000, SI 2000/1175. These Regulations implement Directive 98/84/EC of the European Parliament and of the Council of 20 November 1998 on the legal protection of services based on, or consisting of, conditional access, OJ L 320, 28.11.1998, p 54.

**252** Increased from a maximum of a fine not exceeding level 5 on the standard scale by the Copyright, etc. and Trade Marks (Offences and Enforcement) Act 2002.

**253** Copyright, Designs and Patents Act 1988 s 297A(4) contains definitions.

**254** OJ L 320, 28.11.1998, p 54.

**255** Article 2(e).

**256** [2008] FSR 789.

to licensees in other countries to enable subscribers to watch Premier League football matches. The decoders were delivered to the licensees on the understanding that they were not to be used by persons outside the licensed territories. Some of these ‘non-UK’ decoders found their way into the UK where they were used, typically in bars and public houses. A question arose where the decoders were illicit devices under the Directive as they originated from the claimants. Kitchen J thought that they were not but referred a question to the Court of Justice for a preliminary ruling on this and many other matters.

Before the insertion of s 297A, although the dishonest reception of a programme included in a broadcasting service carried criminal penalties under s 297, there were only civil remedies against any person responsible for making, importing, selling or letting for hire, etc. unauthorised decoders and this provision had caused considerable problems of interpretation. In *BBC Enterprises Ltd v Hi-Tech Xtravision Ltd*<sup>257</sup> the claimant provided a satellite television service known as ‘BBC TV Europe’. The defendant sold decoders at a price considerably lower than that charged by the distributors authorised by the claimant. The offence of fraudulently receiving a programme included in a broadcast or cable programme service in s 297 of the Copyright, Designs and Patents Act 1988, was held to be inapplicable for reasons of jurisdiction. The claimant therefore based his claim on s 298 of the Act, which controls apparatus, devices or information to assist persons to receive programmes or other transmissions when they are not entitled to do so.<sup>258</sup> In the Chancery Division, it was held that the unauthorised reception of waves in the ether caused by wireless telegraphic transmission did not represent an interference with property rights at common law and that no one had rights of property in those wireless transmission waves. Scott J suggested that a right to prohibit reception had to be found outside s 298 before it was possible to say that persons were not entitled to receive programmes and it is not an infringement of copyright to receive a broadcast. Therefore, the foreign viewers of ‘BBC TV Europe’ could not be described as persons who were ‘not entitled to do so’ within s 298.<sup>259</sup> Scott J was of the opinion that s 298 was inept legislation and that the legislature was under a misapprehension as to the law.

The Court of Appeal reversed the decision in the Chancery Division. While the court accepted that the right involved was probably not a proprietary right, it was held that the claimant’s claim disclosed a good cause of action, rejecting the interpretation of s 298 suggested by Scott J.<sup>260</sup> Staughton LJ said that s 298 contained both the right and the remedy. The person who seeks to charge for encrypted transmissions has the right not to have others making apparatus designed for use by persons not authorised by him to receive the programmes. The defendant’s appeal was dismissed by the House of Lords, which held that providers of satellite programmes broadcast from the UK are protected by s 298<sup>261</sup> and are thus entitled to collect charges for the reception of these programmes, and this covered, indirectly, persons receiving the transmissions in other countries that lie within the ‘footprint’ of the transmissions.<sup>262</sup>

As amended, s 298 gives rights and remedies to a person who makes charges for reception of programmes included in a broadcasting service, sends encrypted transmissions of any other description or provides conditional access services, where the place from which the service is provided from (or transmitted from in the case of encrypted transmissions) is the UK or any other Member State. That person has the same rights and remedies as a copyright owner in respect of infringement of copyright against any person who (i) makes, imports, distributes, sells or lets for hire, offers or exposes for sale or hire, or advertises for sale or hire, (ii) has in his possession for commercial purposes, or (iii) installs, maintains or replaces for commercial purposes, any apparatus designed or adapted to enable or assist persons to access the programmes or other transmissions or circumvent conditional access technology related to the programmes or other transmissions when they are not entitled to do so. The same applies in respect of a person

<sup>257</sup> [1990] Ch 609.

<sup>258</sup> This section was substituted by the Conditional Access (Unauthorised Decoders) Regulations 2000, SI 2000/1175 to bring it in line with the changes to s 297A.

<sup>259</sup> *The Times*, 28 November 1989.

<sup>260</sup> [1990] Ch 609.

<sup>261</sup> This was before the changes made to s 298 by the Conditional Access (Unauthorised Decoders) Regulations 2000, SI 2000/1175.

<sup>262</sup> [1991] 3 WLR 1.

who publishes or otherwise promotes by means of commercial communications any information which is calculated to enable or assist persons to access the programmes or other transmissions or circumvent conditional access technology related to the programmes or other transmissions when they are not entitled to do so.

Where s 97(1) applies (damages not available where infringement innocent) but the reference to the defendant not knowing or having reason to believe that copyright subsisted in the work shall be construed as a reference to his not knowing or having reason to believe that his acts infringed the rights conferred by this section. The right against self-incrimination is withdrawn (as it generally is for intellectual property) and other relevant provisions apply as they do to copyright infringement.

The definitions for the purposes of s 298 are generally as those given in s 297A and conditional access service means services comprising the provision of conditional access technology.

The general reference to the UK and other Member States extends to protection to broadcasters and information society service providers throughout the European Union. A potential problem that the provisions before amendment were limited to and thereby favoured UK organisations was highlighted in *British Sky Broadcasting Group Ltd v Lyons*<sup>263</sup> where the defendant imported from Germany and sold in the UK unauthorised smartcards<sup>264</sup> (cards containing algorithms to allow a decoder to unscramble encrypted signals). He raised a number of interesting defences, all of which were rejected by Aldous J, who described him as a parasite.

Persons selling unauthorised decoders may commit other offences. For example, in *R v Maxwell-King*,<sup>265</sup> the accused sold devices which, when fitted to 'set-top boxes' allowed persons to receive all services provided without paying for some of them. He was convicted of offences of incitement to commit an offence under s 3 of the Computer Misuse Act 1990, the unauthorised modification offence. Now, it is unlikely that this Act would be used, especially as the criminal offences under s 297A carry a maximum of ten years' imprisonment and/or a fine. In *Maxwell-King*, the offender was sentenced to four months' imprisonment but the Court of Appeal considered that a custodial sentence was not justified for someone of previous good character.<sup>266</sup>

<sup>263</sup> [1995] FSR 357.

<sup>264</sup> The Irish High Court considered that a smartcard was a computer program in *News Datacom Ltd v Satellite Decoding Systems* [1995] FSR 201.

<sup>265</sup> [2001] 2 Cr App Rep (S) 136.

<sup>266</sup> The devices were not very successful.

## SCIENTIFIC DISCOVERIES, GENETIC SEQUENCES AND FORMULAE

In this increasingly technological world, where the means of production and dissemination are more widely available than ever before, freeing authors from the control of publishers, there may be more emphasis on invention, innovation and original thought than the means of expression and commercial reproduction. An important factor is that copyright has now moved into the technological field and the shift of power from publishers to authors may serve as a catalyst for change in emphasis. Take, for example, a person who devises an original mathematical formula. It can be used to generate valuable information such as the chances of a particular horse winning a race. Or perhaps a scientist has by careful experimentation discovered a new aerodynamic model for turbulent flow of fluid over a surface which can be expressed mathematically. A geneticist determines the genetic sequence of a viral infection. Are such things the subject of copyright protection, and should they be?

We will see in Part Four of this book that certain things are expressly excluded from the grant of a patent, as such. These include a discovery, scientific theory or mathematical method, a scheme, rule or method for performing a mental act, playing a game, or doing business, or a program for a computer.<sup>267</sup> Practical applications of such things may, however, be patentable. For example, a scientific discovery cannot form the basis of a patent, but a new industrial process based on that theory can be patented. What the

<sup>267</sup> Patents Act 1977 s 1(2).

patent system cannot protect is the theory itself. Apart from anything else, the protection of theories and the like by patents would give the proprietor far too strong a monopoly position. In the light of this, should copyright protect something that the patent system does not?

Consider the case of a new formula used to calculate the size of a timber beam to support a roof over a building. Variables used by the formula might include the span (s), the horizontal spacing between beams (h), the maximum roof load (including wind and snow loads) (w), the strength of timber (t), the slenderness ratio (the ratio of the depth of the beam compared to its height) (r), the factor of safety (F) and so forth. The formula<sup>268</sup> might look something like this:

$$d = F \times \int (f(s) + f(h)) \div f(t) + 0.235 \times F \sum \partial w \div r$$

where  $f()$  denotes some function of the variable enclosed in brackets.

The formula is likely to be the result of a significant amount of theoretical work supported by empirical research. Once it has been developed and tested, its application to practical situations will probably be a fairly simple matter, though requiring mathematical skills. Imagine that a person other than the deviser of the equation decides to use the formula in a computer program to design timber beams. The program is used to create a whole set of tables by which a person wishing to determine an appropriate size for timber beams to span a roof can quickly and easily do so.

Several questions fall to be considered. Is the formula a work of copyright in its own right? Is the set of tables a work of copyright? If so, does the deviser of the formula have any rights in the tables? Taking those questions *seriatim*:

- 1 Is the formula a work of copyright? If it is accepted that skill and judgment have been expended in the creation of the formula, there seems to be no doubt that the formula is a work of copyright, being an original literary work. Aldous J considered that there was no reason why this should not be so in *Bookmakers' Afternoon Greyhound Services Ltd v Wilf Gilbert (Staffordshire) Ltd*<sup>269</sup> in the context of a formula for calculating forecast dividends for greyhound races. There are authorities which suggest otherwise. In *Exxon Corp v Exxon Insurance Consultants International Ltd*,<sup>270</sup> the single word 'EXXON' was held not to be an original literary work, even though significant market research had been undertaken in deciding a new corporate name. In that case, great reliance was placed on the quote by Davey LJ in *Hollinrake v Truswell*<sup>271</sup> to the effect that a literary work should 'afford either information or instruction, or pleasure, in the form of literary enjoyment'. It is submitted that that approach is no longer valid, primarily because of the extension of literary copyright to computer programs. An object code program installed in a silicon chip and invisible to the naked eye would surely fail Davey LJ's test, yet such a program is undoubtedly protected by copyright.<sup>272</sup> The better view, therefore, is that a formula that is a result of skill and judgment is a work of copyright. This accords also with the approach taken by Aldous J in *Microsense Systems Ltd v Control Systems Technology Ltd*<sup>273</sup> where he accepted that there was an arguable case that a list of mnemonics was protected by copyright, at least by virtue of the skill and judgment in devising the functions to be represented by the mnemonics. However, this case was before the Directive on the legal protection of computer programs which states that programming languages, in as much as they consist of ideas and principles, are not protected by copyright.
- 2 Is the set of tables a work of copyright? Returning again to the *Bookmakers' Afternoon Greyhound Services* case, the claimant submitted that, in determining whether forecasts such as 'BAGS Forecast £2.25' derived using a formula were themselves works of copyright, the skill and judgment in devising the formula should be taken into account. Aldous J did not accept that proposition. He said:

<sup>268</sup> This formula is completely fictional.

<sup>269</sup> [1994] FSR 723. Unfortunately, the formula is not reproduced in the law report.

<sup>270</sup> [1981] 3 All ER 241.

<sup>271</sup> [1894] 3 Ch 420.

<sup>272</sup> Either in its own right or as an adaptation of the source code program.

<sup>273</sup> (Unreported) 17 July 1991.

274 [1994] FSR 723 at 735.

275 Aldous J did not consider the fact that performing the calculations in the *Bookmakers* case required 'a certain amount of education', meaning that the results were protected by copyright.

276 See the section on Databases, earlier in this chapter.

277 [1985] 1 WLR 1089.

278 Such as in *Merrell Dow Pharmaceuticals Inc v HN Norton & Co Ltd* [1996] RPC 76, where a patent for a chemical reaction in the human liver was held invalid.

279 It has been suggested that DNA sequences are protected by copyright provided they are sufficiently long: Laddie *et al.* (1995) *The Modern Law of Copyright* (2nd edn) Butterworths, p 859.

A person who takes a work, whether it be a formula, a book or a poem, and uses it to produce another work, will only obtain copyright in that other work, if the skill, labour and judgment used to produce that other work are sufficient.<sup>274</sup>

Therefore, the creation of the derivative work must itself require skill and judgment, independent from that of the first work. Making calculations using a formula might require little skill beyond a basic understanding of arithmetic, such as working out a percentage of a number, or it may require advanced mathematical skills: for example, requiring proficiency in differential calculus.<sup>275</sup> One problem with this approach is where the formula has been incorporated in a computer program. Here it may be a question of considering the skill and judgment of the person using the program. If he simply enters factual data the resultant output may not be protected by copyright as in the *Bookmakers* case, *a fortiori* where only a single or small number of calculations are performed. A table is itself a work of copyright and protected as such, provided that there is skill and judgment in its making. This will be so in deriving a set of tables to design timber beams. The person setting about the task will have to decide on the ranges of parameters, the increments in those parameters, how to design the layout of the tables for ease of use, etc. A table or set of tables could also be viewed as a database, subject to copyright and/or the database right, whether the table resides in software form or is printed out on paper. The database right may be particularly useful as it overcomes the need for skill and judgment by requiring a substantial investment only.<sup>276</sup>

- 3 Does the deviser of a formula have any rights in the result of using it? If the formula is a work of copyright and the person using it performs any of the restricted acts without the licence of the owner of the copyright in the formula, there will be an infringement of its copyright. This would be so if the formula were expressed in a computer program, and it would seem to be sensible to hold the same if the formula is not directly expressed but is broken down into a number of individual calculations on the basis of non-literal copying. However, if a person simply uses the formula without reproducing it, there can be no infringement. The formula simply is the tool by which the calculated results are obtained in the same way as a pen or paintbrush is used to create a new work. In this respect the situation is analogous to the creation of random numbers by a programmed computer in *Express Newspapers plc v Liverpool Daily Post and Echo plc*.<sup>277</sup>

Similar considerations ought to apply to other technical discoveries such as a hitherto unknown chemical reaction<sup>278</sup> or a genetic sequence.<sup>279</sup> Provided that there is skill and judgment in their discovery or creation, and they have been expressed in an appropriate manner (for example, by being written down), there is no reason why they should not be protected by copyright. Copyright will not, however, prevent the use of such things by others. All that is controlled are the specific acts restricted by copyright. Nor does copyright prevent the independent creation of the same or a similar work. If the discovery or whatever is published, perhaps in an academic journal, a limited amount of copying may be permitted in the course of developing a practical application of the discovery, on the basis of the fair dealing provisions or by virtue of an implied licence. Public interest may also be an issue. Of course, where the discovery has not been published, it may be protected by the law of breach of confidence.

## Chapter 9

# RIGHTS IN PERFORMANCES

### INTRODUCTION

A well-known soprano gives a live performance of an operatic aria by Mozart. Unknown to the soprano, a member of the audience makes a recording of the performance on a magnetic tape and then later makes copies which he sells to the public without the singer's permission. Under copyright law, there is nothing that can be done to prevent the sale of the recordings of the performance. The music and lyrics are out of copyright, so there is no infringement of the musical or literary work. Indeed, the only relevance of copyright law is that the person who made the recording without permission owns the copyright in it as a sound recording. Had the singer agreed a recording contract with a publisher, the publisher would be unable to use copyright law to prevent the sale of the unauthorised recordings, which have a separate and independent copyright to the publisher's recording. The authorised and unauthorised master recordings are coterminous, and there is no link between them associated with the acts restricted by the copyright in the publisher's sound recording. There may still be problems even if the music is protected by copyright, because the owner of that copyright may be reluctant to pursue a claim for infringement with respect to one performance.

This state of affairs was clearly untenable and this 'loophole' in copyright law was closed by the law relating to performances. However, this area of law only gained the status of a fully-fledged intellectual property right under the Copyright, Designs and Patents Act 1988. The first law on the subject was the Dramatic and Musical Performers' Protection Act 1925, which provided criminal penalties in respect of the making of recordings of dramatic and musical performances without consent. This Act was basically re-enacted in 1958, and by the Performers' Protection Act 1963 the provisions were extended to all the original works of copyright, that is literary, dramatic, musical and artistic works.<sup>1</sup> The Performers' Protection Act 1972 increased the maximum penalties available. However, these Acts appeared to give rise to criminal liability only, and did not seem to give any civil remedies to performers or to those with whom the performers may have had recording contracts. The offences related to recording a live performance, broadcasting it, transmitting it via a cable distribution system or performing it in public without the consent of the original performers. The use of an unauthorised audio or audio-visual recording for the purpose of broadcasting, inclusion in a cable system or public performance, and dealing with such unauthorised recordings, were also offences.

The question as to whether the law gave a right to civil actions was considered both in respect of performers and recording companies. In *Rickless v United Artists Corp.*<sup>2</sup> the defendant made a new film by using clips and out-takes (discarded excerpts) from previous *Pink Panther* films starring the late Peter Sellers. The claimant, who owned the rights of Peter Sellers' services as an actor, sued for, *inter alia*, breach of the Dramatic

<sup>1</sup> The purpose of the 1963 Act was to achieve compliance with the Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organisations (the Rome Convention), 26 October 1961.

<sup>2</sup> [1988] 1 QB 40.

3 Applying the *dictum* of Lord Diplock in *Lonrho Ltd v Shell Petroleum Co Ltd* [1982] AC 173.

4 [1983] Ch 135.

5 In this context, a 'bootleg' recording is one made without the permission of either the performer or the authorised recording company, if any.

6 *Intellectual Property and Innovation*, Cmnd 9712, HMSO, 1986. The problems had also been discussed earlier in the Whitford Committee Report, *Copyright and Designs Law*, Cmnd 6732, HMSO, 1977 and in the Green Paper, *Reform of the Law relating to Copyright, Designs and Performers' Protection*, Cmnd 8302, HMSO, 1981.

10 Directive 2001/29/EC of the European Parliament and of the Council of 22 May 2001 on the harmonisation of certain aspects of copyright and related rights in the information society, OJ L 167, 22.06.2001, p 10, hereinafter referred to as the 'Directive on copyright and related rights in the information society'.

11 Copyright, Designs and Patents Act 1988 s 180(3). Unless otherwise stated, in this chapter, statutory references are to the Copyright, Designs and Patents Act 1988.

12 Assuming the making of the copies was not in pursuance of arrangements made before the commencement of the new provisions. A person having an exclusive recording contract with the acrobats in relation to the performance could also sue because his recording rights had been infringed.

13 Copyright, Designs and Patents Act 1988 s 192.

and Musical Performers' Protection Act 1958 s 2 because the defendant failed to obtain the permission of the actor's executors. The trial judge awarded damages of US \$1 million and the defendant appealed to the Court of Appeal, arguing that s 2 did not give rise to a private cause of action. The Court of Appeal dismissed the appeal confirming that s 2 of the Act conferred a right to civil remedies to the performer whose performance had been exploited without written consent in addition to imposing criminal penalties.<sup>3</sup> The basis for this decision was that, by imposing the criminal penalties, the Act imposed an obligation or prohibition for the benefit of a class of persons, in this case performers, and consequently this gave a cause of action to any aggrieved performer. However, in *RCA Corp v Pollard*,<sup>4</sup> the Court of Appeal reluctantly found that the Acts did not give civil remedies to recording companies. This highlighted the problem that recording companies were having with 'bootleg' recordings and the regrettable lack of civil remedies under the 1958–1972 Acts.<sup>5</sup> The ease of making good quality bootleg recordings because of technological advances was of particular concern.

These problems were identified in the White Paper preceding the Copyright, Designs and Patents Act 1988.<sup>6</sup> That Act repealed the previous Acts in their entirety and replaced them with new provisions contained in Part II of the Act. In addition to giving a civil right of action to recording companies having an exclusive licence with the performer and confirming civil remedies for performers, the new provisions extend to live performances by a variety of artistes such as jugglers and acrobats, and bring the criminal penalties and powers of search and seizure more in line with those available in copyright law.

The remainder of this chapter looks first at rights in performances briefly as set out in the Copyright, Designs and Patents Act 1988 as originally enacted. It then goes on to look at the current position. Rights in performances were substantially changed (and enhanced) by the Copyright and Related Rights Regulations 1996,<sup>7</sup> which implemented the Directive on rental and lending right<sup>8</sup> and there have been further modifications, primarily resulting from the Copyright and Related Rights Regulations 2003<sup>9</sup> which implemented the Directive on certain aspects of copyright and related rights in the information society.<sup>10</sup>

## RIGHTS GRANTED BY THE COPYRIGHT, DESIGNS AND PATENTS ACT 1988 AS ENACTED

The Copyright, Designs and Patents Act 1988 Part II came into force on 1 August 1989. Rights in performances were considerably expanded in comparison with previous law. The provisions were retrospective in that live performances that were made prior to the coming into force of the new law were protected, but a right of action did not accrue in respect of acts carried out before that date.<sup>11</sup> In other words, new rights were retrospectively granted, but new liabilities had not been retrospectively imposed. For example, a live performance by a team of acrobats made in 1987 was protected. If a bootleg film was made of the performance, the making of the film did not infringe any intellectual property rights and there could be no legal action in respect of it. However, if the person who made the film decided to make and sell copies to the public, the acrobats could sue for infringement of their performers' right.<sup>12</sup>

Two separate and distinct rights were created by the 1988 Act: a performer's right and a recording right. The nature of the rights was somewhat peculiar as the rights were not transmissible, except that a performer's right would pass on the death of the performer concerned.<sup>13</sup> However, by s 185(2)(b), the benefit of an exclusive recording licence could be assigned, and by s 185(3)(b) a person could assign the benefit of a

licence to make recordings for commercial exploitation. Either the person having recording rights or the person granting the licence had to be a qualifying person. As a result of these limitations on transmissibility, rights in performances were not true property rights. The performer's right, in particular, had some features in common with the author's moral rights under copyright law.<sup>14</sup> However, in other respects, the rights were very similar to copyright. Rights in performances subsist alongside and were independent of copyright, both the economic and moral rights. A fairly complex mosaic of rights could be involved. For example, a live performance might take place of a piece of music by a singer (Cynthia) and orchestra (Harvey and the Syncopators). The music was recently written by Filbert and the lyrics by Hamstein, who have assigned their copyrights to the Palm Beach Music Publishing Company. A television company (SKB TV) may have had an exclusive recording contract with the singer and orchestra. If a person, John Silver, was in the audience and made a bootleg recording with the intention of making copies for sale, then John infringed the following rights:

- 1 Palm Beach's copyright in the musical and literary work;
- 2 the performance right belonging to Cynthia and to each and every member of the orchestra;
- 3 SKB TV's recording right.

In addition, if John had made copies that were issued to the public, but which did not mention the fact that the music was written by Filbert and Hamstein, they would have had an action against John for infringement of their moral right to be identified as the authors of the music and lyrics. If he sold or rented copies to the public, John would further infringe the copyrights.<sup>15</sup> The situation could be even more complex if the music was subject to an agreement with a collecting society, or if SKB TV had assigned the benefit of the exclusive recording contract to another. John was, therefore, exposed to a veritable battery of civil actions, but he was also liable to be prosecuted for offences under copyright law<sup>16</sup> and for dealing with illicit recordings.<sup>17</sup>

The meaning of recording was accepted to apply to both the recording and a record made from that recording in *Bassey v Icon Entertainment plc*.<sup>18</sup> In that case, a recording was made of a live performance by Shirley Bassey. She had the right to veto the release of records made from the recording if she was not satisfied with its quality and she exercised that veto. Together with David Bainbridge, who owned the copyright in the recording, she brought a successful action to prevent the release of those records. The court held that making records of the recording infringed those rights in the absence of express or implied consent.

<sup>14</sup> Performers now have a separate moral right in addition to their property rights and non-property rights.

<sup>15</sup> He could have had further liabilities arising from rental and lending rights provided for in pursuance of the rental and lending rights Directive.

<sup>16</sup> Copyright, Designs and Patents Act 1988 s 107(1).

<sup>17</sup> Copyright, Designs and Patents Act 1988 s 198(1).

<sup>18</sup> [1995] EMLR 596.

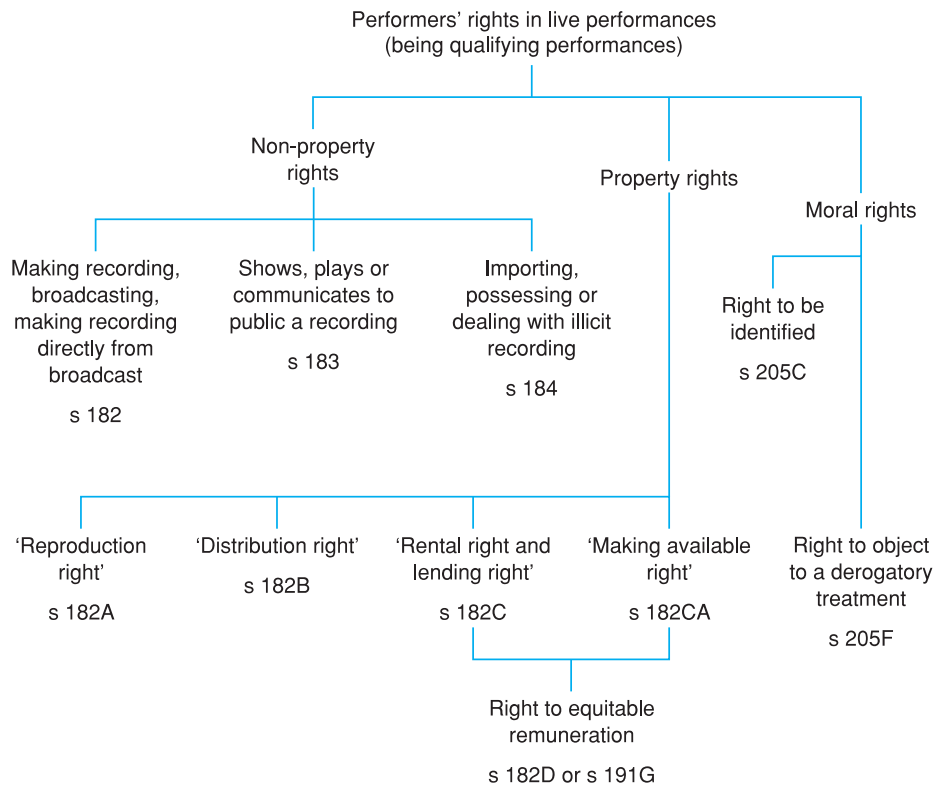

## RIGHTS IN PERFORMANCES – PRESENT POSITION

Rights in performances were significantly strengthened as a result of the Copyright and Related Rights Regulations 1996<sup>19</sup> which implemented, *inter alia*, the Directive on rental right and lending right.<sup>20</sup> Further changes have been made, including by the Copyright and Related Rights Regulations 2003.<sup>21</sup> The rights of a person having recording rights were not radically changed, but the rights of performers were transformed by the 1996 Regulations and a further right (the 'making available right') was added by the 2003 Regulations. As mentioned earlier, performers' rights were analogous to moral rights under copyright law. These rights continue and new ones have been added, but the most dramatic change is that, alongside these, performers are given full property rights which can be exploited and dealt with just as a copyright in addition, more recently, to moral rights to be identified as performer and to object to a derogatory treatment of a performance. A performer now has 'property rights', 'non-property

<sup>19</sup> SI 1996/2967. The new provisions came into force on 1 December 1996.

<sup>20</sup> OJ L 346, 27.11.92, p 61. Replaced by codifying Directive 2006/115/EC of the European Parliament and of the Council of 12 December 2006 on rental right and lending right and on certain rights related to copyright in the field of intellectual property, OJ L 376, 27.12.2006, p 28.

<sup>21</sup> SI 2003/2498.

*Note:* If a performer transfers his rental right in relation to a sound recording or film to its producer, this is replaced by a right to equitable remuneration for the rental (s 191G(1)). There is also a right to equitable remuneration where a commercially published sound recording is played in public or broadcast to the public under s 182D.

**Figure 9.1** Performers' rights

rights' and moral rights, as indicated in Figure 9.1. It should be noted that, in some cases, there is some relationship between the property rights, the non-property rights and also the performers' moral rights. For example, a performer's non-property rights are infringed by a person making without the performer's consent a recording of the whole or any substantial part of a qualifying performance directly from the live performance.<sup>22</sup> If that person then makes copies of the recording, directly or indirectly, that will infringe the performer's property right of reproduction.<sup>23</sup> If the copies do not bear a notice identifying the performer and are subsequently issued to the public there will be an infringement of his moral right to be identified as such as well as an infringement of the performer's property right of issuing copies to the public.

Before these important changes, the duration of rights in performances had been modified to bring them more in line with the rules applying to copyright sound recordings. Until 1 January 1996, the duration of rights in performances was simply 50 years from the end of the calendar year during which the performance took place. As a result of the Duration of Copyright and Rights in Performances Regulations 1995,<sup>24</sup> a new s 191 was substituted into the Act.<sup>25</sup> The basic rule on the duration of rights in performances is now as follows:

- (a) 50 years from the end of the calendar year in which the performance takes place, or
- (b) if during that period a recording of the performance is released, 50 years from the end of the calendar year in which it was released.

<sup>22</sup> Copyright, Designs and Patents Act 1988 s 182(1)(a).

<sup>23</sup> Copyright, Designs and Patents Act 1988 s 182A.

<sup>24</sup> SI 1995/3297, implementing Council Directive 93/98/EEC of 29 October 1993 harmonising the term of copyright and certain related rights, OJ L 290, 24.11.1993, p 9. This Directive was repealed and replaced by a codified version, Directive 2006/116/EC of the European Parliament and of the Council of 12 December 2006 on the term of copyright and certain related rights, OJ L372, 27.12.2006, p 12.

<sup>25</sup> Duration of Copyright and Rights in Performances Regulations 1995, SI 1995/3297, reg 13.

This is similar to that applying to sound recordings. Where the performer is not a national of a European Economic Area (EEA) state, the term of protection is as in the country of which the performer is a national provided it is not longer than that available under s 191 as substituted.<sup>26</sup>

The definition of ‘released’ is when the recording is first published, played or shown in public or communicated to the public. As with copyright, ‘communication to the public’ means broadcasting or making available to the public by electronic transmission in such a way that members of the public can access the work (in this case recoding) from a place and at a time individually chosen by them. As is general in the 1988 Act, no account is taken of any unauthorised act.

The Duration of Copyright and Rights in Performances Regulations 1995 contained a number of transitional provisions, particularly dealing with extended rights and revived rights. In principle, these are similar to those applying to extended and revived copyright, for which *see* Chapter 3 (p 78).

It is possible that a recording made without the performer’s consent may be shown in public or broadcast when the performer is still alive, if the performance was more than 50 years ago and it was released soon after. However, the decision in the *Rickless* case may still give rise to a separate civil right of action based on the offences which have no time limit.<sup>27</sup>

In the remainder of this chapter some common ground is covered, then the performers’ non-property rights as modified by the Copyright and Related Rights Regulations 1996 will be described. This will be followed by the performers’ property rights and moral rights. The rights of persons having an exclusive recording contract with the performer, or the benefit of such a contract, are then considered, followed by the permitted acts, the transitional provisions and the criminal offences, which have been modified by the Copyright, etc. and Trade Marks (Offences and Enforcement) Act 2002 and added to by the Copyright and Related Rights Regulations 2003.<sup>28</sup>

It should be noted that the performers’ property rights are ‘new rights’ and distinct from the performers’ non-property rights. The former can be dealt with as any other form of property rights whilst the latter are personal rights which are not assignable, as discussed later.<sup>29</sup>

## COMMON GROUND

The rights are given to performers and persons having recording rights, and their consent is required for the exploitation of the performance or the making of recordings.<sup>30</sup> Rights in performances should not be confused with ‘performing rights’. This term is usually used to signify rights under copyright in relation to the acts of performing, showing or playing a work, in which copyright subsists, in public. For example, where a retail store wishes to play background music, it will require the permission of the relevant copyright owners. The copyright performing rights are usually administered by collecting societies such as the Performing Right Society (in the UK).

A performance is a live performance given by one or more individuals which is a dramatic performance (including dance and mime), a musical performance, a reading or recitation of a literary work, or a performance of a variety act or any similar presentation which is, or so far as it is, a live performance given by one or more individuals.<sup>31</sup> If a person sings live to a recorded backing track, for example in a ‘karaoke bar’, the live performance relates to the live singing only.<sup>32</sup> The meaning of ‘recording’ is important in terms of recording rights and infringement and is defined in s 180(2) as being a film or sound recording made directly from a live performance, or made from a broadcast of the performance made, directly or indirectly, from another recording of the performance.

<sup>26</sup> Under s 191(5), if this would be at variance with an international obligation of which the UK became subject before 29 October 1993, the duration is as specified by the basic rules on duration.

<sup>27</sup> Section 180(4) states that the rights conferred are independent of ‘any other right or obligation arising otherwise than under this Part’.

<sup>28</sup> SI 2003/2498.

<sup>29</sup> *Barrett v Universal-Island Records Ltd* [2006] EMLR 567, concerning rights in performances by Bob Marley and The Wailers.

<sup>30</sup> The performer’s consent is required in relation to the performers’ rights, but the consent of either the performer or the person having the recording right is required in relation to the recording right.

<sup>31</sup> Copyright, Designs and Patents Act 1988 s 180(2).

<sup>32</sup> However, there is also a public performance of the backing track and there will be an infringement of this unless permission to play the track has been obtained or a licence scheme is in operation and covers the playing of the particular backing track in question.

Therefore, copies made from a master recording that was made during the performance count as being recordings.

For the rights to exist, certain qualification requirements must be satisfied. The performers' rights subsist only if the performance is a qualifying performance which, by s 181, means that it must be given by a qualifying individual or take place in a qualifying country. Section 206 defines a qualifying individual as being a citizen or subject of a qualifying country or a person who is resident in such a country. 'Qualifying country' means the UK and any other Member State of the European Economic Community and any other country designated by Order in Council under s 208, that is, to countries enjoying reciprocal protection.<sup>33</sup> The current order is the Copyright and Performances (Application to Other Countries) Order 2008.<sup>34</sup> This applies to countries which are parties to the Rome Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organisations 1961 and, granting limited protection to performers, to other countries party to the Agreement of Trade Related Aspects of Intellectual Property Rights.

For the recording right, by s 185, the person having recording rights who is a party to an exclusive recording contract with the performer or the assignee of the benefit of such a contract must be a qualifying person.<sup>35</sup> If not, then the right might still arise where a person who has been licensed to make recordings or to whom the benefit of such a licence has been assigned is a qualifying person. A qualifying person can be a qualifying individual or a body corporate or other body having legal personality formed under the law of the UK or of another qualifying country which carries on a substantial business activity in any qualifying country: s 206. It should be noted that the recording right can arise even though the performance is not a qualifying performance, so that an Italian film company having an exclusive recording contract to record the live performance of a juggler from North Korea which takes place in Syria will have recording rights which are enforceable in the UK, even though the juggler himself has no rights in relation to his own performance subject to UK law. The performance is not a qualifying performance because the juggler fails to meet the requirements for a qualifying individual and the performance does not take place in a qualifying country.<sup>36</sup>

Rights in performances are conferred retrospectively by s 180(3) but there may be a problem where the performance took place in a country which was not granted reciprocal protection prior to the commencement of the 1988 Act or the 1996 Regulations as the case may be. For example, in *Experience Hendrix LLC v Purple Haze Records Ltd*,<sup>37</sup> the late Jimi Hendrix gave, with others, live performances in Stockholm in 1969. Sweden did not join the European Community until 1 January 1995 and was not a qualifying country until then although reciprocal protection was granted in 1989 by an Order in Council made under s 208. It had been argued that, as there were no express transitional provisions dealing with this situation, the Stockholm performance was not a qualifying performance as Sweden was not a qualifying country at the time of the performance. This was rejected by Hart J: as a performance given in the UK before 1 August 1989 was a qualifying performance, there was nothing to suggest that a performance made before that date in another Member State of the EC could not also be a qualifying performance. Later, the Court of Appeal rejected a claim that the rights did not apply to persons who died before commencement of the Copyright, Designs and Patents Act 1988 in *Experience Hendrix LLC v Purple Haze Records Ltd (No 2)*.<sup>38</sup> This was so even though some of the language of the Part of the Act dealing with performance was expressed in the present tense. The argument that the rights did not apply to performers who died before commencement was only viable had the Act been construed in isolation, not talking account of international obligations and pre-existing law, including the so-called 'Rickless rights'.<sup>39</sup>

<sup>33</sup> This includes countries that are members of the Rome Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organisations 1961.

<sup>34</sup> SI 2008/677.

<sup>35</sup> An exclusive recording contract is a contract between the performer and another person under which that other person is entitled to the exclusion of all others, including the performer, to make recordings of one or more of his performances with a view to their commercial exploitation: s 185(1).

<sup>36</sup> North Korea and Syria are not members of the Rome Convention.

<sup>37</sup> [2005] EMLR 417.

<sup>38</sup> [2007] FSR 769. Jimi Hendrix died in 1970.

<sup>39</sup> After *Rickless v United Artists Corp* [1988] 1 QB 40, *supra*.

## Illicit recording

The meaning of ‘illicit recording’ is important in terms of some forms of infringement of the rights and for the offences. It is the equivalent of an infringing copy of a work in which copyright subsists, but there are some differences.

By s 197, an illicit recording is:

- (a) for the purpose of a performer’s rights, a recording of the whole or any substantial part of a performance made, otherwise than for private purposes, without the performer’s consent;
- (b) for the recording rights, a recording of the whole or any substantial part of a performance subject to an exclusive recording contract made, otherwise than for private purposes, without the consent of either the performer or the person entitled to the recording rights;
- (c) for the purposes of ss 198 and 199 (offences and delivery up in criminal proceedings) it is an illicit recording if it falls within (a) or (b) above;
- (d) a recording which is an illicit recording under the provisions of Sch 2 to the Copyright, Designs and Patents Act 1988 (the permitted acts in relation to performances). This covers recordings, the making of which did not infringe the rights in performances because they were made for a permitted act, but which have been used subsequently outside the terms of the exception: for example, where a recording made for educational purposes has been sold.<sup>40</sup>

<sup>40</sup> See Copyright, Designs and Patents Act 1988 Sch 2, para 6(2).

The place where the recording was made is immaterial and there is no reason to believe that the question of substantiality will be construed otherwise than it is for copyright purposes.

## Consent

The issue of consent is central to the infringement of the rights. There is no requirement for the consent to be in writing and, by s 193(1), consent may relate to a single specific performance, a specified description of performances or performances generally. Future and past performances are included, so that consent can be given retrospectively. Persons having any of the rights devolved to them are bound by consents given by previous rightholders. This is strict and there are no statutory exceptions for ‘equity’s darling’.

In the absence of express consent, it seems reasonable to suppose that it may be implied, and it will be so implied if it is necessary and reasonable to do so. The same applies to the need to obtain consent if the intended use of a recording of a performance appears to exceed the terms of the original consent. However, consent given in respect of a particular use does not necessarily prohibit, by implication, other uses; something else must be shown: for example, that the new intended use raises an implication that further consent is required. In *Grower v British Broadcasting Corporation*<sup>41</sup> the BBC had made a recording of a performance of ‘Hoochie Coochie Man’ by the Jimi Hendrix Experience for the immediate purpose of broadcasting on a radio programme hosted by Alexis Korner who had, at the invitation of Hendrix, joined in the performance, playing a guitar. It appeared that Korner had consented to the making of the recording and the broadcasting of that recording. In an agreement made in 1988, the BBC granted a licence to a Californian company in respect of the sound recording. The licence included a term that the Californian company obtained the consent of any artists who had contributed to the recording before exploiting the recording. The claimants, the executors of Korner’s estate, sued the BBC (as joint tortfeasor) on the basis that the Californian company had exploited the sound recording without their

<sup>41</sup> [1990] FSR 595.

consent and that this was a breach of the performer's rights under the Copyright, Designs and Patents Act 1988 Part II. It was held, *inter alia*, that the claimant would have to establish that there was an implied term that the BBC either obtain the claimants' consent to exploit the sound recording or that the BBC would guarantee that a licensee or assignee of the copyright in the sound recording would obtain the consent of all the performers, and neither implication was necessary nor reasonable in the circumstances.<sup>42</sup>

<sup>42</sup> Of course, the BBC owned the copyright in the sound recording. Nor was the BBC liable as joint tortfeasor as, although the BBC may have facilitated the infringement by the Californian company, it had not participated in it. It was, however, arguable that the making of a back-up copy of the recording was a breach of the Dramatic and Musical Performers' Protection Act 1958, and a breach of the agreement between Korner and the BBC.

## PERFORMERS' NON-PROPERTY RIGHTS

These rights are set out in the Copyright, Designs and Patents Act 1988 s 182 (which was substituted by the Copyright and Related Rights Regulations 1996) and ss 183 and 184, which are unchanged except that the phrase 'broadcasts or includes in a cable programme service' was substituted with 'communicates to the public' by the Copyright and Related Rights Regulations 2003. A performer's rights in a qualifying performance are infringed by any person who, without the performer's consent, does any of the following acts in relation to the whole or any substantial part of a qualifying performance:

- (a) makes a recording of the whole or any substantial part of a qualifying performance directly from the live performance (s 182(1)(a));
- (b) broadcasts live the whole or any substantial part of a qualifying performance (s 182(1)(b));
- (c) makes a recording of the whole or any substantial part of a qualifying performance directly from a broadcast of the live performance (s 182(1)(c));
- (d) by means of a recording which was, and which that person knows or has reason to believe was, made without the performer's consent, shows, plays in public or communicates to the public the whole or any substantial part of a qualifying performance (s 183);
- (e) imports into the UK, otherwise than for his own private and domestic purposes, or, in the course of a business, possesses, sells, lets for hire, offers or exposes for sale or hire or distributes an illicit recording, which he knows is or has reason to believe is an illicit recording (s 184).<sup>43</sup>

<sup>43</sup> There is a defence to this form of infringement under s 184(2) where the defendant shows that the illicit recording was innocently acquired either by him or a predecessor in title. Innocence in this case means that the person did not know and had no reason to believe that it was an illicit recording: s 184(3). This is not a complete defence but serves to limit damages to a reasonable payment in respect of the act complained of.

<sup>44</sup> Copyright, Designs and Patents Act 1988 s 194.

<sup>45</sup> These provisions are almost identical to those prior to the 1996 Regulations.

<sup>46</sup> It may be that the performer does not specifically bequeath all his non-property rights, in which case, those not bequeathed are exercisable by his personal representatives.

<sup>47</sup> Copyright, Designs and Patents Act 1988 s 195. There is a limitation period of six years under s 203, and s 204 contains provisions for court orders for disposal. The limitation period can be longer where the performer has been under a disability or does not know of the relevant facts due to fraud or concealment.

Infringement is actionable as a breach of statutory duty.<sup>44</sup> For the infringements under s 182, damages are not available as against a defendant who can show that, at the time of the infringement, he had reasonable grounds for believing that consent had been given.

The performer's non-property rights are not assignable or transmissible except as set out in s 192A.<sup>45</sup> The performer may provide for the rights to pass under his will to a specific person or persons; otherwise, on his death, the rights become exercisable by his personal representatives.<sup>46</sup> Should the performer bequeath his non-property rights to more than one person, the rights are exercisable by each independently of the other or others.

There are provisions for delivery up of illicit recordings following application to the court by the performer or person having the recording rights, as appropriate.<sup>47</sup> Performers and persons having recording rights have a limited right of seizure in respect of illicit recordings under s 196. This right is similar to that applying to infringing works of copyright under s 100. It is not to be exercised at permanent or regular places of business and notice must first be given to the police. It is intended to be used, for example, at car boot sales and the like.

## PERFORMERS' PROPERTY RIGHTS

These full property rights can be described as the 'reproduction right', 'distribution right', 'rental and lending right' and the 'making available right'. If the performer transfers his rental right, this is then replaced by a right to equitable remuneration in the case of the rental of a sound recording or film containing the performance. A right to equitable remuneration also applies where a commercially published sound recording of the whole or any substantial part of a qualifying performance is played in public or communicated to the public otherwise than by being made available by way of the 'making available right'.

### Reproduction right

This is a right which, under s 182A, is infringed by the making of a copy of a recording of the whole or any substantial part of a qualifying performance without the consent of the performer. Making a copy includes making a transient copy or one incidental to some other use of the original recording. It matters not whether the copy is made directly or indirectly. Making the recording in the first place will infringe the performer's non-property right. The right is to authorise or prohibit the making of such copies.

All the four performers' property rights refer to the consent of the performer. As the rights are full property rights and assignable as such, the consent referred to should be that of the contemporary owner of the right. The rental right and lending right Directive is better as it speaks of the 'rightholder'.

### Distribution right

Under s 182B(1), the right is infringed by a person who issues to the public copies of a recording of the whole or a substantial part of a qualifying performance without the performer's consent. Issuing to the public means putting into circulation copies not previously put into circulation in the EEA by or with the consent of the performer, or putting into circulation outside the EEA copies not previously put into circulation in the EEA or elsewhere. However, the doctrine of exhaustion of rights applies and this does not extend to subsequent distribution (without prejudice to the consent required for rental or lending) or subsequent importation into the UK or another EEA state,<sup>48</sup> except so far as putting into circulation in the EEA by or with the consent of the performer applies to putting into circulation into the EEA copies previously put into circulation outside the EEA.

What this contrived set of rules is probably trying to achieve is that the performer's distribution right will be infringed if a person puts copies into circulation anywhere without the consent of the performer, or imports into an EEA state copies from outside the EEA without the performer's consent, whether or not those copies were put into circulation by or with the consent of the performer. The rental right and lending right Directive is much simpler on this point, merely stating that the rightholder's distribution right is exhausted by first sale within the European Community (the reference now should be to the EEA) made by the rightholder or with his consent.<sup>49</sup> Of course, sale of a copy of a recording does not, by itself, exhaust any rental or lending right.<sup>50</sup>

Issuing copies of a recording also covers the situation where the original recording is issued to the public.

### Rental right and lending right

The right here is to authorise or prohibit rental and lending of copies of the performance to the public. The right is infringed, under s 182C, by a person who, without the

<sup>48</sup> Copyright, Designs and Patents Act 1988 s 182B(2) and (3).

<sup>49</sup> Article 9(2).

<sup>50</sup> See Case C-200/96 *Metronome Musik GmbH v Music Point Hokamp GmbH* [1998] ECR I-1953.

performer's consent, rents or lends to the public copies of a recording of the whole or any substantial part of a qualifying performance.

The meanings of 'rental' and 'lending' are equivalent to those for copyright works as set out in s 18A. Thus, rental is making available for use, on terms that the copy will or may be returned, for direct or indirect economic or commercial advantage. Lending is making a copy available, on terms that it will or may be returned, otherwise than for direct or indirect economic or commercial advantage through an establishment accessible to the public. The expressions 'rental' and 'lending' do not include making available for the purpose of public performance, playing or showing in public or communication to the public, making available for the purpose of exhibition in public or making available for on-the-spot reference use. The provisions apply equally to the original recording as they do to copies.

### Making available right

The 'making available right' was introduced by the Copyright and Related Rights Regulations 2003 and was intended to cover a situation where a recording of a qualifying performance was made available electronically for access or downloading as and when a person chooses to do so. An obvious example is where a recording performance is accessible from an internet website so that a person entering the website can play the recording or download it for later playing. Another example is the access and downloading of ring tones for mobile telephones. It does not cover the position where a recording is broadcast or transmitted by cable as part of a scheduled and timetabled service.

The making available right is infringed where a person, without the performer's consent, makes available to the public a recording of the whole or any substantial part of a qualifying performance by electronic transmission in such a way that members of the public may access the recording from a place and at a time individually chosen by them: s 182CA. Thus, a person making a 'bootleg' recording of a live performance and making it available online, for example, by allowing visitors to the website to play the recording or download it, will infringe the right. Making the bootleg recording would also infringe the right under s 182 (making recording of qualifying performance without consent).

### Right to equitable remuneration – exploitation of sound recording

Under s 182D, a performer is entitled to equitable remuneration from the owner of the copyright in a commercially published sound recording of the whole or any substantial part of a qualifying performance if it is played in public or communicated to the public, otherwise than by way of the 'making available right'. This latter act means broadcasting which is what is left of the meaning of communication to the public when the making available right is subtracted from it. However, s 182D(1A) was inserted to include, in the meaning of publication of a sound recording for the purposes of s 182D(1), making available by electronic transmission in such a way that members of the public may access the recording from a place and at a time individually chosen by them.<sup>51</sup> This right may not be assigned except to a collecting society, though it may pass under a will or by operation of law and, from then on, it may be further assigned or transferred.

The amount payable by way of equitable remuneration is to be agreed, with the possibility of application to the Copyright Tribunal in the absence of agreement.<sup>52</sup> An agreement purporting to exclude or restrict the right to equitable remuneration or prevent a person questioning the amount of equitable remuneration or restrict the powers

<sup>51</sup> Inserted by the Performances (Moral Rights, etc.) Regulations 2006, SI 2006/18 with effect from 1 February 2006.

<sup>52</sup> The powers of the Copyright Tribunal are extended accordingly.

of the Copyright Tribunal in respect of this right to equitable remuneration is of no effect to that extent.

### Right to equitable remuneration where rental right transferred

There is a right to an equitable remuneration in respect of rental under s 191G, where the performer has transferred his rental rights in relation to a sound recording or film to the producer of the sound recording or film. The right may not be assigned by the performer except to a collecting society, defined for the purposes of s 191G as a society or other organisation having as its main object, or one of its main objects, the exercise of the right to equitable remuneration on behalf of more than one performer. The right does, however, pass under testamentary disposition or operation of law and, subsequently, can be assigned or further transmitted. The amount payable is that to be agreed by persons by or on whose behalf it is to be paid and is payable subject to a reference to the Copyright Tribunal. The right cannot be excluded or restricted by agreement and any agreement purporting to do this is of no effect to that extent.

Section 191F provides for presumed transfer of the rental right, to be replaced by a right to an equitable remuneration, in the case of an agreement concerning film production being concluded between the performer and the film producer. The absence of the signature of the performer or person acting on his behalf does not exclude the operation of s 191C which deals with prospective ownership of performers' property rights.

### Dealing with performers' property rights and infringement

The provisions for assignment, licensing (including exclusive licences) and prospective ownership are similar to those applying to copyright works. Thus, the assignments must be in writing and signed by or on behalf of the assignor and assignments may be partial.<sup>53</sup> Exclusive licensees may sue for infringement and the provisions for the exercise of concurrent rights are equivalent to those for copyright. Remedies are damages, injunctions, accounts or otherwise<sup>54</sup> (as for copyright) and there is also provision for additional damages under s 191J. Also, there is provision, where licences are available as of right, for a defendant to undertake to take such a licence thereby limiting remedies to damages of twice the amount payable under such a licence.<sup>55</sup>

Under s 191JA an injunction may be granted, by the High Court or Court of Session in Scotland, against a service provider having actual knowledge that another person is using the service to infringe a performer's property right.<sup>56</sup> In determining whether a service provider has actual knowledge, a court must take into account all matters which appear to it in the particular circumstances to be relevant. This includes whether the service provider has received a notice, for example, sent to his e-mail address under reg 6(1)(c) of the Electronic Commerce (EC Directive) Regulations 2002, and the extent to which the notice includes the full name and address of the sender and the details of the infringement in question. These provisions on injunctions on service providers are particularly relevant in relation to online services such as providing internet access and bulletin boards.

Where a person is entitled under a bequest (general or specific) to any material thing containing an original recording of a performance which was not published before the death of the testator, the bequest shall be construed as including any performers' rights in relation to the recording to which the testator was entitled immediately before his death.<sup>57</sup> This is subject to any contrary intention in the will or a codicil to it. Again, this is similar to the equivalent provision under copyright law.

<sup>53</sup> Copyright, Designs and Patents Act 1988 s 191B.

<sup>54</sup> Copyright, Designs and Patents Act 1988 s 191I. The assessment of damages must now be made under the formula in reg 3 of the Intellectual Property (Enforcement, etc.) Regulations 2006, SI 2006/1028.

<sup>55</sup> Section 191K.

<sup>56</sup> Section 191JA was inserted by the Copyright and Related Rights Regulations 2003, SI 2003/2498.

<sup>57</sup> Copyright, Designs and Patents Act 1988 s 191E.

## PERFORMERS' MORAL RIGHTS

The WIPO Performers and Phonograms Treaty 1996 provided for moral rights for performers and, as that Treaty and the WIPO Copyright Treaty 1996 have been specified as Community Treaties, the UK was required to make amendments to the Copyright, Designs and Patents Act 1988 to include performers' moral rights, which it did by virtue of the Performances (Moral Rights, etc.) Regulations 2006<sup>58</sup> which came into force on 1 February 2006.

58 SI 2006/18.

The moral rights granted to performers of qualifying performances are the right to be identified as the performer and the right to object to a derogatory treatment of a performance. Part II of the Copyright, Designs and Patents Act 1988, dealing with rights in performances, has been restructured and chapter numbers inserted. The new moral rights for performers are contained in new ss 205C to 205N of the Act.

### Right to be identified as performer

New s 205C provides for the right to be identified as performer and applies to qualifying performances given in public, broadcast live, communicated to the public in the form of a sound recording or where copies of such a sound recording are issued to the public. The meaning of a qualifying performance is as already provided for under s 206 of the Act. The right to be identified applies in relation to the whole or any substantial part of a performance.

The identification should be in such a manner which is likely to bring the performer's identity to the notice of the person hearing or seeing the performance, communication or acquiring a copy of a sound recording, as the case may be. Where the performance is given in public, identification may be given in any programme accompanying the performance or in some other manner. As an alternative, the manner of identifying the performer may be according to an agreement between the performer and person producing the performance in public, broadcasting it, communicating the sound recording of the performance or issuing copies of the sound recording to the public, as appropriate.

Where the performance is by a group, being two or more persons with a name by which they are collectively identified, they may be identified by the name of the group. One proviso is where copies of sound recordings of qualifying performances are issued to the public. In this case, the right is satisfied by naming the group solely by group name if it is not reasonably practicable to identify each member of the group separately.

As with the right to be identified in relation to original works of copyright and principal directors of films, the right must be asserted. The provisions on assertion are contained in s 205D and are similar to those for copyright works, *mutatis mutandis*. For example, an assertion may be made generally or in relation to a specific act or description of acts by written instrument signed by or on behalf of the performer or on an assignment of a performer's property rights. In the former case, anyone to whom notice of the assertion is brought is bound by it and, in the latter case, the assignee is bound as is anyone claiming through him, whether or not he has notice of the assertion. However, again like copyright, a court can take into account, in determining remedies, any delay in asserting the right. Where an assertion specifies a pseudonym, initials or some other form of identification, that form must be used; otherwise any reasonable form of identification must be used.

There are exceptions to the right to be identified, set out in s 205E, but these do not follow those relating to moral rights under copyright but primarily take into account

some of the permitted acts in relation to performances in Sch 2 to the Act. The first exception is where it is not reasonably practicable to identify the performer or group where this is permitted. The right does not apply in relation to a performance given for the purposes of reporting current events or to a performance for the purposes of advertising any goods or services. The Sch 2 exceptions are in relation to news reporting, incidental inclusion, things done for the purposes of examination, parliamentary and judicial proceedings or in relation to Royal Commissions and statutory bodies. Importantly, the exceptions relating to employees for moral rights under copyright do not apply to performances.

## Derogatory treatment

This also applies in relation to qualifying performances. The performer's right to object to a derogatory performance, under s 205F, is infringed in the case of a live broadcast of it or where, by means of a sound recording, it is played in public or communicated to the public with any distortion, mutilation or other modification that is prejudicial to the reputation of the performer.

A derogatory treatment for the equivalent moral right under copyright law is differently defined and is one which amounts to '... a distortion or mutilation of the work *or is otherwise* prejudicial to the *honour* or reputation of the author or director' (emphasis added): s 80(2)(b). For the performer's right, there is no mention of honour but, for copyright, a distortion or mutilation appears to be a derogatory treatment as being prejudicial to the honour or reputation of the author or director, *per se*. Furthermore, for the performer's right, a modification may trigger the right if it is prejudicial. The modification may be one other than a distortion or mutilation. The right would appear to apply in relation to the whole or any part of a performance and there is no requirement for the part to be a substantial part of the performance.

The right to object to a derogatory treatment is subject to the exceptions in s 205G which relate to:

- performances for the purposes of reporting current events (to which the right does not apply);
- modifications to a performance consistent with normal editorial or production practice (in this case the right applies but is not infringed);
- anything done for the purposes of avoiding the commission of any offence, complying with any duty imposed by or under an enactment or, in the case of the BBC, avoiding in any programme broadcast by the BBC anything which offends against good taste or decency or which is likely to encourage or incite crime or lead to disorder or be offensive to public feeling (again, the right is not infringed).

This last list of exceptions is subject to s 205G(5) which states that the exceptions apply only if there is a sufficient disclaimer where a performer is identified in a manner likely to bring his identity to the notice of a person seeing or hearing the performance as modified or where he has previously been identified in or on copies of a sound recording issued to the public.

A sufficient disclaimer is, under s 205G(6), in relation to an act capable of infringing the right, a clear and reasonably prominent indication that the modifications were made without the performer's consent given in a manner likely to bring it to the notice of a person seeing or hearing the performance or, if the performer was identified at the time of the act, appearing along with that identification.

A person who possesses in the course of business or sells or lets for hire, or offers or exposes for sale or hire, or distributes an article which he knows or has reason to

believe is an infringing article also infringes the right to object to a derogatory treatment. An ‘infringing article’ is a sound recording of a qualifying performance with any distortion, mutilation or other modification that is prejudicial to the reputation of the performer.

### Supplementary provisions

Performers’ moral rights will endure for the same time as the performers’ property and non-property rights, being 50 years from the end of the calendar year during which the performance was made or, if during that period it was released, 50 years from the end of the calendar year during which it was released.

The rights are not infringed where consent has been given by or on behalf of the performer and the rights may be waived by written instrument, signed by or on behalf of the performer, either generally or specifically: s 205J. A waiver may be conditional or unconditional and may be expressed as subject to revocation.

Moral rights of performers, like the equivalent one for copyright authors and principal directors of films, cannot be assigned but, as with copyright, there are provisions for the transmission of the rights on the death of the performer. For example, the performer may have expressed in a will that the rights devolve to a specific person or persons. Where there is no such direction, the rights devolve to the person to whom the performer’s property rights devolve where they are part of the performer’s estate. If neither applies, the rights are exercisable by the performer’s personal representatives. There are provisions to deal with consents and waivers where more than one person is entitled to the rights.

An infringement of the right to be identified as performer or to object to a derogatory treatment is actionable as a breach of statutory duty under s 205N. Unlike the case with copyright the Regulations deal with a situation where a person falsely claims to act on behalf of a performer and purports to give consent to the relevant conduct or to waive the right. Where this causes an infringement of the right, that person will be liable, jointly and severally, with any person liable for that infringement as if he himself had infringed the right. However, it is a defence to show that a person infringing one of the rights reasonably believed that the person claiming to act on behalf of the performer and giving consent or purporting to waive the rights was indeed acting on the performer’s behalf.

In relation to the right to object to a derogatory treatment, apart from the usual remedy of an injunction for a breach of statutory duty, a specific form of injunction may be granted on terms that an act is prohibited unless a disclaimer is made dissociating the performer from the broadcast or sound recording. This is possible if the court thinks it an adequate remedy in the circumstances. The terms and manner of the disclaimer dissociating the performer from the broadcast or sound recording of the performance will be as the court approves.

The new performers’ moral rights are not retrospective and do not apply to performances which took place before 1 February 2006, the date these provisions came into force.

## RECORDING RIGHTS

Recording rights are given to a person having an exclusive recording contract with a performer, being one under which that person is entitled to the exclusion of all others, including the performer, to make recordings of one or more of his performances with a view to their commercial exploitation.<sup>59</sup> That person must be a party to the contract

<sup>59</sup> Copyright, Designs and Patents Act 1988 s 185.

and have the benefit of the contract, or be a person to whom the benefit of the contract has been assigned. He must also be a qualifying person. Apart from being able to assign the benefit of the contract, under s 192B, the right is not assignable or transmissible.

If the person who would otherwise be entitled to the right is not a qualifying person, references are instead to a person licensed by such a person to make recordings for commercial exploitation, or to a person to whom the benefit of such a licence has been assigned if that person is a qualifying person. Thus, for example, if an American company having an exclusive recording contract with a performer to record a live performance to take place in the UK grants a licence to an English company actually to make the recording, it will be the English company which is entitled to the recording right.<sup>60</sup>

Making a recording ‘with a view to commercial exploitation’ simply means, under s 185(4), with a view to recordings being sold or let for hire, shown or played in public.

A person infringes the rights of a person having recording rights by making a recording of the whole or any substantial part of the performance without the consent of the person having the recording rights or the performer under s 186. Damages are not available if the defendant shows that, at the time of the infringement, he believed on reasonable grounds that consent had been given.

Subsequent use of a recording made without consent under s 187 infringes. In this case, the use covers showing or playing the whole or any substantial part of the performance or the communication of it to the public. The consent required is that of the person having recording rights in relation to a performance or, in the case of a qualifying performance, that of the performer. Furthermore, for infringement, the person concerned must know or have reason to believe that the recording was made without the appropriate consent, being under s 187(2) that of the performer or the person who at the time the consent was given had recording rights in relation to the performance. If there was more than one such person, the consent of all is required. Section 187(2) is curiously worded in that the second limb is stated in terms of the consent having been given.

Importing, possessing and dealing with illicit recordings, if done without consent, will infringe the recording right if the person concerned knows or has reason to believe that the recording of the performance is an illicit recording. The consent is that of the person having recording rights or, in the case of a qualifying performance, that of the performer. As usual, having reason to believe is an objective test. Section 188(2) limits remedies against a person where he, or a predecessor in title, innocently acquired the illicit recording to damages not exceeding a reasonable payment in respect of the act complained of. ‘Innocently acquired’ means the person acquiring the recording did not know and had no reason to believe that the recording was an illicit recording.

Infringement of recording rights is actionable as a breach of statutory duty under s 194 as is the case with performers’ non-property rights.

## Exceptions

The *Rickless* case was criticised in that it gave civil rights in a way that was probably not intended by Parliament and this meant that such civil rights were without the comprehensive exceptions that apply to copyright and moderate its strength. The fine balance usually maintained between the interests of the owners of intellectual property rights and the public was missing. The 1988 provisions remedied this in an extensive manner and a whole range of exceptions are made which, on the whole, are very similar to those available in copyright law. There are many cross-references to the copyright provisions for definitions. The exceptions are contained in Sch 2 to the Copyright, Designs and Patents Act 1988 and, although there is not room to discuss them here in detail, Table 9.1 should give some indication of their scope.<sup>61</sup> Where reference is made to

<sup>60</sup> The US enjoys only partial reciprocal protection as yet: Copyright and Performances (Application to Other Countries) Order 2008, SI 2008/677.

<sup>61</sup> For general principles, reference should be made to Chapter 7.

**Table 9.1** Exceptions to infringement of rights in performances

<i>Exception</i>	<i>Comment</i>
Making temporary copies (para 1A)	Transient or incidental copies or recordings of performances may be made if an integral and essential part of a technological process, the sole purpose of which is transmitting in a network between third parties by intermediaries or a lawful use of the recording. There must be no independent economic significance.
Criticism, reviews and news reporting (para 2)	Fair dealing with performance or recording for criticism or review of that or another performance or recording of a work does not infringe providing the performance or recording has been made available to the public. Fair dealing with performance or recording for the purpose of reporting current events does not infringe.
Incidental inclusion of performance or recording in a sound recording, film or broadcast (para 3)	Extends to anything done in relation to copies of, or playing, showing or communication to public in respect of such performance or recording. As with copyright, deliberate inclusion is outside the exception.
'Educational purposes' (paras 4–6)	Similar exceptions to those for copyright but less extensive.
Lending copies of recording of a performance (paras 6A and 6B)	Lending is by educational establishment or libraries or archives.
Copy required as a condition of export e.g. article of cultural or historical importance or interest (para 7)	
Public administration (paras 8–11)	Similar to copyright exceptions but not as many.
Transfer of copies in electronic form (para 12)	Allows the making of a back-up copy in some cases.
<i>Miscellaneous</i> (paras 13–21)	Most are very similar to the copyright exceptions.
Recordings of spoken words	
Recordings of folksongs	
Lending of certain recordings	
Club and society purposes	
<i>Broadcasts</i>	
Incidental recording	
Supervision and control	
Time shifting	
Photographs of broadcasts	
Free public showing/playing	
Reception/re-transmission	
Subtitled copies for hard of hearing, etc.	
Recording for archival purposes	

exceptions to infringing, it is in relation to infringing the rights in performance set out in Part II of the Act. Other rights may be infringed nonetheless.

The Copyright Tribunal is, by s 190, given limited powers in respect of performances, and a person who wishes to make a recording of a performance may ask the Tribunal to give consent where the identity or whereabouts of the performer cannot be ascertained by reasonable enquiry or where the performer unreasonably withholds

his consent. This could prove useful in dealing with the problem of the ‘Tenth Spear Carrier’, that is, where an extra in a film refuses to consent.<sup>62</sup> In exercising this power, the Tribunal shall take into account:

- (a) whether the recording was made with the performer’s consent and is lawfully in the possession and control of the person proposing to make the new recording, and
- (b) whether the making of the further recording is consistent with the obligations of the parties to the arrangements under which, or is otherwise consistent with the purposes for which, the original recording was made.

Where the performer unreasonably withholds consent, the Tribunal may give consent only if satisfied that the performer’s reasons do not include the protection of any of his legitimate interests, but it is for the performer to show what his reasons are and, in default, the Tribunal may make any such inference as it thinks fit. Where the Tribunal gives consent to the making of the further recording(s), it may make such order for payment as it thinks fit as being the appropriate consideration for the consent, unless the parties have agreed payment in the meantime. Of course, in most cases, the recording company will have obtained all the necessary consents.

<sup>62</sup> Prime, T. (1992) *The Law of Copyright*, Fourmat, p 284.

## TRANSITIONAL PROVISIONS AND SAVINGS

The Copyright and Related Rights Regulations 1996 apply to performances given before or after commencement (1 December 1996), but no act done prior to commencement will infringe or give rise to a right to equitable remuneration.<sup>63</sup> Further, unless expressly agreed, an agreement made before 19 November 1992 (the date of adoption of the rental right and lending right Directive) is not affected, nor is any act done after commencement an infringement of any new right in pursuance of such an agreement.<sup>64</sup>

<sup>63</sup> Copyright and Related Rights Regulations 1996 reg 26.

<sup>64</sup> Copyright and Related Rights Regulations 1996 reg 27.

Any new right relating to a qualifying performance may be exercised from commencement and where, before commencement, the owner or prospective owner of one of the performers’ rights authorised the making of a copy of a recording of a performance, any new right relating to that copy will vest on commencement in the person so authorised, in the absence of any agreement to the contrary.<sup>65</sup>

<sup>65</sup> Copyright and Related Rights Regulations 1996 regs 30 and 31.

No right to an equitable remuneration arises in respect of any rental of a film or sound recording before 1 April 1997 nor in respect of any rental after that date but made in pursuance of an agreement entered into before 1 July 1994 unless, before 1 January 1997, the performer or successor in title notified the person by whom the remuneration would be payable that he intends to exercise that right. Because of the timing of the 1996 Regulations, this left just a few short weeks for performers (and relevant copyright authors) to make their notification. The significance of the dates 1 July 1994 and 1 January 1997 is that they are set out in the Directive’s provisions in Article 13 (application in time).<sup>66</sup>

Further transitional provisions and savings were made as a result of the changes made by the Copyright and Related Rights Regulations 2003.<sup>67</sup>

Directive 2006/116/EC of the European Parliament and of the Council of 12 December 2006 on the term of protection of copyright and certain related rights,<sup>68</sup> replaced the earlier Council Directive 93/98/EEC of 29 October 1993 harmonising the term of copyright and certain related rights.<sup>69</sup> Article 10 of the 2006 Directive contained transitional provisions which, when implemented in Germany, denied protection in relation to recordings that had at no time been protected in Germany. In *Case C-240/07 Sony Music Entertainment (Germany) GmbH v Falcon Neue Medien Vertrieb GmbH*,<sup>70</sup> Falcon distributed CDs in Germany which contained recordings of Bob Dylan songs which had been recorded before 1 January 1996 (the cut-off date for protection of

<sup>66</sup> Now Article 11 of Directive 2006/115/EC of the European Parliament and of the Council of 12 December 2006 on rental right and lending right and on certain rights related to copyright in the field of intellectual property, OJ L 376, 27.12.2006, p 28. This Directive replaced the original Directive.

<sup>67</sup> SI 2003/2498.

<sup>68</sup> OJ L 372, 27.12.2006, p 12.

<sup>69</sup> OJ L 290, 24.11.1993, p 9.

<sup>70</sup> [2009] ECDR 183.

recordings made by foreign nationals). However, these recordings were protected in the UK. The Court of Justice held that the transitional provisions applied even though the recordings in question had never been protected in the Member State for which protection was sought. Where a national of a non-Member State benefited from protection in at least one Member State, the transitional provisions applied. Thus, the Bob Dylan recordings would be entitled to protection under German law on copyright and related rights.

## OFFENCES

The criminal offences are detailed in s 198. They apply in respect of illicit recordings, recordings shown, played or communicated to the public and in respect of the making available right. A person commits an offence if, without sufficient consent, he:

- (a) makes for sale or hire, or
- (b) imports into the United Kingdom, otherwise than for his private and domestic use, or
- (c) possesses in the course of business with a view to committing an act infringing any of the rights in performances, or
- (d) in the course of business –
  - (i) sells or lets for hire, or
  - (ii) offers or exposes for sale or hire, or
  - (iii) distributes,

a recording which he knows, or has reason to believe, is an illicit recording.

The offences under (a), (b) and (d) (iii) are triable either way, carrying a maximum of ten years' imprisonment and/or a fine.<sup>71</sup> Under s 198(1A), a person who infringes a performer's making available right in the course of business or otherwise to such an extent as to prejudicially affect the owner of the right commits an offence if he knows or has reason to believe that, by doing so, he is infringing that right. This carries a maximum penalty on conviction on indictment of two years' imprisonment and/or a fine. On summary conviction, the maximum penalty is imprisonment for a term not exceeding three months and/or a fine not exceeding the statutory maximum.

Section 198(2) makes it an offence, without sufficient consent, to cause a recording to be shown or played in public or communicated to the public. It is required that the person concerned knows or has reason to believe that any of the rights in performances will be infringed as a result of his actions. This offence and offences under s 198(1)(c), (d)(i) and (ii) are triable summarily only and carry a maximum penalty of six months' imprisonment and/or a fine not exceeding level 5 on the standard scale.

The meaning of 'sufficient consent' depends on whether the performance is a qualifying performance.<sup>72</sup> If it is, then it is the consent of the performer. Otherwise, and for the purposes of the 'making' offence, it is the consent of the performer or the person having the recording rights. For all the other offences where sufficient consent is required involving a non-qualifying performance, it is the consent of the person having the recording rights.<sup>73</sup> There are provisions for orders for delivery up in criminal proceedings (s 199) and for search warrants (s 200), and orders may be made for the disposal of illicit recordings (s 204).

Directors, managers, secretaries, and other similar officers of corporate bodies may also be liable where the offence is committed by a corporate body with their consent or connivance.<sup>74</sup> It is an offence for a person falsely to represent that he is authorised by any person to give the necessary consent in relation to a performance unless he believes, on reasonable grounds, that he is so authorised. This offence is triable summarily only

<sup>71</sup> This was increased from two years' imprisonment and/or a fine by the Copyright, etc. and Trade Marks (Offences and Enforcement) Act 2002.

<sup>72</sup> Copyright, Designs and Patents Act 1988 s 198(3).

<sup>73</sup> If more than one person has the rights, the consent of all is required.

<sup>74</sup> Copyright, Designs and Patents Act 1988 s 202. Both the officer and the corporate body are criminally liable.

and carries a maximum sentence of imprisonment for a period not exceeding six months and/or a fine not exceeding level 5 on the standard scale.

## SUMMARY

The statutory extension of performers' protection to give civil rights not only to performers but also to persons having exclusive recording contracts with those performers was a welcome and direct response to the growing problem of bootleg recordings. The subsequent development of performers' property rights is further recognition of the importance of such rights, as is the recent introduction of performers' moral rights. The inclusion of variety acts, extending the scope beyond performances of the 'original works' category of copyright, is sensible as such performances are no less deserving of protection. The law on rights in performances now makes it all the more important to ascertain the consent of *all* those taking part in a performance before making a recording, and it could hinder the future use of old recordings to make new recordings, for example by making a compilation of old recordings. The spectre of 'bit-part' actors withholding consent and preventing this future exploitation will be ever present in the minds of film and record companies.<sup>75</sup> This could have serious consequences for the BBC which has a large number of recordings of television comedy and drama, much of which was broadcast live. However, the Copyright Tribunal is there as a last resort should the performer unreasonably withhold his consent.

Some measure of international protection is afforded through the Rome Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organisations 1961, which has been ratified by 86 countries, including the UK.<sup>76</sup>

Finally, it should be noted that the provisions on the circumvention of technological measures under ss 296ZA to 296ZF and the provisions on electronic rights management information under s 296ZG also apply to rights in performances.

<sup>75</sup> Of course, employment and service contracts should provide for these rights in a way that facilitates the future exploitation of the work.

<sup>76</sup> As at 1 February 2008. The Convention has not yet been ratified by the US.

## Part Two

# COPYRIGHT AND RELATED RIGHTS SUMMARY

### KEY POINTS

Copyright protects:

- original literary, dramatic, musical and artistic works;
- sound recordings, films and broadcasts; and
- typographic arrangements of published editions.

Rights related to copyright include:

- rights in live performances;
- *sui generis* database right;
- publication right for works first published after expiry of normal copyright.

The creator of a work of copyright is known as its author. Subject to exceptions, the author is the first owner of the copyright in a work he or she has created. The main exception is where the work has been created by an employee in the course of his or her employment.

Originality is not a high standard and does not equate to novelty. Basically, the work should have originated from the author and not be copied from an existing work. It should be more than trivial. It is often said that copyright protects the expression of ideas and not the ideas themselves. Others are free to create similar works providing they do not copy or use the first work.

To be protected by UK copyright, the work must qualify, for example, by virtue of the author, the place of creation or from where it is broadcast.

Copyright does not usually give rise to monopoly rights unless the author is the only person having access to the material incorporated in the work or in the case of music, films, broadcasts and performances.

In most cases, copyright lasts for life plus 70 years. This differs for sound recordings and typographical arrangements and artistic works which have been industrially applied, for example, by making 50 or more copies for sale.

Rights under copyright are:

- economic (belonging to the owner of the copyright);
- moral (belonging to the author, whether or not the owner);
- artists have a resale right in relation to subsequent sales of their works;
- in some cases, moral rights do not apply.

Copyright may be dealt with by:

- assignment (transfer of ownership);
- licensing (exclusive or non-exclusive);
- used as a security, for example, by grant of a mortgage;
- assignment, etc. may be in relation to the entire rights under copyright or may be partial;
- assignments and exclusive licences require formal execution to be valid at law;
- beneficial ownership or implied licences may be used to cure failure to comply with the formalities.

The owner of copyright is given the exclusive right to perform or authorise the performance of certain acts in relation to the work. A person infringes copyright if, without the licence of the owner, he or she performs any of those acts, directly or indirectly, to the whole or a substantial part of the work. Copying extends to making transient or incidental copies. Authorising another to perform such acts also infringes.

The concept of indirect infringement may apply where the 'copy' is not an exact one but involves alterations. It is said that the structure or architecture of a work may be protected in this way though examples of infringement in this way are scarce.

There are a great many permitted acts which can be carried out without the licence of the copyright owner without infringing copyright. They may be grouped accordingly:

- making temporary copies;
- fair dealing;
- making copies for visually impaired persons;
- education;
- libraries and archives;
- public administration;
- computer programs and databases;
- designs and typefaces;
- works in electronic form; and
- various miscellaneous permitted acts.

Other defences may apply such as public interest, owner's consent, acquiescence, estoppel, laches, etc.

Computer programs (and their preparatory design material) and databases are forms of literary work. They are protected if they are the author's own intellectual creation and otherwise qualify for protection.

Special permitted acts for computer programs are:

- making necessary back-up copies;
- decompilation to achieve interoperability;
- observing, studying and testing to determine underlying ideas and principles;
- other acts necessary for lawful use including error correction.

Database right protects substantial investment in financial, human or technical resources in obtaining, verifying or presenting the contents of a database. Obtaining means seeking out existing materials rather than creating the contents of the database. Infringement occurs by the extraction and/or re-utilisation of a substantial part of the contents of a database (evaluated qualitatively and/or quantitatively) and also may occur by the repeated and systematic extraction of insubstantial parts of the contents of a database.

Performers have, in relation to their live performances:

- non-property rights;
- property rights;
- moral rights.

Persons having exclusive recording rights with respect to live performances have recording rights.

## DISCUSSION QUESTIONS

- 1 Discuss what is meant by the phrase 'copyright protects expression, not idea' with reference to literary and artistic works.
- 2 What is the scope of the sculpture and artistic craftsmanship categories of artistic works?

3 Consider the basic rules that apply to first ownership of copyright. Where there has been a failure to properly deal with ownership of copyright, in some cases, a court may be prepared to grant beneficial ownership or, alternatively, imply a licence. Discuss, with examples, the circumstances under which either may be appropriate.

4 Is the phrase 'what is worth copying is, *prima facie*, worth protecting' of any value in determining infringement of copyright?

5 Discuss the fair dealing provisions and their scope. Do they provide an acceptable balance between the rights of the owner and (a) rights of students and researchers and (b) the right of freedom of expression?

6 Emulating the operation of a computer program without reference to the actual code of the program can never infringe the copyright in the program. Discuss, with reference to *Navitaire v easyJet* and compare with the position in the United States after *Computer Associates v Altai*.

7 The ruling of the Court of Justice in the *British Horseracing Board v William Hill* case has emasculated the database right to such an extent that database owners ought in future to rely on copyright rather than the database right. Discuss.

# Part Three

## THE LAW OF BREACH OF CONFIDENCE

10 Law of breach of confidence

333

# LAW OF BREACH OF CONFIDENCE

## INTRODUCTION

This area of law is concerned with secrets of all kinds. They may be of a personal, commercial or industrial nature, or concern the state and its administration. State secrets received a great deal of publicity some years ago as a result of the publication of *Spycatcher*, written by Peter Wright, a former assistant director of MI5, but it is in relation to trade secrets and business information that the law of confidence is of everyday importance. An obligation of confidence may arise in contract or be imposed by equity. The vast majority of persons owe an obligation of confidence to others: all employees have a duty of confidence or fidelity to their employers, consultants owe a duty to their clients, doctors have a duty of confidence in respect of their patients, and solicitors are bound by a duty of confidence to their clients. The law of confidence also covers business transactions and negotiations, and an obligation of confidence will be implied in a great many situations where there is no express agreement as to confidentiality.

Breach of confidence lies in the domain of equity and is almost entirely based on case law. In *Kitechnology BV v Unicor GmbH Plastmaschinen*<sup>1</sup> it was said that claims for breach of confidence did not arise in tort, were certainly non-contractual but were part of the equitable jurisdiction of the court. However, there is statutory recognition of the law of breach of confidence. For example, the Copyright, Designs and Patents Act 1988 s 171(1) states that:

Nothing in this Part [the part of the Act dealing with copyright law] affects . . . the operation of any rule of equity relating to breaches of trust or confidence.

The notoriously widely drafted Official Secrets Act 1911 s 2 (replaced and narrowed by the Official Secrets Act 1989 s 1),<sup>2</sup> provided for a number of offences relating to the disclosure of confidential information to unauthorised persons.<sup>3</sup> Otherwise, disclosure of confidential information lies within the scope of the civil law and, being equitable, the law of confidence has proven to be reasonably flexible and a particularly useful adjunct to other intellectual property rights.

Whereas other rights such as copyright and patents are particularly useful when the subject matter is made public by exploitation by the right owner, the law of breach of confidence gives protection to things not released to the public or part of the public domain. Indeed, this is the whole point of the law of confidence, and its most useful feature is that, in appropriate cases, an injunction can be obtained preventing an anticipated wrongful release or use of the information that is the subject matter of the confidence. In terms of patent law, confidence is vital to the grant of a patent as it is essential that details of the invention do not fall into the public domain before the filing of the patent application, otherwise the patent will be refused.<sup>4</sup> Confidence protects

<sup>1</sup> [1995] FSR 765.

<sup>2</sup> See *Lord Advocate v Scotsman Publications Ltd* [1990] AC 812 for a discussion of the Official Secrets Act 1989.

<sup>3</sup> Section 2 of the 1911 Act became so infamous that juries had become inclined to acquit regardless of the evidence – for example, the trial and acquittal of the senior civil servant Clive Ponting for disclosure of Cabinet minutes relating to the sinking of the *General Belgrano*: see *R v Ponting* [1985] Crim LR 318.

<sup>4</sup> An exception is made where the information has been released by a person acting in breach of confidence in the previous six months: Patents Act 1977 s 2(4).

the invention and its detail. In some circumstances, the inventor may decide to keep his invention secret in preference to obtaining a patent, as the latter gives a maximum of 20 years' protection only. It depends on whether the information can be kept secret. As regards copyright, it has been seen that, as a matter of principle, copyright does not protect ideas, only the expression of ideas. However, confidence can and does protect ideas, but only until such time as those ideas are published in some way.

The Copyright, Designs and Patents Act 1988 gives a limited right to privacy in respect of certain photographs and films.<sup>5</sup> The law of breach of confidence may protect privacy if, for example, materials of a private nature have been shown or given to another to whom a duty of confidence attaches. Breach of confidence has developed to incorporate the English approach to the rights of privacy and freedom of expression under Articles 8 and 10 of the Council of Europe Convention for the Protection of Human Rights and Fundamental Freedoms 1950.<sup>6</sup> The basic requirement for confidence is the existence of a duty which may be expressed or imputed from the circumstances.

<sup>5</sup> Copyright, Designs and Patents Act 1988 s 85.

<sup>6</sup> Implemented by the Human Rights Act 1998.

## DEVELOPMENT OF THE LAW OF BREACH OF CONFIDENCE

The law of breach of confidence has had an erratic history. From earlier beginnings, it largely developed in a spurt in the early to middle of the nineteenth century, and then lay relatively dormant until the late 1940s when it was realised that this was an extremely useful area of law. Some of the early cases involved 'patent medicines'. There was obviously a lot of money to be made from these magic cures, bearing in mind that conventional medicine was still fairly primitive at this time and that the public at large was relatively ignorant and uneducated. In *Morison v Moat*,<sup>7</sup> such a medicine was made known as 'Morison's Vegetable Universal Medicine'. There was a dispute between the son of the person who originally devised the recipe and the partner, Thomas Moat, who had improperly told his own son of the recipe. It was held that there was an equity against the defendant. It was a breach of faith and of contract by the partner, Thomas Moat, to tell his son of the secret who, therefore, derived his knowledge under a breach of faith and of contract and could not claim a title to the recipe. Although the term 'breach of confidence' was not used at this stage, it was clear that the breach of faith was actionable *per se* and was not dependent upon the existence of a contract. There was no contractual relationship between the son of the originator of the recipe and the son of the defendant.

<sup>7</sup> (1851) 9 Hare 241.

Another important case which helped establish this area of law concerned etchings made by Queen Victoria and Prince Albert. The case is *Prince Albert v Strange*.<sup>8</sup> The Queen and Prince Albert made etchings for their own amusement, intended only for their own private entertainment, although they sometimes had prints made to give to friends. Some of the etchings were sent to a printer for impressions (prints) to be made from them. While at the printers, someone surreptitiously made some additional prints from the etchings, which came into the hands of the defendant, who intended to display the prints in an exhibition to which the public could go on payment of an admission charge. The defendant advertised his intention to hold the exhibition and was sued by the Queen's Consort. It was held that relief would be given against the defendant even though he was a third party. The defendant had argued that the prints were not improperly taken, but it was said that his possession must have originated in a breach of trust, a breach of confidence or a breach of contract, and therefore an injunction was granted preventing the exhibition. Again, it was clear that relief was available without having to rely on a contractual relationship.

<sup>8</sup> (1849) 1 Mac & G 25.

## The law of confidence and privacy

There was no fundamental right to privacy at English law. Occasionally, invasions of privacy may have been dealt with under the law of breach of confidence but this area of law did not provide a comprehensive and seamless law of privacy. This was changed by the Human Rights Act 1998 which gives effect, *inter alia*, to the rights and freedoms guaranteed under the Council of Europe Convention for the Protection of Human Rights and Fundamental Freedoms 1950 (the ‘Human Rights Convention’). Article 8(1) of the Convention states that: ‘[e]veryone has the right to respect for his private and family life, his home and his correspondence.’<sup>9</sup> This is subject to possible derogation for a number of purposes including national security, the prevention of crime or the protection of the rights or freedoms of others. The weakness of the law of confidence in providing a remedy for invasions of privacy before the Human Rights Act 1998 was highlighted by the case of *Kaye v Robertson*<sup>10</sup> in which a journalist and a photographer gained access to Mr Gordon Kaye’s private hospital room and took photographs and conducted an interview when Mr Kaye was in no fit state to be interviewed or to give consent. Mr Kaye, the actor from the television comedy series ‘*Allo ’Allo* had, while driving, been struck by a piece of wood and suffered severe head and brain injuries. In allowing in part the appeal against an injunction imposed by Potter J, the Court of Appeal judges were unanimous in their call for a legal right to privacy.<sup>11</sup> Of course, since the Human Rights Act 1998, it is unlikely that *Kaye v Robertson* would today be decided the same way on the issue of privacy.

Since the assimilation of human rights law into the laws of the UK, there have been some important developments in the courts here, building on and supplemented by decisions of the European Court of Human Rights. It is now clear that the Convention Rights apply not only to protect individuals against arbitrary interference with the rights by public authorities but also, in relation to the right of respect for private and family life, to impose obligations on states to secure respect for private or family life even in the context of relations between individuals. This was made clear in *von Hannover v Germany*<sup>12</sup> in which photographs were taken by the press of Princess Caroline of Monaco in public places. It was held by the European Court of Human Rights that her right of privacy had been breached. The photographs did not relate to her duties, obligations or suchlike as a Princess but showed her, for example, in a restaurant with a friend, on horseback, on a skiing holiday and with her children.

This seems to go a little further than *Campbell v Mirror Group Newspapers, infra*, which English courts below the House of Lords are bound to apply. In *Murray v Express Newspapers plc*,<sup>13</sup> a photographer with a camera with a long-range lens took a photograph of J.K. Rowling’s son, then under two years old, in a pushchair on a public street accompanied by J.K. Rowling and her husband. The photograph was taken without their knowledge or consent. Taking and publishing photographs of innocuous acts, such a taking a bus or walking down a street should not give rise to an action for breach of confidence or invasion of privacy. Such activities do not raise an expectation of privacy. According to Lightman J (at para 65) ‘If a simple walk down the street qualifies for protection then it is difficult to see what would not.’ Although he expressed sympathy for persons wishing to shield their children from intrusive media attention, as it stands, the law does not allow them ‘... to carve out a press-free zone for their children in respect of absolutely everything they choose to do.’<sup>14</sup> However, the Court of Appeal disagreed with Lightman J and ordered a trial.<sup>15</sup> Following *Campbell v Mirror Group Newspapers*, the Court of Appeal held that the test to be applied was whether the claimant had a reasonable expectation of privacy so as engage his Article 8 right to privacy viewed from the perspective of how a reasonable person of ordinary sensibilities would feel if placed

<sup>9</sup> Data protection law, which itself finds its roots in the Human Rights Convention, may also have an impact.

<sup>10</sup> [1991] FSR 62.

<sup>11</sup> Although the libel claim failed, the action for malicious falsehood succeeded, but only in as much as the defendant could not claim that the interview had taken place with Mr Kaye’s consent. For contemporary articles on the then perceived need for a law of privacy, see Markesinis, B.S.I. ‘Our patchy law of privacy – time to do something about it’ (1990) 53 MLR 802; and Prescott, P. ‘*Kaye v Robertson* – a reply’ (1991) 53 MLR 451. See also the Calcutt Committee Report, *On Privacy and Related Matters*, Cm 1102, HMSO, 1990.

<sup>12</sup> (2005) 40 EHRR 1.

<sup>13</sup> [2007] ECDR 328.

<sup>14</sup> At para 66. Of course, if the media attention causes alarm or distress, there may be remedies under the Protection from Harassment Act 1997 which includes criminal penalties and civil remedies.

<sup>15</sup> *Murray v Express Newspapers plc* [2008] 3 WLR 1360.

in the same position as the claimant and subject to the same publicity. In the circumstances of the case involving the clandestine taking of a photograph and its subsequent publication, it was at least arguable that the claimant had a reasonable expectation of privacy as a child.

The decision in *von Hannover* is wider than that in *Campbell v Mirror Group Newspapers*. In the former case, it was even held to be a breach of Princess Caroline's right to privacy to publish photographs of her in public places going about her normal business without being engaged in embarrassing, intimate or private activities. However, taking and publishing the photographs could be seen as part of a campaign of harassment conducted against her by the media. On the other hand taking and publishing a photograph of a famous person popping out for a bottle of milk would not engage the right to privacy.<sup>16</sup>

Article 10 of the Human Rights Convention provides for the right of freedom of expression. This right is also subject to derogations but there is ample opportunity for this right to conflict with the 'right of privacy'. In some respects, it could be claimed that the law of confidence has developed to provide a balance, for example, by protecting the right of privacy subject to disclosure in the public interest. Lord Nicholls in the House of Lords in *Campbell v Mirror Group Newspapers Ltd*<sup>17</sup> went so far as to say that the law of breach of confidence had developed to such a stage that it represented the UK's implementation of the Convention rights of privacy and freedom of expression. He said (at para 17):

The time has come to recognise that the values enshrined in arts 8 and 10 are now part of the cause of action for breach of confidence. As Lord Woolf CJ has said, the courts have been able to achieve this result by absorbing the rights protected by arts 8 and 10 into this cause of action: see *A v B (a company)* [2002] EWCA Civ 337 at [4], [2002] 2 All ER 545 at [4], [2003] QB 195. Further, it should now be recognised that for this purpose these values are of general application. The values embodied in arts 8 and 10 are as much applicable in disputes between individuals or between an individual and a non-governmental body such as a newspaper as they are in disputes between individuals and a public authority.

Later, in the Court of Appeal in *Douglas v Hello! Ltd (No 6)*,<sup>18</sup> Lord Phillips of Worth Matravers MR said that the courts should develop, as far as they can, the action for breach of confidence so as to give effect to the Convention rights under Articles 8 and 10.<sup>19</sup> In that case, photographs were taken surreptitiously at the wedding of Michael Douglas and Catherine Zeta-Jones, who had 'sold' the exclusive rights to take photographs to *OK! Magazine* for £500,000 each. The unauthorised photographs were published in the defendant's magazine. The Court of Appeal confirmed that there had been a breach of the Douglases right of privacy and a breach of what was described as their commercial confidence. It was accepted that persons in the public eye who seek publicity have a right in their image as a commodity which can be dealt with as with any trade secret. In the circumstances of the case, the official photographs were such a commodity that the Douglases had a right to keep secret until the time they chose to make them public. Ordinary individuals with no 'celebrity' status would not necessarily have a commercial confidence though they do have a right of privacy. However, the Court of Appeal held that *OK! Magazine* had no right of commercial confidence it could invoke against *Hello! Magazine*, that the obligation of confidence owed to *OK! Magazine* only covered the photographs taken on its behalf and no others.

The House of Lords, by a 3:2 majority in co-joined cases known as *OBG Ltd v Allan*,<sup>20</sup> reversed the Court of Appeal decision in *Douglas v Hello!* to the extent that it had held that *OK! Magazine* had no right of commercial confidence. Photographs of the wedding were confidential in the sense that none was available publicly.<sup>21</sup> It had been made clear to everyone attending that no one other than the authorised photographer was to take photographs of the wedding. That imposed an obligation of

<sup>16</sup> Per Baroness Hale in *Campbell v Mirror Group Newspapers Ltd* [2004] 2 AC 457 at para 154.

Of course, whilst the lower courts may have regard to decisions of the European Court of Human Rights, they are bound by previous House of Lords decisions.

<sup>17</sup> [2004] 2 AC 457.

<sup>18</sup> [2005] 3 WLR 881.

<sup>19</sup> See also *McKennitt v Ash* [2007] 3 WLR 194 where Buxton LJ said (at para 11): '... in order to find the rules of the English law of breach of confidence we now have to look at the jurisprudence of Articles 8 and 10'.

<sup>20</sup> [2007] 2 WLR 920. This involved appeals in three cases on the tort of inducing a breach of contract or causing loss by unlawful means and, in the appeal by *OK! Magazine*, also an appeal against the finding of the Court of Appeal on whether *OK! Magazine* had a commercial confidence which it could enforce against *Hello! Ltd*.

<sup>21</sup> Of course, the confidential quality in relation to the authorised photographs was lost once they were published but this did not affect the confidential nature of any other photographs.

confidence for the benefit of *OK! Magazine* as well as the Douglasses. Publishing the unauthorised photographs clearly caused a detriment to *OK! Magazine* and, consequently, all the ingredients of a breach of confidence action set out by Megarry J in *Coco v Clark*, *infra*, were present. There was no public policy reason why the law would not protect information of a particular sort only, photographic images as distinct to information about the wedding generally. Photographic images were commercially valuable and the Douglasses had exercised sufficient control to impose an obligation of confidence.

The public interest defence, described in more detail later, was narrowly construed in the *Campbell* case. The supermodel Naomi Campbell had previously claimed that she did not have a drug addiction. The defendant newspaper published articles showing that she had been undergoing treatment at Narcotics Anonymous. The articles included details about the treatment she was undergoing and photographs showing her leaving meetings of Narcotics Anonymous with others undergoing treatment. The House of Lords, by a 3:2 majority, held that this was a breach of confidence. Whilst it was acceptable to publish a story about her having lied about taking drugs and her addiction and the fact that she was receiving therapy, publishing the additional information about the treatment with Narcotics Anonymous together with details of the treatment and the photograph went too far. Of course, publishing any of the information would have been a breach of confidence apart from the fact that Naomi Campbell was someone who sought publicity and was a role model.

22 [1977] 2 All ER 751.

This decision puts into doubt the correctness of some earlier cases, especially *Woodward v Hutchins*,<sup>22</sup> described later, in the level of detail of information that can be published on the basis of public interest where publicity-seeking celebrities are concerned. However, an important point made in *Campbell* in the Court of Appeal was that publishing the additional information and photograph was important to give credibility to the story. In the House of Lords one of the dissenting judges, Lord Hoffmann, said that some editorial latitude should be allowed. Given the exigencies of newspaper publishing, it is not always possible to judge to a nicety what should and should not be published. This is particularly so in relation to photographs which readers have come to expect. Lord Nicholls, also dissenting, said of the balance between privacy and freedom of expression (at para 28):

The balance ought not to be held at a point which would preclude, in this case, a degree of journalistic latitude in respect of information published for this purpose.

Where the balance between privacy and freedom of expression lies may depend on the context and it may lie more towards the freedom of expression end of the spectrum where the information relates to politics rather than in the case of film and television celebrities. What these cases show is that even celebrities have a right of privacy and, whilst it might be acceptable to publish a photograph of a famous person walking down a public street, it would not necessarily be acceptable, *per se*, to publish a photograph of such a person engaged in a private meeting even if it takes place in a public place.

Of course, a right to privacy is not central to the law of breach of confidence in an industrial or commercial context and the following discussion of the modern law of breach of confidence focuses on the impact and development of this useful area of law in relation to industrial and commercial information including ‘trade secrets’.

## THE MODERN LAW OF BREACH OF CONFIDENCE

The law of breach of confidence began its renaissance about 60 years ago. It became apparent that this area of law was extremely well suited to protecting ‘industrial property’ during the development stages before other legal rights were able to afford

protection.<sup>23</sup> Indeed, some industrialists had come to the conclusion that it was better to keep some details of their processes secret rather than obtain a patent which would mean that, eventually, the invention would fall into the public domain. However, it seems as if the significance of this area of law was not fully appreciated by law reporters. A number of important cases were reported in some series of law reports retrospectively, several years after the judgments were handed down.

The first major case on the law of breach of confidence that laid the foundations for its modern form was *Saltman Engineering Co Ltd v Campbell Engineering Co Ltd*.<sup>24</sup> The claimant owned the copyright in drawings of tools for use in the manufacture of leather punches. The defendant was given the drawings and instructed to make 5,000 of the tools at 3s 6d each. After completing the order, the defendant retained the drawings and made use of them for its own purposes. In finding for the claimant, holding that there was an implied condition that the defendant should treat the drawings as confidential, not make other use of them, and should deliver up the drawings with the tools made pursuant to the agreement,<sup>25</sup> Lord Greene MR described the nature of confidential information thus:

The information, to be confidential, must, I apprehend, apart from contract, have the necessary quality of confidence about it, namely, it must not be something which is public property and public knowledge. On the other hand, it is perfectly possible to have a confidential document, be it a formula, a plan, a sketch, or something of that kind, which is the result of work done by the maker upon materials which may be available for the use of anybody; but what makes it confidential is the fact that the maker of the document has used his brain and thus produced a result which can only be produced by somebody who goes through the same process.<sup>26</sup>

Lord Greene also emphasised that an obligation of confidence is not limited to cases where the parties are in a contractual relationship; that the law will prevent an abuse of position by the recipient of confidential information. He also indicated that there need be nothing special about the information concerned and that others may be able to derive the information for themselves but will need to invest some effort to obtain that information. In other words, the recipient of confidential information will be prevented from making unfair use of the information outside that contemplated by the person giving it. It can be said that a person fixed with a duty of confidence is in an analogous position to that of a trustee; however, in the case of a person fixed with an obligation of confidence, the nature of that duty is always negative, that is he must not use or divulge the information outside the authority given to him by his confider.

Megarry J further developed the action of breach of confidence and laid down a good working formula for the application of this area of law in the case of *Coco v AN Clark (Engineers) Ltd*.<sup>27</sup> The claimant, one Marco Paolo Coco, designed a moped engine and had entered into informal negotiations with the defendant with a view to the latter manufacturing the engine. In the end the negotiations broke down and no contract was executed between the claimant and the defendant. The claimant suggested that the defendant had deliberately caused the breakdown in negotiations with a view to making the engine without paying the claimant. When the defendant decided to manufacture its own engine to a design which closely resembled the claimant's design, the claimant sought an interim injunction to prevent the defendant using confidential information given by the claimant for the purposes of a proposed joint venture.

Megarry J stated that the doctrine of confidence required three elements as follows:

- 1 The information must have the necessary quality of confidence about it (using Lord Greene's definition in *Saltman*);
- 2 The information must have been imparted in circumstances importing an obligation of confidence;

<sup>23</sup> 'Industrial property' can be considered to include patents, trade marks and industrial designs.

<sup>24</sup> [1963] 3 All ER 413, also reported in (1948) 65 RPC 203.

<sup>25</sup> There was no contract between the claimant and the defendant who had been subcontracted to make the tools. The defendant was instructed to deliver up the drawings and an inquiry into damages was ordered.

<sup>26</sup> [1963] 3 All ER 413 at 415.

<sup>27</sup> [1969] RPC 41.

- 3 There must be an unauthorised use of that information to the detriment of the party communicating it.

However, in the event, the claimant was not granted an injunction and had, at best, a weak case. Where information was communicated in the expectation that the claimant would be paid, it was doubtful whether an injunction was an appropriate remedy if there was subsequently a dispute. Megarry J ordered that the defendant give an undertaking to pay a royalty of 5s per engine made into a special joint bank account on trusts, should he manufacture the engines, pending the full trial. The formula used by Megarry J forms a useful basis for exploring the nature and scope of the law of breach of confidence and is used as a framework for the discussion later.

The equitable nature of the law of breach of confidence was stressed by Ungood-Thomas J in *Duchess of Argyll v Duke of Argyll*<sup>28</sup> where he said:

These cases [*Prince Albert v Strange*, etc.] in my view indicate (1) that a contract or obligation of confidence need not be expressed but can be implied . . . (2) that a breach of confidence or trust or faith can arise independently of any right of property or contract other, of course, than any contract which the imparting of the confidence in the relevant circumstances may itself create; (3) that the court in the exercise of its equitable jurisdiction will restrain a breach of confidence independently of any right at law.

It is clear an obligation will be implied in many situations but, as Ungood-Thomas J acknowledged, the obligation may be created expressly by way of a contract (an express contractual obligation may run alongside or replace an obligation that would otherwise be imposed by equity). For example, a contract of employment or service may include terms imposing an obligation of confidence on one or both parties. Further, in some contracts, the subject matter may be the confidential information itself, for example where a designer gives details of his design to a manufacturer in return for royalties.

Being rooted in equity, the law of confidence retains a useful flexibility and it has been developed at an extraordinary rate by the courts over the last three or four decades. Nevertheless, the Law Commission recommended that this area of law be codified and a draft Bill was produced in 1981.<sup>29</sup> A major advantage of the law of breach of confidence has been its flexibility and the way in which it has been developed by the courts, freed from the straightjacket of statutory interpretation. It might be wondered, therefore, what would be gained by codifying this area of law, which works reasonably effectively, to replace it with sterile legislation. The Law Commission must have appreciated this as much of the draft Bill is couched in general terms, and indeed the Law Commission stated:

. . . we should emphasise that the legislative framework which we envisage would allow the Courts wide scope in applying its principles to differing situations and changing social circumstances.<sup>30</sup>

If this is the basis upon which the legislation would be founded it is difficult to see what advantage would be gained by its promulgation. Widely drafted legislation might have some unfortunate and unpredictable effects, while the track record of the courts in developing this area of equity has been good and there is no reason to believe that judicial common sense cannot provide for the future satisfactory development of the law of confidence. Such considerations may account for the fact that no moves have been made to codify the law of confidence and it would seem that codification is extremely unlikely in the foreseeable future.<sup>31</sup>

One area the draft Bill addressed that was unclear and in need of development was the position of persons improperly acquiring information, for example by industrial espionage or surreptitiously. In many cases, the information concerned has been divulged willingly by the person who 'owns' the information. However, where a person

<sup>28</sup> [1967] Ch 303 at 322.

<sup>29</sup> Law Commission Report No. 110, *Breach of Confidence*, Cmnd 8388, HMSO, 1981.

<sup>30</sup> *Ibid.*, para 6.1.

<sup>31</sup> For a brief overview of the Law Commission's draft Bill, see Reid, B.C. (1986) *Confidentiality and the Law*, Waterlow, p 190.

acquires information by eavesdropping, or by other means such as computer hacking or other unauthorised taking or copying of information, it was not certain whether an obligation of confidence exists. Perhaps the difficulty stems from one of the guidelines laid down by Megarry J in *Coco v AN Clark (Engineers) Ltd*,<sup>32</sup> that is that the information must have been imparted in circumstances importing an obligation of confidence. This is an important point as, because of developments and improvements in areas of technology such as telecommunications, it is much easier for determined people to gain access to confidential information on a worldwide basis. In the case of *Prince Albert v Strange*,<sup>33</sup> the court did not know how the prints came into the defendant's possession, only that the prints must have been made surreptitiously. Nevertheless, the court was willing to give relief. It seems plausible that the principle as associated with this case can be applied to persons gaining access to confidential material without permission, that is in respect to the improper acquisition of information, and that Megarry J's test is unduly restrictive on this point. Indeed, in *Douglas v Hello! Ltd (No 6)*,<sup>34</sup> it was accepted that taking photographs surreptitiously was a breach of the right of privacy and a breach of 'commercial confidence'. The protection afforded extended to the magazine contracted to publish the authorised photographs as confirmed in the House of Lords.<sup>35</sup>

To determine whether information should be treated as confidential by its recipient, a reasonable person approach is helpful. In *Napier v Pressdram Ltd*,<sup>36</sup> Toulson LJ said (at para 42):

For a duty of confidentiality to be owed . . . the information in question must be of a nature and obtained in circumstances such that any reasonable person in the position of the recipient ought to recognise that it should be treated as confidential. As Cross J observed in *Printers & Finishers Ltd v Holloway (No.2)* [1965] RPC 239 at 256, the law would defeat its own object if it seeks to enforce in this field standards which would be rejected by the ordinary person. Freedom to report the truth is a precious thing both for the liberty of the individual (the libertarian principle) and for the sake of wider society (the democratic principle), and it would be unduly eroded if the law of confidentiality were to prevent a person from reporting facts which a reasonable person in his position would not perceive to be confidential.

Although this case did not involve trade secrets as such (*Napier* was concerned with information about a Law Society investigation following a complaint of a conflict of interest by a solicitor and his firm), the same considerations must also apply to trade secrets.

Returning to Megarry J's formula for breach of confidence, the nature of this useful area of law is now examined in more detail commencing with the necessary quality of confidence.

## CONFIDENTIAL QUALITY

### Nature of confidential quality

The sort of material protected may be technical, commercial or personal. In *R v Department of Health, ex parte Source Informatics Ltd*,<sup>37</sup> Simon Brown LJ accepted the proposition that there are four main classes of information traditionally regarded as confidential, being trade secrets, personal confidences, government information and artistic and literary confidences.<sup>38</sup> In that case, use of information about patients' prescriptions which had been converted into an anonymous form was acceptable. The purpose of the law of confidence in such circumstances was to protect personal confidences and this did not give the patients a property right in the information.

In the context of this book, the information usually will be a trade secret, related to business, commercial or industrial activity or enterprise such as in the *Coco* case. The value of such information should not be taken for granted and it can be surprising how

<sup>32</sup> [1969] RPC 41.

<sup>33</sup> (1849) 1 Mac & G 25.

<sup>34</sup> [2005] 3 WLR 881.

<sup>35</sup> *OBG Ltd v Allan* [2007] 2 WLR 920.

<sup>36</sup> [2009] EMLR 389.

<sup>37</sup> [2001] FSR 74.

<sup>38</sup> See also *Electro Cad Australia Pty Ltd v Mejati Res Sdn Bhd* [1999] FSR 291, High Court of Malaysia.

important some secrets are even though they may seem mundane at first sight. For example, there was a dispute about a cockle bottling secret in which the cockle bottlers' greatest problem was discussed, being to achieve the right acidity level, that is, strong enough to preserve the cockles without being too strong so as to be unpleasant to taste.<sup>39</sup> Secrets of a personal nature are also protected, even if relating to sexual conduct of a lurid nature. It was held in *Stephens v Avery*<sup>40</sup> that there was no reason why such information, expressly communicated in confidence, could not be subject to an enforceable duty of confidence. The background to that case was the killing of Mrs Telling by her husband. Details of a sexual relationship between Mrs Stephens, the claimant, and Mrs Telling were disclosed in confidence to a friend, Mrs Avery, the defendant, who had published the information in a newspaper. While a court would not protect information of a grossly immoral nature, on the basis of *Glyn v Weston Feature Film Co Ltd*,<sup>41</sup> the difficulty in this instance was identifying what was grossly immoral. A general code of sexual morals accepted by the overwhelming majority of the public no longer existed and there was no common view that sexual conduct between consenting adults, two females in this case, was grossly immoral.<sup>42</sup> After all, the story was not so shocking as to prevent the editor spreading the story across the pages of a major national newspaper for personal profit, and it lay ill in the mouth of the defendant to claim that the law did not protect the confidentiality of information of this sort.

Confidential information is not restricted to the written or printed word and an image may properly be regarded as confidential information. In *Douglas v Hello! Ltd*,<sup>43</sup> an unknown person took photographs without authorisation at the wedding of the actors Michael Douglas and Catherine Zeta-Jones. These photographs were to be published by the defendant in its magazine but the actors obtained an interim injunction. The actors had carefully controlled photography at their wedding and had granted exclusive rights to publish photographs of the wedding to another publisher (the proprietor of *OK! Magazine*). Stringent security measures were in place to prevent the taking of photographs by anyone other than the official photographer engaged by the actors. The defendant knew of the measures taken and the Court of Appeal accepted that the Douglases had a right to privacy and a right to a commercial confidence which had been breached by the defendant.<sup>44</sup>

An objective test should be applied to determine whether information is truly confidential. Simply marking a document with the words 'PRIVATE AND CONFIDENTIAL' will not suffice if the contents are commonplace and lie within the public domain, such as a simple, straightforward recipe for bread which contains nothing unusual in terms of the ingredients or the methods to be employed in the mixing and baking of the dough. In *Dalrymple's Application*<sup>45</sup> a manufacturer distributed over 1,000 technical bulletins to members of a trade association, marking them 'CONFIDENTIAL' and including a statement on the front of the documents to the effect that the contents were not to be divulged to non-members. The material in the bulletins could not be regarded as confidential. Even distribution of a report marked 'PRIVATE AND CONFIDENTIAL' to only ten out of 350 members of the British Cast Iron Research Association was fatal to confidentiality.<sup>46</sup> On the other hand, lack of a notice that something is confidential does not mean that the information will not be protected by the law of confidence. In *Collag Corp v Merck & Co Inc*,<sup>47</sup> it was said that operators of manufacturing processes often consider their process to be confidential and take steps to keep it secret, imposing obligations on suppliers and the like. They would strongly resist any suggestion that their competitors be allowed to look around their manufacturing plant. However, that does not mean to say that the process is confidential and all three elements identified in *Coco v Clark* must be present for an action in breach of confidence. On the other hand, failing to mark a document as 'confidential' does not, *per se*, deprive it of any confidential nature it may possess.

39 *The Times*, 24 June 1986. In an earlier dispute which involved the same claimant who was a bottler of cockles and mussels, the founder of the claimant company had obtained £530,000 in damages in respect of the copying of an onion peeling machine.

40 [1988] 1 Ch 457. Followed in *Michael Barrymore v News Group Newspapers Ltd* [1997] FSR 600.

41 [1916] 1 Ch 261.

42 The analogy with copyright law in respect of works of a grossly immoral nature failed to find sympathy, so the modern relevance of cases like *Glyn v Weston Feature Film Co Ltd* [1916] 1 Ch 261 must be doubted.

43 [2001] FSR 732. An early example of a breach of confidence involving a photograph was *Pollard v Photographic Company* (1889) 40 Ch D 345. A photograph of a woman taken for private purposes had been incorporated in a Christmas card without permission.

44 *Douglas v Hello! Ltd (No 6)* [2005] 3 WLR 881, discussed *supra*.

45 [1957] RPC 449.

46 *Young's Patents* (1943) 60 RPC 51.

47 [2003] FSR 263.

Trade practice may give an indication of whether a form of information will be regarded as confidential by the courts. For example, in *IBCOS Computers Ltd v Barclays Mercantile Highland Finance Ltd*,<sup>48</sup> Jacob J said that the source code for a computer program was confidential because it was not usually given to clients by software developers who regarded it as confidential. Even if a source code is made available to a client under a licence agreement, the licence will most likely contain terms imposing an obligation of confidence on the licensee in respect of the source code.<sup>49</sup>

The information does not have to be particularly special in any way and a compilation of already known information such as a list of customers can, when taken as a whole, be regarded as confidential.<sup>50</sup> What makes such information worth protecting by confidence is the fact that time and effort has been expended in gathering, selecting and arranging the information.<sup>51</sup> In other words, a competitor should not be permitted to take a short cut by ‘stealing’ information belonging to someone else – he should have to go through a similar process and discover the information for himself by his own labours.<sup>52</sup>

A combination of information taken together may be confidential even though it is doubtful that each item of information, taken separately, is confidential. In *Indata Equipment Supplies Ltd v ACL Ltd*,<sup>53</sup> the information disclosed by the claimant to the defendant concerned the provision of a fleet of cars to a potential client of the claimant, being information relating to the price of cars, full details of the client’s requirements, the sums it was prepared to pay, its preferred payment scheme and its time constraints. The defendant used this information to offer the client a lower ‘on the road’ price for the cars. In finding the profit margin and, to a lesser degree, the invoice price to be confidential information, Otton LJ said (at 259):

The information for which confidence is claimed must not be considered in isolation but in the context of other information where it is doubtful that any confidence arose.

Simon Brown LJ expressed some doubt about whether the invoiced prices were protected by confidence as he thought it difficult to think of circumstances in which a buyer would need the seller’s authority to disclose the price of goods he had bought to another.

In *Thomas Marshall (Exports) v Guinle*,<sup>54</sup> the defendant was appointed as the managing director of the claimant company for ten years. The company’s business largely concerned the purchase of clothing from Eastern Europe and the Far East and the sale of such clothing to retail outlets. The defendant’s service agreement stated that he was not to engage in any other business without the company’s consent and that he must not disclose confidential information. Further, after ceasing to be the managing director, he was not to use or disclose confidential information about the suppliers and customers of the claimant company. The defendant began to trade on his own account and on behalf of two companies in competition with the claimant company. When his service contract had another four-and-a-half years left to run, he purported to resign. It was held that the court would restrain the defendant from committing further breaches of his employment contract and that an interim injunction would be granted in respect of the defendant’s breach of the obligations of fidelity and good faith to his employer. Sir Robert Megarry V-C suggested that four elements were important when testing for confidential quality:

- 1 The information must be such that the owner believes that its release would be injurious to him, or would be advantageous to his rivals or to others;
- 2 The owner of the information must believe it to be confidential or secret and not already in the public domain;
- 3 The owner’s belief in 1 and 2 above must be reasonable; and

<sup>48</sup> [1994] FSR 275.

<sup>49</sup> Jacob J went on to find that one of the defendants had access to the claimant’s source code while writing his software and was, consequently, in breach of confidence in addition to infringing copyright.

<sup>50</sup> *Inline Logistics Ltd v UCI Logistics Ltd* [2002] RPC 611.

<sup>51</sup> Such a collection of data could also have protection under the database right provided for by the Copyright and Rights in Databases Regulations 1997, SI 1997/3032.

<sup>52</sup> In *Oxford v Moss* (1978) 68 Cr App R 183 it was held that information is not property for the purposes of theft.

<sup>53</sup> [1998] FSR 248.

<sup>54</sup> [1976] FSR 345.

- 4 The information must be judged in the light of usages and practices of the particular trade or industry concerned.

According to this test, a certain amount of subjectivity is allowed on the part of the owner of the information, but this is restricted by the requirement that the owner's beliefs must be reasonable. On this basis, it is possible that a duty of confidence could arise and attract legal remedies even if the information was actually in the public domain if the owner's contrary belief was reasonable. This seems to go too far. Surely, the test of whether information is confidential is objective. In *Lancashire Fires Ltd v SA Lyons & Co Ltd*,<sup>55</sup> Carnwath J, at first instance, noted this subjective emphasis in *Thomas Marshall*, saying that it does not appear in earlier authorities and explaining its presence by the context of *Thomas Marshall*, which was concerned with the construction of a specific provision in a contract. Conversely, as an actionable breach of confidence is based, at least partly, on an equity being fastened on the conscience of the defendant, the behaviour of the defendant may be a factor.<sup>56</sup> In *R v Department of Health, ex parte Source Informatics Ltd*,<sup>57</sup> the Court of Appeal accepted that the confidant's own conscience was the touchstone used to determine the scope of the duty and whether it had been breached.

55 [1996] FSR 629.

56 The behaviour of the defendant in *Indata Equipment Supplies Ltd v ACL Ltd* [1998] FSR 248 seemed to colour the judgments of Simon Brown and Otton LJ.

57 [2001] FSR 74.

58 Lord Goff described the public domain as information which is so generally accessible that, in all the circumstances, it cannot be regarded as confidential in *Attorney-General v Guardian Newspapers (No. 2)* [1990] 1 AC 109. He also said that a duty of confidence would not apply to useless information or trivia.

59 *CMI-Centers for Medical Innovation GmbH v Phytopharm plc* [1999] FSR 235.

60 *Inline Logistics Ltd v UCI Logistics Ltd* [2002] RPC 611.

61 [2001] FSR 383.

62 [2001] FSR 559.

The law of breach of confidence cannot protect information that is unmistakably in the public domain,<sup>58</sup> notwithstanding that a compilation of materials taken from the public domain may be protected. In some cases, the information concerned will be a mixture of confidential information and matter already in the public domain. In such cases, the onus will be on the claimant to identify what is confidential and what is not. This is important at an interim hearing as well as at a full trial. For example, if an interim injunction is granted preventing the further use or disclosure of the information, the defendant must be able to distinguish between information he must not use and that which he is free to. Where the information can be disentangled and the confidential information identified and classified as such, then the claimant must do that, even at an interim stage.<sup>59</sup> This is important also in determining whether confidential information had been communicated under an obligation of confidence and whether there had been an unauthorised use of confidential information.<sup>60</sup>

Similar principles apply to applications for search orders. In *Gadget Shop Ltd v Bug.Com Ltd*<sup>61</sup> it was held that the confidential information that was alleged to have been misused must be clearly identified at the interim stage and the claimant had failed to exercise the care required to ensure that its evidence in this respect was true. A significant amount of the information alleged to be confidential had been put into the public domain by the claimant by publication on its website.

If the claimant himself has placed information in the public domain, that does not necessarily deprive a more detailed version of that information of its confidential nature. In *Ashworth Security Hospital v MGN Ltd*,<sup>62</sup> the *Daily Mirror* published an article about Ian Brady who had been convicted with Myra Hindley of 'the Moors Murders'. During a hunger strike in 1999, Ian Brady launched a media campaign and wrote to the BBC and published information through his solicitor. The newspaper article included detailed observations taken from Ian Brady's file in a database by a person unknown who had passed on the information to a journalist. In the Court of Appeal, Lord Phillips MR said:

I do not consider the publicity generated by Ian Brady himself in the period before publication of the *Mirror* article had the effect of stripping the cloak of confidentiality from the more detailed records about Brady on the PACIS database.

The defendant's appeal against an order disclosing its source of the information as published was dismissed by the House of Lords, which agreed with the Court of Appeal decision and said that Article 10 of the Human Rights Convention required that the

courts should carefully scrutinise any request for relief, including disclosure of a journalist's sources, which interfered with freedom of expression. In this particular case, it was said to be important that the source be identified and punished to act as a deterrent to such wrongdoing in future. The order for disclosure was, therefore, necessary, proportionate and justified.<sup>63</sup>

<sup>63</sup> [2002] 1 WLR 2033.

It is important to distinguish material alleged to be confidential from other material that can be used lawfully. In *Vestergaard Frandsen A/S v Bestnet Europe Ltd*,<sup>64</sup> an application to strike out an action for breach of confidence failed. The confidential information related to a mosquito net. The defendants claimed that some of the information was in the public domain, being contained in a published patent specification. However, that information did not seem to be the same as the information claimed to be confidential. Furthermore, the defendants submitted an expert report which did not clearly distinguish between information claimed to be confidential and information which ex-employees could be expected to remember following termination of their employment.

<sup>64</sup> [2007] EWHC 2455 (Ch).

## Trade secret

The term 'trade secret' is often used in relation to confidential information associated with industrial and commercial activity. The classification of some forms of confidential information as trade secrets is important because the protection afforded by the law may depend upon it. Unfortunately, there is no satisfactory legal definition of the term.

In *Herbert Morris Ltd v Saxelby*,<sup>65</sup> Lord Atkinson spoke of trade secrets thus (at 705):

<sup>65</sup> [1916] 1 AC 688.

... trade secrets, such as prices, &c. or any secret process or things of a nature which the man [the defendant] was not entitled to reveal.

In that case, Lord Parker suggested a test based on the detailed nature of the information. Information that was far too detailed to be carried away in the head was a trade secret, whereas a general method or scheme that could easily be remembered could not be regarded as a trade secret. At first instance, in *Faccenda Chicken Ltd v Fowler*,<sup>66</sup> Goulding J defined three classes of information, being:

<sup>66</sup> [1985] 1 All ER 724.

- 1 Information which, because of its trivial character or its easy accessibility from public sources, cannot be regarded as confidential;
- 2 Information which an employee must treat as confidential, but which, once learned, reasonably remains in the employee's head and becomes part of his skill and experience; and
- 3 Specific trade secrets so confidential that a continuing duty of confidence applies even beyond the termination of employment or the service contract.

This classification provides little guidance as to what precisely distinguishes a trade secret from information in the second category, but it does show that such information will be given less protection. In *Lancashire Fires Ltd v SA Lyons & Co Ltd*,<sup>67</sup> Sir Thomas Bingham MR said that the distinction between Class 2 and Class 3 may, on the facts, be very hard to draw but the Court of Appeal did apply Goulding J's classification. There may be a problem with Goulding J's 2nd class, and in *Ocular Sciences Ltd v Aspect Vision Care Ltd*,<sup>68</sup> Laddie J admitted difficulty with it, arguing that it had little to do with confidence. Perhaps it is more a question of the employee's duty of fidelity to his present employer. This duty would prevent him, whilst still employed, putting his skill and expertise at the disposal of another employer whether or not that involved confidential

<sup>67</sup> [1996] FSR 629.

<sup>68</sup> [1997] RPC 289.

information. As Laddie J said, ‘... he is expected to work for his employer not for his employer’s competitors.’

69 [1991] 1 WLR 251.

Of trade secrets, in a restraint of trade case, *Lansing Linde Ltd v Kerr*,<sup>69</sup> Staughton LJ spoke in terms of information that would be liable to cause real harm if it was disclosed to a competitor, provided it was used in a trade or business and the owner had either limited the dissemination of the information, or at least not encouraged or permitted widespread publication. Butler-Sloss LJ stressed the need to take account of the changing nature of business and the need to take account of ‘... the wider context of highly confidential information of a non-technical or non-scientific nature.’<sup>70</sup>

70 [1991] 1 WLR 251 at 270.

While it is clear that a secret industrial process containing an inventive step is capable of being a trade secret, the position is less predictable in terms of confidential price lists, databases containing customer names and addresses and clients’ accounts. The test of what can be remembered by an ex-employee does not help, as many new inventions may easily be remembered. Neither would it be realistic to limit trade secrets to inventions that are potentially patentable. Information relating to clients’ credit ratings and the types of goods that they buy may be very valuable and, in the right circumstances, fall to be considered a trade secret. In *PSM International plc v Whitehouse & Willenhall Automation Ltd*<sup>71</sup> drawings, quotations, price costing and business strategies were considered to rank as trade secrets. On the other hand, the mere application of obvious principles to an industrial process does not, *per se*, give rise to a trade secret. Furthermore, it is unlikely, though not impossible, that the aggregation of a number of well-known or obvious features would amount to a trade secret.<sup>72</sup> In *Inline Logistics Ltd v UCI Logistics Ltd*,<sup>73</sup> it was held that a particular combination of non-confidential design features could be protected as confidential information. But, in *Cantor Fitzgerald International v Tradition (UK) Ltd*,<sup>74</sup> it was held that a technique used for testing computer software which was readily derivable by a skilled man from public sources is not a trade secret. It amounts to no more than a useful technique or ‘wrinkle’ which an ex-employee may use after cessation of his employment. However, use of the claimant’s computer program source code, even if only for debugging purposes, was a breach of confidence. Thus, as a general rule, it can be said that source code programs are trade secrets unless published by the owner of the program.

71 [1992] FSR 489.

72 *AT Poeton (Gloucester Plating) Ltd v Michael Ikem Horton* [2001] FSR 169.

73 [2002] RPC 611.

74 [2000] RPC 95.

Where a person carried out work which could result in inventions being made, then it is obviously falls to be classed as a trade secret. This also applies to carrying out experiments and making deductions on the basis of those experiments. In *Vestergaard Frandsen A/S v Bestnet Europe Ltd*,<sup>75</sup> the information concerned the process of discovering the most effective treatment of mosquito nets.

75 [2009] EWHC 657 (Ch).

## Publication

If the information has been published or disclosed to third parties on a reasonable scale in the absence of an obligation of confidence, it falls into the public domain and the law of confidence cannot prevent its subsequent use and further disclosure. Unless his conscience is fixed by equity, a person who has received the information in circumstances such that he was not, or could not reasonably have been, aware of the confidential nature is free to make use of that information or to pass it on to others. However, even if the information has fallen into the hands of innocent third parties because of a breach of confidence, there will be remedies available against the person in breach. When a patent is applied for, the specification of the invention is available for public inspection 18 months after the priority date. The protection afforded by the law of confidence is then lost, to be replaced by the patent, once granted.<sup>76</sup> The information is in the public domain even though it may be available only after a search at the Patent Office. In *Mustad & Son v Dosen*,<sup>77</sup> a case concerning information about a machine

76 Once the patent has been granted, the proprietor can sue for infringement in relation to acts done after the date of publication of the patent.

77 [1964] 1 WLR 109. This case was actually decided in 1928.

for the manufacture of fish hooks for anglers, it was held that publication through the master by obtaining a patent effectively destroys the servant's duty of confidence in respect of the subject matter of the patent grant. However, this principle has been distinguished as regards a patent obtained by a third party.

In *Cranleigh Precision Engineering Ltd v Bryant*,<sup>78</sup> Bryant was the managing director of the claimant company which manufactured above-ground swimming pools invented by Bryant. No patent had been granted in respect of the claimant's swimming pools. Patent agents, acting on behalf of the claimant, informed Bryant of a patent belonging to a rival company (known as the Bischoff patent) which concerned a similar swimming pool but which lacked two special features which the claimant's design incorporated.<sup>79</sup> Bryant did not inform his co-directors of the Bischoff patent. Later, Bryant left and set up his own company and obtained an assignment of the Bischoff patent. He was sued, *inter alia*, for injunctions to restrain him and his company from making use of or disclosing information relating to the claimant's swimming pools.

It was argued on behalf of the defendant that, because knowledge of the Bischoff patent was in the public domain, there could be no breach of confidence. However, although details of the Bischoff patent could be inspected by anyone, it was especially relevant to the claimant because of the possible effect of the Bischoff patent on the claimant's swimming pools and the possibility of a conflict over rights. Bryant had acted in breach of confidence in making use, as soon as he left the claimant's employ, of the information concerning the Bischoff patent and in terms of the *various effects on the claimant's position* of that information. The case of *Mustad & Son v Dosen* was distinguished on the grounds that, in that case, the patent was granted to the master (employer), that is, publication was by the master of the person alleged to have committed the breach of confidence. In *Cranleigh Precision Engineering Ltd v Bryant*, the publication was by another; Bryant's 'master' (the claimant) had never published anything, not even the specification for its own swimming pool.

Where information is in the public domain in a particular form, such as in a published patent, it might be argued that obtaining and using that information which has been acquired by other means is a breach of confidence. In *EPI Environmental Technologies Inc v Symphony Plastic Technologies plc*,<sup>80</sup> the defendant had the use of the claimant's additives under a contract. These products contained material which was part of the public domain in a patent and part secret. The defendant did not consult the patent, and only discovered it later, but analysed the products. It was held that the defendant was free to use the public domain materials providing the contract did not impose any obligation not to analyse the products. If it were otherwise, the defendant would be the only organisation not able to make use of the public domain materials. The appeal to the Court of Appeal was dismissed.<sup>81</sup> Although proof of a sufficient similarity may 'shift' the burden of proof in as much as the evidential burden shifted to the defendant who was then obliged to give an explanation for the similarity. However, although being described as shifting the burden of proof, the burden of proof remain with the claimant. In this particular case, comparing the substances in question did not raise an inference of copying and there was nothing to suggest that the judge at first instance had misdirected himself.

If the information has found its way to the public domain, the person who owed another an obligation of confidence in respect of that information may be prevented from making use of the information himself for a period of time. This is known as the 'springboard' doctrine. The person who was under an obligation of confidence is not allowed to use it as a springboard from which to launch his own project if to do so would be harmful to the person to whom the obligation was owed. In *Terrapin v Builders Supply Co (Hayes) Ltd*<sup>82</sup> it was said by Roxburgh J that:

<sup>78</sup> [1965] 1 WLR 1293.

<sup>79</sup> The special features were a plastic strip clamping the inner and outer walls together and an overlapping interfit of the metal plates forming the outside wall of the swimming pool.

<sup>80</sup> [2005] FSR 502.

<sup>81</sup> *EPI Environmental Technologies Inc v Symphony Plastic Technologies plc* [2006] EWCA Civ 3.

<sup>82</sup> [1967] RPC 375, actually decided in 1959.

. . . a person who has obtained information in confidence is not allowed to use it as a springboard for activities detrimental to [the owner] and springboard it remains even when all the features have been published . . .<sup>83</sup>

83 [1967] RPC 375 at 392.

However, the springboard effect does not last indefinitely. After all, if the information has been published others are free to use it, so why should the person who originally owed an obligation of confidence be restricted? Of course, one justification is that the information has been published because of a breach of that obligation. In *Roger Bullivant Ltd v Ellis*,<sup>84</sup> the claimants specialised in a type of construction work known as underpinning. This is a means of replacing defective foundations. The defendant, who had been an employee of the claimants, with others, set up a rival business. It was discovered that the defendant had taken a copy of a card index of customers which had been compiled by the claimants. The defendant had deliberately made use of the card index and could not complain if the court restrained him from using it, even though his obligation of confidence as an ex-employee was weaker and he would have been free to use information that he simply had remembered. It was said that the springboard doctrine would not normally extend beyond the period for which the unfair advantage gained would reasonably be expected to remain, and the purpose of an injunction in such circumstances was not to punish the defendant but to protect the claimant. It was argued that the information was freely available elsewhere but, on the basis of *Robb v Green*,<sup>85</sup> it was said that the defendant could not complain if the law was unable to distinguish between the information he was able to use and that which he could not.<sup>86</sup>

84 [1987] FSR 172. This case was distinguished in *Nottingham University v Fishel* [2001] RPC 367 in which an application for springboard damages was refused. The defendant employee, who was not in breach of a fiduciary duty, worked for foreign clinics but this caused no damage to his employer whose clinic in England was not affected by the defendant's activities abroad.

85 [1895] 2 QB 315.

86 But a claimant has a duty to make such a distinction if it can be made: see *CMI-Centers for Medical Innovation GmbH v Phytopharm plc* [1999] FSR 235, discussed above.

The springboard doctrine is used to deprive the defendant of that unfair advantage he might have as a result of his breach of confidence. Where the information has entered the public domain, we have seen, in *Bullivant v Ellis*, that any injunction imposed will be of limited duration. One justification is that the court ought to restrict the use of the information for the time it would have taken the defendant to derive the same information using his own skill and labour, where it is possible for the defendant to do this. However, if it is not possible for the defendant to derive the same information independently, then the springboard cannot apply and any injunction granted ought to be permanent. This was the case in *Electro Cad Australia Pty Ltd v Mejati Rcs Sdn Bhd*<sup>87</sup> in which the judge accepted evidence that it was impossible to reverse engineer a computer chip containing the relevant information. Thus, apart from his misuse of information learned whilst in the employ of the claimant, the defendant had no other way in which he could derive the information, used in car immobilisation devices.

87 [1999] FSR 291, High Court of Malaysia.

Where the information has entered the public domain, it can no longer be regarded as confidential and the obligation of confidence owed by the defendant cannot continue. If everyone else is free to further publish or use the information why should the defendant be prevented from doing so? In such cases, the only justification for the springboard doctrine is to prevent the defendant having a head start over others who are free to use the information because of his breach of confidence, or to ensure that the claimant has a head start over the defendant.<sup>88</sup> He would be able to enter the marketplace before any other who is free to use the information. Where this is not so – for example, where the information can be put to use immediately – it would seem that the remedy ought to lie in damages only as the sole purpose of the injunction would be to punish the defendant further rather than to protect the interests of the claimant. Springboard relief will not be granted simply because the defendant has made an unauthorised use of the claimant's confidential information. The defendant must have gained an unfair competitive advantage over the claimant which still existed at the time of the action.<sup>89</sup>

88 *Gupta v Dasgupta* [2003] FSR 337, High Court of Delhi.

89 *Sun Valley Foods Ltd v John Philip Vincent* [2000] FSR 825.

90 [1990] 1 AC 109.

In *Attorney-General v Guardian Newspapers (No 2)*,<sup>90</sup> one of the *Spycatcher* cases, Lord Goff said that it was difficult to see how a confidant who publishes information to

the whole world could be prevented from further disclosing it. This would mean the confidant could not mention in public what was now common knowledge. Laddie J was attracted to this conclusion in *Ocular Sciences Ltd v Aspect Vision Care Ltd*,<sup>91</sup> thereby casting some doubt on the springboard doctrine. He said that the court counters any unfair benefit to the defendant by imposing financial penalties or imposing a constructive trust. However, the *Attorney-General v Guardian* case was concerned with publication rather than other forms of use. What, for example, of the situation where the defendant has published the information but can put it to practical use some time before anyone else because of his particular training and experience of using the information? Perhaps the information concerns a new technique that has to be learnt and practised before it can be applied successfully. In such cases, there may yet be a place for the springboard doctrine. Alternatively, it may be technical information relating to a new industrial process and the defendant, because of his knowledge of specialist component manufacturers and potential customers, can realise a commercial reward long before anyone else. On the other hand, if the information can be put to immediate use – for example, if it relates to a planned takeover bid for a company quoted on the stock market – there seems little point in injuncting the defendant.

Further consideration of the springboard doctrine was given in *Vestergaard Frandsen A/S v Bestnet Europe Ltd*.<sup>92</sup> Arnold J doubted that *Terrapin* was authority for the proposition that an injunction could be granted once the information had ceased to be confidential. He gave a possible interpretation of the springboard doctrine expressed in *Terrapin*. If it meant that information could have a limited degree of confidentiality even though it could be ascertained by reverse engineering or by compilation from public domain sources, then the doctrine was sound. An injunction for a limited period could be granted in relation to such information. The purpose of the injunction would be to prevent the defendant from benefiting or continuing to benefit from past misuse. However, an injunction was not appropriate where the defendant had misused the information but was no longer doing so.

## Public interest

As with copyright, a defence of public interest is available in an action for breach of confidence. Of course, in many cases where this is relevant, there will be issues of both confidence and copyright, such as where someone publishes a confidential document.<sup>93</sup> The courts will not respect an obligation of confidence if it is in the public interest that the confidential information is made known to the public at large or to a restricted class of the public, such as an official body. Public interest is relevant where it concerns the administration of justice: for example, the law of confidence cannot be used as a means of suppressing information concerning criminal conduct.<sup>94</sup> But it is wider than that and can cover matters about religion,<sup>95</sup> price-fixing,<sup>96</sup> experiments on animals<sup>97</sup> and about persons in the public eye. It can extend to ‘mug-shots’ (photographs taken by the police of persons suspected of having committed a criminal offence) in pursuance of the Police and Criminal Evidence Act 1984. In *Hellewell v Chief Constable of Derbyshire*<sup>98</sup> the claimant complained that the police had given copies of a photograph of him to local shopkeepers involved in a shop watch scheme and who were concerned at the level of shoplifting. At the time the claimant had been charged with theft, though not convicted.<sup>99</sup> The judge said that the police were not free to use the photograph in whatever way they wished and that it might be described as a piece of confidential information. However, the judge, referring to the claimant’s long list of convictions and the fact that the dissemination of the photograph was limited to shopkeepers and their staff, held that the actions of the police were obviously and unarguably in the public interest.<sup>100</sup>

91 [1997] RPC 289.

92 [2009] EWHC 1456 (Ch).

93 For example, *Lion Laboratories Ltd v Evans* [1984] 2 All ER 417, discussed in Chapter 7.

94 See *Gartside v Outram* (1857) 26 LJ Ch (NS) 113. However, in *Re Barlow Clowes Gilt Managers Ltd* [1992] Ch 208, it was said that information received by liquidators in confidence for the purposes of liquidation should not be disclosed to defendants in collateral criminal proceedings unless there was a compelling reason to divulge the information such as a court order.

95 For example, in *Hubbard v Vosper* [1972] 2 QB 84, it was held, *inter alia*, that it was in the public interest that details about the Church of Scientology be made known to the public.

96 *Initial Services Ltd v Putterill* [1968] 1 QB 396.

97 *Imutran Ltd v Uncaged Campaigns Ltd* [2003] FSR 20.

98 [1995] 1 WLR 804.

99 He was subsequently convicted.

100 Data protection law may also be engaged. There is provision in the Data Protection Act 1998 for disclosures of personal data, which includes photographs, for the prevention or detection of crime: s 29.

The police had acted in good faith for the prevention or detection of crime. The provision of information to the police by a person under caution accused of a criminal offence is subject to an obligation of confidence and must not be used for any purpose other than criminal proceedings. This is a matter of public interest, being that such a person should be able to make a full disclosure without fear of it being used for extraneous purposes.<sup>101</sup>

<sup>101</sup> *Robert Bunn v BBC* [1999] FSR 70.

Public interest must now be viewed in the context of the Human Rights Act 1998 which incorporates the Human Rights Convention into UK law. Of particular interest are Articles 8 and 10 of the Convention, the former providing a right to privacy and the latter providing a right to freedom of expression. However, both rights are subject to potential interference or derogation: for example, in the interests of national security or public safety or for the protection of the rights of others. In *R v Ashworth Special Hospital Authority*,<sup>102</sup> the Authority monitored telephone calls made by high-risk patients having violent or dangerous predilections. The monitoring was random and involved about 10 per cent of calls but excluded privileged calls, for example, made to patients' legal advisers. It was held that this was not a breach of the right to privacy in Article 8(1) of the Convention as it fell within Article 8(2) which allows interference with the right in accordance with law where necessary in a democratic society in the interests of, *inter alia*, national security, public safety, the prevention of disorder or crime or the protection of the rights and freedoms of others.<sup>103</sup>

<sup>102</sup> *The Times*, 26 June 2001.

<sup>103</sup> For a case involving Article 10, see *Ashworth Security Hospital v MGN Ltd* [2001] FSR 559, discussed below.

<sup>104</sup> [2009] EMLR 411.

<sup>105</sup> A 'blog' is a publicly accessible internet-based diary.

<sup>106</sup> In relation to the latter, it was argued that revealing his identity would inhibit his right to impart information to the general public.

In *Author of a Blog v Times Newspapers Ltd*,<sup>104</sup> the claimant was a serving police officer who was also a 'blogger'<sup>105</sup> and he placed information indicating his strong views of police and administration of justice matters. He wished to remain anonymous but, by detective work, the defendant discovered his identity. He sought to restrain the defendant from publishing details of his identity, arguing that there was a public interest in preserving the anonymity of bloggers and would infringe his Article 8 and Article 10 rights.<sup>106</sup> The claimant's application for an injunction was dismissed. It was held that the information did not have the necessary quality of confidence about it nor did it qualify as information about which the claimant had a reasonable expectation of privacy because blogging is a public activity, analogous to journalism. Furthermore, even if that was wrong, at full trial it would be likely to be held that there was a greater public interest in informing the public that a particular serving police officer was responsible for the blogs.

The scope of breach of confidence should not be drawn too widely in the first place and the scope of the public interest defence should be kept within strict limits, otherwise there is a danger that the public interest defence becomes less of a rule of law but provides ammunition to judges to allow them to decide cases on an extempore basis, depending on their subjective view as to whether the obligation of confidence in a particular case should be respected or overruled.<sup>107</sup>

Three points about public interest are considered below, namely where the proposed publication is potentially defamatory, where there is a conflict in public interests and, finally, as regards the scope and nature of the disclosure.

<sup>107</sup> Per Simon Brown LJ in *R v Department of Health, ex parte Source Informatics Ltd* [2001] FSR 74, approving the dictum to that effect of Gummow J in *Smith Kline and French Laboratories (Australia) Ltd v Secretary, Department of Community Services and Health* [1990] FSR 617 at 663.

### Potentially defamatory publication

It is recognised that the public have an interest in the truth. If a person intends to publish material which is clearly untrue and defamatory, there is little doubt that the courts would, if asked, grant an injunction preventing publication unless the defendant pleads justification. However, if a person has obtained information in confidence which might injure the reputation of another, he may be free to publish it if such publication can be said to lie within the public interest. This will apply particularly to information concerning the character of persons in the public limelight, such as politicians and

show-business personalities who actively seek publicity. Of course, public interest can only be realised if the information is true, and the courts will not usually restrain publication if the person intending to publish the information is likely to raise the defences of justification or fair comment if sued for defamation. In this respect, there is something to be said for the ‘publish and be damned’ attitude of the Duke of Wellington. After all, the aggrieved party has, if the information is untrue, remedies under the tort of defamation which can be quite effective bearing in mind the burden of proof in such an action.

There are two reasons why the courts are reluctant to restrain publication of information even if claimed to be defamatory. First, the defences of justification or fair comment in a defamation action are for a jury to decide, not the court asked for injunctive relief. Second, the courts have to take account of freedom of speech.<sup>108</sup> The motive behind the threatened publication may not be particularly relevant to the issue, even if the defendant intended to be paid for his silence. In *Holley v Smyth*,<sup>109</sup> the defendant was the sole beneficiary of a trust. He threatened to send press releases to the media alleging fraud on the part of the trustees unless they paid him £200,000, being the amount by which the defendant claimed the trust had been defrauded. The Court of Appeal, by a majority, discharged an injunction restraining publication on the basis that the claimants were not entitled to interim injunctions unless the information was manifestly untrue.

In *Woodward v Hutchins*,<sup>110</sup> the defendant was a public relations officer who worked for the claimants, who were pop singers including Tom Jones, Englebert Humperdinck and Gilbert O’Sullivan. The singers wanted to be presented to the public in the best possible light in order to encourage large audiences to attend their concerts. The defendant went on tour with the singers and saw their ‘goings on’. Later, when no longer engaged by the claimants, he wrote a series of articles about the claimants’ discreditable conduct, including a case of adultery; it was a typical ‘Sunday paper’ story with headings such as ‘Why Mrs Tom Jones threw her jewellery from a car window and Tom got high in a jumbo jet’ and ‘Tom Jones is Superstud’. The first article was published and the singers applied for an injunction to prevent further articles being published on the grounds that they were defamatory and had been written in breach of confidence. Lord Denning MR said that the public interest in the truth outweighed the public interest in protecting confidential information in this case. The remaining articles could be published, leaving the claimants free to pursue a claim for damages in libel. The defendant had made it clear that he would plead justification if sued for defamation. An important factor in the decision is that the claimants had sought publicity which was favourable to them, and they could not therefore complain if the public were given true information showing them in a less favourable light.

This case must now be read in the light of *Campbell v Mirror Group Newspapers Ltd*.<sup>111</sup> As the singers in *Woodward v Hutchins* had sought publicity and, to some extent, to control it to their advantage, it was right that the public should be told the truth if the public image they hoped to promote was false or a distortion of the truth. However, disabusing the public of the image the claimants had attempted to put across may not extend to publishing all the salacious details of behaviour falling short of that image. The balance between the rights to privacy and freedom of expression require some careful consideration that may not be possible in the reality of newspaper and other media publishing, working to tight deadlines. It remains to be seen whether the courts are prepared to allow some judgmental latitude to editors. The majority decision in *Campbell* suggests that latitude might be quite narrow although the majority of judges could be accused of balancing privacy and freedom of expression with the benefit of hindsight, not sufficiently taking account of the pressures on editors of newspapers and other news media to take quick, ‘on-the-hoof’ decisions.

<sup>108</sup> *Bonnard v Perryman* [1891] 2 Ch 269.

<sup>109</sup> *The Times*, 20 December 1997.

<sup>110</sup> [1977] 2 All ER 751.

<sup>111</sup> [2004] 2 AC 457. Further doubt was placed on the correctness of *Woodward v Hutchins* in *McKennitt v Ash* [2007] 3 WLR 194. The case did, of course, precede the implementation of the Convention rights in English law.

### Conflict of differing public interests

There may be more than one type of public interest involved where confidential information is concerned. Public interest can be served by the disclosure of certain types of information to a limited section of the public or to the public at large, depending on the nature of the information. However, the public interest can be best served by maintaining confidences generally, that is by discouraging potential breaches of confidences by a strong and certain law. For example, the public interest in maintaining confidences between doctors and their patients is extremely high. Sometimes there will be a conflict between these forms of public interest, and the court must balance one against the other in coming to its decision.

112 [1990] Ch 359.

In *W v Edgell*,<sup>112</sup> W had killed five people and had been diagnosed as suffering from paranoid schizophrenia. At his trial, his plea of diminished responsibility was accepted and he was detained without time limit under the Mental Health Act 1959 ss 60 and 65.<sup>113</sup> Later, W's condition improved and his doctor recommended transfer to a regional secure unit. The doctor said that the illness was under control and W was no longer a danger provided he stayed on medication. The Home Secretary refused his consent to the transfer. W applied to a mental health review tribunal for discharge or transfer. Dr E was instructed to examine W and make out a report. The report was unfavourable to W and Dr E sent a copy to W's solicitor in the belief that it would be placed before the tribunal, but W's solicitor withdrew the application. Dr E heard of this and realised that there would not be a copy of his report on W's file for future reference. Being concerned at this, Dr E sent a copy of his report to the Home Secretary. W complained that this was a breach of the confidential relationship between a patient and a doctor.

113 Now the Mental Health Act 1983 ss 37 and 41.

In the High Court, it was said that Dr E owed a duty of confidence to W which was created and circumscribed by the particular circumstances of the case. Dr E considered that W had a psychopathic personality and thought that W's solicitors intended to suppress the report. Therefore Scott J considered that Dr E also owed a duty to the public which required him to place before the proper authorities the results of his examination of W, who was not an ordinary member of the public. W unsuccessfully appealed to the Court of Appeal. It was held that although W had a personal interest to see that the confidence he had reposed in Dr E was not breached, the maintenance of a duty of confidence by a doctor to his patient was not a matter of private but of public interest. The public interest in maintaining confidence had to be balanced against the public interest in protecting others from possible violence. In this case, the public interest in restrictive disclosure outweighed the public interest that a patient's confidences should be respected. Bingham LJ said:

Only the most compelling circumstances could justify a doctor in acting in a way which would injure the immediate interests of his patient, as the patient perceived them, without obtaining his consent.<sup>114</sup>

114 [1990] Ch 359 at 423.

On the facts Dr E acted very responsibly and, it would appear, under a sense of public duty. It is clear that breach of confidence in a relationship as sensitive as doctor and patient would be legally permissible only under the most compelling and narrow circumstances.<sup>115</sup>

115 Presumably, now the interference to the patient's right to privacy would be justified under Article 8(2) of the European Convention on Human Rights on the basis that it was necessary for public safety, the prevention of disorder or crime or to protect the rights and freedoms of others.

It is contrary to the public interest to order disclosure of the identity of a press source but, in exceptional circumstances, there may be an overriding public interest equivalent to a pressing social need. In *Ashworth Security Hospital v MGN Ltd*,<sup>116</sup> the Court of Appeal confirmed an order for disclosure of the identity of the person who had provided the defendant newspaper with detailed medical records pertaining to Ian Brady. Lord Philips MR said that disclosure of the medical records to the press was serious misconduct that went beyond matters of concern to the individual. It was an attack

116 [2001] FSR 559, confirmed in the House of Lords at [2002] 1 WLR 2033.

on an area of confidentiality that required safeguarding in a democratic society. The order for disclosure involved interpretation of the Contempt of Court Act 1981 s 10 and Article 10 of the Human Rights Convention. The former provides a defence to contempt of court where a person refuses to disclose a source of information unless disclosure is necessary in the interests of justice or national security or for the prevention or detection of crime. The latter provides for a right to freedom of expression but this may be subject to formalities, conditions, restrictions or penalties:

... necessary in a democratic society, in the interests of national security, territorial integrity or public safety, for the prevention of disorder or crime, for the protection of health or morals, for the protection of the reputation or rights of others, for preventing the disclosure of information received in confidence, or for maintaining authority and impartiality of the judiciary.

Although the interests of justice are not expressly mentioned in Article 10, Lord Philips was of the view that, in the present case, the claimant could argue that its claim for identification of the source of the information fell within the interests of the protection of health, the protection of rights of others and preventing the disclosure of information received in confidence. In determining whether the disclosure of the source is 'necessary', a three-stage test formulated by counsel was accepted by Lord Philips. The test is:

- 1 Are the interests of justice engaged?
- 2 If so, the court then has to consider whether disclosure is necessary to achieve the relevant ends of justice.
- 3 As a matter of discretion, the court then has to weigh the specific interests of the claimant against the public interest in the protection of journalistic sources.

Finally, Lord Philips noted that the European approach seemed more inclined to emphasise freedom of expression and give more protection to journalistic sources than was the case in the UK. Nevertheless, the European Court of Human Rights, in *Goodwin v United Kingdom*,<sup>117</sup> recognised that, in exceptional circumstances where vital public or individual interests are at stake, an order requiring disclosure of journalistic sources can be justified. *Ashworth v MGN* was such a case.

<sup>117</sup> (1996) 22 EHRR 123.

### Scope and nature of the disclosure

It is clear that, in some circumstances, whether the public interest defence applies depends on the scope and nature of the disclosure. Sometimes, a very restrictive disclosure will be appropriate such as in *W v Edgell*, but, had that particular disclosure been made to a newspaper, the defendant probably would not have been successful in his public interest defence. In *Imutran Ltd v Uncaged Campaigns Ltd*<sup>118</sup> it was said that the public interest may be served by a limited disclosure rather than disclosure to the world but the court, as a public authority, must take into account the right of freedom of expression under Article 10 of the Human Rights Convention. If there is a public interest in the disclosure, the judges will take into account the persons to whom the confidential information is communicated. For example, the public interest might be best served by disclosure to a responsible body rather than to the media.<sup>119</sup> Another, often related, factor might be whether the disclosure was done for gain or reward, although this is not decisive.<sup>120</sup>

<sup>118</sup> [2002] FSR 20.

<sup>119</sup> This was identified as a factor in *Lion Laboratories Ltd v Evans* [1984] 2 All ER 417.

<sup>120</sup> Profit was obviously a motive for publication in *Woodward v Hutchins*, see p 350.

Simply because the confidentiality of information is breached for one particular purpose does not mean that it can be used for other purposes. Certain documents were seized legally by the police investigating a fraud case in *Marcel v Commissioner of Police of the Metropolis*.<sup>121</sup> It was held that the police were not entitled to disclose those documents to a third party to use in civil proceedings, because the public interest in ensuring that the documents were used solely for public purposes appropriate to the powers of seizure conferred on the police outweighed the public interest in ensuring that all

<sup>121</sup> [1991] 1 All ER 845. The documents were seized under the provisions in the Police and Criminal Evidence Act 1984 Part II.

relevant information was available in civil proceedings. The police had a duty not to disclose such documents to third parties except by the order of the court. This case also provides another example of a conflict between two competing public interests.

In *Robert Bunn v BBC*,<sup>122</sup> the claimant had made a statement to the police under caution after being suspected of defrauding a number of banks. The statement was read in open court by the judge, but the claimant was not convicted.<sup>123</sup> Whilst accepting that a statement made to the police was subject to an obligation of confidence, it was held that once it had been read in open court by the judge that obligation had come to an end. The defendant was allowed to continue with its plans to broadcast a programme which made reference to the statement.<sup>124</sup>

122 [1999] FSR 70.

123 The judge directed the jury to acquit on one charge and let the other lie on the file. The claimant had suffered a heart attack.

124 The second defendant was allowed to continue to sell copies of a book containing a report of the claimant's statement.

## OBLIGATION OF CONFIDENCE

The second requirement for an action in breach of confidence is that there must be an obligation of confidence which arises from the circumstances in which the information was imparted.<sup>125</sup> This obligation may arise by express agreement or prior notice, or it may be implied by law: for example, in a fiduciary relationship or by general equitable principles.<sup>126</sup> Commonly, an obligation of confidence will be established and delineated by a contract which has express terms dealing with confidence or, in the absence of such express terms, by implied terms depending on the nature of the contract. For example, the contract may prohibit performing an analysis of a compound supplied under the contract. The obligation of confidence may extend beyond the termination of the contract. However, a contract is not essential and frequently the obligation will arise in preliminary negotiations for a contract, even though the contract is never executed. It is axiomatic that an obligation of confidence will apply where there is a duty of good faith: for example, between doctor and patient or between solicitor and client. Nevertheless, the circumstances where the obligation will be appropriate are much wider than this and include business transactions, commercial negotiations, the relationship between husband and wife and, sometimes, disclosures to third parties.

There are limits to the occasions when a duty of confidence will be implied. The defendant in *Carflow Products (UK) Ltd v Linwood Securities (Birmingham) Ltd*<sup>127</sup> was sued for infringement of a registered design and an unregistered design right in respect of a design for a steering wheel lock for cars. The defendant had made a prototype steering wheel lock of its own and Jacob J held that there was no evidence of copying and, as a result, the unregistered design right claim failed. As regards the registered design claim, the defendant argued that, as the prototype had been shown to a potential buyer before the filing date of the registered design, that buyer was not under a duty of confidence, being free in equity and law to use or disclose it. If that was the case, then the registered design would be invalid for lack of novelty.<sup>128</sup>

125 *Coco v AN Clark (Engineers) Ltd* [1969] RPC 41 per Megarry J.

126 It is not clear whether confidential information can be trust property under a constructive trust: see *Satnam Investments Ltd v Dunlop Heywood & Co* [1999] FSR 722.

127 [1996] FSR 424.

128 Alternatively, the defendant's lock was outside the scope of the registration.

129 The reasonable man must be someone with some knowledge of the industry and the importance of securing protection of some form. The man on the Clapham omnibus knows little of intellectual property rights.

In deciding whether the disclosure was in confidence, Jacob J said there were two approaches: a subjective one (what the parties thought they were doing by way of imposing or accepting obligations of confidence) and an objective approach. As to the former, on the evidence Jacob J held that neither party thought an obligation of confidence was being imposed or accepted. As to the objective approach, the reasonable man (officious bystander)<sup>129</sup> would know that what was being shown was a prototype and that the law provides a number of ways in which it could be protected: for example, by registration as a design, by application for a patent or by the unregistered design right. Therefore, he would not expect that an obligation of confidence arose merely by showing a prototype for something which was being offered for sale. Obviously, in circumstances where there is any doubt as to whether an obligation of confidence will be imposed by the courts, it would be better to impose an express duty.

The fact that confidential information is made difficult to access, for example, by releasing it in encrypted form only, is not enough, *per se*, to impose an obligation of confidence. In *Mars (UK) Ltd v Teknowledge Ltd*,<sup>130</sup> the defendant managed to reverse engineer an EEPROM<sup>131</sup> computer chip to access information which it then used to recalibrate discriminators used in coin receiving and changing machines supplied to third parties by the claimant. Jacob J rejected the claimant's argument that the fact of encryption meant 'confidential – you may not de-encrypt'.<sup>132</sup> He said (at 151):

The [customer] is an intended recipient of the article containing the information . . . There is nothing obviously confidential about the machine he gets. There is no marking 'confidential' and indeed there is not even any indication of encryption. By the time one gets to find out about the encryption it is, in my judgment, far too late to impose a duty of confidence.<sup>133</sup>

Jacob J said that the message that comes across by encrypting information is that the owner does not want another person to gain access to it. Without more, that cannot impose an obligation of confidence.

Where information contains or comprises personal data (information relating to living individuals), there is an inevitable overlap between the law of breach of confidence and data protection law. The law of confidence often imposes a duty not to disclose information and data protection law prohibits disclosures of personal data in some circumstances, such as where disclosure to a third party would cause them substantial damage or distress. Indeed, the Data Protection Act 1998 permits disclosures of personal data in tightly drawn circumstances only. However, if the data have been rendered truly anonymous, they will be outside the provisions of data protection law as in *R v Department of Health, ex parte Source Informatics Ltd*<sup>134</sup> where data relating to patients' prescriptions had been rendered anonymous before disclosure to a company processing the data for the purpose of providing pharmaceutical companies with information concerning prescribing habits and trends. Disclosures of personal data to third parties may be allowed, *inter alia*, if necessary for the legitimate interests pursued by the third party providing the disclosure is not unwarranted by reason of prejudice to the rights and freedoms or legitimate interests of the data subject.<sup>135</sup> In Case C-369/98 *R v Minister of Agriculture, Fisheries and Food, ex parte Fisher*,<sup>136</sup> the Ministry refused to provide information about crops grown in previous years on farms newly acquired by a number of farmers, claiming it would breach data protection law by disclosing personal data relating to the farmers who had previously occupied the farms in question. The European Court of Justice disagreed, noting that the test required a balancing between the legitimate interests of the third party with those of the persons to whom the personal data related.

Furnishing individuals with copies of their personal data under s 7 of the Data Protection Act 1998 might disclose information relating to third parties. In such cases, it may be necessary to obliterate or remove that information which might identify third parties. This process is known as redaction and an example is given by *Durant v Financial Services Authority*<sup>137</sup> where personal data were provided to the individual requesting subject access in redacted form.<sup>138</sup>

Four particular issues are considered below: express contractual terms imposing a duty of confidence, the employer/employee relationship, covenants in restraint of trade, and the position of third party recipients.

### Express contractual term

It is quite common for formal contracts to contain terms dealing with matters of confidence and imposing a duty on one or both parties not to use or disclose certain types of information. A computer software company engaged to write and install computer programs for a client will be expected not to divulge any details of the client's

<sup>130</sup> [2000] FSR 138.

<sup>131</sup> Electronically Erasable Programmable Read Only Memory.

<sup>132</sup> An obligation not to de-encrypt could have been imposed by contract, subject to the permitted acts under copyright law relating to computer programs.

<sup>133</sup> Jacob J distinguished *Attorney-General v Guardian Newspapers (No 2)* [1990] 1 AC 109 where Lord Goff spoke of an obviously confidential document wafted by an electric fan out of a window into a crowded street.

<sup>134</sup> [2001] FSR 74.

<sup>135</sup> Data Protection Act 1998 Sch 2 para 6.

<sup>136</sup> [2000] ECR I-6751.

<sup>137</sup> [2004] FSR 573.

<sup>138</sup> See Bainbridge, D.I. (2005) *Data Protection Law* (2nd edn) xpl publishing.

business to competitors. An advertising agency asked by a drinks manufacturer to mount an advertising campaign for a new brand of lager will be under a duty not to disclose information about the new product until after its launch. A duty of confidence will exist between two companies submitting a joint tender for a contract where preparation of the tender involves an exchange of confidential information.<sup>139</sup> Of course there will be an equitable duty, but expressly providing for the duty in a contract means that it can be more stringent and focused in its scope. Breach of confidence will then constitute a breach of contract, giving contractual remedies to the aggrieved party. Terms dealing with confidence, often imposing a reciprocal duty, are common in contracts between business organisations, between consultants and businesses engaging them, and between employers and their employees, as discussed later.

As with any contractual term, care must be taken in the drafting. The courts will not impose a duty of confidence to benefit a person other than the person intended. In *Fraser v Evans*,<sup>140</sup> the claimant was a public relations consultant who had been engaged by the Greek government to prepare a report. The contract included an express term stating that the claimant must not divulge any of the information contained in the report during or after the currency of the contract. A copy of the report had been surreptitiously obtained and came into the hands of the *Sunday Times*. The claimant was granted an *ex parte* order restraining publication of the report or parts of it in the newspaper on the grounds that it would be defamatory and would be a breach of confidence. The claimant considered that an article based on the report would show him in a bad light. On the defendant's appeal, it was held that the claimant was not entitled to an injunction. Although the claimant owed a duty to the Greek government, no reciprocal duty was imposed by the contract, neither could such a duty be implied. The courts can give effect to an obligation of confidence only at the instance of the party to whom such obligation is owed. It was also held, *obiter*, that although the claimant owned the copyright in the report, this did not extend to preventing the use of the information contained within it, once again illustrating the distinction between idea and expression in copyright.

When items are distributed to the public or to a limited section of the public, it can be assumed that confidential information embodied within those items will automatically lose its confidential quality and a person obtaining one of the items will not owe an obligation of confidence to its manufacturer. Other branches of intellectual property law are more appropriate, such as patent law and copyright law. However, if the distribution occurs by way of a contract, the contract may include terms attempting to impose a continuing duty of confidence, for example by prohibiting dismantling or reverse engineering. In *KS Paul (Printing Machinery) Ltd v Southern Instruments Ltd*,<sup>141</sup> there were two defendants. The second defendant hired from the claimant a telephone answering machine which was enclosed in a box which concealed the workings of the machine. The contract of hire included a condition that the machine should not be removed from its installation position or interfered with. The machines were not available except under such conditions. The second defendant allowed the first defendant to remove the machine, dismantle it and examine it. Access to the confidential information concerning the workings of the machine was thus obtained. An injunction was granted to the claimant restraining the use of confidential information obtained from the 'machines of the type hired by the claimants . . . from any unlawful inspection of any such machines'. The contract of hire had effectively prolonged the effectiveness of confidence and applied to a third party who had been allowed by the hirer to dismantle the machine.

It is arguable that sales to the general public may not destroy the application of the law of breach of confidence if, by the very nature of the product, the secret information is not accessible or is accessible only after doing something which infringes some right

139 An interim injunction was granted to enforce or restrain derogation from agreed terms in relation to a defence contract in *Simtech Advanced Training & Simulation Systems Ltd v Jasmin Simtec Ltd* [1995] FSR 475.

140 [1969] 1 QB 349.

141 [1964] RPC 118.

or duty.<sup>142</sup> For example, if a computer program is licensed in object code form, the licensee, or any other person for that matter, will not be able to gain access to the ideas locked away in the program without carrying out reverse analysis of the program, an operation that will normally infringe the copyright subsisting in the program, unless falling within the scope of the permitted acts under copyright law. However, by the Copyright, Designs and Patents Act 1988 s 296A(1)(c), any term or condition in an agreement relating to the use of a computer program shall be void in so far as it purports to prohibit or restrict the observing, studying or testing of the functioning of a computer program in accordance with s 50BA.

### Employer/employee relationship

An employee owes a duty of confidence to his employer and this duty may be expressly stated in the contract of employment, and in any case will be implied by law. It can be said that an employee always has a duty to act in his employer's best interests together with a duty of good faith, and this will obviously include a duty not to divulge confidential information about his employer's business to others without the consent of the employer. The sort of information concerned may be rather special, a 'trade secret' such as details of a technique to improve the strength or durability of a type of plastic, or it may be ordinary and mundane, such as details of the customers of the employer. There may be exceptions to this duty, for example, if the information pertains to a criminal offence, or if it is in the public interest that the information is disclosed.

There is seldom any doubt about the duty owed by a present employee. Although the law will be quick to imply a duty of fidelity,<sup>143</sup> inclusion of terms dealing with this in a contract of employment at least have the effect of focusing the employee's attention on the importance of not misusing confidential information. If there are express terms in the contract of employment which attempt to strengthen this duty they must, of course, be clear and unambiguous.

Where the information would be likely to be regarded by employees as a trade secret, it is not essential that the employer specifically points this out. In *Lancashire Fires Ltd v SA Lyons & Co Ltd*,<sup>144</sup> Lord Bingham MR said (at 674):

We do not accept that it is incumbent on an employer to point out to his employee the precise limits of that which he seeks to protect as confidential, particularly where, as here, what is new is an integral part of a process.

Although the employer does not have to spell out the precise limits of what he regarded as confidential, this does not mean that an employer can expect the employee to infer the confidential nature of a small part of extravagant claims made by the employer.<sup>145</sup> In any case, and for the avoidance of doubt, an employer would be advised to make explicit the extent of the confidential material keeping some sense of reality without making exaggerated claims.

### Ex-employees

Many problems arise through the use or disclosure of confidential information by ex-employees, and here the law is faced with a dilemma, for not only does the employer have an interest in maintaining confidence, but the employee also has a competing interest in that he should be free to use his skill and knowledge to earn a living elsewhere.

After confirming that the law will restrain unauthorised disclosure or use of information which is confidential in the *Coco v Clark* sense, Laddie J discussed the public policy in respect of the employee's skill and knowledge in *Ocular Sciences Ltd v Aspect Vision Care Ltd*.<sup>146</sup> He said (at 370), presumably in the context of information within Gouling J's second category in *Faccenda Chicken*:

<sup>142</sup> For an American view of this possibility, see Davidson, D.M. 'Protecting computer software: a comprehensive analysis' (1983) 23(4) *Jurimetrics Journal* 337 at 358. But *cf Mars (UK) Ltd v Teknowledge Ltd* [2000] FSR 138, discussed above (see p 354). Simply making access difficult is not enough, *per se*, to impose an obligation of confidence.

<sup>143</sup> However, the existence of a contract of employment does not, *per se*, impose a fiduciary duty although fiduciary duties could arise out of the relationship of employer and employee. It is a matter of identifying the duties undertaken by the employee and asking whether he had to act solely in the interests of his employer: *Nottingham University v Fishel* [2001] RPC 367.

<sup>144</sup> [1996] FSR 629.

<sup>145</sup> *AT Poetion (Gloucester Plating) Ltd v Michael Ikem Horton* [2001] FSR 169.

<sup>146</sup> [1997] RPC 289.

On the other hand, for public policy reasons, an employee is entitled to use and put at the disposal of new employers all his acquired skill and knowledge. That is so, no matter where he acquired that skill and knowledge and whether it is secret or was so at the time he acquired it. Where an employer's right to restrain misuse of his confidential information collides with the public policy, it is the latter which prevails.

This goes further than other cases, and probably further than Laddie J intended, as he then went on to say the difficulty was in distinguishing between information in Goulding J's second and third categories. Certainly public policy should require that an ex-employee should be able to make use of his learned skill and knowledge as a general principle. This should not, however, extend to information in Goulding J's third category, specific trade secrets so confidential that there is a continuing duty of confidence after employment. In *Printers & Finishers Ltd v Holloway*,<sup>147</sup> Cross J referred to information regarded as a separate part of the employee's stock of knowledge which '... a man of ordinary honesty and intelligence would recognise to be the property of his old employer, and not his to do as he likes with ...' adding that the court would restrain the use of such information by injunction.

Much of the attractiveness of a potential employee to other employers will be the fact that he has built up skill and experience in his previous employments, and it may be difficult to separate this from a previous employer's confidential information. As a further complication, in some cases the employment contract may contain terms trying to restrict an employee's use of confidential materials after the termination of employment. When there are no express terms, the employer will not be protected to any great extent. For example, if an ex-employee simply remembers some information about a few of his previous employer's customers there will be nothing to prevent the ex-employee using this information himself or putting it at the disposal of his new employer. Of course, it would be different if he deliberately memorised the customers' names or made a copy of them.<sup>148</sup> In the absence of an express term in the contract of employment dealing with confidentiality, it was said in *Printers and Finishers Ltd v Holloway*<sup>149</sup> that there would be nothing improper in the employee putting his memory of particular features of his previous employer's plant at the disposal of his new employer. Even if there was an express term, the previous employer would have to show that the information was over and above the employee's normal skill in the job and amounted to a trade secret.

In *Northern Office Microcomputer (Pty) Ltd v Rosenstein*,<sup>150</sup> a case from the Supreme Court of South Africa involving the laws of copyright and trade secrets relating to computer programs, the problem of where to draw the line between the conflicting interests of an employee and his previous employer was considered. It was conceded by Marais J that:

... the dividing line between the use by an employee of his own skill knowledge and experience and the use by him of his employer's trade secrets is notoriously difficult to draw.<sup>151</sup>

In recognising that computer programs that were not commonplace should be eligible for protection as trade secrets, Marais J said that the protection given by the law of trade secrets in the context of ex-employees should be of a limited nature only and that all that should be protected was the employer's 'lead-time', the time to develop the program. That is, the advantage the employer has in getting his product to the marketplace first should be protected and nothing more. He went on to say that, in many cases, the employer's trade secrets were no more than the result of the application by an employee of his own skill and judgment, but if the employee was engaged specifically to produce that information then it could still amount to a trade secret. However, if the material was commonplace, there would be nothing to stop the ex-employee deriving the same

147 [1965] RPC 239.

148 *Robb v Green* [1895] 2 QB 315. Making a copy of a list of customers would also be an infringement of copyright provided the list was original in copyright terms.

149 [1965] RPC 239.

150 [1982] FSR 124.

151 [1982] FSR 124 at 138.

or similar material again as long as he did not simply copy his employer's material. The employee would not have to 'wipe the slate of his mind clean' on the termination of his employment.

### **A test for employees' and ex-employees' obligation of confidence**

An important case which clarified the principles to apply in the employer/employee relationship is *Faccenda Chicken Ltd v Fowler*.<sup>152</sup> This was about the alleged wrongful use by the defendant ex-employee (with a wonderfully appropriate surname) of his employer's sales information. This comprised customers' names and addresses, the most convenient routes to customers, the most suitable times for delivery, prices charged and details of customers' usual orders – information which was, by its very nature, fairly mundane and ordinary, but which was nevertheless still within the scope of the law of breach of confidence. The employer's business was supplying fresh chickens from itinerant refrigerated vans to retailers and caterers. The defendant was engaged by the claimant as a sales manager and left the claimant company to set up in business on his own account, taking eight of the claimant's employees with him. He started selling fresh chickens from refrigerated vans in the same area in which the claimant operated. The employer's action for breach of confidence failed because the information was not of the type which an employee was bound, by an implied term in his contract of employment, not to use or disclose subsequent to the termination of employment. Neill LJ, delivering the judgment of the court, stated the Court of Appeal's views on the relevant principles to apply in cases involving confidentiality between master and servant.

152 [1986] 1 All ER 617.

- 1 If there was a contract of employment the employee's obligations were to be determined from that contract.
- 2 In the absence of any express terms, the employee's obligations would be implied.
- 3 While still in employment, there was an implied term imposing a duty of good faith or fidelity on the employee. This duty might vary according to the nature of the contract, but would be broken if the employee copied or deliberately memorised a list of customers.
- 4 The implied term imposing an obligation on the employee after the termination of his employment was more restricted than that imposed by the duty of fidelity. It might cover secret processes of manufacture or designs, or special methods of construction or other information of a sufficiently high degree of confidentiality so as to be classed as a trade secret.
- 5 Whether information fell within this implied term to prevent its use or disclosure by an ex-employee depended on the circumstances, and attention should be given to the following:
  - (a) the nature of employment – a higher obligation might be imposed where the employee regularly handled confidential material;
  - (b) the nature of information – it should be an authentic trade secret, or at least highly confidential;
  - (c) whether the employer stressed the confidential nature of the material; and
  - (d) whether the information could be easily isolated from other material the employee was free to use, this being useful evidentially rather than being a conclusive test.

On the last point, separability of information would tend to suggest that it was more likely that the information could be classed as confidential. The court left open the question of whether it would make any difference if the ex-employee used the information himself or if he simply sold it to another. Although the decision in this case seems a trifle unfair in that the ex-employee calculatingly and deliberately took advantage of his employer's business and reputation, it can be argued that the employer should have

153 [1983] FSR 318.

154 In *Balston Ltd v Headline Filters Ltd* [1990] FSR 385, an intention to set up in business in competition with the company of which he was a director was held not to conflict with the director's fiduciary duty to the company even though preliminary steps had been taken while he remained a director.

155 [2001] FSR 169.

considered using a restrictive covenant which might have prevented the employee from competing in the area for at least a year or two. However, Mr Fowler was walking a thin line, for in *Normalec v Britton*<sup>153</sup> the defendant decided to sell the same goods as his employer (electric bulbs and fittings) to the same customers he had been seeing on behalf of his employer. Worse still, the defendant did this while he was still in the employ of the claimant. The defendant was held to have a fiduciary duty to his employer who was entitled to the profits made by the defendant, and the court also granted an injunction preventing the defendant from selling to the claimant's customers even after the termination of his employment.<sup>154</sup> The one major difference between this case and the *Faccenda Chicken* case is that here the activity was commenced while the defendant was still employed and while he still was under a duty of good faith or fidelity to his employer.

The *Faccenda* test was revisited by the Court of Appeal in *AT Poeton (Gloucester Plating) Ltd v Michael Ikem Horton*.<sup>155</sup> The facts of the case were that the claimant carried on an electroplating business, specialising in the plating of the internal surfaces of cylinders of internal combustion engines. The defendant had been employed as the claimant's sales engineer and, soon after terminating his employment, he started an electroplating business. Later, the claimant commenced proceedings for breach of confidence arguing that its confidential information misused by the defendant related to:

- (a) the electrolyte;
- (b) the apparatus used by the claimant; and
- (c) a list of the claimant's customers.

At first instance, the claimant was successful in respect of the claim relating to the apparatus and an injunction was granted. The trial judge, Pumfrey J, considered that the defendant had misused confidential information in relation to the design and configuration of the plating cell contained in the apparatus, having decided that the basic idea of the cell was not protectable.

156 However, with respect to a feature (described as feature 'X') which the defendant apparently had become aware of only during the course of the proceedings, the Court of Appeal considered this confidential and ordered the defendant not to use it without prior leave of the court.

157 [1985] 1 All ER 724.

The Court of Appeal allowed the appeal.<sup>156</sup> As regards the design and configuration of the plating cell, the trial judge did not believe this was in the public domain but he was criticised for not considering whether it was, in whole or in part, a *trade secret*, and, if so, whether it came within Class 2 or 3 of the *Faccenda* classification, being those described by Goulding J (at first instance) in *Faccenda Chicken Ltd v Fowler*.<sup>157</sup>

To reiterate Goulding's definitions of Class 2 and 3, Class 2 is information which the servant must treat as confidential (either because he is expressly told that it is confidential or because from its character it obviously is so) but which once learned necessarily remains in the servant's head and becomes part of his own skill and knowledge applied in the course of his master's business. Class 3 comprises specific trade secrets so confidential that, even though they may necessarily have been learned by heart and even though the servant may have left the service, they cannot lawfully be used for anyone's benefit but the master's.

In the Court of Appeal in *Faccenda*, Neill LJ said that to be in Class 2 and, therefore, protectable by a restrictive covenant, the information must be a trade secret or its equivalent. In the present case the defendant's contract of employment contained no relevant restrictions on his activities after termination; therefore, to be protectable, the information must have been in Class 3.

In the present case, Morritt LJ doubted whether the aggregation of the features of the plating cell (apart from feature 'X') was indeed a trade secret but he assumed so for the purposes of applying the test of Neill LJ in *Faccenda*, to determine whether they could amount to a trade secret of such a type as to fall within Goulding J's Class 3. That test and Morritt LJ's application of it to the facts of the present case follow.

- 1 *Nature of employment.* The defendant was employed as a sales engineer. Although he occasionally operated the electroplating process there was nothing in his contract of employment or the work he performed to heighten his appreciation of the alleged confidentiality of the information.
- 2 *Nature of the information.* Although it was accepted that the plating cell was capable of being a trade secret it did not attain the degree of confidentiality required for Class 3. The concept of the process was well known and the features of the claimant's cell reproduced by the defendant were largely a consequence of using that concept.
- 3 *Whether the employer impressed on the employee the confidentiality of the information.* This should be to the extent that the information can be properly regarded as a trade secret. Although this factor was present it was clear that the claim to confidentiality was much wider than justified. Although the Court of Appeal in *Lancashire Fires Ltd v Lyons & Co Ltd*<sup>158</sup> said the employer did not have to define the 'precise limits' of what he sought to protect, that case was not one in which the employer had made 'extravagant claims'.
- 4 *Whether the information can be easily isolated from other information the employee is free to use or disclose.* As the relevant features were so easily seen and assimilated by the defendant during his employment, they could not easily be isolated from information the employee was free to use and could not be protected in the absence of an appropriate covenant in restraint of trade.

158 [1996] FSR 629.

The last point is important and Morritt LJ said that, if employers failed to use covenants in such cases, the court should be reluctant to find information in Class 3 'tucked away in a much wider, but unjustified, claim to confidential information'. The reason was that such claims could be easily made but could be expensive and time-consuming to refute and employees should not be exposed to such risks except in clear cases. *Faccenda*, *Lancashire Fires* and *Poeton* still leave the difficulty of deciding whether information is a 'specific trade secret' within Class 3 or a 'trade secret or its equivalent' in Class 2.

### Employer's obligation

The obligation of confidence arising from a contract of employment is not all one way. In many cases, the employer will owe a duty of confidence to his employees. An employer will hold information concerning the employee, such as marital status, salary and career details. This information should not be divulged to others without the employee's permission except in circumstances where disclosure is permitted by express provision (for example, in pursuance of an attachment of earnings order)<sup>159</sup> or is implied (for example, where salaries are calculated and paid by a third party). If the employee's details are stored on a computer, there will usually be restrictions on disclosure by virtue of the Data Protection Act 1998.<sup>160</sup> Prospective employers also owe a duty of confidence in respect of *curricula vitae* submitted by job applicants. Some employers operate employee suggestions schemes, usually with the possibility of rewards for suggestions having merit that will be used by the employer. By taking part in the scheme, an employee can be said to have waived his rights, if any, in the information he has disclosed in this way if his employer uses the information.<sup>161</sup> However, if the employer does not make use of the information it seems that a duty of confidence will arise. In *Prout v British Gas plc*<sup>162</sup> the claimant, while employed by the defendant, submitted an idea for a new design of bracket for warning lamps placed around excavations. The bracket was supposed to be vandal-proof. The claimant was given an award by the defendant on the basis of its suggestions scheme, but later the defendant said that it had no interest and agreed to allow the claimant to pursue a patent application on his own behalf. On the issue of confidence, it was held that there was a contractual or equitable duty of confidence imposed on the defendant, the employer. Although this duty would

159 Attachment of Earnings Act 1971.

160 See *Rowley v Liverpool City Council*, *The Times*, 26 October 1989. In this case disclosure was lawful under the Data Protection Act 1984 s 34(5), being required in the course of legal proceedings. The 1984 Act has been replaced by the Data Protection Act 1998.

161 In some cases, the information will be treated as belonging to the employer by virtue of the contract of employment.

162 [1992] FSR 478.

normally end once the idea was used in public for the first time without any objection from the employee, a fresh duty could arise if the employee gave notice of his intention to apply for a patent and would continue until the filing date of the application. In this particular case it was held that the employer was in breach of confidence by its subsequent use of the lamps. This extension of duty beyond the first consensual public use could apply only where long-term trade or commercial secrecy was possible, or where an application for legal protection requiring novelty was envisaged. However, public use could easily destroy novelty and would do so in many cases.

### Covenants in restraint of trade

An employer must be careful not to draft terms which are too wide in a contract of employment imposing a continuing duty of confidence after the employment has been terminated.<sup>163</sup> Terms that are too wide are in danger of being struck out by a court as being in restraint of trade. On appointment, an employee may agree to sign a contract restricting his use or disclosure of information concerning his employer's business, or agreeing not to work for a competitor after the termination of the contract of employment.<sup>164</sup> Generally, such agreements will be enforced by the courts only if they are reasonable between the parties and not against the public interest. In particular, an employer cannot use the law of confidence to protect himself against future competition *per se*. If a term in the contract of employment is a clear attempt to prevent future competition rather than a legitimate means of protecting the employer's business interests, it will not be enforced by the courts.<sup>165</sup> Generally, the burden of proof is on the employer to show that the covenant is reasonable and enforceable.<sup>166</sup>

Restrictive terms are usually referred to as covenants in restraint of trade and are frequently expressed in terms of preventing the employee working for a competitor or setting up a business in competition within a given area and for a given period of time.<sup>167</sup> These two factors, time and area, define the extent of the restraint. If the covenant is too wide in terms of either factor, the courts are unlikely to enforce it, and it is clear that the two factors must be considered together. In *Fitch v Dewes*,<sup>168</sup> a solicitor's clerk was prohibited from entering into the employment of another solicitor within a seven-mile radius of Tamworth Town Hall. The restriction was indefinite in terms of time, but nevertheless, because the geographic area was small, it was held to be valid. However, in *Herbert Morris Ltd v Saxelby*,<sup>169</sup> a restriction that an engineer could not work for a competitor anywhere as an engineer for seven years was held to be void. In any case, a restrictive covenant will not be enforced:

unless the protection sought was reasonably necessary to protect a trade secret or to prevent some personal influence over customers being abused in order to entice them away.<sup>170</sup>

Geographical area will not be particularly relevant if the employer's business is carried out over the telephone or by facsimile transmission: even more so if the employer is engaged in e-business, making use of the internet. A covenant prohibiting the former employee from carrying on a business as an employment agent within a 3,000-metre radius (about 1.2 miles) of the employer's place of business for a period of six months was held to be too wide in *Office Angels Ltd v Rainer-Thomas*.<sup>171</sup> It was said that, as clients' orders were placed over the telephone, the location of the business was of no concern to them. Therefore, the area restriction was inappropriate.<sup>172</sup> However, even a small area restriction could be unduly restrictive if the area was one where most of the relevant business was undertaken.

Covenants in restraint of trade often include non-solicitation clauses. That is, the ex-employee may not approach or do business with the employer's customers or clients. The scope of such covenants needs careful thought. In *GW Plowman & Sons Ltd v Ash*<sup>173</sup> a sales representative for the claimant, who was a corn and agricultural merchant

<sup>163</sup> The same applies to independent consultants and the like engaged to perform some work.

<sup>164</sup> Alternatively, such a promise might be extracted from the employee on payment of a settlement at the end of the contract of employment.

<sup>165</sup> *Berkeley Administration Inc v McClelland* [1990] FSR 505; *Roberts v Northwest Fixings* [1993] FSR 281. The courts will not lend their aid to a determined attempt to stop competition. However, a covenant in a franchise agreement has to satisfy a far less stringent test of reasonableness than is required in respect of an ex-employee: *Dyno-Rod plc v Reeve* [1999] FSR 148 and *Convenience Co Ltd v Roberts* [2001] FSR 625.

<sup>166</sup> *Polymasc Pharmaceuticals plc v Stephen Alexander Charles* [1999] FSR 711.

<sup>167</sup> It should be noted that such covenants are not always concerned with confidential information.

<sup>168</sup> [1921] AC 158.

<sup>169</sup> [1916] 1 AC 688.

<sup>170</sup> Per Neill LJ in *Faccenda Chicken Ltd v Fowler* [1986] 1 All ER 617 at 626.

<sup>171</sup> [1991] IRLR 214.

<sup>172</sup> The covenant was too wide because it went beyond that necessary to protect the employer's interest.

<sup>173</sup> [1964] 1 WLR 568.

and animal feeding stuffs manufacturer, had a service agreement which contained a covenant not to carry on a business in the same field for two years within 20 miles of Spalding after termination of employment. It also contained a non-solicitation clause as regards persons who had been customers of the claimant during the period of employment. The fact that this was not limited to customers of whom the defendant had personal experience was not fatal to the clause. It was held valid by the Court of Appeal because, in the words of Russell LJ, the sales representative would be likely to 'acquire special influence over or knowledge of the requirements of any of the employer's customers' whether or not he dealt directly with them. This was because of the nature of the employer's business and because the defendant would be well known to all the customers as representing the claimant.

There are limits to non-solicitation clauses and the above case was distinguished in *Austin Knight (UK) Ltd v Hinds*<sup>174</sup> in which the defendant, who worked for a recruitment consultancy, dealt with about one-third of the consultancy's customers. She was made redundant and her contract of employment contained a covenant preventing her from soliciting or endeavouring to entice away any person who had been a customer of the claimant during her employment. This was held to be unreasonably wide because it purported to prevent the defendant from approaching all the former customers, even though she dealt with only one-third of them. Unlike the *Plowman* case, there were no grounds to infer that she was known to the two-thirds she did not deal with. Nor was there anything to suggest that she had misused any confidential information belonging to the claimant. On this last issue it was said by Vinelott J that there was no evidence that the defendant had taken with her or misused any database or confidential documents.

174 [1994] FSR 52.

If a covenant in restraint of trade is drafted too widely it will be void. The courts will not narrow it down to an acceptable level and apply that instead. In *JA Mont (UK) Ltd v Mills*,<sup>175</sup> Simon Brown LJ said:

175 [1993] FSR 577.

... as a matter of policy, it seems to me similarly that the court should not too urgently strive to find within restrictive covenants *ex facie* too wide, implicit limitations such as alone could justify their imposition.

To construe covenants otherwise would encourage employers to draft their covenants deliberately in wide terms.<sup>176</sup> However, in *Littlewoods Organisation Ltd v Harris*<sup>177</sup> Lord Denning MR adopted a much more relaxed approach to construction, and a covenant that an employee '... shall not at any time within twelve months ... enter into a contract of service or other agreement of a like nature with GUS or any subsidiary thereto' was interpreted as being limited to the mail order side of those parts of the GUS organisation that operated in the UK. The distinction is that in this case there had been an attempt to draw up a reasonable covenant.

176 See also *Mason v Provident Clothing and Supply Company Ltd* [1913] AC 724.

177 [1978] 1 All ER 1026.

The Court of Appeal summarised the legal propositions that apply in the context of restrictive covenants in employment contracts in *FSS Travel and Leisure Systems Ltd v Johnson*.<sup>178</sup> This case involved a computer programmer who was required not to engage in any business that would compete with the claimant's business for a period of one year following termination of employment. The claimant specialised in the development of computer programs for the travel industry. The Court of Appeal upheld the deputy judge's decision that the covenant was unreasonable. Mummery LJ set out the following principles:

178 [1999] FSR 505.

- 1 The court will not uphold a covenant taken by an employer merely to protect himself from competition by a former employee.
- 2 There must be some subject matter which an employer can legitimately protect by a restrictive covenant.

- 3 Protection can be legitimately claimed for identifiable objective knowledge constituting an employer's trade secrets with which the employee has become acquainted during his employment.
- 4 However, protection cannot legitimately be claimed in respect of the skill, experience, know-how and general knowledge acquired by an employee as part of his job, even though this may equip him as a competitor or a potential employee of a competitor.
- 5 The critical question is whether the employer has trade secrets which can be fairly regarded as his property, as distinct from the skill, experience, know-how and general knowledge which can fairly be regarded as the property of the employee. This requires examination of all the evidence relating to the nature of the employment, the character of the information, the restrictions placed on its dissemination, the extent of use in the public domain and the damage likely to be caused by its use and disclosure in competition to the employer.
- 6 The problem in making a distinction between general skill and knowledge, which every employee can take with him when he leaves, and secret or confidential information, which he may be restrained from using, is one of definition. It must be possible to identify information used in the relevant business, the use and dissemination of which is likely to harm the employer, and establish that the employer has limited dissemination and not, for example, encouraged or permitted its widespread publication. It is a matter of examining the detailed evidence relating to the employer's claim for secrecy and deciding, as a matter of fact, on which side of the boundary line it falls. Lack of precision in pleading and absence of solid evidence in proof of trade secrets are frequently fatal to enforcement of a restrictive covenant.

179 [1965] RPC 239.

Mummery LJ then cited Cross J in *Printers & Finishers Ltd v Holloway*<sup>179</sup> with approval, saying that later decisions had not improved upon Cross J's approach where he said (at 244):

If the information in question can fairly be regarded as a separate part of the employee's stock of knowledge which a man of ordinary honesty and intelligence would recognise to be the property of his old employer and not his own to do as he likes with, then the court, if it thinks that there is a danger in the information being used or disclosed by the ex-employee to the detriment of the old employer, will do what it can to prevent that result by granting an injunction.

### Subject matter of covenants

There is some judicial confusion about the proper subject matter of a covenant in restraint of trade in terms of confidential information. In *Faccenda Chicken*, Neill LJ suggested that only trade secrets or their equivalent could be protected by a restrictive covenant and that more mundane information could not. However, this was *obiter* (there was not a restrictive covenant imposed on the defendant) and it conflicts with Neill LJ's own description of the implied term imposed after termination of employment. The implied term protects trade secrets, and consequently there is no need for a restrictive covenant in respect of them. In *Balston Ltd v Headline Filters Ltd*,<sup>180</sup> Scott J declined to follow that part of Neill LJ's judgment to the effect that confidential information that could not be protected by an implied term *ipso facto* could not be protected by a suitably limited express covenant.<sup>181</sup> This accords with common sense as most business organisations possess information that would harm them or benefit others if divulged, even though that information is not a trade secret or associated with one. By limiting the restriction the courts are seeking to arrive at an equitable balance between the interests of employer and employee alike.

180 [1987] FSR 330, an interim hearing.

181 At first instance, in *Faccenda Chicken Ltd v Fowler* [1985] 1 All ER 724, Goulding J classified information available to employees into three categories. Class 2, confidential information falling short of a trade secret, was, he suggested, capable of being protected by a restrictive covenant. In the Court of Appeal, Neill LJ disagreed with this proposition.

### Garden leave

Employers are often worried about the harm that can be caused to them by an employee working his notice. The employee might attempt to influence clients or remove

confidential materials. It is not unknown for employees who have been given notice of termination of their employment to be told to stay at home and ‘enjoy the garden’ during their period of notice. This ‘garden leave’ may last for some time if the employee is in a senior position subject to a lengthy period of notice. If the employee attempts to work for another employer during his garden leave, the courts may act to restrain him by granting an injunction.

A ‘high-flying’ professional may be anxious to start work for another organisation as quickly as possible and challenge the period of notice. In *GFI Group Inc v Eaglestone*<sup>182</sup> a highly paid financial services broker challenged his 20-week period of notice. The court was tempted to hold him to this because, in his line of work, his word was his bond. However, the period was reduced to three months because of some exceptional circumstances, one of which was that some other brokers were only on four weeks’ notice.

182 [1994] FSR 535.

Factors that may be relevant to the grant of an injunction include the amount and nature of confidential information the employee had access to and the seniority of the employee. However, in *Provident Financial Group v Hayward*<sup>183</sup> the Court of Appeal refused to grant an injunction against an employee on garden leave because little of the period of notice remained, there was no evidence of a serious prospect that the employer’s interests would be harmed and the employee worked in an administrative capacity, having access to very little confidential information. It could also be argued that enforced garden leave is a breach of the contract of employment, as an implied term is that the employer provides suitable work, if available.<sup>184</sup>

183 [1989] 3 All ER 298.

Where there is a restrictive covenant for a period of time, the time during which the employee is ‘enjoying’ his garden leave is not, in the normal case, deducted from the time limit in the covenant. In *Credit Suisse Asset Management Ltd v Armstrong*,<sup>185</sup> Neill LJ declined to set off the time on garden leave. In that case, the duration of the garden leave was six months and the period in the covenant was twelve months. Neill LJ did, however, add a caveat on the basis of public policy, saying that a court might decline to enforce the covenant where, for example, the length of garden leave was exceptional.

184 However, the contract of employment may be construed so as not to impose an obligation on the employer to provide appropriate or any work: *SBJ Stephenson Ltd v Mandy* [2000] FSR 286.

185 [1996] ICR 882.

### Third-party recipients

The general rule is that a third party who comes by the information without knowing it to be confidential, or in circumstances where an obligation of confidence cannot be imposed, is free to use the information or to disclose it as he sees fit, especially if it entered the public domain. This is the one fundamental weakness of the law of breach of confidence – innocent third parties are largely unaffected by this area of law. They may, however, be subject to other rights, duties or liabilities. For example, the information may be in the form of a literary work and a question of infringement of copyright might be raised. Alternatively, use of the information may result in an action for passing off, or its publication may be defamatory or a breach of the right to privacy under the European Convention on Human Rights.

The position of the person who is not aware of the confidential nature of the information at the time it is disclosed to him but subsequently becomes so aware is less clear. In *Fraser v Evans*<sup>186</sup> Lord Denning MR said (at 361):

186 [1969] 1 QB 349.

No person is permitted to divulge to the world information he has received in confidence, unless he has just cause or excuse for doing so. Even if he comes by it innocently, nevertheless once he gets to know that it was originally given in confidence, he can be restrained from breaking that confidence.

There are *dicta* in *Prince Albert v Strange*,<sup>187</sup> *Union Carbide Corp v Naturin Ltd*<sup>188</sup> and other cases, which suggest that the power of the court to restrain use or further disclosure of confidential information could extend to cases where a person obtains information without notice of the breach. In *Lancashire Fires Ltd v SA Lyons & Co Ltd*,<sup>189</sup> the third

187 (1849) 1 Mac & G 25.

188 [1987] FSR 538.

189 [1996] FSR 629.

defendant, who had been employed by the claimant as a financial manager, was given information relating to a new process for making artificial coal and logs for gas fires by the second defendant (who had also been employed by the claimant) in breach of confidence. The second and third defendants set up a company to exploit the confidential technology and the Court of Appeal confirmed that the third defendant could also be restrained from using the information. A particular factor was the public interest in the maintenance of confidences.

It can be said that equity fastens on the person's conscience once he discovers the confidential nature of the information. However, equitable remedies are discretionary and injunctive relief may not be given where it could cause hardship to the parties. The person to whom the information has been given might have performed work or made contracts with other persons in reliance on that information before appreciating its confidential nature. This factor did not, however, prevent an Australian judge imposing injunctions on all the defendants (most of whom had unwittingly paid for the information).<sup>190</sup>

<sup>190</sup> *Wheatley v Bell* [1984] FSR 16.

There will be circumstances where a third party will be bound by an obligation of confidence even though the owner of the information did not impart the information to the third party directly. The third party may receive confidential information knowing it to be confidential, or in circumstances in which a reasonable man would have suspected that it was confidential. In other cases, he may discover the confidential nature of the information subsequently. It appears that only when the recipient actually knows of the confidential nature will he be under an obligation not to use or divulge the information further. In *Fraser v Thames TV Ltd*,<sup>191</sup> three actresses formed a rock group with the assistance of a manager and developed an idea for a TV series known as *The Rock Follies*. They discussed the idea orally with Thames TV in confidence, and it was agreed that the actresses were to have first refusal should the series proceed. When Thames TV decided to proceed, one of the actresses could not get a release from another part and Thames TV replaced her with another actress. It was held that the court would prevent a person disclosing an idea in written or oral form until it became general public knowledge, provided that:

<sup>191</sup> [1984] 1 QB 44.

- 1 the circumstances imputed an obligation of confidence; and
- 2 the content was clearly identifiable, potentially attractive in a commercial sense and capable of being brought to fruition.

For a third party to be fixed with an obligation of confidence, they must know that the information was confidential and had been imparted in confidence. Even though it was disclosed to several people, it was disclosed to each and all of them in confidence. An argument by counsel for the defence that the idea lost its confidentiality when it was disclosed to others was rejected by Hirst J, who said that the disclosure to others was plainly also in confidence and, therefore, confidence remained intact.<sup>192</sup> The actress who had been replaced was awarded very substantial damages. If the information has fallen into the public domain, then there is nothing to be gained by preventing a third party from publishing it. As Lord Goff said in *Attorney-General v Guardian Newspapers (No 2)*<sup>193</sup> (at 281):

<sup>192</sup> See also *Franchi v Franchi* [1967] RPC 149.

<sup>193</sup> [1990] 1 AC 109.

If a person into whose possession [the confidential information] comes publishes it, and is (as he usually will be) aware of its confidential nature, he will *prima facie* be guilty of a breach of confidence and any such publication, if threatened, can therefore be restrained by injunctions as a threatened breach of confidence, subject of course to the usual limitations on the duty of confidence. One of these limitations is that information is no longer confidential once it has entered the public domain, once information relating to national security has entered the public domain, I find it difficult to see on what basis further disclosure of such information can be restrained.

The issue of the innocent third-party recipient was considered again in *Valeo Vision SA v Flexible Lamps Ltd*.<sup>194</sup> The claimant gave some drawings and other confidential information relating to rear light clusters for vehicles to a third party, the German truck manufacturer MAN. The third party later disclosed these to the defendant who took them in good faith, believing the third party had the right to disclose them. Aldous J said that the equitable rule, that a person who is a bona fide purchaser for value without notice of confidential information will escape the arm of equity, was too narrow. However, it was settled law that equity would provide relief by way of damages only where a person had his conscience fixed by equity, objectively or subjectively. Nevertheless, the court would still, in appropriate cases, grant an injunction restraining further misuse of the information. The test for whether a third party can be liable for a breach of confidence was considered further in the Court of Appeal in *Thomas v Pearce*.<sup>195</sup> The second defendant had made use of a list of clients given to her by the first defendant who had taken the list from her former employer. It was held that the correct test was whether the third party had acted honestly. Mere careless, naive or stupid behaviour is insufficient. For a third party in such circumstances to be liable for breach of confidence, the third party must have acted dishonestly, with conscious knowledge of the breach or at least deliberately closing his mind to it. This test seems narrower than the view of Aldous J in *Valeo Vision* and, in *Thomas v Pearce*, Buxton LJ put great store on cases on breach of trust such as *Royal Brunei Airlines v Tan*<sup>196</sup> in which Lord Nicholls said that a failure to exercise due diligence was insufficient to establish liability against a third party who procured or assisted in a breach of trust. To be liable, the third party would have to have failed to 'observe the standard which would be observed by an honest person'. However, it is arguable that it is not correct to apply principles derived from cases on breach of trust to a breach of confidence case. There was no mention in *Thomas v Pearce* of the cases on the position of third parties in breach of confidence cases.

The granting of an injunction would be ineffective once the information has entered the public domain and is readily available. It could also be very unfair on the innocent recipient against whom action is taken. In the above case, an injunction was held to be inappropriate as the information had already entered the public domain. Contrary to some earlier judicial statements as regards the knowledge required to bind the conscience of the third party so as to give rise to damages,<sup>197</sup> Aldous J in *Valeo Vision* made it clear that constructive knowledge will suffice. That is where the third party was in the possession of such facts that would make the reasonable man suspect that the information was subject to an obligation of confidence.

A discussion of third-party recipients is not complete without consideration of the position of a person who obtains the information surreptitiously, for example in circumstances involving industrial espionage. Can such a person be fixed with an obligation of confidence? At first sight it appears not, especially when the formula used in the *Coco* case is examined, as it seems to suggest that the information is given voluntarily by its owner. There is very little case law on this point, but in *Malone v Commissioner of Police*<sup>198</sup> Sir Robert Megarry V-C was of the view that an eavesdropper would not owe a duty of confidence. *Malone* involved telephone tapping, an activity which was made illegal under the Interception of Communications Act 1985 s 1, which made it an offence intentionally to intercept a communication during its transmission through a public telecommunication system.<sup>199</sup>

In *Malone* the telephone tap was lawful, but Sir Robert Megarry V-C spoke of unknown hearers and said that a person using a telephone to disclose confidential information must accept the risk of being overheard as that risk is inherent in the mode of communication. This case was distinguished in *Francome v Mirror Group Newspapers Ltd*,<sup>200</sup> where it was held that there was a serious issue to be tried on the

<sup>194</sup> [1995] RPC 205.

<sup>195</sup> [2000] FSR 718.

<sup>196</sup> [1995] 2 AC 378.

<sup>197</sup> For example, Hirst J in *Fraser v Thames Television Ltd* [1984] 1 QB 44 at 65.

<sup>198</sup> [1979] 2 All ER 620.

<sup>199</sup> Now replaced by the Regulation of Investigatory Powers Act 2000 s 1 which makes it an offence intentionally to intercept a communication during its transmission through a public telecommunication system without lawful authority. The offence also applies to a public postal service and to private telecommunication systems, subject to a number of exemptions.

<sup>200</sup> [1984] 2 All ER 408.

basis of breach of confidence concerning information obtained by way of an illegal telephone tap. Although a person using a telephone takes the risk of being overheard because of imperfections or accidents, he does not willingly take the risk of an illegal tap. The same principle should apply to facsimile transmission or electronic mail. The sender takes the risk of the information being seen by persons other than those for whom it is intended, who have access to the room where the receiving machine is installed. Even the risk of misdirection must be accepted. It must be questionable whether confidentiality can remain intact if a number of persons, other than those directly associated with the addressee such as secretarial staff, have an opportunity to read the contents of a facsimile transmission. Likewise, the status of a notice on the transmitted material to the effect that it is confidential and must not be read by anyone other than the addressee is doubtful. It should be noted that, in the case of *Prince Albert v Strange*,<sup>201</sup> the court found for the claimant even though it was not known how the defendant had gained possession of the subject matter, only that it must have been done surreptitiously. If the information in question contains personal data and is subsequently stored in a computer or structured manual file by the eavesdropper or spy, there may be a breach of data protection law and possibly an offence under that law.

201 (1849) 1 Mac & G 25.

## UNAUTHORISED USE

The final ingredient for an action for breach of confidence is an unauthorised use of the information to the detriment of the party communicating it. It will usually be fairly obvious when there has been an unauthorised use of confidential material. The use or disclosure complained of must be related to the nature of the obligation of confidence. For example, in an agreement between the owner of confidential information and a manufacturing company which is going to exploit it commercially on the basis of agreed royalty payments, the company will be permitted to use the information for the purposes detailed in the agreement. In addition, other use and subsequent disclosure may be implied. For example, the company may be able to divulge the information to subcontractors while stressing its confidentiality, and to the company's own employees and to sister companies if part of a group. It is really a matter of construing the agreement.

Liability for unauthorised use may be joint, but is not restricted to cases where all joint tortfeasors have played an active role in the breach of confidence. Thus, a person embarked upon a common design with another who is solely responsible for the breach of confidence may also be enjoined.<sup>202</sup> However, where the confidential information is jointly owned, it appears that one joint owner cannot prevent the other joint owners making use of the information without him, in the absence of any contractual agreement to the contrary. In *Drummond Murray v Yorkshire Fund Managers Ltd*,<sup>203</sup> a team of six persons put together a package of information relating to the purchase of a company. The information was communicated to a third party by the team and the third party started to use the information with the blessing of the team bar one, the claimant, who objected and commenced proceedings to restrain the third party from using the information. Although the first two elements in *Coco v Clark*<sup>204</sup> were present, the last, an unauthorised use, was not. There was no binding agreement that all the members of the team would continue to be involved and any of them could withdraw at any time. If this was so, then some of the members of the team could decide to go ahead without one of their number, either on their own or jointly, with others. Although the information initially belonged to all the members of the team, if one could be excluded, then he could not after exclusion prevent the use of the information by the others.

202 *Lancashire Fires Ltd v SA Lyons & Co Ltd* [1996] FSR 629, applying *Unilever plc v Gillette (UK) Ltd* [1989] RPC 583, a patent case.

203 [1998] FSR 372.

204 [1969] RPC 41, discussed at p 338 above.

If the information is a mixture of public and private materials then the recipient must be especially careful to use only that which is public, unless he has permission to use the private information. In *Seager v Copydex (No 1)*<sup>205</sup> the defendant designed a carpet grip using details from the public domain, but also incorporating some ideas it had discussed with the claimant some years before. The defendant claimed it had forgotten about the latter so it was effectively a case of subconscious copying. Nevertheless, and notwithstanding the apparent innocence of the defendant's actions, Lord Denning MR found for the claimant. It would appear, therefore, that the state of the mind of the person using the information in breach of confidence does not affect liability, although it could be relevant when it comes to determining damages.

205 [1967] RPC 349.

That there should be some detriment to the party communicating the information is doubtful. Although, in *Coco v Clark*, Megarry J spoke of detriment as being an ingredient for an action in breach of confidence, other parts of his judgment suggest that it need not be an essential element. In *Attorney-General v Guardian Newspapers (No 2)*,<sup>206</sup> Lord Goff said that, like Megarry J in *Coco v Clark*, he would like to keep the point open although accepting that it will almost always be present. In many cases, the justification for protecting confidences is that they are tied up with commercial activity, investment and marketing and industrial manufacture. In other words, confidence has an economic value to its owner who will have a vested interest to see that his competitors do not have access to the information, at least not without paying for it. But the law of breach of confidence has a tremendously wide scope, and in some cases economic considerations are largely irrelevant: for example, where the disclosure of the information is likely to harm a person's public standing.

206 [1990] 1 AC 109.

Where the information has economic value, it is easily understandable why the owner of the information would not want to see his competitors have some advantage from it. In *R v Licensing Authority, ex parte Smith Kline & French Laboratories Ltd*,<sup>207</sup> SKF<sup>208</sup> originated a drug (Cimetidine) to control gastric acid secretion and heal peptic ulcers. SKF marketed the drug under the name 'Tagamet' and obtained patents in respect of it in 1972, which were extended to 1992 on the basis that during the last four years the patents would be endorsed 'licences of right'.<sup>209</sup> SKF and others wishing to sell the drug had to obtain a product licence from the licensing authority. SKF objected to the licensing authority using confidential information submitted by SKF in support of its own application in order to consider other companies' applications for product licences. The High Court held that this was a breach of confidence, but this was reversed in the Court of Appeal. The House of Lords upheld the Court of Appeal saying that the licensing authority, at its discretion and in the performance of its duties under the Medicines Act 1968 and Community law, had a right to make use of all the information provided by applicants for product licences in determining whether to grant other applications. Two important factors were the protection of public health and the harmonisation of the national laws throughout Member States.

207 [1989] 1 All ER 175.

208 Smith Kline & French Laboratories Ltd.

209 The extension was by virtue of the Patents Act 1977 Sch 1. Under the Patents Act 1949 the maximum duration of a patent was 16 years.

Of course, this case has tremendous significance for originators of medicines and generic manufacturers. The originator has all the expense of research, development and, in particular, testing new drugs and medicines. If the drug or medicine was covered by patents then, theoretically, all the competitor would have to do would be to look up the patent specifications (being documents available for public inspection) and then, at the appropriate time, apply for a compulsory licence in respect of the patents or to have the patents endorsed 'licences of right'. However, the patent owner's monopoly will not be easily disturbed unless there is some evidence that the patent is not being worked or is being unfairly exploited in some way.<sup>210</sup> This reluctance to interfere with the monopoly provided by patents is justifiable in the context of something like a drug, where a potential competitor could seriously undercut the originator because the former has not spent large sums of money on research and development.

210 See Chapter 13 for licences of right and compulsory licences.

## REMEDIES

The whole rationale and justification for the law of breach of confidence is that it can and should be used to preserve secrets and confidences. As a result of this the most appropriate remedy is the *quia timet* injunction, which will be granted to prevent general publication or other disclosure of the subject matter of the confidence. However, as previously noted, an injunction will not normally be granted if the aggrieved party complains that publication would be defamatory and the defendant is likely to raise a defence of justification or fair comment. In such a case, the courts will usually allow the defendant to publish and take the risk of paying damages, which could be considerable, should his defence in a defamation action fail. In some cases, an injunction may be granted to prevent the defendant making use of the information himself, even though innocent third parties may be free to use it (the so-called springboard doctrine discussed earlier in this chapter). However, normally, once the information has fallen into the public domain, an injunction will not be granted because it is ineffective: for example, as in one of the *Spycatcher* cases, *Attorney-General v The Observer Ltd*.<sup>211</sup> In the House of Lords it was held that injunctions would not be granted against the *Observer* and the *Guardian* preventing them from reporting on the contents of *Spycatcher* because publication abroad had effectively destroyed the secrecy of the book's contents.<sup>212</sup>

211 [1989] AC 109.

212 The *Sunday Times* was in breach of confidence when it published an extract before copies of the book had become readily available in the UK and the newspaper was liable to account for the resulting profits. However, the *Sunday Times* could now continue with its further serialisation of *Spycatcher*.

213 [1967] RPC 349.

214 [1969] RPC 41.

Being equitable, injunctions are discretionary, and the decision to grant an injunction will be influenced by factors such as the innocence of the defendant – for example, in the case of non-deliberate use of information as in *Seager v Copydex (No 1)*,<sup>213</sup> and whether an injunction is really necessary. In *Coco v AN Clark (Engineers) Ltd*,<sup>214</sup> the court decided that payment of damages in the form of royalties would be an appropriate alternative pending full trial. Other considerations might be whether the claimant delayed in taking legal action (the doctrine of laches applies), whether he was careless with the information or whether he should have sought other legal means of protecting the information, for example by obtaining a patent.

In terms of confidential information, an injunction may be for either or both of two purposes. The first is to restrain the continued use of the information and the second is to restrain publication. The latter will not normally be appropriate where the information has already entered the public domain, subject to what has been said earlier in this chapter in relation to the springboard doctrine. In *Ocular Sciences Ltd v Aspect Vision Care Ltd*,<sup>215</sup> Laddie J clearly distinguishes between the two purposes and when they are appropriate. In that case, he applied the guidelines in *Shelfer v City of London Electric Lighting Co*<sup>216</sup> to the effect that the court should grant damages in substitution for an injunction where the injury to the claimant's legal rights is small, is capable of being estimated in money, is adequately compensated by a small money payment and the case is such that it would be oppressive to the defendant to grant the injunction. On the facts, the information relating to contact lenses was not substantial, the damage to the claimants, if any, was small and the granting of an injunction would be oppressive. The claimants' proceedings had been vexatious in a number of respects and some reckless claims to confidentiality had been put forward. Therefore, Laddie J refused to grant this form of injunction.

215 [1997] RPC 289.

216 [1895] 1 Ch 287.

217 Exemplary damages are not available for breach of confidence or invasion of privacy: *Mosley v News Group Newspapers Ltd* [2008] EWHC 2341 (QB).

218 [1969] RPC 250.

If the information has been disclosed or used in some way in breach of confidence then it will usually be too late for an injunction, but damages may be available.<sup>217</sup> Damages may be calculated on the basis of conversion, breach of confidence being in the nature of an equitable tort. The most thorough and comprehensive discussion of the relevant principles is to be found in *Seager v Copydex Ltd (No 2)*,<sup>218</sup> where it was said that the value of confidential information depends upon its nature, and one of the following two formulae would be appropriate:

- 1 If there is nothing very special about the information, and it could have been obtained by employing a competent consultant, then the value (for the purpose of damages) is the fee that consultant would charge.
- 2 If the information is something special involving an inventive step, then the value is the price a willing buyer would pay for it.

If the information is commercial in nature and used in the manufacture of an object which is sold or hired, then it would seem that damages should be assessed on the basis of the fee the owner of the information reasonably might have expected had the information been used with his licence. Assessing damages for future infringement would be difficult using the second formula in *Seager* above. One might also question why a patent had not been applied for if there was an inventive step. A better approach would be that used in the *Coco* case, where an order was granted to the effect that the defendant should pay into a trust account a royalty on engines made in the future.

The Intellectual Property (Enforcement, etc.) Regulations 2006<sup>219</sup> provide a formula for the assessment of damages for the infringement of intellectual property rights. It may seem debatable whether the ownership of confidential information, *per se*, gives rise to an intellectual property right. However, the Directive on the enforcement of intellectual property rights suggests that a wide interpretation should be given to the term ‘intellectual property’ and goes on to state that Member States may apply the Directive to acts involving unfair competition.<sup>220</sup> Furthermore, the protection of intellectual property rights under the TRIPs Agreement extends to the protection of ‘undisclosed information’.<sup>221</sup> The Directive on the enforcement of intellectual property rights recognises that the Member States and the Community itself are bound by the TRIPs Agreement.

Under reg 3 of the Intellectual Property (Enforcement, etc.) Regulations 2006, in assessing damages in cases where the defendant knew or had reasonable grounds for knowing that he was engaged in infringing activity, the court must take account of all appropriate aspects including negative economic factors such as lost profits or unfair profits made by the defendant and non-economic factors such as the moral prejudice caused to the claimant by the infringement. In appropriate cases, royalties or fees payable had the defendant taken a licence may be used as a basis for the assessment exercise. It is submitted that this will have minimal impact on the assessment of damages for breach of confidence but could impact on cases such as *Peter Pan Manufacturing Corp v Corsets Silhouette Ltd*, discussed below.

The market value approach has no place where the claimant would not have contemplated selling or licensing the confidential information to others. In *Cadbury Schweppes Inc v FBI Foods Ltd*,<sup>222</sup> the claimant acquired a company making a drink comprising tomato juice and clam broth, sold under the name ‘Clamato’. An ex-licensee made a new drink after termination of the licence, called Caesar Cocktail. The claimant obtained some and discovered the formula and claimed that it had been made in breach of confidence. It was held, in the Supreme Court of Canada, that damages for the breach of confidence should be calculated on a ‘but-for’ basis as is usual with a tort. The claimant’s lost opportunity was that the defendant had entered the marketplace some 12 months earlier than it would have otherwise done. However, the court would not unjustly enrich a confider by overcompensating for ‘nothing very special’ information.

In *Gorne v Scales*<sup>223</sup> a willing seller and willing buyer approach was taken in assessing the value of confidential information relating to a farm seed processing business. The information was in the form of a card index containing information such as customers (farmers), contact details, quantities and types of seed processed for these customers and amounts charged. In assessing damages for breach of confidence, the Court of Appeal held by a majority, that where the confidential information is a business asset,

<sup>219</sup> SI 2006/1028 reg 3. The Regulations implement, *inter alia*, Directive 2004/48/EC of the European Parliament and of the Council of 29 April 2004 on the enforcement of intellectual property rights, OJ L 157, 30.04.2004, p 45 (the ‘Directive on the enforcement of intellectual property rights’).

<sup>220</sup> Recital 13 to the Directive.

<sup>221</sup> Agreement on Trade-Related Aspects of Intellectual Property Rights, Annex 1C of the Marrakech Agreement Establishing the World Trade Organisation, 1994. Under Article 39 of the Agreement, protected undisclosed information is secret information of commercial value.

<sup>222</sup> [2000] FSR 491.

<sup>223</sup> [2006] EWCA Civ 311.

regard should be had to the market value of that information in the context of a sale between a willing seller and a willing buyer.

As regards innocent third parties, damages will be available, as a general rule, only if the third party's conscience is fixed by equity, that is, if they knew or ought to have known that the information was subject to an obligation of confidence. Injunctions may be available, if appropriate, notwithstanding the innocence or *bona fides* of the third party. Each case must be treated on its own merits and it is, effectively, a matter of satisfying the equity raised by the third party's intentions in relation to the information. Basic equitable principles should guide the courts in the exercise of their discretion in such matters and the interests of a third party purchaser without knowledge, actual or constructive, should be paramount.

If the information has been exploited commercially in breach of confidence, an account of profits may be more beneficial to the claimant. An account is an alternative to damages, and being an equitable remedy is discretionary. In *Peter Pan Manufacturing Corp v Corsets Silhouette Ltd*<sup>224</sup> a manufacturer of brassieres made use of confidential information under a licence agreement. After the expiry of a licence agreement, the manufacturer continued to use the information, clearly in breach of confidence. In an action for breach of confidence, the claimant asked for an account of profits based on the whole of the profits accruing from the brassieres, but the defendant claimed that the account of profits should be based only on the profit resulting from the wrongful use of the confidential information, that is, the profit relating to the parts of the brassieres incorporating the confidential information. The difference between the two sums was substantial and the claimant was awarded the higher sum because it was accepted by the court that the defendant would not have been able to make the brassieres at all without the use of the confidential information.

Finally, another equitable remedy which might be available, depending upon the circumstances, is an order for the destruction of articles that have been made by using the confidential information, or which incorporate the tangible expression of such information. For example, an order for destruction of any of the brassieres still held in stock by the defendant in the above case might have been appropriate. Such an order would not be granted as regards articles lawfully in the possession of third parties, unless somehow implicated in the breach of confidence.

224 [1963] RPC 45.

## Part Three

# THE LAW OF BREACH OF CONFIDENCE SUMMARY

### KEY POINTS

The law of breach of confidence protects trade secrets and information of all types which is not in the public domain where the secret or information:

- has the necessary quality of confidence;
- has been disclosed in circumstances imposing a duty of confidence; and
- there has been or will be an unauthorised use of the secret or information.

A secret industrial process known only to one company clearly has the necessary quality of confidence. Relatively mundane information such as a list of customers and suppliers may also be protected by the law of breach of confidence. A photograph of a person taken in a private place may also be protected as will be other information concerning an individual's private life.

The duty of confidence may be imposed expressly or it may be implied from the circumstances or the status of the person disclosing the information and the recipient, such as between a person and their legal advisor.

Unauthorised use includes a situation where the person under the duty of confidence makes use of the secret or information for their own purposes or discloses it to a third party or publishes it.

The law of breach of confidence has developed to such an extent as to reflect the rights of privacy and freedom of expression enshrined in the Council of Europe Convention for the Protection of Human Rights and Fundamental Freedoms. It may also overlap with data protection law, where the information contains personal data.

In terms of industry, business and commerce, the law of breach of confidence is very important in relation to employees and consultants. In the absence of express terms in the contract of employment, a duty of confidence will be implied but will not prevent an ex-employee making use of what they have learnt and

which has become part of their skill and experience. An employer may consider using a reasonable covenant in restraint of trade to better protect his confidential information.

Although information may be secret, in some cases it may be published in the public interest, which is the main defence to a breach of confidence action, for example, where the information discloses illegal conduct or improper conduct by someone in the public arena such as a politician or celebrity.

The most important remedy for a breach of confidence is an injunction to prevent unauthorised use, whether actually occurring or anticipated. There are two purposes of injunctions in this context, being:

- to prevent the person under the obligation of confidence using the information for himself;
- to prevent the person under the obligation of confidence disclosing the information to others.

Where the person under an obligation of confidence puts the information in the public domain, he may be prevented from using it for himself for a fixed period of time even though others may be free to use the information. This is termed a springboard injunction but is without prejudice to any damages that may be awarded. However, the rationale for such springboard relief has been doubted. It may be appropriate to prevent a person benefiting from a past misuse of confidential information.

The status of third parties who acquire confidential information is not absolutely clear, but it appears that:

- where the circumstances are such that they should have realised the information was confidential they may be prevented from using it and if they have made use of it they may be required to pay damages or account for the resultant profit;
- where a third party has acquired the information unaware that it was confidential and the

circumstances are not such as to objectively suggest that it was confidential, it seems that the third party will be free to make use of it.

## DISCUSSION QUESTIONS

- 1 Discuss the extent to which the law of breach of confidence reflects the rights of privacy and freedom of expression under the Human Rights Convention.
- 2 An employee is employed to write computer programs and to create and maintain a customer database for his employer. In writing the programs, he makes use of a special technique known only to his employer. It appears that the programs and database have the necessary quality of confidence. After termination of his employment, he sets himself up in business as a sole trader and wishes to create similar computer programs using the special technique and a similar database containing what customer details he can remember from his previous employer's database. He has not taken away any copies of his previous employer's programs or database. The contract of employment was silent on the issue of confidentiality and contained no covenants in restraint of trade. Discuss the application of the principles in the *Faccenda Chicken* cases (Goulding J at first instance and Neill LJ on appeal) to this situation.
- 3 Consider the public interest defence in the context of a company which makes goods for sale. Discuss the

sort of confidential information that such a company may have which, if published without the company's permission (for example, published by a whistleblower), could be subject to a public interest defence.

- 4 Is the springboard doctrine logically flawed? If the information in question has entered the public domain, surely the only remedy lies in monetary compensation. Discuss.

# PATENT LAW – BACKGROUND, BASIC PRINCIPLES AND PRACTICAL ASPECTS

## INTRODUCTION

Patent law concerns new, industrially applicable inventions. It is perhaps fitting that intellectual property law reserves a very special and powerful mode of protection for inventions that meet exacting standards. The grant of a patent effectively gives the inventor, or more commonly his employer, a monopoly to work the invention to the exclusion of others for a period of time, not exceeding 20 years. However, the monopoly is not absolute and there are a number of checks and balances to curb its abuse. The invention might concern a new or an improved product: for example, a new type of window lock or an improvement to the design of scaffolding clamps. Alternatively, the invention may concern some industrial process, such as a new method of rust proofing motor car bodies or an improved method of making printed circuit boards for electronic equipment. Due to the strength of this form of property right, high standards are required – the invention must be new and it must involve an inventive step, that is, it must be more than merely an obvious application of technology. Furthermore, the invention must be capable of industrial application and must not fall within certain stated exclusions. These requirements are explored in detail in the next chapter; suffice it to say for now that patents are not granted lightly and an application is subjected to a thorough examination process.

In common with other intellectual property rights, a patent is a form of personal property that may be assigned, licensed or charged by way of a mortgage. However, it is declared by the Patents Act 1977 s 30(1) that a patent is not a thing in action.<sup>1</sup> Patent law grants a monopoly for a limited period of time in respect of an invention in return for disclosure of the details concerning the invention. These details are available for public inspection and are sufficiently comprehensive so that a person skilled in the particular art would be able to make practical use of the invention; in other words, he would be able to work the invention.<sup>2</sup>

Disclosure is a central prerequisite for the grant of a patent and it must be total, with nothing of substance withheld, otherwise it might be difficult for others to make use of the invention once the patent has expired.<sup>3</sup> In *Young v Rosenthal*,<sup>4</sup> Grove J said (at 31):

Then he [the applicant] is bound so to describe it in his specification as that any workman acquainted with the subject . . . would know how to make it; and the reason of that is this, that if he did not do so, when the patent expired he might have some trade mystery which people would not be able actually to use in accordance with his invention (although they had a right to use it after his invention had expired), because they would not know how to make it.

Although full disclosure is required so that a person skilled in the art will be able to work the invention, that person does not necessarily need to be taught how it works by the disclosure. However, the holding back of part of the invention runs counter to the

<sup>1</sup> There is some doubt as to whether a copyright is a chose in action: see Chapter 1, pp 10–11.

<sup>2</sup> Patent legislation uses the term 'a person skilled in the art'. This means a person (or team of persons) having knowledge and experience of the science or technology concerned.

<sup>3</sup> An early example of a patent being declared invalid because of a failure fully to disclose how to work it is *The King v Arkwright* (1785) 1 WPC 64.

<sup>4</sup> (1884) 1 RPC 29.

**Table 11.1** Patent consideration

<i>Patent – concept of contract – consideration</i>	
<i>Patentee's consideration</i>	<i>State's consideration</i>
1 Details available for public inspection.	1 Examination and search by UK Intellectual Property Office (UK IPO) may assist in the drawing up or amendment of the application.
2 Invention falls into the public domain on expiry.	2 Wealth of information available at UK IPO will help in deciding whether to apply for a patent and in the framing of patent application.
3 Some things can be done during the life of the patent (non-infringing acts) by others.	3 The granting of a limited monopoly.
4 The invention may be vulnerable to a compulsory licence or licence of right.	4 A priority date will be given assisting in applications in other countries.
5 UK and EC Competition law may impose restrictions on the exploitation of the patent.	5 Useful evidential materials available, presumptions.
6 Fees have to be paid.	6 Inexpensive opinions available from the Comptroller of Patents as to validity and infringement.
7 The risk that the invention may be appropriated by the Crown (although payment may be made).	

whole rationale of patent law and such applications will be rejected, or the applicant will be asked to modify and enlarge his disclosure accordingly.

After the expiry of the patent, the invention falls into the public domain and anyone is free to make use of it. One might wonder what the state or the general public get in return for this grant of privilege. The fact that the details of the invention are published means that competitors, researchers and the like have immediate access to this information which they may study and use subject to the scope of the infringing acts. The system benefits everyone by this because the wider availability of such information helps to spread and widen technical knowledge and, importantly, because investment is encouraged, wealth and employment are created and maintained. The whole patent transaction can be thought of as a bargain or contract between the inventor (or his employer) and the state, both parties bringing consideration to that contract<sup>5</sup> (see Table 11.1).

Without a patent system, inventors and their employers would attempt to keep the details of the invention secret, relying on the law of confidence for protection. In some cases, it would be impossible to keep the details of the invention secret. For example, if it concerned a new type of gearing arrangement for a bicycle, anyone purchasing a bicycle with the new system fitted would be able to discover the inventive step by an examination of the gears, perhaps after dismantling them. However, if the invention concerned some new industrial process used for making bicycle gears, it might be possible to maintain secrecy because an inspection of the finished product would not necessarily disclose the manufacturing process.

In the first case, obtaining a patent is the most effective way of protecting the invention and the investment incurred in developing it. Other ways do exist but are not usually as attractive. For example, the inventor will be first to the marketplace with his gear system, and it could be several months or years before competitors can equip their factories and organise their production and marketing of a similar system. The duration of this lead-time is often proportional to the complexity of the technology required

<sup>5</sup> The person applying for the patent brings consideration in terms of fees and by adding his invention to the store of public information, ultimately giving up his monopoly in his invention.

<sup>6</sup> [1989] 1 All ER 175. For a fuller discussion of this case in terms of the law of confidence, see Chapter 10.

to put the invention into practice, although this lead-time might be dramatically reduced where the first product has to undergo rigorous safety testing and the competitor's product can largely avoid this by reliance on the testing of the first product. For example, in *R v Licensing Authority, ex parte Smith Kline & French Laboratories Ltd*,<sup>6</sup> information given by a drug manufacturer to a licensing authority, in order to obtain a product licence in respect of a drug, was used by the authority in determining whether to grant a product licence to a second manufacturer.

In the second case, where the invention relates to a process, the owner might be well advised to seek patent protection because of the uncertainty of the law of confidence. This flawed form of legal protection is little better than useless if details of the invention fall into the hands of third parties who have acquired the information in good faith. Depending on how tight security measures can be made, a patent will usually be an attractive alternative to the law of breach of confidence. However, where secrecy can be assured, there is no need to obtain a patent, and indeed the grant of a patent is a poor alternative as competitors will be able to find out about the process and gain a valuable insight into the way the patentee's business is likely to develop in the future. The invention will be available for anyone to use after expiry of the patent and compulsory licences might be available during its existence. If the secret can be maintained indefinitely, this will be preferable on all counts.

<sup>7</sup> Either the UK's unregistered design right or the unregistered Community design or both.

If the invention relates to a product rather than to a process, it may be possible to register some aspects of the shape of the product as a design or it may fall within the unregistered design right.<sup>7</sup> Additionally, there will be copyright in the drawings and written descriptions of the invention. However, copyright protection is a poor substitute for a patent as, in principle, copyright protects only the expression of an idea, whereas a patent can protect from exploitation by others the idea that is encapsulated in the invention. The nature of patent protection was described by Buckley LJ in *Hickton's Patent Syndicate v Patents and Machine Improvements Co Ltd*<sup>8</sup> in the following terms:

<sup>8</sup> (1909) 26 RPC 339 at 348.

Every invention to support a patent must . . . either suggest a new way of making something . . . or it may mean the way of producing a new article altogether; but I think you are losing the grasp of the substance and seizing the shadow when you say that the invention is the manufacture as distinguished from the idea. It is much more true to say that the patent is for the idea as distinguished from the thing manufactured. No doubt you cannot patent an idea, which you have simply conceived, and have suggested no way of carrying out, but the invention consists in thinking of or conceiving something and suggesting a way of doing it.

The strength of protection afforded to inventions through the patent system is one reason why patent protection is of a shorter duration than that available for works of copyright.

<sup>9</sup> (1892) 9 RPC 113.

Patent litigation is usually complex, lengthy and very expensive. This has been the case for some time and, in 1892 in the case of *Ungar v Sugg*,<sup>9</sup> Lord Esher MR said (at 117):

A man had better have his patent infringed, or have anything happen to him in this world, short of losing all his family by influenza, than have a dispute about a patent. His patent is swallowed up, and he is ruined. Whose fault is it? It is really not the fault of the law: it is the fault of the mode of conducting the law in a patent case. That is what causes all this mischief.

This quote is often used even nowadays by judges in patent cases. Some moves have been made to try to reduce costs, for example, by giving the Comptroller-General the power to deliver non-binding opinions as to validity and infringement under s 74A. The UK Intellectual Property Office now also provides a mediation service as a form of alternative dispute resolution.

Subject to provisions on entitlement to a patent, the general rule is that the person who is first to file an application to patent an invention will be the person to whom it

will be granted. There is a presumption to this effect in s 7. Patent law in the US is presently based on the person who is the first to invent being the person entitled to the patent. In the UK and elsewhere, if a person A makes an invention and the same invention is made by person B later, but B is the first to file an application for a patent then he will be entitled to it, providing novelty has not been compromised by A.<sup>10</sup> However, the US is now moving to a first to file system in order to align the US system to the rest of the world.

## BRIEF HISTORICAL PERSPECTIVE

As with the origins and development of other intellectual property rights, England has a prime place in world history and has set the mould for patent rights internationally. It is no coincidence that England was the country where the first major steps towards an industrial society were taken. Whether this was a direct result of the patent system is arguable, but it is without doubt that patents had an important role to play in the Industrial Revolution. Before this, the origins of patent law can be seen emerging in late medieval times. *Letters patent* were open letters with the King's Great Seal on the bottom granting rights, often to foreign weavers and other craftsmen, allowing them to practise their trade and overcoming guild regulations which suppressed competition. The first such letters patent were granted in 1311 to John Kempe, a Flemish weaver who wanted to practise his trade in England, one of the earliest recorded instances of a patent.<sup>11</sup> The regulation of trade was deemed to fall within the provenance of the Crown and letters patent proved to be a useful method of encouraging the establishment of new forms of industry and commerce, giving the Crown powerful control over trade. In this early form, there was no need for anything inventive; it had more to do with the practice of a trade and the granting of favours by the Crown. However, some letters patent were granted for inventions: for example, a patent was granted to John of Utyman in 1449 for his new method of making stained glass. Eventually, there was a strong need for an effective system that prevented unfair competition where, for example, one person had made some novel invention and wanted to stop others from simply copying it. A monopoly system developed in the reign of Elizabeth I and many letters patent were granted.

Monopolies are controversial. There are many dangers associated with monopolies, such as overcharging, manipulation of markets or a refusal to make the product available. In particular, the Tudor monarchs saw the system of monopolies as a good way of raising revenue. However, unease was growing at how the system was open to abuse and the law began to curb such excesses. *Darcy v Allin*<sup>12</sup> is an example of an early patent case which involved a monopoly for making, importation and selling of playing cards. The patent was held to be invalid as being, *inter alia*, a common law monopoly. James I issued a number of proclamations against monopolies, including the 'Book of Bounty' which generally prohibited monopolies but excepted inventions provided they were not contrary to law, hurtful to the state or trade, or generally inconvenient. In the slightly later *Clothworkers of Ipswich Case*<sup>13</sup> patents of a limited duration were recognised by the courts. The Statute of Monopolies 1623 s 6<sup>14</sup> gave recognition to patents as an exception to the general rule against monopolies:

Provided . . . that any declaration before mentioned shall not extend to any letters patent and grants of privilege for the term of fourteen years or under . . . of the sole working or making of any manner of new manufactures within this Realme, to the true and first inventor and inventors of such manufactures which others at the time of making such letters patent and grants shall not use, so as also they be not contrary to the law, or mischievous to the State, by raising prices of commodities at home, or hurt of trade, or generally inconvenient . . .

<sup>10</sup> The Patents Act 1977 s 64 would give A the right to continue to work the invention if he carried out acts that would otherwise infringe the patent or had made effective and serious preparations to do so before the priority date of the patent.

<sup>11</sup> For an early historical perspective, see Davenport, N. (1979) *The United Kingdom Patent System: A Brief History*, Mason; and Thorley, S. et al. (2005) *Terrell on the Law of Patents* (16th edn) Sweet & Maxwell.

<sup>12</sup> (1602) Co Rep 84b.

<sup>13</sup> (1614) Godbolt 252.

<sup>14</sup> 21 Jac 1 c 3. It seems that the world's first patents statute was passed in Venice in 1474: see Reid, B.C. (1998) *A Practical Guide to Patent Law* (3rd edn) Sweet & Maxwell, p 1.

So, the true and first inventor was given 14 years in which he could exploit his invention to the exclusion of others. The section also makes it clear that the monopoly granted is not to be abused. Although there was a long way to go, the seeds of the modern patent system were sown. The basis of the 14-year period was that the duration of apprenticeship was seven years and, at the end of the first seven years, the proprietor was expected to take on an apprentice and teach him how to work the invention. Thus, at the end of 14 years, there would be at least one other person who was free in law to work the invention.<sup>15</sup> In some cases, a longer term was granted. In *Lairdet's Patent*<sup>16</sup> a patent was granted for 18 years by private Act because it was accepted that a longer term was needed to allow the proprietor to receive adequate recompense and to encourage him to make it available to the public. However, the proprietor was constrained as to the price he could charge for his cement, the subject matter of his patent.

Initially there was no requirement for a written description of the invention to be provided by the applicant, but this gradually became common practice. At first, however, descriptions were not made publicly available. They became known, as they still are, as specifications.<sup>17</sup> By 1718, the provision of a specification was often a requirement. The drafting of them could be quite important, as Arkwright discovered to his chagrin when his main patent for a water-powered spinning machine was held to be invalid through want of detail in 1785.<sup>18</sup> Applications were still made to the Monarch, or later to the law officers of the Crown, and the system became difficult, long-winded and expensive. James Watt was critical of the system and submitted proposals for reform in 1790. Charles Dickens wrote a critical exposé of it<sup>19</sup> and the system was overhauled by the Patent Law Amendment Act 1852. This saw the beginnings of the Patent Office<sup>20</sup> and the opening of the Patent Office Library soon followed,<sup>21</sup> as did a system for classifying patents.<sup>22</sup> The Patents, Designs and Trade Marks Act 1883 gave effect to the provisions in the Paris Convention for the Protection of Industrial Property 1883. The 1883 Act also substituted the Seal of the Patent Office for the Monarch's Great Seal.

Until the early part of the twentieth century, patent applications were not searched for novelty. It was basically a deposit system, with applications simply being checked for satisfactory completion. However, as a result of the Patents Act 1902, novelty searches were commenced and the granting of patents became a much more exacting process. There were other Acts, culminating in the Patents Act 1949, all of which can be seen as being developments based on the same traditions. However, the current Act, the Patents Act 1977, is different in that it was designed to take account of the European Patent Convention, which established the European Patent Office, and the Community patent system.<sup>23</sup> Since the coming into force of the 1977 Act, letters patent are no longer issued, but instead a certificate from the Comptroller-General of Patents, Designs and Trade Marks is provided. The maximum term of a patent was extended from 16 years to 20 years.

## JUSTIFICATION FOR PATENT RIGHTS

An inventor owns a property right in his invention. This is a natural right and accords with the views on property rights of philosophers such as Locke. Furthermore, there is no substantial principle of classic jurisprudence that requires that property rights be limited temporarily. Neither need they be so limited if the inventor and his successors in title choose to keep secret details of the invention or how it works. However, such a property right, protected only by the law of confidence, is very vulnerable. Details of the invention might be disclosed in breach of confidence and eventually there may be those who, having acquired the details in good faith unaware of their confidential nature, are free in law and equity to put the invention to work.

<sup>15</sup> For example, *Buck's Invention* (1651) 1 WPC 35.

<sup>16</sup> (1773) 1 WPC 52.

<sup>17</sup> Between 1853 and 1857, nearly all the patents granted since 1671 were published: see Davenport, N. (1979) *The United Kingdom Patent System*, Mason, p 53.

<sup>18</sup> *The King v Arkwright* (1785) 1 WPC 64. Arkwright was a barber from Bolton who left his business and nagging wife to pursue his interest in inventing.

<sup>19</sup> Dickens, C. *A Poor Man's Tale of a Patent*, reprinted in Phillips, J. (1984) *Charles Dickens and the 'Poor Man's Tale of a Patent'*, ESC Publishing. In a plea to end the considerable bureaucracy involved, the closing sentence ends with the sentiment '... England has been chaffed and waxed sufficient'. (One of the officials involved in the process was the Deputy Chaff-wax who appears to have been responsible for preparing the wax for the Sealer.)

<sup>20</sup> Now renamed the UK Intellectual Property Office.

<sup>21</sup> In 1855. Now part of the British Library.

<sup>22</sup> For a description of the period leading up to the 1852 Act, see Dutton, H.I. (1984) *The Patent System and Inventive Activity during the Industrial Revolution, 1750–1852*, Manchester University Press.

<sup>23</sup> The Convention for the European Patent for the Common Market ('Community Patent Convention') 76/76/EEC, OJ L 17, 26.01.1976, p 1, first promulgated in 1976, has still not yet been brought into force.

What the patent system does is to guarantee a limited term of protection in return for the inventor's agreement to disclose details of his invention and, ultimately, to abandon his property right in it. This accords with the contract view of patents discussed earlier. Inventors are offered a stronger and more effective property right than under their natural right on condition that they will lose all rights in the invention when the patent expires.

The conventional justification for a patent system is that inventors and investors are rewarded for their time, work and risk of capital by the grant of a limited, though strong, monopoly. This benefits society by stimulating investment and employment and because details of the invention are added to the store of available knowledge. Eventually, after a period of time, depending on how long the patent is renewed (subject to a maximum of 20 years),<sup>24</sup> anyone will be free to put the invention to use. This utilitarian approach found favour with great English philosophers such as Jeremy Bentham, who argued that, because an invention involved a great deal of time, money and effort and also included a large element of risk, the exclusive use of the invention must be reserved for a period of time so that it could be exploited and thereafter used for the general increase of knowledge and wealth. He said that such exclusive use cannot:

... otherwise be put upon any body but by the head of law: and hence the necessity and the use of the interposition of law to *secure* to an inventor the benefit of his invention.<sup>25</sup>

Of course, the proprietor of a patent is likely to use this economic privilege to his advantage and the resulting product will be priced accordingly, subject to market forces. The mere fact that competition can be restrained by way of injunction will tend to maintain prices. However, that does not, by itself, indicate that patents are against the public interest. Indeed, it is in the public interest that patent monopolies are enforced.<sup>26</sup> The proprietor may demand a high price reflecting two factors: the cost of research and development required to bring the invention to fruition and the natural commercial desire to obtain a large profit. Another factor is the marketing effort required to establish a demand for the product or process. However, the owner of the patent (the proprietor) does not have *carte blanche* in fixing his prices for the following reasons:

- 1 Consumers have managed thus far without the invention and may continue to do so by refusing to pay high prices.
- 2 The equation between volume of sales and profit margin must be considered. Sometimes a cheaper price will make more money for the owner of the patent by increasing sales disproportionately.
- 3 The consuming public may not have a need for the invention and it may be difficult to attract sales at any price. The sad fact is that a great many inventions fail to be commercially viable.
- 4 There are various safeguards and controls to prevent abuse of patents both in terms of domestic law (that is, UK law) and European Community law.

On the first point, John Stuart Mill, who strongly supported the patent system, was considered by Smit to have:

... adopted the rhetoric of the free market economy by suggesting that the reward depended on the invention proving to have economic value and that, in any event, only the users of the commodity created were paying for the increased price caused by the patent monopoly.<sup>27</sup>

A patent, therefore, is not necessarily a licence to print money, and a great deal of market research and economic judgment is essential before embarking upon the development of inventions. Bearing in mind that most important patents are granted to corporate organisations, this is a highly significant factor. The days of eccentric inventors are by no means gone, and simple and easily developed inventions are still a

<sup>24</sup> Pharmaceutical patents can be renewed up to a maximum of 25 years: Council Regulation (EEC) No 1768/92 of 18 June 1992 concerning the creation of a supplementary protection certificate for medicinal products, OJ L 182, 02.07.1992, p 1 now implemented, *inter alia*, by the Patents (Compulsory Licensing and Supplementary Protection Certificates) Regulations 2007, SI 2007/3293.

<sup>26</sup> Per Aldous J in *Chiron Corporation v Organon Teknika Ltd (No 10)* [1995] FSR 325 at 333.

<sup>27</sup> Smit, D. van Zyl, 'The social creation of a legal reality: a study of the emergence and acceptance of the British patent system as a legal instrument for the control of new technology', unpublished PhD thesis, University of Edinburgh, 1980.

possibility, such as the Biro ballpoint pen or reflecting roadstuds ('cats' eyes'). But in most cases the advent of technology and its increasing complexity have necessitated substantial capital investment. The pharmaceutical industry is a good example of this; the cost of developing and testing new drugs requires large and long-term investment well before any rewards can be secured. Cursorily examined, the price charged for the finished product may seem exorbitant but could be the result of all sorts of preliminary and hidden costs associated with the invention. Speaking of the once popular exaggeration that drugs cost 'twopence a bucket to make and sell at £10 per pill', Walton points out that:

What at first sight looks like profiteering, on examination turns out to be not so. What the drug houses sell is not a substance (whose manufacturing cost is commonly negligible) but a service. The cost of research – including the cost of all the abortive investigations – the clinical trials – the creation and maintenance of the market by initial and continuing promotion – the back-up servicing by the originating drug house which has at all times to deal with any slow to emerge problems caused by use of the drug – all this has to be paid for.<sup>28</sup>

<sup>28</sup> Walton, A. 'The Copyright, Designs and Patents Act 1988 (1)' (1989) 133 *Solicitors Journal* 646 at 650. Walton's comment was made in the context of compulsory licences, discussed in Chapter 13.

These costs, which can be disproportionately large in comparison with the cost of manufacturing, will be incurred only by companies and organisations that can foresee a profitable return on them, and the only way this can be guaranteed is to secure some form of legal protection that will ensure that this is a practical possibility. Without such protection another manufacturer would be able to come along, steal the idea and sell the product for far less than the originator could ever hope to. The other manufacturer would have the considerable advantage of not having to pay any of the costs identified by Walton, except, perhaps, some minimal marketing costs. Of course, the high cost of pharmaceutical products is a matter of some controversy in poorer 'third world' countries which can ill-afford the cost of buying expensive drugs to meet particular health problems. Pharmaceutical companies are being faced with the option of considerably reducing prices in poorer countries or being deprived of any form of protection in some of these countries.

The Industrial Revolution brought a great many pressures upon the patent system, eventually leading to major reforms starting with the Patent Law Amendment Act 1852. During the preceding period there had been much debate about whether inventions should be afforded legal protection by the grant of patents, and indeed in Switzerland and the Netherlands patent law was dismantled to be reintroduced later in the nineteenth century. The fact that this could happen and that the whole rationale for the granting of patents could be challenged in England now seems incredible. Nevertheless, the demise of the patent system was anticipated in the press, including *The Times* and *The Economist*.<sup>29</sup> Arguments for the abolition of the system centred around the detrimental effect of patents on competition and free trade.<sup>30</sup> Some commentators considered that patents had served their purpose and were no longer needed in a developed industrial society, while others saw patents as insidious and positively harmful, *The Economist* in 1851 noting that the granting of patents:

... inflames cupidity, excites fraud . . . begets disputes and quarrels betwixt inventors, provokes endless lawsuits, makes men ruin themselves for the sake of getting the privilege of a patent, which merely fosters a delusion of greediness.<sup>31</sup>

Convincing arguments had to be developed by those keen to see the patent system retained and improved. As Dutton suggests, those arguments are still valid today and include:<sup>32</sup>

1 *The contract theory*. Temporary protection granted in reward for knowledge of new inventions.

<sup>29</sup> *The Times*, 29 May 1869; *The Economist*, 5 June 1869.

<sup>30</sup> For a comprehensive description of the arguments for and against a patent system that were raging in the mid-nineteenth century, see Dutton, H.I. (1984) *The Patent System and Inventive Activity during the Industrial Revolution, 1750–1852*, Manchester University Press, Chapter 1.

<sup>31</sup> *The Economist*, 26 July 1851.

<sup>32</sup> Dutton, H.I., note 30 above.

- 2 *The reward theory.* Inventors should be rewarded for making useful inventions and the law must be used to guarantee this reward so that inventors can receive sufficient recompense for their ingenuity.
- 3 *The incentive theory.* By constructing a framework whereby invention is rewarded, this will act as an incentive to make new inventions and to invest the necessary time and capital. This is a forward-looking approach in contrast to the latter which is retrospective.
- 4 *The natural law/moral rights theory.* Individuals have a right of property in their own ideas and this right should be protected from being usurped or stolen by others. (This is similar to moral rights in copyright law.)

In *Chiron Corporation v Organon Teknika Ltd (No 10)*<sup>33</sup> Aldous J put the justification for the patent system in very pragmatic terms, saying that nearly every country had chosen to adopt a patent system because:

<sup>33</sup> [1995] FSR 325.

... it is generally accepted that the opportunity of acquiring monopoly rights in an invention stimulates technical progress in at least four ways. First it encourages research and invention; secondly, it induces an inventor to disclose his discoveries instead of keeping them a secret; thirdly, it offers a reward for the expense of developing inventions to the state at which they are commercially practical and, fourthly, it provides an inducement to invest capital in new lines of production which might not appear profitable if many competing producers embarked on them simultaneously . . . It is inherent in any patent system that a patentee will acquire a monopoly giving him a right to restrict competition and also enabling him to put up or at least maintain prices. That affects the public and is contrary to the public interest, but it is the recognised price that has been accepted to be necessary to secure the advantages to which I have referred.<sup>34</sup>

<sup>34</sup> *Ibid.* at 332.

Encouragement, inducement and reward are the main factors underlying the patent system. The public interest, although apparently jeopardised by the grant of a monopoly, is secured by increased industrial activity, developing new technologies and disclosure of new and useful inventions. Furthermore, patent law contains a number of safeguards, such as compulsory licensing and Crown use, to curb any significant abuse of the patent monopoly.

Much of the dissatisfaction with the patent system until the middle of the nineteenth century could be explained by the parlous state of patent law at the time. It was clear that something had to be done – either the patent system should be abandoned, or it should be reformed and streamlined to meet the needs of a heavily industrialised society that depended on invention and innovation for future growth and prosperity. The arguments of the supporters of a strong patent system won the day and the latter course was taken. However, it should be appreciated that having a strong system of patent law is not a foregone conclusion and that there are some good reasons to the contrary. If patent law were to be abolished tomorrow, inventive activity would not cease altogether – other factors would come to the fore, such as the inventor's lead-time, that halcyon period before competitors can equip their factories and commence manufacture, when he has no competition. Depending upon the nature of the invention, that period may be long enough to justify the initial expense associated with putting the invention to use. However, in many cases, the lead-time would be insufficient and the inventor would have to look to factors such as quality and value for money as a way of making the whole undertaking profitable and worthwhile. Trade marks and business goodwill are other ways in which the invention could be successfully exploited by the inventor or the owner of the patent. In spite of the arguments for and against patents, it is now unthinkable that the patent system would be abolished. Over the last 100 or so years, patents have become established on a worldwide basis, with almost all the countries with developed industries having some form of patent protection for inventions.<sup>35</sup>

<sup>35</sup> Even the former USSR had patent laws: Mamiofa, I.E. 'The draft of a new Soviet patent law' [1990] 1 EIPR 21.

Some industries, such as pharmaceuticals and electronics, could become stagnant without patent protection through lack of investment.

As noted above, the presence of a strong and effective patent system may bring numerous benefits such as the dissemination of information and providing an incentive to invest in the development of new products and processes which will eventually fall into the public domain. However, the patent system does not always stand up well to close scrutiny as many inventors who have had to deal with the system will testify. Obtaining a patent is expensive and takes a long time. It may be several years before action can be taken against an infringer. It could be said that the system favours large wealthy corporations which have the deep pockets required to acquire patents and defend them on a global scale. Unless the sole inventor can find a ‘product champion’, that is, an investor prepared to put up substantial funds, he will be seriously disadvantaged. One critic of the system is James Dyson, the inventor of the wheelbarrow with a ball for a wheel and the bagless vacuum cleaner. He considered bringing a case before the European Court of Human Rights, arguing that patent renewal fees are illegal as the inventor gets nothing in return,<sup>36</sup> although proponents of the patent system would disagree, pointing to the continued protection afforded by payment of the renewal fees.

<sup>36</sup> *Sunday Times*, 1 March 1998.

Another, perhaps more worrying, concern is that a system which was designed around technology from a simpler era is unable to provide an appropriate level of protection, taking account of all the checks and balances, in the context of new and emerging technologies. Information technology and genetic engineering are two important examples. We will see the difficulty patent law has in addressing the protection of software inventions in the following chapter. Consider the situation whereby a commercial organisation has economic rights in genetic material, rights which can last for up to 20 years. Thurow claims that tweaking the existing system will not provide a solution, and he argues for a new system which strikes a balance between the production and distribution of new ideas.<sup>37</sup> He is also critical of judge-made law in this area, saying that judges do not consider what is appropriate in terms of accelerating technological and economic progress. Rather, they are concerned with how to fit new technology into the existing legal framework with minimum disruption to established principles. In particular, Thurow suggests an optimal patent system would differentiate between different industries, types of knowledge and types of inventors. For example, the electronics industry wants speed and short-term protection, whilst the pharmaceutical industry wants long-term protection because it takes a number of years before a new drug can be sold to the public. For the most part, in the latter case the companies involved can well afford the expense of acquiring, maintaining and defending their intellectual property rights. Small, innovative electronics companies are less able to afford this expense, or even to understand such a complex system.

<sup>37</sup> Thurow, L.C. ‘Needed: a new system of intellectual property rights’, *Harvard Business Review*, September–October 1997, p 95.

Patent law has undergone a number of changes in recent years and the *Gowers Review of Intellectual Property*<sup>38</sup> proposes some more changes. These will be set out and discussed briefly in the following chapters where appropriate. At this stage it is worth mentioning that the Review recommends that further support for the Community Patent Convention should be given and its introduction expedited by negotiations throughout Europe.<sup>39</sup> The introduction of a single unitary European patent would have significant benefits. At the present time patents, including those obtained through the European Patent Convention, have effect as national patents effective only in the relevant States.

<sup>39</sup> *Gowers Review of Intellectual Property*, HMSO, 2006, p 81.

## Patent trolls

One would normally expect a proprietor of a patent to exploit it either by working the invention himself or licensing another or others to do so in return for a royalty or

licence fee. One practice that has sprung up, particularly in the US, is that of obtaining the grant of a patent and then sitting on it, waiting for an unsuspecting third party to make something or do something which might fall within the scope of the patent. The third party will then usually receive a letter before action threatening patent litigation unless a licence is taken out. This may include a claim for payment for past infringement. As patent litigation is notoriously expensive, the third party may choose to pay up, particularly if an application for an interim injunction is likely to be made. Patent proprietors who behave in this manner are often termed patent trolls.<sup>40</sup> They are particularly prevalent in relation to software inventions and business methods. The ease with which patents have been granted for such inventions in the past in the US has compounded the problem.

In *eBay Inc v MercExchange LLC*,<sup>41</sup> MercExchange was the proprietor of a number of business method patents. One was for an invention being an electronic market to facilitate the sale of goods between private individuals by the establishment of a central authority to promote trust amongst participants. eBay's website allowed sellers to list goods they wish to sell either by auction or by fixed price (Buy It Now). MercExchange attempted to licence its patent to eBay but the parties failed to reach an agreement and MercExchange sued eBay for infringement of its patent.

At first instance, it was held that the patent was valid and eBay had infringed it. Although damages would be awarded, the court refused to grant a permanent injunction. On appeal, the Court of Appeals reversed the part of the decision relating to an injunction and eBay appealed to the Supreme Court which remitted the case to the first instance court to apply the proper principles in determining whether to grant an injunction. The Supreme Court criticised the test used by the Court of Appeals in deciding it was appropriate to grant an injunction. In the Supreme Court, Kennedy J said:

An industry has developed in which firms use patents not as a basis for producing and selling goods but, instead, primarily for obtaining licensing fees . . . For these firms, an injunction, and the potentially serious sanctions arising from its violation, can be employed as a bargaining tool to charge exorbitant fees to companies that seek to buy licenses to practice the patent.

As noted in *eBay v MercExchange*, many of the patents filed of business methods are vague and of suspect validity. The response of large wealthy companies to such a threat is normally to challenge the validity of the patent or defend an infringement action. Small and medium-sized enterprises, and particularly start-up companies, may feel less inclined to do so. As legal costs in taking a patent to court in the US is typically around \$1 million, one can understand the difficulty this places smaller companies in when faced with such threats. One advantage in the UK is the availability of a groundless threats action though this is not available in all circumstances and, if the 'threat' is carefully made, a groundless threats action may not be triggered.<sup>42</sup>

In England and Wales, in *Aerotel Ltd v Wavecrest Group Enterprises Ltd*,<sup>43</sup> the claimant was an Israeli company with a patent for a method of making telephone calls and a telephone system. The company did not make or sell anything but exploited the present and other patents by litigation and the threat of litigation against others, principally in the United States. Jacob LJ said of this strategy (at para 32):

That is unimpressive, for it is notorious that at least from the middle-90s the US patent litigation scene had become immensely pro-plaintiff. A defendant faced with the possibility of litigation had to take into account all of the following matters: (1) the right of the patentee to insist upon jury trial (juries are apt to be pro-plaintiff); (2) the general level of damages awarded in the US – by juries; (3) the real possibility of triple damages for wilful infringement; (4) the fact that even if a defendant won he would have to pay his own, very considerable, legal costs; and (5) the fact that until the decision of the Supreme Court in *eBay v MercExchange*

<sup>40</sup> Presumably, so named after the *Three Billy Goats Gruff* fairy story.

<sup>41</sup> 547 US 388 (2006).

<sup>42</sup> See the section on groundless threats of infringement proceedings in Chapter 15.

<sup>43</sup> [2009] EWCA Civ 408.

U.S. No. 05–131 (2006) there was a strong view that even a non-exploiting patentee who won would get an injunction as of right.

The Court of Appeal dismissed Aerotel’s appeal against the finding of HHJ Fysh QC (sitting as a Deputy High Court Judge) that the patent was invalid, mainly on the ground of obviousness. Although commercial success can be a factor (though not conclusive) in determining whether the alleged invention is or is not obvious, as Jacob LJ said (at para 30), ‘[t]he world beat a path to the door of Ralph Waldo Emerson’s inventor of a better mousetrap, but the path to Aerotel’s door remained untrodden’.

## Patent strategy

Intellectual property rights are considered to be of the utmost importance in Japan and companies there have developed efficient strategies for exploiting their patents to the fullest extent.<sup>44</sup> An ‘attacking’ strategy is at the forefront, an important goal being to use the patents in a way which excludes competitors and secures a large market for the proprietor. Licences are often subject to an obligation to grant back, for no fee, rights in improvements on the original invention. Of course, in the context of Europe this may well offend against domestic or European Community competition law but, otherwise, there is no absolute principle of public policy against a commercial agreement whereby one party agrees that the benefit of any improvement he brings about in relation to a past invention will belong to another.<sup>45</sup>

An ideal outcome is where the invention for which the patent has been granted is combined with an industry standard: for example, the Japan Victor Company’s VHS technology which became the industry standard for video recorders.

The Japanese also widely use patents defensively to avoid needless conflicts and litigation by ‘blanketing’ the invention with a close network of patent filings, trying to predict future applications and improvements on the basic invention for the purpose of pre-empting competitors and covering any possible future applications. If successful, this ties a competitor’s hands together and deprives him of technical mobility and flexibility. This approach is also known as ‘ring-fencing’ the invention.

An important source of inventions is the employee. In many organisations employees, who are not directly employed in the search for new inventions, are encouraged to submit ideas through a company suggestions scheme. However, in the UK it is a sad fact that many suggestions, whether made as a result of a formal scheme or otherwise, are not taken up. In any case, if an employee has an idea for a new invention in a situation where he may be entitled to be the proprietor of the invention, he would be well advised to seek professional advice rather than to submit it to his employer. The rewards offered by employers for useful suggestions are likely to be minuscule compared with the income which may be derived from a successful patent.

Nevertheless, the Japanese approach is to provide an incentive to employees to be patent-minded, thinking of new inventions and ways to improve or create policies in respect of patents within the company. This is known as the ‘motivation’ strategy. If handled properly, it can encourage suggestions from a company’s human resources at all levels, even from the humblest shop-floor worker. This in turn should engender a feeling of worth, motivation and loyalty from amongst employees.

A desideratum for many Japanese companies is to build a strong patent portfolio. This will enhance a company’s technological reputation and in the area of research and development generally. This can improve investors’ confidence in the company and facilitate the raising of new capital. Coupled with effective and well-known trade marks, this will be a powerful combination and will encourage other companies to seek licences to work the company’s technology. A strong portfolio of intellectual property rights is central to a ‘patent licensing’ strategy.

<sup>44</sup> Rahn, G. ‘Japanese patent strategy’, in *The European Patent Office, Annual Report 1995*, p 9.

<sup>45</sup> Per Lord Clarke in *Buchanan v Alba Diagnostics Ltd* [2001] RPC 851, Court of Session, Inner House.

With strategies such as those outlined above, Japanese companies have been extremely successful in the protection and exploitation of intellectual property. Over 80 per cent of the world's patents are granted by the European Patent Office, the US Patent and Trademark Office and the Japanese Patent Office. Japanese companies are amongst the world's most vigorous patent applicants, especially in the USA and Europe. As the Japanese economy is largely based on high-tech industry, this leads to reliance on intellectual property rights. It is widely recognised in Japan that, if it intends to keep its place as a very effective and successful high-technology industrial country, it must take intellectual property rights very seriously as the key to protecting and exploiting intellectual property.

## PRACTICAL CONSIDERATIONS

Three possibilities present themselves to an inventor who is resolved on securing a patent for his invention. An application may be made for a UK patent, for a 'European' patent designating a number of Member States of the European Patent Convention (EPC) or under the Patent Cooperation Treaty (PCT) designating some or all of the Contracting States. Applications through the EPC and PCT have additional costs in relation to translations though, in relation to the former, an Agreement concluded in London in 2000 came into force on 1 May 2008.<sup>46</sup> Under this Agreement, the Member States party to it waive or reduce their requirements for translations of European patents to be filed in their own national language. In many cases, this will significantly reduce the costs of obtaining patents through the EPC. At the time of writing, 15 EPO Member States have acceded to or ratified the London Agreement, including the UK.

In all cases, applications can be handled initially by the UK Intellectual Property Office (UK IPO)<sup>47</sup> in London. Where an application for a patent contains information relating to military technology or publication of the information is otherwise prejudicial to national security or public safety, it is an offence for a UK resident to file an application elsewhere before six weeks have elapsed from filing at the UK IPO and no directions prohibiting or restricting publication or communication of the information have been given under s 22.<sup>48</sup> The procedure for obtaining a UK patent will be described below, but first some definitions are given relating to the terms used and documents submitted.<sup>49</sup>

### Filing date

This is the date when the application is received by the UK IPO. The application must indicate that a patent is being sought, identify the person applying for the patent or contain sufficient information so that he may be contacted by the UK IPO, contain something that appears to be a description of the invention for which the patent is sought or a reference to an earlier relevant application made by the applicant or predecessor of his. This is somewhat of a relaxation of what was previously required and makes it easier to correct possible deficiencies in the application such as by filing missing parts later.<sup>50</sup> The applicant then has a period of 12 months of the filing date (or earlier priority date) during which he must file one or more claims and an abstract, pay the application fee and request a search and pay the search fee. Where the application refers to an earlier relevant application, the applicant must also file a description of the invention and furnish a copy of that earlier application during that same period. The filing date is important because it is the date used to determine the duration of the patent. That is, the 20 years' maximum period available starts to run from the filing date.

<sup>46</sup> European Patent Office, *The London Agreement: European patents and the costs of translations*, 2006.

<sup>47</sup> Formerly known as the Patent Office.

<sup>48</sup> Patents Act 1977 s 23, as amended by the Patents Act 2004 s 7. An alternative would be to seek the written permission of the Comptroller to file abroad rather than first filing at the UK IPO.

<sup>49</sup> The procedure for a patent under the European Patent Convention is broadly similar but there are some differences: for example, opposition is decided post-grant. Patent Cooperation Treaty patents are somewhat different in that, after search and publication, applications must be made to the individual countries; this is known as entering the national phase and can be quite complex. The procedure for a UK patent is laid out in detail in the Patents Act 1977 and the Patents Rules 2007, SI 2007/3291.

<sup>50</sup> The Regulatory Reform (Patents) Order 2004 (SI 2004/2357) inserted a new s 15 into the Patents Act 1977 with effect from 1 January 2005.

## Priority date

Section 5(2) of the Patents Act 1977 allows an application to claim the priority of an earlier application filed within the preceding 12 months if the later application is supported by matter disclosed in the earlier application. The priority claim must be by the applicant for the earlier patent or his successor in title.<sup>51</sup> For example, an inventor may apply for a UK patent for his invention and then, within 12 months, apply to the European Patent Office, designating a number of Member States, and the priority date of the resulting European patents will be that of the original UK patent, assuming that it supports the invention as claimed in the application to the European Patent Office. The consequences of a failure to support the later application can be severe. In *Biogen Inc v Medeva plc*<sup>52</sup> the House of Lords confirmed the Court of Appeal decision that the patent in suit was invalid. It relied on the priority of an earlier application. The problem was that, contrary to s 5(2), the invention claimed in the later application was not supported by matter disclosed in the earlier application. The technology in the relevant field (genetic engineering) had moved very rapidly and, without being able to rely on the priority of the earlier application, it was conceded that the second application was obvious.

Applications for late declarations of priority may be made under s 5(2B) and, if the request complies with the relevant rules and the Comptroller is satisfied that the failure to file within the prescribed period was unintentional, he shall grant the request under s 5(2C). In *re Abaco Machines (Australasia) Pty Ltd*,<sup>53</sup> an Australian company filed an application for a Vietnamese patent, intending to file an application under the Patent Cooperation Treaty and following this, in relation to the UK, file an application under the European Patent Convention. Due to an error the company missed the 12-month deadline to file the PCT application. An application was then filed for a UK national patent and an application was then made for a late declaration of priority based on the Vietnamese patent. Section 5(2) permits declarations of priority in relation to the ‘application in suit’. It was held that this meant the UK national patent and the failure to file was not unintentional as the company had intended to file an application under the PCT rather than file a national application.

The priority date is important because it is the state of the art at that date that is considered when judging the invention for novelty. It is also relevant in terms of infringement in that persons who in good faith, before the priority date, either have done an act that would constitute infringement or have made effective and serious preparations for such an act, may continue to do so after the grant of the patent.<sup>54</sup>

## Specification

This is a very important document, probably the most important thing submitted by the applicant. The specification must contain a description of the invention, one or more claims together with any drawings required to illustrate the invention. The specification should fully describe the invention – anything omitted at this stage could have the effect of jeopardising the application or cutting down the usefulness and scope of the patent should it be granted. The specification should also be sufficiently detailed so that a person skilled in the art can work the invention, that is, put it into effect. For example, if the invention concerns a new type of tow bar for a vehicle, the specification should be such that a skilled vehicle engineer would be able to make it, fit it and use it.

Specifications usually contain a number of drawings. Judges by their training are better equipped to interpret the written word than drawings. In *Van der Lely NV v Bamfords Ltd*,<sup>55</sup> Lord Reid said that judges were not expert at interpreting visual evidence (photographs in this case) and the question to be asked is what the eye of a

<sup>51</sup> Where, for example, the earlier application was made by two joint inventors, A and B, but only A submits a later application seeking the priority of the earlier application, the claim to priority will fail. This is so even if A subsequently acquires B's rights to the earlier application: see *Edwards Lifesciences AG v Cook Biotech Inc* [2009] EWHC 1304 (Pat).

<sup>52</sup> [1997] RPC 1.

<sup>53</sup> [2007] EWHC 347 (Pat).

<sup>54</sup> Patents Act 1977 s 64.

<sup>55</sup> [1963] RPC 61.

person with appropriate skill and experience would see in the photograph. Where the evidence was contradictory, the judge must decide which interpretation to accept, not by reading or construing the photograph, but by looking at it to see which explanation is the most plausible.

An example of a patent specification is given at the end of this chapter and should be referred to. It contains on the front page, the application number, date of filing,<sup>56</sup> the name and address of the applicant, inventors,<sup>57</sup> agent and address for service, the classifications for the invention, a document cited by the examiner which may have a bearing on the novelty of the invention, field of search, title, abstract and, usually as here, a drawing. The little numbers in brackets alongside the entries are known as INID numbers and are used to standardise the layout of the page to help with processing of the information contained on the page.<sup>58</sup> For example, on the front page of the sample application at the end of this chapter, (71) is the name of the applicant, (54) is the title of the invention, (57) is the abstract and (51) is the International Patent Classification. The remainder of the specification contains a detailed description of the invention and the claims. Sometimes there will be further drawings and there may be amendments to the claims.

The specification does not have to demonstrate that the claimed invention actually worked or why it worked. So it was held in the House of Lords in *Conor Medsystems Inc v Angiotech Pharmaceuticals Inc*.<sup>59</sup> The House of Lords held that the Court of Appeal had erred by deciding that a patent which claimed the treatment of stents with taxol to prevent restenosis was invalid because the patent merely taught that taxol was worth trying but failed to show that it actually worked in practice.<sup>60</sup> The House of Lords held that there was no requirement in either the EPC or the 1977 Act to the effect that the patentee had to demonstrate by experiment that the invention worked or why it worked. The question the Court of Appeal failed to address was whether it was obvious to use a taxol-coated stent to prevent restenosis. By its decision, the House of Lords agreed with a Dutch court before which parallel proceedings had taken place. The Dutch court held that it was sufficient if the patent indicated that taxol would work.

## Claims

The application will include a statement of the claims defining the invention for which protection is required. There will usually be several claims, some of which may be alternatives. Often, the first claim will be developed and expanded upon by subsequent claims which may enlarge the first claim, particularise it or give specific embodiments of it. The purpose of the claims is to define the limit of the monopoly and, therefore, they must be very carefully drawn up. According to Lord Russell in *Electric & Musical Industries Ltd v Lissen Ltd*,<sup>61</sup> the function of the claims is to define clearly and with precision the monopoly claimed so that others may know the exact boundaries of the area in which, if they venture therein, they will be trespassers. The ideal situation from the applicant's point of view is a set of valid claims which give the widest scope to the invention. The claims in the example should be carefully studied with this in mind. They provide a good example of the care and thoroughness that a patent agent employs in the drafting of claims.

Under the Patents Act 1977 s 14(5), the claims shall:

- (a) define the matter for which the applicant seeks protection;
- (b) be clear and concise;
- (c) be supported by the description; and
- (d) relate to one invention or to a group of inventions which are so linked as to form a single inventive concept.

<sup>56</sup> This particular example does not have a priority date. Where the priority of an earlier application is claimed, a reference to the date and country of the earlier application will all be noted on the front page.

<sup>57</sup> An inventor may now choose to waive their right to be named as inventor and/or to have their address published on the patent by applying in writing and giving reasons that satisfy the Comptroller of Patents: the Patents Rules 2007 r 11, SI 2007/3291.

<sup>58</sup> This system was devised by ICIREPAT, the International Committee for Information Retrieval by Examining Patent Offices.

<sup>59</sup> [2008] UKHL 49.

<sup>60</sup> A stent is a tubular metal device which is inserted into an artery which has become restricted to keep it open. Stents are used in angioplasty for treating sclerosis of the coronary arteries. A problem had been the injury caused to the inner wall of an artery by inserting the stent often triggered a healing response which involved the proliferation of smooth muscle cells which again restricted the artery. This is known as restenosis.

<sup>61</sup> (1939) 56 RPC 23; see also *Glaverbel SA v British Coal Corp* [1995] RPC 255.

Claims (and the same applies to amended claims) are required to be clear and concise. But, otherwise, a patentee is not restricted by the Patents Act 1977 or the EPC as to the way he defines his monopoly. However, it is also important to bear in mind that the claim defines the scope of the monopoly and everything within it is monopolised and everything without it is disclaimed.<sup>62</sup> In *IGT/Acres Gaming Inc*,<sup>63</sup> the application used terms such as ‘encrypted’ in relation for an electronic system for giving punters in casinos bonus rewards without having to issue loyalty cards. The system worked by a card reader which could read the required information from other cards, including driving licences, credit cards and debit cards. However, some of the cards, such as US driving licences contained open-access information and this meant that the relevant claim was not sufficiently clear.<sup>64</sup>

<sup>62</sup> *Kirin-Amgen Inc v Transkaryotic Therapies Inc* [2003] RPC 31 at para 27.

<sup>63</sup> [2008] EWHC 568 (Ch).

<sup>64</sup> References to encryption may have caused the patent examiner to miss some relevant prior art such as card readers which read from non-encrypted cards.

<sup>65</sup> [1995] RPC 607.

<sup>66</sup> *Scanvaegt International A/S v Pelcombe Ltd* [1998] FSR 786 at 797 per Aldous LJ. It was doubted that the *contra proferentum* rule of interpretation applied where the manner of construction was laid down by a statute.

<sup>67</sup> [2001] FSR 339.

<sup>68</sup> [1986] RPC 1.

In *Strix Ltd v Otter Controls Ltd*,<sup>65</sup> a case involving a patent for a back-up control to switch off an electric kettle where there had been a failure of the kettle’s ‘dry-boil’ protector, it was accepted that, although something clearer and more concise could have been drafted, the test was whether a person skilled in the art would have difficulty in understanding the language used in the claim. However, a failure by the UK IPO to ensure that obscure claims are not allowed could be described as an infringement of the fundamental right of the public to know precisely the scope of the monopoly claimed. Others have a right to know what they are prevented from doing by the monopoly but lack of clarity in framing the patent claims could result in the proprietor having difficulty in establishing infringement.<sup>66</sup>

Where a claim is unjustifiably wide, it could lead to a claim that it is bad for covetousness. The omission of a feature essential to the invention could lead to such width. In *Kimberly-Clark Worldwide Inc v Procter & Gamble Ltd (No 2)*,<sup>67</sup> the defendant argued that an amendment sought by the proprietor of a patent for nappies should be refused on the ground that the claims were covetous as they omitted a feature which went to the essence of the invention. The defendant cited *Donaldson Co Inc’s Patent*,<sup>68</sup> in which Falconer J refused to exercise his discretion to allow an amendment to a claim that had omitted the inventive feature on the basis that the claim before amendment was covetous; the reason being that the court will not assist someone who, by omitting an essential feature of the invention, knows that his claim is invalid and who now wants to limit it. In *Kimberly-Clark*, Pumfrey J said that, for a claim of covetousness to be made out, the draftsman of the specification must have sought to obtain a claim of unjustifiable width on the basis of the material available to him, such material including the description of the invention and information as to the prior art. An amendment should not be refused on the basis of *ex post facto* knowledge of the prior art which the draftsman of the specification was either unaware of or in respect of which he failed to appreciate the significance.

The use of the word ‘for’ in a claim describes a purpose of the invention. This is taken to mean that the invention is suitable for that purpose but not that it is necessarily intended for that purpose or even that it is actually used for it.<sup>69</sup> This can leave the patent vulnerable to anticipation by prior art which, in practical terms, is capable of being used for that purpose even though it had not occurred to anyone to so use it. In *Adhesive Dry Mounting v Trapp*,<sup>70</sup> the invention was for a method of dry mounting photographs with a sheet placed between a photograph and a mount which became tacky when heated would cause the photograph to stick to the mount. An earlier sheet had the same physical properties but it had never been suggested that it could be used for the purpose of sticking photographs to mounting boards.

The example at the end of the chapter is a good example of a group of inventions forming a single inventive concept in accordance with s 14(5)(d). Claims 1, 20 and 39 relate to three different aspects – a beverage package, a method of packaging a beverage, and a beverage when so packaged. Rule 16 of the Patent Rules 2007<sup>71</sup> states that where

<sup>69</sup> Peter Prescott QC in *Corevale Inc v Edwards Lifesciences AG* [2009] EWHC 6 (Pat).

<sup>70</sup> (1910) 27 RPC 341.

<sup>71</sup> SI 2007/3291.

two or more inventions are claimed (whether in a single claim or in separate claims), and there exists between or among those inventions a technical relationship which involves one or more of the same or corresponding special technical features, then those inventions shall be treated as being so linked as to form a single inventive concept for the purposes of the Act. ‘Special technical features’ are defined as those technical features which define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art.

Sometimes, an omnibus claim will be included, usually as the final claim, for example:

the widget as substantially described hereinbefore with reference to the accompanying drawings.

The way claims are interpreted is important. By s 125(1) of the 1977 Act, interpreted according to the principles set down in the Protocol on Article 69 of the European Patent Convention, the invention shall be taken to be that specified in a claim as interpreted by the description and any drawings contained in the specification.<sup>72</sup> The extent of protection afforded by the grant of the patent is to be determined accordingly. Any ambiguities must be resolved by reference to the specification.<sup>73</sup> But the specification should not be used to place a gloss upon the words of a claim that have a clear meaning.<sup>74</sup> However, interpretation of claims can be wider than this and a purposive approach to interpretation is taken, rather than a strict literal approach, in accordance with the European Patent Convention. This feature is discussed in depth in Chapter 14 (see pp 500–510).

Patent agents use language designed to maximise the protection afforded by the patent when granted. It can, at first sight, seem curious. For example, if a person invents something that has three components, such as three legs, a patent agent will draft the claim in terms of a ‘plurality’ of components where it might be possible to use two or four components. However, using this term excludes the singular.<sup>75</sup> If the invention can be worked with one or more components, a better expression would be ‘a single or plurality of . . .’ or ‘one or more . . .’

Often claims will contain numeric data. For example, where a range of numbers is claimed, it was held in *Auchincloss v Agricultural & Veterinary Supplies Ltd*,<sup>76</sup> that anything outside that range is outside the monopoly and is not a variant in the sense used in *Catnic*.<sup>77</sup> In *Hoechst Celanese Corp v BP Chemicals Ltd*,<sup>78</sup> a reference in a claim to ‘50 per cent of its dry physical dimension’ was held to be a reference to a linear dimension (radius) of the particle concerned rather than the volume, as the defendant contended. The Court of Appeal agreed, stating that the construction put forward by the defendant would defeat the purpose of the claim, which was to include only inherently stable resins. If the dimension was taken to refer to volume, resins which were unstable would have been included.<sup>79</sup>

Sometimes, patent agents and others drafting patent claims may come down with a sad case of ‘parametritis’. This term has been used by judges in relation to an attempt to repatent the prior art by placing new limits on claims by using a series of parameters which were not mentioned in the prior art: for example, because the equipment to measure them did not exist at the time. Another practice is to draft claims in an unnecessarily complicated manner. As the claims of a granted patent are prima facie valid, this may make it difficult for an opponent to challenge the claim. However, using obscure, difficult or complex language is not, by itself, a ground for invalidity and, within wide limits and notwithstanding the requirement that the claims must be clear and concise, an applicant for a patent can use what language he wishes to define the scope of his invention. Of course, the court must be on guard not to be impressed with obfuscatory language.<sup>80</sup>

In the next chapter, we will see that patents are available for second uses of known substances or compositions for medicinal use. However, great care must be taken to

<sup>72</sup> *American Home Products Corp v Novartis Pharmaceuticals UK Ltd* [2001] RPC 159. For Article 69 and the Protocol, see Chapter 12.

<sup>73</sup> *PCME Ltd v Goyden Controls UK Ltd* [1999] FSR 801.

<sup>74</sup> *Lubrizol Corp v Esso Petroleum Co Ltd* [1998] RPC 727. In *Cartonneries de Thulin SA v CTP White Knight Ltd* [2001] RPC 107, the Court of Appeal held that a court had to do its best to reconcile the literal meaning of claims with the context provided by the rest of the specification, as read by an ordinary skilled person.

<sup>75</sup> *Mabuchi Motor KK's Patents* [1996] RPC 387.

<sup>76</sup> [1997] RPC 649.

<sup>77</sup> *Catnic Components Ltd v Hill & Smith Ltd* [1982] RPC 183, discussed in detail in Chapter 14. For a description of the approach of the European Patent Office in terms of ranges of numbers see Ashley, G. and Björk, P. ‘Patentability of alloys at the European Patent Office’ (1997) 2(3) *Intellectual Property* 3.

<sup>78</sup> [1997] FSR 547.

<sup>79</sup> [1999] FSR 319.

<sup>80</sup> *Raychem Corp's Patents* [1998] RPC 31 per Laddie J.

81 [1985] OJ EPO 64.

draft the claims in such cases, and a certain form of claim has become widely acceptable, known as a ‘Swiss-type claim’. In *Eisai*,<sup>81</sup> the enlarged board of appeal of the European Patent Office approved such a type of claim, which normally takes the form:

Use of a substance or composition X for the manufacture of a medicament for a specified new and inventive therapeutic application.

A typical claim for a first medical use of a known product might take the form:

Substance or composition X . . .  
 . . . for use as a medicament  
 . . . for use as an antibiotic; or  
 . . . for use in treating disease Y.

In a Swiss-type claim for a second medical use of a known substance or compound, the second use had to be inventive and new. The novelty must lie not in the method of use but in the new therapeutic purpose for which the substance or compound was used.<sup>82</sup> In *Hoerrmann’s Application*,<sup>83</sup> the court held that, when making a claim to a further medical use, the claims must be supported by the description (as per s 14(5)) and, in such a case, this would require a clear indication that the treatment had been tried and tested – it must come over as a reality and not merely a possibility. Nonetheless, the tests actually used might be fairly rudimentary and it was not necessary to demonstrate that fully rigorous, detailed and conclusive tests had been carried out.<sup>84</sup>

## Abstract

The abstract is simply a concise summary of the matter contained in the specification.<sup>85</sup> It must start with a title for the invention. The abstract must indicate the technical field to which the invention belongs, a technical explanation of the invention and the principal use of the invention. The abstract must not contain any statement on the merits or value of the invention or its speculative application. The abstract provides useful information to help in the searching process: for example, when searching for anticipatory materials. Indeed it is a requirement that the abstract be drafted accordingly. By reading the abstract, it should be possible to determine whether it is necessary to consult the specification itself. Abstracts are included with other information in online and printed searching services.

86 The UK IPO website is a rich source of information and guidance about intellectual property generally and patents. For information about applying for a patent see the UK IPO publications available from its website at [www.ipo.gov.uk](http://www.ipo.gov.uk).

## Procedure for a UK patent<sup>86</sup>

The procedure described below applies where there has not been a declaration of priority from an earlier application. If there has been such a declaration, step 2 is different in that the claims and abstract must be filed within 12 months of the earliest priority date or within one month of the date of filing the application whichever is the later, but the form and search fee must be submitted within 12 months of the earliest declared priority date.

In simple terms, the application procedure is as follows.<sup>87</sup>

87 This description is necessarily simplified and takes no account of, for example, the later filing of missing parts such as a description of the invention and copy of an earlier application where the priority of an earlier application is sought.

88 The application fee may be deferred until the request for a grant of a patent is filed, if later.

- 1 *File application*: submit application including, usually at this stage, a request for grant of a patent, identification of the applicant (full name and address), description of the patent and the application fee.<sup>88</sup>
- 2 *File claims, etc.*: within 12 months, file the claims, abstract, form requesting preliminary examination and search together with the fee.
- 3 *Preliminary examination and search*: the application will then be checked to ensure all necessary documents and forms have been filed and fees paid. The application

will then go to a UK IPO examiner who will make a search, mainly amongst patent specifications to check for novelty and obviousness. After this a search report will be issued. This report helps the applicant to decide whether his invention is new and not obvious. In some cases, amendments may have to be made to the claims or description. Any amendment to the claims must not cover something not already disclosed in the specification as first filed. However, this does not prevent the applicant widening the scope of his claims.<sup>89</sup> The prohibition on amendment extending the protection afforded by the patent under s 76(3) only applies to amendments post-grant. In the light of materials identified by the search, or for other reasons, the applicant might decide to withdraw the application before early publication thereby keeping his invention secret, in as much as it is not anticipated by the prior art.

- 4 *Early publication*: the application will be published together with the search report and any amended claims received before date of publication. Normally, this takes place 18 months after the date of filing if there is no priority date or 18 months after the priority date, as the case may be.<sup>90</sup> The contents of the specification are no longer confidential and become part of the state of the art. The date of early publication is important because it is the date from which damages for infringement ultimately can be claimed. For example, if there is an infringement of the patent between the early publication and grant, assuming it is finally granted, an action in respect of that infringement can be commenced *after* the patent has been granted. Early publication is known as ‘A’ publication. The example at the end of the chapter is an ‘A’ publication.
- 5 *Substantive examination*: this is the final stage before the grant of the patent. Within six months of the date of early publication, yet another form and fee has to be submitted to the UK IPO. The application will lapse if the form and fee are not received within those six months.<sup>91</sup> Once the patent application has been published and before grant any person may make written observations on the patentability of the invention. Reasons for the observations must be given and the Comptroller must consider the observations.<sup>92</sup> The specification is examined to see whether it complies with the requirements of the Patents Act 1977, especially whether the invention claimed is new and non-obvious, whether the description is adequate so that it can be carried out by a person skilled in the art concerned and whether the claims are clear and consistent with the description. It is common for the specification or claims or both to require amendment in the light of objections raised by the examiner. Once all the examiner’s objections have been met, assuming they can be, the patent is granted. The patent as granted is published. This is known as ‘B’ publication.

Figure 11.1 illustrates a simplified flowchart for the UK patent application process. The period allowed for putting an application in order so that it complies with the Act is 4 years 6 months from the date of filing or priority date, if there is one, or 12 months from the date the first report under the substantive examination provisions is sent to the applicant, whichever expires the later.<sup>93</sup> Under the usual procedure, it can be seen that the shortest period is theoretically a little over 18 months, but a period of between two and three years is more realistic. However, the UK IPO will consider shortening the publication period and the time between publication and full examination if the applicant can make out a good case. The initial grant is for four years. Thereafter the patent may be renewed annually up to a maximum of 20 years from the date of filing.

On account of the difficulties faced by small and medium-sized undertakings which may need to exercise their rights much sooner than the traditional period of two to three years, bearing in mind that a patent cannot be enforced until it has been granted, the UK IPO now offers a speedier service. Patent procedure is accelerated by combining the search and examination stages and, by so doing, the time taken to obtain the grant of a patent may be as little as one year.<sup>94</sup>

<sup>89</sup> *Spring Form Inc v Playhut Inc* [2000] FSR 327.

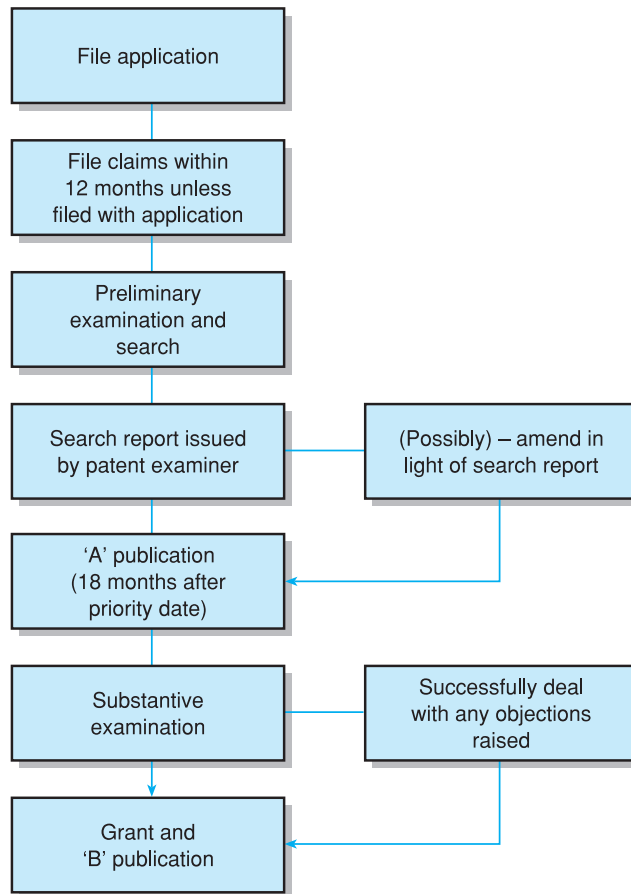

<sup>90</sup> Patents Rules 2007 r 26, SI 2007/3291.

<sup>91</sup> Under s 20A, the Comptroller has a discretion to reinstate an application which is refused or taken to have been refused because of a failure of the applicant, for example, failing to respond to a substantive examination report within the time limit if, *inter alia*, satisfied that the failure was unintentional. A mistaken intention to put the application on hold does not count: *Anning’s Patent Application* [2007] EWHC 2770 (Pat).

<sup>92</sup> The person making the observations does not, as a result, become a party in any proceedings under the Act before the Comptroller: Patents Act 1977 s 21. Under this provision, a person may claim that the invention is not new because he was working the invention before the priority date.

<sup>93</sup> Patents Act 1977 s 18; Patents Rules 2007 r 30, SI 2007/3291.

<sup>94</sup> See the Patents Application Guide available at the UK IPO website, [www.ipo.gov.uk](http://www.ipo.gov.uk).

**Figure 11.1** Flowchart of a UK patent application (simplified)

The combined search and examination procedure, which is an alternative to the traditional procedure, is initiated by filing a request for search together with a request for examination at the same time. A request for early publication and early grant must also be made by the applicant. Combined search and examination is not likely to be appropriate in all cases. The applicant may have insufficient time fully to assess the prior art and make modifications to his application and, by the time the patent has been granted, the search and examination may not be complete. It would be likely to be useful, however, where the invention is 'clear cut' in terms of the requirements of the Act: for example, where it is clear that the invention is new, involves an inventive step, is capable of industrial application and not excepted. The combined search and examination procedure, which was available from 3 July 1995, is unlikely to be appropriate where the distinction between the invention and the prior art is imprecise, or where there is an issue concerning the exceptions or where the technology involved is particularly complex. Nevertheless, the fact that the UK IPO went some way to meeting the wishes of users of the patent system was generally welcomed.

### Patents after grant

On the fourth anniversary of the date of filing, a patent must be renewed and then renewed annually on subsequent anniversaries. Renewal may be applied for within the

3-month period ending with the end of the month during which the anniversary falls. Renewal is effected by submitting a form and the appropriate renewal fee. The renewal fees increase with each renewal.<sup>95</sup> Late renewal can be made up to six months after the end of the renewal period.<sup>96</sup> If this is not done, the patent will cease to have effect. However, during the following 13 months (that is 19 months in total from the end of the relevant renewal period) an application may be made to have the patent restored. If the restoration fee is paid and the Comptroller is satisfied that the failure of the proprietor to renew the patent was unintentional, he will restore the patent. Section 25(3) of the Patents Act 1977 reads:

Where any renewal fee in respect of a patent is not paid by the end of the period prescribed for payment (the ‘prescribed period’) the patent shall cease to have effect at the end of such day, in the final month of that period, as may be prescribed.

The Patents Rules 2007<sup>97</sup> provide for the prescribed periods in three different situations, being as follows.

- The basic rule, not within the two other cases below.
- The case where a patent is granted on or after three years and nine months of the filing date.
- The case where the grant of a patent is mentioned in the European Patents Bulletin on or after three years and nine months of the date of filing (there are two possibilities here).<sup>98</sup>

Under the basic rule, the renewal date is the fourth or subsequent anniversaries of the filing date and the renewal period is the period of three months ending with the last day of the month during which the renewal date falls. Thus, if a patent has a date of filing of 6 September 2005, the first renewal date is 6 September 2009 and the renewal period runs from 1 July 2009 to 30 September 2009. The next renewal date is 6 September 2010 and the renewal period runs from 1 July 2010 to 30 September 2010, and so on.

Under s 25(4), if the renewal fee and any additional fee are paid during the period of six months after the end of the renewal period, the patent shall be treated as if it never expired and anything done during that period shall be treated as valid and any act which would have constituted an infringement of the patent had it not expired shall constitute an infringement of it. Thus, using the example dates above, late renewal can be made up to the end of March 2010 in relation to the first renewal of the patent. If the patent is not renewed during that period, an application can be made for restoration of the patent under s 28. The period during which restoration can be applied for is 13 months from the end of the period during which late renewal can be made, that is 19 months from the end of the renewal period. In our example, this would be the end of April 2011 in relation to the first renewal date. Under s 28(3), restoration will only be allowed if the relevant fees are paid, including a restoration fee,<sup>99</sup> and the Comptroller is satisfied that the failure of the proprietor to renew was unintentional.<sup>100</sup> These dates are set out in Table 11.2.

<sup>95</sup> At the time of writing, the fee for the fifth year is £50, increasing to £400 for the twentieth and final year.

<sup>96</sup> There is an additional late renewal fee, apart from the first month, of £24 per month.

<sup>97</sup> SI 2007/3291.

<sup>98</sup> Rule 37(2) to (4).

<sup>99</sup> Presently £135.

<sup>100</sup> Further renewal fees and additional fees may also be due.

**Table 11.2** Patent renewal and restoration dates

<i>Filing date</i>	<i>6 September 2005</i>
4th anniversary & 1st renewal date	6 September 2009
Renewal period	1 July 2009 to 30 September 2009
Late renewal period ends	31 March 2010
Restoration period (failure to renew on 4th anniversary)	1 April 2010 to 30 April 2011

101 SI 2004/2357. The Order came into force on 1 January 2005.

102 [1989] RPC 411.

103 [1972] AC 153.

104 [1994] RPC 647.

105 [2009] EWHC 59 (Pat).

106 [1995] RPC 666.

107 *Norsk Hydro AS's Patent* [1997] RPC 89.

108 However, s 75 does permit amendment where the validity of the patent is or may be in issue in live proceedings.

109 Substituted by the Copyright, Designs and Patents Act 1988 s 295 and Sch 5, para 20.

110 Amendment under s 37(4), where an application for revocation is made in a case where the person registered as proprietor was not entitled to the patent but the person who was entitled makes a new application, is subject to not disclosing additional matter only.

111 [1996] RPC 387.

The present version of s 28(3) was substituted by the Regulatory Reform (Patents) Order 2004.<sup>101</sup> Previously, rather than consider whether the failure to renew was unintentional, a test of reasonable care was used. This was considered in *Textron Inc's Patents*,<sup>102</sup> where Lords Oliver and Goff said that where the renewal had been delegated to a director or an officer of a company that was the proprietor of a patent, it might be necessary to decide whether or not that person was a directing mind of the company such that the fault was the company's fault and not that of an agent or servant along the lines of *Tesco Supermarkets Ltd v Natrass*.<sup>103</sup> In *Textron*, the failure to renew was the fault of a contractor specialised in renewing patents and to which the proprietor had entrusted the task of renewals. The new test should be fairly easy to satisfy though would not extend to a deliberate decision not to renew even though the proprietor later has second thoughts about this. Whether it will extend to negligence or mere carelessness is uncertain although it would be reasonable to expect the proprietor to show that he did intend to renew the patent and that the failure to renew was caused, for example, by a procedural error or malfunction. Before amendment of s 28(3), if a patentee could not afford to pay the renewal fee, this was a factor to be taken into account. It did not necessarily mean that he failed to exercise reasonable care but he would have to go further and show that his impecuniosity was not due to any lack of care. In *Ament's Application*,<sup>104</sup> the patentee was prohibited by US bankruptcy laws from applying his funds to renew the patent. Nevertheless, it was held that the patentee failed in the heavy onus to show that he had taken reasonable care. In *Bending Light Ltd's Application*,<sup>105</sup> the executive chairman of the patentee company, which was in financial difficulties, used company funds to meet liabilities as and when they became due to keep the company solvent. Unfortunately, he did not follow the same practice with regard to patent renewal fees. His application to restore the patent failed as it was held that reasonable care had not been taken. In particular, it was not shown that the company was not in a position to pay the necessary fees. The new test of unintentional failure seems more generous than previously but must make it harder if not impossible for impecunious patentees to secure restoration of a lapsed patent. Failing to pay for lack of money cannot be described as unintentional. A person cannot intend to pay if he has no money with which to pay.

In *Atlas Powder Co's Patent*,<sup>106</sup> Atlas was taken over by ICI and decided not to renew its UK patent. An unforeseen consequence was that a Malaysian patent belonging to Atlas in respect of the same invention lapsed because the UK patent ceased to have effect. In terms of what was required by the first limb of old s 28(3) (reasonable care to see that the renewal fee is paid), the Court of Appeal decided that this required an intention to ensure that the fee was paid, or at least that the proprietor had taken some steps towards that. A deliberate decision not to renew is not consistent with the statutory requirement and restoration was not permitted. This case must now be read with the relaxed test to the effect that the failure to renew was unintentional.

After a patent has been granted it may still be amended under s 27 subject to s 76. Any such amendment is treated as having effect from the date of grant and there is provision for opposition. A failure to respond to any opposition will result in the application for amendment being treated as withdrawn.<sup>107</sup> The Comptroller may amend a specification on his own initiative to recognise a registered trade mark. Amendment under s 27 is not permitted where proceedings in which the validity of the patent has been put in issue are pending.<sup>108</sup>

Section 76<sup>109</sup> deals with amendment generally. The basic rule is that additional matter must not be disclosed. In terms of amendment after grant, s 76(3) requires that any amendment does not result in additional matter being disclosed in the specification or which extends the protection conferred by the patent.<sup>110</sup> In *Mabuchi Motor KK's Patent*,<sup>111</sup> it was held that an amendment to cut down the claims in a patent specification

does not offend s 76. Under s 75, amendment may be allowed in infringement or revocation proceedings, subject to s 76, but this is discretionary. In *Mabuchi*, in relation to amendment under s 75, the Patents Court held that an amendment should be refused only on very compelling grounds. The proprietor's requested amendment was designed to catch infringement and to avoid the prior art, but it was accepted by the court that this was not to be equated with acting in a blameworthy manner. Although the amendment was allowed, the defendant's '*Gillette*' defence succeeded.<sup>112</sup>

Taking features in a specification described only in a particular context and without inventive significance and then seeking to amend by introducing them in a claim deprived of that context is sometimes referred to as an intermediate generalisation and will not normally be allowable as extending the subject matter of the patent.<sup>113</sup>

Article 123 of the European Patent Convention requires that amendments must not extend the subject matter beyond the patent as filed whereas the Patents Act 1977 s 76(3)(a) does not permit amendment resulting in the specification disclosing additional matter. In *Triumph Actuation Systems LLC v Aeroquip-Vickers Ltd*,<sup>114</sup> a question arose as to whether s 76 required a comparison with the specification of a granted patent before amendment or with the patent as filed. In the particular case, amendments during the patent application process had resulted in the deletion of matter in the specification as filed. Pumfrey J held that consistency with the European Patent Convention meant that the comparison should be with the patent as filed. Such consistency was desirable even though s 76 is not one of those provisions in the Act stated by s 130(7) to have, as nearly as practicable, the same effects in the UK as, *inter alia*, the European Patent Convention.

The correct test for added matter was set out by Aldous J in *Bonzel v Intervention Ltd (No 3)*<sup>115</sup> where it was held that, in deciding whether there is an extension of disclosure, the task of the court is:

- 1 To ascertain through the eyes of the skilled addressee what is disclosed both explicitly and implicitly in the application.
- 2 To do the same in respect of the patent as granted.
- 3 To compare the two disclosures and decide whether any subject matter relevant to the invention has been added, whether by deletion or addition.

The comparison is strict in the sense that that subject matter will be added unless such matter is clearly and unambiguously disclosed in the application either explicitly or implicitly. A deletion may add matter if what is deleted limits the scope of the subject matter: for example, if a statement in the application claims a product invention made of metal is modified to remove any reference to metal.

Amendment may be by way of deletion of invalid claims, in which case the court will refuse to exercise its discretion to allow amendment only in exceptional circumstances.<sup>116</sup> Furthermore, an amendment may be permitted which widens the scope of the protection conferred by a single claim provided it does not extend the protection conferred by the patent overall.<sup>117</sup> An example where a court may refuse to exercise its discretion to accept an amendment is where the claims in the patent as granted were covetous, that is, the draftsman deliberately sought to protect matter going beyond the scope of the invention and, consequently, the claims were unjustifiably wide.<sup>118</sup>

Post-grant amendment is not provided for by the European Patent Convention as patents granted under that Convention are treated as if they had been granted under the UK's Patents Act 1977: *see s 77*. In *Oxford Gene Technology Ltd v Affymetrix Inc (No 2)*,<sup>119</sup> it was argued that the discretion to allow amendment under s 75 was constrained by Article 138 of the European Patent Convention<sup>120</sup> and, consequently, the court had no option but to allow amendment under s 75 if the outcome would be a

<sup>112</sup> The '*Gillette*' defence is discussed in Chapter 15.

<sup>113</sup> *Vector Corp v Glatt Air Techniques Ltd* [2007] EWCA Civ 805.

<sup>114</sup> [2007] EWHC 1367 (Pat).

<sup>115</sup> [1991] RPC 553.

<sup>116</sup> *Nutrinova Nutrition Specialities & Food Ingredients GmbH v Scanchem UK Ltd (No 2)* [2001] FSR 831.

<sup>117</sup> *Siegfried Demel (t/a as Demotec Siegfried Demel) v C & H Jefferson* [1999] FSR 204.

<sup>118</sup> *Kimberly-Clark Worldwide Inc v Procter & Gamble Ltd (No 2)* [2001] FSR 339. However, in this case, an argument by the defendant that the claims were covetous failed.

<sup>119</sup> [2001] RPC 310.

<sup>120</sup> Article 138(1) is equivalent to the grounds of revocation set out in s 72 of the Patents Act 1977 and Article 138(2) equates to s 63(1), which allows a court to grant relief to the extent that a patent is partially valid.

partially valid patent. This is because Article 138(2) provides that a patent *shall* be limited appropriately if the grounds of revocation are made out in part only. However, Aldous LJ pointed out that s 75 is not one of the provisions which are required by s 130(7) to be framed so as to have as nearly as practicable the same effect in the UK as the corresponding provision of the European Patent Convention, as the latter does not provide for post-grant amendment as such. Aldous LJ made the distinction that Article 138, as s 63(1), is concerned with a patent that is partially valid, whereas s 75 allows amendment to validate a patent that would otherwise be invalid.

## Divisional applications

Once a patent application has been submitted, but before grant, a divisional application may be made in relation to it.<sup>121</sup> This is where the applicant divides out one or more claims from the original application (the ‘parent’ application) and makes them subject to a separate application for a patent. Typically, one or more divisional applications may be made where the patent examiner has objected on the ground that the parent application contains more than one invention or a number of inventions not having a single inventive concept.<sup>122</sup> However, the applicant may elect himself to make a divisional application. The advantage about making a divisional application is that, providing the Act and the Rules are complied with, it will have the same priority date as the parent application.

A divisional application can only be made in respect of subject matter which does not extend beyond the content from the application it was divided from. This is a general rule: see Article 123(2) EPC and Patents Act 1977 s 76. Although s 76 is not one of those provisions stated under s 130(7) to have as near as is practicable the same effect as the corresponding provision in the EPC and although it is differently worded compared with Article 123(2), it has been accepted that it was intended to have the same meaning in the Court of Appeal in *Napp Pharmaceutical Holdings Ltd v ratiopharm GmbH*.<sup>123</sup>

An example of a divisional application is where an application may be made for a patent but the application claims two inventions (X and Y) which are not so linked as to form a single inventive concept. The applicant may then make a divisional application in respect of invention X and another in respect of invention Y. The applicant may later decide to withdraw the parent application.<sup>124</sup> Alternatively, a divisional application may be made in relation to invention X and the parent application may be amended to exclude invention X.

The reason that it is not permissible to add subject matter in a divisional application, as is the case with a straightforward amendment, was explained by the Enlarged Board of Appeal of the EPO in Case G1/93 *ADVANCED SEMICONDUCTOR PRODUCTS/Limiting feature*<sup>125</sup> (at para 9) in the following terms:

With regard to Article 123(2) EPC, the underlying idea is clearly that an applicant shall not be allowed to improve his position by adding subject-matter not disclosed in the application as filed, which would give him an unwarranted advantage and could be damaging to the legal security of third parties relying on the content of the original application. Article 123(3) EPC is directly aimed at protecting the interests of third parties by prohibiting any broadening of the claims of a granted patent, even if there should be a basis for such broadening in the application as filed.

At first sight, a previously undisclosed disclaimer of part of the subject matter of a patent application cannot add matter and should be unobjectionable. However, as the Enlarged Board of Appeal stated in *ADVANCED SEMICONDUCTOR PRODUCTS/Limiting feature*, it may add subject matter if it provided a technical contribution to the subject matter of the claimed invention. However, this would not be so if it simply narrowed the protection sought. Adding such a disclaimer cannot be viewed as giving

<sup>121</sup> Article 76 of the EPC and the Patents Act 1977 s 15(9).

<sup>122</sup> Under s 14(5)(d) the claim or claims must relate to a single invention or a group of inventions which are so linked as to form a single inventive concept.

<sup>123</sup> [2009] EWCA Civ 252.

<sup>124</sup> A divisional application may not be made in a number of cases. These include where the parent application has already been withdrawn or refused or where a patent has been granted in respect of it.

<sup>125</sup> [1995] EPOR 97.

an unwarranted advantage to the applicant. In *Napp Pharmaceutical Holdings Ltd v ratiopharm GmbH*,<sup>126</sup> the Court of Appeal agreed with Kitchen J's understanding of the position at first instance, where he said (at para 122):

126 [2009] EWCA Civ 252.

Nevertheless, the test for added subject matter remains that set out in the Convention and the Act. The reason that disclaimers of accidental and deemed anticipations do not offend is that they do not add subject matter relevant to the invention. If a disclaimer introduced by a divisional application does not add subject matter relevant to the invention, but merely excludes subject matter from protection, then it too will not offend against the provision.

A situation where an undisclosed disclaimer may be made is where a patent application ('A') having an earlier priority date than the one in question ('B') is published and contains subject matter also in application B. The applicant in respect of B may wish to cut his application down by excluding that subject matter from his application and limiting his claims accordingly.

### Cost of applying for a patent

The cost of applying for a patent can be quite high; apart from paying the appropriate fees to the UK IPO, the drawing up of the necessary documents and drafting of claims will usually take a considerable amount of time. Additionally, in most cases, the services of a patent agent will be required. Some of the main fees payable to the UK IPO in respect of a UK patent, at the time of writing, are as follow:<sup>127</sup>

127 Patents (Fees) Rules 2007, SI 2007/3292.

Application fee (alternatively this fee may be paid when filing Form 1 or Form 9A)	Patents Form AF1	£30
Request for grant of a patent	Patents Form 1	No charge
Request for search (this may be reduced to £100 in some cases: for example, where a search has already been carried out by the International Search Authority)	Patents Form 9A	£130
Request for substantive examination	Patents Form 10	£70
Request for an opinion as to validity or infringement	Patents Form 17	£200
Renewal fees – on a sliding scale varying from £50 for fifth year to £400 for twentieth and final year.		

There are a host of other fees, for example, for making an opposition, amendment, assignment, restoration, etc. If everything is straightforward and progress is smooth the total fee to obtain a patent is £200.

As from 4 October 2009, there is a reduction of £10 in some of the fees where the relevant filing is made in electronic form or using electronic communications. In such cases, the filing fee is reduced from £30 to £20, the request for a search fee is reduced to £90 and the fee for a substantive examination is reduced to £60.<sup>128</sup>

128 The relevant filing must be in accordance with directions under the Patents Act 1977, s 124A (use of electronic communications): Trade Marks and Trade Marks and Patents (Fees) (Amendment) Rules 2009, SI 2009/2089, rr 21 and 22.

### Classification system

Current and old patents have to be consulted for several reasons, the obvious one being to determine whether a 'new' invention has been anticipated and is, therefore, likely to be refused a patent on the ground of lack of novelty. Other reasons relate to patent documents as a valuable source of information in terms of gaining information about competitors and a particular field of technology, seeing how certain problems have been tackled in the past, as a way of gaining inspiration and as a research tool. The UK IPO presently holds specifications and abstracts for every British patent dating from 1617 in addition to patents published by the USA and European Patent Offices. Additionally, computer databases hold details of many more millions of patents. It

will come as no surprise that some sort of classification scheme is needed to assist in searching for relevant documents. Patent abstracts and specifications are classified and indexed to make the task of searching easier. For example, for specifications, the system used is based on three elements: a section, a division, and a heading. There are eight sections lettered from A to H as follows:

- A Human necessities
- B Performing operations
- C Chemistry and metallurgy
- D Textiles and paper
- E Civil engineering and building accessories
- F Mechanics, heating and lighting
- G Instrumentation
- H Electricity

In addition there is a ‘division not specified’. Each section is divided into between two and eight divisions, which are further divided into between two and 24 headings. As an example, the classification for toys is A6S (A6 being entertainments). Further subdivisions are used below the headings level and are known as ‘terms’, which are developed and expanded pragmatically in response to volume of applications.

There is also a Universal Indexing Schedule and an International Patent Classification (IPC), the latter being used by the European Patent Office. The IPC is arranged in eight sections in a way similar to the UK classification. In practice, UK patent specifications will carry all three classifications. The UK IPO and the British Library have access to several computer databases. There are now millions of applications for patents worldwide each year.

## Patent agents

Persons wishing to apply for a patent normally use the services of a patent agent because of the complexity and technicality associated with patent applications and the importance of correctly defining the scope of the patent and extent of the claims. Although anyone can act for another in an agency capacity in respect of a patent application,<sup>129</sup> under the Copyright, Designs and Patents Act 1988 s 276, only registered patent agents may describe themselves as patent agents or patent attorneys.<sup>130</sup> Communications between a client and his patent agent are privileged provided the agent is registered.<sup>131</sup> There is a professional body for patent agents, the Chartered Institute of Patent Agents. Chartered patent agents have a right of audience in the Patents County Court.

## Example patent application and specification

There follows a reproduction of a patent application made to the UK IPO (No. GB 2183592A). This is reproduced by permission of Guinness Brewing Worldwide Ltd and their patent attorneys, Urquhart-Dykes & Lord. The application should be studied in the light of the description of the constituent parts of a patent specification given earlier in this chapter. The format of the specification and the high standard of draftsmanship particularly should be noted.

<sup>129</sup> Subject to restrictions under the European Patent Convention in relation to European patents: Copyright, Designs and Patents Act 1988 s 274.

<sup>130</sup> Solicitors may also use the description patent attorney.

(57) A container for a beverage having gas (preferably at least one of carbon dioxide and inert (nitrogen) gases) in solution consists of a non-resealable container 1 within which is located a hollow secondary chamber 4, eg a polypropylene envelope, having a restricted aperture 7 in a side wall. The container is charged with the beverage 8 and sealed. Beverage from the main chamber of the container enters the chamber 4 (shown at 8a) by way of the aperture 7 to provide headspaces 1a in the container and 4a in the pod 4. Gas within the headspaces 1a and 4a is at greater than atmospheric pressure. Preferably the beverage is drawn into the chamber 4 by subjecting the package to a heating and cooling cycle. Upon opening the container 1, eg by draw ring/region 13, the headspace 1a is vented to atmosphere and the pressure differential resulting from the pressure in the chamber headspace 4a causes gas/beverage to be ejected from the chamber 4 (by way of the aperture 7) into the beverage 8. Said ejection causes gas to be evolved from solution in the beverage in the main container chamber to form a head of froth on the beverage. The chamber 4 is preferably formed by blow moulding and located below beverage level by weighting it or as a press fit within the container 1 by lugs 6 engaging the container walls, the container being preferably a can, carton or bottle. The chamber 4 may initially be filled with gas, eg nitrogen, at or slightly above atmospheric pressure, the orifice being formed by laser boring, drilling or punching immediately prior to locating the chamber 4 in the container 1.

The drawings originally filed were informal and the print here reproduced is taken from a later filed formal copy.

Reference to UK Patent Application 2, 183,592A is made with kind permission of Guinness Brewing Worldwide Limited and their Patent Attorneys, Urquhart-Dykes & Lord.

## SPECIFICATION

**A beverage package and a method of packaging a beverage containing gas in solution**

5

*Technical field and background art*

This invention relates to a beverage package and a method of packaging a beverage containing gas in solution. The invention more particularly concerns beverages containing gas in solution and packaged in a sealed, non-resealable, container which, when opened for dispensing or consumption, permits gas to be evolved or liberated from the beverage to form, or assist in the formation of, a head or froth on the beverage. The beverages to which the invention relates may be alcoholic or non-alcoholic; primarily the invention was developed for fermented beverages such as beer, stout, ale, lager and cider but may be applied with advantage to so-called soft drinks and beverages (for example fruit juices, squashes, colas, lemonades, milk and milk based drinks and similar type drinks) and to alcoholic drinks (for example spirits, liquors, wine or wine based drinks and similar).

It is recognised in the beverage dispensing and packaging art that the characteristics of the head of froth which is provided on the beverage by the liberation of gas from the beverage immediately prior to consumption are an important consideration to the consumers enjoyment of the product and are therefore of commercial importance. Conventionally beverages of the type discussed above containing gas in solution and packaged in a non-resealable container (such as a can, bottle or carton) provide a headspace in the container within which gas is maintained under pressure. Upon opening of the package, the headspace gas is vented to atmosphere and the beverage is usually poured into a drinking vessel. During such dispensing of the beverage it is usual for gas in solution to be liberated to create the froth or head. It is generally recognised that when dispensing a beverage as aforementioned, the gas is liberated as a result of the movement of the beverage over a surface having so-called gas nucleation or active sites which may be the wall of the drinking vessel into which the beverage is poured. There is therefore a distinct possibility with conventional beverage packages that upon opening of the container after storage and until the beverage is poured therefrom, the beverage will have little or no froth or head - such a headless beverage is usually regarded by the consumer as somewhat unattractive and unappealing especially where the beverage is to be drunk directly from the container. Admittedly it may be possible to develop a head or froth within the container by agitating or shaking the package (so that the movement of the beverage over the interior surface of the container causes the liberation of the gas in solution) but this is clearly inconvenient once the container is opened and is inadvisable if the package is shaken immediately prior to opening as the contents tend to spray or spurt on opening.

There is therefore a need for a beverage package and a method of packaging a beverage containing gas in solution by which the beverage is packaged in

a non-resealable container so that when the container is opened gas is liberated from the beverage to form or assist in the formation of a head or froth without the necessity of an external influence being applied to the package; it is an object of the present invention to satisfy this need in a simple, economic and commercially viable manner.

70

*Statements of invention and advantages*

75

According to the present invention there is provided a beverage package comprising a sealed, non-resealable, container having a primary chamber containing beverage having gas in solution therewith and forming a primary headspace comprising gas at a pressure greater than atmospheric; a secondary chamber having a volume less than said primary chamber and which communicates with the beverage in said primary chamber through a restricted orifice, said secondary chamber containing beverage derived from the primary chamber and having a secondary headspace therein comprising gas at a pressure greater than atmospheric so that the pressures within the primary and secondary chambers are substantially at equilibrium, and wherein said package is openable, to open the primary headspace to atmospheric pressure and the secondary chamber is arranged so that on said opening the pressure differential caused by the decrease in pressure at the primary headspace causes at least one of the beverage and gas in the secondary chamber to be ejected by way of the restricted orifice into the beverage of the primary chamber and said ejection causes gas in the solution to be evolved and form, or assist in the formation of, a head of froth on the beverage.

105

110

115

120

125

130

Further according to the present invention there is provided a method of packaging a beverage having gas in solution therewith which comprises providing a container with a primary chamber and a secondary chamber of which the volume of the secondary chamber is less than that of the primary chamber and with a restricted orifice through which the secondary chamber communicates with the primary chamber, and charging and sealing the primary chamber with the beverage to contain the gas in solution and to form a primary headspace in the primary chamber, and charging the secondary chamber with beverage derived from the primary chamber by way of said restricted orifice to form a secondary headspace in the secondary chamber whereby the pressures in both the primary and secondary chambers are at equilibrium and gaseous pressures in both the primary and secondary headspaces are at a pressure greater than atmospheric so that, when the container is broached to open the primary headspace to atmospheric pressure, the pressure differential caused by the decrease in pressure at the primary headspace causes at least one of the beverage and gas in the secondary chamber to be ejected into the beverage of the primary chamber by way of said restricted orifice and the said ejection causes gas to be evolved from solution in the beverage in the primary chamber to form, or assist in the formation of, a head of froth on the beverage.

The present invention is applicable to a wide range of beverages of the type as previously discussed and

where those beverages contain gas in solution which gas is intended to be liberated to form or assist in the formation of the head or froth on the beverage. Understandably the gas in solution must not detract  
 5 from, and should preferably enhance the characteristics required of the beverage and be acceptable for use with food products; preferably therefore the gas is at least one of carbon dioxide and inert gases (by which latter term is included nitrogen)  
 10 although it is to be realised that other gases may be appropriate.

The present invention was primarily developed for the packaging of fermented beverages such as beer, ale, stout, lager and cider where among the desirable  
 15 qualities sought in a head are a consistent and regular, relatively fine, bubble size; a bubble structure which is substantially homogeneous so that the head is not formed with large irregularly shaped and random gaps; the ability for the head or bubble  
 20 structure to endure during a reasonable period over which it is likely to be consumed, and a so-called "mouth-feel" and flavour which may improve the enjoyment of the beverage during consumption and not detract from the desirable flavour characteristics  
 25 required of the beverage. These desirable qualities are of course equally applicable to non-fermented beverages, for example with so-called soft drinks. Conventionally, beverages of the type to which the invention relates are packaged in a non-resealable  
 30 container which when opened totally vents the head-space to atmosphere, contain carbon dioxide in solution and it is the liberation of the carbon dioxide on opening of the package and dispensing of the beverage into a drinking vessel which creates the froth or head; however, the head so formed has very few of  
 35 the aforementioned desirable qualities - in particular it is usually irregular, lacks homogeneity and has very little endurance so that there is a tendency for it to collapse after a short period. It has been known for approximately 25 years and as discussed in our G.B. Patent No. 876,628, that beverages having in solution  
 40 a mixture of carbon dioxide gas and inert gas (such as nitrogen or argon) will, when dispensed in a manner whereby the mixed gases are caused to  
 45 evolve to develop the head or foam from small bubbles containing the mixture of carbon dioxide and, say, nitrogen gases, provide the desirable qualities for the head as previously discussed. Commercially the formation of the head by the use of mixed  
 50 gases as aforementioned has been widely employed in the dispensing of beverage in a draught system and on demand from a bulk container (such as a keg or barrel) where the gases are caused to evolve by  
 55 subjecting the beverage to intense shear forces in passing it under pressure through a set of small holes. Beverages, particularly stout, having a mixture of carbon dioxide and nitrogen gases in solution and dispensed in draught using the aforementioned  
 60 technique have met with considerable commercial success and it was soon realised that there was a need to make available for consumption a similar beverage derived from a small non-resealable container suitable for shelf storage and retail purposes.

Research has indicated that to achieve the initiation of a head on a beverage containing carbon

dioxide and inert gas such as nitrogen in solution it is necessary to provide so-called "active sites" which are regions where the beverage is subjected to a high local strain (such a strain being higher than the  
 70 cohesive force of the beverage). In these conditions the beverage prefers to generate a bubble of mixed gases instead of "bending around" the active site. It was found that an active site could be solid, liquid or gas such as granules, restrictor holes, rapid streams  
 75 of liquid or bubbles and the like. It was also found that ultrasonics could produce a "ghost" active site by the formation of extreme pressure gradients. There has however been a problem in providing an  
 80 "active site" in a beverage packaged in a non-resealable small container in a manner which is commercially and economically acceptable. During the past 25 years considerable expenditure has been devoted to research and development in an attempt to  
 85 overcome the aforementioned problem. For example, our G.B. Patent No. 1,588,624 proposes initiating the evolution of mixed carbon dioxide and nitrogen gases from a beverage by subjecting the beverage to ultrasonic excitement, by injecting a  
 90 gas, liquid and/or foam into the beverage by use of a syringe-type device, or by pouring the beverage over an excitation surface such as polystyrene granules. Although these latter proposals were successful in  
 95 achieving the desired head formation, the necessity to use ancillary apparatus had commercial disadvantages (for example, it is unreasonable to expect a retail customer to have available an ultrasonic  
 100 signal generator; also the steps required to effect initiation of the head following opening of the beverage package involved an inconvenient discipline and time factor). In a further example our G.B. Patent No. 1,266,351 relates to a non-resealable package containing beverage having mixed carbon dioxide and  
 105 inert gases in solution; in this disclosure a can or bottle has two chambers of which a larger chamber contains the beverage while the smaller chamber is charged under pressure with the mixed gases. On opening of the can or bottle to expose the larger chamber to atmosphere, its internal pressure falls to  
 110 atmospheric permitting the pressurised gas in the small chamber to jet into the beverage by way of a small orifice between the two chambers. This jet of gas provides sufficient energy to initiate the formation of minute bubbles and thereby the head from the evolution of the mixed gases in the beverage  
 115 coming out of solution. By this proposal the small gas chamber is initially pressurised with the mixed gases to a pressure greater than atmospheric and from a source remote from the beverage; as a consequence it was found necessary, particularly in the case of cans, to provide a special design of two  
 120 chambered container and an appropriate means for sealing the smaller chamber following the charging of that chamber with the mixed gases (such charging usually being effected, in the case of cans, by injecting the mixed gases into the small chamber through  
 125 a wall of the can which then had to be sealed). Because of the inconvenience and high costs involved in the development of an appropriate two chambered container and the special facilities required for  
 130 charging the mixed gases and sealing the container,

the proposal proved commercially unacceptable.

The container employed in the present invention will usually be in the form of a can, bottle or carton capable of withstanding the internal pressures of the primary and secondary chambers and of a size suitable for conventional shelf storage by the retail trade so that, the overall volume of the container may be, typically, 0.5 litres but is unlikely to be greater than 3 litres.

By the present invention a two chambered container is employed as broadly proposed in G.B. Patent No. 1,266,351; however, unlike the prior proposal the secondary chamber is partly filled with beverage containing gases in solution and the beverage in the secondary chamber is derived wholly from the beverage in the primary chamber so that when the contents of the primary and secondary chambers are in equilibrium (and the primary and secondary headspaces are at a pressure greater than atmospheric) immediately prior to broaching the container to open the primary headspace to atmosphere, the pressure differential between that in the secondary headspace and atmospheric pressure causes at least one of the beverage and the headspace gas in the secondary chamber to be ejected by way of the restricted orifice into the beverage in the primary chamber to promote the formation of the head of froth without the necessity of any external influence being applied to the package. The pressurisation of the headspace gas in the secondary chamber is intended to result from the evolution of gas in the sealed container as the contents of the container come into equilibrium at ambient or dispensing temperature (which should be greater than the temperature at which the container is charged and sealed). Consequently the present invention alleviates the necessity for pressurising the secondary chamber from a source externally of the container so that the secondary chamber can be formed as a simple envelope or hollow pod of any convenient shape (such as cylindrical or spherical) which is located as a discrete insert within a conventional form of can, bottle or carton (thereby alleviating the requirement for a special structure of can or bottle as envisaged in G.B. Patent No. 1,266,351).

Although the head or froth formed by pouring wholly carbonated beverages tends to lack many of the desirable qualities required of a head as previously discussed; our tests have indicated that by use of the present invention with wholly carbonated beverages (where the head is formed by injection of gas or beverage from the secondary chamber into the primary chamber) the resultant head is considerably tighter or denser than that achieved solely by pouring and as such will normally have a greater life expectancy.

The beverage is preferably saturated or supersaturated with the gas (especially if mixed carbon dioxide and inert gases are employed) and the primary chamber charged with the beverage under a counterpressure and at a low temperature (to alleviate gas losses and, say, at a slightly higher temperature than that at which the beverage freezes) so that when the container is sealed (which may be achieved under atmospheric pressure using con-

ventional systems such as a canning or bottling line), the pressurisation of the primary and secondary headspaces is achieved by the evolution of gas from the beverage within the primary and secondary chambers as the package is handled or stored at an ambient or dispensing temperature (greater than the charging temperature) and the contents of the container adopt a state of equilibrium. As an optional but preferred feature of the present invention, following the sealing of the container, the package may be subjected to a heating and cooling cycle, conveniently during pasteurisation of the beverage. During such a cycle the gas within the secondary chamber is caused to expand and eject into the primary chamber; during subsequent cooling of the package, the gas in the secondary chamber contracts and creates a low pressure or vacuum effect relative to the pressure in the primary chamber so that beverage from the primary chamber is drawn into the secondary chamber by way of the restricted orifice. By use of this preferred technique it is possible to ensure that the secondary chamber is efficiently and adequately charged with beverage and has the desired secondary headspace.

The restricted orifice through which the primary and secondary chambers communicate is conveniently formed by a single aperture in a side wall of the secondary chamber and such an aperture should have a size which is sufficiently great to alleviate "clogging" or its obturation by particles which may normally be expected to occur within the beverage and yet be restricted in its dimensions to ensure that there is an adequate jetting effect in the ejection of the gas and/or beverage therethrough from the secondary chamber into the primary chamber to promote the head formation upon opening of the container. The restricted orifice may be of any profile (such as a slit or a star shape) but will usually be circular; experiments have indicated that a restricted orifice having a diameter in the range of 0.02 to 0.25 centimeters is likely to be appropriate for fermented beverages (the preferred diameter being 0.061 centimetres). It is also preferred that when the package is positioned in an upstanding condition in which it is likely to be transported, shelf stored or opened, the restricted orifice is located in an upwardly extending side wall or in a bottom wall of the secondary chamber and preferably at a position slightly spaced from the bottom of the primary chamber. It is also preferred, particularly for fermented beverages, that when the contents of the sealed package are in equilibrium and the package is in an upstanding condition as aforementioned, the restricted orifice is located below the depth of the beverage in the secondary chamber so that on opening of the container the pressure of gas in the secondary headspace initially ejects beverage from that chamber into the beverage in the primary chamber to promote the head formation. It is believed that such ejection of beverage through the restricted orifice is likely to provide a greater efficiency in the development of the head in a liquid supersaturated with gas than will the ejection of gas alone through the restricted orifice; the reason for this is that the restricted orifice provides a very active site which causes the bever-

age to "rip itself apart" generating extremely minute bubbles which themselves act as active sites for the beverage in the primary chamber, these extremely minute bubbles leave "vapour trails" of larger initiated bubbles which in turn produce the head. Since the extremely minute bubbles are travelling at relatively high speed during their injection into the beverage in the primary chamber, they not only generate shear forces on the beverage in that chamber but the effect of each such bubble is distributed over a volume of beverage much larger than the immediate surroundings of an otherwise stationary bubble.

A particular advantage of the present invention is that prior to the container being charged with beverage both the primary and secondary chambers can be at atmospheric pressure and indeed may contain air. However, it is recognised that for many beverages, particularly a fermented beverage, prolonged storage of the beverage in contact with air, especially oxygen, is undesirable as adversely affecting the characteristics of the beverage. To alleviate this possibility the secondary chamber may initially be filled with a "non-contaminant" gas such as nitrogen (or other inert gas or carbon dioxide) which does not adversely affect the characteristics of the beverage during prolonged contact therewith. The secondary chamber may be filled with the non-contaminant gas at atmospheric pressure or slightly greater (to alleviate the inadvertent intake of air) so that when the container is charged with the beverage, the non-contaminant gas will form part of the pressurised headspace in the secondary chamber. As previously mentioned, the secondary chamber may be formed by an envelope or hollow pod which is located as a discrete insert within a conventional form of can, bottle or carton and such a discrete insert permits the secondary chamber to be filled with the non-contaminant gas prior to the envelope or pod being located within the can, bottle or carton. A convenient means of achieving this latter effect is by blow moulding the envelope or pod in a food grade plastics material using the non-contaminant gas as the blowing medium and thereafter sealing the envelope or pod to retain the non-contaminant gas therein; immediately prior to the pod or envelope being inserted into the can, bottle or carton, the restricted orifice can be formed in a side wall of the pod or envelope (for example, by laser boring). Immediately prior to the container being sealed it is also preferable to remove air from the primary headspace and this may be achieved using conventional techniques such as filling the headspace with froth or fob developed from a source remote from the container and having characteristics similar to those of the head which is to be formed from the beverage in the container; charging the primary chamber with the beverage in a nitrogen or other inert gas atmosphere so that the headspace is filled with that inert gas or nitrogen; dosing the headspace with liquid nitrogen so that the gas evolved therefrom expels the air from the headspace, or by use of undercover gassing or water jetting techniques to exclude air.

Although the secondary chamber may be constructed as an integral part of the container, for the

reasons discussed above and also convenience of manufacture, it is preferred that the secondary chamber is formed as a discrete insert which is simply deposited or pushed into a conventional form of can, bottle or carton. With cans or cartons such an insert will not be visible to the end user and many bottled beverages are traditionally marketed in dark coloured glass or plastics so that the insert is unlikely to adversely affect the aesthetics of the package. The discrete insert may be suspended or float in the beverage in the primary chamber provided that the restricted orifice is maintained below the surface of the beverage in the primary chamber on opening of the container; for example the insert may be loaded or weighted to appropriately orientate the position of the restricted orifice. Desirably however the insert is restrained from displacement within the outer container of the package and may be retained in position, for example at the bottom of the outer container, by an appropriate adhesive or by mechanical means such as projections on the package which may flex to abut and grip a side wall of the outer container or which may engage beneath an internal abutment on the side wall of the outer container.

#### *Drawings*

One embodiment of the present invention as applied to the packaging of a fermented beverage such as stout in a can will now be described, by way of example only, with reference to the accompanying illustrative drawings, in which:-

*Figures 1 to 4* diagrammatically illustrate the progressive stages in the formation of the beverage package in a canning line, and

*Figure 5* diagrammatically illustrates the effect on opening the beverage package prior to consumption of the beverage and the development of the head of froth on the beverage.

#### *Detailed description of drawings*

The present embodiment will be considered in relation to the preparation of a sealed can containing stout having in solution a mixture of nitrogen and carbon dioxide gases, the former preferably being present to the extent of at least 1.5% vols/vol and typically in the range 1.5% to 3.5% vols/vol and the carbon dioxide being present at a considerably lower level than the amount of carbon dioxide which would normally be present in conventional, wholly carbonated, bottled or canned stout and typically in the range 0.8 to 1.8 vols/vol (1.46 to 3.29 grams/litre). For the avoidance of doubt, a definition of the term "vols/vol" is to be found in our G.B. Patent No. 1,588,624.

The stout is to be packaged in a conventional form of cylindrical can (typically of aluminium alloy) which, in the present example, will be regarded as having a capacity of 500 millilitres and by use of a conventional form of filling and canning line appropriately modified as will hereinafter be described. A cylindrical shell for the can 1 having a sealed base 2 and an open top 3 is passed in an upstanding condition along the line to a station shown in Figure 1 to present its open top beneath a stack of hollow pods 4. Each pod 4 is moulded in a food grade plastics material such as polypropylene to have a short (say 5

millimetres) hollow cylindrical housing part 5 and a circumferentially spaced array of radially outwardly extending flexible tabs or lugs 6. The pods 4 are placed in the stack with the chamber formed by the housing part 5 sealed and containing nitrogen gas at atmospheric pressure (or at pressure slightly above atmospheric); conveniently this is achieved by blow moulding the housing part 5 using nitrogen gas. The volume within the housing part 5 is approximately 15 millilitres. At the station shown in Figure 1 the bottom pod 4 of the stack is displaced by suitable means (not shown) into the open topped can 1 as shown. However, immediately prior to the pod 4 being moved into the can 1 a small (restricted) hole 7 is bored in the cylindrical side wall of the housing part 5. In the present example, the hole 7 has a diameter in the order of 0.61 millimetres and is conveniently bored by a laser beam generated by device 7a (although the hole could be formed by punching or drilling). The hole 7 is located towards the bottom of the cylindrical chamber within the housing part 5. Since the hollow pod 4 contains nitrogen gas at atmospheric pressure (or slightly higher) it is unlikely that air will enter the hollow pod through the hole 7 during the period between boring the hole 7 and charging of the can 1 with stout (thereby alleviating contamination of the stout by an oxygen content within the hollow pod 4).

The hollow pod 4 is pressed into the can 1 to be seated on the base 2. Conventional cans 1 have a domed base 2 (shown by the section 2a) which presents a convex internal face so that when the pod 4 abuts this face a clearance is provided between the hole 7 and the underlying bottom of the chamber within the can 1. It will be seen from Figure 1 that the diameter of the housing part 5 of the pod 4 is less than the internal diameter of the can 1 while the diameter of the outermost edges of the lugs 6 is greater than the diameter of the can 1 so that as the pod 4 is pressed downwardly into the can, the lugs 6 abut the side wall of the can and flex upwardly as shown to grip the can side wall and thereby restrain the hollow pod from displacement away from the base 2.

The open topped can with its pod 4 is now displaced along the canning line to the station shown in Figure 2 where the can is charged with approximately 440 millilitres of stout 8 from an appropriate source 9. The stout 8 is supersaturated with the mixed carbon dioxide and nitrogen gases, typically the carbon dioxide gas being present at 1.5 vols/vol (2.74 grams/litre) and the nitrogen gas being present at 2% vols/vol. The charging of the can 1 with the stout may be achieved in conventional manner, that is under a counterpressure and at a temperature of approximately 0°C. When the can 1 is charged with the appropriate quantity of stout 8, the headspace above the stout is purged of air, for example by use of liquid nitrogen dosing or with nitrogen gas delivered by means indicated at 10 to alleviate contamination of the stout from oxygen in the headspace.

Following charging of the can 1 with stout and purging of the headspace, the can moves to the station shown in Figure 3 where it is closed and sealed under atmospheric pressure and in conventional manner by a lid 11 seamed to the cylindrical side wall of the

can. The lid 11 has a pull-ring 12 attached to a weakened tear-out region 13 by which the can is intended to be broached in conventional manner for dispensing of the contents.

Following sealing, the packaged stout is subjected to a pasteurisation process whereby the package is heated to approximately 60°C for 15-20 minutes and is thereafter cooled to ambient temperature. During this process the nitrogen gas in the hollow pod 4a initially expands and a proportion of that gas passes by way of the hole 7 into the stout 8 in the main chamber of the can. During cooling of the package in the pasteurisation cycle, the nitrogen gas in the hollow pod 4 contracts to create a vacuum effect within the hollow pod causing stout 8 to be drawn, by way of the hole 7, from the chamber of the can into the chamber of the pod so that when the package is at ambient temperature the hole 7 is located below the depth of stout 8a within the hollow pod 4.

Following the pasteurisation process the contents of the can 1 will stabilise in a condition of equilibrium with a headspace 1a over the stout 8 in the primary chamber of the can and a headspace 4a over the stout 8a in the secondary chamber formed by the hollow pod 4 and in the equilibrium condition. With the sealed can at ambient temperature (or a typical storage or dispensing temperature which may be, say, 8°C) the pressure of mixed gases carbon dioxide and nitrogen (which largely results from the evolution of such gases from the stout) is substantially the same in the headspaces 1a and 4a and this pressure will be greater than atmospheric pressure, typically in the order of 25lbs per square inch (1.72 100 bars).

The package in the condition shown in Figure 4 is typically that which would be made available for storage and retail purposes. During handling it is realised that the package may be tipped from its upright condition; in practice however this is unlikely to adversely affect the contents of the hollow pod 4 because of the condition of equilibrium within the can.

When the stout is to be made available for consumption, the can 1 is opened by ripping out the region 13 with the pull-ring 12. On broaching the lid 11 as indicated at 14 the headspace 1a rapidly depressurises to atmospheric pressure. As a consequence the pressure within the headspace 4a of the secondary chamber in the pod 4 exceeds that in the headspace 1a and causes stout 8a in the hollow pod to be ejected by way of the hole 7 into the stout 8 in the primary chamber of the can. The restrictor hole 7 acts as a very "active site" to the supersaturated stout 8a which passes therethrough to be injected into the stout 8 and that stout is effectively "ripped apart" to generate extremely minute bubbles which themselves act as active sites for the stout 8 into which they are injected. These minute bubbles leave "vapour trails" of larger initiated bubbles which develop within the headspace 1a a head 8b having the previously discussed desirable characteristics.

It is appreciated that the headspace 1a occupies a larger proportion of the volume of the can 1 than that which would normally be expected in a 500 millilitre capacity can; the reason for this is to ensure that

there is adequate volume in the headspace 1a for the head of froth 8b to develop efficiently in the event, for example, that the stout is to be consumed directly from the can when the tear-out region 13 is removed.

5 Normally however the stout 8 will first be poured from the can into an open topped drinking vessel prior to consumption but this pouring should not adversely affect the desirable characteristics of the head of froth which will eventually be presented in the drinking vessel.

10 In the foregoing embodiment the can 1 is charged with stout 8 (from the source 9) having in solution the required respective volumes of the carbon dioxide and the nitrogen gases. In a modification the can 1 is charged with stout (from source 9) having the carbon dioxide gas only in solution to the required volume; the 2% vols/vol nitrogen gas necessary to achieve the required solution of mixed gas in the packaged stout is derived from the liquid nitrogen dosing of the headspace in the can.

#### CLAIMS

1. A beverage package comprising a sealed, non-resealable, container having a primary chamber containing beverage having gas in solution therewith and forming a primary headspace comprising gas at a pressure greater than atmospheric; a secondary chamber having a volume less than said primary chamber and which communicates with the beverage in said primary chamber through a restricted orifice, said secondary chamber containing beverage derived from the primary chamber and having a secondary headspace therein comprising gas at a pressure greater than atmospheric so that the pressure within the primary and secondary chambers are substantially at equilibrium, and wherein said package is openable, to open the primary headspace to atmospheric pressure and the secondary chamber is arranged so that on said opening the pressure differential caused by the decrease in pressure at the primary headspace causes at least one of the beverage and gas in the secondary chamber to be ejected by way of the restricted orifice into the beverage of the primary chamber and said ejection causes gas in the solution to be evolved and form, or assist in the formation of, a head of froth on the beverage.

2. A package as claimed in claim 1 in which the container has a normal upstanding condition with an openable top and said secondary chamber has an upwardly extending side wall or a bottom wall within which said restricted orifice is located.

3. A package as claimed in either claim 1 or claim 2 in which with the pressures within the primary and secondary chambers substantially at equilibrium the restricted orifice is located below the depth of the beverage within the secondary chamber.

4. A package as claimed in any one of the preceding claims wherein the secondary chamber comprises a hollow and discrete insert within the container.

5. A package as claimed in claim 4 in which the insert floats or is suspended in the beverage in the primary chamber and means is provided for locating

the restricted orifice below the surface of the beverage in the primary chamber.

6. A package as claimed in claim 5 in which the insert is weighted or loaded to locate the restricted orifice below the surface of the beverage in the primary chamber.

7. A package as claimed in claim 4 wherein means is provided for retaining the insert at a predetermined position within the container.

8. A package as claimed in claim 7 wherein the container has a normal upstanding condition with an openable top and said insert is located at or towards the bottom of said container.

9. A package as claimed in either claim 7 or claim 8 wherein the insert comprises a hollow pod or envelope having means thereon for retaining it in position within the container.

10. A package as claimed in claim 9 wherein the retaining means comprise flexible tab means which engage a side wall of the container to retain the insert.

11. A package as claimed in any one of claims 4 to 10 wherein the insert comprises a hollow moulding.

12. A package as claimed in claim 11 when appendant to claim 10 in which the container has a side wall and the moulding is substantially cylindrical with radially extending tabs engaging the wall of the container.

13. A package as claimed in any one of claims 4 to 12 in which the container has a base on which the insert is located and said restricted orifice is located in an upwardly extending side wall of the insert spaced from said base.

14. A package as claimed in any one of the preceding claims in which the beverage has in solution therewith at least one of carbon dioxide gas and inert gas (which latter term includes nitrogen).

15. A package as claimed in claim 14 in which the beverage is saturated or supersaturated with said gas or gases.

16. A package as claimed in any one of the preceding claims in which the container is in the form of a can, bottle or carton.

17. A package as claimed in any one of the preceding claims in which the restricted orifice comprises a circular aperture having a diameter in the range of 0.02 to 0.25 centimetres.

18. A package as claimed in any one of the preceding claims and comprising a fermented beverage having in solution therewith carbon dioxide in the range 0.8 to 1.8 vols/vol (1.46 to 3.29 grams/litre) and nitrogen in the range 1.5% to 3.5% vols/vol.

19. A beverage package substantially as herein described with reference to the accompanying illustrative drawings.

20. A method of packaging a beverage having gas in solution therewith which comprises providing a container with a primary chamber and a secondary chamber of which the volume of the secondary chamber is less than that of the primary chamber and with a restricted orifice through which the secondary chamber communicates with the primary chamber, and charging and sealing the primary chamber with the beverage to contain the gas in solution and to form a primary headspace in the primary chamber,

and charging the secondary chamber with beverage derived from the primary chamber by way of said restricted orifice to form a secondary headspace in the secondary chamber whereby the pressures in both  
 5 the primary and secondary chambers are at equilibrium and gaseous pressures in both the primary and secondary headspaces are at a pressure greater than atmospheric so that, when the container is  
 10 broached to open the primary headspace to atmospheric pressure, the pressure differential caused by the decrease in pressure at the primary headspace causes at least one of the beverage and gas in the secondary chamber to be ejected into the beverage of the primary chamber by way of said restricted ori-  
 15 fice and the said ejection causes gas to be evolved from solution in the beverage in the primary chamber to form, or assist in the formation of, a head of froth on the beverage.

21. A method as claimed in claim 20 which com-  
 20 prises subjecting the sealed container to a heating and cooling cycle whereby gas within the secondary chamber is caused to expand and eject by way of the restricted orifice into the primary chamber and sub-  
 25 sequently to contract and create a low pressure effect in the secondary chamber relative to the primary chamber to draw beverage from the primary chamber into the secondary chamber by way of said restricted orifice.

22. A method as claimed in claim 21 in which the  
 30 heating and cooling cycle comprises pasteurisation of the beverage.

23. A method as claimed in any one of claims 20 to 22 in which the container has an upstanding condition with an openable top and which comprises  
 35 locating the restricted orifice within an upwardly extending side wall or bottom wall of the secondary chamber.

24. A method as claimed in any one of claims 20 to 23 which comprises charging the secondary  
 40 chamber with beverage from the primary chamber to the extent that the restricted orifice is located below the depth of beverage in the secondary chamber.

25. A method as claimed in any one of claims 20 to 23 which comprises forming the secondary  
 45 chamber by a discrete hollow insert located within the primary chamber of the container.

26. A method as claimed in claim 25 in which the  
 50 hollow insert is to float or be suspended in the beverage in the primary chamber and which comprises loading or weighting the insert to locate the restricted orifice below the surface of the beverage in the primary chamber.

27. A method as claimed in claim 25 which com-  
 55 prises retaining the insert at a predetermined position within the container.

28. A method as claimed in any one of claims 25 to 27 which comprises forming the hollow insert  
 60 having the restricted orifice in a wall thereof and locating the insert within the primary chamber prior to the charging and sealing of the primary chamber.

29. A method as claimed in any one of claims 25 to 28 which comprises forming the hollow insert by  
 65 blow moulding.

30. A method as claimed in claim 29 which com-

prises blow moulding the hollow insert with gas for  
 dissolution in the beverage so that said gas is sealed  
 within the secondary chamber, and forming said re-  
 stricted orifice in the wall of the insert immediately  
 70 prior to locating the insert in the primary chamber.

31. A method as claimed in claim 30 which com-  
 75 prises sealing said gas in the secondary chamber at atmospheric pressure or at a pressure slightly greater than atmospheric.

32. A method as claimed in any one of claims 25 to 31 which comprises forming the restricted orifice  
 80 in the hollow insert by laser boring, drilling or punching.

33. A method as claimed in any one of claims 25 to 32 in which, prior to it being sealed, the container  
 85 has an upstanding condition with an open top through which the primary chamber is charged with beverage and which comprises locating the insert through said open top to provide the secondary chamber within the container.

34. A method as claimed in claim 33 when appen-  
 90 dant to claim 27 which comprises press fitting the insert within the container so that during its location the insert engages with a side wall of the container to be retained in position.

35. A method as claimed in any one of claims 20 to 34 which comprises, prior to sealing the primary  
 95 chamber, purging the primary head space to exclude air.

36. A method as claimed in any one of claims 20 to 35 in which the gas comprises at least one of  
 100 carbon dioxide gas and inert gas (which latter term includes nitrogen).

37. A method as claimed in claim 36 in which the  
 105 beverage is fermented and has in solution carbon dioxide in the range 0.8 to 1.8 vols/vol (1.46 to 3.29 grams/litre) and nitrogen in the range 1.5% to 3.5% vols/vol.

38. A method of packaging a beverage as  
 110 claimed in claim 20 and substantially as herein described.

39. A beverage when packaged by the method as  
 claimed in any one of claims 20 to 38.

## Chapter 12

# REQUIREMENTS FOR PATENTABILITY

### INTRODUCTION

The long title to the Patents Act 1977 includes the aim of giving effect to certain international conventions on patents. The influence of the European Patent Convention ('EPC'), signed in Munich in 1973, is evident in the basic requirement for patentability. Article 52(1) EPC states:

European patents shall be granted for any new inventions, in all fields of technology, which are susceptible of industrial application, which are new and which involve an inventive step.<sup>1</sup>

The Patents Act 1977 s 1(1) requires the following conditions to be satisfied for a patent to be granted for an invention:

- (a) the invention is new;
- (b) it involves an inventive step;
- (c) it is capable of industrial application; and
- (d) the grant of a patent for it is not excluded by subsections (2) and (3) below.<sup>2</sup>

The similarities are even more pronounced when the exceptions in s 1(2) and (3) are compared to the equivalent provisions in the EPC. Given the influence of the EPC on UK patent law, where appropriate, references will be made to the Convention and to judgments of the Boards of Appeal of the European Patent Office ('EPO') in Munich. The judgments are of persuasive authority and will normally be followed by UK judges.<sup>3</sup> Congruity in the international development of patent law is seen as being of great importance. Indeed, the Patents Act 1977 s 130(7) states that a number of important provisions of the Act are declared to have, as nearly as practicable, the same effect in the UK as the corresponding provisions of the EPC, the Community Patent Convention ('CPC') and the Patent Cooperation Treaty ('PCT').<sup>4</sup> In a case prior to the 1977 Act, Lord Parker CJ said, in terms of Australian and New Zealand decisions:

Finally one cannot shut from one's mind the desirability of having a homogeneous development of the law in all countries which have adopted our system of patent legislation. That desirability must result in a tendency of our Court to follow those decisions if it is possible to do so.<sup>5</sup>

In the light of the UK's membership of the EPC, the same now holds true in respect of decisions of the EPO. The same applies as regards the PCT and, if it ever sees the light of day, decisions relating to the CPC. The desirability of other provisions of the Patents Act 1977, in addition to those expressly mentioned in s 130(7), also being construed in line with the EPC and the PCT where they may properly be so construed was

<sup>1</sup> The reference to 'all fields of technology' was inserted into the 13th edition of the Convention, 1 July 2007.

<sup>2</sup> As a result of the Patent Regulations 2000, SI 2000/2037, which came into force on 28 July 2000, s 1(3) of the Patents Act 1977 was modified. Part of the previous exception is restated in modified form in new s 1(3) (prohibiting patenting inventions, the commercial exploitation of which would be contrary to public policy or morality) whilst old s 1(3)(b) preventing the patenting of animal or plant varieties has been replaced by substantially modified provisions in new Sch A2 to the Act. These changes and other more recent changes are discussed later in this chapter.

<sup>3</sup> And sometimes distinguished!

<sup>4</sup> Those provisions deal with, *inter alia*, patentability, infringement, burdens of proof and extent of invention. Other provisions should, if possible and appropriate, also be construed so as to conform to the European Patent Convention.

<sup>5</sup> *Swift's Application* [1962] RPC 37. In *Pharmaceutical Management Agency Ltd v The Commissioner of Patents* [1999] RPC 752, the High Court of New Zealand followed the European approach to Swiss-type claims (see Chapter 11, p 393), commenting on the desirability of following patent law in other jurisdictions providing it was not inconsistent with New Zealand patent law.

6 [2002] RPC 851 at para 47 per Neuberger J. In *Unilin Beheer NV v Berry Floor NV* [2005] FSR 56, Jacob LJ said where a provision in the Patents Act 1977 was to be interpreted to mean the same as in the EPC, it was best to work from the Convention itself. The manner in which these provisions had been set out in the Act had been by way of an unhelpful rewrite rather than a copy-out.

7 See Laddie J in *Woolard's Application* [2002] RPC 767.

8 [2007] RPC 117.

highlighted by Neuberger J in *Kirin-Amgen Inc's Patent*.<sup>6</sup> The importance of the decisions of the Boards of Appeal at the EPO is now well established in assisting judges in domestic courts interpreting national patent laws. However, it must be noted that there is no doctrine of *stare decisis* at the EPO and a submission by counsel that a statement made in a Board of Appeal is *obiter* does not necessarily carry the same weight as it would do in relation to an earlier English case.<sup>7</sup> Indeed, however persuasive a decision of the Boards of Appeal at the EPO, it can never be binding on an English court which may be bound by a previous decision of an English court which conflicts with that decision. In *Aerotel Ltd v Telco Holdings Ltd and Macrossan's Patent Application*<sup>8</sup> the Court of Appeal was bound by previous decisions of that court and was unable to follow conflicting decisions of the EPO Boards of Appeal, leading to an unfortunate disparity between case law in England and at the EPO. These developments are discussed later in this chapter in the section on computer programs.

## SUFFICIENCY

Before looking at the basic requirements for the grant of a patent, an application will be refused if the specification does not disclose the invention in a manner which is clear enough and complete enough for the invention to be performed by a person skilled in the art. This is a requirement of s 14(3) and failure to comply means that the invention is insufficiently described. This is to prevent applicants holding back some vital information needed to put the invention into effect, as alluded to in the previous chapter. Insufficiency is also a ground for invalidity of a patent.

Determining sufficiency requires a two-step approach.<sup>9</sup> First, the invention must be identified, along with what it is claimed that the skilled person is enabled to do. Second, the specification must be examined to see whether it does enable the skilled person to carry it out. Where a principle of general application is disclosed elements of a claim may be stated in general terms and this may be sufficiently enabled if it can be expected that the invention will work with anything that falls within that general principle. The example given by Lord Hoffmann in *Kirin-Amgen Inc v Hoechst Marion Roussel Ltd*<sup>10</sup> was a reference to a requirement of 'connecting means'. This would be enabled (and not lacking for insufficiency) '... if the invention can reasonably be expected to work with any means of connection'. The applicant does not have to show that he has experimented with all possible means of connection. Where a claim is broad enough to cover two methods, if the skilled person would quickly realise that one would work and the other would not, the disclosure would still meet the requirement of sufficiency. In *Kirin-Amgen*, it was held that the specification did not tell the skilled person whether any given urinary erythropoietin would bring his recombinant erythropoietin within the claim – all he could do was guess and, if the specification did not tell him, it was insufficient.

A patent specification must not merely disclose a novel product or process but it must be an enabling disclosure and should support that which the teaching in the specification promises to deliver, as indicated by Lord Hoffmann *supra*. Where a claim is to a class of compounds, it must enable the invention to be performed to the full extent of the monopoly which is claimed<sup>11</sup> and, if the invention is to a selection of certain compounds claimed to secure some advantage or avoid some disadvantage, it must contain sufficient information to make the compounds as well as describing the advantage or how the disadvantage is to be avoided.<sup>12</sup>

The amount of work performed by a skilled person who attempts to carry out the invention is not irrelevant and, where it is considerable, this might suggest that the claim in question is insufficient. In *Halliburton Energy Services Inc v Smith International*

9 Per Lord Hoffmann in *Kirin-Amgen Inc v Hoechst Marion Roussel Ltd* [2005] RPC 169 at para 103.

10 [2005] RPC 169 at paras 112–113.

11 *Biogen Inc v Medeva plc* [1997] RPC 1 per Lord Hoffmann at page 48, overruling some previous decisions in the Patents Court where it was held that, where a range of compounds is claimed, the invention was sufficiently disclosed if the skilled person could make one embodiment.

12 *Pharmacia Corp v Merck & Co Inc* [2002] RPC 41 per Aldous LJ at paras 50 and 56.

(*North Sea Ltd*)<sup>13</sup> the alleged invention was for a method of computer simulation for the design of drill bits. Working from the specification, an extraordinary amount of work would be required to put the invention into effect. Furthermore, the basic equation underlying the proposed computer model was shown to be wrong. If it is not possible for a skilled person to determine a vital parameter, such as the quantity of a compound to be used in making the invention, then the disclosure cannot be described as an enabling disclosure.<sup>14</sup>

Sometimes, where a range of compounds is claimed or an ambiguous word is used in a claim, there may be what is termed a ‘puzzle at the edge of the claim’;<sup>15</sup> that is, where there may be examples within the claim where the invention does not do what it promises to deliver or where the limits of the claim are imprecise. For example, in *Unilin Beheer NV v Berry Floor NV*,<sup>16</sup> in attacking one of the claims, it was argued that if the claim in question, relating to a snap-together flooring system, typically made of MDF, provided for a little bit of play between the floor units, this made it impossible to know how much play took one outside the claim. Jacob LJ rejected this, saying that, whatever the language, it is almost always possible to set a puzzle at the edge of the claim. In *British Thomson-Houston Company Ltd v Corona Lamp Works Ltd*,<sup>17</sup> the claim was to a tungsten filament lamp which required it to be of ‘large diameter’. The House of Lords rejected an argument that the claim was ambiguous to such an extent that it was impossible for the skilled person to decide when the claim had been infringed. Although it might have been possible to carry out experiments using different diameters of filament so that, in some cases at the outer edges, the advantage taught by the specification evaporated, Lord Shaw said (at para 92):

... in applying an invention within its successful ambit it is expected that those operating the manufacture will be honestly looking, not to failure, but for success in the range for which the principle is applied.

Therefore, the question of sufficiency has to be seen through the eyes of the skilled person who is seeking success rather than failure and, although lawyers can think of puzzles at the edge of a claim, skilled persons are interested in practicalities, not puzzles.<sup>18</sup> To this extent, the requirement that an invention must be capable of being performed across the entire range of what is claimed is mitigated. Where there is uncertainty at the ‘edge of the claim’, it might be unrealistic and disproportionate to hold a claim invalid for insufficiency but if an alleged infringement fell within the fuzzy edge, the need for certainty for third parties would require a conclusion of non-infringement.<sup>19</sup>

Whether one product in a class or all products in a class can be claimed depends on how the applicant for a patent is able to describe that product or products. Lord Hoffmann summed this up in *Biogen Inc v Medeva plc*<sup>20</sup> where he said (at p 49):

... if the patentee has hit upon a new product which has a beneficial effect but cannot demonstrate that there is a common principle by which that effect will be shared by other products of the same class, he will be entitled to a patent for that product and not for the class, even though some may subsequently turn out to have the same beneficial effect ... on the other hand, if he has disclosed a beneficial property which is common to a class, he will be entitled to a patent for all products of that class (assuming them to be new) even though he has not himself made more than one or two of them.

The manufacture of a known product by a new method of manufacture does not make the product so obtained new, although a patent may be obtained for the new manufacturing process. The fact that a product identical to an existing product made by a new process is not novel is not just a rule of practice, it is a proposition of law.<sup>21</sup> Where a new product cannot be satisfactorily defined by reference to its composition, it may be adequately defined by describing its process of manufacture. However, where a
