In *Generics (UK) Ltd v H Lundbeck A/S*,<sup>22</sup> Lundbeck had a patent for the antidepressant drug citalopram. The patent expired some years ago. Citalopram is an organic compound of a type known as a racemate, being a combination of two types of molecules in equal proportions. These molecules have exactly the same chemical formula and structure but are mirror images of each other. These types of molecules are known as enantiomers and are distinguished from each other by different conventions, one of which is to prefix them with a (+) or (–). It has long since been known that the two enantiomers can have different properties and one may have a therapeutic effect whilst the other has some undesirable side-effect<sup>23</sup> or may inhibit the therapeutic effect of the first enantiomer, as was found to be the case with citalopram. Almost the whole of the therapeutic effect of citalopram resulted from the (+)-enantiomer and the (–)-enantiomer inhibited this effect. Therefore, a drug made from the (+)-enantiomer alone was more effective.

23 Thalidomide is an notorious example.

Having found a process by which the (+)-enantiomer could be isolated and established that it was much more effective than citalopram, Lundbeck obtained a patent in respect of it. The patent claimed the (+)-enantiomer, known as escitalopram, a compound comprising it as an active ingredient and a method for making it. Generics applied for revocation of the patent on a number of grounds. The only ground relied on in the House of Lords was that of insufficiency. Section 72(1)(c) of the Patents Act 1977 states that a patent may be revoked if:

the specification of the patent does not disclose the invention clearly enough and completely enough for it to be performed by a person skilled in the art.

This mirrors s 14(3) which requires that the specification must disclose the invention in a manner which is clear enough and complete enough for the invention to be performed by a person skilled in the art.<sup>24</sup> (It is worth considering the EPC provisions on sufficiency under Articles 83 and 84.) At first instance<sup>25</sup>, Kitchen J said that the inventive step was finding how to separate the enantiomers and the technical contribution was not to find a new product but to find a way of making the product. He thought that obtaining the purified enantiomers was an obviously desirable goal. As the patent specification only described one way of making the product, if the patent effectively covered all ways of making it, that would give a monopoly disproportionate to the technical contribution. Relying on *Biogen Inc v Medeva plc*, he said (at para 267):

24 The requirement in s 14(5)(c) that the claim or claims must be supported by the description is not mentioned in s 72 on revocation which sets exhaustively the grounds for revocation. However, it seems to have been accepted in the House of Lords that the requirements of s 14(3) include those of s 14(5)(c) – see *Asahi Kasei Kogyo KK's Application* [1991] RPC 485 and *Biogen Inc v Medeva plc* [1997] RPC 1.

25 *Generics (UK) Ltd v H Lundbeck A/S* [2007] RPC 792.

The first person to find a way of achieving an obviously desirable goal is not permitted to monopolise every other way of doing so. Claims 1 and 3 are too broad. They extend beyond any technical contribution made by Lundbeck.

26 *H Lundbeck A/S v Generics (UK) Ltd* [2008] RPC 19.

The Court of Appeal, with Lord Hoffmann sitting in that court, reversed the finding that the product claims should be revoked as lacking sufficiency.<sup>26</sup>

In the House of Lords, Lord Neuberger decided to consider whether Kitchen J's conclusion was justified on the basis of any principle or authority apart from *Biogen Inc v Medeva* and then to consider if it was justified on the basis of *Biogen*. Lord Neuberger said that he could not discern any statutory provision (including in the EPC) which supported a proposition that, once it is established that a product is novel and non-obvious, and the specification sufficiently explains to a person skilled in the art how to make it, the claim is nevertheless bad because there may be other ways of making it which are not taught by the patent. As Lord Oliver explained in *Asahi* a claim would not be supported by the description for the purposes of s 14(5)(c) unless it contained

sufficient material to enable the specification to constitute the enabling disclosure as required by s 14(3). In the present case, the description clearly set out a method of making the (+)-enantiomer and clearly satisfied s 14(3).

Although ‘technical contribution’ is not a term from the statute, the monopoly should be assessed by the technical contribution taught by the patent. In this case, the technical contribution was to make available for the first time a product which had not previously been made available. Thus, Lundbeck was entitled to claim the product as such. This is in line with the thinking at the EPO and, in T595/90 *Kawasaki/grain-orientated silicon sheet*<sup>27</sup> (at 43), the Technical Board of Appeal said:

27 [1995] EPOR 36.

... it is the view of the Board that a product which can be envisaged as such with all characteristics determining its identity together with its properties in use, that is, an otherwise obvious entity, may become nevertheless non-obvious and claimable as such, if there is no known way or applicable (analogy) method in the art to make it and the claimed methods for its preparation are therefore the first to achieve this in an inventive manner.

Apart from *Biogen*, Lord Neuberger accepted that, by finding one way of making a new product, a person can obtain a monopoly for that product. Furthermore, he said (at para 90):

Further, where (as here) the product is a known *desideratum*, it can be said (as Lord Walker pointed out) that the invention is all the more creditable, as it is likely that there has been more competition than where the product has not been thought of. The role of fortuity in patent law cannot be doubted: it is inevitable, as in almost any area of life. Luck as well as skill often determines, for instance, who is first to file, whether a better product or process is soon discovered, or whether an invention turns out to be valuable. Further, while the law must be principled, it must also be clear and consistent.

At first instance, Kitchen J based his finding of insufficiency largely on Lord Hoffmann’s judgment in *Biogen*. However, *Biogen* was distinguishable from the present case as it concerned a product-by-process claim but related to a wide class of products. In the Court of Appeal, Jacob LJ thought that Kitchen J had extracted too broad a principle from *Biogen*. Counsel for Generics based his challenge on sufficiency mainly on a number of passages from Lord Hoffmann’s judgment in *Biogen*. Lord Neuberger dealt with three of them (he said his observations applied equally to the others). They were as follows:

- 1 If the claims include a number of discrete methods or products, the patentee must enable the invention to be performed in respect of each of them. However, in the present case, the claim is to a single product and the product is clearly enabled by the teaching in the patent.
- 2 The issue is not whether the claimed invention could deliver the goods, but whether the claims cover other ways in which they might be delivered: ways which owe nothing to the teaching of the patent or any principle which it disclosed. But in *Biogen*, the patent disclosed one way in which the products might be delivered but the claim covered other ways in which they might be delivered. The claim was very different to the claim in the present case which was a claim to a ‘simple’ product.
- 3 The extent of the monopoly should not exceed the technical contribution to the art made by the invention as described in the specification. In the context of a simple product claim, especially where the claim is to a single chemical product, the technical contribution is the product itself (at least in the absence of special factors). Lord Neuberger went on to say that ‘... technical contribution can often be equated with non-obvious novelty – what is new to the art and not obvious is really another way of identifying the technical contribution (at para 95).

It may be possible to overcome objections based on insufficiency by amendment but, assuming the specification does adequately disclose the invention, the basic requirements set out in ss 1 to 4 must then be satisfied.

## BASIC REQUIREMENTS

The basic statement of the requirements for patentability – that is novelty, inventive step and industrial application – followed by the exclusions from patentability, provides a good framework in which to explore the legal consequences and meaning of these words and phrases. The first point which must be made, however, is that the Patents Act 1977 contains no definition of what an invention is. This is perhaps because those responsible for drafting the Act felt either that the task was too daunting, or that a definition might be later seen as sterile and a fetter on the development of the law in tune with technological development. Another explanation is that they did not really know with any certainty. Many other common words from the world of technology cause similar problems: for example, ‘computer’ or ‘computer program’. A dictionary definition of ‘invention’ might talk in terms of an imaginative design, or product or innovation or something produced for the first time. Schmookler gives a more rigorous definition and subdivides inventions into process inventions and product inventions.<sup>28</sup> The former are new ways of producing something old and the latter are old ways of producing something new. Every invention can thus be considered to be a ‘new combination of pre-existing knowledge which satisfies some want’.<sup>29</sup> On the other hand, innovation can be said to be the first use of an invention.<sup>30</sup> In practice, the lack of definition causes few problems because the basic requirements of novelty, inventive step and industrial application, as defined in the statute and as interpreted by the courts, in most cases produce an effective and practical explanation of ‘invention’ for the purposes of patent law. Nevertheless, there may be a number of occasions when the meaning of ‘invention’ may be important, for example, in deciding who is the inventor and, *prima facie*, entitled to a patent.

The meaning of the word ‘invention’ in a particular patent may be determined from interpreting the claims. However, in the case of an application for a patent, there may be no claims submitted initially and the invention may be determined from an objective consideration of the inventive concept as understood from a reading of the application as a whole. Even where claims are submitted with the application as first filed, they may be over-broad and misleading.<sup>31</sup> It is clear that ‘invention’ is a term of art in patent law and is used in a special way which may vary according to the particular context. For example, it may not be what the applicant claims it to be (which may turn out not to be patentable at all) or it may be excluded from the grant of a patent, however new and non-obvious it may be, such as a method of doing business, or it may be an idea that cannot be brought to fruition in practical terms, such as a perpetual motion machine. It may be that the context requires consideration of the person or persons who devised the invention or whether it involves an inventive step. It is tempting to describe an invention as a non-obvious advance in technology but this replaces one imprecise test with one even more imprecise.<sup>32</sup>

The word ‘invention’ may be equated, to some extent, with the requirement for industrial application. In *Case T854/90 IBM/Card Reader*<sup>33</sup> the applicant had claimed a method of allowing any machine-readable bank card or credit card to be used by any card-reading machine to carry out any transactions. The Technical Board of Appeal of the EPO held that the method was not patentable as the use of the word ‘inventions’ in Article 52 of the EPC required that the claimed subject matter had a technical character and, in principle, was industrially applicable. The card was, in effect, equivalent to

<sup>28</sup> This is, indeed, the approach taken by the Patents Act 1977. The distinction is quite clearly seen in s 60, on infringement. Unless otherwise stated, in this chapter, statutory references are to the Patents Act 1977.

<sup>30</sup> Dutton, H.I. (1984) *The Patent System and Inventive Activity During the Industrial Revolution, 1750–1852*, Manchester University Press, p 9.

<sup>31</sup> *Markem Corporation v Zipher Ltd (No 1)* [2004] RPC 203 at para 64 per Judge Fysh QC, sitting as a judge of the High Court.

<sup>32</sup> See, for example, Peter Prescott QC’s discussion of the problem in *CFPH LLC’s Application* [2006] RPC 259.

<sup>33</sup> [1994] EPOR 89.

an application form, and the method involved (the user presenting the card to the machine) was part of a business operation as such. The Board further confirmed that the presence of technical means to carry out a business activity does not mean that the business activity has a technical character and therefore is an invention.<sup>34</sup>

The scope and nature of the invention as claimed must be determined from the claims as interpreted by the description. This is made clear by s 125(1) and the Protocol on Article 69 of the EPC (which concerns the interpretation of patent claims).<sup>35</sup>

Section 1 of the 1977 Act requires that there must be an invention, and the exclusions to patentability in s 1(2) and (3) of the Act do not limit things that are not inventions to the particular exclusions specified.<sup>36</sup> In *Genentech Inc's Patent*<sup>37</sup> Mustill LJ said (at 262):

... the question whether the claim discloses anything which can be described as an invention must be answered in the affirmative before compliance with paragraphs (a)–(d) becomes relevant [s 1(1)(a)–(d)].

He went on to confirm that there will often be a substantial overlap between an objection on the basis that the thing claimed is not an invention and other objections, being lack of novelty, lack of inventive step, being incapable of industrial application or excluded by s 1(2) and (3).<sup>38</sup>

It is possible to apply for a single patent in relation to more than one invention if they are so linked as to form a single inventive concept.<sup>39</sup> This might be particularly relevant where the inventions concern a process and the product which results from putting the process into effect. In practice, this would normally cause little difficulty. However, if a claim is to a class of products, the claim might be invalid if some of the products cannot be made. In *May & Baker Ltd v Boots Pure Drug Co Ltd*<sup>40</sup> a claim to a class of 'sulpha-thiazole' products was amended to cover two specific products only as it was unlikely that all the class would have had the therapeutic properties claimed.

In *Biogen Inc v Medeva plc*<sup>41</sup> patents were granted in the EPO (designating the UK and other countries) concerning a vaccine for hepatitis B which had been genetically engineered. In an action for infringement, the defendant counterclaimed successfully for revocation on a number of grounds. The problem facing an applicant for a patent in respect of a range of products rather than a process was well stated by Hobhouse LJ (at 94):

... [the claimants] could not make any claim to a process ... if they had invented a process, they could also have claimed a monopoly over anything produced by that process. But they could not do this and had simply to claim the invention of products independently of the process by which they were produced. They wished to make the claim as wide as possible.<sup>42</sup>

However, the difficulty for the applicant is to take care not to claim more products than would actually display the claimed properties. It is no use claiming a vast range of products hoping to be able to show, later, that some or all of them conform. The applicant has a choice and if he wishes to claim a wide range of products of a class he must make a sufficiently wide disclosure. If he cannot make the appropriate disclosure, he is trying to claim more than he is entitled to.

## NOVELTY

The invention must be new. It must not already have been available to the public. The question of novelty (whether the invention is new) has a special meaning assigned to it under the Patents Act 1977 s 2(1), which states that an invention is new if it 'does not form part of the state of the art'. Section 2(2) continues and describes the 'state of the

<sup>34</sup> Furthermore, the claimed invention lacked inventive step.

<sup>35</sup> Per Hobhouse LJ in *Biogen Inc v Medeva plc* [1995] RPC 25 at 87, disapproving the suggestion of Aldous J that the invention was to be determined by the wording of the claim independently of the description in *Chiron Corporation v Organon Teknika Ltd (No 3)* [1994] FSR 202.

<sup>36</sup> See *Lux Traffic Controls Ltd v Pike Signals Ltd* [1993] RPC 107, where it was held, *inter alia*, that the Patents Act 1977 s 1(2) comprised a non-exhaustive list of non-patentable things and a method of controlling traffic as such was not patentable.

<sup>37</sup> [1989] RPC 147.

<sup>38</sup> Old s 1(3) excluded methods of treatment or diagnosis now restated with modification in s 4A. New s 1(3) excludes inventions, the commercial exploitation of which would be contrary to public policy or morality.

<sup>39</sup> Patents Act 1977 s 14(5).

<sup>40</sup> (1950) 67 RPC 23.

<sup>41</sup> [1995] RPC 25.

<sup>42</sup> For a criticism of this case and its apparent contradiction of the decision of the European Patent Office which found the patent valid, see Reid, B.C. 'Biogen in the EPO: the advantage of scientific understanding' [1995] 2 EIPR 98. The House of Lords confirmed the Court of Appeal decision that the patent was invalid: [1997] RPC 1, discussed below, see pp 430–431.

43 Whether a product, a process, information about either, or anything else (in other words, anything!).

44 The phrase 'made available to the public' was used in the definition of 'published' in the Patents Act 1949 s 101 and should be given the same meaning: *PLG Research Ltd v Ardon International Ltd* [1993] FSR 197.

45 Per Floyd J in *MMI Research Ltd v Cellxion Ltd* [2009] EWHC 418 (Pat) citing with approval Case T1022/99 *Van Wonerghem/Dispositif de transmission*, 10 April 2001 before the Board of Appeal at the EPO.

46 [2009] EWHC 1221 (Pat).

47 *General Tire & Rubber Co v Firestone Tyre & Rubber Co Ltd* [1972] RPC 457 per Sachs LJ. Section 130(1) defines 'published' as being made available to the public (in the UK or elsewhere) and a document shall be taken to be published if it can be inspected as of right at any place in the UK by members of the public, whether on payment of a fee or not.

48 *Inhale Therapeutic Systems Inc v Quadrant Healthcare plc* [2002] RPC 419 per Laddie J at para 43.

49 [2006] RPC 323.

50 This was an example of the operation of s 2(3), anticipation by an earlier patent application which had not been published as at the priority date of the patent in suit.

51 Lord Westbury LC in *Hill v Evans* (1862) 31 LJ (NS) 457 and Sachs LJ in *General Tire & Rubber Co v Firestone Tyre & Rubber Co Ltd* [1972] RPC 457, in particular where he spoke of planting a flag at the precise destination before the patentee got there (at 486).

art' as comprising all matter<sup>43</sup> made available to the public before the priority date of the invention whether by written or oral description, by use or in any other way.<sup>44</sup> At least one member of the public should be free in law and equity to use the invention. Disclosure to a person or persons in confidence does not invalidate a patent but disclosure to a single person in the absence of an express or implied obligation of confidence will destroy novelty even if that person chooses autonomously to keep it secret. *De facto* secrecy is not enough to preserve novelty.<sup>45</sup> In an unusual case, *Folding Attic Stairs Ltd v The Loft Stairs Company Ltd*,<sup>46</sup> a photographer and government Minister were invited into a factory to see a prototype of a folding loft stair. They were not under any obligation of confidence. Peter Prescott QC, sitting as a deputy judge of the High Court, held that there was no irrebuttable presumption of law that information that is capable of being perceived by persons who are on private premises is in fact perceived by them, if the circumstances are such as to make it unlikely that those persons were interested in the subject matter. This must be contrasted with a situation where the prototype was left in a public place. This would be novelty-destroying without actual evidence that an interested person actually examined it to see how it worked.

The state of the art includes matter contained in other patent applications having an earlier priority date. Therefore, novelty is really a question of whether the invention has been 'anticipated': for example, by a previous patent, or by publication or use. The anticipating patent, or publication could have occurred anywhere in the world as s 2(2) refers to public availability in 'the UK or elsewhere'. Whether publication in a limited circulation journal published in a remote part of some far off country would count is a moot point. Some sense of realism must be preserved and, under the 1949 Act, anticipatory matter did not include that which would not have been discovered during the course of a diligent search.<sup>47</sup>

A claim in a patent may be anticipated in two ways by the prior art: either where the prior art describes something that is within the scope of the claim such that it enables the invention as claimed to be worked, or where the inevitable result of carrying out what is described in the prior art falls within the claim.<sup>48</sup> An example of the former is where the prior art describes an industrial process, which is at the heart of what is claimed, and an example of the latter is where carrying out that prior art process necessarily results in a product or technical effect which is now claimed.

Anticipation requires an 'enabling disclosure' such that the prior art enables a person skilled in the art to put the invention into effect. However, disclosure and enablement are two separate concepts, both of which must be satisfied and each of which has its own separate rules, as confirmed by the House of Lords in *Synthon BV v SmithKline Beecham plc*.<sup>49</sup> Of course, in many cases, the two concepts merge, such as where the specification spells out what the invention is and how it may be put into effect. Problems occur in some fields of technology, particularly in relation to chemicals and pharmaceuticals. For example, the patent may claim an invention (disclosure) but inadequately describe how it is to be made or performed (a question of enablement). In *Synthon v SmithKline Beecham*, Lord Hoffmann said that it was important to distinguish between disclosure and enablement, something he claimed the Court of Appeal failed properly so to do, in reinstating the decision of Jacob J in the Patents Court where he held that the patent in suit ('Synthon') was invalid having been anticipated by an earlier application that had not been published until after the priority date.<sup>50</sup> Lord Hoffmann summarised two important cases on the subject of disclosure<sup>51</sup> by saying that the '... prior art must disclose subject-matter which, if performed, would necessarily result in an infringement of the patent'. It may be that the prior art expressly discloses the same invention so that there will be no question that the performance of the earlier invention would infringe but patent infringement does not require awareness of infringement. Lord Hoffmann referred to *Merrell Dow Pharmaceuticals Inc v H N*

*Norton & Co Ltd*<sup>52</sup> where taking terfenadine by hay-fever sufferers inevitably entailed the making of the acid metabolite, the subject matter of the patent in suit, in their livers even though the author of the terfenadine patent was unaware of the production of the acid metabolite. Lord Hoffmann also stressed that prior disclosure must be construed as it would have been understood by the skilled person at the date of the disclosure and not in the light of the subsequent patent.

On the question of enablement, this must be viewed from the perspective of the ordinary skilled person, not someone of exceptional skill and knowledge or, in the words of Jacob J at first instance, a world champion.<sup>53</sup> Lord Hoffmann said that, once the subject matter of the invention has been disclosed, the question of whether it was enabled is to be answered by assuming that the person skilled in the art is prepared to carry out trial and error experiments to get the invention to work. Whether experimentation is assumed is a question of enablement not disclosure.

In determining whether an invention is enabled, it is reasonable to read the specification from the perspective of addressee of the specification, that is, a person skilled in the art, who has common general knowledge which he may use to get the invention to work and even to recognise and rectify errors in the description of the invention. However, in applying this test, the skilled person does not make undue efforts in experimentation and certainly does not have inventive skills, nor does he have an awareness of the whole state of the art: *Case T206/83 ICI/Pyridine Herbicides*.<sup>54</sup>

If the prior disclosure enables the skilled person to perform the patented invention it does not matter if he does not know that he is working it. Lord Hoffmann again referred to *Merrell Dow v Norton* where the question of enablement ‘... turned on whether the disclosure enabled the skilled man to make terfenadine and feed it to hay-fever sufferers, not on whether it enabled him to make the acid metabolite’ (being the inevitable result of treating hay-fever sufferers with terfenadine).

In *Synthon BV v SmithKline Beecham*, Lord Hoffmann found that the earlier application disclosed the invention in Synthon. As regards enablement, he said that there was no reason for disturbing the decision of Jacob J at first instance where he said that, although the earlier application specified an unsuitable solvent, the skilled person would have tried other solvents and produced the paroxetine methanesulfate crystals (the subject matter of claim 1 of Synthon, on which the remaining claims were dependent) within a reasonable time. The Synthon patent was, therefore, invalid having been anticipated by the earlier application. Finally, Lord Hoffmann confirmed that the test for enablement in s 2(2) and (3) is the same as the test for sufficiency in s 72(1)(c).<sup>55</sup>

Where a prior art document claims a combination of features, say A+B+C, whether there is also disclosure of A or B or C independently depends on substance not a formula. So held Jacob LJ in *Unilin Beheer NV v Berry Floor NV*<sup>56</sup> where he said that much depended on what the features actually are. In some cases, the invention is the idea of putting those features together but in other cases they are independent. However, in that case the relevant issue was not novelty, rather whether the patent in suit could claim priority from an earlier patent, although the principle should be the same for determining whether an invention is novel over the prior art.

Oral disclosures will not anticipate a patent if they are in confidence, whether express or implied. In *Visx Inc v Nidek Co Ltd*,<sup>57</sup> the patents in suit related to laser apparatus used to alter the shape of the cornea to correct myopia, hyperopia and astigmatism. The defendant counterclaimed for revocation of the patents on the basis, *inter alia*, of a number of oral disclosures, including one alleged to have been made on a train journey. Neuberger J said that the burden of proof lies with the person alleging prior disclosure<sup>58</sup> but, in this case, the numerous alleged oral disclosures were either insufficient to anticipate the patents or the defendant had failed to show that they were not made in confidence.

52 [1996] RPC 76.

53 *Synthon BV v SmithKline Beecham plc* [2003] RPC 607 at para 57.

54 [1986] EPOR 232. The Technical Board of Appeal of the EPO also made it clear that, normally, patent specifications are not part of the common general knowledge for the purposes of anticipation.

55 Citing two decisions of the EPO, *Case T206/83 ICI/Pyridine Herbicides* [1986] EPOR 232 and *Case No T81/87 Collaborative/Preprorennin* [1990] EPOR 361 in which it was confirmed that the test in Article 54(2) and (3) was the same as that in Article 83 (the equivalent provisions in the EPC).

56 [2005] FSR 56 at para 61.

57 [1999] FSR 405.

58 However, as opposed to the legal burden, the evidential burden may shift according to the state of the evidence from time to time: *Dunlop Holding Ltd's Application* [1979] RPC 523 at 542 per Buckley LJ.

59 In *Uni-Continental Holdings Ltd v Eurobond Adhesives Ltd* [1999] FSR 263, the sale of two cartridges with nozzles for dispensing acrylic adhesives before the priority date was sufficient to invalidate the patent for the nozzle.

60 [1985] RPC 59.

61 [2007] RPC 65.

62 *Synthon BV v SmithKline Beecham plc* [2003] RPC 114 per Aldous LJ.

63 [2002] RPC 310.

64 [2002] RPC 767.

The act or series of acts that make the invention available to the public does not have to be on a particularly wide scale.<sup>59</sup> Using an invention in public in one locality only will suffice to anticipate a patent. In *Windsurfing International Inc v Tabur Marine (Great Britain) Ltd*,<sup>60</sup> the Court of Appeal held that a 12-year-old boy, who built a sailboard and used it in public for a few weekends at a caravan site at Hayling Island in Hampshire, had effectively anticipated a later patent for a sailboard which was declared invalid for want of novelty (and also because it lacked an inventive step).

Under s 2(3), the state of the art includes matter in other patent applications published on or after the priority date of the invention being tested against the state of the art, provided the priority dates of those other applications are earlier. Patent applications are published 18 months after their priority dates, unless withdrawn, and this provision simply includes in the state of the art all those unpublished applications that have an earlier priority date. Thus, it is possible for a patent application to be preempted by material that cannot, at the time of making the application, be discovered or inspected by the applicant. In *Ranbaxy UK Ltd v Warner-Lambert Co*,<sup>61</sup> carrying out the invention described in a s 2(3) prior unpublished patent application would clearly fall within a claim of the patent application in question and, consequently, that claim was invalid for lack of novelty. However, prior unpublished patent applications are not taken into account in determining whether there is an inventive step. The application of s 2(3) is the same as s 2(2) and it is not correct to restrict the enquiry under s 2(3) to the contents only of the prior application but consideration should extend to what is taught by it and it is permissible to take into account experiments made on the basis of it.<sup>62</sup>

An applicant for a patent may decide to withdraw his patent application before it is published. This would allow him to prevent the invention becoming part of the state of the art and would enable him to later make a fresh application for the same invention. He would of course lose the priority of the earlier application. There was some doubt as to the position where the application is withdrawn but it is still published, for example, because it is withdrawn too late to prevent publication. Section 16 of the Patents Act 1977 states that the application shall be published as soon as possible after the end of the prescribed period (18 months) unless it is withdrawn or refused before preparations for its publication have been completed by the Patent Office. There is, therefore, a point of no return beyond which an application will be published even though it has been withdrawn. The question in such cases is whether the published, though withdrawn, application is part of the state of the art in determining novelty of later applications.

In *Zbinden's Application*,<sup>63</sup> the first application was withdrawn on 12 December 1996 but published on 18 December 1996. The second application for the same invention was filed on 16 December 1996. The examiner decided that the second application lacked novelty because of the earlier published application. The Hearing Officer agreed that the effect of s 2(3) was that the earlier withdrawn application was part of the state of the art even though this appeared to be contrary to the effect of Article 54(3) of the EPC, the equivalent provision to s 2(3). However, soon after, in *Woolard's Application*,<sup>64</sup> Laddie J rejected this approach and said that s 2(3) had to be interpreted in a way consistent with Article 54(3) EPC as applied at the EPO and the prior publication had to relate to an application that was still in existence. The purpose underlying Article 54(3) was to prevent double-patenting: for example, where two persons (or even the same person) obtain two patents for the same invention in the same country. As s 2 is one of the provisions of the Patents Act 1977 framed to have the same effect, in so far as is practicable, with the equivalent provisions of the EPC, CPC and PCT, Laddie J in *Woolard* must be right and does not conflict with the goal of preventing double-patenting.

Inventors may wish to demonstrate their invention to others: for example, to secure investment or to show to potential licensees. If such demonstrations are held before the priority date the inventor runs a grave risk of jeopardising his application by compromising the novelty of his invention. The inventor must be very careful not to disclose details of the invention, but it may be safe to allow third parties to see a demonstration if this is held in private and the confidentiality of the event is stressed. In *Pall Corp v Commercial Hydraulics (Bedford) Ltd*,<sup>65</sup> the claimant sent samples of his claimed product (hydrophilic microporous membranes) to a potential customer for testing in comparison with other membranes. Other suppliers were present at the test which had been arranged. However, details of the nature and construction of the membrane were not disclosed and it was not possible to determine these details from a visual inspection of the membrane. After the patent had been granted, it was challenged on the basis that it had been made available to the public before the priority date. It was held, *inter alia*, that delivering samples in confidence to persons who knew that they were experimental and secret did not make the invention available to the public for the purposes of s 2(1) and did not, therefore, prejudice the novelty of the invention.<sup>66</sup>

It should be mentioned that, on the issue of novelty, cases under the Patents Act 1949 must be treated with caution as, under that Act, reasons for invalidity on the grounds of lack of novelty were somewhat different and prior secret use could invalidate a patent or be a reason for rejecting an application for a patent. In the 1949 Act a patent would be invalid if the invention was ‘used in the United Kingdom before the priority date of the claim’,<sup>67</sup> or if the invention ‘is not new having regard to what was known or used before the priority date of the claim, in the United Kingdom’.<sup>68</sup> In *Quantel Ltd v Spaceward Microsystems Ltd*,<sup>69</sup> Falconer J made the point (at 108):

[under the 1949 Act] there was no requirement that the prior dated use had to make the invention available to the public. Accordingly, cases of prior use decided under the 1949 Act *not* decided upon the criterion of whether the prior use made the patented invention available to the public, may no longer be good law. (original emphasis)

Under the 1977 Act, secret prior use, for example of a new industrial process by an employer whose employees are subject to a duty of confidence, cannot anticipate the patent because it is not made available to the public. However, this runs counter to the basic notion, underlying the Statute of Monopolies 1623, that monopolies ought to be limited in time.

There was a general lack of authority on the meaning of prior experimental use in the context of anticipation. Under the 1949 Act, even secret experimental use would constitute disclosure to the public unless it was reasonably necessary, by or with the consent of the proprietor, and took place within one year before the priority date.<sup>70</sup> There is no equivalent provision in the 1977 Act, and in *Prout v British Gas plc*<sup>71</sup> it was argued that a patent for an anti-vandal mounting bracket for a warning lamp was invalid because it had been used experimentally at a location on a public highway notorious for vandalism. However, Judge Ford held that the patent was valid nonetheless. There was some persuasive German authority that anticipatory use had to be more than mere trials in public and that the use of the finished invention was required. He also accepted that the repeal of the 1949 Act, particularly s 51(3) on trial use, revived the previous common law on the subject to the effect that experimental use to test the invention does not destroy the invention’s novelty.

Field trials of a traffic light control system were carried out before the relevant filing in *Lux Traffic Controls Ltd v Pike Signals Ltd*.<sup>72</sup> The defendant argued that the invention had been made available to the public because a prototype had been used in public and it did not matter whether anyone, in fact, observed the particular feature claimed by the patentee. Aldous J confirmed that anticipation of a patent required an enabling

<sup>65</sup> [1990] FSR 329.

<sup>72</sup> [1993] RPC 107.

disclosure such that the public were enabled to make or obtain the invention. He went on (at 133):

Further it is settled law that there is no need to prove that anybody actually saw the disclosure provided the relevant disclosure was in public. Thus an anticipating description in a book will invalidate a patent if the book is on the shelf of a library open to the public, whether or not anybody read the book and whether or not it was situated in a dark and dusty corner of the library.

In the present case a prototype controller was made available to a contractor and, had a skilled man examined it, he would have seen how it worked. Whether such a person did examine it was of no consequence. The fact remained that the contractor was free in law and equity to examine the controller. If the invention has been communicated to a single member of the public without inhibiting fetter, that is enough to make it available to the public.<sup>73</sup> In *Lux v Pike*, the relevant claim in the patent was held to be invalid on the ground of lack of novelty.<sup>74</sup>

On the issue of prior experimental use *Lux v Pike* is difficult to reconcile with *Prout v British Gas*, and although the latter was not mentioned by Aldous J in the former case, both judges referred to the lack of English authority. In *Lux v Pike*, Aldous J cited three cases heard in the EPO.<sup>75</sup> The upshot of these three cases appears to be that if the public have an opportunity to discover the relevant features of the invention without being under any obligation of confidence then the invention is made available to the public for the purposes of determining the state of the art. Of course, in *Lux v Pike* independent contractors had been given the controllers, whereas in *Prout v British Gas* the prior use was by employees. However, in the latter case any member of the public, including vandals, might have taken the opportunity to examine the product to discover how it worked, though presumably, as this would probably have amounted to trespass to goods, they would not have been free in law to do so. The advice to anyone contemplating field trials in respect of a new invention must be, in the light of the uncertainty still surrounding this aspect of prior use, file the patent application first.

The enlarged Board of Appeal of the EPO addressed the question of whether something has been made available to the public in the context of the chemical composition of a substance in Case G01/92 *Availability to the Public*.<sup>76</sup> The President of the EPO referred the following points to the enlarged board of appeal for its determination.

- 1 Is the chemical composition of a product made available to the public by virtue of the publication of that product irrespective of whether particular reasons can be identified to cause the skilled person to analyse the composition? And, if the answer to this is in the affirmative:
- 2 Does the principle extend to the more general case whereby all information which can be obtained from a product is made available to the public by virtue of the availability of that product, irrespective of whether particular reasons exist to cause the skilled person to search for that information?

The Board responded by saying that the chemical composition of a substance is part of the state of the art when the substance as such is available to the public and can be analysed and reproduced by the skilled person, irrespective of whether or not particular reasons can be identified for analysing the composition. The same principles apply *mutatis mutandis* to any other product. Article 54(2) of the EPC makes no distinction between the different means by which any information is made available to the public. Where it is possible for the skilled person to discover the composition of a substance or the internal structure of the product and to reproduce it *without undue burden*, then both the product and the composition or internal structure become part of the state of the art.

<sup>73</sup> Per Lord Parker CJ in *Bristol Myers Co's Application* [1969] RPC 146.

<sup>74</sup> Arguments based on obviousness and not being an invention failed. A second patent for another controller was held valid and infringed by the defendant.

<sup>75</sup> Case T/84/83 *Luchtenberg/Rear-view mirror* [1979–85] EPOR 796, Case T482/89 *Telemacanique/Power supply unit* [1993] EPOR 259 and Case T245/88 *Union Carbide/Atmospheric vaporizer* [1991] EPOR 373.

<sup>76</sup> [1993] EPOR 241.

In *Milliken Denmark AS v Walk Off Mats Ltd*,<sup>77</sup> the patent for washable floor mats with a rubber or plastic backing having perforations so as to allow machine washing without the risk of the backing bursting was ordered to be revoked. There had been non-confidential prior use by an American company which was a part owner of the defendant company. The US company had previously supplied customers with mats with perforations and mere knowledge of the perforations would enable the skilled man to work the invention and the fact that he might not realise the advantage of having perforations was irrelevant. Jacob J, referring to the approach in *Lux* and *Availability to the Public*, to the effect that an invention will become part of the state of the art if the product is made available to the public even if no person in fact examines or inspects it to acquire knowledge of the invention, said (at 311):

77 [1996] FSR 292.

The rule . . . seems harsh when prior use is by the patentee. Likewise it seems harsh when the publication is in written form but is in an obscure language and a document placed in an obscure library: a leaf in a forest is available to the public even if the wise man hid it there. But the rule provides a ‘brightline’ test – avoiding subjectivity and most questions of degree (‘undue burden’ remains). Nor does it seem harsh when one considers that the patentee can protect himself by applying for a patent before making the product available to the third parties . . .

In speaking of ‘undue burden’, Jacob J was referring to the enlarged Board of Appeal’s requirement that the skilled man must be able to discover the composition or internal structure and reproduce it without undue burden. It is clear from these cases that anticipation may occur even if the skilled person would not have appreciated the benefit or purpose of the invention. Obviously the safest course is to file the patent application first, before allowing persons not under a duty of confidence the potential of access to the invention.

Determined efforts to prevent access to details about how a product invention operates may be made such as in *PCME Ltd v Goyen Controls Co UK Ltd*<sup>78</sup> in which the electronic circuitry in a dust emission monitoring device had been embedded in resin to prevent anyone physically dismantling the device without destroying it. Nevertheless, it was held that prior use of the device by customers anticipated the patent because obvious and simple testing techniques would make the necessary disclosures. The claims in the patent were directed to the broad features that would have been disclosed by such testing.

78 [1999] FSR 801.

It is only one short step from the position that an invention is made available to the public if it is made available to a person who does not in fact examine it, though he is free to do so, to the proposition that an invention is made available to the public even though the public does not know and cannot know it has been made so available. In *Merrell Dow Pharmaceuticals Inc v HN Norton & Co Ltd*<sup>79</sup> the claimant had a patent for a drug ‘terfenadine’ which had expired. The drug was used as an antihistamine treatment and, unknown at the time, its use caused an acid metabolite to be made in the human liver. The claimant, upon discovering this, applied for a patent in respect of the acid metabolite. The defendant started selling terfenadine after the first patent had expired and was sued for infringement of the second patent on the ground that the defendant was supplying the means to put the invention into effect.<sup>80</sup> The second patent was revoked in the Patents Court and the Court of Appeal dismissed the appeal of the claimant. It was held that the disclosure of a process made available to the public made available everything which inevitably took place as part of that process, whether appreciated or not. Lord Nicholls V-C said (at 238):

79 [1995] RPC 233. Affirmed in the House of Lords [1996] RPC 76.

80 An infringement under the Patents Act 1977 s 60(2).

Any other conclusion would run counter to one of the golden threads of jurisprudence relating to patents. Patents exist today to reward and thereby encourage inventors; they are not

intended to make it possible to take out of public use processes or products already made available to the public.

81 *Merrell Dow Pharmaceuticals Inc v HN Norton & Co Ltd* [1996] RPC 76.

The House of Lords confirmed that the patent was invalid for want of novelty.<sup>81</sup> The invention had been made available to the public by virtue of the specification for the terfenadine patent which included in the description of the invention the phrase ‘... a part of the chemical reaction in the human body produced by the ingestion of terfenadine and having an anti-histamine effect’. The invention was being worked before the priority date because the public were able to take terfenadine and, by doing so, necessarily they were working the invention disclosed in the second patent. The chemical reaction described was taking place in their livers even though they did not know. Lord Hoffmann said (at 90):

It enabled the public to work the invention by making the acid metabolite in their livers. The fact that they would not have been able to describe the chemical reaction in these terms does [not] mean that they were not working the invention. Whether or not a person is working a product invention is an objective fact independent of what he knows or thinks about what he is doing.

82 [1979–85] EPOR 308.

83 [1989] EPOR 95.

In particular, Lord Hoffmann cited two decisions of the EPO Boards of Appeal: Case T12/81 *BAYER/Diastereomers*,<sup>82</sup> and Case T303/86 *CPC/Flavour Concentrates*.<sup>83</sup> The latter concerned an application for a patent in respect of a process for making flavour concentrates from vegetable or animal substances by extraction with fat solvents in pressure cookers. Pre-existing recipes for pressure-frying chickens disclosed processes having the same effect although they were couched in non-technical language. The Technical Board of Appeal stated (at 98):

It is sufficient to destroy the novelty of the claimed process that this process and the known process are identical with respect to starting material and reaction conditions since processes identical in these features must inevitably yield identical products.

84 Case T12/81  
*BAYER/Diastereomers Decision*  
[1979–85] EPOR 308.

The House of Lords’ avoidance of the unfortunate consequence of allowing what was, essentially, continuing protection for an expired patent accords with common sense and the views of the EPO that the effect of Article 54 (the equivalent to s 2 of the 1977 Act) is to prevent the state of the art being patented again.<sup>84</sup> Perhaps, however, the manner in which the Patents Court and the Court of Appeal dealt with the problem is to be preferred. Had the second ‘invention’ not been disclosed in the specification for the first patent, the outcome in the House of Lords might well have been different; although, if there had not been disclosure in the specification of the first patent, that could have been invalid for lack of sufficiency. Whilst there are good policy reasons for not granting protection beyond the normal 20-year period, the more technical approach of the House of Lords conforms better with patent law as it has developed. The fact that persons taking terfenadine were producing the acid metabolite should not, on the basis of *Lux* and *Availability to the Public*, be a sufficient ground without more for adding the acid metabolite to the state of the art. It could, after all, probably require an ‘undue burden’ to discover the composition of the metabolite. Would even the skilled man realise that it was being produced in the human liver if there was no mention of the chemical reaction in the specification for terfenadine?

In the US and in Germany, the equivalent patents for the acid metabolite produced by taking terfenadine were held not to be infringed by a defendant selling the drug after expiry of the patents. In each case, the court held that the second patent would be limited to the production of the acid metabolite *outside* the human body.<sup>85</sup>

85 *Terfenadin* [1998] FSR 145  
and *Marion Merrell Dow Inc v Baker Norton Pharmaceuticals Inc*  
[1998] FSR 158.

If published material does not adequately describe what is claimed there can be no loss of novelty. If someone else thought of the idea underlying the invention before the priority date, that alone would not be sufficient to invalidate the patent unless it was

made available to the public. For example, in *Catnic Components Ltd v C Evans & Co (Builders Merchants) Ltd*<sup>86</sup> a challenge on the ground of lack of novelty by way of another person having a similar idea and making a model of a lintel failed even though the model had been shown to a number of people. The model was not the lintel (it was in fact too short to be used as a lintel) and therefore the claimant's patent for a new lintel was valid.

A prior publication which deals with a different problem to the one dealt with in the patent application could still amount to anticipation under old UK law. In *Molins v Industrial Machinery Co Ltd*,<sup>87</sup> an application was made in respect of a method of distributing tobacco evenly in the manufacture of cigarettes on a high-speed machine. The method involved pushing the tobacco in the same direction as the paper in which it would be wrapped. But this was held to have been anticipated by an earlier patent which used the same movement but in a slow-speed machine. This was so even though the movement in the older machine was not intended to cure the problem of uneven tobacco distribution. However, a carefully drafted application that is directed to a new purpose, not previously disclosed, might now succeed.<sup>88</sup> It has been accepted that the nature of novelty has been changed under Article 54 of the EPC and new purposes may be patentable and not anticipated by inherent prior disclosure.<sup>89</sup>

Having a similar use to prior art will not necessarily anticipate a patent, especially if the purpose is somewhat different. In *Haberman v Jackel International Ltd*,<sup>90</sup> prior art consisting of two patents for feeding bottles did not anticipate a patent for a training cup. These cups were intended to be used by young children in the transitional stage between suckling from the mother's nipple or from a feeding bottle with a teat to the stage where the child could use an ordinary cup. The present invention had a spout with a self-sealing valve to prevent leakage if the cup was tipped over or lay on its side.

Anticipation is judged by considering how a prior publication, for example, would be construed by a person skilled in the art. This extension of the reasonable man test is essential as many technical publications are incomprehensible to the layperson. It is acknowledged that if the art is in a highly developed technology, it might be a matter of how it can be construed by a team of persons skilled in the particular art. This was accepted in *General Tire & Rubber Co v Firestone Tyre & Rubber Co Ltd*,<sup>91</sup> in which the validity of Firestone's patent for making oil-extended rubber for tyres was challenged by an alleged infringer. Attacks on the validity of patents frequently come from defendants in infringement actions, where it is often the best form of defence and certainly puts the claimant to a great deal of additional trouble. As regards the rubber patent and the issue of anticipation, there had been a prior publication, but whether it related to Firestone's patent was ambiguous. It was said that if a prior publication contained a direction that was capable of being carried out in a manner which would infringe but would be at least as likely to be carried out in a way that would not do so, the patentee's claim would not be judged to be anticipated.<sup>92</sup> To anticipate the claim, the prior publication must contain a clear and unmistakable direction to do what the patentee claimed to have invented. The same test that applies to infringement also applies to anticipation: that is, does the prior art fall within the claims of the patent in suit?<sup>93</sup> There may be a clear and unmistakable disclosure if the prior art discloses a number of alternatives, one of which is within the claim.<sup>94</sup>

*General Tire* has been used on numerous occasions as authority for the 'clear and unmistakable direction' approach to anticipatory material. An example, which adds something of a gloss to this principle, is *Union Carbide Corp v BP Chemicals Ltd*<sup>95</sup> in which Jacob J in the Patents Court said that a direction in a prior publication not to do something because it would have adverse consequences was not a direction to do that same thing because it had beneficial consequences. In such a case, the invention lies in finding that those in the art at the time of the prior publication had been wrong. Jacob J

<sup>95</sup> [1998] RPC 1.

also confirmed that disclosure of a range of values, for example, 15 to 70 per cent, discloses each and every part of the range. However, there may still be room for invention if a part of the range is claimed later if there is something special (that is, inventive) about that later claimed range.

The ‘clear and unmistakable directions’ rule can be carried too far and result in a ‘photographic approach’ which ignores implicit knowledge of the skilled person. Any reader brings his own knowledge of supplementary detail which could be said to be self-evident. Of course, the prior document has to be seen through the eyes of the skilled person but there is a danger of inferring too much which would have the result of blurring the distinction between lack of novelty and obviousness. In *Hoechst Celanese Corp v BP Chemicals Ltd*<sup>96</sup> Jacob J said (at 601):

... it must be right to read the prior document with the eyes of the skilled man. So if he would find a teaching implicit, it is indeed taught. The prior document is novelty destroying if it explicitly teaches something within the claim or, as a practical matter, that is what the skilled man would see it is teaching him.

The disclosure of an allegedly anticipating document must be an enabling disclosure. In *Asahi Kasei Kogyo KK's Application*,<sup>97</sup> Lord Jauncey said in relation to whether a patent was supported by matter in an earlier patent for the purposes of priority<sup>98</sup> (at 547):

An invention is only supported by prior matter . . . if the earlier relevant application not only describes the invention but also contains an enabling disclosure thereant [relating thereto].

Thus, the disclosure must enable the skilled person to work the invention. If the invention is a product, this does mean that the prior disclosure is such that the skilled person can work the invention; it is not necessary that he knows what it is he is working.<sup>99</sup> As Laddie J said in relation to anticipation in *Evans Medical Ltd's Patent*<sup>100</sup> (at 576):

First one must identify what the alleged invention is, that is to say what is covered by the claims in the patent, and then one must decide whether or not that invention, or any part of it, would be made inevitable by following the instructions in the prior art. If it would be, then it does not matter whether the skilled reader of the prior art would realise that he was working within the area claimed by the subsequent patent.

If a product is necessarily made as a result of a known process even though the existence of the product is not known and its manufacture is not desired by a person working the process, then the product must be part of the state of the art, nonetheless.<sup>101</sup> If the process is worked in public or published then the product must inevitably be part of the state of the art. To hold otherwise would allow someone to re-patent something which is already part of the state of the art.

Matter that has been obtained unlawfully or in breach of confidence,<sup>102</sup> or which has been divulged in breach of confidence, is to be disregarded when considering the novelty of an invention.<sup>103</sup> In the case of a patent application, this covers the period of six months preceding the date of filing of the patent so that, effectively, if there has been a disclosure of the invention because of a breach of confidence – for example, by a potential manufacturer of products made in accordance with the invention who has been in negotiations with the inventor – there is a six-month time limit during which that disclosure will be ignored in the determination of novelty. There is provision for the inventor to display the invention at an international exhibition without this destroying the novelty of the invention, subject to the inventor making a declaration and filing written evidence. The six-month time limit applies and the patent application must be filed within six months of the act of displaying the invention at the exhibition.<sup>104</sup>

One thing an inventor must be careful to avoid is anticipating his own invention: for example, by publishing details of it in an academic or trade journal before the priority date (normally the date of filing the application). However, to anticipate the invention,

96 [1998] FSR 586.

97 [1991] RPC 485.

98 The same considerations apply in terms of anticipation by a patent with an earlier priority date as apply in respect of whether a later patent can rely on an earlier one for priority.

99 Per Pumfrey J in *Minnesota Mining & Manufacturing Co's (Suspension Aerosol Formulation) Patent* [1999] RPC 135 at 146, citing the House of Lords in *Merrell Dow Pharmaceuticals Inc v HN Norton & Co Ltd* [1996] RPC 76, discussed above.

100 [1998] RPC 517.

101 Case T303/86 *CPC/Flavour Concentrates* [1989] EPOR 95.

102 Ferris J did not accept a distinction between ‘business ethics’ and confidence in *Strix Ltd v Otter Controls Ltd* [1995] RPC 607 at 634.

103 Patents Act 1977 s 2(4). Unlawfully obtained matter would include, for example, a stolen model of something incorporating the invention or manufactured using the invention. Whether it applies to stolen information is less clear because of the difficulty with respect to theft of information: for example, *Oxford v Moss* (1978) 68 Cr App R 183. However, details of the invention stored on a computer would be covered, as to gain access to them without authorisation will usually be an offence under the Computer Misuse Act 1990 s 1. Of course, ‘unlawfully’ includes civil wrongs as well as criminal offences and could cover trespass (to land and goods) and conversion.

104 Patents Act 1977 s 2(4). The Patents Rules 2007, SI 2007/3291 r 5 sets out the detailed provisions.

the publication must clearly describe the invention as claimed.<sup>105</sup> Tempting as it might be to publicise his ingenuity, the inventor would be advised to restrain his ego and keep the details of his invention secret, and, in any dealings with advisers, potential manufacturers, assignees or licensees, to make it clear that discussion of the invention is in the strictest confidence.

## New uses for old inventions

Old inventions may be patentable if the claims are directed to a new use. If sufficiently different, the new use will not be considered to be part of the state of the art. For inventions other than drugs for the treatment of humans and animals, new uses for old inventions may be patentable up to a point if there is some new technical effect: for example, by combining two previous inventions in a new and non-obvious way.<sup>106</sup> In the case of drugs for the treatment of humans or animals, at first sight it appears that only the first use is patentable. Section 4A(3) states that the fact that the drug (substance or composition) already forms part of the state of the art does not prevent the new method of use from being patentable if ‘the use of the substance or composition *in any such method* does not form part of the state of the art’ (emphasis added).<sup>107</sup> The key words are ‘any such method’, which seems to include the first use, at least on a strict literal interpretation. The omission of the word ‘any’ would clearly permit ‘second use patents’, and the only conclusion that can be reached is that the inclusion of the word ‘any’ was quite deliberate.<sup>108</sup>

The literal approach, denying second use patents for drugs, found some support in the English case of *John Wyeth & Brothers Ltd’s Application: Schering AG’s Application*,<sup>109</sup> although, in the end, the court decided to follow the enlarged Board of Appeal of the EPO<sup>110</sup> which held that second and subsequent new uses of known substances or compounds were patentable. Either interpretation was possible but it was important to achieve conformity with the EPC. In Case G05/83 *Eisai*,<sup>111</sup> the enlarged Board of Appeal held that:

- 1 claims directed to the use of a product for the treatment of an illness in a human or animal body (when such use was the second or subsequent medical use) were equivalent to claims for a method of treatment of the human or animal body and therefore excluded from patentability,<sup>112</sup>
- 2 claims directed to the use of a product for the manufacture of a medicament for a specified new therapeutic use were not lacking in novelty.<sup>113</sup>

A second medical use must be effective to achieve the new treatment. It is not sufficient if it simply has a placebo effect. So it was held in *Pfizer Ltd’s Patent*<sup>114</sup> by Laddie J. The patent was for the drug Viagra used for treating male erectile dysfunction and was a combination of a number of compounds. Laddie J also accepted the view that if a combination of compounds is used to treat a disease, then each is used for the treatment of the disease. He gave an example where a compound was used which did not produce full erections in a patient but did if it was used with another compound. In such a case he said it was fanciful to suggest that the first compound was not being used in the treatment.

Thus, second uses of known substances or compounds for new medicinal purposes may be patentable. This seems to be a restrictive interpretation which should not apply to ‘non-medical’ inventions, that is, those falling outside the scope of s 4A(3) where the question of novelty depends on whether the new use for a new purpose had previously been made available to the public. Secret or hidden uses will not be considered to be grounds of objection.<sup>115</sup> In *Mobil Oil*, which concerned a claim based on the discovery that an existing compound used for preventing rust was also effective as a lubricant, the

<sup>105</sup> *Lux Traffic Controls Ltd v Pike Signals Ltd* [1993] RPC 107. In that case a published paper did not describe the invention sufficiently clearly so as to make it known to the public.

<sup>106</sup> See the discussion below on *Parks-Cramer Co v GW Thornton & Sons Ltd* [1966] RPC 407 (p 438). Prior to the 1977 Act, there had to be novelty in the mode of using the old product as distinguished from novelty of purpose: *Lane-Fox v Kensington and Knightsbridge Electric Lighting Co Ltd* (1892) 9 RPC 413.

<sup>107</sup> Note s 2(6) was repealed and incorporated in a new s 4A which also extends to new specific uses as well as methods of treatment. The changes were made by the Patents Act 2004: the relevant provisions were brought into effect on 31 December 2007.

<sup>108</sup> In fact, Article 54(5) of the European Patent Convention, the equivalent provision to the Patents Act 1977 s 4A(3), also includes the word ‘any’.

<sup>109</sup> [1985] RPC 545.

<sup>110</sup> Case G05/83 *Eisai* [1979–85] EPOR B241. See Paterson, G.D. ‘The patentability of further uses of a known product under the European Patent Convention’ [1991] 1 EIPR 16.

<sup>114</sup> [2001] FSR 201. The patent was ordered to be revoked on the grounds of lack of inventive step.

<sup>115</sup> Case G02/88 *Mobil/Friction reducing additive* [1990] EPOR 73.

example of a compound that had been previously known and used as a plant growth regulator was discussed. Imagine that it was later discovered that this same compound was effective also as a fungicide and the patent claim is for the use of the compound as a fungicide. The method of use is the same for both purposes, that is application to plants, and so the only novelty that can be claimed is in the use of the compound as a fungicide rather than as a growth regulator, that is in *the purpose of the use*. In such a case, the question of novelty has to be determined along basic principles: that is, has that functional technical feature previously been made available to the public?

In *Mobil Oil*, the enlarged Board of Appeal in the EPO suggested that a new use of a known compound may reflect a newly discovered technical effect which could be considered as a functional technical feature of the relevant claim. If that technical feature had not previously been made available to the public the claim would be novel even though it had inherently taken place in the course of carrying out what previously had been made available to the public.<sup>116</sup> However, this contradicts the view on novelty taken in *Merrell Dow Pharmaceuticals Inc v HN Norton & Co Ltd*<sup>117</sup> and was doubted as being correct in the Patents Court hearing of that same case by Aldous J.<sup>118</sup>

In the appeal to the House of Lords in *Merrell Dow*,<sup>119</sup> although their Lordships approved *Mobil Oil*, Lord Hoffmann cast some doubt on that decision. Considering the UK's provisions on infringement, he said it would be difficult to tell, for a second invention such as that in *Mobil Oil*, whether the alleged infringer was using it for the forbidden purpose. That is, how can you tell whether a person is using the oil additive as a lubricant (lawful after the expiry of the first patent) or to reduce friction (which would infringe the second patent)? However, whichever purpose the person alleged to have infringed had in mind is irrelevant to the existence of infringement. It may, at best, reduce the exposure to damages. If a person used the additive for the purpose of lubrication, it would also reduce friction, whether or not he knew this. The danger, similar to that perceived in the Court of Appeal in *Merrell Dow*, discussed earlier, is that the patent monopoly can be extended beyond its normal life if a new hitherto unknown effect can be discovered by the patentee. This might be acceptable if it involves a *new use not previously carried out* (not being a previous unknown and inherent use), but not if it involves a *known use* but for a *new purpose*. However, this approach is not in conformity with the decision in *Mobil Oil*.

The Court of Appeal had an opportunity to revisit second uses of known substances or compounds for new therapeutic uses in *Bristol-Myers Squibb Co v Baker Norton Pharmaceuticals Inc*<sup>120</sup> and the court also took the opportunity to give further explanation of the *Mobil Oil* case. In *Bristol-Myers Squibb*, the patent in suit was for the use of taxol for making a medication for treating cancer by administering the drug over a period of three hours, thereby reducing neutropenia (the side effect of suppression of the production of white blood cells which led to severe allergic reactions). It was already known that administering the drug over three hours was as effective as doing this over 24 hours, which had been the period previously used to minimise side effects, but it was not previously known that neutropenia was less under the three-hour regime than the 24-hour regime.

The Court of Appeal accepted the correctness of *Eisai* and confirmed that the novelty in a Swiss-type claim lay in the new subsequent therapeutic use. However, in the present case, the claim was not a claim to a second therapeutic use. The reduction of neutropenia was a discovery not a second therapeutic use. The rest of the three-hour regime, relating to the drug, the method of administering the drug and the therapeutic purpose were all the same as in the 24-hour regime. Swiss-type claims must be directed at new therapeutic uses or purposes.

As regards the *Mobil Oil* case, Aldous LJ said that it differed from *Eisai* which was concerned with the interaction between Articles 52(4) and 54(5) of the EPC. Article

**116** The enlarged Board of Appeal said that 'making available to the public' means that the invention must have been communicated to the public or laid open for inspection. It said that the question of inherency does not arise under Article 54(2) of the European Patent Convention: [1990] EPOR 73 at 88.

**117** [1995] RPC 233.

**118** [1994] RPC 1 at 12.

**119** [1996] RPC 76.

**120** [2001] RPC 1.

52(4) denies patents for methods of treating the human or animal body whilst Article 54(5) allows patents for new uses of known substances or compositions used in such methods of treatment.<sup>121</sup> On the other hand, *Mobil Oil* was concerned with the purposive construction of claims on the basis of the Protocol on Article 69 such that the claim was interpreted as being limited to the technical effect, that is, the physical activity. Thus, in *Mobil Oil*, the claim to an additive in lubricating oil for reducing friction should be interpreted as a claim to a product when used for reducing friction. Aldous LJ said in *Bristol-Myers Squibb* (at 17):

Such a claim [as in *Mobil Oil*] would be novel if the use had not previously been made available to the public. However, it is relevant to note that similar reasoning cannot be applied in relation to a Swiss-type claim, as such a claim cannot be interpreted as relating to a product when used because that would constitute a method of treatment which is prohibited under the EPC.

*Bristol-Myers Squibb* does little to resolve the problems with *Mobil Oil* pointed out by Lord Hoffmann in *Merrell Dow*. However, when one considers the basic requirement for novelty, that the invention has not been made available to the public, it is hard to fault *Mobil Oil* as a secret inherent use that is not known to the public cannot sensibly be said to be made available to the public. Indeed, in *Merrell Dow* the House of Lords recognised that previous secret and uninformative uses would, subject to s 64, infringe a patent once granted and even though they would count as infringements post-grant, they would not anticipate the patent. The difficulty in making illegal an activity that was formerly lawful by the grant of a patent is mollified by s 64 which allows the continuance of acts done in good faith before the priority date of the patent. Though one could ask, how can a person do an act in *good faith* if he does not know he is doing it?

The correctness of *Bristol-Myers Squibb* was doubted in so far as it held that a change in a dosing regime could not be a new therapeutic use in *Merck & Co Inc's Patent*<sup>122</sup> where the essence of the invention was using a single dose of alendronate of 70mg per week rather than a daily dose of 10mg. The former was shown to be a more effective dose for treating osteoporosis. This was objected to on the basis that it was a method of treatment of the human body by therapy and, therefore, excluded under s 4A(1),<sup>123</sup> as it was not a case of a second or subsequent medical use. Of course, in the Patents Court, Jacob J was bound to follow *Bristol-Myers Squibb*, being a Court of Appeal decision though he did express his regret at having to do so as this construction would act as a disincentive to research to find such improved dosage regimes. On the subsequent appeal,<sup>124</sup> the Court of Appeal itself was also bound by its own earlier decision in *Bristol-Myers Squibb*, although the court did indicate that the patentee could consider appealing elsewhere (the House of Lords) as it thought that *Bristol-Myers Squibb* was wrongly decided. However, when one looks at the wording of s 4A(1) and (2) (and their predecessors ss 2(6) and 4(2) and (3)) the matter seems beyond doubt, especially as s 4A(2) states that subsection (1) '... does not apply to an invention consisting of a substance or composition for use in any such method'. Changing a dosage regime is not the same as inventing a product for use in the treatment of the human body. It is not a new use such as where it is found that a known drug used for regulating the number of red blood cells can also be used to treat skin diseases. In *Merck* and *Bristol-Myers Squibb* the purpose of the changed regime was to treat the same condition.

<sup>121</sup> Article 53(c) is equivalent to s 4A(1) and Article 54(4) and (5) is equivalent to s 4A(2) and (3).

<sup>122</sup> [2003] FSR 498 at para 80.

<sup>123</sup> This provision prevents the patenting of methods of treatment of the human or animal body by surgery or therapy or a method of diagnosis practised on the human or animal body. Under s 4A(2), this exclusion does not extend to substances or compositions for use in any such method. *Bristol-Myers Squibb* was decided under s 4(2) and (3) which were repealed and replaced by new s 4A, discussed in further detail at the end of this chapter.

<sup>124</sup> *Merck & Co Inc's Patent* [2004] FSR 330.

## INVENTIVE STEP

The Patents Act 1977 does not define the term 'invention', but Lord Hoffmann usefully described different forms of invention in *Biogen Inc v Medeva plc*.<sup>125</sup> He said that it is the addition of a new idea to the existing stock of knowledge and that (at 34):

<sup>125</sup> [1997] RPC 1.

Sometimes, it is the idea of using established techniques to do something which no one had previously thought of doing. In that case, the inventive step will be doing the new thing. Sometimes, it is finding a way of doing something which people had wanted to do but could not think how. The inventive idea would be the way of achieving the goal. In yet other cases, many people may have a general idea of how they might achieve a goal but not know how to solve a particular problem which stands in their way. If someone devises a way of solving the problem, his inventive step will be that solution but not the goal itself or the general method of achieving it.

These three forms of invention can be classified as (a) the goal itself, (b) the general method of achieving the goal, and (c) the solution to a problem. The last two forms of invention, in their different ways, can be thought of fulfilling a ‘long-felt want’, a phrase often used in patent law. Its presence is sometimes useful in determining whether an inventive step is present. It is not, of course, conclusive.

The invention must involve an inventive step. Under s 3, this applies when the invention is not obvious to a person skilled in the art having regard to all matter forming part of the state of the art, but not including matter from patent applications with earlier priority dates which is published later than the priority date of the invention. This is different to the position concerning novelty as, normally, matter in earlier applications that has not yet been published is taken to be a part of the state of the art.<sup>126</sup> This material is used to test for novelty but not for inventive step.

The word ‘obvious’ does not have any special legal meaning and it has been said that it is not necessary to go beyond the dictionary definition but to take it to mean ‘very plain’.<sup>127</sup> It is manifestly evident that the notional skilled worker cannot be endowed with inventive faculties himself, however technical the art, otherwise all inventions could be considered to be obvious. The person skilled in the art is simply someone with a wide knowledge of the technology within which the invention lies (or a team of persons so skilled). The question becomes, would the invention be obvious to such a person or persons?<sup>128</sup> In some fields, a person skilled in the art who does not possess inventive faculties may be a contradiction: for example, in the engineering professions where engineers are trained in problem-solving by the application of ingenuity, the very word ‘engineer’ sharing a common origin with the word ‘ingenuity’.

In *Technip France SA’s Patent*,<sup>129</sup> Jacob LJ described the notional skilled worker as a nerd. He would be very boring and also forgetful, for after he has read one piece of prior art, unless it forms part of his background technical knowledge, he would instantly forget it before reading the next piece of prior art unless it forms part of an uninventive mosaic or there is sufficient cross-reference between the items of prior art. Where it is appropriate to consider a team of skilled workers, Jacob LJ described these as an assembly of nerds with different basic skills, all unimaginative. However, he did say that the notional skilled worker was not a complete android and will share the prevailing prejudices or conservatism in the art. Pill LJ preferred Lord Reid’s description of the notional skilled worker in *Technograph Printed Circuits Ltd v Mills & Rockley (Electronics) Ltd*<sup>130</sup> (at 355) as:

... a skilled technician who is well acquainted with workshop technique and who has carefully read the relevant literature. He is supposed to have an unlimited capacity to assimilate the contents of ... scores of specifications but to be incapable of a scintilla of invention. When dealing with obviousness, unlike novelty, it is permissible to make a ‘mosaic’ out of the relevant documents, but it must be a mosaic which can be put together by an unimaginative man with no inventive capacity.

Pill LJ said that the skilled worker must be taken to read documents assiduously, however boring, with reference to both novelty and inventive step. He may well be boring but he is never bored.

<sup>126</sup> See Patents Act 1977 s 2(3).

<sup>127</sup> *General Tire & Rubber Co v Firestone Tyre & Rubber Co Ltd* [1972] RPC 457.

<sup>128</sup> Conversely, if the invention is not obvious to skilled and inventive persons it must involve an inventive step: *Intalite International NV v Cellular Ceilings Ltd (No 2)* [1987] RPC 537.

<sup>129</sup> [2004] RPC 919.

<sup>130</sup> [1972] RPC 346.

In *Glaxo Group Ltd's Patent*,<sup>131</sup> Pumfrey J noted that the skilled person does not represent some sort of lowest common denominator of persons actually engaged in the field, possessed by the knowledges and prejudices all of them can be said to possess. It is also unlikely that an expert witness can be truly representative of the notional skilled person as he may be too well qualified and be subject to personal prejudices and preferences. Of course, an expert witness is not usually an unimaginative person and would find it difficult to be completely objective when it comes to giving evidence as to inventive step. Persons newly entering the relevant technical field cannot be taken into account in determining the skilled address who must represent the attainments of those already in the field, in particular, those most closely associated with that field.<sup>132</sup>

Invention may lie in the idea of taking a step from the prior art but to argue that an invention is not obvious unless there is some motivation to take that step is not necessarily relevant. As Aldous LJ said in *Asahi Medical Co Ltd v Macopharma (UK) Ltd*<sup>133</sup> (at para 23), 'the fact that nobody would dream of making a plate one inch bigger than the standard size does not mean that there would be invention in making one'. It may be argued that, given the prior art, it would be obvious to try to do what is now claimed. For example, in *Saint-Gobain PAM SA v Fusion Provida Ltd*,<sup>134</sup> the invention was for a means of protecting buried pipes (typically of iron) from corrosion by coating them with a layer of zinc/aluminium alloy. A paper published two months before the priority date of the patent suggested that it *might* be worth trying an alloy of zinc and aluminium. However, Jacob LJ said that this suggestion for further research was far from showing that the patent lacked inventive step. He said (at para 35):

Mere possible inclusion of something in a research programme on the basis that you will find out more and something might turn up is not enough. If it were otherwise there would be few inventions that were patentable . . . The 'obvious to try' test really only works where it is more or less self evident that what is being tested ought to work.

If it was enough to try something in case something turns up, the only research worth doing, if patent protection was desired, would be research which had little prospect of success.<sup>135</sup>

The 'obvious to try' test for inventive step finds its origin in the judgment of Diplock LJ in *Johns-Manville Corporation's Patent*.<sup>136</sup> That case involved a fairly 'low-tech' invention but the continuing value of the test was severely doubted in *Conor Medsystems Inc v Angiotech Pharmaceuticals Inc*,<sup>137</sup> particularly in the field of pharmaceuticals. It was noted by Lord Walker of Gestrinorpe that the volume of hi-tech research has increased enormously since *Johns-Manville* and, especially in the field of pharmaceuticals, enormous resources are committed to research because the rewards are so great. That being so, companies may engage in experiments which have a lower expectation of success than would have been the case in the past.

Where a granted patent is challenged on the ground of lack of inventive step, it is important that this is judged at the priority date of the patent rather than using the benefit of hindsight. This is especially so where the invention comprises a number of previously known integers. The danger of applying an *ex post facto* analysis to the question of obviousness was noted by Moulton LJ in *British Westinghouse Electric & Manufacturing Co Ltd v Braulik*<sup>138</sup> where he said (at 230):

. . . I view with suspicion arguments to the effect that a new combination, bringing with it new and important consequences in the shape of practical machines, is not an invention, because, when it has once been established, it is easy to show how it might be arrived at by starting with something known, and taking a series of apparently easy steps. This *ex post facto* analysis of invention is unfair to inventors, and, in my opinion, it is not countenanced in English patent law.<sup>139</sup>

<sup>131</sup> [2004] RPC 843.

<sup>132</sup> *Mayne Pharma Ltd v Debiopharm SA* [2006] EWHC 1123 (Pat), per Pumfrey J at paras 4 and 5.

<sup>133</sup> [2002] EWCA Civ 466.

<sup>134</sup> [2005] EWCA Civ 177.

<sup>135</sup> The 'Saint-Gobain test' will not always be appropriate: per Warren J in *Actavis UK Ltd v Novartis AG* [2009] EWHC 41 (Ch) at (para 163).

<sup>136</sup> [1967] RPC 479.

<sup>137</sup> [2008] UKHL 49.

<sup>138</sup> (1910) 27 RPC 209.

<sup>139</sup> This was approved by Lord Russell in *Non-Drip Measure Co Ltd v Strangers Ltd* (1943) 60 RPC 135.

140 [2001] RPC 133.

141 [1985] RPC 59, discussed below (see pp 440–44).

142 However, later, in *David J Instance Ltd v Denny Bros Printing Ltd* [2002] RPC 321, Aldous LJ said that, although the ‘Windsurfing test’ was useful, there was no precedent to the effect that it was essential that it was used and a judge could go straight to the question posed by the Act, providing he adopted the mantle of the skilled person.

143 [2001] FSR 514.

144 [2008] EWHC 800 (Pat).

145 *British Acoustic Films Ltd v Nettlefold Productions Ltd* (1936) 53 RPC 221 at 250 per Luxmore J, approved by the Court of Appeal in *General Tire & Rubber Co v Firestone Tyre & Rubber Co Ltd* [1972] RPC 457. Unlike the case with enablement for the purposes of anticipation, knowledge of patent specifications is included in the common general knowledge when it comes to considering inventive step.

146 [1997] RPC 489.

147 *Richardson-Vicks Inc’s Patent* [1997] RPC 888, where it was said that a person skilled in the art of obtaining regulatory approval for new drugs was not a person skilled in the art of producing new combination drugs.

148 [2001] FSR 201.

In *Davina Wheatley v Drillsafe Ltd*,<sup>140</sup> Aldous LJ suggested that a failure by the trial judge to use the structured approach to determining obviousness, proposed by Oliver LJ in *Windsurfing International Inc v Tabur Marine (Great Britain) Ltd*,<sup>141</sup> led the judge to fall into the trap of hindsight reasoning or ‘being wise after the event’.<sup>142</sup> In *Minnesota Mining & Manufacturing Co v ATI Atlas Ltd*,<sup>143</sup> Pumfrey J said that allegations of obviousness in the light of common general knowledge are particularly prone to be tainted by hindsight. The danger of hindsight is heightened where the challenge to obviousness is based upon the common general knowledge. On a number of prior publications. As Kitchen J said in *Abbott Laboratories Ltd v Evysio Medical Devices ULC*<sup>144</sup> (at para 180):

It is all too easy after the event to identify aspects of the common general knowledge which can be combined together in such a way as to lead to the claimed invention. But once again this has the potential to lead the court astray. The question is whether it would have been obvious to the skilled but un inventive person to take those features, extract them from the context in which they appear and combine them together to produce the invention.

The notional skilled worker does not have inventive ability, but he does have knowledge common to the particular art. That is known as common general knowledge and is the basis for determining whether, in the light of that knowledge, an invention is obvious. Common general knowledge does not include every published patent specification in a particular art, but is restricted to those which are generally known to those who engage in that particular art.<sup>145</sup> In *Beloit Technologies Inc v Valmet Paper Machinery Inc*,<sup>146</sup> Aldous LJ accepted that the notional skilled man may not have the advantage of the facilities available in some large corporations with extensive library facilities and patent departments. He said (at 494):

The notional skilled addressee is the ordinary man who may not have the advantages that some employees of large companies may have.

Therefore, the person skilled in the art does not know everything. He simply knows that which is known to a large proportion of those working in the relevant art. Knowledge which is known by some, perhaps a few only, can be described as public knowledge and this must be distinguished from common general knowledge.<sup>147</sup>

The fact that a particular piece of knowledge is well known to an expert witness does not necessarily mean that it forms part of the common general knowledge. It may be known to only a small number of workers in the field. However, it should be noted that the exercise of endowing the notional skilled worker with the common general knowledge at the relevant time is not something derived from either the UK legislation or the EPC. If one considers that the purpose of requiring an inventive step is to prevent a person monopolising something that is an obvious extension of material in the public domain, this approach is suspect. The state of the art includes a document in a dusty corner of a library that has been read by only one person. Therefore, an invention should lack inventive step if, when viewed objectively from that document, it would be obvious to the notional skilled man. The use of common general knowledge pre-dates the 1977 Act (and the 1949 Act) and it is arguable that it is no longer relevant. Apart from unpublished patent applications having earlier priority dates, the state of the art should be used for the purposes of determining both novelty and inventive step. Conversely, the fact that there is evidence that a number of others thought about taking the route taken by the inventor does not necessarily mean that the invention is obvious. Such persons may, after all, have had inventive faculties.

In *Pfizer Ltd’s Patent*,<sup>148</sup> Laddie J discussed the nature of the skilled but non-inventive man in the art which suggests the notional skilled worker has more extensive knowledge of the prior art. He said (at para 64):

This is not a real person. He is a legal creation. He is supposed to offer an objective test . . . He is deemed to have looked at and read publicly available documents and to know of public uses in the prior art. He understands all languages and dialects. He never misses the obvious nor stumbles on the inventive. He has no private idiosyncratic preferences or dislikes. He never thinks laterally. He differs from all real people in one or more of these characteristics. A real worker in the field may never look at a piece of prior art – for example he may never look at the contents of a particular public library – or he may be put off because it is in a language he does not know. But the notional addressee is taken to have done so.

Laddie J went on to point out that anything which is obvious over the prior art cannot be subject to a valid patent application even if, in practice, few would have found it or have bothered to look at it. Whilst the real worker might miss some of the prior art, the notional skilled man never does. The rationale is that a person should not be able to obtain a monopoly over the prior art and anything obvious over it. In *Pfizer Ltd's Patent*, the patent related to the drug Viagra, used to treat impotence in men, Laddie J held that it lacked inventive step, *inter alia*, on the ground that it was obvious to attempt to administer known inhibitors used to treat male impotence in a more desirable way, that is, orally.

If one accepts that the common general knowledge approach is still correct, then it is not simply a matter of imbuing the notional skilled addressee with positive aspects of that knowledge. Negative aspects also must be considered. In *Dyson Appliances Ltd v Hoover Ltd*,<sup>149</sup> the judge accepted that the vacuum cleaner industry had a mindset which precluded the use of bagless vacuum cleaners. This prejudice would have caused the skilled addressee to treat the modification of prior art which included a cyclone to remove particles from the air to come up with a bagless vacuum cleaner with 'considerable reserve if not overt scepticism'. Furthermore, there was no long-felt want, there being no evidence that there was any technical problem at the relevant time in using bags in vacuum cleaners. This itself made it difficult to maintain an attack based on obviousness. Another example of mindset being a critical factor in determining obviousness was given by *Panduit Corp v Band-It Co Ltd*<sup>150</sup> where the mindset was in relation to coating metal ties fully with plastic coating to avoid problems handling the ties in cold weather and preventing corrosion. The invention was for a partially coated tie which increased the efficiency of the locking mechanism. The Court of Appeal held that the invention was not obvious. In *Buhler AG v FP Spomax SP*,<sup>151</sup> the prejudice was against the use of double-grinding. It was shown to exist in a similar technical field (grinding grain for bread flour) but there was no evidence to show that such prejudice existed in the field in question (grinding grain for starch).

The fact that a document which appears to bear upon the question of obviousness has been published does not mean that it is a realistic starting point for an obviousness attack.<sup>152</sup> Although the skilled person is deemed to have considered it with interest he is not taken to necessarily take it forward. He might read it and decide that it is not a worthwhile starting point and put it to one side.<sup>153</sup>

Invention requires something more than simply showing that something can be done. It must show how it can be done – a particular way in which the underlying idea can be translated into a practical method of implementation. Otherwise, the patent could extend to all possible ways of achieving the end result. A patent must be for more than an end result and must relate to the means utilised to realise that end. In *Biogen Inc v Medeva plc*<sup>154</sup> a patent in respect of a vaccine for hepatitis B which had been genetically engineered was declared invalid. Lord Hoffmann said (at 52):

It is said that what Professor Murray showed by his invention was that it could be done . . . Those who followed, even by different routes, could have greater confidence by reason of his success. I do not think that this is enough to justify a monopoly in the whole field . . . The Wright Brothers showed that heavier-than-air flight was possible, but that did not entitle them

<sup>149</sup> [2001] RPC 473.

<sup>150</sup> [2003] FSR 127.

<sup>151</sup> [2008] EWHC 823 (Ch).

<sup>152</sup> *Ratiopharm (UK) Ltd v Alza Corporation* [2009] EWHC 213 (Pat).

<sup>153</sup> *Eli Lilly & Co v Human Genome Sciences Inc* [2008] EWHC 1903 (Pat).

<sup>154</sup> [1997] RPC 1.

to a monopoly in heavier-than-air flying machines . . . care is needed not to stifle further research and healthy competition by allowing the first person who has found a way of achieving an obviously desirable goal to monopolise every other way of doing so.

Obviousness is judged by looking at the invention as a whole and considering the entire state of the art at the relevant time. A process known as ‘mosaicing’ has occasionally been used to attack the validity of a patent by showing that it is obvious. This process consists of piecing together several unrelated bits of information in different documents which, when combined, are capable of showing obviousness. But the use of such a technique is theoretically very unsound because, if this is the first time the mosaic has been constructed, that in itself is indicative of non-obviousness. If it were otherwise someone else would have pieced the bits together previously. In practice, mosaicing is unlikely to find favour in the courts, although there are exceptions – for example, where it would be reasonable for the notional uninventive skilled worker to fit the pieces together, an unlikely phenomenon as the very act of mosaicing implies both detective and inventive skills. Accepting that the skilled man has no inventive faculties (‘incapable of a scintilla of invention’), Lord Reid said of mosaicing:

When dealing with obviousness, unlike novelty, it is permissible to make a ‘mosaic’ out of the relevant documents, but it must be a mosaic which can be put together by an unimaginative man with no inventive capacity.<sup>155</sup>

<sup>155</sup> *Technograph Printed Circuits Ltd v Mills & Rockley (Electronics) Ltd* [1972] RPC 346 at 355.

<sup>156</sup> [1993] RPC 107.

Whether the invention is obvious is a question of fact. For example, in *Lux Traffic Controls Ltd v Pike Signals Ltd*,<sup>156</sup> the defendant claimed that the claimant’s two patents in relation to traffic signal control systems were invalid on a number of grounds. The second patent was for a means of varying the ‘intergreen’ period, the safety period between the lights in one direction changing to red and before the lights in the other direction changed to green. It was argued that it was obvious. However, being unsupported by evidence, the court expressed surprise that the invention had not been proposed before if that was the case. The invention may have been simple, but it represented an advance and a technical contribution to the art.<sup>157</sup> The simplicity of an invention must not be confused with obviousness.<sup>158</sup> The problem for the court when it comes to a simple invention is that once it was known it could be extremely easy to understand. This also brought the danger of looking at inventive step with the benefit of hindsight.

<sup>157</sup> The first patent was held to be invalid through lack of novelty because prototypes had been made available to contractors who were able to examine them, and such examination would have been sufficient to disclose the invention.

<sup>158</sup> *Armour Group plc v LeisureTech Electronics Pty Ltd* [2008] EWHC 2797 (Pat).

When obviousness has to be determined retrospectively (for example, where the validity of a patent is in issue), commercial success is an important and telling factor that can be taken into account. If the invention fulfils a ‘long-felt want’, this is good evidence of non-obviousness. However, commercial success can never be decisive and, if it is taken as a yardstick of non-obviousness, consideration must also be given to other factors such as market forces and nature of the advertising used to promote the product. There may be many commercial and social reasons for success but what matters for patent purposes is whether technical reasons exist.<sup>159</sup> In *Technograph Printed Circuits Ltd v Mills & Rockley (Electronics) Ltd*,<sup>160</sup> the defendant alleged that the claimant’s method of making printed circuit boards using a silk screen printing method was invalid because of obviousness and lack of novelty, relying on a prior US patent relating to the manufacture of electrostatic shields and aerials. It was held that the claimant’s patent was valid because the adaptation of the method described in the US patent, where it was used in relation to three-dimensional objects, to printing a pattern on a flat circuit board was not an obvious step. Although the invention turned out to be an enormous commercial success, this was some years later and the invention was not widely used for some years. At first instance, Harman J said:

<sup>159</sup> Per Peter Gibson LJ in *Seb SA v Societe De Longhi SpA* [2003] EWCA Civ 952 at para 50. If an invention is technically obvious, it does not matter if the step would not have been taken for commercial reasons, that is, that the alleged invention was not commercially obvious: *Hallen Co v Brabantia (UK) Ltd* [1991] RPC 195.

<sup>160</sup> [1969] RPC 395.

It was objected that in fact it was not until ten years after the invention was published that it was commercially adopted . . . and it was argued from this that it was not a case of filling

a long felt want. I do not accept this argument. In the years immediately following the war, manufacturers could sell all the machines they wanted using the old point-to-point wiring and had no need to trouble themselves with anything better.<sup>161</sup>

<sup>161</sup> The House of Lords confirmed that the invention was non-obvious: [1972] RPC 346.

Therefore, commercial success as an indicator of obviousness must be treated cautiously. Lack of immediate commercial success, as in the above case, might be explained by factors that have nothing to do with the obviousness of the invention. The correlation that the proprietor hopes will be confirmed by commercial success is that the invention cannot have been obvious because it clearly satisfies a demand, and that demand would have been long since satisfied had the invention been obvious. While this might be a reasonable assumption, the opposite is not tenable: lack of success does not necessarily directly equate to obviousness. Something might be highly inventive but fail to sell because, put simply, consumers have no desire for it. That commercial success as a measure of non-obviousness should be treated cautiously was confirmed by Mummery J in the Patents Court in *Mölnlycke AB v Procter & Gamble Ltd (No 3)*,<sup>162</sup> a case involving a patent for disposable nappies, where he said that whether an invention was obvious was something which must be considered technically or practically rather than commercially. Commercial success might be relevant if it was due to the precise improvement which satisfied the long-felt want, but not if it was due to things such as appearance, get-up, price, marketing strategies or advertising campaigns. This was confirmed by Lord Nicholls V-C in *Mölnlycke AB v Procter & Gamble Ltd (No 5)*,<sup>163</sup> where he said that secondary evidence such as that relating to commercial success had a place, but its importance or weight would vary from case to case. The complexity and routine of such evidence must not allow it to obscure the fact that it is no more than an aid in assessing the primary evidence.

<sup>162</sup> [1990] RPC 498.

<sup>163</sup> [1994] RPC 49.

Laddie J cast further doubt on the utility of commercial success being used to suggest inventiveness in *Raychem Corp's Patents*,<sup>164</sup> at first instance, in which he said that commercial success was rarely an indicator of non-obviousness. It would, in many cases, be very difficult to demonstrate the necessary causal link and it may be the result of other factors such as improved marketing. He then criticised the practice of pleading commercial success saying that normally it only adds time and expense to the proceedings and serves no useful purpose. However, in that case, the evidence that commercial success resulted from non-obviousness was very weak. Of course, the court should always be wary of being seduced by evidence that the invention has been very successful but it can be useful if it is accompanied by evidence of a long-felt want.<sup>165</sup> But, even then, other factors such as marketing effort must also be considered. Nevertheless, if a patentee, whose patent is under attack for lack of inventive step, is confident that he can show at least an arguable case that commercial success is the result of the invention being non-obvious, he would be foolish not to put in such evidence. As the consequences of a finding of invalidity can be dire for the patentee, the court should be slow to criticise a patentee for doing what he can to protect his patent from attack.

<sup>164</sup> [1998] RPC 31. The patents were held to be invalid. The proprietor's appeal to the Court of Appeal was dismissed: *Raychem Corp's Patents* [1999] RPC 497.

<sup>165</sup> Where the prior art is available only a short time before the priority date of the patent, commercial success is not applicable: *BSH Industries Ltd's Patents* [1995] RPC 183. Presumably, this is because of an absence in such circumstances of a long-felt want.

Laddie J gave further thought to the utility of commercial success as an indicator of non-obviousness in *Haberman v Jackel International Ltd*.<sup>166</sup> The invention was for a spill-proof training cup for young children. It was very successful, annual sales reaching a peak of nearly 2 million. Although it is possible to make large profits by using effective marketing to sell a non-inventive product, Laddie J set out a list of nine factors, which he admitted was not an exhaustive list. These factors pointed one way or another in determining whether there was an inventive step and included:

<sup>166</sup> [1999] FSR 683.

- 1 The problem addressed by the claimed invention.
- 2 The period of time that problem had existed.
- 3 The significance of the problem.

- 4 How widely known the problem was and how many were likely to have been seeking a solution.
- 5 The prior art known to those seeking a solution.
- 6 Alternative solutions put forward before the publication of the patent.
- 7 What, if any, factors may have held back exploitation of the solution even if it was technically obvious?
- 8 How well was the patentee's development received?
- 9 The extent to which it could be shown that the commercial success was due to the technical merits of the development because it solves a problem.

Success should not be taken into account if due to other factors such as the commercial power of the patentee or licensee, extensive advertising directed at features which had nothing to do with the development, branding and other technical features. In the present case, Laddie J considered the remarkable commercial success of the invention helpful. There had been a long-felt want as the problem had existed for a long time and there had been many attempts to make spill-proof training cups. The present invention was a simple but very effective solution and represented a step that anyone in the industry could have made in the preceding ten years. Against that background, there was an inventive step. Where there are numerous attempts to find a solution to a known problem and those developed before the claimed invention are significantly inferior to it as a solution to the problem, this fact is almost conclusive of non-obviousness.<sup>167</sup> If the claimed invention is a significant commercial success, this reinforces that view. Of course, the emphasis must be on whether the claimed invention was technically obvious rather than whether it was a commercial success, but the latter can be a good pointer to the former if analysed sensibly and in context in the manner suggested by Laddie J.

The words of the statutory provision are what are important and it is too easy to become influenced by paraphrases and linguistics. Sometimes commercial success may be a helpful pointer to inventiveness. In other cases, it may be obvious to try to make the invention. Such formulae on their own rarely provide the answer. At the end of the day, it is the nature of the alleged invention that is important.<sup>168</sup>

The fact that it would be relatively inexpensive to experiment and to make prototypes is another point in favour of a finding of non-obviousness, especially when the problem that the invention sought to solve had existed for some time. So it was held in *Mölnlycke AB v Procter & Gamble Ltd*.<sup>169</sup> It was argued that the claimant's dedicated fastening surface used for refastenable disposable nappies was obvious. The court disagreed because there had been an increasing need for multiple taping over a number of years and, had the idea been obvious, it would have occurred to someone much sooner, especially as it would cost very little to make prototypes. The invention was not obvious even though some of the defendant's employees had the same idea before or at around the same time. The fact that a competitor has had the same idea does not affect the state of the art unless the competitor makes it available to the public or files a patent application in respect of it.

If an invention takes a long time to conceive, that itself suggests that it is non-obvious.<sup>170</sup> Again, however, evidence of the length of time to find a solution can never be conclusive because researchers may work for years and still miss the obvious.<sup>171</sup> Neither does taking a commercial decision to pursue a series of experiments in the hope of finding a solution to a problem constitute an inventive step. In *Biogen Inc v Medeva plc*<sup>172</sup> the claimant embarked upon a series of experiments using known methods to find recombinant DNA molecules. Others knew that this approach might have worked, but had dismissed it as too unlikely to succeed to have been worthwhile. Hobhouse LJ made a useful analogy with placing a bet on a horse that appears to most to have little

<sup>167</sup> See also Laddie J in *Pfizer Ltd's Patent* [2001] FSR 201 at 244 and *Parks-Cramer Co v GW Thornton & Sons Ltd* [1966] RPC 407, discussed below.

<sup>168</sup> Per Jacob LJ in *Angiotech Pharmaceuticals Inc v Conor Medsystems Inc* [2007] RPC 487 at para 45. An appeal to the House of Lords against the Court of Appeal decision that the specification must demonstrate that the invention worked and why it worked was successful: *Conor Medsystems Inc v Angiotech Pharmaceuticals Inc* [2008] UKHL 49.

<sup>169</sup> [1992] FSR 549; appeal dismissed: see [1994] RPC 49.

<sup>170</sup> Despite *dicta* suggesting the contrary per Tomlin J in *Samuel Parks & Co Ltd v Cocker Brothers Ltd* (1929) 46 RPC 24 at 248.

<sup>171</sup> Per Aldous J in *Chiron Corp v Organon Teknika Ltd (No 3)* [1994] FSR 202 at 224.

<sup>172</sup> [1995] RPC 25.

chance of winning a race. If the horse then wins, the gambler cannot be said to have invented a way of picking winners.<sup>173</sup>

It is not clear whether, if the notional skilled worker would perceive a significant risk of failure in pursuing a line of research, this implies that it is non-obvious to pursue that line of research. In *Pfizer Ltd's Patent*,<sup>174</sup> the proprietor suggested that other workers in the field would have been put off trying to develop an oral treatment for male impotency because of fears that any such treatment could be life-threatening. This was described by Laddie J as a lurid fear likely to obscure the issues. He said that the risk was one of failing to get the drug through the extensive and careful testing and clinical trials needed before a licence would be granted to administer the drug to patients rather than one of killing patients. Therefore, the notional skilled worker would not be deterred from finding a solution involving an oral treatment and this pointed to obviousness.

Some claimed inventions could be described as being no more than a general desideratum which skilled persons would aspire to. For example, in Case T389/99 *HITACHI/Electrostatic recorder and electrostatic latent image measuring instrument*,<sup>175</sup> the Technical Board of Appeal of the EPO held that higher accuracy in printing process control was such a general desideratum which did not imply an inventive step, *per se*. Furthermore, in Case T455/91 *GENENTECH/Expression in yeast*,<sup>176</sup> the Technical Board of Appeal said that it is the normal task of the skilled person to be constantly seeking the elimination of deficiencies, overcoming drawbacks and achieving improvements to known devices. Such matters can be described as 'workshop variations' generally regarded as unpatentable in the UK.

The invention may be the application of well-known technology to a particular problem, usually a new problem or an old one that has escaped attempts to solve it. Although novelty may be in issue, a second use of existing technology for a new purpose may still be acceptable on this point; but more importantly the question of obviousness will be raised. Consideration of the magnitude of the problem and whether there have been many attempts to find a solution in the past, all of which have proved to be unsuccessful, will provide a useful rule of thumb. If such is the case, it can be presumed that the invention is not obvious, and again the commercial success of the invention can prove to be a helpful factor in deciding obviousness. In *Parks-Cramer Co v GW Thornton & Sons Ltd*,<sup>177</sup> the invention was for a method of cleaning floors between rows of textile machines. There had been many attempts to find a satisfactory solution but none of them, unlike the present invention, actually worked. All the invention consisted of was an overhead vacuum cleaner which moved automatically up and down the rows between the machines. But attached to the cleaners were long vertical tubes, reaching almost to the floor. In the High Court, the trial judge considered that the patent was invalid because it was obvious. He said that it was common knowledge to every competent housewife that dust could be removed from a floor by the passage of a vacuum cleaner.<sup>178</sup> However, the Court of Appeal held that the patent was valid. The many unsuccessful attempts by inventors to find a solution and the immediate commercial success of the invention denied the possibility of a finding of obviousness. Diplock LJ said:

As in all other cases of obviousness, the question is one of degree. There may be an inventive step in recognising that a problem exists at all; but given a problem which is known to exist which it is the object of the invention to solve, the question always is: 'Is the solution claimed by the patentee one which would have occurred to everyone of ordinary intelligence and acquaintance with the subject matter of the patent who gave his mind to the problem?'<sup>179</sup>

The claimant was granted an injunction and an order was made for the delivery up or destruction of the infringing articles.

<sup>173</sup> The House of Lords found the claimed invention to be too broad and to be invalid for insufficiency: *Biogen Inc v Medeva plc* [1997] RPC 1.

<sup>174</sup> [2001] FSR 201.

<sup>175</sup> 6 December 2000.

<sup>176</sup> [1996] EPOR 85.

<sup>177</sup> [1966] RPC 407.

<sup>178</sup> Perhaps the judge should have used the term 'houseperson' instead.

<sup>179</sup> [1966] RPC 407 at 418.

The courts have to draw a line somewhere when it comes to new uses of old technology and the question of obviousness. There must be a sufficient inventive step. Merely taking two older inventions and sticking them together will not necessarily be regarded as an inventive step. It is all a question of degree, and it is difficult to lay down hard and fast rules. For example, in *Williams v Nye*,<sup>180</sup> Williams took out a patent for an improved mincing machine made up from a combination of two old machines: a mincing machine and a filling machine. What he did was to take the cutter from one machine and simply replace it with the cutter from the other machine. When the claimant sued the defendant for infringement of the patent, the defendant claimed that the patent was invalid, and this claim was successful because it was held that there was insufficient invention. However, the court accepted that a slight alteration might produce important results and be the result of great ingenuity. Cotton LJ said:

... in order to maintain a patent there must be a substantial exercise of the inventive power or inventive faculty. Sometimes very slight alterations will produce very important results, and there may be in those very slight alterations very great ingenuity exercised or shown to be exercised by the Patentee.

Therefore, there seems to be a fine line drawn between what does and what does not constitute an inventive step. Even if the inventiveness appears at first sight trivial, the utility of the new invention and whether it is a significant improvement in the state of the art should be considered. Also one has to ask the obvious question: Why did nobody else do it before? After all, many of the most successful inventions seem, in retrospect, to be very simple, but simplicity should not be confused with obviousness.

It may be well known that you could combine two things, but nobody has thought to do it, perhaps because of technical prejudice. In *Petra Fischer's Application*,<sup>181</sup> the alleged invention was putting a diesel engine into a cabriolet car. The fact that those skilled in the art have been prejudiced against doing that does not mean that it is inventive. The alleged invention taught nothing new as the skilled man knew it was possible to put a diesel engine into a cabriolet car even though he did not think it was worth doing, for example, because of the problem of vibration of such an engine in a less rigid body shell or because he did not think it would sell. Reasons such as these were why it had not been done before – it had nothing to do with inventiveness.

Scientific prejudice may also be a factor. In *Ancare New Zealand Ltd's Patent*,<sup>182</sup> the patent in question was for a combination of two compounds, one for treating animals against tapeworm, the other for treating animals against roundworm. At the time of the application, a leading expert had written a paper to the effect that treating lambs for tapeworm was not worth doing as no harm was caused and, eventually, sheep develop a natural immunity to tapeworm. Nevertheless, many farmers did treat lambs for tapeworm. It was claimed that the inventive step was to stand out against the then received scientific wisdom to show that it was sensible to treat lambs for both tapeworm and roundworm: having the idea of combining treatment for both tapeworm and roundworm. Research carried out after the priority date of the patent did indeed show that tapeworm were deleterious to the health of lambs. The Privy Council confirmed that the patent was invalid for lack of inventive step otherwise '... anyone who adopted an obvious method of doing something which was widely practised but which best scientific opinion thought was pointless could obtain a patent'.<sup>183</sup> However, overcoming an existing prejudice can, in the right circumstances, involve an inventive step.<sup>184</sup> The issue is whether the prejudice is so great that overcoming it is inventive. In some cases the idea underlying the invention may be part of the state of the art as will be the prejudice that it will not work or would not be practicable. As Jacob LJ said in *Pozzoli SpA v BDMO SA*:<sup>185</sup>

180 (1890) 7 RPC 62.

181 [1997] RPC 899.

182 [2003] RPC 139, on appeal from the Court of Appeal of New Zealand.

183 Per Lord Hoffmann at para 16.

184 *Ivax Pharmaceuticals UK Ltd v Akzo Nobel BV* [2007] RPC 45.

185 [2007] FSR 872 at para 27.

A patentee who contributes something new by showing that, contrary to the mistaken prejudice, the idea will work or is practical has shown something new. He has shown that an apparent ‘lion in the path’ is merely a paper tiger. Then his contribution is novel and non-obvious and he deserves his patent.

If an invention turns out to possess some advantage unforeseen before the priority date of a patent, that might not displace a finding of obviousness based on the prior art. In *Degussa-Huls SA v Comptroller-General of Patents*,<sup>186</sup> the prior art included a method of compressing materials for ease of packaging. It was later found that advantageous and surprising results were achieved using a different compound. Pumfrey J confirmed the hearing officer’s view that the invention lacked inventive step, saying (at para 29):

186 [2005] RPC 703.

Evidence of unforeseeable advantage cannot displace a finding of obviousness if the finding of obviousness proceeds upon the suggestion that the invention is obvious for reasons which have nothing to do with the unforeseeable advantages which are said to have been obtained.

Putting two inventions together to create a new inventive concept is sometimes described as a collocation, which comes from the judgment of Lord Tomlin in *British Celanese Ltd v Courtaulds Ltd*<sup>187</sup> where he said (at p 193):

187 (1935) 52 RPC 171.

... a mere placing side by side of old integers so that each performs its own proper function independently of any of the others is not a patentable combination, but that where the old integers when placed together have some working interrelation producing a new or improved result then there is patentable subject-matter in the idea of a working interrelation brought about by the collocation of those integers.

In *Sabaf SpA v Meneghetti SpA*,<sup>188</sup> the alleged invention was to combine a low profile burner for a gas hob which drew air from above which was mixed with gas in a lower radial chamber by means of a venturi effect. This made it possible to manufacture shallow gas hobs, considered to be very desirable in modern kitchens. At first instance, Laddie J referred to an approach based on collocation but said that he was dealing with two inventions as each had no real effect upon the other. The Court of Appeal overturned his decision on the basis that Laddie J did not fully apply the *Windsurfing* test and that he applied what was described as the law of collocation; and the Court of Appeal held that the patent was valid.

188 [2005] RPC 209.

The House of Lords disagreed with the Court of Appeal and agreed with Laddie J, though their Lordships confirmed that there was no law of collocation ‘... in the sense of a qualification of, or gloss upon, or exception to, the test of obviousness in s 3’. Lord Hoffmann said that, before you could apply s 3, you had to determine what the invention was and, in particular in such cases, whether you are dealing with one invention or two inventions and that two inventions do not become one simply because they are included in the same hardware. An example was given of a car made up of numerous parts, many of which could be described as inventions but operating independently of each other. This would not make the car itself a single invention. Support for Lord Hoffmann’s view was provided by s 14(5)(d) which requires that a claim relate to an invention or a group of inventions so linked as to form a single inventive concept. This suggests that references to an invention are to a single inventive concept and not to a collocation of separate inventions.

## Tests for inventive step

Oliver LJ postulated a test for obviousness in *Windsurfing International Inc v Tabur Marine (Great Britain) Ltd*,<sup>189</sup> being:

189 [1985] RPC 59 at 73.

**190** This does not require the court to substitute its own language for that of the patentee, where the latter is clear. In many cases, a claim will state the inventive concept concisely: *Union Carbide Corp v BP Chemicals Ltd* [1999] RPC 409 at 424 per Aldous LJ.

**191** See *Mölnlycke AB v Procter & Gamble Ltd (No 5)* [1994] RPC 49. For a good example of the test in use, see Balcombe LJ in *Optical Coating Laboratories Inc v Pilkington PE Ltd* [1995] RPC 145 at 163. In *Palmaz's European Patents (UK)* [2000] RPC 631, Aldous LJ said that he remained of the view that the best way to arrive at the right conclusion as to inventive step was to adopt the structured approach in *Windsurfing*.

**192** [2001] RPC 133.

**193** [1999] RPC 497.

**194** [1995] RPC 287. See also [1995] FSR 116 in which the judgment of the court is reported as being given by Neill LJ rather than Millett LJ.

**195** The principles were first enunciated in *Mölnlycke AB v Procter & Gamble Ltd (No 5)* [1994] RPC 49, but Millett LJ's description is clearer.

**196** Excluding the *Windsurfing* test, presumably.

- 1 Identify the inventive concept embodied in the patent in suit.<sup>190</sup>
- 2 The court then assumes the mantle of the normally skilled but unimaginative addressee in the art at the priority date, imputing to him what was, at that date, common general knowledge in the art in question.
- 3 Identify what, if any, differences exist between the matter cited as being 'known and used' and the alleged invention.
- 4 The court then asks itself the question whether, viewed without any knowledge of the alleged invention, those differences constitute steps which would have been obvious to the skilled man or whether they require any degree of invention.

Although *Windsurfing* involved a patent under the 1949 Act, the above test has been approved and applied on numerous occasions ever since.<sup>191</sup> The test has become so ingrained that failure of the judge to apply it to the question of obviousness was seen as a ground of appeal. For example, in *Davina Wheatley v Drillsafe Ltd*,<sup>192</sup> the patent related to a machine and method for cutting threaded holes in tanks containing liquids such as petrol. Ferris J, at first instance, decided that the invention was obvious without using the *Windsurfing* test. In the Court of Appeal, Aldous LJ accepted that the judge failed to distinguish between what was known and what formed part of the common general knowledge and he said that he suspected that this was because he failed to adopt the structured approach in *Windsurfing*. The Court of Appeal found that the patent was valid. In *Raychem Corp's Patents*,<sup>193</sup> Laddie J found that the inventions relating to positive temperature coefficient material were obvious without using the *Windsurfing* approach. On appeal, Aldous LJ disagreed with counsel's submission that Laddie J was wrong and, for the avoidance of similar criticism and applying the *Windsurfing* test, confirmed that the patents were invalid for lack of inventive step.

The *Windsurfing* test does not modify or supplement the statutory provision; it merely affords a structured way of assessing whether the requirement of inventive step has been satisfied. In *PLG Research Ltd v Ardon International Ltd*<sup>194</sup> the Court of Appeal confirmed that patents for heavy-duty plastic netting made by stretching sheets of perforated plastic were non-obvious, reversing the decision of Aldous J in the Patents Court on this point. Millett LJ neatly summarised the principles to be adopted in terms of obviousness:<sup>195</sup>

- 1 The criterion for determining whether the claimed invention involves an inventive step is wholly objective and is defined in s 3 of the 1977 Act;
- 2 The test is qualitative, not quantitative, and paraphrasing the statutory test in other cases does not assist;<sup>196</sup>
- 3 The court must make findings of fact as to the state of the art at the priority date and, in the light of that, decide whether the invention was obvious to the skilled person;
- 4 Assessment of obviousness with hindsight must be avoided;
- 5 Where the validity of a patent is being attacked on the basis of lack of inventive step the burden of proof lies on the person making the attack to show that the invention did not involve an inventive step;
- 6 The *Windsurfing* test continues to be of assistance.

Millett LJ went on (at 313):

The value of [the *Windsurfing*] analysis is not that it alters the critical question; it remains the question posed by the Act. But it enables the fact-finding tribunal to approach the question in a structured way.

The danger of falling into the trap of applying hindsight is particularly present where the invention is already known to the court, especially where the invention operates in accordance with some simple principles of physics, chemistry or other sciences. This

was pointed out by Laddie J in *Haberman v Jackel International Ltd*,<sup>197</sup> where he said of such inventions (at 698):

It is normally easy to understand how they work. From this it is but a short step to thinking that a competent technician in the art would have realised, starting from the same simple principles, why the solution proposed by the patentee should have worked . . . the simpler the solution, the easier it is to explain. The easier it is to explain, the more obvious it can appear. This is not always fair to inventors.

Almost invariably a court, faced with the task of deciding whether an invention involves an inventive step, will adopt the *Windsurfing* test.<sup>198</sup> It is not essential that it is used.<sup>199</sup> It is helpful rather than essential but may help avoid the danger of hindsight.<sup>200</sup> However, in spite of the popularity of the test amongst judges, there is at least an arguable case as to whether it ought to be used at all. The statutory provision seems straightforward and requires a one-step test only: that is, whether the invention is not obvious to a person skilled in the art.<sup>201</sup> There is a danger, in breaking this down, that artificiality will be introduced which might distort the test. A simpler formulation is to ask whether, from the point of view of a person who had total knowledge of the state of the art, the invention was obvious at its priority date. It goes without saying that the person concerned cannot be endowed with inventive faculties, otherwise not a single patent would ever be granted again. It is notable that the Boards of Appeal in the EPO do not appear to have adopted a structured approach to determining whether an inventive step is present as have the UK courts. The approach there to Article 56 of the EPC, the provision equivalent to that under the UK Act, seems to be a more straightforward application of the accepted state of the art to the statutory test, being whether, having regard to the state of the art, the invention is not obvious to a person skilled in the art. For these purposes, the closest prior art for the purpose of objectively assessing inventive step is generally that which corresponds to the same or a similar use as the claimed invention and, at the same time, that which requires the minimum of structural and functional modifications to arrive at the claimed invention.<sup>202</sup> Workshop improvements, increases in speed, accuracy or definition do not generally result from an inventive step as even unimaginative persons skilled in the art seek such goals. This does not mean, however, that such improvements can never be the subject of a patent as it may be that those skilled in the art had attempted for some time to make such improvements but had met with little or no success.

Perhaps English judges feel that the *Windsurfing* test prevents subjectivity, being too easily influenced by the evidence and applying hindsight. As Neuberger J said in *DSM NV's Patent*<sup>203</sup> (at para 58):

I suppose that it can be said that this fourth stage approach really involves ending back up where one started, namely with the original issue, embodied in the fourth question. However, I believe that it is appropriate to apply this four stage approach . . . it ensures that one does not go straight to the question of obviousness by reference to a general impression as to the evidence as a whole. By adopting the structured approach, one ensures that there is a measure of discipline, reasoning and method in one's approach.

The structured approach in the *Windsurfing* test appears to be here to stay, although failure to use it is not fatal, providing the judge applies the statutory test correctly.<sup>204</sup> What can be said is that use of the test helps overcome subjectivity and falling into the error of using hindsight. It has to be said, however, that there are very few examples of judges not referring to the test and those that fail to apply the test may be guilty of leaving a hostage to fortune. The main danger in using the test is that it may put a gloss upon the statutory test that could cause a judge to lose sight of the question posed by s 3. Another difficulty is that, in a case where a judge has already decided that an invention is anticipated by the prior art, the application of step 3 of *Windsurfing* results in no

<sup>197</sup> [1999] FSR 683.

<sup>198</sup> Even then, a judge might fail to adopt the mantle of the skilled person and also fall into the danger of adopting a classic *ex post facto* analysis in applying the fourth part of *Windsurfing*: see, for example, *Panduit Corp v Band-It Co Ltd* [2003] FSR 127 where this criticism was made by the Court of Appeal of the trial judge's application of *Windsurfing*.

<sup>199</sup> See, for example, *David J Instance Ltd v Denny Bros Printing* [2002] RPC 321 and *Merck & Co Inc's Patent* [2004] FSR 330.

<sup>200</sup> *Research in Motion UK Ltd v Inpro Licensing Sarl* [2007] EWCA Civ 51.

<sup>201</sup> The Patents Act 1977 s 3 goes on to define what matter is to be taken as part of the state of the art.

<sup>202</sup> Case T922/98 *MERCK/Antihypertensive combination*, 16 March 2001.

<sup>203</sup> [2001] RPC 675.

<sup>204</sup> *David J Instance Ltd v Denny Bros Printing Ltd* [2002] RPC 321. See also *Sabaf SpA v Meneghetti SpA* [2005] RPC 209 where Lord Hoffmann referred to the Court of Appeal being upset by the fact that the trial judge failed to apply *Windsurfing*.

205 This was a criticism of Laddie J at first instance by the Court of Appeal in *Technip France SA's Patent* [2004] RPC 919 at para 114.

differences and results in a premature conclusion of obviousness.<sup>205</sup> But novelty and inventive step are two independent tests and a finding of lack of novelty by the judge, which will often be based on his view of the scope and extent of the prior art coloured by the evidence of expert witnesses, should not automatically determine obviousness.

Incredibly, the House of Lords has not had an opportunity to confirm whether or not the *Windsurfing* test is appropriate and should be used. The author's view is that a stepwise approach to what is, in essence, a single question can increase the danger of misconstruing what s 3 requires as is evidenced by the numerous appeals based on inventive step.

One exception where the structured approach of Oliver LJ in *Windsurfing* might not be appropriate is in relation to a selection patent. This is implicit in the judgment of Aldous LJ in *Lubrizol Corp v Esso Petroleum Co Ltd*,<sup>206</sup> although in that case, after deciding that the patent was not a selection patent, he went on to apply the *Windsurfing* test. A selection patent is one where 'the inventive step lies in the discovery that one or more members of a previously known class of products possesses some special advantage for a particular purpose, which could not be predicted before the discovery was made.'<sup>207</sup> Another possible exception to the usefulness of the *Windsurfing* test is where the issue lies on the boundary of anticipation and obviousness.<sup>208</sup>

Finally, it is important to bear in mind the philosophy behind the doctrine of obviousness, which is, according to Millett LJ in *PLG Research* (at 313):

... that the public should not be prevented from doing anything which was merely an obvious extension or workshop variation of what was already known at the priority date.

Simple variants of existing inventions will be unlikely to be patentable. Something else is needed, and this could be described as the inventor's genius in thinking of something which others have not yet been able to conceptualise.

In *Pozzoli SpA v BDMO SA*,<sup>209</sup> Jacob LJ suggested that the *Windsurfing* test would be better restated as follows:

- 1 (a) Identify the notional 'person skilled in the art';  
(b) Identify the relevant common general knowledge of that person;
- 2 Identify the inventive concept of the claim in question or, if that cannot readily be done, construe it;
- 3 Identify what, if any, differences exist between the matter cited as forming part of the 'state of the art' and the inventive concept of the claim or the claim as construed;
- 4 Viewed without any knowledge of the alleged invention as claimed, do those differences constitute steps which would have been obvious to the person skilled in the art or do they require a degree of invention?

This is a useful reformulation which makes the test easier to understand and apply. Some of the wording in the test as set out by Oliver LJ derives from the Patents Act 1949, for example, 'known and used' whereas the 1977 Act uses 'state of the art'. It is also preferable to change the order of the first two steps considering 'mantle first then concept'. The reformulation is welcome yet does not alter the essence of the test. Jacob LJ's version seems to have quickly established itself: see, for example, *Aerotel Ltd v Wavecrest Group Enterprises Ltd*<sup>210</sup> and *Dyson Technology Ltd v Samsung Gwangju Electronics Co Ltd*.<sup>211</sup> However, although the test is relatively easy to describe, it can be difficult to apply. In *Virgin Atlantic Airways Ltd v Premium Aircraft Interiors Group Ltd*,<sup>212</sup> Lewison J said (at para 271) that one reason for this was that:

... at the third stage ... it is necessary to focus on the differences between the prior art and the patent in suit; but at the immediately succeeding fourth stage it is necessary to erase all knowledge of the alleged invention from the mind. That is not an easy task. Another [reason] is that where the skilled addressee is (or is a team that includes) a designer, to approach the

prior art through the mind of an unimaginative designer is unreal. An unimaginative designer would soon be out of a job.

## INDUSTRIAL APPLICATION

Another requirement is that the invention is capable of industrial application. This requirement demonstrates the practical nature of patent law, which requires that the invention should be something which can be made industrially or relate to an industrial process.<sup>213</sup> An application for a patent that depends upon the use of hitherto undiscovered materials in its manufacture would be refused.<sup>214</sup> The invention has to be something that can be worked industrially, and to some extent this requirement distinguishes patents from other forms of intellectual property such as original works of copyright. It confirms the difference between ‘industrial property’ and copyright.

The notion of ‘industry’ must be construed broadly. In *Eli Lilly & Co v Human Genome Sciences Inc*,<sup>215</sup> Kichen J summarized the position (at para 226) by saying that:

It includes all manufacturing, extracting and processing activities of enterprises that are carried out continuously, independently and for commercial gain . . . However, it need not necessarily be conducted for profit . . . and a product which is shown to be useful to cure a rare or orphan disease may be considered capable of industrial application even if it is not intended for use in any trade at all . . . Conversely, the requirement will not be satisfied if what is described is merely an interesting research result that might yield a yet to be identified industrial application

Under s 4(1) an invention is capable of industrial application if it can be made or used in any kind of industry, including agriculture.<sup>216</sup> Before the 1977 Act, the requirement equivalent to industrial application came from the phrase ‘manner of new manufacture’,<sup>217</sup> but it is no easy task to tell whether the change in phraseology makes any difference when it can strongly be argued that the requirement that the invention is capable of industrial application is totally unnecessary, especially when the exceptions contained in s 1(2) (discussed below, see pp 446–50) are considered, as these exceptions probably account for anything which might not have industrial application.<sup>218</sup> Otherwise, lack of industrial application may be relevant if the invention as claimed simply does not work. This may be analogous to the provisions relating to inutility in the 1949 Act.<sup>219</sup>

There have been relatively few cases where the question of industrial application was at issue.<sup>220</sup> One example under the 1949 Act, where the phrase used was ‘manner of manufacture’, was *Hiller’s Application*.<sup>221</sup> An application for a patent for an improved plan for underground service distribution schemes for housing estates was turned down. The scheme involved the location of gas and water mains, electricity cables and storm and foul water drains. The alleged novelty lay in the idea of locating the main supply route alongside the road rather than underneath it, with branches passing under the road at intervals serving adjacent houses. The appeal to the Patent Appeal Tribunal was turned down by Lloyd-Jacob J who said that the scheme could not constitute a ‘manner of manufacture’. He did not need to trouble himself to go on to consider another possibly fatal objection to the application on the ground of lack of novelty. There were other good grounds why the application should have been refused which were not really considered in the judgment, not the least being that it would give a disproportionate monopoly which would be certain to restrict the freedom of providers of public utilities. Finally, the scheme lacked an inventive step, being obvious and representing no more than good practice in the construction industry.

Another example of a refusal because the invention did not represent a new manner of manufacture was *C’s Application*,<sup>222</sup> in which an application in respect of an invention

<sup>213</sup> Under the Patents Act 1977 s 4(1) ‘industry’ includes agriculture.

<sup>214</sup> Under the Patents Act 1949, a patent could be invalidated on the grounds of inutility: s 32(1)(g).

<sup>215</sup> [2008] EWHC 1903 (Pat).

<sup>216</sup> Almost identical to the requirement in Article 57 of the European Patent Convention.

<sup>217</sup> For example, Patents Act 1949 s 101(1).

<sup>218</sup> However, the exception of surgery, therapy and diagnosis from industrial application is important.

<sup>219</sup> Patents Act 1949 s 32(1)(g).

<sup>220</sup> For a more recent example, where it was argued, unsuccessfully, that not all the products claimed had a use, see *Chiron Corp v Organon Teknika Ltd (No 3)* [1994] FSR 202. The defendant also raised a number of other defences, including the s 44 defence which was successful. (Note that s 44 was repealed by the Competition Act 1998.)

<sup>221</sup> 194 [1969] RPC 267.

<sup>222</sup> (1920) 37 RPC 247.

223 [1969] RPC 646.

comprising a musical notation, in which sharps and flats were printed in different colours and sizes compared to natural notes, was refused. However, in *Pitman's Application*,<sup>223</sup> an application for a patent for an improved method of teaching pronunciation was allowed. The method involved visually conveying inflection and stress by using upper and lower case print and by the vertical displacement of the letters in relation to a median line. The arrangement was in the form of a printed sheet, but the patent specification referred to the use of the sheet in conjunction with a reading machine. The invention possessed a definite mechanical purpose when considered together with the reading machine and was not simply a literary or intellectual arrangement of matter. In this way, the case is distinguishable from *C's Application*.

224 [1996] RPC 535.

Industrial application may be in issue where a range of substances is claimed and it is argued that some do not do what is claimed. In *Chiron Corp v Murex Diagnostics Ltd*,<sup>224</sup> a range of polypeptides encoded by a genome of hepatitis C virus was claimed. The defendant in an infringement action challenged the validity of the patent on the basis, *inter alia*, that the invention was not capable of industrial application because the claim included polypeptides unconnected with hepatitis C virus. These polypeptides had no conceivable use. At first instance, Aldous J held that the patent was capable of industrial application. He said (at 575):

Although the range of polypeptides falling within the claims . . . may be large, there is no evidence to suggest that once the sequence is known they could not be made by industry.

225 A phrase used by Lord Shaw of Dunfermline in *British Thomson-Houston Co Ltd v Corona Lamp Works Ltd* (1922) 39 RPC 49 at 89.

The defendant appealed, claiming that Aldous J was wrong to substitute the word 'by' for 'in', arguing that the correct question was whether the invention could be made or used *in* industry not *by* industry. The defendant submitted that there was no industry in making the useless. The claimant argued that the defendant's objection was merely 'a puzzle at the edge of the claim'.<sup>225</sup> Whilst what was claimed must have some practical use, a claim in respect of practical things is not invalidated by the inclusion at the edge of the claim of something for which there is no present or foreseeable use. The Court of Appeal was unimpressed by that argument and Morritt LJ said (at 607):

We accept that the polypeptides claimed . . . can be made . . . [but it is required] that the invention can be made or used 'in any kind of industry' so as to be 'capable' or 'susceptible of industrial application' . . . the manifest intention of the Patents Act 1977 and the European Patent Convention [is] that monopoly rights should be confined to that which has some useful purpose . . . the judge fell into error by giving the sections too literal a construction and in considering what can be made and used by industry rather than what can be made and used in any kind of industry.<sup>226</sup>

226 However, Morritt LJ used the phrase 'made *and* used in any kind of industry' when the statutory test uses the phrase 'made *or* used in any kind of industry' (emphasis added).

227 See, for example, *May & Baker Ltd v Boots Pure Drug Co Ltd* (1950) 67 RPC 23.

228 The phrase 'technical effect' derives from case law; it is not taken from the Patents Act 1977.

As a result, the court held that part of the relevant claim was invalid. Of course, in such a case where a range or class of products is claimed, it may be possible to amend the specification to eliminate those incapable of being made or not having the claimed effect.<sup>227</sup>

Industrial application can be equated with *technical effect*,<sup>228</sup> and if there is some technical effect, that is if the use or working of the invention produces some tangible and physical consequences or if the invention is itself a physical entity (as opposed to information), then the requirement should be met. Technical effect is important when considering the scope of the exceptions to patent protection contained in s 1(2) of the 1977 Act which is discussed below.

229 *Blacklight Power Inc v Comptroller General of Patents* [2008] EWHC 2763 (Pat).

The UKIPO routinely refuses claims to perpetual motion machines on the basis of lack of industrial application. The same principles apply to inventions based on theories which may appear to fly in the face of accepted science. However, the correct test is whether the evidence adduced by the applicant gives rise to any reasonable prospect that the theory in question might turn out to be correct.<sup>229</sup> Many theories, when first postulated, might seem improbable if not impossible, in terms of the contemporary scientific beliefs and accepted standards and theories.

## EXCLUSIONS FROM PATENTABILITY

One form of exclusion has already been described. The treatment, by surgery or therapy, or diagnosis in relation to human and animal bodies is excluded, previously on the basis that such forms of treatment were not considered to be capable of an industrial application.<sup>230</sup> Section 1(2) and (3) of the 1977 Act contains a range of things that are excluded from patentability. While in many cases these exclusions can be justified on the ground of lack of technical effect or technical contribution, in some cases the exclusions are more controversial: for example, in the case of computer programs. The exclusions in s 1(2) can be classified as those necessary because of the nature of the subject matter, either being information orientated, and therefore more appropriately protected by copyright, or being too abstract and removed from immediate industrial application or manufacture. The exclusions in s 1(3) are based on public policy and morality. Further provisions prohibiting the patenting of animal or plant varieties used to be contained in old s 1(3)(b). These have been replaced and significantly modified and are now found in Sch A2 to the 1977 Act which confirms the scope of patentability of biotechnological inventions. These provisions are discussed in the section on biotechnological inventions below.

### EXCLUSIONS IN S 1(2)

The Patents Act 1977 s 1(2) states that anything which consists of the following (amongst other things – the list is not exhaustive) is not an invention for the purposes of the Act:

- (a) a discovery, scientific theory or mathematical method;
- (b) a literary, dramatic, musical or artistic work, or any other aesthetic creation whatsoever;
- (c) a scheme, rule or method for performing any mental act, playing a game or doing business, or a program for a computer;
- (d) the presentation of information.<sup>231</sup>

However, the section goes on to say that ‘the foregoing provision shall prevent anything from being treated as an invention . . . only to the extent that a patent or application for a patent relates to that thing *as such*’ (emphasis added). Herein lies the problem: things in the list are not excluded totally and unequivocally, but only if the patent application is directed towards the excluded thing itself.<sup>232</sup> This has caused some judicial differences in the way s 1(2) has been interpreted, especially in the context of computer programs. Before this is examined in detail, the nature of the other exclusions will be discussed briefly.<sup>233</sup>

That the list of excluded things is not exhaustive does not mean that a whole range of other things can be excluded by adding copiously to the list.<sup>234</sup> It is likely that any additions to the list will be, at least, analogous to those specified in the Act. One example of something added to the list was a method of controlling traffic in *Lux Traffic Controls Ltd v Pike Signals Ltd*.<sup>235</sup>

#### A discovery, scientific theory or mathematical method

The things excepted in this category are the raw materials which are part of the stock-in-trade of scientists, and if previously unknown ones are discovered they should be available to all. But there is another reason why they cannot be patented and that is that, by themselves, they have no technical effect. They have to be applied before there can

<sup>230</sup> Now excluded simply on the basis of not being a patentable invention rather than lacking industrial application under new s 4A.

<sup>231</sup> These exclusions are derived from the European Patent Convention (see Article 52(2) and (3)), but the position is not far removed from earlier UK law because of the requirement that the invention was a ‘manner of manufacture’. This would automatically exclude most of these things anyway.

<sup>232</sup> Thus, theoretically it should be possible to obtain a patent on an industrial application of a scientific theory though not for the theory itself.

<sup>233</sup> The basic principles which have been developed in respect of the patentability of computer programs should also apply to the other excluded materials mentioned in the Patents Act 1977 s 1(2).

<sup>234</sup> *Chiron Corp v Murex Diagnostics Ltd* [1996] RPC 535.

<sup>235</sup> [1993] RPC 107.

be a technical effect and therefore an industrial application. But in common with the other exclusions in s 1(2), these exclusions relate to patent applications for the stated things as such. If a mathematical formula is embodied into a measuring device then that device itself may well be patentable.

236 [1994] FSR 202.

In *Chiron Corp v Organon Teknika Ltd (No 3)*<sup>236</sup> the defendant argued that the claimant's patent sought to monopolise methods of testing blood, based on its discovery of the sequence of hepatitis C virus. However, this was rejected by Aldous J, who confirmed that a claim directed to the technical effect of a discovery may well be patentable. He said (at 239):

Many inventions that are patented arise out of a discovery. However, the section [s 1(2) of the 1977 Act] makes it clear that something further is needed to make that discovery patentable . . . In the present case, the claims are concerned with a technical aspect of the discovery. They are limited to products, kits, methods of testing, vaccines and cell cultures.

237 (1884) 1 RPC 29.

The fact that mathematical theories cannot be patented is not new. In *Young v Rosenthal*,<sup>237</sup> there was an alleged infringement of a patent for improvements in the manufacture of corsets using seams arranged in diagonal patterns in accordance with a mathematical formula. In addressing the jury, Grove J said (at 31):

An invention of an idea or mathematical principle alone, mathematical formula or anything of that sort could not be the subject of a patent. It must be a manufacture, and it must be a manufacture which is new in this realm.

238 Of course, this case long pre-dates the specific exception in the Patents Act 1977 s 1(2).

The jury found that the claimant's invention had been copied by the defendant, but that the patent was invalid because it was neither novel nor useful. However, it is arguable that there is a technical effect.<sup>238</sup> The quote from Grove J confirms the view that there is a large overlap between s 1(2) and (1)(c) (the industrial application requirement) and that one or other is unnecessary.

239 [1987] RPC 553.

The practical application of a discovery might be perfectly obvious once the discovery has been made yet it might still be patentable. In *Genentech Inc's Patent*,<sup>239</sup> involving recombinant DNA technology, Whitford J said at first instance (at 566):

It is trite law that you cannot patent a discovery, but if on the basis of that discovery you can tell people how it can be usefully employed then a patent of invention may result. This in my view would be the case even though once you have made the discovery the way in which it can be usefully employed is obvious enough . . . The language of section 1(2) . . . is apt as an embodiment of this principle of United Kingdom patent law.

240 [1989] RPC 147.

In the subsequent appeal, the Court of Appeal agreed with Whitford J.<sup>240</sup> Dillon LJ said (at 240):

In so far as a patent claims as an invention the practical application of a discovery, the patent does not, in my judgment, relate only to the discovery as such, even if the practical application may be obvious once the discovery has been made, even though unachievable in the absence of discovery.<sup>241</sup>

241 The Court of Appeal again confirmed this approach as being correct in *Re Gale's Patent Application* [1991] RPC 305.

242 [2001] RPC 675.

Similarly, in *DSM NV's Patent*,<sup>242</sup> Neuberger J found that getting from the protein activity of a fungus to a point where the protein gene could be isolated, copied, multiplied and reproduced involved an inventive step and was not an application to obtain a patent on a discovery as such.

243 [1996] RPC 535.

Proprietors of patents do not engage in research aimed at making discoveries simply for the acclaim resulting from their discovery. They do so with a view to developing a practical application of the discovery so that they may exploit it commercially. The scope of the exclusion of discoveries as such from the grant of a patent was reviewed again in *Chiron Corp v Murex Diagnostics Ltd*.<sup>243</sup> The Court of Appeal accepted that *Genentech* and *Gale* represented good law in this respect and yet again approved

Whitford J's statement above. The above principles relating to the patentability of discoveries are very important in the context of genetic engineering where much research is undertaken to discover and isolate genetic sequences and to discover genetic defects causing diseases. As mentioned earlier, the rationale for allowing patents in such areas is to encourage investment in such research and reward the achievement of being able to make something useful that could not be made before.

### A literary, dramatic, musical or artistic work, or any other aesthetic creation whatsoever

These works and creations are plainly the subject matter of copyright law or design law, hence the exclusion. In most cases, these works will not be capable of industrial application and are thus excluded twice over. Copyright law is more suited to these types of works because a patent would give a protection that is too strong. Copyright does not provide a monopoly and the independent creation of similar works is permissible.<sup>244</sup> However, such works could be indirectly patented if they were part of some machine or process: for example, as in *Pitman's Application* discussed above in relation to industrial application.

<sup>244</sup> But a registered design enjoys a monopoly during its life. Furthermore, copyright can confer a monopoly if the owner of the copyright is the only source of the information contained within the work.

### A scheme, rule or method for performing any mental act, playing a game or doing business, or a program for a computer

(Computer programs are discussed separately later in this chapter, see pp 450–67.) It is not possible to stop people thinking or doing mental arithmetic. If a patent were to be granted, say, for a method of mental arithmetic, it would be unenforceable anyway. As far as methods of playing games and doing business are concerned, this means that it is not possible to patent, for example, a new chess opening or a new method of assessing bids for large construction schemes.<sup>245</sup> However, copyright law may protect the expression of the scheme, rule or method and, depending upon the circumstances, the law of confidence could give some protection. The exclusion of methods of doing business is particularly important and there have been a number of examples of patents being refused for inventions caught under this head. For example, in *Case T854/90 IBM/Card reader*,<sup>246</sup> a method whereby a person could use any machine-readable card to perform transactions on automatic self-service machines was refused on the basis that it was a method of doing business, the card being analogous to an application form. The fact that the business activity was effected by technical means did not overcome the objection. Furthermore, it was held that the claimed invention lacked inventive step. However, in *Case T1002/92 PETERSSON/Queuing system*,<sup>247</sup> a system for handling the queuing of customers at service points in a system incorporating a turn-number allocation unit, a selection unit, terminals, an information unit and computing means was held to be patentable. The relevant claim was directed to the functional aspects of the invention and the only function which was arguably a method of doing business was that of the claimed computing means to decide which turn-number was to be served at a particular free service point on the basis of a given rule. However, taking the claim as a whole, this function was inseparably linked to the remaining technical features.

<sup>245</sup> On arithmetic, see *Re Gale's Patent Application* [1991] RPC 305, and on methods of doing business see *Re Merrill Lynch, Pierce Fenner and Smith Inc's Application* [1988] RPC 1 and [1989] RPC 561. Both of these cases are discussed in the section on computer programs below.

<sup>246</sup> [1994] EPOR 89.

<sup>247</sup> [1996] EPOR 1.

Some of the things under this particular exception will not be capable of industrial application anyway (in a direct sense). Unlike most of the other items in this sub-category, computer programs are capable of being applied industrially and are often so used, for example, in controlling industrial processes such as an electronically controlled furnace, in telecommunications, in robotics, in imaging and even to control the operation of the humble washing machine.

248 [2006] RPC 293.

A claim to a lottery game played through the internet was rejected in *Shoppalotto.com Ltd's Patent Application*.<sup>248</sup> The hearing officer at the Patent Office (now UK Intellectual Property Office) held that the application was for a scheme, rule or method of performing a mental act, playing a game or doing business, or a program for a computer or the presentation of information. The appeal was dismissed. Pumfrey J said that the correct approach was to ask whether there was a relevant technical effect, being one over and above 'that to be expected from the mere loading of a program into a computer'. What did the claimed programmed computer invention contribute over and above the fact that it involved a computer program? It would be patentable if there was a contribution not within the subject matter and activities declared to be 'non-inventions' as then it would not be an application for the excluded matter *as such*. He also noted that the list of things or activities excluded from the meaning of invention formed a heterogeneous collection and it was difficult to discern any underlying policy for their inclusion in the list.<sup>249</sup>

249 In *CFPH LLC's Application* [2006] RPC 259 (at para 21), Peter Prescott QC described the list of excepted matter as a 'miscellaneous rag-bag'. Although excluded for policy reasons, they were not all excluded for the same reasons.

250 [2006] RPC 345.

In *Crawford's Patent Application*,<sup>250</sup> a display system designed to prevent bus grouping was also held to be not an invention as it was, *inter alia*, a method of doing business. Kitchen J said that there was a consistent principle that an inventor had to make a contribution to the art, that contribution had to have a technical nature, being susceptible to industrial application and not within one of the areas excluded by Article 52(2) of the EPC. But this ignores the fact that most of the exclusions are there because they are, by their very nature, abstract and lacking industrial application in their pure form. It is the technical application of the excluded matter that overcomes the effect of Article 52(2). It is submitted that the invention in question did overcome a technical problem by technical means and would, in principle, be patentable at the EPO.

251 [2008] EWHC 649 (Pat).

It now seems clear that the mental acts exclusion should be narrowly construed. So held Floyd J in *Kapur v Comptroller General of Patents*,<sup>251</sup> where he accepted that the physical handling and indexing of documents was not a mental act. However, as regards the exclusion, it covered clever mental acts as well as obvious ones.<sup>252</sup>

252 Per Floyd J in *Kapur* at para 35.

## The presentation of information

This is another exception that can be best explained on the ground that it is properly within the scope of copyright or other forms of protection. Information may be presented in numerous ways: for example, by newspapers, television, slide presentation at a conference or by means of internet web pages. In many cases, the information will be protected by copyright or by the database right. In some cases, the information may be imparted in confidence giving rise to an obligation of confidence. What this exemption prevents is the presentation of information, *per se*. A particular means or method of presenting information may be subject to a patent if it otherwise complies with the requirements for patent: for example, a new and inventive visual display system.

253 [2004] EWHC 482 (Pat).

In *Townsend's Patent Application*,<sup>253</sup> the application was in respect of an advent calendar having additional indicia applied to the doors of the calendar so that the 'treats' exposed when opening the doors could be fairly shared out in cases where two or more persons shared the calendar. For example, half the doors could have a male symbol printed on them with the other half having a female symbol so a sister and brother would know when it was their turn to open the door and retrieve the treat behind, such as a chocolate. It was argued that the term 'presentation of information' could mean either the expression of information or the provision of information. The applicant accepted that the exclusion would apply if it meant the provision of information as the purpose of the additional indicia was to provide information, being the identity of the person entitled to open a particular door on the advent calendar. However, he argued that the term actually meant the expression of information and concerned how the

information was provided. Laddie J gave an example of the difference between the two meanings. Marking a door on an advent calendar with ‘only three more shopping days to Christmas’ was the provision of information. Requiring the words to be in a particular font is to stipulate the expression of the information.

Laddie J considered that the answer was simple and that the presentation of information clearly meant providing information. He said that the term used ordinary English words and was unambiguous. Further, it should be construed in the light of the other exclusions in s 1(2) and he noted that in *Fujitsu Limited’s Application*,<sup>254</sup> the Court of Appeal said that the reason for the exclusion of computer programs *as such* was to prevent the patenting of giving instructions or conveying information, *per se*.

254 [1997] RPC 608.

## COMPUTER PROGRAMS

The granting of patents for software inventions has long been a matter of some controversy. An example of this was the rejection by the European Parliament of the proposed Directive on the patentability of computer-implemented inventions on 6 July 2005.<sup>255</sup> This proposal would have allowed the patenting of computer-implemented inventions, defined as any invention ‘... the performance of which involves the use of a computer, a computer network or other programmable apparatus and having one or more *prima facie* novel features which are realised wholly or partly by means of a computer program or computer programs’. The conditions for patentability would have been that the computer-implemented invention was susceptible of industrial application, novel and involved an inventive step by making a technical contribution not obvious to a person skilled in the art. The technical contribution would have been assessed by looking at the difference between the scope of the claim as a whole, which may comprise both technical and non-technical features, and the state of the art.

255 COM (2002) 92 final, 20.02.2002.

Had the proposal been accepted, it could have made it easier to obtain patents for certain software inventions, particularly where the technical contribution was itself something excluded from the grant of a patent, *per se*, such as a method of doing business. One of the reasons for the proposal was that the current provisions relating to the patenting of computer programs are ambiguous and there have been differences between the way the provisions are interpreted, particularly by the Boards of Appeal of the EPO and Member States and between Member States. This is unsatisfactory and can only distort the internal market but it appears that no further action will be taken in the foreseeable future. As the Agreement on Trade Related Aspects of Intellectual Property Rights (‘TRIPs Agreement’) contains no express exception for computer programs from the grant of a patent this is a regrettable state of affairs, particularly when one considers that the US and Japan also have no specific exclusion for computer-implemented inventions and patents for such inventions appear to be much easier to obtain in those countries.

Proponents of open-source software were particularly concerned about the prospects of computer software being tied up by patents owned by large corporations. Copyright protection is, in the views of many, a more appropriate form of protection and does not prevent creation of new software that emulates existing software especially in terms of its underlying logic, objectives and functionality providing none of the acts restricted by copyright are performed. Numerous exceptions to copyright protection for computer programs have prevented copyright becoming the tool by which over-strong monopolistic protection for software lies in the hands of powerful corporations. Nevertheless, and in spite of the exception from patenting computer programs as such, there are tens of thousands of patents in Europe for software inventions and, as will be

seen, the exception can be overcome in many cases, where there is a technical contribution to the state of the art.

Whilst differences in interpretation are almost inevitable given the way in which the EPC is drafted and where the meaning of ‘invention’ is given only by stating what is not an invention in a manner that could not be more imprecise, the UK courts and the Patent Office have striven to be at one with the Boards of Appeal at the EPO when considering how to determine whether an invention incorporating a computer program is patentable.

Copyright and patents as a means of protecting computer programs each have their own advantages and disadvantages from the perspective of the rightholder.<sup>256</sup> These are set out in Table 12.1.

Drawing a distinction between computer technology and other forms of technology in their relative patentability cannot be maintained on purely logical grounds. Why should using computer technology to solve technical problems be treated less favourably than other forms of technology? Indeed, the current version of the European Patent Convention states that patents are available for inventions ‘in all fields of technology’.<sup>257</sup> There are, however, some practical reasons why a cautious approach to patenting computer-implemented inventions might be called for. Determining the state of the art to test novelty for computer programs is an impossible task, given the widespread use of computers in all fields of technology. This is compounded by the fact that innovation in computer software is poorly documented compared to other forms of technology, such as pharmaceuticals where there is a wealth of published information in published patent specification and learned journals. Many patents for computer-implemented inventions are very vulnerable to challenges for lack of novelty.<sup>258</sup>

Inventive step is another issue. For example, does one take into account what is known and used in one type of software application in other, perhaps totally unrelated, software applications? Clearly it is not inventive to take a known manual process and install it in a computer<sup>259</sup> but where does one draw the line?

Finally, as confirmed by the European Commission in its consultation on the proposed Directive on the patentability of computer-implemented inventions, patents are not generally perceived as the optimum cost-effective route to protection for start-up companies and SMEs in the software industry. The ‘frontier’ style of innovation in software has been in sharp contrast to the substantial investment in research and development funded by large powerful corporations in many other fields. Patent protection has not been seen as a *desideratum* for the smaller software companies because of the time and expense involved in what has been a very fast-moving industry. Indeed many small software companies express concern at the danger of large powerful companies tying up vast areas of software applications by the use of patents. The fact of the matter is that start-up companies and SMEs have been responsible for substantial advances in computer software but most do not have the resources to initiate or defend patent infringement actions.

## Developments at the EPO

It is perhaps with all the above issues and aspects in mind that the framers of the EPC, original version, sought to provide a compromise that would allow patents for computer-implemented inventions in certain special and deserving cases. The way in which they did it not only compounded the problems of determining what type of computer-implemented invention could be patented but also did nothing to ease the position of SMEs and individuals whose contribution to software innovation has been so vital to its growth. They could not have made the position more opaque and

<sup>256</sup> Even then, the scope of copyright protection for computer programs has only recently been clarified by Pumfrey J in his excellent analysis in *Navitaire Inc v easyJet Airline Co* [2006] RPC 111, discussed in Chapter 8.

<sup>257</sup> Article 52(1) EPC 13th edition, 1 July 2007. This suggests that the EPO will look more favourably on software inventions and seems to align the EPC better with case law at the Boards of Appeal, discussed later.

<sup>258</sup> This has been the experience in the US where many software patents have been challenged.

<sup>259</sup> For example, Case T258/03 *Hitachi/Auction method* [2004] EPOR 55 where a computer system used a Dutch auction to overcome potential delays in transmission of bids.

**Table 12.1** Advantages and disadvantages of copyright and patents

<i>Copyright</i>		<i>Patents</i>	
<i>Advantages</i>	<i>Disadvantages</i>	<i>Advantages</i>	<i>Disadvantages</i>
Copyright is free and protection is automatic. There are no formalities.	Copyright does not normally provide a true monopoly form of protection.	Patents give strong monopolistic protection.	It is expensive to apply for and maintain patents.
The threshold for protection is much lower than that for patents.	It is possible to write programs to emulate existing programs without infringing copyright.	Publication of the specification and claims <i>should</i> make it easy to determine the scope of a patent.	The invention falls into the public domain on expiry of the patent and, in the meantime, competitors can see how the invention works – this may help them to design around it.
Copyright also protects items of software other than computer programs, such as databases, and so protects the ‘whole package’.	Ideas, principles and interfaces are not protected.	The patent system increases the stock of knowledge through publication.	Infringement proceedings cannot be commenced until after the patent has been granted.
Copyright does not prevent the creation of competing software. This stimulates the market and encourages start-up companies and small and medium enterprises (SMEs).	Due to the lack of formalities, there may be evidential difficulties if proper records have not been kept.	Controls over abuses of patent monopolies.	Litigation tends to be very expensive and parallel actions may have to be brought in a number of countries.
Infringement proceedings can be commenced immediately.		In some technologies it may be possible reasonably to determine the state of the art on the basis of prior published patents and learned journal articles (though this is much more difficult in relation to computer programs).	
The state of the art is irrelevant. Copyright infringement requires acts to be performed in relation to the protected work. Independent creation cannot infringe.			
Litigation tends to be significantly less expensive than in the case of patent litigation, where validity is often an issue.			
If software is subsequently modified, new copyrights may be automatically generated.			

unpredictable even if that had been their goal. Incredibly, at the end of the day, it all comes down to ascertaining the effect of two short words: ‘as such’.

The EPC lays down the basic requirements for patentability, being inventions, in all fields of technology, that are susceptible of industrial application, which are new and which involve an inventive step: Article 52(1).<sup>260</sup> It then goes on under Article 52(2) to state that a number of things are not to be regarded as inventions. These include, *inter alia*, discoveries, aesthetic creations and schemes, rules and methods for performing mental acts, playing games or doing business, and programs for computers. Presentations of information are also excluded.<sup>261</sup> There is no pattern in this and the diversity of such things is breathtaking. However, as with the UK Patents Act 1977, these things are excluded only to the extent that the application for a patent or patents relates to that thing ‘as such’.

The diversity of matter excluded from the grant of a patent indicates that there is no single underlying logical thread as noted by Peter Prescott QC in *CFPH LLC’s Patent Applications*.<sup>262</sup> For example, discoveries ‘as such’ are excluded because this could result in far-reaching monopolies being created. Sir Isaac Newton would have become a very rich man on the basis of his theory of gravity! On the other hand, applications of discoveries in technical fields are patentable: *see*, for example, *Genentech Inc’s Patent*.<sup>263</sup> As noted earlier, aesthetic creations and presentations of information as such are normally protected by other intellectual property rights which are not monopolistic in nature. The latter exclusion does not prevent the patenting of board games as this is a ‘technical’ application. Of course, the fact that a type of subject matter is protected in other ways does not mean that it cannot be protected by a patent. There is no general rule to say that a particular thing can only be protected by one intellectual property right, notwithstanding an attempt to do this in relation to copyright and the unregistered design right.<sup>264</sup>

The leading case on the patentability of computer programs before the EPO was Case T208/84 *VICOM/Computer-related invention*<sup>265</sup> in which the Technical Board of Appeal emphasised the technical contribution of the alleged invention to determine whether it was an invention for the purposes of the EPC. In that case, the claims were directed at a computer operating in accordance with instructions in a computer program to produce a technical effect (enhancing digital images on the basis of a mathematical method). This could not be said to be a claim to a computer program ‘as such’. The Board of Appeal said (at 80):

... a claim directed to a technical process which process is carried out under the control of a program (be this implemented in hardware or in software), cannot be regarded as relating to a computer program *as such* within the meaning of Article 52(3) EPC, as it is the application of the program for determining the sequence of steps in the process for which in effect protection is sought. Consequently, such a claim is allowable under Article 52(2)(c) and (3) EPC. (original emphasis)

Furthermore, although the invention used a mathematical method, it was not a claim to a mathematical method ‘as such’ as what was claimed was a technical process in which the method was used. However, the technical contribution test did not tell us whether the subject matter was itself an invention.

The Technical Board of Appeal at the EPO does not subscribe to a rigid doctrine of binding precedent although it is sometimes possible to tease out general principles that can be applied in domestic courts applying the equivalent provisions to those in the EPC. Often, a difficult or compromising earlier decision is sidestepped and the jurisprudence of the Boards of Appeal at the EPO is not necessarily a reflection of consistent and rational development. This means that a principle discernible from an earlier judgment, which may have been followed and applied in numerous cases in

<sup>260</sup> The reference to ‘all fields of technology’ was inserted in Article 52(1) in the 13th edition of the European Patent Convention, 1 July 2007. This edition came into force on 13 December 2007.

<sup>261</sup> These provisions are mirrored in s 1(1) and (2) of the Patents Act 1977.

<sup>262</sup> [2006] RPC 259, discussed below (*see* p 459).

<sup>263</sup> [1989] RPC 147.

<sup>264</sup> *See* s 236 of the Copyright, Designs and Patents Act 1988.

<sup>265</sup> [1987] EPOR 74.

domestic courts, may be subject to subtle or even sudden change or modification. This happened in relation to the exclusion of computer programs, as such, from the meaning of invention for the purposes of Article 52 of the EPC.

In a step-by-step fashion, the Technical Boards of Appeal at the EPO have distanced themselves from the *VICOM/Computer-related invention* approach as to what constituted an invention, without expressly stating that it was wrong. It began to consider a programmed computer as an invention and the impact of the exclusions in Article 52(2) as being relevant to questions of novelty and inventive step rather than considering whether the technical contribution, as in *VICOM/Computer-related invention*, took the subject matter beyond the exclusions.

In Case T1173/97 *IBM/Computer programs*<sup>266</sup> it was said that determining the technical contribution of an invention was more relevant to the questions of novelty and inventive step than deciding on possible exclusion from the meaning of invention under Article 52(2) or (3). This approach was confirmed in Case T931/95 *PBS Partnership/Controlling pension benefits systems*<sup>267</sup> where it was held that there was no basis for applying the technical contribution approach in deciding whether the subject matter comprised an invention.

266 [2000] EPOR 219.

267 [2002] EPOR 522.

The clearest indication of the present approach was given by Case T258/03 *Hitachi/Auction method*<sup>268</sup> in which the Technical Board of Appeal held that a method involving technical means is an invention within Article 52. What is important is whether the subject matter has a technical character. That technical character can be implied from the physical features of an entity, or the nature of an activity, or conferred on a non-technical activity by use of technical means.

268 [2004] EPOR 548.

Subject matter caught by Article 52(2), being a ‘non-invention’ as such, would be something which was a purely abstract concept devoid of any technical implications. The result of all this is anything carried out by a programmed computer (whether it is claimed in that way, as an entity, or the activity performed by the programmed computer) that has a technical character is, consequently, an invention and not excluded by Article 52(2). The Board of Appeal accepted that this was a very broad interpretation of ‘invention’ and said (at para 4.6):

[this] will include activities which are so familiar that their technical character tends to be overlooked, such as the act of writing, using pen and paper.

Of course, and as the Board of Appeal pointed out, this does not mean that all methods using technical means are patentable. They still have to satisfy the other requirements of novelty, inventive step and being capable of industrial application.

The subject matter in *Hitachi* was a computer-implemented method of holding auctions. The problem to be overcome was that of delays in bidders submitting their bids due to the vagaries and nature of electronic transmission. The solution was to use a Dutch auction method where bidders submitted two bids: their desired bid and maximum bid. After bidding is finished, the result is calculated by setting a price and successively lowering it until the highest desired bid is reached. If there is more than one at the same highest desired bid, the price is automatically increased until the highest maximum price is left from those tying with the same highest desired bids.

The Technical Board of Appeal held that this did not solve the known problem (fundamentally being delays in online auctions) by technical means; it simply circumvented the problem by adapting the Dutch auction system for use on a computer. It did not, therefore, involve an inventive step. The system as adapted could just as easily be conducted using a system of postal bids. The invention was also no more than the mere automation of a non-technical activity. However, it went on to say that if a step in such a method was designed so as to be particularly suitable for being performed on a computer then, arguably, it had a technical character.

269 [2006] EPOR 414.

270 [2006] EPOR 423.

271 The Boards had the same panel and the same Chair, S V Steinbrener, as in *HITACHI/Auction method*.

Later decisions by the Boards of Appeal involved applications by the Microsoft Corporation for patents concerning the use of clipboard formats to transfer non-file data between software applications in Case T424/03 *MICROSOFT/Clipboard format I*<sup>269</sup> and Case T411/03 *MICROSOFT/Clipboard format II*.<sup>270</sup> The decision of the Boards of Appeal<sup>271</sup> followed *Hitachi/Auction method* and held that a method using technical means was an invention and a computer system including a memory was a technical means. A method implemented in a computer system represents a sequence of steps actually performed and achieving an effect, and not a sequence of computer-executable instructions (that is, a computer program) which only has the potential of achieving such an effect when loaded into, and run on, a computer. The claims in the application were not, therefore, claims to a computer program as such. Even though a method of operating a computer may be put into effect by means of a computer program, a claim to such a method does not claim the computer program as such.

The Board of Appeal went on to say that the steps in the claimed method solved a technical problem by technical means as functional data structures (clipboard formats) were used independently of any cognitive content in order to enhance the internal operation of a computer system with a view to facilitating the exchange of data among various application programs. The claimed steps provided a general-purpose computer with a further functionality. The computer thus programmed assisted the user in transferring non-file data into files. Finally, a computer program on a technical carrier is not a computer program as such and may contribute to the technical character of the subject matter of what is claimed to be a patentable invention. Both Microsoft applications were held to be patentable, being new and inventive over the prior art.<sup>272</sup>

272 The closest prior art was Windows 3.1.

However, the *MICROSOFT/Clipboard format* cases are distinguishable from both *Hitachi/Auction method* and *PBS Partnership/Controlling pension benefits systems* as in the latter two cases the technical character was in relation to other matter declared to be non-inventions.

273 [2007] EPOR 312.

Subsequently, in Case T1023/06 *IGT/Computer implemented game process*,<sup>273</sup> involving an application for a patent for a method of operating an electronic video poker machine, following *Hitachi/Auction method*, the Board of Appeal held that the implementation of a card game in an electronic video poker machine involved steps implying the use of an appropriate display and control means. This bestowed a technical character on the claimed method as a whole. Where an invention consists of a mixture of technical and non-technical features, consideration must be directed to the actual contribution of each feature to the technical character by:

- (a) determining the difference between the claimed subject matter and the prior art, so as to allow:
- (b) the effect of each difference in relation to the prior art to be established, from which:
- (c) the extent to which the respective differences contributed to the technical nature (that is, its technical ‘residue’) could be inferred.

In the present case, the differences addressed the technical problem of enabling a machine to play more than one game with improved readability. However, their implementation was straightforward and obvious, being non-technical modification of game rules which did not contribute to inventive step. The implementation of the changed rules within a machine in an obvious manner lacked inventive step.

274 [2007] EPOR 293.

In Case T49/04 *Walker/Text processing*,<sup>274</sup> the application was for a method for enhancing text presentation from a machine-readable natural language text based on reader-specific parameters including at least the viewing field of dimensions including parsing and folding rules. The Board of Appeal held that the mere fact that mental activities were involved did not necessarily render the subject matter non-technical

as the technical solution was in providing a tool serving to assist or replace human activities, including mental ones. Technical aspects could be present in the design and use of a graphic interface. Therefore, means for analysing text, dividing it into segments related to the physical arrangement of the overall image structure of the displayed text with a view to solving the technical problem of improving text presentation, specifically readability on a display, was not excluded by Article 52(2) EPC as such.

Probably the most important aspect of the above line of authorities is the fact that the technical contribution lies within one of the other things excluded from the meaning of invention as such is not fatal to the application. This is in direct conflict with the present case law at the Court of Appeal, as will be seen later. That is not to say that a business method, for example, performed by a programmed computer is patentable. There is still a requirement for a technical problem to be solved by a technical means.<sup>275</sup>

To summarise the current position at the Boards of Appeal of the EPO, the following approach in relation to computer-implemented inventions seems to be as follows:

- 1 Determine the technical problem which the invention seeks to overcome.
- 2 Look at the solution to that problem encapsulated in the invention.
- 3 If it solves the problem by technical means it is patentable if those means are new, inventive and capable of industrial application.
- 4 If it does not solve the problem by technical means it is not patentable. For example, it may use or modify matter excluded under Article 52(2), being no more than an automation of non-technical activity. However, the use of such matter designed to be particularly suitable for computer implementation may, arguably, possess a technical character and, if so, the other requirements for patentability should be tested.

It is unlikely that *Hitachi* and subsequent cases mark an end to further development of the jurisprudence on the patentability of software inventions at the EPO Boards of Appeal. Given the failure of the proposed Directive on the patentability of computer-implemented inventions, this is an important task and it may be that we end up with something not too far removed from what was proposed. The meaning of ‘technical means’ needs further consideration and explanation as does the position covered by the proviso in point 4 above. The author’s view is that inventions implemented by programmed computers involve technical means, *per se*, and computer programs in operation are necessarily technical. That being so, it could be argued that computer programs should not be treated as ‘non-inventions’ as a starting point only to overcome the artificial construct of finding technical means which are not themselves excluded. If we applied the basic requirements of novelty, inventive step and industrial application, that should be sufficient, bearing in mind that simply automating an existing manual system, without more, can never be inventive, in line with the outcome in *Hitachi*.

### Patenting computer programs in the UK before 2005

Before the 1977 Act, patents were rarely granted for computer programs as it was required that an invention had to be a manner of manufacture. This implied that a computer program operating in a computer with no external effects could not be patentable. There were some exceptions, however, such as in *Gever’s Application*<sup>276</sup> where the program was coded on punched cards. This was said to be analogous to a CAM for controlling the cutting path of a lathe and, therefore, was a manner of manufacture. In another case, *Burrough’s Corporation (Perkin’s) Application*,<sup>277</sup> computer programs controlling the transmission of data to terminals from a central computer were held to be the proper subject matter of a patent as the programs were embodied in physical form in the electronic circuits of the computer equipment. This distinction, based on

<sup>275</sup> Case T154/04 *Duns Licensing Associates/Estimating sales activity* [2007] EPOR 349. The use of mathematical and statistical methods to evaluate data about sales activity was a method of business research as such.

<sup>276</sup> [1970] RPC 91.

<sup>277</sup> [1974] RPC 147.

278 [1991] RPC 305.

279 At first instance, Aldous J distinguished between a program installed on a computer chip and one stored on a floppy disk: *Re Gale's Patent Application* [1991] RPC 305.

280 An expert system shell is a program or suite of programs that allows a system developer to enter rules and facts to form an expert system directed towards providing solutions in particular knowledge domains: for example, a computer system that gives medical advice on stomach pains.

281 [1991] RPC 463.

282 A program used to create an object code version of a source code program.

288 Above.

whether the program in question had a physical form, was laid to rest after the 1977 Act came into force in *Re Gale's Application*,<sup>278</sup> where the Court of Appeal held that installing an algorithm to calculate square roots on a ROM chip did not, of itself, give it a technical character required for patentability.<sup>279</sup>

Following *VICOM/Computer-related invention*, the courts started to look for the presence of some technical effect. For example, in the UK, an application for a patent for an expert system shell<sup>280</sup> was refused in *Re Wang Laboratories Inc's Application*<sup>281</sup> because it was for nothing more than a computer program. When the system had been developed it did not form with the computer a new machine. Similarly, a claim in relation to a compiler program<sup>282</sup> was no more than a claim for the compiler program itself.<sup>283</sup> In Germany it has been confirmed that a similar approach applies, and in *Re the Computer Generation of Chinese Characters*<sup>284</sup> a word-processing program using Chinese characters was not patentable because it did not solve a technical problem by a technical method and did not make a technical contribution to the state of the art. It was mainly intellectual in nature and did not make use of methods beyond human intellectual activity.

An important case before the Technical Board of Appeal at the EPO on the subject of the patentability of computer programs was Case T935/97 *IBM/Computer programs*<sup>285</sup> which led to a change in practice at the UK Patent Office.<sup>286</sup> The Board of Appeal took the opportunity to review its previous case law relating to the patentability of computer programs and it set out comprehensively the principles that should apply. IBM had applied for a patent for a data processing system used to display information in windows such that any information displayed in one window obscured by a second window is moved automatically to a new unobscured position. The first six claims in the application related to the process and had been accepted as patentable by the examiners in the EPO but claims 7 to 10 had been rejected. These were directed, *inter alia*, to a computer program product (a medium having program code on it which caused the computer to execute the process). The Board of Appeal decision confirmed that computer programs must have a technical character to be patentable and that what can be claimed in such a case is not just the programmed computer as the means of obtaining a technical effect but also the computer program from which, when run in a computer, the technical effect is obtained and a computer program product (for example, a computer chip on which the program is stored) from which the technical effect is obtained when the program so stored is run on a computer. One could be excused for thinking that this approach promotes form over substance and this was noted by the Hearing Officer in the Patent Office in *Hutchin's Application*<sup>287</sup> where it was held that the Comptroller General of Patents was bound to follow decisions of the UK courts, expressing some reservation about the *PBS Partnership/Controlling pension benefits systems* case.<sup>288</sup>

The UK Patent Office changed its practice to come into line with that in the EPO with respect to claims to computer program inventions. At this stage in the development of the jurisprudence relating to computer programs, a patent would not be granted if the technical effect it produced or had the potential to produce is, exclusively, within the other exceptions in Article 52(2) EPC (together with Article 52(3) equivalent to s 1(2) of the 1977 Act). In the UK, that doctrine developed particularly in terms of technical effects which are methods of performing a mental act, the 'mental steps' doctrine.

### Mental steps doctrine

Many computer programs perform operations that were or could have been performed by the human mind. As such, methods of performing mental acts are excluded by

s 1(2). However, even if such a method is incorporated in a computer in a way which is different to the way a human would perform the mental act, this does not make the invention patentable. In *Re Wang Laboratories Inc's Application*,<sup>289</sup> Aldous J said (at 472):

289 [1991] RPC 463.

The fact that the scheme, rule or method is part of a computer program and is therefore converted into steps which are suitable for use by a person operating the computer does not matter . . . The method remains a method for performing a mental act, whether a computer is used or not . . . The method may well be different when a computer is used, but to my mind it still remains a method for performing a mental act, whether or not the computer adopts steps that would not ordinarily be used by the human mind.

One of the exceptions in s 1(2) and Article 52(2) EPC is a method of performing a mental act. In the Chancery Division, it was held that an application to patent a computer-implemented system for identifying ships was caught by the equivalent exception in s 1(2)(c) of the Patents Act 1977, *inter alia*, as being a method for performing a mental act: *Raytheon Co's Application*.<sup>290</sup> The system was such that it was particularly suitable for carrying out by computer, where silhouettes of ships on the horizon were captured by digital imaging and matched with a database containing data as to the shapes of known ships. This would seem to be an application particularly suitable for computer implementation as it would be likely significantly to outperform the same task carried out by a human being, armed with a book containing silhouettes of ships, both in terms of time and, probably, accuracy.

290 [1993] RPC 427.

In *Fujitsu Ltd's Application*,<sup>291</sup> the applicant developed software to produce computer-generated images of any two chosen crystal structures of inorganic material, parts of which could be selected. This data was then converted into data containing a combination of the two chosen crystal structures producing an image of the resulting combined structure for the purpose of research. The intention was to replace the traditional, manual method of constructing a crystal structure by assembling three-dimensional plastic models. The Patent Office rejected the application, objecting that it was the performing of a mental act under s 1(2)(c). Laddie J, in the Patents Court, agreed.<sup>292</sup> The Court of Appeal confirmed that the application was caught by s 1(2)(c), being either an application for a computer program as such or a method of performing a mental act as such.

291 [1997] RPC 608.

292 *Fujitsu Ltd's Application* [1996] RPC 511. Laddie J set out the principles to apply in a useful manner.

As the operation relied on the operator's selection of data and exercise of skill and judgment, the application was in substance for a scheme or method for performing a mental act. Originally, the traditional method was to assemble plastic models by hand and all the computer program did was to automate this operation. The images were simply substitutes of a manually assembled plastic model previously produced which did not provide a technical advantage and therefore were excluded by s 1(2)(c) as being a program for a computer. Aldous LJ rejected the appellant's argument that that exclusion should be construed narrowly, requiring that the mental act should be as performed in the human mind. He said that the question should be determined without recourse to evidence as to how the human mind actually works. Nor was there any room for reading into the test that the act had to be one that had previously been performed by the human mind.

The difficulty for the applicant was that the practical application or technical effect produced by means of the computer program was, itself, excluded material, being a scheme or method of performing a mental act. The result of all the case law in relation to s 1(2) would appear to be that a practical application of any of the things listed in the subsection is patentable in principle, provided it is not itself within the list.<sup>293</sup> Thus, a new software-driven process for making metal castings should be patentable, but not a new computer program to present information in a new manner even though it could

293 Assuming that all the other requirements such as novelty and inventive step are present.

294 The equivalent application by Fujitsu in Japan was granted a patent.

295 [2002] RPC 1.

296 Patent Office Practice Notice: Patents Act 1977: Interpreting section 1(2) [2002] RPC 774.

297 This section is based on Bainbridge, D. I., 'Court of Appeal parts company with the EPO on software patents' [2007] 23 *CLSR* 119.

298 This is not to say that such decisions are binding on the courts in the UK.

299 [1989] RPC 147.

300 [1989] RPC 561.

301 [1991] RPC 305.

302 [1997] RPC 608.

303 [2006] RPC 259.

304 In *Halliburton Energy Services Inc v Smith International (North Sea) Ltd* [2006] RPC 25, at first instance, Pumfrey J said that contribution must lie in a technical effect and not merely in excluded matter. He noted that, in *Case T453/91 IBM/Method for physical VLSI-chip design*, 31 May 1994, the Board of Appeal felt uneasy with *VICOM/Computer-related invention*. The Board explained *VICOM*, saying that it equated the image in question with a material object as it was an image of a material object.

be argued that such an application is neither for a computer program *as such* nor for the presentation of information *as such*.<sup>294</sup>

In 2002, it was noted that Aldous LJ in *Fujitsu* had said that patents were not available for discoveries or ideas *per se* '... but those that have a technical aspect or technical contribution are'. This was later referred to by Neuberger J in *Kirin-Amgen Inc v Roche Diagnostics GmbH*<sup>295</sup> without qualification. If this applies to discoveries and ideas, then it should follow that the same principle applies to other excluded matter. Therefore business methods and the like have a technical aspect or making a technical contribution ought also in principle to be patentable. That being so, the Patent Office issued another Practice Notice to the effect that inventions which involve a technical contribution will not be refused merely because they relate to business methods or mental acts.<sup>296</sup> However, it was noted that this did not affect the approach to patent applications, such as pure business method application, that had no prospect of maturing into valid patents.

### Recent developments in the UK – the Court of Appeal and *stare decisis*<sup>297</sup>

The courts in the UK have tended to refer to *VICOM/Computer-related invention*, sometimes expressly approving of it, sometimes distinguishing it. Section 91 of the Patents Act 1977 requires judicial notice to be taken of decisions of the Boards of Appeal at the EPO.<sup>298</sup> In *Genentech Inc's Patent*,<sup>299</sup> Purchas LJ approved *VICOM/Computer-related invention* although Mustill LJ said that the report of the case was so compressed as to be 'almost incomprehensible'. In *Merrill Lynch's Application*<sup>300</sup> and *Gale's Application*,<sup>301</sup> some members of the Court of Appeal appeared to distinguish *VICOM/Computer-related invention*. But, in *Fujitsu Limited's Application*,<sup>302</sup> Aldous LJ said (at 614):

However it is and always has been a principle of patent law that mere discoveries or ideas are not patentable, but those discoveries and ideas which have a technical aspect or make a technical contribution are. Thus the concept that what is needed to make an excluded thing patentable is a technical contribution is not surprising. That was the basis for the decision of the Board in *Vicom*. It has been accepted by this court and by the EPO and has been applied since 1987. It is a concept at the heart of patent law.

The apparent move away from *VICOM/Computer-related invention* at the EPO was first noticed judicially by Peter Prescott QC, as deputy judge of the High Court, in *CFPH LLC's Application*.<sup>303</sup> He concluded that the interpretation set out in *Hitachi/Auction method* was the correct approach. The mere fact that the claimed invention contained or used a computer program did not mean that a patent would foreclose the use of a computer program. He used an analogy, saying (at para 104), in the context of automatic pilots and computer-driven processes for making canned soup:

The question to ask should be: is it (the artefact or process) new and non-obvious merely *because* there is a computer program? Or would it still be new and non-obvious in principle even if the same decisions and commands could somehow be taken and issued by a little man at a control panel, operating under the same rules? For if the answer to the latter question is 'Yes' it becomes apparent that the computer program is merely a tool, and the invention is not about computer programming at all. It is about better rules for governing an automatic pilot or better rules for conducting the manufacture of canned soup.<sup>304</sup>

Following these developments, the UK Patent Office again decided to change the manner in which it examined computer-implemented inventions as suggested in *CFPH LLC*. At this stage, it seemed that the UK Patent Office and the courts were attempting to reflect the current thinking of the Boards of Appeal. However, this desire for uniformity with the decisions of the Boards of Appeal at the EPO came to a shuddering

halt with *Aerotel Ltd v Telco Holdings Ltd and Macrossan's Patent Application*.<sup>305</sup> *Aerotel* concerned two separate appeals heard together. One was to a telephone system allowing pre-payment from any available telephone (the *Aerotel* patent). The other was to a method of automatically acquiring the documents required for the formation of a company (the *Macrossan* application).

After reviewing the decisions of the Boards of Appeal of the EPO and of the Court of Appeal, Jacob LJ identified three different approaches, one of which had itself three variations. The approaches were as follows.

- 1 *The contribution approach*. Does the inventive step reside *only* in the contribution of excluded matter? If YES, the subject matter is not an invention under Article 52(2). This was the approach adopted by Falconer J at first instance in *Merrill Lynch* but expressly rejected by the Court of Appeal.
- 2 *The technical effect approach*. Does the invention as defined in the claim make a technical contribution to the known art? If NO, Article 52(2) applies. A possible clarification (at least by way of exclusion) of this approach is to add the rider that novel or inventive purely excluded matter does not count as a 'technical contribution'. This is the approach (with the rider) adopted by the Court of Appeal in *Merrill Lynch* and subsequently followed by the Court of Appeal in *Gale* and *Fujitsu*. The approach (without the rider as an express caution) was that first adopted by the EPO Boards of Appeal in *VICOM/Computer-related invention* and other cases in the following few years.
- 3 *The 'any hardware' approach*. Does the claim involve the use of, or is it to, a piece of physical hardware, however mundane (whether a computer or a pencil and paper)? If YES, Article 52(2) does not apply. This was the approach in *PBS Partnership*, *Hitachi* and *Microsoft*. It was specifically rejected by the Court of Appeal in *Gale*. However, Jacob LJ noted that there were three variants of this approach:
  - (i) Where a claim is to a method which consists of an excluded category, it is excluded by Article 52(2) even if hardware is used to carry out the method. But a claim to the apparatus itself, being 'concrete' is not so excluded. The apparatus claim is nonetheless bad for obviousness because the notional skilled man must be taken to know about the improved, excluded, method. This was the specific approach taken in *PBS Partnership*.
  - (ii) A claim to hardware necessarily is not caught by Article 52(2). A claim to a method of using that hardware is likewise not excluded even if that method as such is excluded matter. Either type of claim is nonetheless bad for obviousness for the same reason as above. This is the approach in *Hitachi*, disagreeing with *PBS Pensions* about method claims.
  - (iii) Simply ask whether there is a claim to something 'concrete' e.g. an apparatus. If YES, Article 52(2) does not apply. Then examine for patentability on conventional grounds – do not treat the notional skilled man as knowing about any improved excluded method. This is the *Microsoft* approach.

Instead of applying the current thinking at the EPO (*HITACHI* and *Microsoft*), Jacob LJ said that he had no choice but to follow the previous Court of Appeal decisions because of the doctrine of *stare decisis*.<sup>306</sup> On the basis of those decisions, there must be a technical contribution which is not itself within the matter excluded from the meaning of 'invention'. This is the second approach with the 'rider'.<sup>307</sup> Perhaps he drew some comfort from the fact that the German Bundesgerichtshof declined to follow *HITACHI* on one occasion.<sup>308</sup>

Mr Birss, on behalf of the Comptroller, suggested the following structured approach to applying the Court of Appeal decisions in *Merrill Lynch*, *Gale* and *Fujitsu*.

<sup>305</sup> [2007] RPC 117. Jacob LJ gave the judgment of the court. Unusually, the judgment has an Appendix setting out the case law at the EPO, in the UK and Germany on software patents.

<sup>306</sup> None of the exceptions in *Young v Bristol Aeroplane Co Ltd* [1944] KB 718 applied. The House of Lords has consistently said that the Court of Appeal cannot add to the exceptions in *Young v Bristol Aeroplane*; see, for example, *Davis v Johnson* [1979] AC 264. However, more recently, Baroness Hale of Richmond did not rule out the possibility of a very limited extension of the exceptions in relation to conflicting Privy Council decisions in *In re Spectrum Plus Ltd (in liquidation)* [2005] 2 AC 680.

<sup>307</sup> Applying this Jacob LJ held that the *Aerotel* patent was valid. It used a new combination of existing apparatus and was not a business method as such. In *Macrossan*, the alleged invention was to an interactive system to do the work normally done by a solicitor or company formation agent. This was a business method as such and also a claim to a computer program as such.

<sup>308</sup> *Jesco Schwarzer*, 28 September 2004, 17 W (pat) 31/03.

- 1 Properly construe the claim.
- 2 Identify the actual contribution.
- 3 Ask whether it falls solely within the excluded subject matter.
- 4 Check whether the actual or alleged contribution is actually technical in nature.<sup>309</sup>

<sup>309</sup> This is now the basis of the test adopted by the UK Patent Office in the light of *Aerotel*, recognising that this case must now be followed.

<sup>310</sup> [2008] EWHC 335 (Pat).

Jacob LJ thought this useful and applied it to the *Aerotel* patent and the *Macrossan* application. He did say that the fourth step should have been covered by the third step though it was useful as a final check to ensure that the contribution was technical and the Court of Appeal decision in *Merrill Lynch* was being followed. In *Research in Motion UK Ltd v Visto Corp*,<sup>310</sup> Floyd J held that claim 1 of the patent in suit did not have ‘. . . enough of a technical effect to render the invention patentable’. But an invention either has a technical effect or it does not. What Floyd J really meant was that the technical effect did not go beyond the ordinary effects of running a computer program.

The Court of Appeal in *Aerotel* expressed some doubt, *obiter*, as to whether the exclusion for a scheme, rule or method of performing a mental act, as such, extended to electronic means of carrying out mental acts. This was in contrast with the view, also *obiter*, in *Fujitsu*. This leaves the lower courts and the UK Patent Office in the unenviable position of having to decide which to follow. In the end the Patent Office has decided to follow the view in *Aerotel*.<sup>311</sup>

<sup>311</sup> Patent Office Practice Notice: *Patentable subject matter*, 2 November 2006. Cases such as *Raytheon Co's Application*, *op cit*, must now be doubted.

<sup>312</sup> [2007] EWHC 954 (Pat).

There have been a number of cases on software inventions following *Aerotel*. In *Oneida Indian Nation's Application*,<sup>312</sup> the applicant was an Indian Nation based in New York and the application was in respect of a ‘system, method and article of manufacture for gaming from an off-site location’. The judge, Mr Christopher Floyd QC, sitting as deputy judge of the Patents Court in the High Court, followed *Aerotel* and the four-step test set out in that case. In *Oneida*, the contribution was a computerised two-stage gaming apparatus providing advantages such as a reduction in the number of processing steps and the data transmission steps; dispensing with the need to make an account check for every bet placed and, as a result, making the system more secure and robust. As regards the fourth step in *Aerotel*, Mr Christopher Floyd QC said (at para 10):

. . . if the invention fails to overcome that test [the third step], any technical contribution must have been one of purely excluded matter . . . The 4th step is intended merely to make sure that inventions that have *passed at step 3* are technical in nature. (original emphasis)

The claimed advantages were to a new method of doing business and fell completely within the exclusion. Although they could be described as ‘technical’ they did not count as such because they were not a *relevant technical effect*. They were merely the consequence of putting the new business method into effect. Furthermore, the hardware involved was standard and formed no part of the contribution.

<sup>313</sup> [2007] FSR 663.

*Cappellini's Application and Bloomberg LLP's Application*<sup>313</sup> involved two separate ‘inventions’. In *Bloomberg*, the invention was for a method of distributing data in which the data transmitted to a user was mapped to a form suitable for the application to be used by the user. The method was to be performed in software only. The *Cappellini* invention was a new algorithm for planning a delivery route for a package using a network of carriers. Pumfrey J made a number of general points. First, the question of patentable subject matter was essentially a question of the scope of the claim. If the claim covered a method of arriving at a particular result by the exercise of rational processes alone, then it was a claim to a ‘scheme, rule or method of performing a mental act’. Second, if a physical article resulting from the performance of a mental act, such as mathematical calculations, became a feature of the claim, the claim would not be objectionable. But it was objectionable unless ‘tethered’ to the claim. Pumfrey J said (at para 8) ‘I do not, of course, say that every result must be a physical article before the

claim is allowable'. Finally, a claim to a programmed computer as a matter of substance was just a claim to the program on a kind of carrier. If the result of running the program was no more than the performance of a business method added, this added nothing to the art that did not lie in the excluded matter.

With respect to *Bloomberg*, Pumfrey J held that the application was for a computer program as such. There was no question of matching the form of the data to any deficiency or advantageous feature of hardware. It was purely formatted to render it suitable to cooperate with particular software. As regards *Cappellini*, Pumfrey J said that this was both the presentation of information and a mathematical method. Although there was a physical effect, being the movement of known items (vehicles) over known and existing routes, this was a method of doing business (moving vehicles according to a routing algorithm). Pumfrey J criticised *PBS Partnership/Pensions*, saying that it reached the correct result by incorrect reasoning. He said he preferred *Aerotel*, an important question being what the claimed invention was as a matter of substance.<sup>314</sup>

A new method of inventory management, implemented by software, involving two databases, one defining the layout of a facility, the other the items in it, was the subject of the application in *Raytheon Co v Comptroller General of Patents, Trade Marks and Designs*.<sup>315</sup> The claimed contributions to the art were the use of visual representation, the synthesis of individual images and the navigability of the system. Kitchen J said that if the technical contribution did not wholly fall within any one of the exclusions but did fall wholly within two or more, the invention would nonetheless be excluded. The second and third aspects of the contribution were simply matters of program design and related to a computer program as such. The first aspect was a method of doing business and also no more than a method of presenting information.

*Aerotel* and the four-step test is now treated with the utmost respect in the Chancery Division and has been applied in the above cases and more recent cases such as *Astron Clinica Ltd v Comptroller General of Patents, Designs and Trade Marks*.<sup>316</sup> In *Autonomy Corp v Comptroller General of Patents, Designs and Trade Marks*,<sup>317</sup> Lewison J summarised the present position in England as follows (at para 29):

- 1 A computer program is not merely a set of instructions to a computer, but can include the medium (e.g. floppy disc or CD ROM) which causes the computer to execute the program (*Aerotel*) or a programmed computer (*Cappellini*);
- 2 However what is excluded from patentability is not a computer program but a computer program 'as such'. Accordingly the mere fact that a claim relates to a computer program does not necessarily disqualify it from patentability (*Astron Clinica*);
- 3 In order to decide whether a computer program is excluded from patentability because it is a computer program 'as such' one must consider the substance of the claimed invention (*Cappellini*);
- 4 If the claimed contribution exists independently of whether it is implemented by a computer, in the sense of embodying a technical process lying outside the computer, then the contribution will not be a computer program as such (*Gale*; *Raytheon*);
- 5 This will be the case even though the only practicable way of implementing the contribution is by means of a computer (*Raytheon*);
- 6 If the contribution requires new hardware or a new combination of hardware, or consists of a better computer or solves a technical problem in the functionality of a computer it is unlikely to be a computer program as such (*Aerotel*; *Raytheon*);
- 7 On the other hand, a mere new hardware test is not enough if the newness consists of a computer program on a known medium (*Aerotel* commenting on *Gale*);
- 8 The mere fact that a computer program reduces the load on the processor or makes economical use of the computer's memory or makes more efficient use of the computer's resources does not amount to making a better computer, and thus does not

<sup>314</sup> Of course, Pumfrey J had no option but to follow *Aerotel*.

<sup>315</sup> [2008] EWHC 1230 (Pat).

<sup>316</sup> [2008] EWHC 85 (Pat).

<sup>317</sup> [2008] EWHC 146 (Pat).

- take it outside the category of computer program as such (*Aerotel* commenting on *Gale*; *Raytheon*);
- 9 An effect caused merely by the running of the program will not take a program outside the exclusion (*Aerotel*);
  - 10 The manipulation of data stored on a computer (whether on the computer in use or on a remote computer) is unlikely to give rise to a contribution that exists independently of whether it is implemented by a computer (*Bloomberg*);
  - 11 Even if the claimed invention is not a computer program as such, it is still necessary to ask whether the contribution lies solely in some other field of excluded matter. If it does, then the contribution will not be patentable (*Oneida*);
  - 12 In such a case, although the contribution may well be described as having a technical effect, it is not the right kind of technical effect, and so does not count (*Shoppalotto*; *Aerotel*; *Oneida*).

This can hardly be described as bringing clarity to the question of the patentability of computer-implemented inventions. The present position in England and the disparity between that and the position at the EPO is untenable. It can rightly be described as a mess of Herculean proportions and something should be done about it soon. By narrowing the scope of the exceptions to the meaning of ‘invention’, the Boards of Appeal at the EPO have brought the focus of the enquiry more on whether a software invention satisfies the requirements of novelty and inventive step. This is preferable to getting involved in an over-elaborate analysis as to whether the subject matter makes the right sort of technical contribution so as to bring it within the meaning of invention. There should be no objection to this approach as many software ‘inventions’ will fail to meet these stringent requirements.

One could argue that the exception of computer programs ‘as such’ from the meaning of invention ought to be repealed. This would bring the EPC more in line with patent law elsewhere. Indeed, the Agreement on the Trade Related Aspects of Intellectual Property Rights does not have an equivalent exclusion for computer programs or, for that matter, business methods.

The decision in *Aerotel* is regrettable in two ways. It confirms that the law on the patentability of software inventions in England harks back to the position over 15 years ago. All the refinement at the EPO is ignored. Perhaps more seriously, patent law in England relating to the exceptions to the meaning of invention is now at odds to the position at the EPO. This can only result in conflicting decisions with software patents being more readily available at the EPO. Applicants may now get a UK(EP) patent from the EPO more easily than by direct application for a UK patent. Worse still, a UK software patent obtained through the EPO will be subject to challenges in the UK based on different criteria than those used at the EPO to determine whether the application was patentable in the first place. We could even end up with inconsistency within the UK as the Scots courts are not bound by the English Court of Appeal and could decide to follow the most recent case law at the EPO Boards of Appeal.

In *Aerotel*, Jacob LJ must have been very frustrated at being bound by older Court of Appeal decisions. He noted that the present position was very unsatisfactory and he even went so far as to formulate questions for the enlarged Boards of Appeal at the EPO. Of course, the position is not the same as that concerning European Union legislation with the possibility of seeking preliminary rulings from the Court of Justice and there is no requirement for the enlarged Board to look at questions offered for its consideration. The EPO may even think it presumptuous for such questions to be suggested. Nevertheless, there is force in what Jacob LJ feels about the issue and it would be timely for a decision of the enlarged Board which can be convened to consider particular points of interpretation without a case where the point has been raised *in vacuo*.

However, even then the High Court and Court of Appeal could not apply such a ruling because of *stare decisis*. It would take legislative action or a House of Lords judgment to free the lower courts and the UK Patent Office from the difficult position they are now in. Perhaps in a future case on software patents the leapfrog procedure could be used to fast track an appeal from the High Court to the House of Lords.

### Subsequent developments as to the patentability of computer-implemented inventions

In *Symbian Ltd v Comptroller General of Patents*,<sup>318</sup> the invention in issue was for a method of accessing data in a dynamic link library in a computing device (a dynamic link library is one containing functions common to a number of different applications). This had the advantage of making such devices faster and more reliable in operation. The application was refused by the hearing officer as being an application to patent a computer program as such. On appeal, Patten J held the invention to be patentable. The Comptroller General appealed to the Court of Appeal. Lord Neuberger of Abbotsbury gave the judgment of the court.

That there was previously some conflict between the Court of Appeal and the EPO Boards of Appeal was highlighted in *Aerotel* by Jacob LJ who pointed out that some decisions of the Boards of Appeal were mutually contradictory and by the Board of Appeal in Case T154/04 *Duns Licensing Associates/Estimating sales activity*<sup>319</sup> where the Board (at para 12) described the ‘technical effect approach’ adopted by Jacob LJ in *Aerotel* as not being:

... consistent with a good-faith interpretation of the European Patent Convention in accordance with Article 31 of the Vienna Convention on the Law of Treaties of 1969.<sup>320</sup>

In relation to *stare decisis*, the Court of Appeal recognised that there was a new exception to the rule in *Young v Bristol Aeroplane*.<sup>321</sup> The Court could depart (but was not bound to do so) from previous Court of Appeal decisions where they were inconsistent with clear guidance from the EPO Boards of Appeal unless satisfied that it was wrong.<sup>322</sup> Nevertheless, the Court of Appeal in the present case decided to follow *Aerotel*. The reason being that there have been some conflicting decisions of the Boards of Appeal after *Aerotel* which shows that the law before the Boards of Appeal is not yet settled<sup>323</sup> and there has not yet been a decision at the enlarged Board of Appeal.

Although following *Aerotel* and the previous Court of Appeal decisions, Lord Neuberger cast some doubt on the approach in the decision in that court in *Fujitsu Limited's Application*.<sup>324</sup> Although ostensibly consistent with *Vicom* and *Gale*, it was hard to reconcile with those two cases as to what constitutes a technical contribution, the alternative ground for refusal (that the alleged invention was a method of performing a mental act) could not be faulted.

Lord Neuberger noted a major difficulty in the past was the dividing line between what was and was not ‘technical’.<sup>325</sup> Nonetheless, he accepted that there was a need for a technical effect but it was not limited to an effect outside the computer. In the present case, the invention made a better computer in that it increased speed and reliability. The invention could also be applied to other devices such as cameras and mobile phones so any distinction between whether the technical effect lies within or outside the computer is an artificial one. In applying the law as expressed in *Aerotel* and explained in *Symbian*, it was held that the invention was not caught by the exclusion. He applied *Aerotel* thus:

Stage 1 of the *Aerotel* guidance was not in issue.

Stage 2 – the contribution was a program which makes a computer operate on other programs faster than prior art operating programs enabled it to do by virtue of the claimed features.

<sup>318</sup> [2008] EWCA Civ 1066.

<sup>319</sup> 15 November 2006.

<sup>320</sup> Article 31(1) of the Treaty states: 1.A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose.

<sup>321</sup> Encouraged by Lord Hoffmann in *Merrell Dow Pharmaceuticals Inc v H N Norton & Co Ltd* [1996] RPC 76 and *Conor Medsystems Inc v Angiotech Pharmaceutics Inc* [2008] UKHL 49 where he emphasised that it was desirable for English courts to adopt the same principles as the Boards of Appeal when assessing obviousness.

<sup>322</sup> See also Jacob LJ in *Actavis UK Ltd v Merck & Co Inc* [2008] EWCA Civ 444.

<sup>323</sup> For example, in T1351/04 *FUJITSU/File search method*, 18 April 2007, the Board held that ‘[t]he claimed method requires the use of a computer. It has therefore technical character and constitutes an invention within the meaning of Article 52(1) EPC. . .’

<sup>324</sup> [1997] RPC 608.

<sup>325</sup> The word does not appear in either s 1(2) of the Patents Act 1977 or Article 52 of the EPC.

Stage 3 – the contribution was not solely excluded matter as it had the knock-on effect of the computer working better as a matter of practical reality.

Stage 4 – the contribution was technical on any view as to the meaning of ‘technical’.

Put simply, a computer program invention is caught by the exception if it does not produce a technical effect at all, or if it does, that effect itself lies within the other exclusions from the meaning of invention. This accords with some, but by no means all, decisions of the Boards of Appeal.

326 [2009] EWHC 343 (Pat).

In *AT & T Knowledge Ventures LP v Comptroller General of Patents*,<sup>326</sup> Lewison J explained that *Aerotel* and *Symbian*, taken together, meant that the four-stage test in *Aerotel* was still good law but should not be followed blindly and that the question of whether the contribution is technical must be asked and answered in the course of the inquiry but it does not matter whether it is asked at stage 3 or 4. Although it is impossible to define ‘technical effect’ in the context of the excluded matter but Lewison J thought the following were useful ‘signposts’ (at para 40 and 41):

40 . . .

- i) whether the claimed technical effect has a technical effect on a process which is carried on outside the computer;
- ii) whether the claimed technical effect operates at the level of the architecture of the computer; that is to say whether the effect is produced irrespective of the data being processed or the applications being run;
- iii) whether the claimed technical effect results in the computer being made to operate in a new way;
- iv) whether there is an increase in the speed or reliability of the computer;
- v) whether the perceived problem is overcome by the claimed invention as opposed to merely being circumvented.

41 If there is a technical effect in this sense, it is still necessary to consider whether the claimed technical effect lies solely in excluded matter.

As regards the second question in the *Aerotel* test, identifying the actual contribution, Jacob LJ said it was a question of asking what the inventor had really added to human knowledge. In *AT & T Knowledge Ventures LP*, Lewison J said that this question requires the questioner to have some knowledge of the state of the art. In a case where novelty is also at issue, this is a good reason for considering novelty before the issue of whether the alleged invention is excluded. In *Cranway Ltd v Playtech Ltd*,<sup>327</sup> Lewison J applied the *Aerotel* test and his own ‘signposts’ in *AT & T* and concluded that the application to patent a method of online gambling fell wholly within the exclusion. The whole process was carried out on a computer and/or server, the computer architecture was standard, the computer did not operate in a new way, there was no increase in speed or reliability of the computer and the perceived problem was a business problem not a computer problem. To the extent that the alleged invention solved a problem, it was a method of doing business.

327 [2009] EWHC 1588 (Pat).

The Boards of Appeal of the EPO have recently distinguished between excluded matter and non-excluded matter where an alleged invention comprises both. In Case T1793/07 *Konami/Video game device*,<sup>328</sup> the claims were directed at a computer game device. The alleged invention was directed at the technical implementation of rules for playing a game.<sup>329</sup> It was held that only those features which contributed to technical character were to be taken into account when testing for inventive step.<sup>330</sup> This seems to contradict the decision in Case T208/84 *VICOM/Computer-related invention*,<sup>331</sup> where the Board of Appeal held, *inter alia*, that (at 79):

328 [2009] EPOR 103.

329 The close-marking of an opponent’s player in a video football game.

330 See also, to similar effect, Case T336/07 *IGT/Electronic multi-play poker* [2008] EPOR 227.

331 [1987] EPOR 74.

. . . even if the idea underlying an invention may be considered to reside in a mathematical method a claim directed to a technical process in which the method is used does not seek protection for the mathematical method *as such*. (original emphasis.)

At long last, the President of the EPO has made a reference to the enlarged Board of Appeal to resolve the issue of the scope of the exceptions in relation to computer programs under Article 52(2) and (3) EPC.<sup>332</sup> The questions referred are:

332 *President's reference/Computer program exclusion* [2009] EPOR 63.

- 1 Can a computer program only be excluded as a computer program as such if it is explicitly claimed as a computer program?
- 2 (a) Can a claim in the area of computer programs avoid exclusion under art. 52(2)(c) and (3) merely by explicitly mentioning the use of a computer or a computer readable storage medium?
  - (b) If question 2(a) is answered in the negative, is a further technical effect necessary to avoid exclusion, said effect going beyond those effects inherent in the use of a computer or data storage medium to respectively execute or store a computer program?
- 3 (a) Must a claimed feature cause a technical effect on a physical entity in the real world in order to contribute to the technical character of the claim?
  - (b) If question 3(a) is answered in the positive, is it sufficient that the physical entity be an unspecified computer?
  - (c) If question 3(a) is answered in the negative, can features contribute to the technical character of the claim if the only effects to which they contribute are independent of any particular hardware that may be used?
- 4 (a) Does the activity of programming a computer necessarily involve technical considerations?
  - (b) If question 4(a) is answered in the positive, do all features resulting from programming thus contribute to the technical character of a claim?
  - (c) If question 4(a) is answered in the negative, can features resulting from programming contribute to the technical character of a claim only when they contribute to a further technical effect when the program is executed?

My own view is that the answer to Q.1 must be NO. Otherwise, it would be matter for form over substance and Q.2(a) also must be answered in the negative for the same reason. Question 2(b) must therefore be answered in the positive – some further technical effect must be necessary rather than only requiring the execution or storage of a computer program. The answer to Q.3(a) and (b) must be in the affirmative. The technical effect must be on a physical entity in the real world but this can include a computer. Consequently, Q.3(c) must be answered in the negative and the technical effect need not be external to the computer (contrary to the view of the Comptroller General in *Symbian*). The answer to Q.4(a) must be NO, otherwise simply writing a computer program could be outside the exclusion. The answer to Q.4(c) must be YES, the technical effect must be the result of the execution of the program. This would remove the confusion caused by a set of claims covering (a) a programmed computer during the execution of the program; (b) a computer thus programmed which will produce the technical effect when the program is executed; and (c) a computer storage medium containing the program which when executed in the computer will produce the necessary technical effect. The addition of inherent technical effects is over-elaborate. All that should be needed is that the computer program in question will produce the technical effect required to escape the exclusion when it is executed on a computer.

The President's reference does not seek guidance on an important question, being what the scope of the exclusion should be if the effect of executing the computer program in question is itself amongst the exclusions under Article 52(2) and (3), for example, if the computer program when run performs a business method. There are two approaches. As held in the English courts, this would be within the exclusion but there are some Boards of Appeal decisions that seem to point the other way, such as Case T258/03 *Hitachi/Auction method*.<sup>333</sup> Surely, implementing a business method

333 [2004] EPOR 548.

by technical means is not a claim to a business method *as such*. Granting a patent in such a case would not lock away the business method itself, only that method of implementation.<sup>334</sup>

<sup>334</sup> Potentially answering the argument that some (though by no means all) of the exclusions are based on a desire to avoid monopolies that are too extensive.

## EXCLUSIONS IN S 1(3)

Further exclusions are contained in the Patents Act 1977 s 1(3). This subsection was significantly modified by the Patents Regulations 2000.<sup>335</sup> Previously, s 1(3)(a) excluded inventions, the publication or exploitation of which would generally be expected to encourage offensive, immoral or anti-social behaviour.<sup>336</sup> Section 1(4) stated that behaviour should not be regarded as offensive, immoral or anti-social only because it is prohibited by law in the UK or any part of it. Old s 1(3)(b) excluded the patenting of any variety of animal or plant or any essentially biological process for the production of animals or plants, not being a micro-biological process or the product of such a process. This provision is now restated in Sch A2 to the 1977 Act which modifies and clarifies the position in relation to biotechnological inventions, discussed in the following section of this chapter.

<sup>335</sup> SI 2000/2037. These Regulations came into force on 28 July 2000.

<sup>336</sup> Article 53(a) of the European Patent Convention is the equivalent of s 1(3)(a).

Now, s 1(3) states that a patent shall not be granted for an invention the commercial exploitation of which would be contrary to public policy or morality. This requires something more than illegality as s 1(4) states that the exploitation referred to shall not be regarded as contrary to public policy or morality only because it is prohibited by any law in force in the UK or any part of it. These provisions are equivalent to Article 53(a) EPC. However, this refers to publication or exploitation and to the law in some or all of the Contracting States. Thus, something which may be illegal in one Contracting State does not automatically mean that the publication or exploitation is automatically deemed to be contrary to public policy or morality. The purpose behind the provision in the EPC would seem to be to overcome disparities in national laws that would otherwise prevent the grant of a patent which could be exploited in other countries. For example, use of a device to give advance warning of speed traps on roads might be illegal in some countries but this should not prevent the patenting of such a device and the sale of it in other countries.

The transposition of Article 53(a) into the Patents Act 1977 makes sense as regards illegality where differences in laws in parts of the UK may occur. If, for example, the commercial exploitation of the invention is illegal in Scotland, that does not necessarily mean that a UK patent cannot be granted for it providing, of course, notwithstanding that illegality, it is not regarded as contrary to public policy or morality. The invention could be commercially exploited in the rest of the UK without difficulty. It has to be said, however, that the exploitation of an invention being illegal in only part of the UK is highly unlikely. Furthermore, the effect of s 1(3) and (4) is that it is a remote possibility (or at least not impossible) for an invention, the commercial exploitation of which is illegal in the whole of the UK, to be granted a patent nonetheless, even though it cannot lawfully be exploited commercially.

Examples of things which may be excluded from the grant of a patent by these provisions could be a method of making explosives or a self-administered abortion kit.

## Biotechnological patents

It is possible to obtain a patent in some countries for a new breed of animal (for example, in the USA), but the scope of the exclusion in old s 1(3)(b), and the corresponding provision of the EPC, Article 53(b), was unclear. The Board of Appeal of the EPO granted a patent for a laboratory mouse that had been genetically altered (a transgenic

animal) so as to be more likely to develop cancerous cells in a short period of time.<sup>337</sup> It was accepted that this mouse was not a new variety of animal and, as a result, not excepted from the grant of a patent. Obviously, this is a very sensitive, ethical issue and decisions in this area require careful consideration of animal rights and the potential benefits to man and animal alike.

Granting patents for biotechnological inventions is an area which raises much controversy, especially where such inventions involve genetic modification of animals or plants or research carried out on embryos. There has been some criticism of the role of the EPO in this field and, in an address at the annual press conference at the EPO on 27 June 2000, the President, Mr Ingo Kober, answered these criticisms by saying that:

- the patent system is based on transparency through disclosure;
- certain technological developments are not prevented simply by denying patents for them;
- there are legal obstacles (for example, the prohibition on patenting varieties of animals and plants, *per se*) and safety precautions (such as the examination system and the awareness of patent examiners to ethical issues) built into the patent system;
- patents are not a measure of what is permissible; this responsibility lies in other areas of law, such as licensing controls.

The President dismissed claims that the EPO is lining its own pockets by encouraging applications for biotechnological patents and he pointed out that there had been two fee reductions in the preceding four years. With that background and the fact that there are some 25,000 genetic patents at the EPO, the Patents Regulations 2000 make interesting reading.

For some time, there were moves to adopt a Directive on the legal protection of biotechnological inventions. After rejecting the first proposal in 1995, the European Parliament rejected an amended proposed Directive on 16 July 1997.<sup>338</sup> However, it was still accepted that this was an area in need of clarification and a further revised proposal was prepared by the Commission and was adopted by the Council on 26 February 1998. Following this, on 12 May 1998, the European Parliament voted to accept the common position text of the Directive on the legal protection of biotechnological inventions.<sup>339</sup> The final outcome was Directive 98/44/EC of European Parliament and of the Council of 6 July 1998 on the legal protection of biotechnological inventions.<sup>340</sup>

The recitals to the Directive give important information as to its *raison d'être*. It is seen as important because of the increasing role in a broad range of industries being played by biotechnology and genetic engineering. This is a matter of some importance in the future industrial development of the Community. Adequate legal protection is needed to encourage the high-risk investment involved in research and development in biotechnology, in particular in genetic engineering. Advantages of protecting biotechnology and genetic engineering identified in the recitals include the development of less polluting and more economical methods of cultivation and improvements in combating major epidemics, endemic diseases and hunger in the world. It is noted that the TRIPs Agreement requires that patent protection must be provided for products and processes in all areas of technology.

The EPC was modified to incorporate the effects of the Directive. Article 53(b) remained as before, with the general prohibition on patents for varieties of animals or plants or essentially biological processes for the production of such varieties though not extending to micro-biological processes or the products thereof. New rules were added to the Implementing Regulations to the Convention on the Grant of European Patents.<sup>341</sup> The overall effect follows the Directive closely as does Sch A2 to the Patents Act 1977, inserted by the Patent Regulations 2000.<sup>342</sup> The following description of the

<sup>337</sup> Case T19/90 *Onco-Mouse/Harvard* [1990] EPOR 501.

<sup>338</sup> OJ C286, 22.09.1997, p 87.

<sup>339</sup> The *Official Journal* reference of the common position text is OJ C100, 08.04.1998, p 17.

<sup>340</sup> OJ L 213, 30.07.1998, p 13.

<sup>341</sup> Rules 23b, 23c and 23d.

<sup>342</sup> SI 2000/2037. The Regulations came into force on 28 July 2000. They give effect to the Directive and to Article 27(2) of the TRIPs Agreement which permits the exclusion from patentability, inventions the commercial exploitation of which would be contrary to the *ordre public* or morality and has equivalent effect to new s 1(3) and (4) of the Patents Act 1977.

new regime on the patentability of biotechnological inventions is based on the changes made by the Regulations.

First, s 76A, as inserted by the 2000 Regulations, states that any provision of or made under the 1977 Act is to have effect in relation to biotechnological inventions subject to Sch A2. Provisions relating to other kinds of patents or applications for patents are unaffected. The Regulations amend the Act to allow the patenting of biotechnological inventions, which are defined as inventions concerning products consisting of or containing biological material or processes by means of which biological material is produced, processed or used. Biological material is defined as any material containing genetic information and which is capable of reproducing itself or being reproduced in a biological system.<sup>343</sup>

Schedule A2 para 1 states that inventions are not to be considered unpatentable solely on the ground that they concern a product consisting of or containing biological material or a process by which biological material is produced, processed or used. Provision is made for the patenting of inventions even though the biological subject matter previously occurred in nature or if the invention comprises an element isolated from the human body or otherwise produced by a technical process even if the structure of the element is identical to a natural element. This includes the sequence or partial sequence of a gene. A possible example is in respect of people living in a part of northern Italy who have a genetic make-up that appears to make them particularly resistant to a build-up of cholesterol. If a new process is made for mass-producing the relevant genetic sequence so that it may be administered to patients having high cholesterol levels, this may be patentable. Inventions may be patentable even if the technical feasibility is not confined to a particular type of animal: for example, a new gene therapy that works effectively when applied to different varieties. Thus, a new gene therapy that works for both sheep and goats may be patentable.

Schedule A2 para 3 lists inventions that are not patentable. They are:

- 1 the human body, at the various stages of its formation and development, and the simple discovery of one of its elements, including the sequence or partial sequence of a gene – thus, there must be some technical application of the discovery to be patentable as in *Genentech Inc's Patent*;<sup>344</sup>
- 2 processes for cloning human beings;
- 3 processes for modifying the germ line genetic identity of human beings;
- 4 uses of human embryos for industrial or commercial purposes;
- 5 processes for modifying the genetic identity of animals which are likely to cause them suffering without any substantial medical benefit to man or animal, and also animals resulting from such processes;
- 6 any variety of animal or plant or any essentially biological process for the production of animals or plants, not being a micro-biological<sup>345</sup> or other technical process or the product of such a process.

The latter exception is subtly changed from the previous exclusion in old s 1(3)(b) of the 1977 Act. The words 'other technical process' are inserted. Furthermore, new definitions are given and 'essentially biological process' is now defined as any process for the production of animals and plants which consists entirely of natural phenomena such as crossing and selection and 'micro-biological process' is defined as any process involving or performed upon or resulting in micro-biological material.<sup>346</sup>

The scope of the extent of protection afforded by patents on biotechnological inventions is set out in Sch A2 paras 7–10 as follows:

- *biological material possessing specific characteristics* – the protection extends to any biological material derived from that biological material through propagation

<sup>343</sup> These new definitions are inserted into s 130 of the Patents Act 1977, the interpretation section.

<sup>344</sup> [1989] RPC 147.

<sup>345</sup> Brewer's yeast is the product of a micro-biological process. Louis Pasteur obtained a patent for purified brewer's yeast in the USA in 1873; Eisenschitz, T.S. (1987) *Patents, Trade Marks and Designs in Information Work*, Croom Helm, p 54. In *American Cyanamid Co (Dann's) Patent* [1971] RPC 425, a method of producing antibiotics using micro-organisms was held to be patentable.

<sup>346</sup> Patents Act 1977 Sch A2, para 11.

or multiplication in an identical or divergent form and possessing those same characteristics;

- *a process that enables biological material to be produced possessing specific characteristics as a result of the invention* – the protection extends to biological material directly obtained through that process and any other biological material derived from the directly obtained biological material through propagation or multiplication in an identical or divergent form and possessing those same characteristics;
- *a product containing or consisting of genetic information* – the protection extends to all material in which the product is incorporated and in which the genetic information is contained and performs its function, save as provided for in para 3(a) (the exclusion in relation to the human body and the simple discovery of one of the elements of the human body, including the sequence or partial sequence of a gene).

The principle of exhaustion of rights applies to a limited extent and the above protection does not extend to biological material obtained from the propagation or multiplication of biological material placed on the market by the proprietor of the patent or with his consent, where such propagation or multiplication necessarily results from the application for which the biological material was marketed, provided that the material obtained is not subsequently used for other propagation or multiplication.

The industrial application of a genetic sequence must be disclosed in the patent application as filed (Sch A2 para 6). Section 125A of the 1977 Act, which deals with the disclosure of inventions by their specifications in terms of the availability of samples of micro-organisms, is amended. Basically, the term ‘biological material’ substitutes micro-organism. Schedule 1 of the Patent Rules 2007<sup>347</sup> contain provisions for the deposit, access and re-deposit of biological material.

347 SI 2007/3291.

The Patents Regulations 2000 insert specific defences for farmers in relation to the use of animal or animal reproductive stock and these provisions are discussed in the following chapter in the section on defences.

As regards varieties of plants, the exclusion from patentability is of relatively little consequence as plants may be protected under the Plant Varieties Act 1997.<sup>348</sup> Under this Act, proprietary rights are granted to the breeders or discoverers (or their successors in title) of new, distinctive, uniform and stable plant varieties. The duration of protection is 25 years or, for potatoes, trees and vines, 30 years from date of the grant of right. These periods may be extended to 30 and 35 years respectively by the relevant National Authorities, including the Secretary of State for Environment, Food and Rural Affairs. The rights are monopolistic in nature and are to prevent production or reproduction, conditioning for the purpose of propagation, offering for sale, selling or other marketing, exporting or importing, stocking for the above purposes and any other prescribed purpose. The scheme is administered by the Plant Variety Rights Office under the control of the Controller of Plant Variety Rights, appointed by the relevant Ministers. A specific defence for farmers in relation to the product of his harvest for propagation purposes is inserted into the Patents Act 1977 (s 60(5)(g)) together with new Sch A1 limiting the circumstances in which the defence applies.

348 Since 27 May 1995 there has been a Council Regulation (EC) No 2100/94 of 27 July 1994 on Community plant variety rights, OJ L 227, 01.09.1994, p 1.

## SURGERY, THERAPY AND DIAGNOSIS OF THE HUMAN OR ANIMAL BODY

Previously, methods of treatment of the human or animal body by surgery or therapy or diagnosis practised on the human or animal body were stated under s 4(2) as being incapable of industrial application and, hence, excluded from the grant of a patent. This did not prevent the patenting of substances or compounds for use in such methods of

treatment or diagnosis even if they were part of the state of the art providing the use in question was not itself part of the state of the art under s 2(6) and s 4(3). These provisions were repealed and replaced by a new s 4A which came into force on 13 December 2007. This was to comply with changes to the EPC and the new mechanism is much clearer and more logical than before. Section 4A(1) states that methods of treatment by surgery or therapy of the human or animal body or diagnosis practised on the human or animal body are simply not patentable. However, s 4A(2) confirms that the exception does not apply to inventions consisting of substances or compositions for use in such methods. These are patentable even if the substance or composition itself is part of the state of the art in two cases, the distinction being that the first relates to ‘use in any such method’ whilst the second relates to ‘a specific use in any such method’.<sup>349</sup> The use of the substance or compound in any such method or the specific use, as they case may be, must itself not form part of the state of the art. These provisions closely follow the equivalent provisions in the EPC.<sup>350</sup> Thus, the use of known substance X to treat a virus or infection Y generally or specifically is patentable providing that general or specific use is not itself part of the state of the art.

The reason for the basic exclusion under s 4A(1) is to ensure that medical practitioners (and veterinary surgeons) are not subjected to restraint by a patent when tending patients: *John Wyeth & Brother Ltd’s Application: Schering AG’s Application*.<sup>351</sup> The exclusion does not extend to products consisting of substances or compositions used in any such methods under s 4A(2) and, therefore, drugs are capable of industrial application and are patentable in principle. The words ‘treatment’ and ‘diagnosis’ imply an illness or disease of some kind which does not include conception or pregnancy, neither of which is considered to be an illness.<sup>352</sup> Further, as treatment of the human or animal body is excluded, treatment to rid a person or animal of, for example, an infestation of lice may be patentable if it is accepted that such treatment is directed towards ridding the human of lice and not directed to treating the human or animal body as such: *Stafford-Miller’s Application*.<sup>353</sup> However, in Case T116/85 *WELLCOME/Pigs I*,<sup>354</sup> the Board of Appeal in the EPO considered an invention comprising a method of treating mange in pigs by the application of a pesticidal composition to the surface of a pig’s body to be a method of treating an animal body and excluded from patentability under the equivalent provision in the EPC.<sup>355</sup> *Stafford-Miller* must now be doubted, especially as it was decided under the 1949 Act which had no equivalent express exclusion. However, in *WELLCOME/Pigs I*, the Board of Appeal did say that treating pigs infected by mange was a therapeutic treatment of a disease on the evidence before the Board whereas, in *Stafford-Miller*, the court decided on different evidence that an infestation of lice on human beings is not a disease.

The reason for the exclusion of surgery, therapy or diagnosis is probably a policy decision to prevent restrictions on the spread and adoption of new and improved methods of treatment. For example, if a surgeon develops a new and improved way to perform back surgery, it is in the public interest that such a method be available to all surgeons. Nevertheless, this does not sit comfortably with the fact that drugs can be, and often are, patented. One difference between the surgeon and the drug company is that the former is in a profession where he is expected to pass on his knowledge to others (he will probably be very keen to publish his new technique) and will not expect financial recompense for his idea but will hope for kudos and the respect of colleagues; whereas the drug company, operating in a competitive industry, needs a patent to justify investment in research and development.

As previously, known compounds and substances for use in new methods of treatment or diagnosis are patentable as are second and subsequent uses for new methods. Additionally, new specific uses as well as methods are patentable in principle under

<sup>349</sup> Section 4(3) and (4) respectively.

<sup>350</sup> Article 53(c) and Article 54(4) and (5).

<sup>351</sup> [1985] RPC 545.

<sup>352</sup> See *Schering AG’s Application* [1971] RPC 337, where a patent was granted to a method of contraception involving doses of gestagen. However, in 1936, an application in respect of ‘improvements in pessaries’ (contraceptive devices) was refused by exercise of the Royal Prerogative: *Riddlesbarger’s Application* (1936) 53 RPC 57.

<sup>353</sup> [1984] FSR 258.

<sup>354</sup> [1998] EPOR 1.

<sup>355</sup> Article 52(4).

s 4A(4). This could cover the situation where a new regime for dosing a patient is found to be more effective than known regimes and would remove Jacob LJ's regret at how the Court of Appeal interpreted the previous version of the exception for known compounds and substances used for new methods of treatment.<sup>356</sup>

<sup>356</sup> In *Merck & Co Inc's Patent* [2003] FSR 498 at para 80.

# OWNERSHIP, DEALING WITH PATENTS, SAFETY AND SECURITY, AND CROWN USE

## INTRODUCTION

Disputes as to entitlement to patents are common. This is not surprising given the value of many patent rights. The Patents Act 1977 contains numerous provisions setting out the basic rules on entitlement and procedures for determining who is entitled in a particular case. Prime examples of issues of entitlement concern situations where two or more persons have made contributions to an invention, or where an employee makes an invention. In some circumstances, employee inventors may be entitled to compensation where the invention belongs to the employer; there have been recent changes to these provisions to make this more than a mere theoretical possibility as, in the past, there was not one single example of an employee being successful in an application for compensation.

As is usual with intellectual property rights, patents can be dealt with in a number of ways, such as by assignment, licensing or by way of a mortgage. Certain transactions have to be registered; otherwise there may be problems with obtaining damages in infringement actions. Where a patent is owned by two or more persons jointly, each can exploit the patent by themselves or through their agents under s 36(2), but the consent of all is required in respect of certain transactions under s 36(3), notably licensing. However, the Comptroller has a discretion to order the grant of a licence under a patent. This might be important where co-proprietors cannot agree and a deadlock has been reached such that the patent is not being exploited.<sup>1</sup>

<sup>1</sup> Section 37(2). See *Hughes v Paxman* [2007] RPC 34.

The Act also contains provisions for the grant of compulsory licences and for licences of right. The former are quite rare and the provisions are intended to deal with a situation where the patent monopoly is being abused although, if that is so, competition law may be triggered also. Most licences of right result from the proprietor of a patent agreeing to this as a way of reducing the renewal fees.

There are provisions relating to 'safety and security' which may result in restrictions or prohibitions on the publication of information or its communication to any specified person. There are also restrictions on applications abroad by UK residents in respect of certain types of inventions. Basically, an application must be filed first at the UK Patent Office or the Comptroller must give written authority. Finally, the provisions relating to Crown use are described in this chapter.

## OWNERSHIP OF PATENTS

The owner of a patent is referred to as its proprietor in the Patents Act 1977 which contains a number of provisions concerning the ownership of patents not noted for their clarity. At the outset, a distinction has to be made between the inventor and the

proprietor of a patent, although in some cases the inventor will be the proprietor of the patent. The inventor of an invention is, by s 7(3), the actual deviser of the invention. Where the invention is the result of the combined efforts of two or more persons, they are the joint inventors of the invention. Where there are joint inventors, it is inappropriate to divide up the claims to see which has contributed which element.<sup>2</sup> It is important to identify who in substance was responsible for the invention, and if that is two or more persons then they are the joint inventors. Where more than one person is involved, to determine which are the inventors, the first step is to identify the inventive concept.<sup>3</sup>

The proprietor is the person to whom the patent is granted and who, therefore, has the right to work the patent. If the inventor is not the proprietor of the patent, he has a right to be mentioned as being the inventor in any patent granted and in any published application.<sup>4</sup> Failure to identify the inventor will prevent an application from proceeding. However, the inventor may waive his right to be identified as such (or have his address suppressed) in a published notice or specification for the patent under s 24(4).<sup>5</sup> This is not an absolute right except in relation to the inventor's address and the inventor must give reasons in writing, as to why he does not want his name published, to the Comptroller who will comply if satisfied of those reasons.<sup>6</sup> The rationale is to protect the identity or address of inventors who may be responsible for making inventions of a controversial nature which could attract the attention of protesters.

A patent is a form of personal property,<sup>7</sup> but not a thing in action, and may be transferred, created or granted only in accordance with s 30(2)–(7). The availability of compulsory licences in certain circumstances prevents the abuse of the monopoly granted to the proprietor of the patent.

The proprietor of a patent may offer to surrender it at any time by giving notice to the Comptroller under s 29. A person may give notice of opposition, in which case, the Comptroller will notify the proprietor and determine the question. This could be the case where a licensee objects to the surrender of the patent. The patent ceases to have effect when notice of the Comptroller's acceptance of the offer to surrender is published in the *Patents Journal*. In *Connaught Laboratories Inc's Patent*,<sup>8</sup> it was held that where an offer to surrender a patent was made in revocation proceedings, the patent remained in existence until such time as the Comptroller decided to accept that offer but, until that time, a court could revoke the patent.

## Entitlement to patent

While any person can apply for a patent either on his own or jointly, it will be granted only to persons identified in s 7. Under s 7(2)(a), primarily, the patent will be granted to the inventor, or joint inventors, except where someone else has a better entitlement to it under s 7(2)(b). This is where another person or persons are entitled by virtue of '... any enactment or rule of law, any foreign law or treaty or international convention, or by any enforceable term in an agreement with the inventor that was entered into prior to the making of the invention ...'. An example might be where an inventor is commissioned to produce an invention to overcome a particular problem. Equitable interests are not effective to make any other person entitled to the patent as far as the Act is concerned. The patent will be granted to the legal owner only, although any equitable owner may have a claim to the benefit accruing from the patent under a trust.<sup>9</sup> Additionally, an invention made by an employee shall be taken to belong to his employer.<sup>10</sup> This situation might, in any case, be covered expressly by the contract of employment. Section 7(2)(c) also provides for the grant of a patent to a successor or successors in title to the person or persons who would otherwise have been entitled to the patent. The words 'and to no other person' round off s 7(2) indicating that no other

<sup>2</sup> *Henry Brothers (Margherafelt) Ltd v Ministry of Defence and Northern Ireland Office* [1997] RPC 693. See also *Hughes and Paxman's Patent* [2005] EWHC 2240 (Pat) where an argument that this was the reason for s 37(2), giving the Comptroller a discretion to grant a licence, was rejected. The discretion was not so limited.

<sup>3</sup> *Henry Brothers (Margherafelt) Ltd v Ministry of Defence and Northern Ireland Office* [1999] RPC 442, dismissing the appeal from the Patents Court.

<sup>4</sup> Patents Act 1977 s 13(1).

<sup>5</sup> Inserted by the Patents Act 2004, effective from 1 October 2005.

<sup>6</sup> Patent Rules 2007, SI 2007/3291, r 10.

<sup>7</sup> Patents Act 1977 s 30(1).

<sup>8</sup> [1999] FSR 284.

<sup>9</sup> As the question of ownership of an invention had to be considered as of the date the invention was made, any constructive trust must have arisen at this time: *Christopher S French v Paul J Mason* [1999] FSR 597.

<sup>10</sup> Patents Act 1977 s 39, below.

rules apply to determine entitlement. The most common example of someone other than the inventor being entitled is the right of an employer in the case of an invention made by an employee which is provided for by s 39, discussed later (*see* p 477).

To facilitate patent applications there is a rebuttable presumption that the person making the application is entitled to the grant of the patent. Anyone challenging entitlement has, therefore, the burden of proof. For example, a person claiming to be entitled as or by virtue of a joint inventor has the burden of proving that that person was indeed a joint inventor. Furthermore, if a person is claiming to be solely entitled has the additional burden of proving that the person named as inventor was not in fact the inventor.<sup>11</sup>

Lord Hoffmann in *Rhone-Poulenc Rorer International Holdings Inc v Yeda Research & Development Co Ltd*<sup>12</sup> considered that s 7(2) and (3) provided an exhaustive code for determining entitlement to the grant of a patent. It was wrong to require that a person claiming to be an inventor had to rely on some other rule of law, such as a breach of contract or breach of confidence as had been suggested in *Markem Corp v Zipher Ltd*.<sup>13</sup> To show entitlement all that was needed was to show that the proprietor was the inventor, being the actual deviser of the invention, or was entitled under s 7(2) or (3). Lord Hoffmann consider that the Court of Appeal in *Markem* confused the rules about entitlement and validity (novelty). The latter relates to the principle that the first to file is entitled to the patent where two persons independently make the same invention.<sup>14</sup> But this is a rule about novelty, not entitlement. Lord Hoffmann gave an example. Where A claims that his inventive concept has been patented by B, three things might have happened as follows:

- (a) B made the same invention independently and, therefore, B is entitled to the patent. A cannot patent the same invention later.
- (b) A described his invention to B without imposing a duty of confidence (and no such duty could be implied in the circumstances). In that case, information about the invention has been communicated to the public and B's patent will be invalid for lack of novelty.
- (c) A described his invention to B and imposed a duty of confidence. The patent will be valid and A is entitled, not because B applied for his patent in breach of confidence but because A was the inventor. The duty of confidence relates to the question of novelty under s 2 and not to entitlement under s 7.

At any time before a patent has been granted a reference may be made under s 8(1) to the Comptroller to determine whether the person making the reference (alone or with any other persons) is entitled to be granted the patent, or has or would have any right in or under the patent or application for the patent.<sup>15</sup> A reference may also be brought by any of two or more co-proprietors of an application to determine whether any right in or under the application should be transferred or granted to any other person. Where the Comptroller considers the question arising would be more properly dealt with by the court, he may decline to deal with it, effectively handing it over to the court. The Comptroller (or court) may order, *inter alia*, that the application may proceed in the name of the person making the reference, solely or jointly with any other applicant, or refuse to grant the patent, or order the application to be amended so as to exclude matter in respect of which the question was referred or order the transfer or grant of any licence or other right in or under the application and give direction to any person for carrying out the provisions of the order.

A person may be entitled to a patent even though the inventor is not familiar with the applicable technology. The important thing is whether the inventor was the actual deviser of the invention, the person who came up with the inventive concept. In a case involving a patent for an insect trap, *IDA Ltd v University of Southampton*,<sup>16</sup> the

<sup>11</sup> *Rhone-Poulenc Rorer International Holdings Inc v Yeda Research & Development Co Ltd* [2008] 1 All ER 425.

<sup>12</sup> [2008] 1 All ER 425 at para 18.

<sup>13</sup> [2005] RPC 761.

<sup>14</sup> The US patent system is based on a 'first to invent' principle but this is likely to change to a 'first to file' system to align the US system more closely with most other countries.

<sup>15</sup> Post-grant references are brought under s 37 and should be made within two years of the date of grant: s 37(5).

<sup>16</sup> [2006] RPC 567.

inventive concept was using magnetic particles to adhere to the legs of insects such as cockroaches so that they could not grip a sloping surface that they alighted onto and would slide into the trap. This was suggested by a consultant working for the claimant company to one Professor Howse at the defendant university, which already had patents for insect traps using electrostatic powders. The consultant did not know whether his idea would work. It was held that the claimant was entitled to the patent. All that Professor Howse, his colleague and the patent agent drafting the application contributed was common general knowledge.<sup>17</sup> Jacob LJ suggested that cases such as the present one were ripe for mediation. The invention had not been exploited since the original application some eight years ago. Its exploitation was ‘. . . stultified by the dead hand of litigation’. He pointed out that a small share of a large exploitation was better than a large share of none or little exploitation.

In *Goddin and Rennie’s Application*,<sup>18</sup> Rennie made contributions to Goddin’s design for covers for circular fish tanks. Rennie had visited the site at which Goddin had erected a tank, under an obligation of confidence, and later it was agreed that Rennie would make the net covers for the tank to be fixed to the frame of the cover. The patent was applied for in the name of Goddin’s company, Woodwick Fish Farms Ltd, and mentioned both Goddin and Rennie as inventors. Later, Goddin made an application under s 8(1). The patent application had been assigned to Goddin.

The Court of Session, Outer House, in Scotland held that there was an implied term in the agreement between Rennie and Goddin to the effect that any improvement thought of by Rennie would belong to Goddin’s company. However, Rennie had made a suggestion for an elliptical frame before the contractual arrangement and separate from it. He was, therefore, entitled to the benefit of the relevant parts of the claims involving that suggestion.<sup>19</sup> The patent was granted in Goddin’s name only, subject to Rennie having an irrevocable exclusive licence in respect of those parts of the claims relating to the feature of the elliptical frame with a power to sub-licence. The royalty was set at 2.5 per cent of the ex-works sale price of products made under those claims and Goddin was to be solely responsible for the cost of maintaining the patent.

Under s 12, provisions not unlike those in s 8 apply in relation to an application made under the law of a country other than the UK or under any treaty or in a convention country.<sup>20</sup> This is subject to provisions concerning jurisdiction and stays under s 82, for example, where proceedings are before the competent authority in respect of the foreign, treaty or convention application.

Where there are two or more proprietors of a patent, their ownership is equivalent to ownership as tenants in common, that is they are each entitled to an undivided share in the patent,<sup>21</sup> and if one of the owners dies his share passes under his will or by intestacy and does not automatically pass to the remaining owners. Where a co-proprietor is a company or other organisation the undivided share will be a company asset which, for example, can be assigned or dealt with by a receiver on insolvency.

Under s 36(2) where two or more persons are proprietors, each may ‘by himself or his agents’ do for his own benefit without the consent of the other or others any act which would otherwise infringe the patent. This is subject to any agreement to the contrary. The term ‘agent’ is used in a loose sense and would cover, for example, an independent contractor working the invention for the benefit of the joint proprietor. The question is whether the act is, in substance, an act under a licence or use by the proprietor. In *Henry Brothers (Margherafelt) Ltd v Ministry of Defence and Northern Ireland Office*,<sup>22</sup> the Crown, being a joint proprietor, engaged an independent contractor to construct a building incorporating the invention. It was held that this was use by the Crown; the contractor was the means by which the Crown obtained construction of its building. There are, however, some limits to what a joint proprietor can do without the consent of the other or others. Under s 36(3) the consent of the others is required

<sup>17</sup> Of course, without their contribution the disclosure may not have been an enabling disclosure but performing experiments to confirm the efficacy of the idea and providing technical knowledge to draft the application did not contribute to the inventive concept.

<sup>18</sup> [1996] RPC 141.

<sup>19</sup> However, this appears to contradict *Henry Bros (Margherafelt) Ltd v Ministry of Defence and Northern Ireland Office* [1997] RPC 693, at first instance, above. Unless the claims cover a group of inventions which are so linked to cover a single inventive concept, it seems logically unrealistic to separate out the claims and assign them individually to different persons.

<sup>20</sup> An example is *Ladney and Hendry’s International Application* [1998] RPC 319 where a reference was made in respect of an application under the PCT. The Court of Appeal reinstated the Hearing Officer’s decision that the reference failed.

<sup>21</sup> Patents Act 1977 s 36(1).

<sup>22</sup> [1997] RPC 693. The proprietor’s appeal was dismissed by the Court of Appeal in [1999] RPC 442.

to grant a licence under the patent, or to assign or mortgage a share in the patent, subject to any agreement in force at the time. This now also applies to an amendment to, or application to amend, the specification and an application for revocation of a patent.<sup>23</sup>

<sup>23</sup> Patents Act s 36(3), as substituted by the Patents Act 2004, from 1 October 2005.

<sup>24</sup> [1999] RPC 442.

The Court of Appeal in *Henry Bros (Margherafelt) Ltd v Ministry of Defence and Northern Ireland Office*<sup>24</sup> considered the effect of s 36(2) and (3) and confirmed that, subject to any agreement to the contrary, one co-proprietor may, without the consent of the other co-proprietors:

- do by himself or his agents for his own benefit what would otherwise (and apart from Crown use) be an infringing act, but
- he may not grant a licence under the patent or assign or mortgage his share in it.<sup>25</sup>

<sup>25</sup> Nor amend, apply to amend or revoke the patent without the consent of the others, from 1 October 2005.

The purpose of s 36(2) is to allow what has been referred to as domestic enjoyment or 'home use'. It does not allow large-scale commercial exploitation through the grant of licences. Robert Walker LJ said that the provisions of s 36(2) will rarely be in issue as, in the vast majority of cases, there will be at least a relevant informal agreement between the co-proprietors as to the use each can make of the invention without the consent of the others. Robert Walker LJ remarked that there appeared to be almost no authority on s 36(2).

The Comptroller has a discretion to order that a licence be granted under s 37(2). After grant, on application by a person claiming a proprietary right in the patent, *inter alia*, he may determine the question and make such order as he thinks fit under s 37(1). This discretion is not prejudiced by s 36(2) as s 36 is expressed as being subject to a number of provisions including s 37.<sup>26</sup>

<sup>26</sup> *Hughes v Paxman* [2007] RPC 34.

An agreement between joint owners to the effect that one will forfeit his rights under certain circumstances, for example, after failing to pay a share in the expenses related to renewing the patent, will not necessarily be considered to be void as a penalty clause. However, the court has an equitable jurisdiction to grant relief against forfeiture. It was held thus in *BICC plc v Burndy Corp*,<sup>27</sup> where the court granted an extension of time for payment of the agreed expenses associated with the upkeep of the patent.

<sup>27</sup> [1985] RPC 273.

### Employee inventors

The Patents Act 1977 deals with employee inventors in far more detail than is the case, for example, in copyright law. The relevant provisions are of great import because a very large number of applications for the grant of a patent will concern inventions made by employees. 'Employee' is defined in s 130(1) as being a person who works or worked under a contract of employment, or in employment under or for the purposes of a government department or a person who serves or who has served in the naval, military or air forces of the Crown. By s 39, an employee invention belongs to the employer in either of the following circumstances:

<sup>28</sup> It was not acceptable to ascertain the meaning of 'normal' by reference to some other standard such as 'ordinary', 'day-to-day' or 'primary': *LIFFE Administration and Management v Pavel Pinkava* [2007] RPC 667.

- 1 The invention was made in the course of the employee's normal<sup>28</sup> duties as an employee or, if not, in the course of duties specifically assigned to the employee, provided that, in both cases, the circumstances are such that the invention might reasonably be expected to result from the carrying out of those duties (s 39(1)(a)).
- 2 The invention was made in the course of the employee's duties which, at the time of making the invention, were such that the employee had a special obligation to further the interests of the employer's undertaking (s 39(1)(b)).

In all other circumstances, the invention belongs to the employee rather than to the employer. Where the employee is entitled to the patent, to prevent an employer interfering with the employee's right to exploit the patent, s 39(3) provides that nothing done by or on behalf of the employee or anyone claiming under him for the purposes

of pursuing an application for a patent, and nothing done by any person for the purposes of performing the invention, will infringe any copyright or design right in any model or document which as between the employee and employer belongs to the employer. It is difficult to think of examples where this provision would be needed. If there was an issue in relation to an employer's copyright or design right, a court would be likely to grant a royalty-free non-exclusive licence. However, there may be a situation where an employee has created a document or drawing for his employer in the course of employment where this represents a preliminary, though perhaps not essential, step to an invention made later to which the employee is entitled.

These provisions apply as between the employee and the employer and would not, for example, affect any third party rights. They will apply where an employee's duties include making inventions in the normal course of his duties: for example, where an employee is engaged in a research and development capacity. They would also apply where a workshop manager was given the task of trying to solve a particular problem with the employer's equipment or using his employer's working practices, and the manager makes the invention in the course of carrying out that task. They would not normally apply where, say, a clerical worker working for a manufacturing company devised an invention which improved his employer's assembly line and which had nothing to do with the employee's normal duties and in respect of which he had not been assigned any relevant specific duties.

Where the employee is engaged at a high level, such as a director of a company, the employee will face an uphill task in convincing a court that he is entitled to a patent for an invention relating to the company's business. This is because it is almost inevitable that a company director would be held to have a special obligation to further the interests of his employer's obligation. This point was made by Pumfrey J in *Christopher S French v Paul J Mason*,<sup>29</sup> in which he pointed out that, nevertheless, it does not mean to say that a director can never succeed.

29 [1999] FSR 597.

Especially in the case of employees below the level of company director, the terms of the contract of employment, express or implied, will assist the court in determining whether the circumstances in which the invention was made fall into either of the above two categories. In *Electrolux Ltd v Hudson*,<sup>30</sup> an employee of the claimant (a company making electrical appliances) invented, with his wife at home one evening, an adapter for a vacuum cleaner that would allow the use of any type of disposable bag in any make of vacuum cleaner taking disposable bags. At the time the defendant was employed as a senior storekeeper. The claimant claimed entitlement to the patent for the invention on the basis of the defendant's contract of employment. However, it was held that the relevant term in the contract was too wide (it was probably too wide even for a person employed in a research capacity) and the court refused to imply an appropriate term because the employee was not employed to invent; he was employed as a storekeeper.

30 [1977] FSR 312.

A reference under s 37 (determination of the right to a patent after grant) was made in *Greater Glasgow Health Board's Application*<sup>31</sup> to see whether an employed hospital doctor was entitled to be the proprietor of a patent for the invention of a spacing device for an ophthalmoscope. The doctor, a registrar, had a very wide job description which referred to research facilities of which the doctor was encouraged to avail himself for basic clinical research. The contract did not, however, express this as a duty and the court held that his duty to treat patients did not extend to devising new ways of diagnosing and treating patients. The doctor was entitled to be the proprietor of the patent. He had made the invention in his own time, during a period when he was working over 80 hours a week.

31 [1996] RPC 207.

Some further indication of the circumstances in which an employee invention will or will not belong to the employer was given in the Patents Court in *Harris's Patent*.<sup>32</sup>

32 [1985] RPC 19.

The invention was for a slide valve for controlling the flow of material such as coal dust and was an improvement over the ‘Wey’ valve. Harris made the invention while he was a manager of the Wey valve department of R company, who were licensees of S, a Swiss company. Harris made the invention during the period after he was informed that he was to be made redundant and before he left the employ of R company. The patent was granted and the question of who was entitled to the patent was referred to the Comptroller under s 37. Harris’s primary duty had been to sell Wey valves, and R company had no research facilities and did not undertake any creative design. Major problems were referred to the Swiss company. It was held that the rights between an employee and employer were governed only by s 39. The employee’s normal duties were the actual duties he was employed to perform. Any duty of fidelity owed to the employer did not assist in formulating those normal duties. R company never solved design problems so it could not have been part of Harris’s duties to provide solutions to problems and his duty in respect of problems was to report them for transmission to the Swiss company. Neither was the invention made in circumstances such that an invention might reasonably be expected to have resulted from the carrying out of the employee’s normal duties. The invention did not fall within s 39(1)(b) – the employee’s obligation was to sell Wey valves.

33 [1996] RPC 183.

*Staeng Ltd’s Patents*<sup>33</sup> is a good example of factors that favour the employer. Staeng Ltd was the proprietor of the patents in suit and Mr Robertson, an employee of Staeng, was named as inventor. There was no dispute between Staeng and Mr Robertson. Mr Neely was employed by another company, Hellerman, which had cooperated with Staeng in the development of electrical connector kits, and there had been a number of meetings between Mr Robertson and Mr Neely. At one of these meetings, Mr Neely, after being asked by Mr Robertson whether he could think of an alternative way of holding the cable screen, suggested a constant tension spring which turned out to be an important aspect of the patents. Mr Neely later claimed that he was entitled to be named as inventor under s 13(3), and that he was also entitled to be the proprietor of the patents on the basis that his duties did not require him to invent. Nor was he under a special obligation to further his employer’s interests.

The Patent Office held that Mr Neely failed to show that he was the sole inventor. He was not skilled in the relevant art and only came up with the idea after prompting by Mr Robertson. Both Mr Neely and Mr Robertson were joint inventors. On the question of Mr Neely’s employer’s entitlement, as between Mr Neely and his employer, it was held that the employer was entitled. Mr Neely made the invention in the course of his normal duties in circumstances such that invention could reasonably be expected to result. Although his role was primarily one of marketing, he had a wide-ranging brief to generate new ideas for new products. Furthermore, Mr Neely was a senior executive. He knew that his employer was contemplating acquiring Staeng Ltd and, that being so, the invention might be of advantage to his employer. Therefore, he was under a special obligation to further the interests of his employer’s undertaking.

34 [2007] RPC 667.

Further guidance on the operation of s 39 was given in *LIFFE Administration and Management v Pavel Pinkava*.<sup>34</sup> LIFFE operated the London Futures Market and Dr Pinkava was employed by LIFFE as its interest rate product manager. Whilst working for LIFFE he invented a system of electronic trading for financial instruments not previously traded. He applied for US patents after being advised that patents were not available in the UK because of the exclusions to the meaning of invention under s 1(2)(c) of the Patents Act 1977.<sup>35</sup> The source of an employee’s duties was primarily contractual but some terms were implied by law. However, because it was usual for employment contracts to evolve over time, regard must be had to how the contractual duties evolved over time by a process of continual variation. Such extra or additional duties arising in this way were not specifically assigned duties but, in the course of time,

35 Presumably on the basis that the invention was a computer program and/or business method as such. The US has no equivalent exclusion.

became part of the employee's normal duties. Section 39(1)(a) is in terms of circumstances such that '... an invention might reasonably be expected to result from the carrying out ...' of the employee's duties, whether normal duties or specifically assigned duties. This did not mean that the particular invention in question had to be envisaged from the performance of the duties, simply that any invention might be reasonably expected. If the words were limited to the invention in question then, if it could reasonably be expected to be the result, it would probably lack either novelty or inventive step. Nor was there any room for implying a further condition or qualification that the invention was similar to what might have been expected or that it provided a solution to a pre-identified problem or that it realised or contributed to the achievement of the aim or object of the employee's duties.

The test under s 39(1)(a) was purely objective. However, the majority in the Court of Appeal in *LIFFE* considered that it was correct to consider the particular employee's abilities and it would not be consistent to consider some notional employee of reasonable or average ability. Jacob LJ dissented from this view, probably rightly so, and he thought that the reference to the circumstance of either case (normal or specific duties) meant that the question was whether the employee was in a situation where one could objectively expect him to make the invention. He said (at para 103):

I cannot accept that, given all other factors being equal (contract terms, nature of the job and so on), there can be a difference as to ownership depending on whether the individual employee is thick or brilliant.

This must be right. Otherwise, the test becomes fraught with subjectivity and the almost impossible task of determining the abilities of a particular individual. After all, a 'thick' employee might have a flash of inspiration that could elude a more 'clever' person who is so knowledgeable about the technology that he fails to see the wood for the trees.

An employee might devise an invention which is of outstanding benefit to his employer in circumstances such that the employer will be taken as being entitled to the patent. This might seem unfair because the benefit of the invention may far exceed the employee's salary for the period of time he has been involved with making and developing the invention. However, the employee has been given consideration for his work, that is his salary, and the employer may have been prepared to pay the employee his salary even if no useful invention resulted, simply as a speculative investment in the hope that a valuable invention would result. Even so, the employee may apply for compensation under s 40, which allows the Comptroller or a court to award compensation where, having regard to the size and nature of the employer's undertaking, the invention or patent for it (or a combination of the two) is of outstanding benefit to the employer and it is just that the employee should be awarded compensation by the employer.<sup>36</sup> Prior to the changes to include a reference to the invention as well as the patent, there was little case law on the provisions, but it was clear that the benefit must be extraordinary and not such as might be expected to result from the employee's normal duties.<sup>37</sup> In fact, the use of the word 'outstanding' suggests that compensation will be awarded under these provisions only in exceptional circumstances.<sup>38</sup>

Section 41 lays down the basic principles for the calculation of the amount of the compensation, being an award that gives the employee a fair share in the benefit derived or expected to be derived. These provisions also apply where the invention initially belonged to the employee and he has subsequently assigned it to the employer or granted an exclusive licence to him. This might apply where, because of the employee/employer relationship, the employer is able to bring pressure to bear upon the employee. Of course, one way that the employer can avoid the compensation provisions where the employer is the person entitled to the patent is not to apply for a

<sup>36</sup> New s 40(1) was inserted by the Patents Act 2004 to include not just the patent but the invention (or a combination of both) to be taken into account. The reference to invention may make it easier for an employee to be awarded compensation.

<sup>37</sup> *GEC Avionics Patent* [1992] RPC 107.

<sup>38</sup> *British Steel's Patent* [1992] RPC 117.

patent and to rely on the law of confidence. There have been very few reported cases on applications for compensation under s 40. Until recently, none had been successful. In *British Steel plc's Patent*,<sup>39</sup> the employee had received an *ex gratia* payment and had been honoured by the award of an MBE in addition to a licence agreement. The proven benefit was only 0.08 per cent of the employer's profits. The employee's application for compensation was refused.<sup>40</sup> Whether the change brought about by the Patents Act 2004 will lead to successful applications for employee compensation remains to be seen. The most significant difference is that, if an employee works the invention himself rather than granting rights under it, the benefit can be said to flow from the invention rather than the patent for it. It may be that the combination of invention and patent assists an employee in an award of compensation, say, where the employer exploits the invention himself (for example, by making and selling widgets that are the subject matter of the invention) and uses the patent rights to obtain injunctions and/or awards of damages against infringers.

The first reported case in which an application for employee compensation succeeded is *Kelly v GE Healthcare*<sup>41</sup> in which two research scientists were awarded £1 million and £500,000 respectively. They were involved in the synthesis of a compound used in a patented radioactive imaging agent which turned out to be very successful. The application for compensation fell to be determined under ss 40 and 41 before amendment by the Patents Act 2004. Floyd J set out the principles to apply, as follow:

- i) Section 40 is available to an inventor in the sense of the 'actual deviser' of the invention, but not to those who merely contribute to the invention without being joint inventors;
- ii) Section 40 is available to an employee who makes an invention (which is subsequently patented by the employer) in the ordinary course of his employment or in the course of duties specifically assigned to him;
- iii) Under the section prior to its amendment, it is the patent (as opposed to the invention) which must be of outstanding benefit to the employer, having regard to the size and nature of the employer's undertaking;
- iv) 'Outstanding' means 'something special' or 'out of the ordinary' and more than 'substantial', 'significant' or 'good'. The benefit must be something more than one would normally expect to arise from the duties for which the employee is paid;
- v) On the other hand it is not necessary to show that the benefit from the patent could not have been exceeded;
- vi) Section 40 is not concerned with whether the invention is outstanding, although the nature of the employee's contribution may fall to be considered at the section 41 stage, if it is reached;
- vii) It will normally be useful to consider what would have been the position of the company if a patent had not been granted, and compare this with the company's position with the benefit of the patent;
- viii) The patent must have been a cause of the benefit, although it does not have to be the only cause. The existence of multiple causes for a benefit does not exclude the benefit from consideration, although the benefit may have to be apportioned to isolate the benefit derived from the patent;
- ix) 'Patent' in section 40 does not include regulatory data exclusivity. Thus the scenario without patent protection is one where [it] nevertheless exists;<sup>42</sup>
- x) It must be 'just' to make an award: the consideration of what is just is not limited to the facts set out in section 40;
- xi) It is not a requirement of obtaining compensation that the employee can prove a loss (for example by reference to inadequate remuneration for his employment) or by the expenditure of effort and skill beyond the call of duty. These are nevertheless factors to take into account under section 41;
- xii) The valuation of any benefit is to be performed *ex-post* and in the light of all the available evidence as to benefit derived from the patent: not '*ex-ante*';

39 [1992] RPC 117.

40 At the time, the annual turnover of British Steel was in the region of £4.9 billion.

41 [2009] EWHC 181 (Pat).

42 In relation to medical inventions, safety and efficacy data must be generated and supplied to the regulator for approval. This data can be costly and time-consuming to generate but is not available to others for a period of time. Generic companies usually do not go through the data generation process themselves but wait until the data is made available. Until such time, the inventor or his employer has exclusivity even without the benefit of the patent. The total benefit of the patent may be reduced to allow for this exclusivity.

- xiii) Where the employee shows that the invention has been of outstanding benefit, the amount of compensation is to be determined in the light of all the available evidence in accordance with section 41 so as to secure a just and fair reward to the employee, neither limiting him to compensation for loss or damage, nor placing him in as strong a position as an external patentee or licensor.

Floyd J held that the benefit of the patents was outstanding and conservatively valued that benefit at £50 million. He also held that it was just that the employees received a fair share of the benefit. The fact that Dr Kelly had waited until he had retired to make his claim was not a relevant factor and s 40 did not require a claim for employee compensation to be made whilst the patent in question was still in force.

It is conceivable that in some circumstances where the patent initially belongs to the employee, the equitable doctrine of undue influence might apply: for instance, where an employee has been pressurised by his employer to assign the patent to his employer or to grant an exclusive licence in favour of his employer, and where the terms of the agreement are grossly unfavourable to the employee. However, the employee/employer relationship does not automatically give rise to a presumption of undue influence and the employee would have to prove the nature of the pressure. If the doctrine of undue influence does apply, the effect is to make the agreement voidable. Section 42 has a similar effect as it makes terms in contracts between an employee and his employer (or some other person at the request of the employer or through the employee's contract of employment) unenforceable if and to the extent that those terms attempt to diminish the employee's rights in inventions.

## DEALING IN PATENTS

As with other forms of intellectual property, patents may be dealt with by way of assignment or licensing, either exclusive or otherwise. They may also be mortgaged or vest by operation of law as other personal property. For example, if the proprietor dies the patent will vest in the proprietor's personal representatives. Patent applications may also be dealt with, which is understandable considering the length of time that may pass before the patent is finally granted. Where there are two or more proprietors of a patent or application for a patent, the consent of all of them is required for a licence, assignment or mortgage.<sup>43</sup> Under s 30(6), any purported assignment or mortgage of a patent or patent application is void unless it is in writing and signed by or on behalf of the assignor or mortgagor.<sup>44</sup> An assent by a personal representative must be signed by or on behalf of the personal representative.

If the requisite formalities are not complied with, the agreement is likely to operate as an agreement to assign in equity. The assignee will be the beneficial owner and the assignor will remain the legal owner of the patent. The beneficial owner will be able to sue for infringement of the patent provided at some stage the legal owner is made a party to the proceedings. An example is *Baxter International Inc v Nederlands Produktielaboratorium voor Bloedtransfusiapparatuur BV*,<sup>45</sup> where the defendant applied to strike out the claimant's action on the ground that the assignments in question had been signed only by the assignor.<sup>46</sup> In that case, both assignments contained a covenant of further assurance common in agreements to assign. It stated:

We agree to execute all documents required in connection with the patent applications and patents and to execute all further documents necessary to vest title in said patents and applications to the Assignee.

Agreements to assign are very common especially where the patents are part of a much larger transaction involving other forms of property rights. It is common for a short

<sup>43</sup> Patents Act 1977 s 36(3). This now also extends to amendment of the specification, applications to amend and to applications for revocation.

<sup>44</sup> In the case of a body corporate, the requirement for signing is satisfied if the transaction is done under the seal of the body: Patents Act 1977 s 30(6A), inserted by the Regulatory Reform (Patents) Order 2004, SI 2004/2357 Art 10(3) with effect from 1 January 2005. Previously, an assignment or mortgage had to be signed by or on behalf of both parties to the transaction.

<sup>45</sup> [1998] RPC 250.

<sup>46</sup> At that time, both parties were required to sign.

47 See, for example, *Coflexip Stena Offshore Ltd's Patent* [1997] RPC 179.

48 This section was modified by the Intellectual Property (Enforcement, etc.) Regulations 2006, SI 2006/1028. Previously the limitation was in respect of the availability of damages or accounts.

49 [1992] RPC 83.

50 In the event, the relevant patent, relating to the coating of a fibrous sheet used for lining pipes, was held to be invalid for lack of inventive step.

51 Patents Act 1977 s 130, the interpretation section.

52 Patents Act 1977 s 67. The proprietor shall be made a party to the proceedings.

53 [2008] EWCA Civ 1161, overruling *Tamglass Ltd Oy v Luoyang North Glass Technology Co Ltd* [2006] EWHC 445 (Pat) on the scope of assignment under s 33(3).

54 Patents Act 1977 s 68. Before amendment by the Intellectual Property (Enforcement, etc.) Regulations 2006 SI 2006/1028, section 68 could operate to deprive the proprietor of damages or an account of profits.

55 Patents Act 1977 s 46. There were 1,002 applications during 2004.

form assignment to follow an agreement to assign.<sup>47</sup> Transactions creating equitable interests are not registrable transactions under s 33 (see below) and are not, therefore, subject to the limitation of the availability of costs (or in Scotland, expenses) for a failure to register the transaction under s 68.<sup>48</sup>

In *Insituform Technical Services Ltd v Inliner UK plc*<sup>49</sup> it was held that an assignment of an exclusive licence was not a right in a patent but a right *under* a patent and therefore was not caught by s 30(6). The defendant had argued that the second claimant, an exclusive licensee, was not entitled to relief on the basis of s 30(6).<sup>50</sup>

A licence for the working of the invention may be granted under a patent or application for a patent by s 30(4). The licence may permit the making of sub-licences and, unless the licence or sub-licence provides otherwise, a licence or sub-licence may be assigned or mortgaged. An exclusive licence is one conferring, to the exclusion of all others (including the proprietor or applicant), any right in respect of the invention to which the patent or the application relates.<sup>51</sup> An exclusive licensee has the same right as the proprietor to bring proceedings in respect of any infringement of the patent after the date of the licence agreement.<sup>52</sup>

Certain types of transaction must be registered. They are listed in s 33(3) and are:

- (a) an assignment of the patent or application for a patent;
- (b) a mortgage of the patent or application or the grant of a security over it;
- (c) the grant or assignment of a licence or sub-licence or mortgage of a licence or sub-licence, under the patent or application;
- (d) the death of the proprietor or one of the proprietors of the patent or application or any person having a right in or under the patent or application and the vesting by an assent of personal representatives of a patent or application or any such right;
- (e) any order or directions of a court or other competent authority transferring a patent or application or any right in or under it to any person, or that an application should proceed in the name of any person together with registration of the event under which the court or authority had the power to make the order or give the directions.

The scope of the term 'assignment' was considered in *Siemens Schweiz AG v Thorn Security Ltd*.<sup>53</sup> It was held in the Court of Appeal that a purposive meaning should be given and the judge at trial was wrong to hold that it did not cover a series of mergers under the Swiss law of succession. In this context an assignment was not limited to an express consensual bilateral document and could include an assignment by operation of law.

It is essential that such transactions are registered for two reasons: first, the result of s 33(1) is that registration of acquisition of property in a patent or an application defeats earlier transactions, instruments or events that have not been registered; and, second, the subsequent proprietor of the patent or an exclusive licensee may be unable to obtain costs or expenses in respect of any infringement proceedings.<sup>54</sup>

## LICENCES AS OF RIGHT

The proprietor may, at any time after the grant of the patent, apply to the Comptroller to indicate that licences as of right are available in respect of the patent.<sup>55</sup> The Comptroller must give notice to any person registered as having a right in or under the patent and shall make the entry provided he is satisfied that the proprietor is not precluded by contract from granting licences (s 46(2)). These provisions might be used by a proprietor who has been unable to exploit his patent to good effect and wants to reduce his renewal fees as they are reduced to half the normal rate. Whether making an

entry in the register that licences are available as of right makes any difference is doubtful because, if the invention was commercially attractive in the first place, the proprietor should have had no difficulty in finding an organisation willing to exploit the patent under an assignment or exclusive licence. If any person desires to take up the offer, the licence terms shall be as agreed between the parties or, failing agreement, upon such terms as may be settled by the Comptroller on the application of either party. The entry on the register to the effect that licences are available as of right may be later cancelled by application of the proprietor (s 47).

Supplementary protection certificates (SPCs) are available for medicinal products by virtue of Council Regulation (EEC) No 1768/92 of 18 June 1992 concerning the creation of a supplementary protection certificate for medicinal products.<sup>56</sup> SPCs give an additional five years' protection following expiry of the basic patent. Article 5 of the Regulation confirms that the SPC confers the same rights and is subject to the same limitations and obligations as those conferred or existing under the basic patent. Thus, if licences as of right were available at the expiry of the basic patent, they will remain available under the SPC.<sup>57</sup> In the Patents Court, Aldous J said that an SPC gives no more or less rights than those that existed under the basic patent. An argument that s 46(3)(a), entitling any person as of right to a licence where an entry is made by the proprietor that licences are available as of right, allowed a person to have only one licence (that is, that under the basic patent) was rejected. Aldous J said (at 674):

I cannot accept that submission. A person may only have one licence at a time, but a person can apply at any time for a licence providing he is not a licensee at the time his application is made.

Therefore, if the licence of right expires at the time of the basic patent, a new right to licence accrues with the grant of the SPC and, consequently, the Comptroller has the jurisdiction to grant such licence in appropriate terms.

An entry on the register in respect of licences as of right may also come about from the operation of s 51, which concerns references to the Competition Commission (previously the Monopolies and Mergers Commission). This applies to a competition reference that a person was engaged in anti-competitive practices which operated or are expected to operate against the public interest or, on a reference under s 11 of the Competition Act 1980, where a person is pursuing a course of conduct which operates against the public interest. Following a report laid before Parliament by the Competition Commission, on application by the appropriate Minister or Ministers,<sup>58</sup> the Comptroller may, by order, cancel or vary conditions in licence agreements or may, instead or in addition, make an entry in the register to the effect that licences are available as of right. There are similar provisions in relation to powers under a number of provisions of the Enterprise Act 2002 to take remedial action following merger or market investigation where the matter concerns conditions in patent licence agreements or a refusal to grant licences under a patent on reasonable terms.<sup>59</sup>

In settling the terms of a licence of right (and a compulsory licence), the Comptroller must have regard to European Community competition law. It had been the practice in the UK to allow a licensee of right to import the patented product from outside the European Community if the proprietor of the patent worked the patent by importing the product to the UK. However, if the proprietor manufactured the product within the UK, the licence of right would not allow the licensee to import the product from outside the European Community.<sup>60</sup> This was held by the European Court of Justice, in Case C-191/90 *Generics (UK) Ltd v Smith Kline and French Laboratories Ltd*,<sup>61</sup> to be discriminatory because it encouraged proprietors of patents to manufacture the patented product in their national territory rather than importing the product from other Member States.

<sup>56</sup> OJ L 182, 02.07.1992, p 1.

<sup>57</sup> *Research Corp's Supplementary Protection Certificate* [1994] RPC 387 (Patent Office) and [1994] RPC 667 (Patents Court).

<sup>58</sup> Representations may be made by persons whose interests appear to be affected.

<sup>59</sup> Patents Act 1977 s 50A, inserted by the Enterprise Act 2002.

<sup>60</sup> This was the Comptroller's view of the provisions in the Patents Act 1977 ss 48(3) and 50(1) when the patent was not being worked in the UK. However, in Case C-30/90 *Commission of the European Communities v United Kingdom* [1992] ECR I-829, it was held that s 48 offends against Article 28 (formerly Article 30) of the EC Treaty: see below.

<sup>61</sup> [1992] ECR I-5335.

Under the Patents Act 1949, the maximum term of a patent was 16 years, but existing patents that were less than 11 years old when the 1977 Act came into force (on 1 June 1978) were extended to a maximum of 20 years subject to their being treated as endorsed ‘licences of right’ for the last four years of their life. However, because of the special problems with pharmaceutical products, where the exploitation period is reduced because of the time taken to test and obtain a licence under the Medicines Act 1968, the proprietor of a patent for a product was allowed to file a declaration preventing licences as of right extending to pharmaceutical use.<sup>62</sup>

<sup>62</sup> Patents Act 1977 Sch 1 para 4A, inserted by Copyright, Designs and Patents Act 1988 s 293. Patents for medicinal products may now be extended to a maximum of 25 years (Patents (Supplementary Protection Certificates) Rules 1997, SI 1997/64).

## COMPULSORY LICENCES

There has always been a danger that the proprietor of a patent will abuse the monopoly granted to him. For example, an inventor, Mary, develops an everlasting light bulb and obtains a patent for it. Brightlight Ltd, a manufacturer of conventional light bulbs, offers a large sum of money to Mary for an assignment of the patent, to which she agrees. Brightlight then suppresses the invention and does not put it to use, preferring to continue making conventional light bulbs. This state of affairs cannot exist as far as a patented invention is concerned because of the availability of compulsory licences under which others may work the invention against the wishes of the proprietor of the patent. Compulsory licences not only cover situations where a patent is not being worked, but also are available in other circumstances such as where demand for a product is not being met on reasonable terms.

Compulsory licences cannot be granted until after three years from the date of the grant of the patent, after which any person may apply for a licence under the patent and/or for an entry to be made on the register to the effect that licences are available as of right.<sup>63</sup> Additionally, where the applicant is a government department, an application may be made for the grant of a licence to any person specified in the application. The grounds on which such applications may be made are set out in ss 48A and 48B.<sup>64</sup> The former apply where the proprietor is a World Trade Organisation (WTO) proprietor and the latter apply in the case of a non-WTO proprietor. A WTO proprietor is a national of, or is domiciled in a country which is a member of, the World Trade Organisation, or has a real and effective industrial or commercial establishment in such a country.

In the case of a WTO proprietor, the grounds for the grant of a compulsory licence or entry in the register to the effect that licences are available as of right are:

- (a) where the patented invention is a product, that a demand in the UK for that product is not being met on reasonable terms;
- (b) that by reason of the refusal of the proprietor of the patent concerned to grant a licence or licences on reasonable terms –
  - (i) the exploitation in the UK of any other patented invention which involves an important technical advance of considerable economic significance in relation to the invention for which the patent concerned was granted is prevented or hindered (in this case, the Comptroller must be satisfied that the proprietor of that other patent is able and willing to grant the proprietor of the patent concerned and his licensees a licence in respect of that other invention on reasonable terms), or
  - (ii) the establishment or development of commercial or industrial activities in the UK is unfairly prejudiced;
- (c) that by reason of conditions imposed by the proprietor of the patent concerned on the grant of licences under the patent, or on the disposal or use of the patented

<sup>63</sup> Patents Act 1977 48(1). Note, it is three years from the date of grant, not the priority date.

<sup>64</sup> Section 48 of the Patents Act 1977 was substituted and ss 48A and 48B were inserted by the Patents and Trade Marks (World Trade Organisation) Regulations 1999, SI 1999/1899. This was to give effect to the TRIPs Agreement.

product or on the use of the patented process, the manufacture, use or disposal of materials not protected by the patent, or the establishment or development of commercial or industrial activities in the UK, is unfairly prejudiced.

No order for a compulsory licence or entry to the effect that licences are available as of right shall be made unless the applicant has made efforts to obtain a licence on reasonable commercial terms and conditions and those efforts have not been successful within a reasonable period.<sup>65</sup> There is an exception and these provisions do not apply to patented inventions in the field of semiconductor technology as regards WTO proprietors.

<sup>65</sup> Patents Act 1977 s 48A(2).

Licences granted under s 48 in respect of WTO proprietors are not exclusive and not assignable except with that part of the enterprise that enjoys the use of the patented invention, or the part of the goodwill that belongs to that part. Such licences shall be predominantly for the supply of the market in the UK and include conditions entitling the proprietor to adequate remuneration. Such licences shall be limited in scope and duration to the purpose for which the licence was granted.

Where the proprietor is not a WTO proprietor s 48B applies and contains the following grounds, which are generally more extensive:

- (a) where the patented invention is capable of being commercially worked in the UK, that it is not being so worked or is not being so worked to the fullest extent that is reasonably practicable;
- (b) where the patented invention is a product, that a demand for the product in the UK –
  - (i) is not being met on reasonable terms, or
  - (ii) is being met to a substantial extent by importation from a country which is not a Member State;
- (c) where the patented invention is capable of being commercially worked in the UK, that it is being prevented or hindered from being so worked –
  - (i) where the invention is a product, by the importation of the product from a country which is not a Member State,
  - (ii) where the invention is a process, by the importation from such a country of a product obtained directly by means of the process or to which the process has been applied;
- (d) that by reason of the refusal of the proprietor of the patent to grant a licence or licences on reasonable terms –
  - (i) a market for the export of any patented product made in the UK is not being supplied, or
  - (ii) the working or efficient working in the UK of any other patented invention which makes a substantial contribution to the art is prevented or hindered, or
  - (iii) the establishment or development of commercial or industrial activities in the UK is unfairly prejudiced;
- (e) that by reason of conditions imposed by the proprietor of the patent on the grant of licences under the patent, or on the disposal or use of the patented product or on the use of the patented process, the manufacture, use or disposal of materials not protected by the patent, or the establishment or development of commercial or industrial activities in the UK, is unfairly prejudiced.

The Comptroller has a discretion to adjourn an application based on a failure to work the invention commercially in the UK at all or to the fullest extent reasonably practicable if it appears that the time elapsed since the publication of notice of grant of the patent has been insufficient for the invention to be so worked.

The first of these grounds, a failure to work in the UK at all or to the fullest extent reasonably practicable, does not apply where the invention is being commercially worked in a Member State and demand in the UK is being met by importation from that Member State.

In relation to licences under s 48, where the Comptroller is satisfied that the manufacture, use or disposal of material not protected by the patent is unfairly prejudiced by reasons of conditions imposed by the proprietor on the grant of licences under the patent, the Comptroller may order the grant of licences to such customers of the applicant as he thinks fit in addition to the applicant. Where the applicant himself already holds a licence in respect of the patent, the Comptroller may order a new licence and cancel the existing one or modify the existing licence.

Guidelines for the exercise of the Comptroller's powers with respect to applications under s 48 are contained in s 50. The Comptroller shall take into account the following general purposes by s 50(1):

- (a) the working of the invention to the fullest extent that is reasonably practicable in the UK without undue delay if it is in the public interest for the invention to be worked on a commercial scale;
- (b) having regard to the nature of the invention, the inventor or other person entitled to the patent shall receive a reasonable remuneration;
- (c) the interests of any person currently working or developing a patented invention in the UK shall not be unfairly prejudiced.

Subject to s 50(1), in determining whether to order a compulsory licence the Comptroller must take account of a number of factors contained in s 50(2), being:

- (a) the nature of the invention, the time since publication of the grant of the patent and measures taken by the proprietor or any licensee to make full use of the invention;
- (b) the ability of any person to whom the licence would be granted to work the invention to the public advantage; and
- (c) the risks to be undertaken by that person in providing capital and working the invention if the order is granted.

No account is taken of matters occurring subsequent to the application for a compulsory licence. The fact that one of the grounds for a compulsory licence is present is not sufficient, *per se*, for the grant of the licence. In *Therma-Tru Corp's Patent*,<sup>66</sup> the Patents Court said that there was no reason why a compulsory licence could not include a right to sub-licence but this would be exceptional. The application was refused because both the applicant and its proposed sub-licensee were financially stretched and there was a substantial risk that the sub-licensee would not be able to work the invention.

If the patent is being worked in the UK, it was held in *Research Corporation's (Carboplatin) Patent*<sup>67</sup> that it would normally run counter to policy to grant a licence of right (or compulsory licence) which permitted importation. Furthermore, if the price of the product was reasonable and demand at that price was being fully met, it was irrelevant to say that demand would be greater if the price was lower. The question is whether, in all the circumstances, the price being charged was reasonable.

The applicant for a compulsory licence must establish a *prima facie* case that the grounds relied upon apply. A mere suspicion will not be sufficient and an order for discovery will not be granted unless a *prima facie* case is raised by the applicant. In *Richco Plastic Co's Patent*,<sup>68</sup> the only evidence that the applicant had was that the patentee had an associated company in the UK and an investigation at the UK Companies Registry

<sup>66</sup> [1997] RPC 777.

<sup>67</sup> [1990] RPC 663. But this decision is now very questionable in the light of Case C-30/90 *Commission to the European Communities v United Kingdom* [1992] ECR I-829, discussed above.

<sup>68</sup> [1989] RPC 722.

which showed an entry for the company which did not refer to manufacturing costs but only to the costs of purchasing and importing. The application was dismissed as being an abuse of process. In practice, applications for compulsory licences are very rare.<sup>69</sup>

### Terms of licence as of right or compulsory licence

If the Comptroller has to settle the terms for a licence as of right or a compulsory licence he should do so with a view to securing, *inter alia*, that the proprietor of the patent receives a reasonable remuneration having regard to the nature of the invention. This can be done only by considering what a willing licensor and a willing licensee would have agreed upon as a reasonable royalty to be paid for the rights granted under the licence as of right. So it was held in the Court of Appeal in *Allen & Hanburys Ltd's (Salbutamol) Patent*.<sup>70</sup> This would include taking account of the research and development costs and promotional costs incurred in creating and maintaining a market for the product. Regard should also be had to the reward deserved by the proprietor for his contribution to the art, secured by an appropriate measure of profit upon the capital invested. It was suggested that this position is not unlike that pertaining under the compulsory licensing provisions in the Patents Act 1949 s 41 which caused much concern in the drug industry.<sup>71</sup> The s 41 approach did not altogether die with the revocation of the 1949 Act.<sup>72</sup> It was held in *Geigy SA's Patent*<sup>73</sup> that three elements should be taken into account in calculating the licence fee: an allowance for research and development costs, an allowance for promotional costs and an appropriate uplift. The first two are the compensation element and the third is the reward element. However, the applicability of this test now seems in doubt, as discussed below.

The best way of determining what willing parties would agree upon is to look at comparable licences where these exist; though even here consideration must be given to the scope of the licence and the other terms in the agreement.<sup>74</sup> In *Smith Kline & French Laboratories Ltd's (Cimetidine) Patents*,<sup>75</sup> Lloyd LJ said (at 236):

For my part I have no doubt that where close comparables exist, they provide by far the best and surest approach. There is no better guide to what a willing licensor and a willing licensee would agree than what other licensors and licensees have in fact agreed in comparable cases.

The presumption of willing parties to a licence could be extended to contemplate that they had a common understanding about future pricing policy, and if price cutting was likely to ensue the court should decide where the floor should be and what profits should be available calculated on that basis.<sup>76</sup>

Another possible method of calculating the terms is the 'profits available' approach in which the exercise is to determine what the available profits are and to divide these between the licensor and licensee. However, this is difficult to apply in practice and should be considered to be a last resort where there is nothing else to go on. It is accepted by the court that there are particular 'going rates' in specific industries. For example, in *Shiley Inc's Patent*,<sup>77</sup> which involved the settlement of terms for a licence of right in relation to a heart valve prosthesis, it was said the range of royalty in the mechanical engineering field was 5 to 7 per cent, but the norm in the pharmaceutical industry was between 25 and 30 per cent. However, even though the patent was in the mechanical engineering field, being a mechanical surgical device, the royalty payable was set at 15 per cent because of factors such as the proprietor's pioneering work and the high profit margins in the particular technology.

The difference between the comparable licence and the s 41 approach can be quite large. In *American Cyanamid Co's (Fenbufen) Patent*,<sup>78</sup> Aldous J applied both of the methods (he considered the profits available method of no assistance because there was no clear evidence of how the profits should be split). He calculated that the royalty to

<sup>69</sup> There were no applications from 1991 to 1994. There were three in 1995 and three in 1996. In the latest year for which statistics are available, 1999, there were no applications. More recent Patent Office Annual Reports do not separate out applications for compulsory licences.

<sup>70</sup> [1987] RPC 327.

<sup>71</sup> The Patents Act 1949 s 41 allowed the Comptroller to grant compulsory licences, *inter alia*, for medical patents. He was obliged to secure that medicines would be available to the public at the lowest prices consistent with the patentee deriving a reasonable advantage for his patent rights. For a discussion of the effects of s 41 of the Patents Act 1949 and its demise in respect of pharmaceutical products, see Walton, A. 'The Copyright, Designs and Patents Act 1988 (1)' (1989) 133 *Solicitors Journal* 646 at 650–851.

<sup>72</sup> Although many of the provisions of the 1949 Act continue to apply to patents and applications existing on 1 June 1978 by virtue of the transitional provisions, s 41 does not. However, the courts still seek guidance from s 41: see *Shiley Inc's Patent* [1988] RPC 97.

<sup>73</sup> [1964] RPC 391, approved by the Court of Appeal in *Allen & Hanburys Ltd's (Salbutamol) Patent* [1987] RPC 327.

<sup>74</sup> *Knutsson's and Bjork's Patents* [1996] RPC 461.

<sup>75</sup> [1990] RPC 203.

<sup>76</sup> *Research Corporation's (Carboplatin) Patent* [1990] RPC 663.

<sup>77</sup> [1988] RPC 97.

<sup>78</sup> [1990] RPC 309.

produce a reasonable remuneration based on comparable licences was 27 per cent, but that the application of the s 41 test gave between 45 and 54 per cent. He said that the s 41 royalty was not correct and the final figure awarded was 27 per cent uplifted to 32 per cent to take account of exceptional promotional costs.

The calculation of royalties in respect of compulsory licences and licences of right will continue to be a source of difficulty. It is not possible to lay down a strict percentage to be applied universally because of variations in development and promotional costs, and there is a danger that the patentee will be robbed of his reward if the rate is set too low. While it is essential that the incentive to invent is maintained, it is important that certain inventions, especially those related to drugs, are readily available at reasonable prices. The willing parties approach is by far the most satisfactory, but sometimes there will be nothing to compare the licence with. In such circumstances, the old s 41 approach may still be of some assistance as the profits available approach is deeply flawed. For example, what happens if there are subsequent applications for licences of right? The patentee's remaining share of the available profit will be diluted still further.

## SAFETY AND SECURITY

Where an application for a patent is filed in the UK Patent Office and it appears to the Comptroller that it contains information of a description notified to him by the Secretary of State as being information the publication of which might be prejudicial to national security, the Comptroller may give directions prohibiting or restricting the publication of that information or its communication to any specified person or group of persons.<sup>79</sup> The Comptroller may also issue like directions in relation to information which appears to him to be such as to be prejudicial to public safety. This can be done on the Comptroller's own initiative, without prior notification by the Secretary of State. The prohibition or restriction can endure until 3 months from the end of the period for publication of the application, normally 18 months from its filing date or earlier priority date if the priority of an application elsewhere is sought.

While directions under s 22 are in force, the application may proceed to the point where it is in order for the grant of a patent but it shall not be published or communicated and no patent shall be granted. If the application is for a patent under either the European Patent Convention or the Patent Cooperation Treaty, it will not be forwarded to the European Patent Office or International Bureau as appropriate. However, this does not prevent the Comptroller from forwarding information to the European Patent Office which it is his duty to send.

If directions are given under s 22, the Comptroller must give notice of the application and the directions to the Secretary of State who will then consider whether national security or public safety would be prejudiced. If he decides that either case applies, he must reconsider within 9 months of the date of filing the application and reconsider at least during each subsequent 12 months. If the Secretary of State is of the opinion that the publication or communication of the information would no longer be prejudicial to national security or public safety, he will then give notice to the Comptroller who will revoke the directions and is given discretion to extend any time limits.<sup>80</sup> Further provisions include the possibility of compensation for any hardship suffered by the applicant. Failure to comply with directions given under s 22 is a criminal offence carrying a maximum penalty on conviction on indictment of two years' imprisonment and/or a fine or, on summary conviction, a fine not exceeding £1,000.

Under s 23, where the invention relates to military technology or for some other reason publication of the information might be prejudicial to national security or the application contains information the publication of which might be prejudicial to

<sup>79</sup> Patents Act 1977 s 22.

<sup>80</sup> Special provisions apply in relation to atomic energy under s 22(6).

the safety of the public,<sup>81</sup> a person resident in the UK cannot apply for a patent<sup>82</sup> in a country outside the UK unless he has written authority from the Comptroller or has already filed an application for a UK patent at least six weeks beforehand and no directions have been given under s 22 or, if they have, they have since been revoked. The penalties for not complying with these requirements are as for s 22 but the criminal offence under s 23 applies only if the person concerned knows of, or is reckless as to, the contravention.<sup>83</sup>

## CROWN USE

A patent is a right granted by the Crown and there are detailed provisions in the Act for Crown use. The forms of use covered are listed in s 55 and are declared not to be an infringement of the patent.<sup>84</sup> They are:

- 1 *Product inventions.* To make, use, import, keep or sell or offer to sell it. Sale and offers to sell must be incidental or ancillary to the previously mentioned activities. To sell or offer to sell it for foreign defence purposes. For the production or supply of specified drugs and medicines, to dispose or offer to dispose of it otherwise than by selling it for any purposes.
- 2 *Process inventions.* To use it or to do any of the above in relation to a product obtained directly by means of the process.
- 3 *Specified drugs or medicines* (product inventions or the product of a process invention). To sell or offer to sell the drug or medicine.
- 4 *Any type of invention.* To supply or offer to supply to any person the means, relating to an essential element of the invention, for putting the invention into effect. To dispose or offer to dispose of anything made, used, imported or kept which is no longer required for that purpose.

Crown use is subject to a royalty being paid to the proprietor of the patent, but not in relation to things done before the priority date unless done as a result of a confidential relevant communication.<sup>85</sup> The use must be for the services of the Crown and by any government department or any person authorised in writing by a government department. A health authority is, for the purposes of s 55, a government department. In *Dory v Sheffield Health Authority*,<sup>86</sup> the proprietor of a patent for machines for treating kidney stones sued the health authority for patent infringement. It was held that the use of the machines by the health authority was Crown use and that the authority exercised the functions of the Secretary of State which were devolved to the authority by the National Health Service Act 1977 and regulations made under that Act.

Section 57 deals with the rights of third parties that are affected by the Crown use and fundamentally prevents third party rights interfering with the Crown use and apportions certain expenditure and royalty payments between the then proprietor and an assignee of the patent, or between the proprietor and an exclusive licensee. If the proprietor of the patent or an exclusive licensee suffers loss from not being awarded a contract in relation to the invention where the invention is used for the services of the Crown, the government department concerned is under a duty to pay compensation.<sup>87</sup> Compensation is payable only to the extent that the contract could have been fulfilled from existing capacity, and factors relevant to determining the loss are the profit that would have resulted from the contract and the extent to which manufacturing or other capacity was underused.<sup>88</sup> The compensation is calculable on the contract lost as a result of the Crown use only and not for other contracts. The amount payable by way of royalties in respect of Crown use or the amount of compensation is to be agreed between the relevant government department and the proprietor with the approval of

<sup>81</sup> Section 23(1A) was inserted by the Patents Act 2004 which limited the scope of s 23 to military technology, national security and the safety of the public. Previously, the restriction applied to all patent applications. This limitation came into effect on 1 January 2005.

<sup>82</sup> Applications for protection for inventions other than patents are included under s 23(4). This could include, for example, an application for utility model protection for the invention.

<sup>83</sup> The requirement for *mens rea* was introduced as from 1 January 2005 by insertion of s 23(3A) by the Patents Act 2004.

<sup>84</sup> See also the Patents Act 1977 s 56 which expands upon the meaning of some of the provisions and terms.

<sup>85</sup> 'Relevant communication' means, by s 55(9), a direct or indirect communication of the invention by the proprietor of the patent or any person from whom he derives title.

<sup>86</sup> [1991] FSR 221.

<sup>87</sup> Patents Act 1977 s 57A (added by the Copyright, Designs and Patents Act 1988 Sch 5 para 16(1)).

<sup>88</sup> Patents Act 1977 s 57A(2) and (3).

<sup>89</sup> In Scotland, the Court of Session, and, in Northern Ireland, the High Court of Northern Ireland: Patents Act 1977 s 130.

<sup>90</sup> Patents Act 1977 s 59.

the Treasury but, in the absence of agreement, may be referred to the High Court,<sup>89</sup> as may other disputes regarding Crown use, under s 58.

There are extended provisions for Crown use during a period of emergency, which is a period declared to be so by Order in Council.<sup>90</sup> During a period of emergency, the powers exercisable by any government department or person authorised by a government department include the power to use the invention for any purpose that appears to the department to be necessary or expedient for one or more stated reasons, including the efficient prosecution of any war in which Her Majesty may be engaged, the maintenance of supplies and services essential to the life or well-being of the community and for assisting in the relief of suffering in any country outside the UK that is in grave distress as a result of war. However, to these are added some reasons which extend the meaning of ‘emergency’ somewhat: for example, promoting the productivity of industry, commerce and agriculture and also for redressing the balance of trade, that is, increasing exports and reducing imports.

Where the Crown happens to be a co-proprietor, the provisions of s 55 still apply, irrespective of other provisions of the Act such as the rules on what a co-proprietor may do without the consent of the other co-proprietors in s 36. In *Henry Bros (Margherafelt) Ltd v Ministry of Defence and Northern Ireland Office*,<sup>91</sup> Robert Walker LJ accepted that ‘home use’ (use by one co-proprietor without the consent of the others) in relation to Crown use has an ‘extraordinarily wide scope, far wider than it has for an ordinary individual’. He had no hesitation in holding that use of the invention in question by contractors working for the Crown was within the Crown use provisions and did not involve the grant of a licence within the meaning of s 36(3).

Crown use may be involved where the invention concerns national security, and directions may have been given under s 22 prohibiting or restricting the publication or communication of information contained in the patent application. Failure to comply with such directions is an offence triable either way.<sup>92</sup> The wide powers under s 22 apply where the information is prejudicial to national security or the safety of the public. It could mean that an invention is kept secret and the exploitation of it by the proprietor is hindered or even prevented, although the Secretary of State must keep the position under review from time to time (at least once a year). For example, in the early 1980s, an inventor devised a method of cryptography that was intended to be used for combating piracy of audio and videotapes and computer programs. However, and unfortunately for the inventor, it also had military uses and was subject to a s 22 direction.<sup>93</sup> As the apparent intention of the Ministry of Defence was not to use the invention but to keep it secret and prevent others from being able to use it, the unlucky inventor may have not received any income from his invention<sup>94</sup> unless some *ex gratia* payment was made. Had the inventor not tried to patent his invention he might have been able to exploit it relying on the law of confidence to protect his ideas.

<sup>91</sup> [1999] RPC 442.

<sup>92</sup> The maximum penalty on indictment is imprisonment for a period not exceeding two years and/or a fine. On summary conviction, the maximum penalty is a fine of £1,000: Patents Act 1977 s 22(9).

<sup>93</sup> *The Times*, 17 February 1984.

<sup>94</sup> If it is used then, under the Patents Act 1977 s 55, royalties will be payable.

## Chapter 14

# PATENTS – INFRINGEMENT, REMEDIES AND CRIMINAL OFFENCES

### INTRODUCTION

The strength of the rights granted by patent law is such that infringement of patents and defences to infringement have to be carefully drawn out. Patent infringement is not measured in terms of whether a substantial part has been taken, as is infringement of a work of copyright, but there are difficulties where the invention has not been taken in its entirety by an alleged infringer, or where some feature of the invention has been changed. Where the alleged infringement is not a direct copy but a variant, the courts may have some difficulty in determining whether the variant does indeed infringe the patent. It is in the light of subsequent variants of an invention that the value of a precise and appropriate specification can be seen; not too wide as to cause rejection of the application and not so narrow as to permit slight variations being made lawfully.

The scope of the infringing acts and the stated exceptions to infringement strive to achieve a balance between the interests of the proprietor and those of others, including competitors. Reverse engineering is permitted *per se*, but is hardly necessary as a study of the patent specification, a document available to the public, should be sufficient to determine how the invention works and what it does. Patent actions often involve challenges to the validity of the patent concerned and proprietors (or exclusive licensees) must be prepared to defend their patent. Commonly, challenges will be made on the grounds of anticipation or lack of inventive step. Partly because of this, but mainly as a result of the technical nature of patents, litigation in this field tends to be expensive and time-consuming. Trials lasting several weeks and costs running to millions of pounds are not unheard of. In *Chiron Corp v Organon Teknika Ltd (No 3)*<sup>1</sup> the defendant argued that the patent in suit was obvious, that it was invalid for insufficiency, that it was a patent for a discovery as such, that it was not capable of industrial application and that some claims were invalid, being methods of treatment. The defendant further claimed, successfully, that it could rely on the s 44 defence.<sup>2</sup>

As with other statute-based forms of intellectual property rights, with the single exception of registered trade marks, the culpability of the infringer is relevant in determining whether damages are available in a particular case. In some cases the defendant's knowledge is also the key to the question of infringement. Like design law and the new trade mark law, there is a remedy for groundless threats of infringement proceedings and, as is the case with registered designs and registered trade marks, certificates of contested validity are available. There are also some criminal penalties associated with patents.

This chapter concentrates on infringement, remedies and the criminal offences under patent law. The following chapter looks at defences to infringement, groundless threats actions and revocation of patents. The validity of patents is frequently an issue

<sup>1</sup> [1994] FSR 202.

<sup>2</sup> This defence was repealed by the Competition Act 1998 s 70 with effect from 1 March 2000 (Competition Act 1998 (Commencement No 5) Order 2000, SI 2000/344). The s 44 defence, which remains available in respect of contracts entered into before 1 March 2000, could be used where the proprietor of a patent imposed certain forms of onerous terms on licensees and other parties to contracts with the proprietor.

in infringement actions and it could be said in this context that attack is the best form of defence.

## CHOICE OF COURT

Before looking in detail at infringement, defences and remedies, a brief word or two should be given on the choice of court for the hearing of a patent action.<sup>3</sup> In the past, litigants were faced with little option but the inevitable expense associated with an action in the Patents Court, part of the Chancery Division of the High Court. Some years ago, average costs in that court had been estimated at £500,000.<sup>4</sup> The Patent Office itself has limited jurisdiction to hear certain matters, as governed by the Patents Act 1977: for example, to grant compulsory licences and settle the terms of licences of right, to revoke patents, to award compensation to employees in respect of inventions of outstanding benefit to their employers, etc. Under s 61(3), with the agreement of the parties the Comptroller may hear infringement actions, in which case the remedies are limited to damages and a declaration that the patent is valid and infringed. The Patent Rules 2007 lay down the procedural aspects.<sup>5</sup> Now, the Comptroller may give non-binding opinions about validity (in relation to novelty and inventive step) and infringement under the Patents Act 1977, s 74A.

Following some speculation that the Patent Office should be given wider powers and a subsequent recommendation that a special county court to hear patents cases be set up,<sup>6</sup> the Patents County Court was established by virtue of the Copyright, Designs and Patents Act 1988 Part VI.<sup>7</sup> The procedure is governed by normal county court procedures with some modification.<sup>8</sup>

The subject matter of the jurisdiction of the Patents County Court is to hear proceedings relating to patents or designs and ancillary matters. The normal county court limits as to the damages that can be awarded do not apply and parties can be represented by a patent agent. Registered patent agents now have a right of audience in the Patents County Court.<sup>9</sup> The Patents County Court should result in speedier, less expensive hearings – and as might be expected has been the target of brickbats and bouquets. In *Prout v British Gas plc*,<sup>10</sup> Sir Thomas Bingham MR said:

[the Patents County Court] has not been in operation for very long and during the period that it has been in operation it has been conspicuously successful. Part of the source of that success has been that it has set out to be as economical of time and expense and as innovative in terms of procedure as possible, consistent always of course with the requirements of justice and the entitlement of the parties to a fair hearing.<sup>11</sup>

A number of criticisms have been levelled at the court and its first judge, Peter Ford, and reported by Conn.<sup>12</sup> They include indecision and lack of firmness on the part of the judge. However, much of the trouble seems to stem from procedural difficulties to which Judge Ford has addressed himself, strengthening the court's *raison d'être* of providing easy access to litigation for persons and companies without large resources. The present judge is Michael Fysh QC.

In relation to transfers of proceedings to or from the High Court, the Patents County Court has a discretion under s 289(2) of the Copyright, Designs and Patents Act 1988 which states that the court shall 'have regard to the financial position of the parties and may order the transfer to a patents county court or, as the case may be, refrain from ordering their transfer to the High Court notwithstanding that the proceedings are likely to raise an important question of fact or law'. In *Chaplin Patents Co plc v Group Lotus plc*,<sup>13</sup> the Court of Appeal accepted the existence of that discretion, although the Master of the Rolls said that he would have ordered transfer had it been up to him, in view of the substantial nature of the action in that case.

<sup>11</sup> This case was an appeal from the judgment of Judge Ford in the Patents County Court [1992] FSR 478, on the question of costs.

<sup>12</sup> Conn D. 'Cut-price Court in Spin', *The Times*, 23 November 1993.

<sup>13</sup> *The Times*, 12 January 1994.

Subsequently, in *Pavel v Sony Corporation*,<sup>14</sup> the Court of Appeal cast doubt on whether the present provisions relating to transfer of trial are satisfactory. The parties in that case were criticised for over-elaboration of the issues in what should have been a relatively simple case. The specification of the patent in issue ran to two-and-a-half pages and should have been easily understood without the need for scientific help. Altogether, there were nearly eight days of interim hearings and the trial lasted nearly four weeks, resulting in costs in the order of £2.2 million with the claimant ending up on legal aid.<sup>15</sup> Aldous LJ said:

... whether the fault for those lamentable events was that of the procedure or something else was not for his Lordship to decide. However, some alteration was necessary if the purposes of the Patents County Court were to be achieved.

In *Halliburton Energy Services Inc v Smith International (North Sea) Ltd*,<sup>16</sup> at first instance, Pumfrey J noted that the case, which lasted 13 days with considerable pre-reading in the Patents Court, and which had started life in the Patents County Court, was not suitable for that court and should not have been commenced there.

The manner in which some litigants behave in the Patents County Court compromises its fundamental purpose of providing fast and inexpensive relief for patent proprietors who do not have deep pockets where the nature of the case is relatively straightforward. The difficulty of fixing a ceiling of, say, £50,000 is that often larger sums are at stake, even in relatively simple cases.

Inevitably, any new court must undergo its teething problems. It is reputed that the first seven decisions of the Patents County Court, tested in the Court of Appeal, were overturned.<sup>17</sup> The need for an inexpensive forum to hear patent disputes is, however, unquestionable, and it seems that the Patents County Court is capable of being a worthwhile and valued alternative to the Patents Court in the Chancery Division. In some ways, the deficiencies of the Patents County Court result from the behaviour and tactics of litigants, many of whom seem unwilling to avail themselves of alternative dispute resolution and who submit vast numbers of documents and often conduct expensive experiments, particularly in the field of pharmaceuticals.

Costs remain a thorny issue at the Patents County Court. In *Warheit v Olympia Tools Ltd*,<sup>18</sup> Aldous LJ considered costs approaching £250,000 claimed by the patentee in respect of a two-day trial in the Patents County Court to be excessive and not a reflection of what the Lord Chancellor envisaged when that court was set up. However, granting leave to appeal from the Patents County Court because the 'whole issue of costs in the Patents County Court is of interest to practitioners' is not, *per se*, a sufficient reason to grant leave to appeal. As a matter of principle, it is not right that the practice in relation to costs should differ in patent cases as between the County Court and the High Court.<sup>19</sup>

The Patents County Court has been criticised for failing to provide an affordable forum for intellectual property litigation for SMEs. A working group of the Judiciary of England and Wales has proposed some changes to improve matters.<sup>20</sup> First it noted that the above failure was due to two main reasons. First was the fear of meeting substantial and unpredictable costs awards if unsuccessful. Second, the procedures before the Patents County Court were costly, being the same as those of the High Court. To answer these criticisms and improve the operation of the court, the Working Group proposed, *inter alia*:

- a requirement for parties to present cases by sequential written arguments;
- the imposition of robust case management;
- to permit or require disclosures, experiments, factual and expert evidence and cross-examination only when a cost-benefit test is satisfied;

<sup>18</sup> [2003] FSR 95.

<sup>19</sup> *Kavanagh Balloons Pty Ltd v Cameron Balloons Ltd* [2004] FSR 698.

<sup>20</sup> Judiciary of England and Wales Intellectual Property Committee, *Working Group's Final Report on Proposals for the Reform of the Patents County Court*, 31 July 2009.

- to limit trials to one or, at the most, two days;
- to restrict costs to a scale basis similar to that (though more generous) used in the UK IPO, except where the conduct of a party has been unreasonable;
- to set a financial limit of £500,000 and to limit costs awards to £50,000;
- to rename the court as the Intellectual Property County Court and to widen its jurisdiction to cover all forms of intellectual property;
- to provide appropriate guidance in the Guide to the court as to the contents of statements of case and as to which sort of case is suitable for the court and criteria for transfer to the High Court.

If the proposals are implemented, they would need primary and secondary legislation. It is unlikely that any changes will happen quickly, given the likely timing of the next general election.

## NON-BINDING OPINIONS

There has been a trend in recent years towards mediation and other forms of dispute resolution as a quicker and cheaper alternative to full-blown litigation which, in the case of patents in particular, can be extremely expensive. In *IDA Ltd v University of Southampton*,<sup>21</sup> discussed in the previous chapter (*see* p 475), Jacob LJ said that the case was one ripe for mediation and that a small share in a large exploitation was better than a large share of none or little. There was no evidence that the patent in question, which had been hailed as a ‘cockroach trap to beat the world’, had been exploited at all during the eight years since the first application for a patent had been filed. With the aim of providing a quicker and cheaper way to resolve issues of validity and infringement, the Comptroller General of Patents, Designs and Trade Marks was given the power to issue opinions about infringement and validity (novelty and inventive step only). The necessary provisions in ss 74A and 74B of the Act were inserted by the Patents Act 2004.<sup>22</sup>

Under s 74A(1), the proprietor or any other person may request an opinion as to whether a particular act constitutes or would constitute an infringement of the patent in question or as to whether or to what extent the invention is not patentable for lack of novelty or inventive step.<sup>23</sup> It seems strange that the Comptroller can give an opinion to the effect that a patent which has been granted by him is not valid after all. Opinions are non-binding and are prepared by patent examiners. The Comptroller may refuse the request in prescribed circumstances<sup>24</sup> or if he considers it inappropriate. In relation to a decision as to whether to refuse the request, only the party making the request can be a party to proceedings before the Comptroller. Thus, where the applicant’s request is refused, only he can challenge that decision.

Within four weeks of advertising the request, any person may submit observations, a copy of which is sent to the person making the request and, if not that person, the patent holder. Observations may then be submitted, strictly limited to matters in reply, and a copy of these is sent within two weeks to the requester or patent holder as the case may be. Observations should be sent by electronic communication. The request is then referred to an examiner and, when the opinion has been prepared, copies are sent to the patent holder, the requester (if different) and any person making observations.

Section 74B provides for reviews of opinions. Under r 98, the patent holder may apply for a review of the opinion unless the issues raised have been decided in other relevant proceedings. An application for review may only be made on the grounds that the opinion wrongly concluded that the patent was invalid wholly or partly or, by reason of its interpretation of the specification, that a particular act did not or would not infringe the patent. Rule 99 of the Patents Rules 2007 contains the procedure for reviews

<sup>21</sup> [2006] RPC 567.

<sup>22</sup> The fine detail is contained in rr 92–100 of the Patents Rules 2007, SI 2007/3291.

<sup>23</sup> The request is made on Patents Form 17 and the fee is £200.

<sup>24</sup> If he considers it frivolous or vexatious or where it appears to him that the question has been sufficiently considered in any relevant proceedings: r 94 Patents Rules 2007. Relevant proceedings are those, whether pending or concluded, before the Comptroller, the court or the EPO.

and, under r 100, after the completion of that procedure, the Comptroller shall either set aside the opinion in whole or in part or decide that no reason has been shown for the opinion to be set aside. Any such decision does not prevent a party to any proceedings from raising an issue regarding the validity or infringement of the patent. No appeal under s 97 (appeals from the Comptroller) lies against a decision to set aside the opinion except where it relates to a part of the opinion not set aside. Where parties are contemplating litigation, once the opinion has been issued, they might be encouraged to settle rather than proceed to lengthy and expensive litigation. There have been around 70 applications for opinions at the time of writing. It remains to be seen how effective the provisions are in terms of encouraging settlement of disputes about validity or infringement.

The question arose in *DLP Ltd v Comptroller-General of Patents, Designs and Trade Marks*<sup>25</sup> as to whether there was a right to appeal against a Hearing Officer's review of an opinion. The Patents Court in the Chancery Division held that there was such a right of appeal. Although opinions and reviews of opinions were non-binding, the court should not refuse to hear an appeal on the basis that the result would be a non-binding opinion or review. The system was of great value to those concerned and related to a living issue and it would be wrong for the court to decline to exercise its discretion to hear an appeal. However, the court should only reverse a Hearing Officer's review of an opinion if he failed to recognise that the examiner had made an error of principle or reached a conclusion that was clearly wrong. On the evidence, neither the examiner nor the Hearing Officer had made an error in law and the opinion was a reasonable one in the circumstances.

25 [2008] 1 All ER 839.

## INFRINGEMENT

A patent may relate to a product or a process. If the invention is a process, it may be used to make a product. An example of a product invention is a new type of golf ball, and an example of a process invention is a new process for making ordinary golf balls. Under s 130<sup>26</sup> a patented product is a product which is a patented invention or, in relation to a patented process, a product obtained directly by means of the process or to which the process has been applied. Article 64(3) of the European Patent Convention leaves infringement of European patents to be dealt with by national law.

Section 60 defines an infringement of a patent as the doing of any of the following things in the UK in relation to the invention<sup>27</sup> without the proprietor's consent.

- 1 *Product invention.* To make, dispose of, offer to dispose of, to use or import the product or to keep it, whether for disposal or otherwise (s 60(1)(a)).<sup>28</sup>
- 2 *Process invention.* To use the process<sup>29</sup> or offer it for use in the UK when the person concerned does so knowing, or where in the circumstances it would be obvious to a reasonable man, that such use would be without the consent of the proprietor and would be an infringement of the patent (s 60(1)(b)).
- 3 *Process invention.* To dispose of or offer to dispose of, to use or import or to keep (whether for disposal or otherwise) any product obtained directly by means of the process (s 60(1)(c)).
- 4 *All inventions.* To supply or offer to supply in the UK a person (other than a licensee or other person entitled to work the invention) with any of the means, relating to an essential element of the invention, for putting the invention into effect (s 60(2)). The alleged infringer must know, or it must be obvious to a reasonable man in the circumstances, that those means are suitable for putting, and are intended to put, the invention into effect in the UK.<sup>30</sup>

26 Unless otherwise stated, in this chapter, statutory references are to the Patents Act 1977.

27 The invention is, under s 125, taken to be that specified in the claim as interpreted by the description and any drawings.

28 Where an invention is a product, it does not matter whether or not it was produced by the methods described in the specification; the monopoly is in any goods fitting the description of the invention: *Raychem Corp's Patents* [1999] RPC 497 at 517 per Buxton LJ.

29 Using the process badly is still using the process for the purposes of infringement: *Union Carbide Corp v BP Chemicals Ltd* [1999] RPC 409.

30 This provision does not apply to the proprietor of the patent. So, for example, if the proprietor grants an exclusive licence to one person he does not infringe by supplying the means suitable for putting the invention into effect to another person. The proprietor will probably be in breach of his licence agreement with the first person.

In terms of proving infringement, the burden of proof lies with the claimant and it is the claims in the specification that are important rather than the products actually made by the claimant. In the case of a product invention, those claims must be compared to the defendant's product.<sup>31</sup> In relation to the s 60(1)(a) infringement, it has been held that negotiating with a customer, during the currency of a patent, to supply a product after the relevant patent had expired did not infringe.<sup>32</sup>

It is no answer to an infringement action to argue that the alleged infringing product is inefficient compared to the patented product though sufficient for commercial purposes. In *Henriksen v Tallon Ltd (No 2)*,<sup>33</sup> the patent was for a ballpoint pen which had a plug of grease at the top of and in contact with the ink in the tube. This was to prevent contact between the ink and air which would cause the ink to dry. The defendant's pen had a narrower tube not needing a grease plug but one was inserted anyway. This was held to infringe. However, in *Novartis AG v Ivax Pharmaceuticals UK Ltd*,<sup>34</sup> the patent was for a formulation of an immuno-suppressant drug 'cyclosporin' aimed at overcoming the problem with the drug's almost insolubility in water. The defendant's version of the drug did not infringe. This was not a case of an inefficient product but sufficient for commercial purposes as in *Henriksen* but the defendant's formulation was nearly all that the patentee had tried to avoid.

A product obtained directly from a patented process must be obtained directly without any intermediate steps to be within s 60(1)(c). In *Pioneer Electronics Capital Inc v Warner Manufacturing Europe GmbH*<sup>35</sup> the claimant had a patent for a process for making optical discs. There were some intermediate steps, including making stampers from which the discs could be mass-produced. It was held that the defendant had not infringed the patent because none of his discs was a direct product of the patented process and that a causal link, however important, was not sufficient. Aldous J looked at the German and French versions of the European Patent Convention,<sup>36</sup> because, under s 130(7), a number of provisions of the Patents Act 1977, including s 60, are framed to have, as nearly as practicable, the same effects in the UK as the corresponding provisions of the European Patent Convention and the Community Patent Convention. In particular, the German word *unmittelbar* suggested that no intermediate points would be allowed between the process and the product. The Court of Appeal dismissed the claimant's appeal, agreeing with Aldous J's views on the meaning of *unmittelbar*.<sup>37</sup> The court also held that the product in question did not cease to be the product if it was subjected to further processing, provided that it did not lose its identity and that it retained its essential characteristics. Whether this was so was a question of fact and degree, a test which would often be difficult to apply. However, in the present case, the finished disc was not an identical copy of the master disc and different in a material way from it as a result of three further stages of production. For example, the master was not capable of being played in a compact disc player.

Infringement by importing a product is not made out by a person in another country who simply arranges for transportation of the goods to the UK. So it was held by the House of Lords in *Sabaf SpA v MFI Furniture Centres Ltd*<sup>38</sup> in which gas hobs alleged to infringe a UK patent were transported from Italy to the UK. An Italian company had made and sold the hobs in question to MFI, the first defendant, and had arranged transportation at MFI's request. The property in the hobs passed to MFI in Italy. A trade mark case, *Waterford Wedgwood plc v David Nagli Ltd*,<sup>39</sup> was distinguished as, in that case, the seller had imported the infringing goods into the UK for transshipment to the buyer in the USA. The USA buyer could be said to have imported the goods into the USA but not the UK.

The mere sale of goods to a person outside jurisdiction who later sells those goods within jurisdiction does not, *per se*, make the seller a joint tortfeasor with the person selling them within jurisdiction. In *Generics (UK) Ltd v H Lundbeck A/S*,<sup>40</sup> an Indian

31 *Buchanan v Alba Diagnostics Ltd* [2001] RPC 851.

32 *Gerber Garment Technology Inc v Lectra Systems Ltd* [1995] RPC 383; appeal against damages allowed in part in the Court of Appeal: [1997] RPC 443.

33 [1965] RPC 434.

34 [2007] EWCA Civ 971.

35 [1995] RPC 487.

36 Article 24(2).

37 *Pioneer Electronics Capital Inc v Warner Music Manufacturing Europe GmbH* [1997] RPC 757.

38 [2005] RPC 209. The patent was held to be invalid in any case.

39 [1998] FSR 92.

40 [2006] EWCA Civ 1261.

company supplied a drug to Generics which had, on a counterclaim for revocation of the patent, been accused of infringement. It was later sought to join the Indian company as joint tortfeasor. This application for amendment was rejected. It made no difference that the Indian company had supplied information to the regulatory authority in the UK before its drugs could be sold in the UK by Generics. Under s 100(1), there is a presumption that, where a product produced by a patented process is new, unless the contrary is proved, the same product made by another person is taken to have been made by the same process. However, this presumption was displaced because of the provision of information required by law to the regulatory authority and there was no reason that it would mislead that authority. Indeed, providing false information is a criminal offence. The Indian company had good legal and commercial reasons not to mislead the regulatory authority.

Where the invention is a process, it may be infringed by the use of another process which occasionally extends into the parameters covered by the patent. In *Hoechst Celanese Corp v BP Chemicals Ltd*,<sup>41</sup> the patent related to a process for making acetic acid. The defendant argued that it would only infringe the patent if its process was within the parameters of the patent for a significant period of time and that short-term fluctuation, moving into the parameters, did not infringe. This was rejected, on the facts, by Jacob J. He accepted that a patentee would not be interested in transient ‘spikes’ coming within the patent’s parameters but would not want to exclude significant commercial production. It was pointed out that one day’s production amounted to 800 tonnes.

The final type of infringement (‘supplying the means’) could occur where one person supplies another with a kit of parts for the latter to assemble. This was not an infringement before the 1977 Act came into force.<sup>42</sup> However, this infringement does not apply to the supply, or offer to supply, of a staple commercial product unless made with the purpose of inducing an act that is an infringement under any of the first three infringing acts above by the person supplied (or the person to whom the offer was made).<sup>43</sup> By virtue of s 60(6), the ‘supplying the means’ infringement in s 60(2) does not apply in respect of a person:

- entitled to work the invention under the Crown use provisions in s 55;
- entitled to continue to do an act begun in good faith before the priority date of the patent (or where that person had made in good faith effective and serious preparations to do such an act before that date) under s 64; or
- entitled to work the invention because of acts done in good faith or where that person made in good faith effective and serious preparations to do such an act after it was no longer possible to renew the patent but before publication of a notice of an application to restore the patent under s 28A(4) and (5).

The infringing acts under s 60 must be done in the UK to infringe. This reflects the territorial nature of a patent. In *Lacroix Duarib SA v Kwikform (UK) Ltd*,<sup>44</sup> the claimant claimed that the defendant had infringed his patent for scaffolding to be used inside large hollow structures, such as the hulls of large ships during their construction. The defendant made its scaffolding in ‘collapsed’ form and it was to be assembled or erected in Korea by Daewoo in its shipbuilding operations. The defendant’s argument was that, since its scaffolding was only in collapsed form in the UK, there was no infringement of the patent as claim 1 of the specification referred to the complete assembly only.

As to whether infringement by a ‘kit of parts’ was possible, Laddie J was referred to the judgment of Graham J in *Rotocrop International Ltd v Genbourne Ltd*<sup>45</sup> where it was held that there was direct infringement by a kit of parts for a bin for making compost of a patent which claimed a fully assembled bin. Graham J considered the kit, in the

<sup>41</sup> [1998] FSR 586.

<sup>42</sup> The Patents Act 1977 came into force on 1 June 1978.

<sup>43</sup> Patents Act 1977 s 60(3).

<sup>44</sup> [1998] FSR 493.

<sup>45</sup> [1982] FSR 241.

<sup>46</sup> Laddie J considered that, if the narrower construction of s 60(1)(a) advanced by the defendant was to be taken, it would be better left to a higher court, especially as there was no authority on this issue.

<sup>47</sup> Thorley, S. *et al* (2005) *Terrell on the Law of Patents* (16th edn) Sweet & Maxwell, para 8.21.

circumstances, to be the ‘bin’. Laddie J thought it inappropriate to depart from that decision.<sup>46</sup>

Cases prior to the 1977 Act and Canadian authorities indicating infringement by a kit of parts were discounted by Laddie J who said that the 1977 Act marked a sea change in patent law. Terrell suggests that a kit of parts might infringe as it could amount to the completed article.<sup>47</sup> Also, unless the kit is made for export, liability for indirect infringement is also likely to arise by virtue of s 60(2). The manufacturer of a kit of parts may also be considered to be a joint tortfeasor with the person who assembles the parts. Nevertheless, doubt remains as to whether making a kit of parts for assembly outside jurisdiction infringes a patent which claims the assembled product. It is surprising that this point has not been litigated more often, and even more surprising that the 1977 Act does not directly deal with it.

Given the territorial nature of patents, the requirement that the infringing act must take place in the UK seems simple enough. But what if the invention includes apparatus, some of which is located in the UK but part is outside the UK? The important test is where the invention is being used. In *Menashe Business Mercantile Ltd v William Hill Organisation Ltd*,<sup>48</sup> the patent was for a gaming system comprising a host computer, terminal computers which could communicate with the host computer, and computer programs. The defendant, a bookmaker, introduced a gambling system and supplied persons in the UK with computer programs on CD-ROM that could be loaded on to their computers, which could then act as terminals and communicate with the defendant’s host computer, which was situated in the Netherlands Antilles. It was alleged that the defendant infringed the patent by supplying the means to put the invention into effect in the UK. Infringement was denied on the basis that the host computer was outside jurisdiction. The Court of Appeal held that the ‘supplying the means’ form of infringement meant putting the invention into an infringing state. The location of the host computer was not relevant and the pertinent question was who used the gaming system. These were the punters using their computers in the UK and they also were ‘using’ the host computer in the UK even though it was situated elsewhere. Therefore, supplying the programs on CD-ROM in the UK was supplying the means to put the invention into effect in the UK.

<sup>48</sup> [2003] RPC 575.

Under the 1949 Act there was no definition of ‘infringement’ in the Act. The letters patent commanded the public not to make use of the patent directly or indirectly, or put it into practice or in any way imitate the same. Thus, the 1977 Act appears to afford a more limited monopoly as regards the scope of infringement.

There are various exceptions to the above infringements and these will be discussed in the section on defences. In the meantime, infringement will be considered further. The patent is granted on the basis of the specification and the claims included in the application, perhaps after amendment. It is to these documents that a court must turn to determine whether the patent has been infringed. This is confirmed by s 125(1) which states that a patent shall, unless the context otherwise requires, be taken to be that specified in a claim of the specification as interpreted by the description and any drawings in the specification. The extent of the protection conferred by the patent is to be determined accordingly. Hence the importance of the claims.

If the alleged infringer has simply duplicated the product or process patented as described in the specification then, subject to the defences or a challenge on the validity of the patent, there should be no hesitation in finding that an infringement has occurred. But what if the alleged infringer has not simply duplicated the invention but has introduced some changes, producing a variant? If this has happened, it is then a matter of construing the patent specification and claims to find out whether the grant extends to the variant. The alleged infringer is likely to suggest that his variant lies outside the invention claimed by the patent, while the proprietor will argue that the

variant falls within the patent as granted. If the former is true, then no matter how close to that dividing line the variant lies, there is no infringement of the patent.

Under r 63.9(1) of the Civil Procedure Rules 1998<sup>49</sup> claims for infringement or in relation to validity of a patent or registered design must contain particulars set out in the Practice Direction supplementing rule 63.<sup>50</sup> In relation to infringement, the claims in the specification alleged to have been infringed must be shown and at least one example of each type of infringement alleged must be given. Failure to comply with these requirements resulted in an order to serve out of jurisdiction being set aside in *Cranway Ltd v Playtech Ltd*.<sup>51</sup> The particulars of infringement followed the wording of s 60 without any real attempt to identify which forms of infringement had been alleged and the statement of case failed to particularise the infringements alleged.

49 SI 1998/3132, as amended.

50 Patents and Other Intellectual Property Claims.

51 [2007] RPC 527.

## INTERPRETATION OF CLAIMS

As a result of their training, lawyers are used to construing legal documents literally. There are exceptions, such as where legislation is ambiguous and a strict literal interpretation would clearly defeat the intention of Parliament to remedy some perceived defect in the law. Nevertheless, a literal approach to interpretation does not sit comfortably with the knowledge that patent specifications are written for scientists, engineers and technologists rather than for lawyers. One of the main purposes is to indicate the scope of what the invention is claimed to be. A rigid approach to interpretation could deprive a patentee of effective protection, bearing in mind that inventions are new and inventive and it is not always possible to describe them in a manner that may be robust enough to stand up to a narrow literal interpretation. After all, the patentee, although usually advised and assisted by experienced patent agents, is trying to describe something new and, in some cases, unlike anything else that has preceded the invention in question. But providing effective protection for a patentee has to be balanced by the interests of third parties who need to be able to see, from the patent specification, the extent of the monopoly granted so that they can be reasonably certain that any activities they are contemplating do not fall foul of patent law.

For some time, the courts have eschewed a strict literal approach to the construction of patent specifications and claims and in *Rodi & Wienberger AG v Henry Showell Ltd*,<sup>52</sup> Lord Reid said (at 378):

... claims are not addressed to conveyancers: they are addressed to practical men skilled in the prior art, and I do not think that they ought to be construed with that meticulousness which was once thought appropriate for conveyancing documents.

A claim is not bad for ambiguity because it is capable of more than one construction or because it is difficult to construe. The court should prefer the most sensible construction and not one leading to an absurd result. So it was held by a majority in the House of Lords in *Henriksen v Tallon Ltd (No 2)*.<sup>53</sup> In *LG Philips LCD Co Ltd v Tatung (UK) Ltd*,<sup>54</sup> the Court of Appeal held that the mere fact that a word or phrase in a patent claim is not wholly clear does not automatically lead to the conclusion that the claim is bad as that would set too high a standard of drafting in a technical field. Drafting patents was a particularly difficult exercise and the claim should be as clear as the subject matter reasonably admitted.

52 [1969] RPC 367.

53 [1965] RPC 434.

54 [2007] RPC 509.

One problem of course is where the alleged infringing product or process is not the same as the invention but is a variant of it. It used to be the case that the differences between the variant and the invention were important and the question was whether they differed in essential or inessential respects. The invention claimed was considered as comprising essential and non-essential integers (components), those that are fundamental to the invention and those that are not. If the alleged infringer has taken all

of the essential integers then there was an infringement even if there were substantial differences in respect of the non-essential integers. This was described by various judges as taking the ‘pith and marrow’ of the invention. However, when applying this principle, the scope of the patent claims was of vital importance. Viscount Radcliffe said in *Van der Lely NV v Bamfords Ltd*<sup>55</sup> (at 78):

When, therefore, one speaks of theft or piracy of another’s invention . . . and this ‘pith and marrow’ principle is invoked to support the accusation, I think that one must be very careful to see that the inventor has not by the actual form of his claim left open to the world the appropriation of just that property that he says has been filched from him . . .

In other words, the inventor had to be very careful when drafting his claims to make sure that they were not framed too narrowly so that some slight and insignificant modification could be effected without infringing the patent. The essential integers claimed were those very parts which the proprietor wished to protect. There was a flaw in the application of the ‘pith and marrow’ test as, arguably, it could extend the monopoly claimed by the patentee beyond that encompassed in the claims as interpreted in the light of the specification. To that extent, the looser the language of the claims, the greater the monopoly afforded and the greater the range of equivalents that may have been caught. This was an unsatisfactory state of affairs and resulted in some inconsistencies. For example, in *Rodi & Wienenberger AG v Henry Showell Ltd*<sup>56</sup> it was held that replacing two ‘U-shaped’ bows in a flexible watch strap with a single large ‘C-shaped’ bow was not an infringement because the ‘U-shaped’ bow was an essential integer. Conversely, in *Marconi v British Radio Telegraph & Telephone*<sup>57</sup> the replacement of an auto-transformer with a two-coil transformer did not prevent a finding of infringement because it was held that the auto-transformer was not an essential integer.

Things changed with the European Patent Convention, which resulted in significant changes to patent law in the UK and the implementation of the Patents Act 1977. But even before, the House of Lords had the opportunity to reflect on the interpretation of patent claims in the *Catnic* case.

### Catnic test and the Protocol questions

The ‘pith and marrow’ test failed satisfactorily to resolve the problem of interpretation, and the question of construction of patent claims in the context of variants came to a head in the case of *Catnic Components Ltd v Hill & Smith Ltd*<sup>58</sup> which involved several variants of steel lintels.<sup>59</sup> The claimant was a proprietor of a patent for steel lintels that had a rear support member which was vertical and so described in claim 1 of the specification by the phrase ‘second rigid support member extending *vertically* from or from near the rear edge of the first horizontal plate or part adjacent its rear edge’ (emphasis added).<sup>60</sup> The defendant made a similar lintel, but with the rear support member inclined between six and eight degrees (depending on the particular model of lintel) from the vertical. Figure 14.1 gives an approximate representation in cross-section of one of the claimant’s lintels and one of the defendant’s lintels.

The strength of a steel lintel in this form of construction derives to some extent from the verticality of the rear member, and the defendant’s lintel had a reduced load-bearing capacity compared to the claimant’s lintel, but because of the small inclination from the vertical this reduction was small.<sup>61</sup> The House of Lords found that the claimant’s patent had been infringed and the defendant’s argument that the verticality of the claimant’s lintel was essential to its function and that, therefore, there was no ‘pith and marrow’ infringement was rejected. It was confirmed that a purposive approach<sup>62</sup> should be adopted in the construction of patent specifications, Lord Diplock saying (at 243):

55 [1963] RPC 61.

56 [1969] RPC 367.

57 (1911) 28 RPC 181.

58 [1982] RPC 183. This case concerned a patent granted under the 1949 Act, but it has been accepted as being applicable to 1977 Act patents.

59 A lintel is a beam used to support some load, such as a wall, above an opening. For example, lintels are used above windows and doors to support the wall above and any transmitted loads.

60 Patent Specification No 1298798 (GB).

61 For a six-degree inclination from the vertical the reduction was only 0.6 per cent and for an eight-degree inclination the reduction was 1.2 per cent.

62 This could be seen as a modern equivalent of the ‘mischief rule’, that is the rule in *Heydon’s Case* (1584) 3 Co Rep 7a. In other words, the word ‘vertically’ did not mean ‘vertically’ but ‘vertically or nearly so’.

**Figure 14.1** Steel lintels in *Catnic v Hill & Smith*

A patent specification should be given a purposive construction rather than a purely literal one derived from applying to it the kind of meticulous verbal analysis in which lawyers are too often tempted by their training to indulge.

This can be described as the *Catnic* principle, to distinguish it from the *Catnic* test, now set out in the Protocol questions (see below). The *Catnic* principle still holds true and properly gives effect to the Protocol. On the other hand the Protocol questions are merely guidelines in determining what the skilled person would think the patentee meant.<sup>63</sup>

In *Catnic*, Lord Diplock identified the real crux of the matter as being whether practical persons, skilled in the art, would understand that strict compliance with a particular word or phrase was intended by the patentee to be an essential requirement of the invention. If so, any variant that did not comply would fall outside the claim regardless of whether it had any effect. If the variant did have a material effect, there would be no infringement. Lord Diplock went on to suggest (and apply) a test that has become that favoured for deciding whether variants infringe, though it has since been restated.<sup>64</sup> The *Catnic* test pre-dated the European Patent Convention though it could be claimed to be prophetic of it. Article 69 of the Convention states that the extent of protection shall be determined by the terms of the claims, using the drawings and description to interpret them. The Protocol on Article 69 states:

Article 69 should not be interpreted in the sense that the extent of the protection conferred by a European patent is to be understood as that defined by the strict, literal meaning of the wording used in the claims, the description and drawings being employed only for the purpose of resolving an ambiguity found in the claims. Neither should it be interpreted in the sense that the claims serve only as a guideline and that the actual protection conferred may extend to what, from a consideration of the description and drawings by a person skilled in the art, the patentee has contemplated. On the contrary, it is to be interpreted as defining a position between these extremes which combines a fair protection for the patentee with a reasonable degree of certainty for third parties.

Section 125(3) of the Patents Act 1977 provides that the Protocol shall apply for the purpose of s 125(1), which is the equivalent to Article 69(1), requiring the extent of the protection to be determined from the claims as interpreted by the description and any drawings contained in the specification.

The *Catnic* test was usefully reformulated into a three-part test by Hoffmann J, as he then was, in *Improver Corp v Remington Consumer Products Ltd*,<sup>65</sup> and is as follows.

If the issue was whether a feature embodied in an alleged infringement which fell outside the primary, literal or acontextual meaning of a descriptive word or phrase in the claim

<sup>63</sup> *Kirin-Amgen Inc v Hoechst Marion Roussel Ltd* [2005] RPC 169, per Lord Hoffmann at para 52.

<sup>64</sup> See, for example, *AC Edwards Ltd v Acme Signs & Displays Ltd* [1990] RPC 621, concerning apparatus for displaying prices at petrol filling station forecourts; *Southco Inc v Dzeus Fastener Europe Ltd* [1990] RPC 587, which involved a lift and turn latch for a cabinet door; and *Improver Corp v Raymond Industries Ltd* [1991] FSR 223, discussed later (see p. 508).

<sup>65</sup> [1990] FSR 181 at 189.

(‘a variant’) was nevertheless within its language as properly interpreted, the court should ask itself the following three questions:

- (1) Does the variant have a material effect on the way the invention works? If yes, the variant is outside the claim (and does not infringe). If no?
- (2) Would this (ie that the variant had no material effect) have been obvious at the date of publication of the patent to a reader skilled in the art? If no, the variant is outside the claim. If yes?
- (3) Would the reader skilled in the art nevertheless have understood from the language of the claim that the patentee intended that strict compliance with the primary meaning was an essential requirement of the invention? If yes, the variant is outside the claim.<sup>66</sup>

On the other hand, a negative answer to the last question would lead to the conclusion that the patentee was intending the word or phrase to have not a literal but a figurative meaning (the figure being a form of synecdoche or metonymy<sup>67</sup>) denoting a class of things which included the variant and the literal meaning, the latter being perhaps the most perfect, best-known or striking example of the class.

Another way of expressing the third question is whether the skilled reader would understand from the language of the claim that strict compliance with the primary meaning of the claim was intended. The *Improver* questions have been applied on numerous occasions since but, whilst referring to that case, judges now tend to refer to them as the ‘Protocol questions’.<sup>68</sup> It has been accepted that the Protocol questions assist the court to construe a claim in accordance with the Protocol on the interpretation of Article 69 of the European Patent Convention.<sup>69</sup> Figure 14.2 shows a flowchart approach to the *Improver* questions.

The purposive approach under Article 69 and the Protocol and the *Catnic* test have become the basic method of determining whether variants infringe. This can be criticised because it can lead to uncertainty. If a strict literal approach were to be adopted

<sup>66</sup> In *Telsonic AG's Patent* [2004] RPC 744, Laddie J thought the third Protocol question as expressed in *Improver* was the wrong way round. He said it should be whether it would have been apparent to the skilled addressee that a limitation to exclude the variant could *not* have been intended by the patentee (original emphasis). See also *Merck & Co Inc v Generics (UK) Ltd* [2004] RPC 607.

<sup>67</sup> For an explanation of ‘synecdoche’ and ‘metonymy’, see note 110 below.

<sup>68</sup> Described as the Protocol questions by the Court of Appeal in *Wheatley (Davina) v Drillsafe Ltd* [2001] RPC 133.

<sup>69</sup> See, for example, Aldous LJ in *Davina Wheatley v Drillsafe Ltd* [2001] RPC 133 at paras 23–25 and in *American Home Products Corp v Novartis Pharmaceuticals UK Ltd* [2001] RPC 159 at para 21.

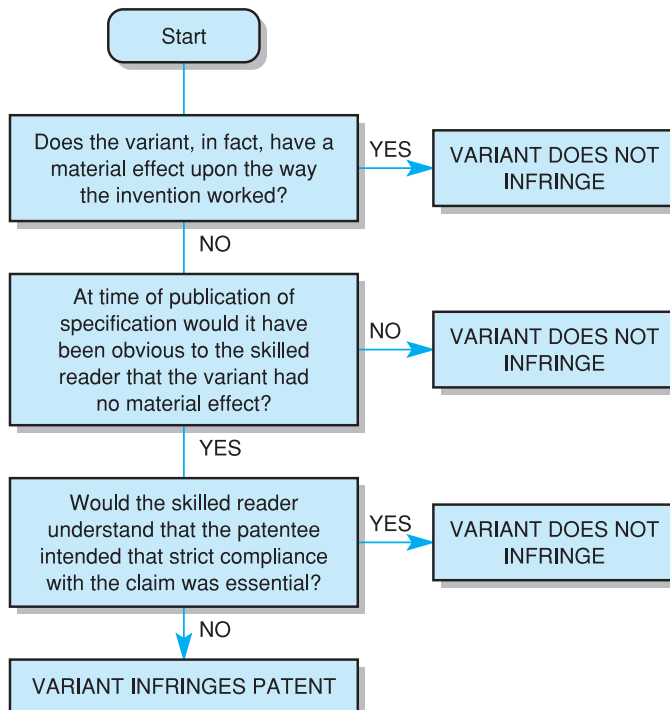

Figure 14.2 Flowchart - whether variant infringes patent

then a potential competitor wishing to make a non-infringing variant should be able to determine just how far he can go without infringing. It would also encourage persons drafting patent claims to use greater precision which would further reduce uncertainty, or to use appropriate language such as ‘generally cylindrical’.<sup>70</sup> Some sense of realism is called for, however, and it would be unreasonable to expect patentees to write their claims with complete precision and lacking any ambiguity in the monopoly that was being claimed. This is particularly so in complex technologies where the language to describe new inventions has not been fully developed. The Protocol and the Protocol questions attempt to strike a reasonable balance between protection for the patentee and certainty for third parties.

A purposive interpretation is not always possible, for example, where the purpose of the claims could not be ascertained objectively from the language of the claims and the drawings and description. In *Rohm and Haas Co v Collag Ltd*,<sup>71</sup> the specification of the patent in suit lacked precision in the use of words and also failed to make clear the main thrust of the inventive purpose. It identified the problem but did not appear to provide any inventive solution to it.

The *Catnic* test, whether so described or under the label ‘Protocol questions’, remains useful in determining the scope of the monopoly claimed and whether variants infringe and can be said to be entirely consistent with Article 69 and the Protocol. Indeed, in *Kirin-Amgen Inc v Hoechst Marion Roussel Ltd*,<sup>72</sup> Lord Hoffmann said (at para 48):

[t]he *Catnic* principle of construction is, therefore, in my opinion, precisely in accordance with the Protocol. It is intended to give the patentee the full extent, but no more than the full extent, of the monopoly which a reasonable person skilled in the art, reading the claims in context, would think he was intending to claim.

The key question in interpreting patent claims to see whether an alleged infringement falls within the claims is to consider what a person skilled in the art would think the patentee was using the language of his claim to mean. Lord Hoffmann went on to say that it was important to distinguish between the Protocol itself and the Protocol questions. The former is the bedrock of patent construction whilst the latter are only guidelines which may be more useful in some cases rather than others. In a case involving a patent for chemical compounds, the Court of Appeal held that the Protocol questions were not appropriate and there was no alternative but to seek the middle way as stated by the Protocol by considering the effect on the patentee and the public by reading a claim as covering a particular compound not specifically mentioned.<sup>73</sup>

Although the *Catnic* approach has been readily accepted under the 1977 Act,<sup>74</sup> it was challenged in the Court of Appeal and questioned as to whether it truly accords with s 125(1) and the Protocol.<sup>75</sup> In *PLG Research Ltd v Ardon International Ltd*,<sup>76</sup> in an infringement action in respect of patents for making plastic nets used in civil engineering, Neill LJ seriously doubted the relevance of the *Catnic* test to the 1977 Act, confirming that claims should be construed in accordance with the Protocol on Article 69. He said (at 133):

... The expression to be construed is ‘substantially uniplanar.’ The word ‘substantially’ imports a degree of flexibility which precludes an exact and literal construction, and makes it unnecessary to consider whether Lord Diplock’s purposive construction was an accurate if proleptic application of the Protocol ... [the precise meaning of Lord Diplock’s words are] a matter which should now be left to legal historians.

This extreme attack on *Catnic* left patent lawyers reeling. Neill LJ suggested that if the two tests were the same, reference to *Catnic* was unnecessary; while if they were different *Catnic* should not be used in any case.<sup>77</sup> In *Kirin-Amgen*, Lord Hoffmann said that this echoed the famous justification said to have been given by the Caliph Omar for burning the library of Alexandria, being:

<sup>70</sup> *Conoco Speciality Products (Inc) v Merpro Montassa Ltd* [1994] FSR 99.

<sup>71</sup> [2002] FSR 445.

<sup>72</sup> [2005] RPC 169.

<sup>73</sup> *Pharmacia Corp v Merck & Co Inc* [2002] RPC 775.

<sup>74</sup> For example, in *Anchor Building Products Ltd v Redland Roof Tiles Ltd* [1990] RPC 283, it was held that the *Catnic* test was the same as that in the 1977 Act and the Protocol.

<sup>75</sup> For a description of the impact of the Protocol, see Sherman, B. ‘Patent Claim Interpretation: The Impact of the Protocol on Interpretation’ (1991) 54 MLR 499.

<sup>76</sup> [1995] FSR 116. This case is also reported at [1995] RPC 287 where the judgment is stated to have been handed down by Millett LJ.

<sup>77</sup> For a discussion of *PLG Research v Ardon*, see Cole, P. ‘Purposive construction and inventive step’ [1995] 3 EIPR 147.

If these writings of the Greeks agree with the Book of God, they are useless and need not be preserved: if they disagree, they are pernicious and ought to be destroyed.

The attack on *Catnic* did not last long. The comments were *obiter* and Aldous J noted this in *Assidoman Multipack Ltd v Mead Corp*<sup>78</sup> where he distinguished *PLG Research* and, after reviewing the history and background of the construction of patent claims, held that the *Catnic* test was still relevant and was entirely consistent with the Protocol.<sup>79</sup> Aldous J said (at 236):

I would be loathe to discard 14 years of case law . . . The middle ground referred to in the Protocol is not clearly defined and every court within the Community has adopted a method of interpretation which it believes to be consistent with the Protocol . . . I have been unable to think of any better guidance [than the *Catnic* test] which hopefully will result in consistent decisions between the courts of this country and those of other parties to the Convention.

Aldous (by now LJ) had the opportunity soon after to reinforce his views in the Court of Appeal in *Kastner v Rizla Ltd*,<sup>80</sup> approving the *Assidoman* decision and confirming the continuing value of the *Catnic* test as representing the *via media* called for by the Protocol. He was soon followed by Jacob J in *Beloit Technologies Inc v Valmet Paper Machinery Inc*<sup>81</sup> and all courts from the Patents County Court through to the House of Lords now accept that the Protocol questions are, in most cases, a helpful and appropriate means of applying the spirit of the Protocol to Article 69.

Where the variant is not just a departure from a descriptive word in a claim, but represents the omission of whole features of the claim, the Protocol questions may have no application. In *Palmas's European Patents (UK)*,<sup>82</sup> an action for a declaration of non-infringement of two patents for stents, Pumfrey J stressed that the construction of a claim, in accordance with the Protocol, must be so as to give reasonable protection for the patentee and a reasonable degree of certainty for third parties. In finding that the patents, if valid, were not infringed, Pumfrey J considered that no construction of the amended claim in suit which brought the applicant's variant within that claim could satisfy the requirement of a reasonable degree of certainty for third parties.<sup>83</sup>

Pumfrey J suggested a technique for construction in accordance with *Catnic* and *Improver* in *Consafe Engineering (UK) Ltd v Emtunga UK Ltd*.<sup>84</sup> Speaking of a claim for accommodation structures for use on oil and gas production platforms in the North Sea, he said (at 160):

The issues which arise on construction can be satisfactorily dealt with only when the alleged infringing structure has been described. It used to be said that it was wrong to construe the claim with one eye on the alleged infringement, but it is not possible to ascertain the correct construction of the claim until a literal meaning of the claim has been arrived at, and any variants from that strict, literal meaning that are present in the alleged infringement have been identified.

There is always a danger of being unduly influenced by keeping the alleged infringement in mind when construing a claim in a patent specification. Indeed, the Protocol questions positively encourage this. It is the same sort of danger as the danger of hindsight when considering the question of anticipation. However, the first two Protocol questions are questions of fact. It is only the third question that may be influenced with knowledge of the alleged infringement and that is a matter of interpretation based on the actual words used by the patentee. The use of words such as 'substantially', as in 'substantially uniplanar', or 'vertical or nearly vertical' may catch minor variations. And, of course, there is that favourite word amongst patent agents, 'plurality', as in a 'plurality of supports'.

Where there is a range of numbers with an upper and lower limit, a departure from that range is not a variant in the *Catnic* sense. If the alleged infringement is just outside

78 [1995] FSR 225.

79 Aldous J's judgment was described as masterly by Lord Hoffmann in *Kirin-Amgen Inc v Hoechst Marion Roussel* [2005] RPC 169 at para 46.

80 [1995] RPC 585.

81 [1995] RPC 705. See also the Court of Appeal decision: [1997] RPC 489. The test has also been approved by the Federal Court of Canada in *Eli Lilly & Co v Novopharm Ltd* [1996] RPC 1.

82 [1999] RPC 47.

83 He revoked both patents on the basis that the first patent was anticipated and obvious even if amended and that the second patent was obvious.

84 [1999] RPC 154 at 160 and also in *Minnesota Mining & Manufacturing Co's (Suspension Aerosol Formulation) Patent* [1999] RPC 135 at 143.

the claimed range, it does not help the proprietor to say that the departure is just a little one. So it was held in *Auchincloss v Agricultural & Veterinary Supplies Ltd*<sup>85</sup> where a patent for compositions for destroying viruses and other micro-organisms claimed ingredients within numeric ranges, for example ‘25 to 60 parts by weight of an oxidising agent’.<sup>86</sup>

<sup>85</sup> [1997] RPC 649.

Sometimes, in construing a claim, it may be important to emphasise the essential purpose of the invention rather than to look at it with mathematical precision. In *Impro Ltd’s Patent*,<sup>87</sup> the patent was granted for apparatus designed to facilitate the lifting of disabled patients by a single nurse where formerly two nurses would be required. The Patent Office granted a declaration of non-infringement in favour of the applicant who wished to make rival apparatus. The patentee’s appeal to the Patents Court was allowed. The respondent’s proposed apparatus had a lifting arm 80 per cent longer than the average human thigh bone whereas the appellant’s patented apparatus was claimed in terms of lifting the patient in an arc having an ‘effective radius comparable to the length of the thigh bone’ of the patient.

<sup>86</sup> On appeal, in *Auchincloss v Agricultural & Veterinary Supplies Ltd* [1999] RPC 397, the Court of Appeal allowed the claimant’s appeal in part.

<sup>87</sup> [1998] FSR 299.

In constructing the claims, Jacob J said that the essential purpose of the invention should be taken into account, being to emulate the way nurses lifted a patient from a sitting to a standing position. He thought that the arc through which a patient would be lifted, whilst being generally arcuate, was not a precise path. Furthermore, he considered that the word ‘effective’ was in the context of what was effective to raise the patient and the description of the radius being comparable to the human thigh bone would be not so much a mathematical comparison but what would be comparable for the purpose of getting the patient in a standing position.

The Impro invention was litigated in Australia in *Nesbit Evans Group Australia Pty Ltd v Impro Ltd*,<sup>88</sup> where the Federal Court followed Jacob J and also held the patent infringed (Wilcox J dissenting). The court agreed that the term ‘average length of the human thigh bone’ should not be calculated statistically but by reference to functional considerations.

<sup>88</sup> [1998] FSR 306.

The scope of the exceptions to patentability may have a bearing on the interpretation of claims. They can only be interpreted in such a way so as not to be caught by the exclusions to patentability. So it was held in *Visx Inc v Nidek Co Ltd*,<sup>89</sup> where the patents in suit related to laser apparatus for changing the shape of the cornea to correct defects such as short-sightedness. Section 4(2) of the Patents Act 1977 excludes from patentability methods of treatment of the human or animal body by surgery or therapy or of diagnosis practised on the human or animal body but this is subject to s 4(3) which nonetheless allows patents for substances or compositions for use in such methods. Consequently, in interpreting the claims in the patent, they had to be considered as claims to the apparatus rather than the method of treatment.

<sup>89</sup> [1999] FSR 405.

In *Horne Engineering Co Ltd v Reliance Water Controls Ltd*,<sup>90</sup> Pumfrey J said that the principle of applying a purposive construction to a claim is (at 100):

<sup>90</sup> [2000] FSR 90.

Not to extract some general principle or inventive concept from a patent specification and discard those features of the claim which are inconsistent with, or unnecessary for the implementation of that principle. It must always be assumed that claims are in the form they are for good reasons.

He quoted Hoffmann LJ in *Société Technique de Pulverisation STEP v Emson*,<sup>91</sup> where he said that to give a purposive construction does not mean that an integer can be treated as struck out if it does not appear to make any difference to the inventive concept.

<sup>91</sup> [1993] RPC 513.

Where a claim is ambiguous, it does not seem likely that the *contra proferentum* rule applies, especially as the method of construction is laid down by the legislation in s 125(1). Aldous LJ declined an invitation to apply the *contra proferentum* rule in

92 [1998] FSR 786.

*Scanvaegt International A/S v Pelcombe Ltd.*<sup>92</sup> He expressed doubts about the applicability of the rule, having deduced the only possible meaning of the claim in question.

93 [2004] RPC 919.

A word or phrase in a claim may have a particular meaning acontextually. But it does not necessarily have the same meaning in context and the Protocol questions are particularly useful in considering the difference between the meaning out of context and in context. In *Technip France SA's Patent*,<sup>93</sup> Jacob LJ, at para 41, gave the example of *Catnic* itself where the word 'vertical' did not mean 'geometrically vertical' but instead meant 'vertical enough to do the job'. Jacob LJ approached the phrase 'free from play' in *Unilin Beheer NV v Berry Floor NV*<sup>94</sup> in a similar manner. The patent was for a flooring system made of panels of, typically, MDF (medium density fibreboard) which snap-fitted together. He said that, taking account of what would be apparent to the skilled person reading the claims and specification, the phrase meant 'free of play for practical purposes' and a little bit of play which did not matter in practice was not excluded by the claim.

95 [2009] EWCA Civ 498.

In *Ancon Ltd v ACS Stainless Steel Fixings Ltd*,<sup>95</sup> the patent was for a channel assembly of the type used in the construction industry comprising a metal channel with lugs or restraining anchors so that the channel can be fixed in concrete. The exposed side of the channel is open and allows the insertion of bolts which can be moved along the channel to its desired position and then turned to lock it in position against the internal walls of the channel. This allows the fixing of brackets used to support heavy loads such as external cladding. The heads of the bolts usually have a profile that prevents them rotating when a bracket is fixed in place. In the patent the fixing bolt was described as having a 'generally elliptical cone shape'. Apart from locking the bolt so that it did not turn when the fixing nut was tightened, its shape meant that it was forced to the inside of the channel. Jacob LJ said that the skilled person would have regard to the purpose of the bolt head, being to achieve a 'camming' action into the corners of the channel. He said (at para 17) that the skilled person would reason that:

the important aspects of the 'generally elliptical cone shape' are those parts of the bolt which co-operate with the channel in the whole assembly – the sides of the bolt not the top. The 'business' bits of the bolt are the sides. This forces his attention on the cross-sections through-out the bolt – that is what the patentee is trying to convey by his words 'generally elliptical'. And considering particularly fig.13 the skilled reader would see that the phrase has a very loose meaning – it is enough that there are what might be called 'vestiges' of a true ellipse to do the necessary camming.

In this case, the skilled reader would know about channels and bolt fixings and the fact that rectangular headed bolts had been used. He would also know that rounded corners had been tried to make it easier to slide the bolts along the channels to the desired position. The skilled reader would see that the bolt head was a completely novel shape and because of its shape, as it was tightened, the bolt head would be forced to the inside of the channel. Jacob LJ noted that the term 'elliptical cone shape' was a geometric nonsense. In particular, an ellipse is two-dimensional whereas a cone is three-dimensional. However, the difficulty for the draftsman of the patent was how to describe a novel shape which has not existed before and for which there was no generally accepted definition.

## Equivalents

Sometimes the alleged infringement may contain mechanical equivalents, an alternative that works equivalently. A mechanical equivalent may be more than a mere variant as in the *Catnic* case. In appropriate cases, it may then be a matter of applying the Protocol questions to determine whether the equivalent lies within the claims. In some

cases, however, the equivalent may be further away from the invention as claimed though it may bring about the same technical effect. The doctrine of equivalents applies where there is no literal infringement, but there is equivalence between elements of the alleged infringing product or process and the claimed elements of the invention.<sup>96</sup> Whether the doctrine is fully within the Protocol to Article 69 of the European Patent Convention or goes beyond it is difficult to tell. If fully within the Protocol it is a dangerous gloss upon it but if it goes further it is surely contrary to the Convention as it presently stands.<sup>97</sup> The existence of a general doctrine of equivalents in UK patent law has been doubted on a number of occasions, especially by Jacob LJ, a very experienced patent judge.<sup>98</sup>

The Court of Appeal in Hong Kong had to deal with a mechanical equivalent in *Improver Corp v Raymond Industries Ltd.*<sup>99</sup> The claimant's patent was for a device, called the 'Epilady', for removing hair from arms and legs. The defendant imported and distributed a device which performed the same function and was called 'Smooth & Silky'.<sup>100</sup> It was held, applying the *Catnic* test, that the first and second questions are questions of fact and the answers to them are not conclusive to the third question, which was one of construction. Even a purposive construction might produce the conclusion that the patentee was confining his claim to the primary meaning and excluding the variant, even though the variant might make no material difference – and this would have been obvious at the time. On the evidence, there was no material difference – both devices trapped and plucked hair from the skin, and it was obvious that both worked in the same way. The answer to the first two questions in the flowchart (Figure 14.2) were therefore 'no' and 'yes' respectively, and the third question fell to be determined. It was held that it was important to look at all the essential integers in the patent specification and claim to see if all those essential integers were present in the alleged infringement.<sup>101</sup> The alleged infringing device could perform the same task as long as it did so differently as regards at least one essential integer, and this is so even if the difference had no material effect upon the way the invention worked.

The specification and relevant claim, therefore, must be construed to determine what the essential integers are and comparing these to the alleged infringing product or process. In the above case, the specification and claim referred to a helical spring that was rotated to pluck out hairs. It was held that this was an essential integer, and the fact the defendant used an elastomeric (rubber) rod instead (even though this had no material effect on how the invention worked) indicated that the defendant's device did not infringe the patent. The skilled man, reading the patent specification and claim, would have considered that the patentee had not intended to include such a variant. As the helical spring was rotated, its windings opened and closed up trapping and plucking out hairs. The defendant's device did the same thing but by using a rubber rod with slits in it. In a claim in the Patents Court involving the same devices, Hoffmann J applied the *Catnic* test and his answers were 'no', 'yes' and 'yes', and therefore, in his opinion, the 'Smooth & Silky' hair remover did not infringe.<sup>102</sup>

The 'Epilady' case is also interesting because it shows differences of approach to infringement and the effect of the Protocol on the interpretation of Article 69. In Germany, in a parallel action involving the same parties and patent, it was held, eventually, that the defendant's rubber rod with slits in it infringed the 'Epilady' patent.<sup>103</sup> Jacob suggested that there is an approach to infringement in Germany whereby a mechanical equivalent that is obvious will infringe even though the integer it replaces is an essential one.<sup>104</sup> However, Lord Hoffmann in *Kirin-Amgen Inc v Hoechst Marion Roussel*<sup>105</sup> noted that the courts in Germany have moved closer to the Protocol questions and have even stated that the approach there is now similar to *Catnic*.<sup>106</sup>

The law on infringement by equivalents is not settled. It is even debatable whether there is a distinct doctrine of equivalents. Article 69 and the Protocol should provide

<sup>96</sup> *Graver Tank & Mfg Co v Linde Air Products Co* 339 US 605 (1950).

<sup>97</sup> Express mention of equivalents is made in an addition to the Protocol to Article 69 in a new version of the Convention, yet to come into effect: see below.

<sup>98</sup> *Mayne Pharma Pty Ltd v Pharmacia Italia SpA* [2005] EWCA Civ 137. At para 5, Jacob LJ set out a useful summary of the law on construction of claims as approved by the House of Lords in *Kirin-Amgen Inc v Hoechst Marion Roussel* [2005] RPC 169.

<sup>99</sup> [1991] FSR 223.

<sup>100</sup> The case was decided under the Patents Act 1977, which was then in force in Hong Kong.

<sup>101</sup> The word 'integer' is used to describe an element of an invention, assuming that it can be broken down into elements. The number of integers can be increased by adding to the claims by use of alternatives. For example, 'an offset eccentrically mounted widget which is attached to the mounting by magnetic means (claim 1) and a widget as in claim 1 which is attached to its mounting by plastic friction clips (claim 2)'.  
<sup>102</sup> *Improver Corp v Remington Consumer Products Ltd* [1990] FSR 181.  
<sup>103</sup> [1991] RPC 597.  
<sup>104</sup> Jacob, R. 'The Herchel Smith Lecture 1993' [1993] 9 EIPR 312 at 313. According to Jacob J in *Beloit Technologies Inc v Valmet Paper Machinery Inc* [1995] RPC 705, the Epilady cases make 'an excellent discussion basis for law students'.  
<sup>105</sup> [2005] RPC 169 at para 75.  
<sup>106</sup> *Kunststoffrohrteil* [2002] GRUR 511 and *Scheidemesser I* [2003] ENPR 12 309.

the only means of construing patent claims. However, the 13th edition of the European Patent Convention, which came into force on 13 December 2007, includes a second Article to the Protocol on Article 69 which states:

For the purpose of determining the extent of protection conferred by a European patent, due account shall be taken of any element which is equivalent to an element specified in the claims.

The doctrine of equivalents will be firmly back on the agenda though, like the ‘pith and marrow’ approach, the doctrine of equivalents in the US was described by Lord Hoffmann as being born of despair.<sup>107</sup> The US Supreme Court, in *Festo Corp v Shoketsu Kogyo Kabushiki Co Ltd*,<sup>108</sup> held that, by amending a claim, a patentee did not necessarily abandon any claim to equivalents. Kennedy J, giving the judgment of the court, said (at para 15):

It is true that the doctrine of equivalents renders the scope of patents less certain. It may be difficult to determine what is, or is not, an equivalent to a particular element of an invention. If competitors cannot be certain about a patent’s extent, they may be deterred from engaging in legitimate manufactures outside its limits, or they may invest by mistake in competing products that the patent secures. In addition the uncertainty may lead to wasteful litigation between competitors, suits that a rule of literalism might avoid . . . Each time the Court has considered the doctrine, it has acknowledged this uncertainty is the price of ensuring the appropriate incentives for innovation, and it has affirmed the doctrine over dissents that urged a more certain rule.

The balance between fair protection and a reasonable degree of certainty is difficult to achieve consistently and is often a matter of deciding where to draw the line. It would be unfair to a patentee if others were to escape infringement by making minor changes,<sup>109</sup> yet the need for certainty is also important. Diligent companies embarking on the manufacture of some new product or installing a new industrial process will usually consult the prior art, especially patent specifications, and it is important that they can determine with some confidence whether or not their planned activities will infringe someone else’s patent rights. At the end of the day, it may simply be a matter of deciding what the skilled reader would think the patentee had intended to claim from the language with which he had expressed himself, taking account of the drawings and description.

In the light of the above, it is suggested that the following tests should be used:

- 1 Where the critical aspect of the alleged infringement is a minor variant, that is, it does the same thing in the same way (as in the *Catnic* case), it should not escape an infringement action merely because of an inappropriately narrow or restrictive choice of words.
- 2 Where the aspect of the alleged infringement under consideration is a mechanical equivalent, that is it performs the same function but by different means (as in the *Improver* case) then the issue is whether, interpreting the last *Catnic* question, the patentee intended strict compliance with the primary meaning of the language of the claim or whether he used the word or phrase under consideration as having a figurative meaning, denoting a class of things which include the variant and the literal meaning, the latter being perhaps the most perfect or best-known example of the class.<sup>110</sup>

The application of the purposive approach may operate harshly on a defendant, because in an interim hearing it is likely to be used even more generously. The slightest hint of infringement might be sufficient to convince a judge that there is a serious issue to be tried. In *Beecham Group plc v J & W Sanderson Ltd*, Aldous J said:

<sup>107</sup> *Kirin-Amgen Inc v Hoechst Marion Roussel Ltd* [2005] RPC 169 at para 41.

<sup>108</sup> [2003] FSR 154.

<sup>109</sup> The doctrine of equivalents appears to have its origin in *Winans v Denmead* 56 US 330 (1856) per Curtis J who said (at 343), ‘The exclusive right to the thing patented is not secured, if the public are at liberty to make substantial copies of it, varying its form or proportions.’ The patent was for a conical-shaped car for carrying coal whilst the defendant’s was an octagonal shape.

<sup>110</sup> *Improver Corp v Remington Consumer Products Ltd* [1990] FSR 181 per Hoffmann J. He described the figure in the figurative meaning being a form of synecdoche (where a part is made to represent the whole) or metonymy (substitution of the name of an attribute or adjunct for that of the thing meant).

Patent claims are difficult to construe after a trial, and are even more difficult on motion without proper education as to the background and the technical effect of differences. This case is no exception, and I conclude that there is a serious issue to be tried as to whether the defendant's toothbrushes infringe claim 1.<sup>111</sup>

<sup>111</sup> (Unreported) 18 June 1993.

Could it be that claimants are given the benefit of doubt because of the purposive approach? This particular case concerned a patent for a toothbrush having a flexible handle by virtue of 'V-shaped' folds transverse to the handle. The defendant's toothbrush achieved flexibility by means of a helical spring or auger construction, having coils connected to a central core. However, although Aldous J decided there was a serious issue to be tried, he refused an injunction after consideration of the balance of convenience, although he did order the defendant to pay 15 pence into a joint bank account for each toothbrush it sold.

If the mechanical equivalent lacks one or more of the important advantages of the patented product, that fact is suggestive that there is no infringement. In *Consafe Engineering (UK) Ltd v Emtunga UK Ltd*,<sup>112</sup> the patent was a moveable structure used for accommodation on oil and gas platforms in the North Sea. It had two important advantages lacking in the alleged infringement, namely, a uniform modular structure and the ability to be lifted safely without a substantial base-frame. However, Pumfrey J held that the patent was invalid because of obviousness and, had it been valid, it would not have been infringed by the defendant's structures.

<sup>112</sup> [1999] RPC 154.

Where a variant has differences that are cosmetic and which have no effect on how the invention works, it is likely to be regarded as within the patent claims unless there was a good reason why the patentee had chosen to restrict himself to the precise literal meaning of the words he had used. In *Dyson Appliances Ltd v Hoover Ltd*,<sup>113</sup> claim 1 of the famous Dyson bagless vacuum cleaner described the cyclone as having a frusto-conical<sup>114</sup> part tapered away from its entry. The defendant alleged, *inter alia*, that there was no infringement as the equivalent part of its bagless vacuum cleaner was of a trumpet shape. In finding the patent valid and infringed, Michael Fysh QC, sitting as deputy judge of the High Court in the Patents Court, said that the skilled reader would still regard the shape as frusto-conical even though there were slight differences in the top and bottom angles from a true geometric frusto-conical shape. Furthermore, even if it was accepted that the trumpet shape was a variant, it had no effect on how the invention worked in practice and there was no reason why the patentee would have considered that strict compliance with the geometric meaning of frusto-conical was required. The Court of Appeal confirmed the decision in the Patents Court.<sup>115</sup>

<sup>113</sup> [2001] RPC 473.

<sup>114</sup> Frusto-conical means a cone with the top cut off in a plane parallel to the base of the cone.

<sup>115</sup> *Dyson Appliances Ltd v Hoover Ltd* [2002] RPC 465.

## DECLARATION OF NON-INFRINGEMENT

Section 71 of the Patents Act 1977 provides for applications to be made to the court or Comptroller for a declaration of non-infringement, without prejudice to the court's jurisdiction to make such a declaration otherwise, in the absence of any allegation of infringement made by the proprietor if the applicant has made a request in writing asking for a written acknowledgement for such declaration and has furnished full particulars in writing of the act in question and the proprietor has refused or failed to give any such declaration. Of course, the burden of proof lies on the applicant to show that the act or acts in question do not infringe the patent.

In *Niche Generics Ltd v Lundbeck A/S*,<sup>116</sup> the claimant wrote to the defendant seeking an acknowledgement that a pharmaceutical product made in India on behalf of the claimant did not infringe the defendant's patent. When no acknowledgement was received, the claimant brought proceedings for a declaration of non-infringement but, just before, made an offer to allow the defendant to inspect the process in India to be

<sup>116</sup> [2004] FSR 392.

attended also by the claimant's experts. Later, the defendant accepted that a declaration could be made in substantially the form sought but objected to paying the costs of the claimant's experts resulting from the inspection. Pumfrey J held that the defendant should pay the claimant's costs associated with the inspection.

The court has a general jurisdiction to grant declarations of non-infringement and it is not uncommon for an application for a declaration to be made at the same time as an application for revocation. In considering whether to grant a declaration of non-infringement, a court will often be faced with applying the Protocol questions to determine the scope of the monopoly claimed and whether the applicant's acts or proposed acts fall within it. In the United States, it is usual practice to use documentation in the US Patent and Trademark Office file as an aid to construing the claims of a patent. The proprietor will be estopped from denying any statement or concession made therein. This is known as 'file wrapper estoppel'.<sup>117</sup> In *Telsonic AG's Patent*,<sup>118</sup> it was held that the prosecution history of a patent should not be used to construe a patent and its claims as these were statements made by the patentee to the relevant public and their meaning and effect should be plain from the face of the published patent.

<sup>117</sup> The Patents Court and Court of Appeal had to apply file wrapper estoppel in *Celltech (Adair's) US Patent* [2004] FSR 35. This case concerned a licence for a US patent subject to English law and the jurisdiction of the English courts.

<sup>118</sup> [2004] RPC 744.

<sup>119</sup> In a declaration for non-infringement, the burden of proof was on the defendant to prove non-infringement: *Rohm & Haas Co v Collag Ltd* [2002] FSR 445.

<sup>120</sup> [1987] 2 All ER 496.

<sup>121</sup> [1954] 1 WLR 1489.

<sup>122</sup> [2005] RPC 348.

## EVIDENCE

Of course, in a patent infringement action, the claimant carries the burden of proof.<sup>119</sup> He has to adduce evidence of the infringement and convince the court, on a balance of probabilities, that the defendant has infringed his patent. However, and in exceptional cases, a judge may come to a conclusion that he just does not know on which side of the line the decision ought to be (in which case, the claimant has failed to discharge his legal burden of proof). In *Morris v London Iron & Steel Co*<sup>120</sup> May LJ accepted that this could happen. He said (at 501):

In the exceptional case, however, a judge conscientiously seeking to decide the matter before him may be forced to say, 'I just do not know'; indeed to say anything else might be in breach of his judicial duty.

Such indecision might be caused by a real and irreconcilable conflict between rival scientific theories. It does not, however, allow the claimant the opportunity to adduce fresh evidence in the hope of tipping the balance in his favour. Under rule 52.11(2) of the Civil Procedure Rules 1998, an appeal court will not receive fresh evidence unless it orders otherwise. Previously, fresh evidence would be admitted only if special grounds existed and the courts used a three-part test set out by Denning LJ in *Ladd v Marshall*.<sup>121</sup> All three parts had to be satisfied. They were:

- 1 if it is shown that the evidence could not have been obtained with reasonable diligence for use at the trial;
- 2 if the further evidence is such that, if given, it would probably have an important influence on the result of the case, though it need not be decisive; and
- 3 if the evidence is such as presumably to be believed in.

*Ladd v Marshall* remains a powerful persuasive authority and the principles are still very helpful in determining whether fresh evidence ought to be admitted. As Christopher Floyd QC, sitting as deputy judge of the High Court, said in *Stanelco Fibre Optics Ltd v Bioprogress Technology Ltd*<sup>122</sup> (at para 8):

The three conditions in *Ladd v Marshall* no longer have effect as binding precedent, but are relevant principles for the court to consider in the exercise of the discretion: see the passage from the judgment of Morritt LJ in *Banks v Cox* cited in *Hertfordshire Investments v Bubb* [2000] 1 WLR 2318 at 2325. As Hale LJ went on to say in that case, the *Ladd v Marshall*

criteria should still be ‘looked at with considerable care’. It will therefore still be a very exceptional case in which an applicant who fails on one or more of the *Ladd v Marshall* criteria succeeds on an application to adduce further evidence.

In that case, the application to adduce further evidence was refused as the evidence in question could probably have been found by exercising due diligence and, furthermore, it was not certain that it would have been adduced had it been found.

In *Imperial Chemical Industries v Montedison (UK) Ltd*,<sup>123</sup> the claimant failed to meet condition 1. Stuart-Smith LJ said (at 468):

It is incumbent upon a party to adduce such evidence as he considers relevant and persuasive relating to the findings of fact which the judge may make. He cannot wait for the findings and then say ‘Oh well, I could have called more evidence on that point.’

There is no exception to the rule in *Ladd v Marshall* should the judge fail to find the burden of proof discharged. The trial judge failed to make a positive finding in the *ICI* case and considered that he did not have to decide between the conflicting theories. Essentially, what he was saying was that the case was not proved to his satisfaction beyond the balance of probability.

There is no duty to keep records of non-infringement although presumptions may be drawn from the fact that a defendant had deliberately destroyed relevant records or, in particular circumstances, failed to keep records. In *Hoechst Celanese Corp v BP Chemicals Ltd*,<sup>124</sup> it was argued that, once some infringement had been found, the onus was on the defendant to prove non-infringement on other occasions.<sup>125</sup> This was rejected by Jacob J, referring to Russell LJ in *General Tire & Rubber Co v Firestone Tyre & Rubber Co Ltd*,<sup>126</sup> where he said (at 267) that the doctrine of *omnia praesumuntur contra spoliatorem*<sup>127</sup> as found in *Armory v Delamirie*<sup>128</sup> might be relevant in determining damages but not to prove the wrongful act itself. In *Hoechst*, Jacob J said that there was no suggestion that records had been destroyed or that *BP* had been guilty of any dishonesty or sharp practice or had turned a blind eye to what was going on.

Where a word in a claim has a technical meaning, expert evidence is admissible, of course. However, where a court is faced with conflicting evidence from two apparently credible expert witnesses, the court has the additional problem in resolving that conflict as well as resolving the centrally relevant issue, being the meaning of the word in question in the context of the document in which it is found: *Rohm & Haas Co v Collag Ltd*.<sup>129</sup>

It is very common to call experts to give evidence in patent cases, for example, to give evidence concerning obviousness. Expert evidence may also be important in interpreting the claims and applying the Protocol questions. For the purpose of donning the mantle of the person skilled in the art, expert evidence is not only helpful, but often essential.<sup>130</sup> Carrying out experiments is common in patent litigation involving claims to chemical or pharmaceutical compounds. Both sides often appoint experts. Jacob LJ thought that there was a danger of ‘litigation chemistry’ with experiments becoming contrived to achieve the desired result. He said it would be better if experts carrying out experiments were just given the unembellished disclosure to work from and, in *SmithKline Beecham plc v Apotex Europe Ltd*,<sup>131</sup> he went so far as to suggest that it would be better, in order to prove that a skilled person carrying out a recipe using his ordinary skills would be able to work the invention, simply to ask him to try. The court could appoint a single joint expert to carry out the experiments, though Jacob LJ did note that lawyers do not like that sort of approach as they lose control and fear that the expert might fail.

As to the role of expert witnesses, in *SmithKline Beecham v Apotex*, Jacob LJ said (at paras 51 and 52):

Before I go further, however, it is as well to remember what the key function of an expert witness in a patent action is – as I said in *Rockwater*<sup>132</sup> (para. 12):

<sup>123</sup> [1995] RPC 449.

<sup>124</sup> [1998] FSR 586.

<sup>125</sup> The defendant’s process was proved to infringe the patent on some days only.

<sup>126</sup> [1975] RPC 203.

<sup>127</sup> All things are presumed against a wrongdoer.

<sup>128</sup> (1722) 1 Stra 504. In that case the defendant, a goldsmith, was found to have converted a jewel from a ring brought into his shop by a chimney sweep who had found it. The judge directed the jury that, unless the defendant produced the jewel and showed it not to be of the finest water, they should presume the strongest against him and adopt the value of the best jewels as the measure of damages.

<sup>129</sup> [2001] FSR 426. In the Court of Appeal, it was accepted that the court could use clarifying information in the public file relating to a patent only when, after considering the description and drawings, it was of the view that the interpretation of the claims was still open to question: *Rohm and Haas Co v Collag Ltd* [2002] FSR 445.

<sup>130</sup> Per Lewison J in *Ultraframe (UK) Ltd v Eurocell Building Plastics Ltd* [2005] RPC 111.

<sup>131</sup> [2005] FSR 524 at para 78.

<sup>132</sup> *Rockwater Ltd v Technip France SA* [2004] EWCA Civ 381.

Their primary function is to educate the court in the technology – they come as teachers, as makers of the mantle [i.e. of the person skilled in the art] for the court to don. For that purpose it does not matter whether they do or do not approximate to the skilled man. What matters is how good they are at explaining things.

To that I would add this: although it is inevitable that when an expert is asked what he would understand from a prior document’s teaching he will give an answer as an individual, that answer is not as such all that helpful. What matters is what the notional skilled man would understand from the document. So it is not so much the expert’s personal view but his reasons for that view – these the court can examine against the standard of the notional unimaginative skilled man.

Bearing these sentiments in mind, Mr Peter Prescott QC, sitting as a Deputy Judge of the High Court in *Corevale Inc v Edwards Lifesciences AG*,<sup>133</sup> allowed for the fact that one expert witness was ‘an enthusiast by temperament, very alive to the latest innovations’ and the other expert witness had been “‘on the road” for a long time now, having given evidence in many patent cases’.

There is a danger of repetitious evidence and calling too many expert witnesses who essentially say the same thing. The court does not decide a case by counting how many experts each party can get to say the same thing.<sup>134</sup> Of course, expert evidence is unnecessary to construe the meaning of words not having a technical meaning. In such cases, the construction of a claim containing non-technical words was a matter for the court. In *British Celanese Ltd v Courtaulds Ltd*,<sup>135</sup> Lord Tomlin said of expert witnesses (at 195):

He [the expert witness] is entitled to give evidence as to the state of the art at any given time. He is entitled to explain the meaning of any technical terms used in the art. He is entitled to say whether in his opinion that which is described in the specification on a given hypothesis as to its meaning is capable of being carried into effect by a skilled worker. He is entitled to say what at a given time to him as skilled in the art a given piece of apparatus or a given sentence on any given hypothesis as to its meaning would have taught or suggested to him. He is entitled to say whether in his opinion a particular operation in connection with the art could be carried out and generally to give any explanation required as to facts of a scientific kind. He is not entitled to say nor is Counsel entitled to ask him what the specification means, nor does the question become any more admissible if it takes the form of asking him what it means to him as an engineer or as a chemist. Nor is he entitled to say whether any given step or alteration is obvious, that being a question for the Court.

Aldous LJ said that the above is particularly applicable where the evidence is contained in a witness statement and any inadmissible evidence included may be taken into account when deciding who should pay costs.<sup>136</sup>

<sup>133</sup> [2009] EWHC 6 (Pat).

<sup>136</sup> *Scanvaegt International A/S v Pelcombe Ltd* [1998] FSR 786 at 796.

## TITLE TO SUE FOR INFRINGEMENT

The proprietor or exclusive licensee has title to sue for infringement of a patent. However, if the relevant interest has not been registered under s 32 the owner of the interest will not be entitled to costs or expenses in respect of infringements occurring before registration, unless registration takes place within six months: s 68.<sup>137</sup> The court (or Comptroller) has discretion to extend that period if satisfied that the interest was registered as soon as possible after, provided it was not practicable to register sooner. Under s 33, later transactions, instruments or events which are registered are not prejudiced by earlier unregistered transactions, providing the person having the property or other right in or under the patent was not aware of the earlier transaction.

If a party to proceedings is found not to have title to sue he will be struck from the action, as in *Bondax Carpets Ltd v Advance Carpet Tiles*<sup>138</sup> where the third claimant was

<sup>137</sup> Until amendment by the Intellectual Property (Enforcement, etc.) Regulations 2006, SI 2006/1028, s 68 operated to deprive the proprietor or exclusive licensee of damage or an account of profits.

<sup>138</sup> [1993] FSR 162.

struck from the action. His contract with the second claimant had nothing to do with the rights under the patent.

Where a registered proprietor is entitled to a patent by way of assignment including an assignment of the right to sue for past infringement, he may not be able to sue for past infringements which took place at a time when the then proprietor was not registered as such. This could happen where there is a series of assignments which had not been entered on the register. In *LG Electronics Inc v NCR Financial Solutions Group Ltd*,<sup>139</sup> the present assignee and claimant derived its title to the patent through a series of assignments, none of which had been registered. It was held that the claimant was not entitled to damages for the periods of infringement when the patent was owned by its unregistered predecessors in title.

One or more joint proprietors of a patent may bring an action for infringement without the concurrence of the others, but they must be made parties to the proceedings.<sup>140</sup> The infringing acts are to be construed in the context of one or more joint proprietors of the patent subject to s 36. This means that the consent of the proprietor referred to in s 60 will usually require the consent of each and every one of the proprietors of the patent. Under s 67, the exclusive licensee of a patent has the same rights as the proprietor to bring an action for infringement committed after the date of the licence. In any action by an exclusive licensee, the proprietor shall be made a party to the proceedings.

## REMEDIES

The remedies available for infringement of a patent are an injunction,<sup>141</sup> damages, an account of profits, an order for delivery up<sup>142</sup> or destruction and a declaration that the patent is valid and has been infringed by the defendant.<sup>143</sup> However, damages and an account of profits are alternatives and may not, by s 61(2), both be awarded or ordered in respect of the same infringement. The question of infringement may be referred to the Comptroller if both parties (the proprietor and any other person who has allegedly infringed the patent) are willing, in which case remedies are limited to damages and/or a declaration.<sup>144</sup> Assessment of damages is discussed later.

The remedies in the Patents Act 1977 are not necessarily exhaustive as s 61(1) states that the remedies stated in that subsection are without prejudice to any other jurisdiction of the court. One issue is whether the courts can impose post-expiry injunctions, sometimes known in this context as 'springboard relief'. In *Crossley v Derby Gas Light Co*,<sup>145</sup> the Lord Chancellor accepted that the court could grant an injunction to prevent a person selling, after expiry of a patent, an article made during the subsistence of the patent.<sup>146</sup> This possibility has been confirmed under the 1977 Act in *Dyson Appliances Ltd v Hoover Ltd (No 2)*.<sup>147</sup> It had been shown that the defendant had infringed the claimant's patent in respect of its bagless vacuum cleaner. The patent was due to expire within one year of the date of the judgment and the defendant had a large quantity of its infringing vacuum cleaners in stock. The defendant had not offered an undertaking not to resume sales immediately after expiry of the patent and the claimant sought two post-expiry injunctions. The first post-expiry injunction was granted. Michael Fysh QC, sitting as deputy judge of the High Court in the Patents Court, accepted that s 61 was not exhaustive as to remedies. He concluded that s 37 of the Supreme Court Act 1981 gave the court the jurisdiction (probably in addition to any inherent equitable jurisdiction) to make, *inter alia*, post-expiry injunctions.<sup>148</sup> The development of the defendant's vacuum cleaner up to the time of the expiry of the patent put it at an advantage in time over its competitors. The judge thought that, as Dyson would probably be able to recover secondary damages by reasons of the antecedent infringement,

<sup>139</sup> [2003] FSR 428.

<sup>140</sup> Patents Act 1977 s 66(2).

<sup>141</sup> Interdict in Scotland.

<sup>142</sup> Section 61(1)(b) provides that a court can order delivery up not just of any patented product but also any article in which it is inextricably comprised: in *Kirin-Amgen Inc v Transkaryotic Therapies Inc (No 3)* [2005] FSR 875, cells containing very small quantities of a protein covered by the claimant's patent.

<sup>143</sup> Patents Act 1977 s 61.

<sup>144</sup> Patents Act 1977 s 61(3). Any award made by the Comptroller can be enforced by court order, decree arbitral (in Scotland) or money judgment (in Northern Ireland: s 61(7), inserted by the Patents Act 2004.

<sup>145</sup> (1834) 4 LT Ch 25.

<sup>146</sup> The European Court of Justice upheld a decision of a Dutch court to impose a temporary injunction of 14 months after expiry of a patent. This period was the average time taken to obtain marketing approval. A third party had applied for authorisation and included a sample of the patented drug before the patent had expired: Case C-316/95 *Generics BV v Smith Kline & French Laboratories Ltd* [1997] ECR I-3929.

<sup>147</sup> [2001] RPC 544.

<sup>148</sup> The Supreme Court Act 1981 s 37 allows the High Court to grant an injunction (whether interim or final) in cases in which it appears just and convenient to do so.

**149** It could be argued that, if secondary damages were recoverable, an injunction was unnecessary, providing those damages could be assessed.

**150** [2002] RPC 203.

**151** [1998] FSR 1.

**152** *Potton Ltd v Yorkclose Ltd* [1994] FSR 567.

**153** *Spring Form Inc v Toy Brokers Ltd* [2002] FSR 276.

**154** [1999] RPC 203.

**155** Laddie J distinguished *Peter Pan Manufacturing Corp v Corsets Silhouette Ltd* [1963] RPC 45, where no apportionment was appropriate as the brassieres made by the defendant could not have been made at all without the use of confidential information.

**156** The defendant would also have to account for a subsequent tax credit on any overpayment of tax.

it was right to ‘handicap’ Hoover for a further 12 months to put Dyson in the position it would have been in had its patent rights been respected.<sup>149</sup>

In *Kirin-Amgen Inc v Transkaryotic Therapies Inc (No 2)*,<sup>150</sup> it was held that the claimant could pursue a claim for springboard relief as it was thought that the claimant may not be able to claim damages for the post-expiry period and would be left without a remedy. However, there was still over three years for the patent to run whereas, in *Dyson*, expiry was imminent. Although Neuberger J allowed the claimant to pursue its claim for springboard relief, on the facts it seemed unlikely that it would be successful.

Even though post-expiry injunctions may be available in appropriate circumstances, there are, however, limits to what other remedies are available and, in *Union Carbide Corp v BP Chemicals Ltd*,<sup>151</sup> it was held that the law of restitution did not apply so as to give a cause of action of unjust enrichment.

The purpose of an account of profits is not to punish the defendant but to prevent his unjust enrichment. An account is limited to the profits actually made and attributable to the infringement and the claimant must take the defendant’s business as it is.<sup>152</sup> The fact that the defendant could have made more profit if he had been more efficient is of no consequence. Accounts are rarely asked for in patent cases because of the complexity in quantifying them though, in principle, they are available during the period between publication and grant, as are damages.<sup>153</sup> This is so even though s 69, which provides for an award of damages for the period between publication and grant, does not mention an account of profits.

Some of the principles applicable to an account of profits were set out by Laddie J in *Celanese International Corp v BP Chemicals Ltd*<sup>154</sup> as follows (at 220ff):

- Although an account of profits may produce a figure very different to an assessment of damages, both proceeded on the basis of legal causation.
- Where the defendant carries on several businesses or sells different products and only one infringes, he has to account only for the profits made by the infringements.
- There can be no reduction if the defendant could have made some of the profits by non-infringing means if he actually used infringing means.
- The claimant must take the defendant as he finds him and the claimant cannot ask for an increase in the amount awarded on the basis that the defendant should have generated higher profits.
- Where only part of a product infringes, the claimant is entitled only to the profit earned by virtue of the use of his invention.
- An apportionment approach is suitable where, for example, there are three stages to making a product, each of which is protected by a patent. The total profit has to be divided between the three stages.<sup>155</sup>
- The court should not engage in a substantial rounding up as a way of making the defendant pay punitive damages and, if insufficient information was available, it was not justifiable to pluck a figure out of the air that bore little relationship to any of the relevant facts.
- Accounting principles afforded a useful guide and it was reasonable to assume, unless there was some special reason otherwise, that the profits made on different stages of a project were in proportion to the costs and expenses attributable to those proportions.
- Acceptable deductions from the total figure were allowable costs, costs of research and development (unless there was a massive imbalance), financing costs, taxes paid.<sup>156</sup>

After taking these and other factors into account, Laddie J awarded £567,840 to the claimant. The total gross profit attributable to the process for manufacturing acetic acid using a process, part of which was attributable to the claimant’s patented process, was

£94.64 million. However, only 0.6 per cent of the entire process was attributable to the claimant's process.<sup>157</sup>

In *Spring Form Inc v Toy Brokers Ltd*,<sup>158</sup> the claimants were the proprietors of a patent for tent-like structures and its exclusive licensee. Two of the defendants, Toy Brokers and its controlling mind, submitted to an order for an account of profits. The claimants then considered electing for an account against the remaining defendants, Worlds Apart Ltd, Argos Ltd and Woolworths plc. The tents had been sold with merchandising embellishments (Teletubbies, Barbie, Winnie the Pooh and Thomas the Tank Engine). Pumfrey J thought that it might be appropriate to take into account the licence fees in respect of the merchandising and an apportionment of net profit resulting from the use of the merchandising, though he expressed no concluded view on this. For part of the period of infringement, the second claimant's exclusive licence, having replaced an earlier registered exclusive licence, had not been registered for nearly two years. During the period of disablement from damages or an account of profits under s 68, only the first claimant was entitled to recover.<sup>159</sup> Both could recover for the period from registration of the first licence up to the date the second licence was entered into and for the period after registration of the second licence. Pumfrey J also confirmed that where there are two claimants – the proprietor and exclusive licensee – both have to make the same election.

Pumfrey J also had to consider the case where a claimant makes a claim against an infringer, D1, who sells infringing products to D2 who also makes a profit by selling the products or using them. This could be important because, in most cases, D1 will have to indemnify D2 in respect of any claims made by the claimant. If the claimant elects to take damages, the total exposure of a defendant to indemnify the other defendants is limited to the claimant's damage. However, if he elects to take an account of profits D1 could end up losing more than his own profit. Pumfrey J said that where there was a chain of defendants, a claimant electing an account of profits should undertake not to make a claim in respect of infringing articles against any other defendant. Otherwise, the account would become 'hopelessly complicated'.

'Innocent' infringers may escape some of the remedies. Under s 62(1), neither damages nor an account of profits is available if the defendant can prove that, at the time of the infringement, he was not aware and had no reasonable grounds for supposing that the patent existed, the latter being a form of constructive notice. The application of the word 'patent' or 'patented' or words expressing or implying that a patent has been obtained for the product does not necessarily fix the defendant with notice unless accompanied by the number of the patent or application. It would, however, be difficult for a defendant to prove to the court that he did not know of the existence of the patent if he copied a product to which the word 'Patented' was applied. The burden of proof in this matter lies with the defendant.

Under s 25(4) there is, in effect, a period of six months' grace following the period for payment of a renewal fee for a patent but, by s 62(2), in respect of any infringement done during this period, the court or the Comptroller has a discretion as to whether to award damages or make an order for damages. Another provision relates to the situation where the infringement occurred before an amendment to the specification was allowed. In this case, the court or the Comptroller, when awarding damages or making an order for an account of profits must take into account:

- (a) whether at the date of infringement the defendant knew or had reasonable grounds to know he was infringing the patent;
- (b) whether the specification as published was framed in good faith and with reasonable skill and knowledge;
- (c) whether the proceedings were brought in good faith.<sup>160</sup>

<sup>157</sup> The claimant originally claimed £180 million including interest. The defendant had made a loss of £89.1 million on the other of the two alleged infringing processes. The total award was less than that calculated by the defendant but his figure was disregarded as it had been arrived at on a flawed basis.

<sup>158</sup> [2002] FSR 276.

<sup>159</sup> Now, s 68 only operates to deprive a proprietor or exclusive licensee of costs or, in Scotland, expenses.

<sup>160</sup> Patents Act 1977 s 62(3) as amended by the Intellectual Property (Enforcement, etc.) Regulations 2006, SI2006/1028, with effect from 29 April 2006.

In either case, there is no restriction on a court granting an injunction even if no damages are awarded.<sup>161</sup> It would be only in exceptional circumstances that an injunction would not be granted.

The meaning of the phrase ‘framed in good faith and with reasonable skill and knowledge’ was considered in *Hoechst Celanese Corp v BP Chemicals Ltd*.<sup>162</sup> Following Aldous J in *Hallen Co v Brabantia (UK) Ltd*,<sup>163</sup> Laddie J said that the test for ‘good faith’ was one of honesty, based on what the proprietor or his agent actually knew. That is a subjective test. As for ‘reasonable skill and knowledge’, Laddie J said that it was whether, in the circumstances pertaining at the time, including what was known of the prior art, a competent patentee (or, in many cases, the patent agent drafting the specification) would or could have been expected to frame the specification in the way it was framed. That is an objective test. In the present case, although the patentee had not bothered to examine the documents cited in the search report, it was held that the specification was framed in good faith and with reasonable skill and knowledge.<sup>164</sup>

By s 69, the applicant for a patent is able to sue for infringements which occurred between the publication of the application and the grant of the patent. It is also required that the act, if the patent had been granted at the date of publication, would have infringed the patent and the claims as published. The claims have to be interpreted by reference to the description and any drawings referred to in the description or claims.<sup>165</sup>

Damages may not be available or may be limited if the patent is found to be partially valid only by s 63. Damages and costs will not be available at all unless the court (or the Comptroller as the case may be) is satisfied that the claimant has proved that the specification was framed in good faith and with reasonable skill and knowledge. Even then, the court or the Comptroller has a discretion as to costs and as to the date from which damages should be calculated. The scope of s 63 was considered by Aldous LJ in *Lubrizol Corp v Esso Petroleum Co Ltd*.<sup>166</sup> He said that the provision applies only if the patent is partially invalid and partially valid. He said (at 790):

Thus, if a claim specifies more than one invention, [the court or Comptroller] may grant relief in respect of one of those inventions even though the other is invalid.

Where the claims specify only one invention rather than an inventive combination, it would seem that there is little place for s 63. However, in comparison with the equivalent provision in the Patents Act 1949, there is no requirement to find a valid claim. Section 63 allows relief for infringement of a partially valid patent with or without requiring amendment.

If the validity of a patent is challenged and it is found to be wholly or partially valid, the court (or the Comptroller if the hearing is before him) may certify the finding and the fact that the validity was so contested (s 65(2)). In any subsequent proceedings, including proceedings in the same action,<sup>167</sup> the proprietor can obtain his costs of the further proceedings on an indemnity basis if the judgment is made in his favour. A further certificate of contested validity may be granted.

There is a limitation on the award of costs or expenses if a transaction, instrument or event by which a subsequent proprietor (or co-proprietor) or exclusive licensee acquired his rights in the patent has not been registered promptly. Section 68 so provides where the transaction, instrument or event was not registered within six months or, if it was not practicable to register in that time, it was not registered as soon as practicable after that six-month period.<sup>168</sup> A number of transactions, instruments and events are registrable under s 33 including assignments, mortgages, licences and sub-licences,<sup>169</sup> the death of a proprietor and orders of the court or competent authority transferring the patent or application or any right in or under it to any person. But, as only the proprietor or exclusive licensee has a right to sue, the limitation on remedies

<sup>161</sup> *SmithKline Beecham plc v Apotex Europe Ltd* [2003] FSR 544.

<sup>162</sup> [1997] FSR 547.

<sup>163</sup> [1990] FSR 134.

<sup>164</sup> Although the documents had been cited by the European Patent Office, in the end the application was accepted and the documents ignored in examination. The patentee later amended his patent to take account of the prior art.

<sup>165</sup> Section 62(2) and (3) do not apply (discretion to refuse damages in relation to the further period for renewal or with respect to an amendment to the specification). There is, however, some discretion left to reduce damages if it would have been reasonable to expect that the patent would not have been granted or the act would not have infringed (s 69(3)). This defence was first raised in *Unilever plc v Chefaro Proprietaries Ltd* [1994] RPC 567, where it was held to require an objective test and to be of very limited scope.

<sup>166</sup> [1998] RPC 727.

<sup>167</sup> *Mölnlycke AB v Procter & Gamble Ltd* [1992] FSR 549.

<sup>168</sup> Previously, s 68 operated to deprive the proprietor or exclusive licensee of damages or an account of profits.

<sup>169</sup> Assignments of mortgages, licences and sub-licences must also be registered.

only applies to these persons. A further incentive for registration of these and other registrable transactions, instruments and events is that, failing registration, they may be vulnerable to a subsequent change in proprietorship of the patent or application.<sup>170</sup> The purpose of these provisions is to ensure that the register reflects accurately the fact of proprietorship and subsisting rights in respect of a patent or an application for a patent rather than to provide a fortuitous defence.<sup>171</sup> However, as s 68 now only applies to deprive the proprietor or exclusive licensee of costs or expenses, the draconian nature of the provision is significantly compromised.

An injunction will be granted as a general rule where the validity of the patent and the infringement are conclusively established but, of course, the grant of an injunction is discretionary. The High Court has a wide discretion to grant injunctions under s 37(1) of the Supreme Court Act 1981<sup>172</sup> and an injunction may be important where use of a property right is in issue, where damages may not be the main consideration.<sup>173</sup> Although discretionary, the normal form of an injunction is a general and unqualified one. It is for the defendant to justify departure from the norm. In *Kirin-Amgen Inc v Transkaryotic Therapies Inc (No 3)*,<sup>174</sup> the defendant unsuccessfully argued that the injunction be qualified to allow it to continue the infringing activity pending the appeal to the Court of Appeal.

Where an injunction is granted, it is important to limit the scope of the injunction to prohibit acts which, if carried out, would infringe the patent. The simplest formula then is to restrain the defendant from carrying out acts that infringe the patent, limited to the term of the patent.<sup>175</sup> Thus, the injunction is limited to the rights under s 60(1) and (2) but excludes acts which are excluded from infringement, such as the acts set out in s 60(5). The purpose of the injunction is to prevent apprehended use of the patentee's statutory monopoly, as defined in his claim.<sup>176</sup> In *Coflexip SA v Stolt Comex Seaway MS Ltd*,<sup>177</sup> the judge at first instance granted an injunction<sup>178</sup> which, according to Aldous LJ in the Court of Appeal, suffered from three deficiencies. It was not linked to the term during which the patent would be in existence, it exceeded the rights under s 60(1) and (2) and failed to exclude acts which are, under the Act, excepted from the right. It also raised difficult issues of construction.

An injunction granted on narrower grounds than covered by the claims at the claimant's request may not be remedied later by an application to widen its terms. In *Building Product Design Ltd v Sandtoft Roof Tiles Ltd (No 2)*,<sup>179</sup> the claimant sought and obtained an order restraining the defendant from making 'clay half-round ridge vent roof tiles' rather than an order in wider terms restraining the defendant from infringing the patent. The claimant later brought a second action in relation to angled tiles (the existence of these was known to the claimant at the time of the first action but it did not seek to include them in its pleadings). The second action was struck out as an abuse of process, being *res judicata*.

Exceptionally, a court may refuse an injunction to restrain the defendant from further infringement. Aldous J refused an injunction in *Biogen Inc v Medeva plc*.<sup>180</sup> The defendant claimed that the grant of an injunction would lead to loss of human life and/or avoidable damage to human health. The patent related to a vaccine for hepatitis B. However, the background facts were likely to change – the defendant's own vaccine might soon be approved or it might obtain a compulsory licence for the claimant's patent. In a previous case, Graham J said:

A life-saving drug is in an exceptional position . . . it is at the least very doubtful if the court in its discretion even ought to grant an injunction . . .<sup>181</sup>

Of course, it must be recalled that, as an equitable remedy, the grant of an injunction is always discretionary. That is not to say that damages would not be appropriate in such cases.

<sup>170</sup> Patents Act 1977 s 33(1).

<sup>171</sup> *Coflexip Stena Offshore Ltd's Patent* [1997] RPC 179 per Jacob J.

<sup>172</sup> Which states that the High Court may order an injunction (interim or final) where it appears to the court to be just and convenient to do so.

<sup>173</sup> *SmithKline Beecham plc v Apotex Europe Ltd* [2003] FSR 544, per Aldous LJ at para 13.

<sup>174</sup> [2005] FSR 875.

<sup>175</sup> Subject, in rare cases, to an injunction that may apply for a specified period beyond the expiry of the patent.

<sup>176</sup> *Coflexip SA v Stolt Comex Seaway MS Ltd* [2001] RPC 182 at para 18 per Aldous LJ.

<sup>177</sup> [2001] RPC 182.

<sup>178</sup> *Coflexip SA v Stolt Comex Seaway MS Ltd* [1999] FSR 473.

<sup>179</sup> [2004] FSR 834. At the first trial, the claimant had sought unsuccessfully to introduce claims for damages for other shapes of tiles and tiles made of concrete into the inquiry as to damages: *Building Product Design Ltd v Sandtoft Roof Tiles Ltd* [2004] FSR 823. The judge was unaware of the defendant's other products at trial.

<sup>180</sup> [1995] RPC 25. The patent was found to be invalid in the Court of Appeal and this was confirmed in the House of Lords: see [1997] RPC 1.

<sup>181</sup> *Roussel-Uclaf v GD Searle & Co Ltd* [1977] FSR 125 at 131.

By s 50 of the Supreme Court Act 1981, the court has a discretion to award damages in lieu of, or in addition to, an injunction. In *Chiron Corp v Organon Teknika Ltd (No 10)*<sup>182</sup> the defendant argued that an injunction would be contrary to the public interest. The patent in question related to test kits for the hepatitis C virus, and the defendant claimed that an injunction would prevent the public having access to the kits and would hinder research and development. Aldous J said that the test in *Shelfer v City of London Electric Lighting Co*<sup>183</sup> laid down by Smith LJ was still appropriate. The test (or rather, working rule) is:

182 [1995] FSR 325.

183 [1895] 1 Ch 287.

- 1 if the injury to the claimant's legal rights is small; and
- 2 is one which is capable of being estimated in money; and
- 3 is one which can adequately be compensated by a small money payment; and
- 4 the case is one in which it would be oppressive to the defendant to grant an injunction;

then damages in substitution for an injunction may be given. However, that is a 'good working rule' and the court's discretion under the section is not limited and the interests of third parties or the public can be taken into account. Considering the general nature of the patent monopoly and controls over abuses, Aldous J refused to limit the injunctions sought. He also refused a stay of the injunctions pending appeal.

However, where the loss claimed is not itself recoverable, for example, for being too remote under tortious principles, an injunction will not be granted to protect the proprietor or exclusive licensee from such loss. This was said by Goff LJ in *Polaroid Corp v Eastman Kodak Co*<sup>184</sup> and, in *Peaudouce SA v Kimberley-Clark Ltd*,<sup>185</sup> the court held that it was wrong in principle to grant an injunction to protect against an irrecoverable loss, in that case, being a loss to other members of the claimant's group of companies.

184 [1977] RPC 379.

185 [1996] FSR 680.

Where a case has been determined on its merits and there is an appeal, the court may decide to grant a stay of any injunction. However, in such cases, the *American Cyanamid*<sup>186</sup> principles are less relevant: they apply to interim hearings. Where there is an appeal against a decision taken at full trial, an application for a stay should be decided in accordance with the approach set out by Buckley LJ in *Minnesota Mining and Manufacturing Co v Johnson & Johnson Ltd*.<sup>187</sup> A major factor is that the claimant's patent has been held to be valid and infringed and, in *Minnesota Mining*, Buckley LJ said (at 676):

186 *American Cyanamid Co v Ethicon Ltd* [1975] AC 396.

187 [1976] RPC 672.

The object . . . must surely be so to arrange matters that, when the appeal comes to be heard, the appellate court may be able to do justice between the parties, whatever the outcome of the appeal may be.

Important factors are whether the appeal is to be made in good faith and whether there is a genuine chance of the appeal being successful, damage caused to the parties either way and, of course, the particular facts of the case.

Where there is an entry on the register to the effect that licences of right are available in respect of the patent and the defendant undertakes to take a licence, an injunction will not be granted against him. Also, the amount recoverable against him is limited to a maximum of double the amount that he would have paid had the infringing acts all been done under the licence.<sup>188</sup> It therefore makes sense for a person who is about to be sued for infringement to check whether licences of right are available for the patent concerned where there is any likelihood that damages will be assessed otherwise than on the basis of lost royalties and will be substantially more than the royalty payments under the licence of right. However, if the infringer did not have a licence and failed to undertake to apply for a licence of right an injunction could be imposed and damages would not be limited: they would be assessed at the damage actually caused to the claimant.<sup>189</sup>

188 Patents Act 1977 s 46(3)(c). The defendant's undertaking can be made at any time before the final order in the proceedings without admission of liability: s 46(3A).

189 *Gerber Garment Technology Ltd v Lectra Systems Ltd* [1995] RPC 383.

The grant of an injunction is discretionary and may not be granted where the patent in question is owned by a company which puts together a portfolio of patents, typically

in the field of software or business method patents, but does not work the inventions itself. Rather, the company watches out for potential infringements and threatens the alleged infringer with legal action if it does not agree to take a licence from the proprietor. Bearing in mind the apparent ease with which the US Patent and Trademark Office grants patents for software and business method patents, coupled with the expense of defending a patent action, the courts may be less willing to grant an injunction, particularly where the defendant has the means to pay damages should it lose at full trial.

In an application for an interim injunction, the application of the *American Cyanamid* principle may come down in favour of the patentee where it appears to the court that the assessment of the loss caused to the patentee are so difficult as to be almost incalculable. For example, in *Leo Pharma A/S v Sandoz Ltd*,<sup>190</sup> the patent was for a combination cream for the treatment of psoriasis. Jacob LJ said (at para 22):

The real point is that Leo currently have a monopoly price. If Sandoz come in with their considerable marketing powers, as a substantial company, and were to lower their price, the consequences of working out the financial damage to Leo go beyond merely difficult to being incalculable

<sup>190</sup> [2008] EWCA Civ 850.

## ASSESSMENT OF DAMAGES

The calculation of damages can give rise to complex considerations. The test is whether damages is an adequate remedy, not a perfect remedy.<sup>191</sup> The exercise has been somewhat modified by the Intellectual Property (Enforcement, etc.) Regulations 2006, discussed later.<sup>192</sup> Previously, the basic principle was stated by Lord Wilberforce in *General Tire & Rubber Co v Firestone Tyre & Rubber Co Ltd*<sup>193</sup> in the following terms (at 185):

As in the case of any other tort . . . the object of damages is to compensate for loss or injury. The general rule at any rate in relation to ‘economic’ torts is that the measure of damages is to be, so far as possible, that sum of money which will put the injured party in the same position as he would have been in if he had not sustained the wrong.

If the proprietor has been exploiting the patent by granting licences to others in return for royalties, then his loss is the capitalised value of the royalties that the infringer would have paid had he taken a licence. For example, if the infringer had made 500 articles that were covered by the patent and the proprietor had granted others a licence to make such articles in return for a royalty of £30 per article, then the damages should be assessed at £15,000. (This convenient method becomes less easy to use if the proprietor has granted licences in respect of the patent to different persons at different royalty rates.) Alternatively, the royalty may be calculated as a percentage of the net sale price of the articles where the infringer has been selling them at a lower price than legitimate licensees. Although a royalty basis is appropriate where the patentee is not a manufacturer but grants licences to work the invention, there may be losses exceeding a reasonable royalty and the measure of damages will be based on normal considerations of causation and remoteness.<sup>194</sup>

The royalty method of calculation falls down altogether if the proprietor does not grant licences but works the patent himself. In this case it is a question of the profits lost as a result of the infringer’s activities. Here, many factors may be relevant, including the effect on the marketplace of the infringement. Particular issues include:

- whether every sale of an infringing article represents a lost sale for the proprietor;
- whether the proprietor would have sold other articles along with those lost sales (for example, the buyer may have also purchased non-patented articles in addition to the patented article) – these damages are often referred to as parasitic damages;

<sup>191</sup> Per Walker J in *Peaudouce SA v Kimberly-Clark Ltd* [1996] FSR 680 at 699.

<sup>192</sup> SI 2006/1028. The Regulations implement, *inter alia*, Directive 2004/48/EC of the European Parliament and of the Council of 29 April 2004 on the enforcement of intellectual property rights, OJ L 157, 30.04.2004, p 45. It remains to be seen what effect the new provisions will have. It is unlikely that the previous method of calculating damages will be much altered.

<sup>193</sup> [1975] RPC 203.

<sup>194</sup> *SmithKline Beecham plc v Apotex Europe Ltd* [2003] FSR 544.

- whether the infringer had generated additional interest in the patented article through his marketing efforts;
- what the effect on the market was by changing a monopoly into a duopoly (for example, did the proprietor have to reduce his prices to compete with the infringer);
- typical profit margins for the category of article concerned;
- whether the infringer had deliberately undercut the proprietor's sale price.

The mere fact that a defendant could have made and sold as many products that did not infringe is no reason for reducing damages to a nominal sum. So it was held in an old Scots case, *United Horse Shoe and Nail Co Ltd v Stewart*,<sup>195</sup> in which the defender made and sold nails which infringed the pursuer's patent. The pursuer was entitled to damages based on the amount of profit it would have made had it made those sales itself, with a deduction to reflect the sales due to the particular exertions of the defendant. This case was still arguably good law and it was arguable that the reasoning in *United Horse Shoe* applied to contracts won by the defendant before an infringing process was used.<sup>196</sup>

195 (1888) 13 App Cas 401.

196 *Coflexip SA v Stolt Offshore Ltd* [2003] FSR 728.

197 [1983] FSR 512.

198 [1982] RPC 183.

An instructive case on the issue of damages where the proprietor had no intention of licensing the patent is *Catnic Components Ltd v Hill & Smith Ltd*,<sup>197</sup> which was a follow-up to the House of Lords case on infringement of lintels by a variant.<sup>198</sup> The claimant's claim for damages was under the following heads.

- 1 Loss of profits on each sale made by the defendant of infringing lintels – on the basis that every sale of the defendant's represented a lost sale to the claimant.
- 2 Loss of profits on the sale of non-patented lintels that the claimant would have sold alongside the patented lintels – parasitic damages.
- 3 A notional royalty of 20 per cent for any infringing lintels not subject to an award under 1 and 2 above.
- 4 Compound interest at 2 per cent above clearing bank base rate.
- 5 Exemplary damages on the sale at a large discount of infringing lintels by the defendant between the hearing in the House of Lords in the main action and the delivery of the judgment.

The defendant disputed these claims arguing that the claimant's lost sales, if any, were less than the defendant's sales of infringing lintels; that the claimant was not, in law, entitled to parasitic damages or exemplary damages and that interest payable should be simple interest at clearing bank rate less 2 per cent. The defendant conceded that the claimant was entitled to a royalty of 2 per cent on gross sales values.

It was held that it was proper to assume that each sale made by the defendant represented a lost sale unless the defendant could prove otherwise. A proper notional royalty rate was that which a potential licensee who had not yet entered the market would pay. No regard would be had to the fact that such a person could, instead, sell non-infringing lintels. On that basis, the appropriate royalty rate was 7 per cent net of tax. Parasitic sales were not allowable as not being a direct and natural consequence of the infringement. Although the defendant's discounted sales made shortly before the House of Lords judgment fell within the second category of acts for which exemplary damages might be awarded (benefit to defendant far outweighed the potential loss) in *Rookes v Barnard*,<sup>199</sup> they could not be awarded because there was no authority for it.<sup>200</sup> Neither was there any authority for compound interest, and the claimant was entitled only to simple interest calculated at clearing bank base rate plus 2 per cent.

199 [1964] AC 1129.

200 *Broome v Cassell & Co* [1972] AC 1027.

201 [1995] RPC 383.

Jacob J chose not to follow *Catnic v Hill & Smith* as regards 'parasitic damages'. In *Gerber Garment Technology Inc v Lectra Systems Ltd*<sup>201</sup> it was held that patent infringement is a matter where secondary loss, provided it was reasonably foreseeable, should be recoverable on basic tortious principles. Such secondary loss may consist of the sale

of unpatented articles which go with the patented article as a commercial matter (in the present case, the sale of machines to be used with the patented machines, servicing the machines and the sale of spare parts). The secondary loss would even extend to loss caused by the infringer establishing a ‘bridgehead’ or ‘springboard’ (for example, by negotiating with clients) before the expiry of the relevant patents.<sup>202</sup> A further head of damages was for price depression. More controversially, part of the overall award of \$5.9 million included losses suffered by subsidiary companies. The claimant held all the shares in a number of subsidiaries and the resulting losses to these companies were taken into account on the basis that every dollar lost by a wholly owned subsidiary was a dollar lost to the parent company.<sup>203</sup>

In the appeal from Jacob J’s award of damages, the Court of Appeal accepted that where a shareholder in a company had a cause of action but the company had none, the shareholder could, in principle, sue in respect of loss caused to the company.<sup>204</sup> However, in the present case, the claimant had failed to prove he had both a personal cause of action and a personal loss.<sup>205</sup> In this case, the companies, including the claimant and its subsidiaries, were all part of a larger group. The claimant was not the holding company but an intermediate company. Hobhouse LJ said of the ‘one dollar lost’ rule (at 479):

The position of parent companies and their subsidiaries vary widely . . . there is no ‘self-evident’ truth. It all depends on the circumstances. Where, as here, the relevant companies are carrying on business in different countries, the starting point must be that an income loss suffered by one company will normally not translate directly into an equal monetary loss to the other company.

Hobhouse LJ compared simple groups of companies operating in the same country with groups with subsidiaries operating in different countries which may be subject to different tax regimes and exchange controls and an inflating local currency.

As an infringement of a patent is a statutory tort, it can be expected that normal tortious rules concerning damages apply as they apply to other torts. The basic rule is that the injured party should be restored to the position he would have been in had the tort not been committed. Recoverable losses are those that are foreseeable, caused by the tort and not excluded by public or social policy. In *South Australia Asset Management Corp v York Montague Ltd*,<sup>206</sup> Lord Hoffmann said that liability is normally limited to consequences which are attributable to that which made the act wrongful. Staughton LJ in *Gerber Garment* said (at 453):

. . . at first impression the Patents Act is aimed at protecting patentees from commercial loss resulting from the wrongful infringement of their rights. That is only a slight gloss upon the wording of the statute itself. In my judgment, again as a matter of first impression, it does not distinguish between profit on the sale of patented articles and profit on the sale of conveyed goods [meaning goods sold alongside the patented articles].<sup>207</sup>

*Gerber Garment* is not inconsistent with *Catnic v Hill & Smith* as, in that case, it was held that the loss of sales of lintels other than those subject to the patent was not a natural and direct consequence of the acts of infringement. As a principle, losses of sales of non-patented goods sold alongside the patented goods are recoverable provided the basic test for recoverability in tort is satisfied. The same applies to the sale of spare parts and the work of servicing the patented goods. It is arguable that this basic principle goes further than now appears to be the case in the US where, in *Rite-Hite Corp v Kelly Co Inc*,<sup>208</sup> it was held that for recovery for lost sales of unpatented goods sold with patented goods, they must function together so as to produce a desired end-product or result, for example, as being components of a single assembly or which operate as a functional unit. Damages in respect of goods sold alongside the infringing goods and bought only as a matter of ‘convenience or business advantage’ are not recoverable. If that is so, this

<sup>202</sup> Jacob J claimed that the provisional opinions in *Polaroid Corp v Eastman Kodak Co* [1977] RPC 379 were adopted by Falconer J in *Catnic Components Ltd v Hill & Smith Ltd* [1983] FSR 512 as part of the *ratio* of the case. Jacob J held that he was wrong to do so!

<sup>203</sup> This was accepted in *George Fischer (Great Britain) Ltd v Multi-Construction Ltd* [1995] 1 BCLC 260. In that case, the group of companies were all operating in the same country under the same tax system.

<sup>204</sup> *Gerber Garment Technology Inc v Lectra Systems Ltd* [1997] RPC 443.

<sup>205</sup> Staughton LJ dissenting on this point.

<sup>206</sup> [1996] 3 WLR 87.

<sup>207</sup> After reviewing the case law, Staughton LJ concluded that there was no rule of law contradicting his first impression.

<sup>208</sup> [1996] FSR 469.

case is not irreconcilable with the English cases and can be said simply to point to a lack of causation in respect of such losses. In *Catnic v Hill & Smith*, it was accepted that, as a common practice, builders obtain from one supplier all their requirements for lintels for the erection of a particular building, and in *Gerber Garment* the articles sold with the patented articles (automated fabric-cutting machines) were computer-aided design machines for designing cutting patterns.

Damages are available for loss of opportunity. For example, in *Les Laboratoires Servier v Apotex Inc*,<sup>209</sup> an injunction had been granted to the claimant preventing the defendant entering the market for perindopril, an anti-hypertension drug, in respect of which the claimant had a patent. The defendant had taken the view that the patent was invalid as, basically, all it claimed was the product of an earlier though expired patent. Eventually, the patent was held to be invalid but, in the meantime, the defendant had been prevented from entering the new generic market for the drug, during the 'at-risk' period.<sup>210</sup> Damages for this loss of opportunity were assessed at £17.5m. Norris J said that the award in such a case was one of equitable compensation, rather than damages strictly so-called.

<sup>209</sup> [2008] EWHC 2347 (Ch).

<sup>210</sup> This is the period before the patent has expired but where the generic manufacturer takes a view on the validity of the patent and decides to market the drug anyway. Norris J's discussion of this and 'transition' periods (one or more new entrants) and 'plateau' periods (numerous generic makers) and the impact on price is very instructive. A generic entrant during the at-risk period, if his view on validity is wrong, may be faced with paying damages several times the profit he makes as the patentee will usually have been making much greater profits.

<sup>211</sup> OJ L 157, 30.04.2004, p 45. The Directive applies to intellectual property rights generally and is not limited to patent infringement.

<sup>212</sup> The claimant may be the proprietor or exclusive licensee, for example.

### Intellectual Property (Enforcement, etc.) Regulations 2006

Regulation 3 implements Article 13 of Directive 2004/48/EC of the European Parliament and of the Council of 29 April 2004 on the enforcement of intellectual property rights.<sup>211</sup> Under recital 26 to the Directive, the intention is to compensate for the prejudice suffered as a result of an infringement committed by an infringer who engaged in activity in the knowledge, or with reasonable ground for knowing, that it would give rise to an infringement. The aim is not to introduce an obligation to provide for punitive damages but to allow for compensation based on an objective criterion while taking account of the expenses incurred by the rightholder, such as the costs of identification and research. Further it is intended that the measures will act as a deterrent to future infringement and to contribute to public awareness by publicising decisions in intellectual property infringement cases.

Regulation 3 seeks to balance the award of damages with the actual prejudice to the claimant where the infringer knew or had reasonable grounds for believing that he was engaged in an infringing activity.<sup>212</sup> All appropriate aspects must be taken into account in such a case when awarding damages, including:

- (a) the negative economic consequences, including any lost profits, suffered by the claimant and any unfair profits made by the defendant; or
- (b) elements other than economic factors, including the moral prejudice caused to the claimant by the infringement; and
- (c) where appropriate, damages may be awarded on the basis of royalties or fees which would have been due had the defendant obtained a licence.

It is unlikely that (b) above will be relevant in patent infringement cases, perhaps being more appropriate in relation to copyright and rights in performances. Point (a) seems to admit the possibility of an award comprising both damages for profits lost by the claimant together with an account of profits. This would be something of a novelty in intellectual property law in the UK. Note that (c) is an alternative to (a) and (b). Royalties or fees under licences might be most appropriate where the proprietor grants non-exclusive licences in relation to the patented invention. But the impact of these new provisions is a little difficult to predict at this time as they came into force only on 29 April 2006. Of course, in some cases, damages are left to be assessed and not further published. As we have seen above, damages in patent cases is a complex subject and the new provisions are unlikely to simplify the assessment of damages.

## CRIMINAL OFFENCES

Infringements of patents associated with selling, distributing and importing products that are subject to a patent are dealt with as civil wrongs and there are no criminal penalties for such dealings, although, depending on the circumstances, trade description, forgery, copyright or trade mark offences may be committed. There are a number of offences provided for by the Patents Act 1977, but these do not directly relate to unauthorised dealing. Section 109 makes it an offence, triable either way, to make, or cause to be made, a false entry on the patents register. This also extends to writings purporting to be copies of such entries and to the use of such writings in evidence. The maximum penalty on indictment is imprisonment for a term not exceeding two years and/or a fine. On summary conviction, the maximum penalty is a fine not exceeding the prescribed maximum.

Two offences deal with unauthorised claims with respect to patents. The first, under s 110, covers false representations that anything disposed of for value is a patented product: for example, where the product has the words ‘patented in the UK’ or just simply the word ‘patent’ applied to it and there is no such patent. The second offence, under s 111, covers representations that a patent has been applied for in respect of any article disposed of for value when this is not true, or if the patent application has been withdrawn or refused. For both offences, a reasonable period of grace is allowed after the expiry or revocation of a patent, or the refusal or withdrawal of an application, to allow sufficient time to prevent the making or continuance of the representation. An example that would probably be deemed to fall within this period of grace is where an article to which a patent relates is being manufactured and has the word ‘patented’ embossed on it. Later, the patent is revoked. It would be expected that the person concerned would take immediate steps to prevent continuing application of the word ‘patented’ to new articles and that he would remove the word from his existing stock (if this is practicable), but he would not be expected to take action to remove the word from articles that he has sold to retailers. A further defence to these two offences is that the accused person had used due diligence to prevent the commission of the offence. The penalty for an offence under s 110 or 111 is a fine not exceeding level 3 on the standard scale. These offences are triable summarily only.

Any person who uses on his place of business or on any document the words ‘Patent Office’ or any other words suggesting a connection between his place of business and the Patent Office, or indeed that his place of business is the Patent Office, is guilty of an offence and will be liable on summary conviction to a fine not exceeding level 4 on the standard scale.<sup>213</sup> An appropriate officer of a body corporate who consents or connives in the commission of any offence under the Act by that body corporate is also guilty of the relevant offence.<sup>214</sup> This also applies in the case of offences attributable to the neglect of the officer.<sup>215</sup> Appropriate officers are directors, managers, secretaries or other similar officers, or any person purporting to act in such a capacity. Where the affairs of the corporation are managed by its members, then those members may be liable as if they were directors.

<sup>213</sup> Patents Act 1977 s 112.

<sup>214</sup> Patents Act 1977 s 113(1).

<sup>215</sup> Notice the difference between this provision and the equivalent provision for registered designs, where only consent and connivance bring criminal liability on the shoulders of the officer, mere negligence being insufficient (Registered Designs Act 1949 s 35A). Neither is neglect sufficient for criminal liability of officers of corporations in respect of the offence of fraudulent application of a trade mark under the Trade Marks Act 1994.

# PATENTS – DEFENCES, GROUNDLESS THREATS AND REVOCATION

## INTRODUCTION

Being such a strong monopoly right, it is not surprising that patent rights are tempered by numerous exceptions to infringement in the form of defences. Apart from defences set out in s 60, described below, there is also a defence available to a person who has worked the invention before its priority date, or made effective and serious preparations to do so. Strictly speaking, this is not a defence and grants a right to the prior user to continue that prior use. Other defences may be available as are generally brought in relation to intellectual property rights, such as defences based on competition law, whether domestic or European Community competition law.

Being the owner of a monopoly right brings with it the temptation to use the right to threaten potential infringers with legal proceedings. As patent litigation is generally expensive, this might be enough to frighten off small and medium-sized enterprises which may well fear the consequences of losing a patent action. Sometimes it will be a third party who is threatened with litigation, such as a retailer or distributor of a product made by the alleged primary infringer, and the threats may be sufficient to deter the third party from placing further orders for the products in question, rather than submit to the vagaries of patent litigation. To deal with such abuses, in some circumstances, it is possible to bring an action against a person making groundless threats of infringement actions. This action is available to ‘a person aggrieved’ which can include the primary infringer, for example, if orders have dried up because his customers have been threatened. However, certain things can be threatened without triggering the action, which has also been watered down in some respects by changes made by the Patents Act 2004.

In many cases where an infringement action is brought, the defendant will attack the validity of the patent, arguing that it ought to be revoked, typically on the grounds that the invention was not new or lacked an inventive step. Such attacks are usually costly to overcome and frequently involve lengthy and complex expert evidence, increasing the expense of patent litigation significantly. This chapter looks at the defences to patent infringement actions, groundless threats and revocation of patents. European competition law and the doctrine of freedom of movement of goods, both of which may be important in relation to patents, are described in Part Seven which looks at European and International aspects of intellectual property rights.

## DEFENCES

A person sued for an alleged infringement of a patent has several and varied escape routes. He might challenge the validity of the patent, claiming that it should be revoked because it has been anticipated or that it is obvious or, more rarely, that the invention is for excluded matter as such or that it lacks industrial application or is invalid for lack

of sufficiency. Section 74 permits the defendant to put the validity of the patent in issue. Once the validity of a patent has been put in issue and evidence has been given in court, the court must rule on it even if the parties are no longer interested. The reason is that third parties may be affected.<sup>1</sup> Putting validity in issue may also be done under certain other circumstances.<sup>2</sup> The defendant may claim that the patent has lapsed or expired, or he may challenge the claimant's title to it or his right to sue. On the other hand, the defendant might be able to reduce his liability by showing that the patent is only partially valid. If the patent is only partially valid, the defendant will escape damages and costs in respect of the invalid part. In the case of a partially valid patent, under s 63, the claimant must show that the specification was framed in good faith and with reasonable skill and knowledge; but, even if he does, the court or Comptroller still has a discretion as to the date from which damages should be calculated and in respect of costs and expenses. This is an unfettered discretion though the conduct of the parties and the position of the general public may be influential.<sup>3</sup> Section 63 now also includes a requirement that the proceedings were brought in good faith and account must also be taken as to whether the defendant knew or had reasonable grounds for knowing he was infringing the patent at the time of the infringement.

Section 46 concerns licences of right. Where a patent has such an entry against it, in infringement proceedings (except where it relates to the importation of any article from a country outside the European Community), if the defendant undertakes to take a licence on terms to be agreed (or, failing agreement, to be settled by the Comptroller) then no injunction will be granted against him and the maximum award of damages against him is double the amount payable under the licence had the licence, on those terms, been granted before the earliest infringement. This provision could be seen as encouraging infringement of patents endorsed licences of right as, if sued, all the defendant has to do is to make the necessary undertaking. If he does this, the most he risks is twice what he would have paid under the licence.

Under s 60(3), the supplying the means form of infringement does not apply to the supply or offer to supply a staple commercial product unless made for the purpose of inducing the other person to do an act that would infringe under s 60(1) (making, etc. a patented product or a product obtained directly from a patented process or using, etc. a patented process).

Apart from these points, other defences to an infringement action are:

- 1 The act was done privately and for purposes which are not commercial: s 60(5)(a) – note the use of the conjunctive, the act must be both private and non-commercial.
- 2 The act was done for experimental purposes relating to the subject matter of the invention: s 60(5)(b) – this might permit making the subject matter of the invention to see more clearly how it works. However, making or experimenting with a patented product for the purposes of obtaining official approval from the Ministry of Agriculture, Fisheries and Food was held not to be within s 60(5)(b) in *Auchincloss v Agricultural & Veterinary Supplies Ltd*.<sup>4</sup> There, the act complained of was done in order to obtain official approval and not to discover something unknown or to test some hypothesis. However, such experiments might be done with a commercial outcome in mind.<sup>5</sup>
- 3 The act consists of the extemporaneous preparation in a pharmacy of a medicine for an individual in accordance with a registered medical or dental practitioner's prescription, or consists of dealing with a medicine so prepared: s 60(5)(c). Under s 60(6) a person who does not infringe under s 60(5)(a) to (c) does not become a person entitled to work the invention.
- 4 Use in relation to certain ships, aircraft, hovercraft or vehicles temporarily or accidentally in the UK or lawfully entering or crossing the UK: s 60(5)(d)–(f).<sup>6</sup> In *Stena*

<sup>1</sup> *Ocular Sciences Ltd v Aspect Vision Care Ltd* [1997] RPC 289.

<sup>2</sup> For example, on the application by any person that the invention is not a patentable invention, or the person to whom the patent was granted was not entitled to it or that the specification does not disclose the invention clearly and completely enough, etc. (s 72), in proceedings in connection with alleged groundless threats of infringement proceedings (s 70), proceedings in respect of a declaration under s 71 and in disputes relating to Crown use (s 58). The Patents Act 1949 contained some other specific grounds, for example, false suggestion under s 32(1)(j); see *Intalite International NV v Cellular Ceilings Ltd (No 2)* [1987] RPC 537.

<sup>3</sup> *Gerber Garment Technology Inc v Lectra Systems Ltd* [1995] FSR 492 at first instance.

<sup>4</sup> [1997] RPC 649, following *Monsanto Co v Stauffer Chemical Co* [1985] RPC 515. This was confirmed in the Court of Appeal in *Auchincloss v Agricultural & Veterinary Supplies Ltd* [1999] RPC 397. In *Kirin-Amgen Inc v Transkaryotic Therapies Inc (No 3)* [2005] FSR 875, the defence was raised initially though not pressed subsequently.

<sup>5</sup> See *Klinische Versuche (Clinical Trials) II* [1998] RPC 423, in the Federal Supreme Court of Germany.

<sup>6</sup> Including air space, internal and territorial waters, as appropriate. These exceptions apply to 'relevant' ships, aircraft, hovercraft and vehicles registered in or belonging to countries which are a party to the Paris Convention or are members of the World Trade Organisation, other than the UK. The provisions also apply to exempted aircraft under the Civil Aviation Act 1982 s 89.

7 [2003] RPC 668.

8 The Court of Appeal cited with approval the US case of *Cali v Japan Airlines Inc* (1974) 380 F Supp 1120, to similar effect in relation to scheduled air freight and passenger services.

9 Inserted by reg 4 of the Patents Regulations 2000, SI 2000/2037 which came into force on 28 July 2000. The 2000 Regulations also inserted Sch A1 into the 1977 Act which contains restrictions on the applicability of s 60(5)(g). Schedule A2, also inserted by the 2000 Regulations, defines *inter alia* the scope of protection afforded by biotechnological patents.

10 Under Article 13(1) to (5) of Directive 2001/82/EC of the European Parliament and of the Council of 6 November 2001 on the Community code relating to veterinary medicinal products, OJ L 311, 28.11.2001, p 1.

11 Under Article 10(1) to (4) of Directive 2001/83/EC of the European Parliament and of the Council of 6 November 2001 on the Community code relating to medicinal products for human use, OJ L 311, 28.11.2001, p 67.

12 Under s 60(6), persons who can rely on these defences are deemed to be persons entitled to work the invention for the purposes of s 60(2) – infringement by supplying or offering to supply the means to put the invention into effect. This also applies in respect of Crown use under s 55.

13 (1913) 30 RPC 465.

14 [1996] RPC 387.

15 *Solar Thomson Engineering Co Ltd v Barton* [1997] RPC 537. Whether it is correct to describe this right as an implied licence was questioned by the House of Lords: see below.

16 In *Intel Corp v Via Technologies Inc* [2003] FSR 574, it was said that cases involving Articles 81 and 82 often raised mixed questions of law and fact and were generally unsuitable for summary judgment.

17 [1993] RPC 107.

18 [1983] RPC 92. Otherwise the normal limitation period of six years applies under the Limitation Act 1980.

*Rederi AB v Irish Ferries Ltd*,<sup>7</sup> the Court of Appeal held that the word ‘temporarily’ meant ‘transient’ or ‘for a limited time’ and the question whether a vessel visited temporarily could not depend on frequency. In this case, a ferry, registered in the Irish Republic and which crossed between Dublin and Holyhead up to three or four times daily was held to be within the defence.<sup>8</sup>

- 5 Certain uses by farmers of the product of their harvest or uses of animals or animal reproductive material following sale of plant propagating material or breeding stock or animal reproductive material by the proprietor of the relevant patent or with his consent: s 60(5)(g) and (h).<sup>9</sup>
- 6 Certain acts done in conducting a study, test or trial necessary for and conducted with a view to complying marketing authorisation in relation to veterinary medicinal products<sup>10</sup> and in relation to medicinal products for human use.<sup>11</sup> s 60(5)(i).
- 7 The act was done in good faith by the defendant before the priority date of the invention, or he made in good faith effective and serious preparations to do such an act and the defendant claims under s 64 that he has the right to do the act or to continue to do the act. Alternatively the defendant may claim that he has obtained this right as being a partner of such a person, or that he has acquired it with the relevant part of that person’s business. Under s 28A similar provisions apply in respect of acts and preparations in relation to a patent after expiry of the renewal period and before publication of an application for restoration (of course, if the application for restoration is unsuccessful, there is no question of infringement).<sup>12</sup>
- 8 The act complained of is not an infringing act; it does not fall within the meaning of infringement in s 60.
- 9 The alleged infringing product or process lacks novelty or is obvious. Therefore, the patent claims are invalid if they cover the alleged infringement or, if valid, they cannot cover the alleged infringement. This is the ‘Gillette’ defence, from *Gillette Safety Razor Co v Anglo-American Trading Co Ltd*.<sup>13</sup> This defence is not uncommon: see, for example, *Mabuchi Motor KK’s Patents*<sup>14</sup> where the patent was held to be valid but not infringed.
- 10 The defendant has a right to repair, sometimes referred to as an implied licence.<sup>15</sup> The principle of non-derogation from grant should also be available in some circumstances. However, this ‘right to repair’ is quite limited.
- 11 The claimant’s rights have been exhausted under European Community law on the basis of Articles 28 to 30 of the EC Treaty. This might apply in the case of patented products placed on the European market by or with the consent of the proprietor of the patent which are subsequently further commercialised, for example, by being bought and resold by a third party, often after exporting the products to another Member State where the products sell at higher prices. Exhaustion of rights is discussed further in Chapter 24.
- 12 A defence on competition law under Articles 81 or 82 of the EC Treaty,<sup>16</sup> which apply to restrictive agreements and abuses of dominant positions, discussed in Chapter 24. The equivalent provisions under the Competition Act 1998 may also be relevant in appropriate circumstances.
- 13 The doctrines of estoppel and laches may apply. However, estoppel does not place a positive duty on a proprietor of a patent to publicise the patent or make inquiries: *Lux Traffic Controls Ltd v Pike Signals Ltd*.<sup>17</sup> Inactivity on the part of the proprietor or exclusive licensee may bar him from the equitable remedies, in particular an interim injunction. A warning may suffice to prevent the claimant’s claim being barred by laches: *TJ Smith & Nephew Ltd v 3M United Kingdom plc*.<sup>18</sup>
- 14 The old section 44 defence. This is no longer available except as regards contracts made before 1 March 2000. At the time of the infringement there was in force a

contract or licence containing a condition or term void by virtue of s 44. This covered terms requiring the other party to purchase anything other than the patented product, or prohibiting the acquisition of anything other than the patented product from a specified third party. It made no difference if the contract or licence was not itself subject to the laws of the UK.<sup>19</sup> Section 44 was repealed by the Competition Act 1998 s 70.<sup>20</sup>

- 15 The old section 45 defence. Again this is no longer available, having also been repealed by the Competition Act 1998 s 70. However, it still may be relevant in connection with contracts entered into prior to 1 March 2000. The defence applied to licences or contracts relating to the patents that contained obligations on the licensee or other party to a contract which survived the patent: for example, where a licence included an obligation to pay royalties in respect of the manufacture of a product by the licensee after the patent had expired. Under s 45, either party could terminate the agreement to the extent that it related to the subject matter of the patent by giving three months' notice in writing to the other party. The repeal of both s 44 and s 45 must be seen in the context of the introduction of provisions in the Competition Act 1998 equivalent to Articles 81 and 82 of the EC Treaty but set in the context of trade within the UK.

The claims may be central to the issue of infringement and validity. Where there is an application to revoke a patent under s 72(1) on the grounds of alleged invalidity, it would seem, in as much as the challenge concerns the claims, that the *Catnic* test is equally valid as in infringement proceedings.<sup>21</sup> On the one hand, the defendant will want to show that the claims are too narrow and do not extend to the alleged infringement. On the other hand, the defendant will argue that the claims are too wide, and hence the patent is invalid, or only partially valid, because the claims embrace some material that lacks novelty or is obvious to the notional skilled worker. This may be particularly relevant in terms of the *Gillette* defence mentioned above, where the defendant argues that his product lacks either novelty or an inventive step or, better still, both.

The existence and scope of the right to repair defence was questioned in the House of Lords in *United Wire Ltd v Screen Repair Services (Scotland) Ltd*.<sup>22</sup> The claimant was the proprietor of two patents in relation to sifting screens used to recycle drilling fluid in the offshore oil-drilling industry. The screens were made from two mesh screens of different mesh sizes fixed, at differential tensions, in a metal frame. In use, the screens quickly became torn and required replacement. The defendant acquired worn out screens and reconditioned them by removing the mesh screens, cleaning the frames and fitting new mesh screens. Customers who bought the screens were given a credit for supplying old frames. The claimant sued for infringement of its patents in that the defendant made the protected product without the consent of the proprietor under s 60(1)(a).

At first instance, the judge accepted that there was an implied licence to repair a patented product. On the facts, he was narrowly persuaded that the defendant's activities could rightly be regarded as repair. The Court of Appeal disagreed and held that the defendant had made the patented product. The defendant appealed to the House of Lords on the basis that, in repairing the screens, it had not infringed the patents because:

- (a) by marketing the screens, the proprietor had implicitly licensed persons acquiring them to repair them so as to prolong their useful life;
- (b) the doctrine of exhaustion of rights applied; and
- (c) a person repairing a screen did not 'make' a screen within the meaning of s 60(1)(a).

<sup>19</sup> *Chiron Corp v Organon Teknika Ltd* [1993] FSR 567.

<sup>20</sup> Section 70 of the Competition Act 1998 was brought into force by the Competition Act (Commencement No 5) Order 2000, SI 2000/344. The transitional provisions leaving the defence for contracts made before 1 March 2000 are contained in the Competition Act 1998 (Transitional, Consequential and Supplemental Provisions) Order 2000, SI 2000/311.

<sup>21</sup> *Conoco Speciality Products (Inc) v Merpo Montassa Ltd* [1994] FSR 99.

<sup>22</sup> [2001] RPC 439.

The leading judgment was given by Lord Hoffmann who agreed with the Court of Appeal and said that neither the concept of an implied licence nor the doctrine of exhaustion of rights were relevant where it was alleged that the defendant had infringed the patent by making the patented product. The sale of a patented product did not confer a licence to make it. Lord Hoffmann agreed with Lord Halsbury LC in *Sirdar Rubber Co Ltd v Wallington, Weston & Co*,<sup>23</sup> where he said (at 543):

23 (1907) 24 RPC 539.

... you may prolong the life of a licensed article but you must not make a new one under the cover of repair.

‘Repair’ is a concept that shares a boundary with ‘making’ but does not trespass on its boundary, according to Lord Hoffmann. What mattered was whether the defendant had made the patented product. He said that the Court of Appeal was right to substitute its own evaluation of whether the defendant had made the patented product as the trial judge failed to identify the patented product correctly. The defendant had prolonged the useful life of the frame which otherwise would have to be scrapped. But the screen was the combination of the frame and meshes and that ceased to exist when the meshes were removed and the frame cleaned down to bare metal. What was left was merely an important component or chassis from which a new screen could be made. Consequently, the defendant had infringed the patents by making new screens. Lord Hoffmann explained the Court of Appeal’s decision in *Solar Thomson Engineering v Barton* to the effect that there was a ‘licence to repair’ a patented product, confirming that the issue was not the juridical nature of the right to repair but simply whether or not the defendant had made the patented product.

The decision in *United Wire* is significant in that it distinguishes between repair and manufacture. However, in any particular case, the question must be a matter of fact and degree. In the present case, had the defendant simply cleaned up the existing mesh screens and placed patches over damaged areas that would surely be deemed to be non-infringing repair.

The s 64 defence (act done, or effective and serious preparations to do such an act, in good faith before the priority date) is an important one as, in a particular industry, many organisations may be working towards the same goal at the same time. Some important points to note about s 64 are as follows.

- 1 The act must be such as would be an infringement of the patent were it in force. If the prior act was not an infringement (for example, if it fell within one of the defences in s 60(5)), s 64 does not apply.
- 2 ‘Continue to do the act’ means ‘that act’. This would appear to cover the continuance of a single infringing act carried on over a period of time (for example, building an infringing radio mast). However, it would seem to allow repeating a single infringing act such as continuing to make infringing products.<sup>24</sup>
- 3 It is difficult to determine whether there are any qualitative restrictions. That is, can the person relying on s 64 in respect of an act falling within one claim work any of the other claims, including the most favoured embodiment? For example, can a prior user who made brass widgets now make plastic widgets which are covered by another claim? There were two contradictory cases on this point<sup>25</sup> but the better view, which has been reinforced by a more recent case to decide the issue,<sup>26</sup> is that s 64 does not give a general licence to other infringing acts beyond those done before the priority date or in respect of which serious and effective preparations were made before the priority date. ‘Effective’ qualifies preparations and there must be something more than preparations to do the act which would otherwise infringe. It was suggested by Aldous LJ in *Lubrizol Corp v Esso Petroleum Co Ltd*,<sup>27</sup> that the preparations must be so advanced as to be about to result in the infringing act being done.

24 See Thorley, S. et al. (2005) *Terrell on the Law of Patents* (16th edn) Sweet & Maxwell, para 8.59.

25 *Helitune v Stewart Hughes* [1991] RPC 78, taking a wide view, and *Lubrizol Corp v Exxon* [1992] RPC 281, taking a narrow view. Both of these cases were in the Patents Court.

26 *Lubrizol Corp v Esso Petroleum Co Ltd* [1997] RPC 195. On appeal, Aldous LJ said that s 64 does not give a right to manufacture any product or expand into other products. However, the protected act does not have to be exactly the same; s 64 is designed to give ‘practical protection to enable a man to continue doing what in substance he was doing before’: *Lubrizol Corp v Esso Petroleum Co Ltd* [1998] RPC 727.

27 [1998] RPC 727 at 770.

- 4 The proprietor will find that his monopoly has turned into a duopoly. However, this is not as bad as it might seem. No one else except the prior user or his assignee can do the act, and he may not be allowed to use the best embodiment unless his prior user extended to that.
- 5 The prior user may assign his right to continue to do the act. (Note it is a right and not just a defence.) However, he is not allowed to grant licences.
- 6 If the patent relates to a product, there may be other rights, such as a design right. Would the right under s 64 overrule these other rights?

There is a period of limbo that can apply where the prior act, or preparations for the act, comes between the priority date and the date of publication of the specification. This may be relevant where a person suspects that a patent application has been filed that may cover the act by its claims. Although no damages can be awarded for acts done before publication, they may be awarded if continued thereafter.<sup>28</sup> The person applying for the patent is unlikely to volunteer information concerning his patent at this stage, and the person intending to do the act has either to take a chance or wait until publication. This may be unsatisfactory, particularly where some considerable initial expense is involved such as constructing a new factory or installing a new production line.

To take an example, say that Deuce Developments Ltd commenced making and selling extendible pruning shears for reaching high branches of fruit trees in November 1993. The shears incorporated a novel design of hinge, but Deuce did not apply for a patent in respect of it. During April 1993, Metal Modes Ltd filed an application for a patent in relation to a hinge. Deuce was not aware of this and Deuce did not start making serious and effective preparations to produce its shears until June 1993. When the patent specification was published, Deuce decided to change the design of its hinge so as not to infringe the patent, should it be granted. When the patent is granted to Metal Modes, it can do nothing about Deuce having made the shears prior to publication (it could have sued for damages as from the publication date had Deuce continued to make shears with the hinge as covered in the claims) but it can take action against persons who acquired the early shears with the infringing hinge if those persons are using them. This is an infringement under s 60. However, those persons will be able to sue Deuce on the basis of a breach of the Sale of Goods Act 1979 s 12(2), the implied warranty of quiet possession of goods. The case of *Microbeads AC v Vinhurst Road Markings Ltd*<sup>29</sup> gives an excellent example of the consequences of acts done between filing and publication of a patent that infringe, which, as they were not a continuance of acts or the result of serious and effective preparations done before the priority date, are not saved by s 64. In the *Microbeads* case road-marking machines were made and sold after the priority date of the patent application made by a third party who later obtained a patent in respect of the machines.

Other points may be relevant, for example whether there is an express licence and, if so, whether it permits the acts complained of. Another way to escape liability is for the defendant to show that the claimant, if he claims to be an exclusive licensee, is indeed not an exclusive licensee, or even if he is that the acts complained of were performed before the licence took effect.<sup>30</sup> There is a presumption in favour of the proprietor under s 100 which states that if the patent in question has been granted for a process for obtaining a new product, the same product produced by anyone other than the proprietor or his licensee shall be taken to have been obtained by means of that patented process. This presumption is rebuttable on proof to the contrary and is relevant to infringement actions under s 60(1)(c), that is infringement of a process patent by disposing of, offering to dispose of, using, importing or keeping any product obtained directly by means of the process. In *Generics (UK) Ltd v H Lundbeck A/S*,<sup>31</sup> it was held that the presumption was displaced by the fact that the evidence showed that the

<sup>28</sup> Patents Act 1977 s 69. Proceedings may not be brought until after the patent has been granted.

<sup>29</sup> [1975] 1 All ER 529.

<sup>30</sup> The Patents Act 1977 s 130(1) defines 'exclusive licence' as a licence from the proprietor (or applicant for a patent) conferring on the licensee (including persons authorised by the licensee) and to the exclusion of all others (including the proprietor or applicant) any right in respect of the invention to which the patent or application relates.

<sup>31</sup> [2006] EWCA Civ 1261.

company producing the new product had applied for permission to market the product to the regulatory authority and there were clear legal and commercial reasons why the company would not have misled the authority about its process as had been alleged. Supplying false information to the regulatory authority is a criminal offence.

## GROUNDLESS THREATS OF INFRINGEMENT PROCEEDINGS

There is a remedy for groundless threats of infringement proceedings and a person aggrieved can bring an action for a declaration that the threats are unjustifiable, for an injunction against the continuation of those threats and for damages for any losses sustained as a result of the threats.<sup>32</sup> The threats may be made by ‘circulars, advertising or otherwise’ and need not be directed against the person aggrieved. Under s 70(2), the person bringing a groundless threats action is entitled to relief if he can show that the threats were made and that he is a person aggrieved. Where the defendant proves that the acts complained of constitute or would constitute an infringement of the patent, entitlement to relief is subject to the claimant showing that the patent is invalid in a relevant respect and, even then, relief is not available if the defendant shows that, at the time of making the threats, he did not know and had no reason to suspect that the patent was invalid in that respect under s 72(2A).<sup>33</sup> Having reason to suspect calls for an objective assessment based upon what the proprietor knew at the time the threat was made which includes information brought to his attention.<sup>34</sup> Assertions that the patent in suit is invalid are not sufficient unless substantiated.

To be considered a threat of infringement proceedings, the nature of the statement depends on how it would be understood by the ordinary reader in the position of the actual recipient.<sup>35</sup> It is also clear from a trade mark case on groundless threats that the threat may be implicit.<sup>36</sup> In *FNM Corporation Ltd v Drammock International Ltd*,<sup>37</sup> the threats were made in a number of letters and an e-mail. The email, sent to the retailer Superdrug, pointed out that there was a current dispute with its supplier of cooling spray aerosols in relation to the patent at issue. Arnold J approved the view of Aldous J in *Bowden Controls Ltd v Acco Cable Controls Ltd*<sup>38</sup> where he said (at 432):

... believe the recipient would consider what was the purpose of the letter. He would conclude that the purpose of the letter was to give him information and a warning. That requires the answer: a warning as to what?

Arnold J said that this was supported by the reaction of Superdrug to the e-mail which said that the owners of the patent believed the supplier was infringing the patent and then reminded the supplier that it would be liable for any incurred costs in relation to the patent dispute under Superdrug’s standard terms and conditions. Consequently, Arnold J held that the e-mail constituted a threat of patent infringement proceedings.

The acts for which threats can be made without giving rise to a groundless threats action are set out in s 70(4) and are allegations of infringement by making or importing a product for disposal or using a process or, in relation to a person who has made or imported a product for disposal or used a process, a threat to bring proceedings for an infringement alleged to consist of anything else.<sup>39</sup> This could apply, for example, where a primary infringer is threatened with proceedings for selling or offering to sell a product alleged to infringe the patent in question. Further, an actionable threat is not made by providing factual information as to a patent, making enquiries for the sole purpose of discovering whether, or by whom, the patent has been infringed by making or importing a product or using a process or by making an assertion in relation to the patent for the purpose of such enquiries: s 70(5).

<sup>32</sup> Patents Act 1977 s 70.

<sup>33</sup> This subsection was inserted by the Patents Act 2004.

<sup>34</sup> *FNM Corporation Ltd v Drammock International Ltd* [2009] EWHC 1294 (Pat) per Arnold J at para 227. This should be compared with the meaning of the phrase ‘reason to believe’ in copyright law.

<sup>35</sup> *Bowden Controls Ltd v Acco Cable Controls Ltd* [1990] RPC 427.

<sup>36</sup> *L’Oréal (UK) Ltd v Johnson & Johnson* [2000] FSR 686.

<sup>37</sup> [2009] EWHC 1294 (Pat).

<sup>38</sup> [1990] RPC 427.

<sup>39</sup> Section 70(4) was substituted by the Patents Act 2004 to provide for this second form of defence. However, it is only available in relation to someone who has made or imported the product, etc. It is not available to someone wrongfully alleged to have made or imported the product: *FNM Corporation Ltd v Drammock International Ltd* [2009] EWHC 1294 (Pat).

Notwithstanding the exceptions to groundless threats actions above, s 70(6), inserted by the Patents Act 2004, provides a defence against a groundless threats action to a person making such a threat to another if he proves that he used his best endeavours to discover, without success:

- in the case of a product, the identity of the person who made or imported it;
- in the case of a process,
  - where the alleged infringement is offering it for use, the identity of the person who used it;
  - where the alleged infringement is an act falling within s 60(1)(c) (disposing, offering to dispose of, etc. a product made directly from the process), the identity of the person who used the process to produce the product in question;

provided he notifies the person threatened accordingly before or at the time of making the threats identifying the endeavours used.

The ‘best endeavours’ defence for a person making threats to bring infringement proceedings is an important change and helps a patent proprietor (or exclusive licensee) in most cases where the primary infringer cannot be identified by the proprietor. In such a case, any threat made against, for example, a secondary infringer, could trigger a groundless threats action. If the identity of the primary infringer (for example, a person making or importing products alleged to infringe) could be discovered by the proprietor, he could threaten proceedings for making or importing the products without exposing himself to a groundless threats action. Section 70(6) allows the proprietor to threaten proceedings against a secondary infringer after failing to identify the primary infringer after using his best endeavours to discover the identity of the primary infringer without success. This will provide the proprietor with a defence to a groundless threats action as against the secondary infringer.

The relief for a groundless threats action is, under s 70(3), a declaration to the effect that the threats are unjustified, an injunction against continuance of the threats and damages for any loss sustained by reason of the threats. Where a groundless threats action is mounted quickly, the person aggrieved may not suffer any quantifiable losses, in which case it seems reasonable to assume that a declaration and injunction may be available in the absence of any award in damages although, without an injunction, losses would be likely to ensue. As the provisions on groundless threats actions are among those that may result in a challenge to the validity of a patent, apart from requiring the proprietor to show that the acts complained of constitute, or would constitute, an infringement, proprietors should take care not to precipitate such an action.

The provisions on groundless threats actions seem fairly straightforward at first sight, though they have generated some case law. Particular issues are: what constitutes an actionable threat, who can be a person aggrieved and what is the scope of the defences in s 70(2) and (4)?<sup>40</sup> A series of cases (*Brain v Ingledew* and others) have been very instructive. The issues are examined in turn below.

Providing factual information about the patent or making enquiries to discover the identity of the person who made or imported a product does not, *per se*, constitute an actionable threat under s 70(5). Therefore, a timely letter pointing out that a certain invention is subject to a patent is not an actionable threat, nor is sending a letter to a retailer asking for disclosure of the identity of the person who made the alleged infringing products together with an appropriate assertion. However, if the letter is ambiguous the benefit of the doubt will not be given to the author of it. A threatening letter should be read through the eyes of the reasonable and normal person and any vagueness should be construed against the threatener. Jacob J suggested so in *Patrick John Brain v Ingledew Brown Bennison & Garrett*<sup>41</sup> in which he said, in relation to the s 70(4) defence, discussed later (at 597):

<sup>40</sup> There is, of course, no case law as yet on the defence under s 70(6) which was inserted by the Patents Act 2004.

<sup>41</sup> [1995] FSR 552.

... to read the letter narrowly would be to give the benefit of the doubt to the threatener because he had written a woolly but ferocious letter. That cannot be right.

That case, the first in the series, *Brain v Ingledew*, involved an application under RSC Ord 14A<sup>42</sup> which allowed a judge to determine questions of law or the construction of a document. In finding that a threats action could be brought in respect of threats issued before a patent is granted, in respect of rights under s 69 (the right to sue for infringement between the date of publication and date of grant of the patent, subject to proceedings not being brought until after grant), Jacob J went further and made further declarations. He said that the letter did amount to a threat of proceedings within s 70; that the claimant (who had set up and managed the company threatened) was a person aggrieved and that the threats in the letter sent by the defendant went further than simply threatening to bring proceedings in respect of using a process.<sup>43</sup>

The Court of Appeal allowed the defendant's appeal as far as these further declarations.<sup>44</sup> The court held that these were matters of fact and it was not open to the judge to decide such matters under RSC Ord 14A. However, the first declaration to the effect that a threats action could be brought in respect of threats made before the patent was granted was accepted as being correct in principle. This provides the court with quite a dilemma. How does the court determine whether the act complained of infringes a patent which has not yet been granted?<sup>45</sup>

'A person aggrieved' may bring a threats action. The defence to an action in s 70(4), that is, that proceedings may not be brought if the threat relates to the making or importing of a product for disposal or the use of a process, suggests that the remedy is designed to protect secondary infringers such as retailers or distributors. (This now extends to other acts of infringement made against the person who has made or imported a product or used a process.)<sup>46</sup> However, the action is not limited to secondary infringers and the question of whether proceedings may be brought depends on whether the threats relate to certain types of acts rather than on the type of person involved.<sup>47</sup> In *Bowden Controls Ltd v Acco Cable Controls Ltd*<sup>48</sup> and in *Dimplex (UK) Ltd v De'Longhi Ltd*,<sup>49</sup> the claimant brought an action in respect of threats made to its customers.

To bring an action, the claimant will have to show that he has been caused damage by the threats, or that it is likely that he will be damaged by them. In *Reymes-Cole v Elite Hosiery Co Ltd*,<sup>50</sup> it was held that the person aggrieved must establish that the threats have caused or are likely to cause damage which is more than minimal. However, customers (for example, retailers) who have been threatened with infringement proceedings may simply not want to get involved and prefer to leave it to the person supplying them to fight the threatener. That being so, it may be difficult to obtain evidence of damage. In *Dimplex (UK) Ltd v De'Longhi Ltd*,<sup>51</sup> there was no evidence from customers in the UK but a French customer, who had also received a letter from the defendant threatening proceedings for infringement of its patent, sought an indemnity from the claimant otherwise it would no longer sell the claimant's product. The court was prepared to accept this as evidence of how the English customers were likely to react; the fact that the customer seeking the indemnity was in France did not matter. The claimant was likely to suffer damage which was more than minimal.

The need to prove damage has been put into some doubt by Laddie J in *Brain v Ingledew Brown Bennison & Garrett (No 3)*<sup>52</sup> where he suggested that, regardless of whether a person had been threatened directly or indirectly, he did not need to prove damage. However, he then made it clear that there must be a recognisable grievance. He said that the fact that a trader bringing the action is able to assuage the fears of potential customers who had been threatened so that the threats did not cause a recoverable loss did not mean that he was not a person aggrieved. He was a person with a real

<sup>42</sup> Now replaced by the Civil Procedure Rules 1998.

<sup>43</sup> This particular form of threat is within the defence to a threats action in s 70(4); see later.

<sup>44</sup> *Patrick John Brain v Ingledew Brown Bennison & Garrett* [1996] FSR 341.

<sup>45</sup> Section 70(2) provides that relief is not available to the person aggrieved by the threats if the defendant proves the alleged infringing acts are infringing or would infringe the patent. This is discussed below.

<sup>46</sup> This additional defence was inserted by the Patents Act 2004.

<sup>47</sup> *Cavity Trays Ltd v RMC Panel Products Ltd* [1996] RPC 361.

<sup>48</sup> [1990] RPC 427.

<sup>49</sup> [1996] FSR 622.

<sup>50</sup> [1965] RPC 102.

<sup>51</sup> [1996] FSR 622.

<sup>52</sup> [1997] FSR 511.

commercial interest which had been interfered with by the defendant and, consequently, his was a grievance which the court recognised.

It has been noted that the person bringing the proceedings for a threats action need not be the person threatened and the provisions may, depending on the circumstances, extend to persons having an interest in the person actually threatened. For example, in *Brain v Ingledew Brown Bennison & Garrett (No 3)*,<sup>53</sup> the claimant had set up and was managing the company which had been threatened. The court held that a director, executive or shareholder of a company threatened could be a person aggrieved. It would be a matter of looking at the circumstances. For example, if the threats were such as to disrupt severely the sales of products made by a company so as to jeopardise the company's future viability, this could in turn have a serious impact on shareholders and directors sufficient to give them a cause of action in relation to the threats.

53 [1997] FSR 511.

A real difficulty for the patentee is where the patent has not been granted. The threats are issued in that period between publication and grant. The specification, including the claims of the patent, may be amended before grant. Indeed, the patent may not be granted at all, for example, where the applicant is unable to deal with objections raised during examination. There was some judicial diversity of opinion over this point in the Court of Appeal in *Patrick John Brain v Ingledew Brown Bennison & Garrett*.<sup>54</sup> Aldous LJ said that it would be desirable for the patent to be granted before trial of the threats action, but if there was an 'extraordinary delay' in grant the court could look at the published specification and decide on a balance of probabilities whether the acts complained of would infringe the patent when granted. Hobhouse LJ was unsure of this approach, saying that he would want further evidence before concluding that the matter could be decided on a balance of probabilities. Unfortunately, the third judge, Beldam LJ, agreed with both judgments! However, in *Brain v Ingledew Brown Bennison & Garrett (No 2)*,<sup>55</sup> Laddie J said that, absent a granted patent at the time of the trial, the s 70(2) defence to a threats action could not be determined and the patentee who had issued the threats had to take the risk that the patent might not be granted by the time of trial.

54 [1996] FSR 341.

55 [1997] FSR 271.

Where the grant is likely to be made in the near future at the time of the trial, it may be that the court will grant a short stay in the threats proceedings. Otherwise, the applicant for a patent would be very foolish to issue threats not saved by s 70(4) or (6) until his patent is granted. The wording of s 70(2) reinforces the view of Laddie J, which is to be preferred. It states that the acts complained of must constitute or, if done, would constitute an *infringement of the patent*.

There are some forms of infringement in respect of which a patentee can threaten to bring an action without risking falling foul of a threats action. Of course, the patentee must be very careful to ensure that his 'threat' does not extend outside the bounds of 'permitted' allegations. Under s 70(4), the right to bring proceedings for groundless threats of infringement proceedings does not arise where the allegation consists of making or importing a product for disposal or of using a process or any other form of infringement by a person making or importing a product or using a process. In *Therm-A-Stor Ltd v Weathershield Windows Ltd*,<sup>56</sup> the Court of Appeal held that this extended to the 'supplying the means' infringement under s 60(2). This would require a purposive construction of the subsection which the Court of Appeal later in *Cavity Trays Ltd v RMC Panel Products Ltd*<sup>57</sup> was unable to accept in view of its clear and unambiguous wording. In that case, there was some discussion of *Therm-A-Stor* in which the judgment was regarded as difficult to follow in places and which was not taken to require a court to depart from the clear and express words of the statute.

56 [1981] FSR 579.

57 [1996] RPC 361.

Laddie J, in *Brain v Ingledew Brown Bennison & Garrett (No 3)*,<sup>58</sup> admitted some difficulty in understanding the legislative philosophy underlying the exceptions in s 70(4), before amendment by the Patents Act 2004. He considered that s 70(4) did not

58 [1997] FSR 511.

59 Such an offer would now be within s 70(4), as substituted by the Patents Act 2004, where the person threatened had been using the process.

60 [1995] FSR 597.

61 [2000] FSR 344.

62 [2001] FSR 158.

63 An earlier letter sent to the alleged infringer together with a copy sent to Tesco was held not to contain an actionable threat of infringement proceedings.

64 A few weeks after the date of the letter, the defendant applied for a UK patent in respect of the buggy. As the buggy had been freely on sale for some time in the UK, the patent application would almost certainly fail or, if not, result in an invalid patent.

65 [2005] FSR 575.

66 [2002] FSR 696.

67 The appeal to the Court of Appeal was dismissed. The place for performance of the contract was the UK and it was ‘exceedingly strongly connected’ with the UK: *Kenburn Waste Management Ltd v Heinz Bergmann* [2002] FSR 711.

68 *Unilever plc v Procter & Gamble Co* [2000] FSR 344.

permit threats in respect of offering a process for use.<sup>59</sup> This is a separate form of infringement and only using a process is included in the subsection.

The threats must relate to the patent and, in *Easycare Inc v Bryan Lawrence & Co*,<sup>60</sup> although a patent for a hoof protector for horses was mentioned by the threatener who was the proprietor of the patent, the threats were clearly stated as being to protect the ‘name and reputation’ of the threatener. Accordingly, an application for interim relief was refused as, *inter alia*, there was no serious issue to be tried as regards the threats.

Where a threat is made in a letter headed ‘without prejudice’, it will not normally be admissible in evidence. In *Unilever plc v Procter & Gamble Co*,<sup>61</sup> threats made at a ‘without prejudice’ meeting between the parties were held to be inadmissible. However, in some cases, such evidence will be admissible notwithstanding the letter or meeting is stated to be without prejudice. The privilege will be lost, for example, in cases where any agreement between the parties should be set aside because of misrepresentation, fraud or undue influence or in cases of estoppel, where the exclusion of such evidence would be a cloak for perjury, blackmail or other unambiguous impropriety or where it is admissible as being an offer made without prejudice save as to costs. Another situation is in the context of an alleged infringement of a patent where, at the material time, there were no relevant negotiations for a settlement. In *Kooltrade Ltd v XTS Ltd*,<sup>62</sup> both parties imported different makes of three-wheel buggies for children. The defendant sent a letter headed ‘without prejudice’ to Tesco Home Shopping which had been supplied by the alleged infringer.<sup>63</sup> Tesco stopped marketing the buggies. This letter specifically alleged that marketing the claimant’s buggy was an infringement of patent rights and was held to be an actionable threat. Although it was marked ‘without prejudice’, no privilege attached to the letters as, at the time, there were no relevant negotiations for settlement between the parties.<sup>64</sup>

Although not involving a groundless threats action as such, a ‘without prejudice’ letter from an Indian company to the proprietor of a UK pharmaceutical patent alleging that the patent was invalid but adding that there was no wish to embark ‘on the confrontational path of revocation if there is an alternative commercial solution acceptable to both parties’ was held to be privileged in *Schering Corp v Cipla Ltd*.<sup>65</sup> The overall message in the letter was one of wishing to negotiate.

Where an action for groundless threats has been made under s 70, it may be that a settlement is reached between the parties which may take the form of a contract. Threats of infringement proceedings made later may be dealt with as a breach of contract. In *Kenburn Waste Management Ltd v Heinz Bergmann*,<sup>66</sup> the action was settled on the basis of undertakings by the defendant not to communicate with individuals or companies in the UK claiming that the defendant’s patent rights were being infringed by the claimant. Following allegations that the threats were repeated subsequently, the claimant brought an action for breach of contract. The defendant’s application for a declaration that the court had no jurisdiction to hear the action was struck out.<sup>67</sup>

Under s 71, any person may apply to the court for a declaration that a certain act does not constitute an infringement of the patent, provided that a written application has been submitted to the proprietor accompanied by full details and the proprietor has refused or failed to give the acknowledgement requested. This enables a person to seek clarification as to whether his intended actions will infringe where the proprietor has been unhelpful on this question. Of course, the onus lies on the applicant for a declaration to show that he is entitled to it. There is no provision to apply for declarations of non-infringement in respect of patent applications. Obviously, it would be impossible to decide the point as the claims might be subject to amendment before the patent is granted. An added difficulty is that the application might fail. To apply for a declaration there must be proceedings between the parties, that is, there must be an admissible claim of right by the proprietor of the patent.<sup>68</sup>

Where an action involves an application for a declaration of non-infringement coupled with a claim of groundless threats and a counterclaim for infringement, it might be preferable to separate out the groundless threats action as, if the application for a declaration of non-infringement fails and the infringement claim succeeds, this would dispose of the groundless threats action. In *LB Europe Ltd v Smurfit Bag in Box SA*,<sup>69</sup> a case involving a patent for a tamper-proof tap for the bag in box wine market, the judge separated out the groundless threats action. In the subsequent trial, it was held that the patent was valid but not infringed,<sup>70</sup> leaving the possibility that a groundless threats action may be brought later.

69 [2006] EWHC 2963 (Pat).

70 *LB Europe Ltd v Smurfit Bag in Box SA* [2007] EWHC 510 (Pat).

## REVOCATION OF PATENTS

In many infringement actions, the defendant will seek to challenge the validity of the patent. This may be done by an application (by any person including the proprietor)<sup>71</sup> to revoke the patent under s 72 or by putting the validity of the patent in issue under s 74. Furthermore, the Comptroller has limited powers to revoke a patent on his own initiative under s 73.<sup>72</sup> Under the Patents Act 1949 s 32(1), only ‘any person interested’ could apply for revocation compared with ‘any person’ under the 1977 Act. This means that anyone, whether with an interest under the patent or not, may make an application for revocation.

In *Cairnstores Ltd v Aktiebolaget Hassle*,<sup>73</sup> it was confirmed that any person could apply for revocation although there may be circumstances where a court might strike out an application as an abuse of process where the purpose was improper or collateral and for which the procedure was not intended. In that case, which concerned an application for revocation of a pharmaceutical patent, the applicant for revocation was an off-the-shelf company with no assets and no objects clause relating to pharmaceuticals. It refused to state what interest, if any, it had in the revocation proceedings. However, there was nothing to suggest an improper or collateral purpose. In ‘straw man’ cases, Pumfrey J said that security for costs would be appropriate to protect the proprietor adequately as to costs.<sup>74</sup>

The principle that any person can apply for revocation is founded on the basis that it is in the public interest to keep invalid monopolies off the patent register. Even if it appears that the applicant for revocation is an agent acting for an undisclosed principal, the court will not order disclosure of the principal. A claim that such a person would not be caught by the principle of *res judicata* and a number of other reasons put forward for disclosure of the principal were not accepted by the court in *Oystertec plc’s Patent*.<sup>75</sup>

The grounds for revocation under s 72 are that:

- (a) the invention is not a patentable invention (that is, it does not comply with s 1);
- (b) the patent was granted to a person who was not entitled to be granted that patent;<sup>76</sup>
- (c) the specification of the patent does not disclose the invention clearly enough and completely enough for it to be performed by a person skilled in the art (that is, insufficiency);
- (d) the matter disclosed in the specification of the patent extends beyond that disclosed in the application for the patent, as filed, or, if the patent was granted on a new application filed under ss 8(3), 12 or 37(4) or as mentioned in s 15(9), in the earlier application, as filed (added matter);<sup>77</sup>
- (e) the protection conferred by the patent has been extended by an amendment which should not have been allowed.

An order made under s 72 may be for the unconditional revocation of the patent or, where one of the grounds in s 72(1) applies but only so as to invalidate the patent to a

71 Express reference to the proprietor was inserted by the Patents Act 2004. However, where there are joint proprietors, under s 36(3)(a), all must consent to the application for revocation.

72 This is only available where the invention formed part of the state of the art under s 2(3) or in the case of dual UK and European patents designating the UK.

73 [2002] FSR 564.

74 Eventually, the patents in question were revoked and the appeal was dismissed. Another applicant for revocation turned up, Generics (UK) Ltd, a substantial company: *Cairnstores Ltd v Aktiebolaget Hassle (No 2)* [2003] FSR 413.

75 [2003] RPC 559.

76 This can only be invoked by a person found, by declaration or under s 37, to be entitled to the patent: s 72(2). There is a two-year deadline from the date of grant of the patent unless the proprietor knew he was not entitled to the patent.

77 See, for example, *European Central Bank v Document Security Systems Inc* [2007] EWHC 600 (Pat), where an argument that the specification as originally filed implicitly disclosed what had been expressly added in a later amendment failed. The skilled addressee would not have seen any gap in the express disclosure in the original specification and, furthermore, had not experience of what had been added.

limited extent, the order may be for revocation unless the specification is amended to the satisfaction of the court or Comptroller, as the case may be: s 70(4). A person whose application for revocation has been refused by the Comptroller may apply to the court for revocation only with the leave of the court: s 70(5). Where the Comptroller has not disposed of an application for revocation, the applicant may only apply to the court either with the consent of the proprietor or where the Comptroller has certified in writing that the question is one which would more properly be dealt with by the court: s 70(6).

Where revocation proceedings have been commenced but there is subsequently a settlement and the proceedings are withdrawn, it appears that the Comptroller still has the power to continue considering the matter by refusing to accept the withdrawal. In *R (on application of Ash & Lacey Building Products Ltd) v Comptroller-General of Patents, Designs and Trade Marks*,<sup>78</sup> the hearing officer decided to continue after withdrawal of revocation proceedings. It was decided that the patent was valid but the hearing officer put a different construction on the claims of the patent which the proprietor claimed was unfavourable to it. Laddie J, in the Administrative Court, dismissed the application for judicial review to have the decision quashed. Although the Act is silent on this matter (as it is on withdrawal) he thought that the Comptroller could refuse to accept a withdrawal on rational, non-capricious grounds. Public interest was engaged as, otherwise, a proprietor might settle revocation proceedings to keep a hopelessly invalid patent on the register. The situation is different in the courts as CPR 38.2 allows a claimant to withdraw at any time and this would also apply to revocation proceedings, such withdrawal being effective no matter what the court thought about it.

The proceedings in which the validity of a patent may be put in issue under s 74 are:

- (a) by way of defence, in proceedings for infringement of the patent under s 61 or proceedings under s 69 for infringement of rights conferred by the publication of an application (rights from publication to grant);
- (b) in proceedings under s 70 (remedy for groundless threats of infringement proceedings);
- (c) in proceedings in which a declaration of non-infringement is sought under s 71;
- (d) in proceedings for revocation under s 72;
- (e) in proceedings under s 58 (relating to Crown use).

Validity may not be put in issue in any other proceedings and, in particular, no proceedings may be instituted seeking only a declaration of validity or invalidity: s 74(2). The only grounds on which the validity of a patent may be put in issue (whether in proceedings for revocation under s 72 or otherwise) are the grounds on which the patent may be revoked under s 72. Where an application for revocation is based on s 72(1)(b) (entitlement), no determination shall be made in invalidity proceedings unless it has been determined in entitlement proceedings under s 37(1) that the applicant is entitled to the patent and proceedings where validity was put in issue were commenced no more than two years from the date of grant of the patent unless it is shown that the proprietor knew at the time of grant (or transfer of the patent to him) that he was not entitled to the patent: s 74(4). Where validity is put in issue by way of defence or counterclaim, the court or Comptroller, if it or he thinks it just to do so, shall give the defendant the opportunity to claim that the patent ought to have been granted to him: s 74(5).

The validity of a patent is not put in issue merely because the Comptroller is considering its validity in order to revoke it under s 73 or its validity is being considered under an application for a Comptroller's opinion as to validity under s 74A. These non-binding opinions in respect of validity and/or infringement were provided for by the Patents Act 2004 which inserted ss 74A and 74B into the 1977 Act.

78 [2002] RPC 939.

Where validity has been put in issue, the court or the Comptroller, as the case may be, may allow the proprietor to amend the specification as the court or the Comptroller thinks fit: s 75. This is subject to the court or the Comptroller's discretion as to the manner of advertising the proposed amendment and as regards costs, expenses or otherwise. Also, the amendment is subject to s 76 and must not include added matter. This includes matter additional to that in earlier priority applications under s 76(1A).<sup>79</sup>

An example of the workings of these provisions is *Cartonneries de Thulin SA v CTP White Knight Ltd*<sup>80</sup> in which the defendant successfully argued that the claimant's patent for boxes designed to hold two compact discs was invalid under s 72(1)(d) on the grounds of added matter. Another example is *Haberman v Jackel International Ltd*,<sup>81</sup> in which the defendant attacked the patent for training cups for children on a number of grounds including insufficiency and added matter. Allowing amendment under s 76, the court held that the patent was valid.

A proprietor of a patent can offer to surrender it at any time under s 29. Surrender may be opposed and, if so, the Comptroller shall determine the question. However, it may be difficult to decide what to do if an offer to surrender a patent is made whilst revocation proceedings are pending. In *Dyson Ltd's Patent*,<sup>82</sup> the proprietor gave notice of surrender to the Comptroller but stated that revocation proceedings were pending in the High Court. Although there was no opposition to surrender, the hearing officer decided on a stay until the revocation proceedings were completed. However, later, following satisfactory reasons submitted by the proprietor, the surrender was accepted.<sup>83</sup> There may be an important difference between surrender and revocation in terms of royalty payments made by licensees.

In the High Court in Ireland, in *GD Searle & Co's and Monsanto Co's Patent*<sup>84</sup> an application for revocation was stayed pending the outcome of opposition proceedings at the European Patent Office (note, the EPC provides for post-grant opposition unlike the position with the UK Patents Act 1977). In parallel proceedings in the UK, no application for stay was made and the patent was revoked. However, in *Glaxo Group Ltd v Genentech Inc*,<sup>85</sup> the Court of Appeal confirmed that the judge in the High Court had been right to refuse to stay proceedings for revocation even though there were parallel proceedings (opposition proceedings) at the European Patent Office. In spite of the problem of potential conflicting decisions, bearing in mind the length of time before the EPO would decide the case, commercial certainty in the UK required that the hearing in the UK went ahead.

It is possible for a patent to be granted for an invention which is, in the light of expert evidence, clearly lacking in merit for want of novelty or inventive step. In *Les Laboratoires Servier v Apotex Inc*,<sup>86</sup> Jacob LJ said that simply comparing the patent specification with the prior art would not have revealed its lack of novelty or obviousness. To understand the patent specification, technical expertise in both chemistry and powder X-ray diffraction was needed as well as some experimentation 'in order to see just how specious the application for the patent was'. In observing that the applicant for the patent had done nothing wrong, Jacob LJ said that it was important that there was a speedy and efficient way of obtaining revocation of such a patent before it did too much harm to the public interest. Had the patent been held to be valid, Servier's monopoly of a particular salt of perindopril could have lasted, in effect, from 1980 to 2020. Jacob LJ said (at para 10):

It is the court's job to see that try-ons such as the present patent get nowhere. The only sanction (apart, perhaps, from competition law which thus far has had nothing or virtually nothing to say about unmeritorious patents) may, under the English litigation system, lie in an award of costs on the higher (indemnity) scale if the patent is defended unreasonably.

<sup>79</sup> Inserted by the Regulatory Reform (Patents) Order 2004, SI 2004/2357.

<sup>80</sup> [2001] RPC 107.

<sup>81</sup> [1999] FSR 683.

<sup>82</sup> [2003] RPC 473.

<sup>83</sup> *Dyson Ltd's Patent (No 2)* [2003] RPC 848.

<sup>84</sup> [2002] FSR 381.

<sup>85</sup> [2008] EWCA Civ 23.

<sup>86</sup> [2008] EWCA Civ 445.

In such cases, it is difficult to quantify the detriment to the public before revocation. It may be several years before the patent is challenged in revocation proceedings. During all or part of this time, the proprietor may have had a monopoly and enjoyed inflated receipts. In any case, it would be extremely difficult to decide whether the applicant for an unmeritorious patent was deliberately trying to play the system or whether he honestly believed that his invention was probably or possibly patentable. As technology in fields such as pharmaceuticals is so complex, it would be next to impossible to distinguish between a 'try-on' and a bona fide application.

## PATENT LAW SUMMARY

### KEY POINTS

Patents may be obtained for inventions which:

- are new;
- involve an inventive step;
- are capable of industrial application; and
- are not excluded from the grant of a patent.

An invention for which a patent is sought may be a new and inventive product or a new and inventive process.

Substantive patent law is harmonised by virtue of the European Patent Convention which applies to all the Member States of the EU and a number of other countries. Consequently, some of the provisions of the UK Patents Act 1977 are intended to have the same effect as the equivalent provisions in the European Patent Convention. Once granted, applications for patents made at the European Patent Office devolve to national patents.

Novelty is determined by considering the state of the art. Included are unpublished patent specifications which have an earlier priority date than the application in question.

An invention involves an inventive step if it is not obvious to a person skilled in the art. The 'Windsurfing test', as restated by Jacob LJ in *Pozzoli v BDMO*, is used to establish whether there is an inventive step.

An invention has an industrial application if it can be made or used in any kind of industry, including agriculture.

The term 'invention' is not defined but certain things are excluded from the meaning of invention to the extent the subject matter relates to that thing *as such*. These include things normally protected by other intellectual property rights. Importantly, excluded (as such) are:

- business methods;
- mental acts; and
- computer programs.

Also excluded are inventions contrary to public policy or morality and methods of treatment or diagnosis practised on the human or animal body. This does not prevent the patenting of pharmaceuticals and medicines.

A patent gives a full monopoly right which can last up to 20 years, subject to annual renewal after the first four years. However, the monopoly is subject to controls such as compulsory licensing in appropriate cases and there are also provisions for licences of right. Competition law may also impact on the exercise of patent rights.

Prima facie, the inventor is the person entitled to a patent. There are exceptions, in particular where the invention is made by an employee. The provisions governing employee inventions are notable for their lack of clarity. Where an employer is entitled to a patent for an invention made by an employee, compensation may be available to the employee if the patent or invention proves to be of outstanding benefit to the employer.

Patent rights may be assigned, licensed or mortgaged. This also applies to applications for patents. Certain transactions and events must be registered. Failure to register may have the following effects:

- unregistered transactions may be defeated by later transactions;
- the proprietor may not be given an award of costs (expenses in Scotland) in an infringement action.

The scope of the rights under a patent depends on whether the invention is a product or a process. In some cases, there is no requirement for knowledge and infringement may occur even though the defendant is unaware of the patent or the product or process in question.

Actions for infringement of patents are often met with a challenge to the validity of the patent. To determine infringement and validity, the patent specification must be construed and the claims are particularly important. The following points can be made:

- patent specifications are not to be construed literally;
- the Protocol to Article 69 of the European Patent Convention provides for a *via media* in construing a patent specification;
- the ‘*Catnic* test’ as reformulated by Hoffmann J, as he then was, as the ‘*Improver* questions’ but now usually referred to as the Protocol questions is useful where the alleged infringement is a variant;
- a patent may be judged to be partially valid.

There are a number of defences to a patent infringement action. They include:

- acts done for private and non-commercial purposes;
- acts done for experimental purposes;
- preparation of medicines to a prescription in a pharmacy;
- acts in relation to ships, aircraft, hovercraft or vehicles entering, crossing or temporarily in the UK.

One defence that actually gives a right under a patent is where a person carried out an act in good faith before the priority date of the patent or made effective and serious preparations to do so. In such a case, that person has a right to continue or start the act as the case may be.

Another defence is the ‘*Gillette* defence’. This is where the defendant argues that his product or process was not new or not inventive at the priority date of the patent and, therefore, it is either outside the patent claims or, if not, the patent is invalid.

There is a limited right to repair but this does not extend, in effect, to remaking a patented product.

There is a limited remedy in relation to groundless threats of infringement proceedings.

## DISCUSSION QUESTIONS

- 1 Discuss the concept of sufficiency in relation to the disclosure in a patent specification.
- 2 Discuss the patentability of second medical uses for known substances or compounds.
- 3 Discuss the extent to which the state of the art, used to determine novelty, differs from the common general knowledge of a person skilled in the art when assessing whether an invention involves an inventive step.
- 4 Whilst taking part in *The Apprentice*, working under the direction of Lord Salt who has asked the contestants to devise a new way of packaging and selling seafood to customers of public houses, Paul invents a new design of packet which is very effective at keeping the contents

fresh and cool during hot weather. Paul’s team sells more seafood than the other teams. Following this, Paul is successful and obtains one year’s work in Lord Salt’s company. The contract of employment states that all intellectual property rights arising from work done for *The Apprentice* belong to Lord Salt’s company. Soon after Paul starts work with the company, it files an application for a patent for Paul’s invention, naming Paul as inventor. Discuss.

- 5 Annabel has invented a method of carrying out financial transactions online. The method is completely new and involves a complex algorithm. The invention uses a number of computer programs and databases. Discuss whether and to what extent Annabel’s invention is patentable (a) under the UK Patents Act 1977 and (b) under the European Patent Convention.

## DESIGN LAW

<b>16</b>	<b>What is a design?</b>	545
<b>17</b>	<b>Community design and the UK registered design</b>	561
<b>18</b>	<b>The UK unregistered design right</b>	611

## WHAT IS A DESIGN?

## INTRODUCTION

Design law has undergone many changes over the last 20 or so years. Before the Copyright, Designs and Patents Act 1988, aesthetic designs were protected by registration under the Registered Designs Act 1949. Functional designs could be protected by way of copyright in drawings of designs though this led to some unfortunate consequences in that functional designs appeared to be protected for much longer than designs registrable under the Registered Designs Act 1949.<sup>1</sup> The House of Lords attempted to address this disparity by refusing to enforce copyright in drawings of exhaust pipes for motor cars, in *British Leyland Motor Corp Ltd v Armstrong Patents Co Ltd*,<sup>2</sup> on the basis of non-derogation from grant. This was a limited attack on copyright protection for functional designs and applied only in relation to spare parts.

The Copyright, Designs and Patents Act 1988 made some very significant changes to design law. It introduced a new form of design protection, known as the unregistered design right. It was aimed primarily, though not exclusively, at functional designs and was informal, like copyright, but of a much shorter duration, being effectively no more than ten years of commercial exploitation with licences of right being available in the last five years. The Registered Designs Act 1949 was also substantially modified including changes to the criteria for registrability and in terms of the maximum duration which was increased to 25 years.

On 9 December 2001, the law relating to registered designs was again changed (almost out of recognition compared with the previous law) as a result of implementing a Directive harmonising registered design law throughout the European Community.<sup>3</sup> The UK's unregistered design right was left untouched by this. However, a further major change was made in 2002 by the introduction of the Community design.<sup>4</sup> This provides for a two-track approach – protection through registration for a maximum period of 25 years and an informal protection for three years, not subject to registration. The Community design, like the Community trade mark, has a unitary nature, is effective throughout the Community and is administered by the Office for the Harmonisation of the Internal Market (Trade Marks and Designs) ('OHIM') based at Alicante in Spain. OHIM commenced accepting registrations for the Community design from January 2003 (first designs registered as from 1 April 2003) and the unregistered Community design came into force on 6 March 2002. Further significant changes to the UK registered design were made during 2006,<sup>5</sup> though these changes did not modify its basic nature. For example, there are no longer substantive grounds for refusal of registration. However, interested persons may raise the equivalent grounds in invalidity proceedings.

The present position is that a design may be protected by one or more of four ways in the United Kingdom by virtue of:

<sup>1</sup> In those days, design registration lasted up to a maximum of 15 years whereas copyright lasted for the life of the author plus 50 years.

<sup>2</sup> [1986] 2 WLR 400.

<sup>3</sup> Directive 98/71/EC of the European Parliament and of the Council of 13 October 1998 on the legal protection of designs, OJ L 289, 28.10.1998, p 28. The Directive should have been implemented by 28 October 2001. The changes were made by the Registered Designs Regulations 2001, SI 2001/3949.

<sup>4</sup> Council Regulation (EC) No 6/2002 on Community designs, OJ L 3, 05.01.2002, p 1.

<sup>5</sup> By the Intellectual Property (Enforcement, etc.) Regulations 2006, SI 2006/1028, and the Regulatory Reform (Registered Designs) Order 2006, SI 2006/1974.

- registration as a UK design under the much amended Registered Designs Act 1949;
- the UK's unregistered design;
- registration as a Community design at OHIM;
- the unregistered Community design.

One thing to bear in mind is that there are some differences between the rights and, whilst it is possible that a particular design can be protected by all four, an important feature of registration is that it provides a monopoly right whilst the unregistered design rights require proof of copying. That is one reason why registration is to be preferred. Another feature of the UK's registered design and the Community registered design is that a one-year period of grace is allowed so that the applicant for registration may, for example, market products to the design for up to one year prior to filing the application without compromising novelty. As regards the UK registered design, this was completely new and caused some difficulty in respect of the transitional provisions in the 2001 Regulations.<sup>6</sup>

A 'design' is aspects of or features applied to an article or product; it is not the article or product itself<sup>7</sup> and it should be noted that, in intellectual property law, the word 'design' has a restricted meaning. In normal usage the word 'design' can be taken to mean a plan or a scheme, which may be written or drawn, showing how something is to be constructed, or how the elements of an item or article are arranged. Alternatively, a design may be a decorative pattern. In legal terms, a design is defined by reference to the provisions applicable to the UK registered design, the UK unregistered design right or the Community design. It should be noted that the UK registered design and the Community design have almost identical requirements for registration or, with respect to the unregistered Community design, subsistence.

Designs may be for functional articles, such as a can opener, a tool box, a container for frozen food or an exhaust pipe for a car. Articles which are functional in nature are generally, but by no means exclusively, in the province of the UK's unregistered design right.<sup>8</sup> The designs are those that are original, though not commonplace, and relate to features of shape or configuration of an article. A design for which the appearance of a product to which it has been applied is new and where the design has individual character are within the scope of the UK's registered designs and the Community design.<sup>9</sup>

The changes to design law over the last few years have been very welcome and have gone some way to bringing design law into the twenty-first century. The UK's unregistered design has been unaffected by the changes and there have been very few legislative changes to the right since its inception. It remains quite different to the other forms of rights in designs and it could be argued, especially with the introduction of the unregistered Community design, that it ought to be repealed. Nevertheless, it remains a useful right and infringement of the UK's unregistered design is still an issue whether in proceedings based solely on that right or together with other rights. A good example of its continuing utility was shown in the case of *Dyson Ltd v Qualtex (UK) Ltd*<sup>10</sup> where it was held that the right was infringed by a 'pattern' manufacturer of spare parts for the famous Dyson bagless vacuum cleaners.<sup>11</sup>

There is inevitably some overlap between the unregistered design right and the other rights in designs. To some extent, this overlap and the scope of the rights are made more complex by the transitional provisions relating to the UK's registered design. There may also be some overlap between rights in designs and other intellectual property rights such as trade marks and copyright. In particular, the Trade Marks Act 1994 and the Community trade mark system allow for the registration of shapes and containers as trade marks, subject to exceptions: for example, where a shape gives substantial value to the goods in question. This could be where the shape is that of an ornament such as a

<sup>6</sup> See *Oakley Inc v Animal Ltd* [2006] Ch 337, discussed in Chapter 17.

<sup>7</sup> *Clarke's Design* (1896) 13 RPC 351 per Lindley LJ.

<sup>8</sup> Many functional articles have also been designed to make them more attractive to potential purchasers and, in a good number of cases, they may also be registrable under the UK registered design and the Community design.

<sup>9</sup> Before 9 December 2001, registered designs were expressly required to have an appearance that was material, being aesthetic.

<sup>10</sup> [2005] RPC 393.

<sup>11</sup> A pattern spare part is one which duplicates the shape and appearance of the original. This important case is discussed in more detail in Chapter 18.

porcelain figurine. Some designs may even be patentable inventions though they may not be registrable as designs if the design is dictated by technical function.

## BRIEF HISTORY OF DESIGN LAW UP TO 2001

The law of designs has a reasonably long history dating back to the latter part of the eighteenth century. In 1787, the first Designs Act protecting designs was passed<sup>12</sup> which gave a two-month protection to designs applied to linens, cotton, calicoes and muslins. The origins of design law spring from this area. The Copyright in Designs Act 1839<sup>13</sup> set up a system of registration and also extended design laws to designs applied to articles, either as ‘surface design’ or ‘shape designs’. Several other Acts were passed over the next few years and, eventually, these were repealed and replaced by the Patents, Designs and Trade Marks Act 1883. A previous distinction between ornamental and useful designs was removed and the duration of protection was set at five years. The Patents and Designs Act 1907 increased the maximum term of protection to 15 years, a remedy for groundless threats of infringement proceedings was introduced and provisions requiring articles to be marked was relaxed. Following further Acts in 1919 and 1932, the current statute, the Registered Designs Act 1949, was enacted. A major step was that a classification system for goods was abolished. Previously, applicants had to specify the class or classes of goods against which they wanted the registration. However, the 1949 Act has been transformed on two occasions, by the Copyright, Designs and Patents Act 1988 and the Registered Designs Regulations 2001.<sup>14</sup> The result is that the Act bears little resemblance to its original form.

With the development of artistic copyright came problems of duplication of rights and the Copyright Act 1911, followed by the Copyright Act 1956, attempted to remove the overlap between a registrable design and artistic copyright. This was modified by the Design Copyright Act 1968 which permitted dual protection to a design both as a registered design and under artistic copyright, but reduced the term of copyright to 15 years.<sup>15</sup> If this was not bad enough, following the distinction between registrable and unregistrable designs highlighted in *Dorling v Honnor Marine Ltd*,<sup>16</sup> a regrettable state of affairs arose.

The claimant in *Dorling v Honnor Marine* designed a sailing dinghy and granted a licence to the second defendant to build dinghies to the design and to make kits of parts on his behalf, all in accordance with the claimant’s drawings. The relationship between the claimant and the second defendant broke down and the latter formed a limited company, the first defendant, to which he purported to assign his licence to build the dinghies. The design of the dinghy as a whole was registrable under the Registered Designs Act 1949, but it had not been registered. The individual parts, being purely functional, were not registrable.<sup>17</sup> By making a three-dimensional representation of the drawings in the form of parts for a boat, the defendants had infringed the copyright in the drawings. A defence based on the Copyright Act 1956 s 10, which removed copyright protection from designs registrable under the Registered Designs Act 1949, failed because the parts, as opposed to the dinghy as an entirety, were not registrable. Thus, the outcome of the case was that if a design was aesthetic it was, subject to some other requirements, registrable under the Registered Designs Act 1949 and could be protected for 15 years.<sup>18</sup> If the design was purely functional it was not registrable but could attract artistic copyright through its drawings, which would last for the remainder of the life of the author plus 50 years.<sup>19</sup> Functional designs appeared to be far better protected than aesthetic designs (not being works of copyright), an extremely anomalous situation.

<sup>12</sup> 27 Geo III c 38.

<sup>13</sup> 2 Vict c 13.

<sup>14</sup> SI 2001/3949.

<sup>15</sup> The Design Copyright Act 1968 and the Copyright Act 1956 were repealed in their entirety by the Copyright, Designs and Patents Act 1988.

<sup>16</sup> [1965] Ch 1.

<sup>17</sup> The Registered Designs Act, at the time of this case, required that a registered design had eye-appeal.

<sup>18</sup> This has now been extended to 25 years.

<sup>19</sup> The basic term for copyright in artistic works is now ‘life plus 70 years’.

The above unsatisfactory position can partly explain the House of Lords decision in *British Leyland Motor Corp Ltd v Armstrong Patents Co Ltd*<sup>20</sup> concerning the reverse engineering of exhaust pipes which infringed indirectly the copyright in the drawings of the exhaust pipes. Their Lordships took the opportunity partly to redress the apparent imbalance between the protection for articles with eye-appeal and purely functional articles by using the principle of non-derogation from grant. Even if a design was registrable there was little incentive for registration as copyright in the drawings could still be enjoyed for 15 years, free of charge. In 1988, the last full year before the main provisions of the Copyright, Designs and Patents Act 1988 came into force, there were only 8,748 applications for registered designs received by the Design Registry.<sup>21</sup>

The law of designs was radically altered by the Copyright, Designs and Patents Act 1988, both in terms of changes to the Registered Designs Act 1949<sup>22</sup> and the introduction of the new unregistered design right. The law prior to the coming into force of this Act remained relevant for designs which were created or recorded before 1 August 1989. Designs that were created or recorded before 1 August 1989 and which were not registrable under the Registered Designs Act 1949 continued to rely on copyright for protection although only effectively until 1 August 1999<sup>23</sup> (unless the copyright expired earlier in any case). Indeed, in *Valeo Vision SA v Flexible Lamps Ltd*,<sup>24</sup> the claimant successfully relied on copyright protection through its drawings of rear lamp clusters for vehicles even though its registered designs were held to be invalid through want of novelty.

Before looking at the rights in overview, it is important to realise that, whilst there are inevitably some similarities between the UK's unregistered design right and the other rights in designs, they are different and have different legislative origins. For example, the UK's registered design has much in common with a patent and the UK's unregistered design right is more like a copyright.<sup>25</sup> Therefore, the meaning of a word or phrase used for both rights will not necessarily be the same for both.

## COMMUNITY DESIGN AND THE UK REGISTERED DESIGN

At the time of writing, the changes made to the Registered Designs Act 1949 to comply with the Directive on the legal protection of designs have been in force for around six years yet, apart from one case challenging the validity of the implementing Regulations,<sup>26</sup> there have been no reported cases (nor any unreported cases of which the author is aware) on the Act as modified with effect from 9 December 2001. Though not impossible, it is unlikely that there will be any further case law on the Act before those changes.<sup>27</sup> Therefore, the Act as it presently is will be described only in this and the following chapter and, then, much of the discussion will focus on the Community design as the requirements for registrability (or subsistence in relation to the unregistered Community design) are almost identical.<sup>28</sup> The protection afforded is the same for the registered Community design as for the UK's registered design.<sup>29</sup> The following chapter will also concentrate on the Community design (registered and unregistered) in relation to aspects of registrability and subsistence. There are a number of differences which will be described where appropriate in a separate section on the UK's registered design. The provisions on dealing with Community designs are as those applying to national designs, with some differences, for the Member State in which the holder of the right is based.

The emphasis on the Community design in the remainder of this and the following chapter is a reasonable approach when one considers that there are only a few thousand applications to register designs at the UK Design Registry.<sup>30</sup> There are now over 300,000 Community designs registered in little over 5 years.<sup>31</sup> Any reader wanting more

20 [1986] 2 WLR 400.

21 This compares with 30,471 patent applications received by the Patent Office in 1988 and 38,006 trade and service mark applications received by the Trade Marks Registry in the same year: *Patents, Designs and Trade Marks 1990*, 108th Annual Report of the Comptroller-General of Patents, Designs and Trade Marks, HMSO, 1990.

22 Prior to these changes, design registration was limited to a maximum of 15 years' protection.

23 Copyright, Designs and Patents Act 1988 Sch 1 para 19(1) prevents the operation of s 51 of that Act for ten years from commencement. Section 51 states that making an article or copying an article represented in a design document or model does not infringe the copyright in the design document or model except where the design is for an artistic work or typeface.

24 [1995] RPC 205.

25 The design right owes its origins to the Council Directive 85/54/EEC of 16 December 1986 on the legal protection of topographies of semiconductor products, OJ L 24, 27.01.1987, p 36. See *Ocular Sciences Ltd v Aspect Vision Care Ltd* [1997] RPC 289 at 421 per Laddie J. Semiconductor products are now protected by a variant of the UK's unregistered design right, described in Chapter 18.

26 *Oakley Inc v Animal Ltd* [2006] Ch 337, discussed in Chapter 17.

27 There is also a paucity of cases on the Act subsequent to these amendments. There have been a small number of cases before Hearing Officers in the Design Registry.

28 There are some differences in some Member States, for example, in relation to spare parts.

29 However, the Community design allows for deferment of publication and, until published, infringement requires proof of copying.

30 The Design Registry is part of the UK Intellectual Property Office, formerly the Patent Office.

31 OHIM, *Statistics of Community Designs 2008*, 4 March 2008, SSC007, p 1.

background on the UK's registered design before implementation of the Directive on the legal protection of designs may wish to refer to the 5th edition and previous editions of this book. Attempts were made to encourage greater use of the UK's registered design. Substantive examination has been ended and attempts made to ease the administrative burden for applicants, for example, in relation to applications to register multiple designs.

## Community design

There are two forms of Community design, registered and unregistered. There are some differences between them but they are very similar. There are, for example, differences in the time at which novelty and individual character are judged and there are differences in infringement. For the unregistered design, proof of copying is required but this is not so for the registered Community design as this is a monopoly right. There are also differences in the duration of the rights. Initial registration gives 5 years protection, which may be renewed up to a maximum of 25 years. For the unregistered Community design, the duration is only 3 years from the date it was first made available to the public.

For both forms of Community design, there is no requirement for eye-appeal as such; however, the definition of design in Article 3(a) of the Community Design Regulation states that it means:

the appearance of the whole or a part of a product resulting from the features of, in particular, the lines, contours, colours, shape, texture and/or materials of the product and/or its ornamentation.

A design must be new and have an individual character. Appearance is still a factor and it is the visual significance of the design which is important when testing for novelty and individual character. A design is new if no identical design, or one whose features differ only in immaterial details, has been made available to the public, either before the date of filing (or priority date, if relevant) for a registered Community design or, in the case of the unregistered Community design, before the date the design was made available to the public.<sup>32</sup> Individual character is tested by the overall impression it produces on the informed user compared with designs already made available to the public.

A period of grace of 12 months is allowed without destroying novelty where the disclosure in question is by or through the designer or in breach of confidence; also disclosures which could not reasonably become known in the normal course of business to the circles specialised in the sector concerned in the Community.

A design must be applied to a product which is defined as an industrial or handicraft item including, *inter alia*, parts intended to be assembled into a complex product, packaging, get-up, graphic symbols and typographic typefaces but excluding computer programs. A complex product is one which is composed of multiple components which can be replaced, permitting disassembly and reassembly of the product. Thus modular components may be registered as designs.<sup>33</sup>

There are a number of exceptions to registration, for example, where the features of appearance of a product are solely dictated by the product's technical function and there is a 'must-fit' exception (but this does not extend to modular units). Designs contrary to public policy or accepted principles of morality are likewise excluded.

The right to a Community design vests in the designer or successor in title unless the designer is an employee creating the design in the execution of his duties, in which case the right vests in his employer, subject to agreement otherwise or as specified in national law. Unless assigned, rights in designs created under a commission do not automatically vest in the commissioner.<sup>34</sup> Infringement of a registered Community design occurs by making, importing, using or by various forms of commercialising a

<sup>32</sup> Certain events which would otherwise be novelty-destroying are ignored if they would not reasonably have been known in the course of business to those specialising in the sector concerned, operating within the Community: Article 7(1) of the Community Design Regulation.

<sup>33</sup> The definitions of 'design', 'product' and 'complex product' in Article 3 of the Regulation are identical to those in the harmonising Directive: Article 1. The definitions in the Registered Designs Act 1949 as amended are not quite verbatim though they probably have an identical effect, as they should do.

<sup>34</sup> Contrast this with the position under the UK registered design and the UK unregistered design right.

product incorporating the design or to which the design has been applied without the consent of the proprietor. The unregistered Community design is infringed in similar circumstances but only if the acts in question are the result of copying the design. There are exceptions to infringement such as where the design is used for private and non-commercial purposes, experimentation or teaching and in respect of ships and aircraft registered elsewhere temporarily within the territory of the Community.

A controversial issue is the protection afforded to 'must-match' parts, being parts that must be a particular shape to match the rest of a complex product of which it is a part to restore its original appearance. An example is a replacement wing for a motor vehicle or a replacement headlamp for a vehicle. Such spare parts are not protected by the Community design<sup>35</sup> but the Directive harmonising design protection throughout the Community allowed Member States to retain their previous position on the protection of such parts provided that, if they made any changes, they could only liberalise the market. The main market affected was the aftermarket in spare parts for motor vehicles, estimated at €7.5 billion annually.<sup>36</sup> Nine Member States, including the UK, denied protection for 'must-match' spare parts but the remaining 16 Member States have protection for such parts.<sup>37</sup> The Commission to the European Communities was required to review the position three years after implementation of the designs Directive and it has produced a proposal to remove protection for spare parts to repair a complex product so as to restore its original appearance providing consumers are informed as to the origin of the parts so that they can make an informed choice.<sup>38</sup>

Figure 16.1 shows a representation of the requirements for and exceptions to the Community design (it also represents the UK's registered design).

Figure 16.1 Community design

<sup>36</sup> Proposal for a Directive of the European Parliament and of the Council amending Directive 98/71/EC on the legal protection of designs COM (2004) 582 final, SEC (2004) 1097, 14.09.2004, p 5. Of course, this proposal preceded enlargement of the Community.

<sup>37</sup> Although Greece has a short-term protection of five years during which spare parts can be copied in return for a fair remuneration.

<sup>38</sup> Proposal for a Directive of the European Parliament and of the Council amending Directive 98/71/EC on the legal protection of designs COM (2004) 582 final, SEC (2004) 1097, 14.09.2004. This has not been adopted at the time of writing.

## UK registered design

The UK's registered design is very much like the registered version of the Community design though there are some differences which will be considered in more depth in the following chapter. At this stage it is worth noting that the Community Design Regulations 2005<sup>39</sup> have brought the two systems closer by providing a remedy for groundless threats of infringement proceedings for Community designs in the UK and by extending Crown use to Community designs. The offence of falsely representing a design as being registered also now applies to the registered Community design. The rules on entitlement are not exactly the same and there are no express provisions for commissioned designs under the Community design. Both the UK's registered design and the registered Community design are of 5 years' duration, which may be renewed up to a maximum of 25 years. There is no facility for deferring publication of a UK registered design unlike the case with the registered Community design.<sup>40</sup>

There are, of course, procedural differences between the UK registered design and the registered Community design. These will be described in the following chapter where appropriate.

<sup>39</sup> SI 2005/2339. These Regulations came into force on 1 October 2005.

<sup>40</sup> However, designs can be prevented from publication if relevant to defence and notified by the Secretary of State as such.

## DESIGN RIGHT

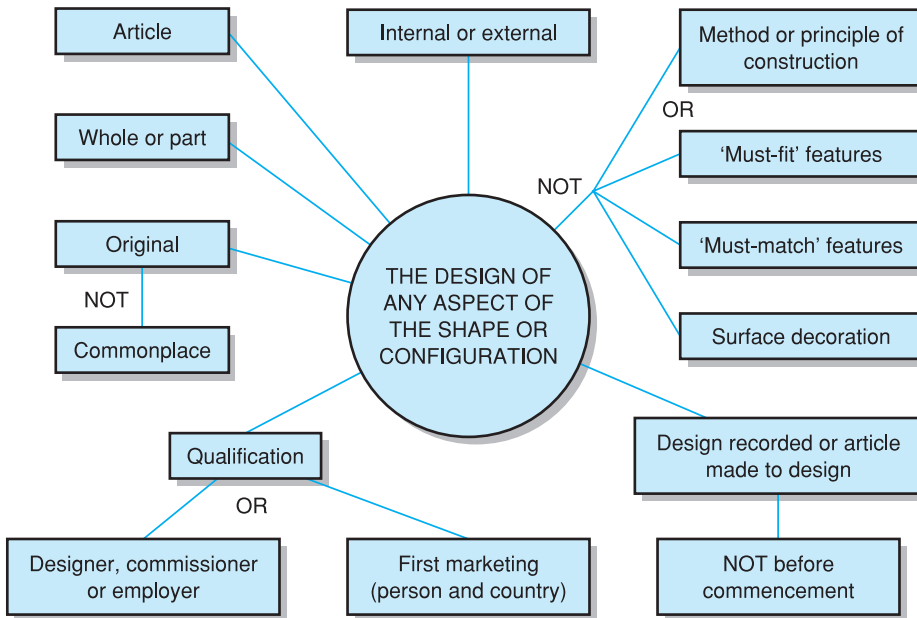

A design right is declared by the Copyright, Designs and Patents Act 1988 s 213(1) to be a property right which subsists in an original design. Section 213(2) defines a 'design' as 'the design of any aspect of the shape or configuration (whether internal or external) of the whole or part of an article'. 'Article' is not defined for the purposes of the design right. The remainder of s 213 describes the requirements for a design. There are several similarities between the design right and copyright and, like copyright, the design right is automatic and does not depend on registration but requires some form of tangible expression. There are qualification requirements and the design must be 'original' for the right to subsist. Needless to say, there are differences. A design is not original if it is commonplace in the design field in question at the time of its creation. This is probably a more stringent test than is the case with copyright. Figure 16.2 shows, in the form of a semantic net, the basic requirements for the design right.

Note that the design right applies to any aspect of the shape or configuration of the whole or part of an article; it does not apply to the article itself. Basically, for the design right to apply to a shape or configuration, it must be original (not commonplace) and it must be in some tangible form, that is, recorded in a design document (alternatively, an article must have been made to the design), and the qualification requirements must be satisfied. Some of the exceptions are similar, but not identical, to those that apply to registered designs and can be justified on the basis that they prevent the right from becoming too strong or from working to the disadvantage of consumers requiring spare parts. A further exception is surface decoration, which lies firmly within the scope of the Community design and the UK's registered design. The qualification requirements may be satisfied in one of three ways:

- 1 by reference to the designer;<sup>41</sup> or
- 2 if the design is created under a commission or in the course of employment, by reference to the commissioner or employer; and
- 3 by reference to the person by whom and country in which articles made to the design are first marketed.

The design right was a new departure for intellectual property law in the UK and there was no equivalent right before the 1988 Act, although certain features of shape and

<sup>41</sup> The term 'designer' is used here rather than 'author': basically, the two terms are equivalent.

**Figure 16.2** The design right

configuration may have had copyright protection. For example, a drawing of an article of a particular shape or configuration would have been an artistic work for copyright purposes. The design right provisions were not retrospective; and anything which would have qualified and which was recorded in a design document, or if an article had been made to the design, before the commencement of the design right provisions<sup>42</sup> was excluded.

<sup>42</sup> 1 August 1989.

## COMMUNITY DESIGN, THE UK REGISTERED DESIGN AND THE UK UNREGISTERED DESIGN RIGHT

The UK's unregistered design right has often been described as applying to functional designs. However, that is not necessarily the sole domain of the design right. There is no reason why a new aesthetic design or a new design having individual character cannot also be subject to the design right if it relates to the shape or configuration of some article, even though it would be expected that it should be registered as a Community or UK design (or protected as an unregistered Community design). An example might be a design for a drinking tankard which is a new shape or which has a new shape of handle, made industrially or hand-made<sup>43</sup> and which, its maker hopes, people will buy for the visual attractiveness of its shape. This should qualify for all forms of rights in designs. One advantage of seeking registration, whether as a Community design or UK registered design, is that the period of protection is potentially longer.<sup>44</sup> The protection afforded by registration also is stronger, infringement not requiring proof of copying. However, the overlap between the UK's unregistered design right and the other rights in designs is not complete. The design right cannot apply to surface decoration which is specifically excluded, although this is clearly within the scope of the Community design and the UK registered design because of the definition of design (and, to a lesser extent, product) which is clearly not exhaustive and includes, for example, lines, colours, contours, texture or ornamentation. As a result of registered designs having a

<sup>43</sup> A product to which a design is to be applied has to be an industrial or handicraft item. Before amendment, the Registered Designs Act 1949 required that a design was applied by an industrial process. However, this did not appear to be a limiting factor and there was no reason why designs applied to hand-crafted articles would have been denied registration on that ground alone.

<sup>44</sup> A maximum of 25 years' protection is available for a registered design, whereas the maximum duration of the design right is 15 years, or 10 years during which it is exploited commercially.

45 If the outer surface of the article is transparent and the feature can be seen, the design may be registrable after all.

46 There is a reciprocal presumption in the Registered Designs Act 1949 s 19(3B). Further, s 19(3A) of that Act requires that the registration of an interest under a registered design will not be made unless the Registrar is satisfied that the person entitled to the interest is also entitled to the corresponding interest in the design right, if it subsists. As amended, the design right is now referred to in the Registered Designs Act 1949 as the national unregistered design right.

47 For example, see *LB (Plastics) Ltd v Swish Products Ltd* [1979] RPC 551 and, of course, *British Leyland Motor Corp Ltd v Armstrong Patents Co Ltd* [1986] 2 WLR 400.

48 The so-called lay recognition test provided for by the Copyright Act 1956 s 9(8).

49 [1976] AC 64.

50 Copyright, Designs and Patents Act 1988 s 236.

51 Copyright, Designs and Patents Act 1988 s 52 might apply, reducing the term of copyright to 25 years if the articles are not hand-made or more than 50 are made: see Copyright (Industrial Processes and Excluded Articles) (No 2) Order 1989, SI 1989/1070. Such a design could also be registrable.

52 Copyright, Designs and Patents Act 1988 s 51. The definition of design for the purposes of s 51 is as for the design right except that the exceptions are not mentioned apart from surface decoration. Therefore, copyright in a design document will not be infringed by copying an article made to a design even though it is not subject to the design right if it is a principle or method of construction or caught by the 'must-fit' and 'must-match' exceptions.

53 Copyright, Designs and Patents Act 1988 s 263.

requirement of appearance and individual character, also excluded from registration are component parts that are hidden from view in normal use, such as 'under the bonnet' parts of vehicles. These may, however, be subject to the UK's unregistered design right.<sup>45</sup> Nevertheless, in many cases a design will be registrable under both the Community and UK registered design systems and yet still be subject to the UK unregistered design right where the design relates to shape or configuration. There are no provisions for abrogating one of these rights in favour of the others providing the requirements for registrability are satisfied. Indeed, in the UK, the Copyright, Designs and Patents Act 1988 explicitly recognises the dual existence of the unregistered design right and the UK registered design: s 224 of the Act raises a presumption that an assignment of a registered design automatically carries with it an assignment of the unregistered design right where the proprietor of the registered design and the owner of the unregistered design right are one and the same person.<sup>46</sup>

## UK UNREGISTERED DESIGN RIGHT AND COPYRIGHT

Design law may overlap with copyright protection. Between 1969 and 1 August 1989, an extremely powerful and wide-ranging form of protection for functional designs was to have a drawing from which the article was made. If a person copied the article, he would infringe the copyright in the drawing even though he had never seen it, no matter how mundane the article was.<sup>47</sup> The only provisos were that the drawing should meet the originality requirements for copyright (not an onerous standard by any means) and that a person who was not an expert in that field could recognise the article as being reproduced from the drawing.<sup>48</sup> Even the mass-produced – and, in the judges' opinions, vulgar – furniture in *George Hensher Ltd v Restawhile Upholstery (Lancs) Ltd*<sup>49</sup> would have been protected by copyright, indirectly, had some drawings been made which bore a two-dimensional resemblance to the furniture. Additionally, a design may overlap with other forms of copyright works such as sculptures and works of artistic craftsmanship. The design may be recorded in a document in which copyright subsists as a literary work, including computer data, or the design document may be a photograph.

To reduce this overlap, the Copyright, Designs and Patents Act 1988 contains two provisions, ss 236 and 51(1) respectively. The first is that where a work consisting of or including a design, in which the unregistered design right subsists, is protected by copyright, the design right is suppressed in favour of the copyright.<sup>50</sup> If what is done is an infringement of the copyright in the work, then an action lies under copyright law and not for infringement of the design right. That is, if the articles made to the design are themselves works of copyright, they will be protected by copyright rather than by the design right. This could be so if the articles were works of artistic craftsmanship: for example, a hand-made wooden toy or an item of jewellery.<sup>51</sup> The second exception applies to cancel out the possibility of indirect copyright infringement by copying the article embodying the design. If an article is made to the design or a copy of such an article is made, this does not infringe the copyright in a design document or model recording or embodying the design.<sup>52</sup> A design document is any record of the design and includes drawings, written descriptions, photographs and computer data.<sup>53</sup> Therefore, if the design is recorded in a drawing and a person makes an article using that drawing, he does not infringe the copyright in the drawing although he does, of course, infringe the design right. However, if the person makes a photocopy of the drawing instead, then the copyright in the drawing will be infringed in that instance, but any subsequent making of articles from the copy of the drawing will infringe the design right only.

Making a copy of garments worn by the Teletubbies indirectly through the medium of television fell within the s 51 defence, so held Laddie J in *BBC Worldwide Ltd v Pally Screen Printing Ltd*.<sup>54</sup> He accepted that it was at least arguable that the design documents showing the original designs of the Teletubbie puppets fell within s 51 and that they had been intended to decide the shape and appearance of the puppets. The purpose of s 51 is to deny copyright protection to 'ordinary functional commercial articles'. The effect of the section is to relate to any act of copying, whatever the result. In *Mackie Designs Inc v Berhinger Specialised Studio Equipment (UK) Ltd*,<sup>55</sup> the defence under s 51 was available even though the defendant had made a net list of components and inter-connections in the claimant's electrical mixer by reverse analysis. From this information the defendant made circuit layouts and circuit boards.

<sup>54</sup> [1998] FSR 665.

<sup>55</sup> [1999] RPC 717.

As another example, consider a design recorded as computer data, for example as a series of numbers describing the three-dimensional coordinates of the design. Without permission, a person copies the computer data on to a magnetic disk and takes the copy away. Later, he prints out the computer data and uses the information to make articles, or he may, for example, enter the computer data into a computer-controlled lathe so that it can be used to make articles to the design. There are two infringements here. First, the copyright in the computer data (as a literary work, being a table or compilation or, possibly, a database) has been infringed by making a copy of it. This infringement is not suppressed by the design right. Secondly, by making articles, the design right is infringed. In this case, the copyright in the computer data is not infringed because it is not an infringement of a literary work to make three-dimensional work of it;<sup>56</sup> but even if the copyright had been infringed, say in the case of a drawing, the Copyright, Designs and Patents Act 1988 s 51 would operate to suppress that copyright. The effect of s 51 can be seen diagrammatically in Figure 16.3.

<sup>56</sup> *Brigid Foley Ltd v Elliot* [1982] RPC 433. But see *Anacon Corp Ltd v Environmental Research Technology Ltd* [1994] FSR 659, discussed in Chapter 6.

In Figure 16.3, a design is recorded in a drawing. Articles have been made to the design. It is assumed that copyright does not subsist in the articles *per se*, for example as works of artistic craftsmanship. A person obtains a drawing and one original article and does one of the following things without the permission of the rights owner:

- (a) copies the drawing (directly);
- (b) makes articles from the drawings;
- (c) makes articles from the original article; or
- (d) makes a drawing from the original article.

By doing act (a) the person will infringe the copyright in the drawing.<sup>57</sup> Both acts (b) and (c) will infringe the design right, and act (d) may infringe the copyright or the design right (this is discussed below).

<sup>57</sup> Such an infringement was found in respect of drawings showing designs for rear lamps for vehicles: see *Valeo Vision SA v Flexible Lamps Ltd* [1995] RPC 205.

**Figure 16.3** Design right and copyright

An exercise in mental gymnastics may be indulged in by considering the interaction between the Copyright, Designs and Patents Act 1988 ss 51(1), 226(1)(b) and 236. Add to this the question: does making a copy of an article made to a design (as stated in s 51(1)) include making a copy in two dimensions? If the answer to this question is in the affirmative,<sup>58</sup> there is only an action for infringement of design right based on s 226(1)(b), which gives the design right owner the exclusive right to make a design document for the purposes of enabling articles to be made to the design. However, if the answer to the question is 'no', there potentially is an infringement of copyright and the design right because s 51(1) fails to operate, and by s 236 an action will lie in copyright only under s 17 (copying). One speculative consideration is that if s 51(1) does apply to the making of a two-dimensional copy of an article made to a design by copying the drawing, and the drawing is copied for purposes other than making articles to the design, for example to study the technology used in the manufacture of the articles, then copying the drawing may escape both copyright and design right liability. Section 51(1) removes copyright protection from the drawing because the copy of the drawing is a copy of the article made to the design and s 226(1) does not extend to making a design document for other purposes.<sup>59</sup>

<sup>58</sup> In the few cases on s 51(1), judges have taken a wide approach, based on the perceived purpose of the provision, being the denial of copyright protection to functional articles: see *BBC Worldwide Ltd v Pally Screen Printing Ltd* [1998] FSR 665 and *Mackie Designs Inc v Berhinger Specialised Studio Equipment (UK) Ltd* [1999] RPC 717.

<sup>59</sup> Note that copying in terms of both copyright and the design right may be indirect.

## PARTICULAR EXAMPLES

The following articles are considered in the light of the Community design (taken as including the UK registered design for these purposes), the UK's unregistered design right and artistic copyright in relation to the design of the article. The purpose of the examples is to highlight the differences between the rights, their similarities and inter-relationship. Where referred to, legislation is abbreviated thus: Copyright, Designs and Patents Act 1988 (CDPA) and Community Design Regulation (CDR).

### Porcelain figurine

*Artistic copyright:* The figurine could be considered to be a sculpture. The original model and the cast (mould) could also be sculptures (CDPA s 4(2)) as long as they are 'original' (CDPA s 1(1)(a)), irrespective of artistic quality (CDPA s 4(1)). Drawings and preliminary sketches could also be protected by copyright.<sup>60</sup>

*Community design:* If the appearance of the figurine is new and has individual character, then it will be registrable and also protected by the unregistered Community design (CDR Articles 3 and 4). The vast majority of such designs will be protectable unless they are slavish copies of previous designs, or differing from previous designs only in immaterial details. The amount of design freedom is a factor to be taken into account. If there is little design freedom, this should improve the possibility of protection even though the design resembles an earlier design. There is no exception for sculptures and the Community design is without prejudice to other rights such as national unregistered designs and trade marks and the Regulation recognises that a design may also be eligible for copyright protection (CDR Article 96).

*UK unregistered design right:* If the shape or configuration is 'original' (CDPA s 213(1)), and not commonplace, then the design right applies, unless otherwise excepted (for example, under the 'must-match' and 'must-fit' exceptions).

It appears that all three rights apply. Copyright is not suppressed because the article is itself an artistic work (CDPA s 51(1)). An advantage of registering the design is that no causal link is required for infringement to be proved (CDR Article 19).<sup>61</sup> However, copyright is wider in terms of the types of infringement: for example, if the figurine is

<sup>60</sup> Under the Copyright, Designs and Patents Act 1988 s 52 and pursuant regulations, if more than 50 figurines are made by an industrial process and marketed, the term of copyright is reduced to 25 years. It would appear from the wording of s 52 that this would apply to the original model, the cast(s) and any drawings, the figurines being three-dimensional copies of the drawings.

<sup>61</sup> For example, in copyright, for infringement by copying, the original thing (or copy of it) must have been copied from directly or indirectly. However, damages are not available against innocent infringers: Registered Designs Act 1949 s 9. This is not explicit in CDR but Article 89(1)(d) states that sanctions other than injunctions and seizure orders appropriate to the circumstances may be ordered as provided by the law of the Member State.

rented or loaned to the public without the copyright owner's licence.<sup>62</sup> But copyright does not prevent similar works being created by independent effort. The existence of the design right is illusory, because if the act complained of infringes copyright the design right is suppressed (CDPA s 236). Finally, it should be noted that the rights could be owned by different persons. For example, if a self-employed sculptor is commissioned to make the original model, in the absence of any agreement otherwise, he will own the copyright and be entitled to the Community design rights but, provided he has paid money or money's worth, the commissioner will be entitled to the UK registered design.

## Mass-produced furniture

*Artistic copyright:* It is unlikely that the furniture itself will be a work of artistic craftsmanship.<sup>63</sup> In principle, any drawings may be protected, as will be other materials such as computer data defining the three-dimensional shape of the furniture. But this protection will be limited by the CDPA s 51, if the design falls within the basic definition of design in that section, to direct copying only: for example, photocopying the original drawing. Copyright might subsist in any document, such as a drawing, recording the design of a pattern or other surface decoration to be applied to the covers to be fitted to the furniture.

*Community design:* Clearly if the furniture is new and has individual character, it will be protectable as a Community design, even if it had been placed on the market by the proprietor during the 12-month period before the date the application is treated as having been made. Individual character is judged in accordance with design freedom (CDR Article 6(2)) so it is likely that similar designs will be registrable providing the differences are not in immaterial details. The exception that a design is not protected to the extent that the features of appearance are solely dictated by technical function is unlikely to apply (CDR Article 8(1)). Two identical-shape designs for furniture should be registrable if they have different ornamentation or texture, providing such designs are new and have an individual character.

*UK unregistered design right:* This will apply if the shape or configuration applied to the furniture is 'original' (CDPA s 213(1)). The furniture is not itself an artistic work, so the design right is not suppressed and runs alongside any registrations in respect of the design. Patterned covers and the like will not, however, be subject to the design right as these are features of surface decoration.

Some of the differences between registering the design and failing to do so may be important in this case. For example, duration is potentially longer for a registered design. For the UK unregistered design right the maximum effective protection is no more than 10 years<sup>64</sup> and the unregistered Community design only lasts for 3 years from the date it was first made available to the public (CDR Article 11). Also, the exceptions are not quite the same for the UK unregistered design as for the other forms of design right. For the design right, features of shape and configuration which relate to the function of the article may be protected if not covered by the 'must-fit' and 'must-match' exceptions. Surface decoration and methods and principles of construction are excepted from the design right. These are not identical to the exceptions for the other design rights. There is also a special rule for ownership of the UK unregistered design right where a design originates from outside Europe. Where this is so, the person first marketing the design in Europe may be the first owner of the design right.

Copyright in any drawing or painting showing the design of any ornamentation could run alongside a design registration. At first sight, the advantage of registering a design can be doubted. However, there are important differences in terms of

<sup>62</sup> But the number of restricted acts is less for artistic works than it is for other original works. For example, by the Copyright, Designs and Patents Act 1988, the making of an adaptation is not an act restricted by the copyright in an artistic work (s 21), neither is it an infringement to show an artistic work in public (s 19).

<sup>63</sup> See *George Hensher Ltd v Restawhile Upholstery (Lancs) Ltd* [1976] AC 64. In some cases, where the furniture has some particular artistic quality, it may be the subject of artistic copyright as a work of artistic craftsmanship. Past examples would include art deco or art nouveau furniture. It might also apply to hand-crafted furniture.

<sup>64</sup> Although the maximum duration is 15 years, it cannot extend for more than 10 years from when it was first commercially exploited.

infringement and ownership which can make registration as a design a more attractive proposition.

### Can opener

*Artistic copyright:* It is unlikely that this could be considered to be a sculpture even if the handle and casing were injection moulded. Copyright, in principle, again will subsist in any drawings subject to the CDPA s 51(1).

*Community design:* There is no express requirement for eye-appeal although it is in respect of appearance that a design is registrable. In particular, in this case, the relevant aspects of design could be the contours and shape of the body and handle, its colour and, possibly, also texture. A can opener is obviously a product, being an industrial or handicraft item. Providing the design is new and has individual character, it will be registrable. Protection will not extend to the cutting mechanism itself as this is solely dictated by the can opener's technical function (CDR Article 8(1)).

*UK unregistered design right:* If the shape of the can opener is not commonplace, the design right may apply in so far as the design does not encompass a method or principle of construction, or is not dictated by the shape of the cans it has to be placed against so that it may be used to open them.

The UK unregistered design right and the Community design rights (and the UK registered design rights) can subsist concurrently in the design, but copyright is not relevant. If the handle has a pretty pattern printed or embossed on it the rights under the Community design and UK registered design will extend also to that, if that also is new and has individual character. The pattern will not be within the UK unregistered design right as it is excluded, being surface decoration.

### Moulded plastic tray for processed food

*Artistic copyright:* Although the moulded tray has shape, it is unlikely that it would be considered to be a sculpture.<sup>65</sup> However, sculptures are protected irrespective of artistic quality, and it could be possible to consider the original model, from which the trays were made, to be a sculpture. Any copyright in drawings for the tray is likely to be suppressed by the CDPA s 51(1).

*Community design:* The definition of a product expressly includes packaging and get-up and providing the design is new and has an individual character it ought to be protectable as a Community design (CDR Articles 3 and 4). As items of food are not usually exactly the same shape, there should be no place for the 'must-fit' exception (CDR Article 8(2)).

*Design right:* If original, the shape of the tray will be protected by the design right. Registration of the design of food containers was very common under the old law in spite of any misgivings over the requirement for eye-appeal. It was a common-sense approach, rewarding the effort expended in the creation of designs intended to show off the food to best commercial effect. It should be even easier to register food packaging now. Although the informal rights are likely to apply providing the other requirements for subsistence are satisfied, registration is preferable given the longer term of protection available and the fact that there is no need to show copying in an infringement action.

<sup>65</sup> However, in the New Zealand case of *Wham-O Manufacturing Co v Lincoln Industries Ltd* [1985] RPC 127, it was held that a wooden model from which the moulds for 'Frisbees' were made was a sculpture and the moulds and Frisbees were engravings. Copying a finished Frisbee infringed all these copyrights and the copyright in the working drawings. See also *Breville Europe plc v Thorn EMI Domestic Appliances Ltd* [1995] FSR 77 and other cases on sculptures in Chapter 3.

## OWNERSHIP – DIFFERENCES BETWEEN RIGHTS

Some of the differences in the ownership provisions between artistic copyright, the Community design, the UK registered design and unregistered design right have

already been alluded to. Before proceeding over the next two chapters to consider these differences in more detail, it will be useful to look briefly at these provisions comparatively. The fact that there are differences could be very inconvenient where a particular design attracts two or more forms of protection. The special provisions that apply, for example, in respect of Crown copyright are omitted for the sake of clarity. There are some differences in terminology. The person creating a work of copyright or a UK registered design is known as the ‘author’, whereas the creator of a design in which the Community design (registered or unregistered) and the UK’s unregistered design right vest is known as its ‘designer’.<sup>66</sup> A copyright, Community design and the UK’s unregistered design right is owned by its ‘owner’, but for the UK’s registered design the owner is known as the ‘proprietor’ of the design.

<sup>66</sup> Statutory recognition is given to the fact that all these rights can be brought about by computer generation and the provisions are equivalent for each of the rights.

*Artistic copyright:* The author is the first owner of an artistic copyright unless he is an employee creating the work in the course of his employment, in which case his employer is the first owner (CDPA s 11(1) and (2)).

*Community design:* The right in a Community design vests in the designer or successor in title unless the design is developed by an employee in the execution of his duties or following instructions given by his employer, in which case the design belongs to the employer subject to contrary agreement or as otherwise specified by national law (CDR Article 14).<sup>67</sup> A design developed jointly by two or more designers vests in all of the designers jointly.

<sup>67</sup> The reference to national law allows the concept of beneficial ownership to be used in the UK to deal with the problem of a Community design developed in the UK under a commission rather than by an employee.

*UK registered design:* The basic rule is that the author of the design is treated as the original proprietor. This is subject to two exceptions. Where the design is created in pursuance of a commission, for money or money’s worth, the person commissioning the design is treated as the original proprietor. The second exception is where the design is not created in pursuance of a commission for money or money’s worth but is created by an employee in the course of his employment: the employer is treated as the original proprietor of the design. There is no specific provision for joint authors of designs but the usual rules should apply. However, where a design is computer-generated in circumstances such that there is no human author, the person making the arrangements necessary for its creation is considered to be the author of the design (Registered Designs Act 1949 s 2).

*UK unregistered design right:* The designer is the first owner, subject to exceptions relating to employees and commissioned designs. A ‘commission’ means a commission for money or money’s worth.<sup>68</sup> A further provision applies to designs which qualify for the right by reference to the first marketing of articles made to the design. In this case, the person marketing the articles is the first owner of the right.

<sup>68</sup> Copyright, Designs and Patents Act 1988 s 263(1).

**Table 16.1** Potential first owners of rights in designs

Type of right	Creator of right known as	Owner of right known as	Potential identity of first owner from amongst			
			Creator	Employer	Commissioner	Marketer
Artistic copyright	Author	Owner	YES	YES	no	no
Community design	Designer	Owner	YES	YES	no	no
UK registered design	Author	Proprietor	YES	YES	YES*	no
UK unregistered design right	Designer	Owner	YES	YES	YES*	YES

\* Only if the commission is undertaken for money or money’s worth.

Table 16.1 shows the identity of potential first owners of the different rights. Which one it is will depend on the circumstances. For example, the first owner of a UK unregistered design right might be the designer, his employer or commissioner, or the person responsible for the first marketing. For artistic copyright, the first owner can only be either the author or his employer.<sup>69</sup> Of course, the first owner may assign the right to another immediately upon its coming into existence, or may agree to do so in respect of a future copyright or design.

<sup>69</sup> Ignoring the Copyright, Designs and Patents Act 1988 s 11(3) which caters for Crown and parliamentary copyright and copyright belonging to certain international organisations.

## INTERNATIONAL ASPECTS

The Directive on the legal protection of designs achieved limited harmonisation of design law throughout Europe. The advent of the Community design has made a significant impact on the protection of designs in Europe and has proved popular and attracted large numbers of applications from within Europe and elsewhere. Both the Paris Convention for the Protection of Industrial Property and the Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPs Agreement) require all participating countries to protect industrial designs but they give relatively little guidance as to the form of the protection. For example, the TRIPs Agreement goes little further than requiring protection for industrial designs that are new or original and the right extends to control making, selling or importing for commercial purposes articles that are copies of the design or substantially to the design. Member States are to give at least ten years' protection.<sup>70</sup>

<sup>70</sup> Articles 25 and 26 of the TRIPs Agreement.

The World Intellectual Property Organisation includes designs within its brief and there have been moves towards international protection, but little has been achieved compared to the cooperation realised as regards copyright and patents. One reason for this is that design protection is effected in many different ways in different States. However, 48 States now belong to the Hague Agreement 1925<sup>71</sup> which does go some way towards a unified system for registering designs by deposit without search.<sup>72</sup> Application for registration is made by deposit of the design at the International Bureau of Industrial Property at Berne. Either articles to the design or representations such as drawings or photographs are submitted with details in French. The deposit takes effect as if the design was deposited in the appropriate industrial property offices in each Member State. Protection is for 15 years (divided into a 5-year and a 10-year period). Individual Member States can refuse registration within a certain period of time.

<sup>71</sup> As at 1 March 2008, there were 48 members to the Hague Agreement Concerning the International Deposit of Industrial Designs 1925. The UK is still not a party to this Agreement.

<sup>72</sup> States which are signatories to the Hague Agreement include France, Germany, Greece, the Benelux countries, Italy and Spain. The European Community has also become a member (as from 1 January 2008).

<sup>73</sup> However, searching for novelty is no longer carried out as a rule and it is expected that searches will be eliminated altogether before long.

<sup>74</sup> A petty patent (called utility models in some countries) is a weaker variety of patent which is used in countries such as Germany, Italy, Spain and Malaysia. There was a proposal for a harmonising Directive on utility models which would require the UK to introduce such a right. Subsequently, it was proposed to introduce a Community utility model. This appears to have fallen on stony ground also.

Registration in the UK is subject to a search to ensure that the design is new, whereas some countries operate a simple deposit system.<sup>73</sup> The UK's unregistered design right is unusual in that, apart from semiconductor protection in Europe, few other countries have taken a similar approach. However, there are some reciprocal provisions for protection of design right.

International protection of UK registered designs is automatically afforded in some countries which consider the UK registration equivalent to their registered designs. These are mainly Commonwealth countries and include Bermuda, British Virgin Islands, Falkland Islands, Fiji, Gibraltar, Swaziland, Tanzania and Uganda. Others extend protection by local re-registration of a UK design: these are Brunei, Guernsey, Jersey, Malta and Montserrat. In some cases there is a time limit. Some countries no longer offer automatic re-registration. They are Hong Kong, Malaysia and Singapore.

In other cases, if international protection is required for a design, it must be obtained by application to the appropriate countries under their registered designs or utility model (sometimes referred to as a petty patent) systems.<sup>74</sup> There is at least the advantage of a six-month priority arrangement for designs under the Paris Convention for the

Protection of Industrial Property 1883. Some countries operate a law of unfair competition which could be useful in some cases. Of course, because of the much better position under copyright laws, it may be possible to pursue actions for infringement of copyright in drawings in some foreign states which allow this possibility.

# COMMUNITY DESIGN AND THE UK REGISTERED DESIGN

## INTRODUCTION

<sup>1</sup> OJ L 289, 28.10.1998, p 28.

<sup>2</sup> Registered Designs Act 1949 s 7A(5). The Act does not exclude such designs from registration but provides that using the design to restore the original appearance of a complex product does not infringe the design.

<sup>3</sup> Proposal for a Directive of the European Parliament and of the Council amending Directive 98/71/EC on the legal protection of designs COM (2004) 582 final, SEC (2004) 1097, 14.09.2004, p 5. If adopted, Member States would have to implement it no later than two years after its adoption.

<sup>4</sup> Although the UK and eight other Member States chose to follow the position in the Community Design Regulation on this issue.

Directive 98/71/EC of the European Parliament and of the Council of 13 October 1998 on the legal protection of designs<sup>1</sup> was one of two main thrusts to reform design law in Europe. It resulted in limited harmonisation throughout Europe. In particular, there was no agreement as to the protection of ‘must-match’ spare parts and Member States were left to continue to protect them if they already did so. Any subsequent change in those Member States that chose to continue to protect designs of spare parts could only be made if they liberalised the market in must-match spare parts. In implementing the Directive, the UK decided to continue its existing exclusion of protection of must-match spare parts, being those that had to be of a particular design so as to restore a complex product to its original appearance (‘must-match’).<sup>2</sup> The most-used example of must-match spare parts are those applied to replacement body parts and panels for motor vehicles and it is in this design field that the exception has most impact by far. In line with the Directive, the Commission has reviewed the position and has proposed a modification to the Directive to exclude protection to such spare parts in all Member States as the lack of harmonisation in this respect distorts the single market and competition.<sup>3</sup> The only proviso would be that it would be necessary to ensure that consumers are made aware of the origin of the parts in question so that they can make an informed choice.

Although the Directive did not seek to achieve complete harmonisation and although it preceded the Community Design Regulation, it was drafted with an eye on the Community design and features that were harmonised were those dealing with registrability and protection which were to be the same as for the Community design as were the provisions on the exclusions from registrability with the exception of must-match spare parts.<sup>4</sup> Enforcement, remedies and procedural aspects, including renewal and invalidity, were left to Member States.

As a result of the limited harmonisation that took place not long before the introduction of the Community design, many provisions of the latter are identical or, to all intents and purposes identical to, features of the UK registered design as it now stands. One major difference is that the Community design contains two forms of protection: one through registration, the other being an informal short-term right not subject to registration. However, the basic requirements for protection by the unregistered Community design are the same, in most respects, to those applicable to the registered Community design. That being so, this chapter is structured so as to look at the Community design first (registered and unregistered) followed by the UK registered design, concentrating on those features that are additional to or different to the Community design. The following abbreviations are used in this chapter:

- RCD – registered Community design
- UCD – unregistered Community design
- UKRD – UK registered design
- CDR – Community Design Regulation
- RDA – Registered Designs Act 1949, as amended.

## COMMUNITY DESIGN

The Community design is stated in Article 1(3) of Council Regulation (EC) No 6/1002 of 12 December 2001 on Community designs<sup>5</sup> to have a unitary character having equal effect throughout the Community. It shall not be registered, transferred, surrendered, declared invalid or the use of it prohibited save in respect of the whole Community unless as otherwise provided for by the Regulation. The recitals to the Regulation confirm that it is important that the needs of all sectors of industry in the Community should be served by the Community design and, as some sectors produce large numbers of articles which have a short market life, there should be an informal short-term protection to suit these sectors. Other sectors create designs having a longer market life and, for those sectors, the advantages given by registration (greater legal certainty and longer duration) outweigh the burdens of the registration process. A short-term informal protection might be important in the context of fashion clothing, for example, with longer-term protection by registration being more attractive to manufacturers of furniture and toys, for example.

The recitals to the Regulation also make it clear that it is not a requirement that designs have an aesthetic quality to be protected though there are a number of exceptions: for example, a technical function and a ‘must-fit’ exception. However, design is defined in terms of appearance, and protection is denied to the design of ‘under the bonnet’ parts of complex products not normally visible during normal use, but the appearance clearly does not have to be an aesthetic one.

There is also a 12-month period of grace which allows the owner of a design to test the market, for example, by selling products made to the design to see whether it is worthwhile applying for registration without prejudicing the novelty or individual character of the design.<sup>6</sup> In the meantime, the design will be protected by the unregistered right and will continue to be so protected for a maximum of three years from the date products made to the design were first made available to the public.

The RCD is administered by the Office for the Harmonisation of the Internal Market (Trade Marks and Designs) (‘OHIM’). It has its own examiners, legal division and invalidity divisions and a Board of Appeal. Appeals from the Board of Appeal go to the European Court of Justice. At the time of writing there have been no cases before the European Court of Justice concerning Community design. Certain national courts are designated Community Design Courts and have jurisdiction to hear cases involving the Community design. In the UK those courts are the High Court, the Patents County Court, the Court of Session in Scotland and the Court of Appeal. As the European Community acceded to the Geneva Act (1999) of the Hague Agreement Concerning the International Registration of Industrial Designs,<sup>7</sup> the CDR was amended to provide a further ground of invalidity on the basis of prior designs registered outside the Community.<sup>8</sup> Procedural changes were also made to the CDR to take account of designs registered under the Hague Agreement. It is now possible for an application through the Hague Agreement to include an application for a Community design.

<sup>5</sup> OJ L 3, 05.01.2002, p 1.

<sup>6</sup> By Article 8 such disclosure being deemed non-prejudicial.

<sup>7</sup> With effect from 1 January 2008.

<sup>8</sup> Council Regulation (EC) No 1891/2006 of 18 December 2006 amending Regulations (EC) No 6/2002 and (EC) No 40/94 to give effect to the accession of the European Community to the Geneva Act of the Hague Agreement concerning the international registration of industrial designs, OJ L 386, 29.12.2006, p 14.

## REQUIREMENTS FOR PROTECTION (RCD AND UCD)

<sup>9</sup> There is a difference in the time novelty and individual character is tested. For the UCD it is the time the design was first made available to the public whereas, for the RCD, it is the time of filing the application or the priority date if the priority of an earlier filing is claimed.

The basic requirements for the rights, whether registered or not, are virtually the same.<sup>9</sup> A design must fall within the meaning of ‘design’ (for which the meanings of ‘product’ and/or ‘complex product’ are also relevant) and the design must be new and have individual character. The definition of ‘design’ is given by Article 3(a) as:

... the appearance of the whole or a part of a product resulting from the features of, and in particular the lines, contours, colours, shape, texture and/or materials of the product itself and/or its ornamentation.

A ‘product’ is, by Article 3(b):

... any industrial or handicraft item, including *inter alia* parts intended to be assembled into a complex product, packaging, get-up, graphic symbols and typographic typefaces, but excluding computer programs.

And a ‘complex product’ is, by Article 3(c):

... a product which is composed of multiple components which can be replaced permitting disassembly and re-assembly of the product.

As can be seen from the definitions, the scope of designs that can be subject to protection is very wide. For example, the definition of ‘product’ is non-exhaustive and includes typefaces, packaging and get-up. Typefaces are protected by copyright as a form of artistic works, providing they are original and qualify for protection.<sup>10</sup> Packaging and get-up could also have copyright protection and be protected by the law of passing off in the UK and Ireland or unfair competition law elsewhere. Trade mark law may also be applicable in a good proportion of cases, particularly in relation to the shape of a product, graphic symbols, get-up or packaging.

<sup>10</sup> The Regulation recognises that designs may also be protected under copyright law and the Regulation is without prejudice to other rights including national unregistered design rights, trade marks and patents: Article 96.

It seems that graphic symbols and icons displayed on computer screens and mobile phones could be subject to the Community design because of the inclusion of graphic symbols in the definition of ‘product’. It would appear that such symbols are deemed to be industrial or handicraft items and logos, screen displays and icons have been accepted for registration as Community designs.

Apart from falling within the definitions, the basic requirement for protection is that the design is new and has individual character (Article 4). Where the design is applied to a product which is a component part of a complex product, it will be protected only if it remains visible in normal use and the visible features are new and have individual character. Therefore, the design of ‘under the bonnet’ parts such as a car radiator or engine cowling are not protected. ‘Normal use’ is couched in terms of use by the end-user and excludes use for the purposes of maintenance, servicing and repair.

Article 5 states that a design shall be considered to be new if no identical design has been made available to the public. In the case of the UCD, the relevant date is the date on which products to that design were first made available to the public. For the RCD, it is the date of filing of the application for registration (allowing for priority from earlier applications elsewhere under the Paris Convention). In determining the ‘prior art’ for designs, that is whether a conflicting design has been made available to the public, under Article 7(1) this may be by its being published following registration or otherwise, exhibited, used in trade or otherwise disclosed before the date at which novelty is tested (and individual character: *see* later). However, such a design will not be taken into account if the event or events in question could not reasonably have become known in the normal course of business to the circles specialised in the sector concerned operating in the Community. In *Green Lane Products Ltd v PMS International Group Ltd*,<sup>11</sup> it was held that the relevant sector was that relating to the prior art and not

<sup>11</sup> [2008] FSR 1.

limited to those persons specialising in the sector specified in the application for registration. An application to register a Community design is required to identify the classification of products under the Locarno classification of designs. In the present case, that was ‘Flatirons and washing, cleaning and drying equipment’. The design had been applied to spiky laundry balls. It was held that the prior art also included spiky balls used for massaging the human body. The importance of this decision is that it takes account of the scope of protection under Article 10 which is not limited to any particular product. If design fields are discrete and persons working in one field are not aware of designs in other fields, then registering in one field could give protection across all the other fields. The Court of Appeal upheld the decision at first instance in *Green Lane Products Ltd v PSM International Group plc*.<sup>12</sup> Jacob LJ considered the *travaux préparatoire* for the Community Design Regulation. Although novelty could have been decided along similar lines to that under the patent system, textile manufacturers were concerned that counterfeiters based outside Europe, for example, in the Far East, could claim some obscure prior art to defeat a Community design. Hence, the proviso to having been made available to the public such that the use, etc. under Article 7(1), ‘. . . could not reasonably have become known in the normal course of business to the circles specialised in the sector concerned, operating within the Community’. With that proviso, a design was made available to the public if it was part of the prior art, not limited by the description of the products or class of products to which it was intended to apply the design in question.

Under Article 7(1), disclosure to a third party under an express or implied obligation of confidence is not taken into account in determining whether a design has been made available to the public.

A design is considered to be identical if its features differ only in immaterial details. In *Crown Confectionery Co Ltd’s Design*,<sup>13</sup> a design to be applied to pretzel-shaped biscuits was held to be invalid as it did not differ from the familiar and well-known shape of pretzels except in immaterial details. The design had some lines across the surface of the pretzel. A design may be judged to be identical to another design if, on close inspection, no apparent differences are shown.<sup>14</sup> In *3M Innovative Properties Co’s Designs*,<sup>15</sup> the design in question was for a swab having a wedge-shaped head mounted on a handle. An earlier Spanish utility model for a swab had a cylindrical stem with a cylindrical head of larger diameter than the stem but the claim to the utility model said that the head could be any size, form or texture. The Invalidity Division at OHIM said that this did not disclose the specific form of the designs and did not compromise their novelty.

Article 6 states that a design has an individual character if ‘the overall impression which it produces on the informed user differs from the overall impression produced on such a user by any design which has been made available to the public.’<sup>16</sup> The informed user would be someone who is familiar with the design field in question.

The Invalidity Division of OHIM has interpreted the informed user as being someone who is familiar with the basic features of products in question and, when assessing the overall impression of the design, will take into account whether there are any limitations on the freedom of the designer and will weigh the various features consequently. More attention will be paid to similarities of non-necessary features and dissimilarities of necessary ones. The informed user is aware of the prior art known in the normal course of business to the circles specialised in the sector concerned. Article 6(1) of the CD Regulation requires the assessment of the overall impression produced by the prior designs and the Community design on the informed user, respectively. To assess the overall impression, the designs must be compared both on their various features taken individually and on the weight of the various features according to their influence.<sup>17</sup>

In *Procter & Gamble Co v Reckitt Benckiser (UK) Ltd*,<sup>18</sup> the registered Community design was for a sprayer used for air fresheners. The Court of Appeal held that the

<sup>12</sup> [2008] EWCA Civ 358.

<sup>13</sup> A decision of the Invalidity Division of OHIM, No ICD000000388, 20 September 2005. At the time of writing, to the author’s knowledge, no cases have been heard at the Boards of Appeal at OHIM and, certainly, no cases involving the Community design have been decided at the European Court of Justice.

<sup>14</sup> *Homeland Housewares LLC’s Design*, Invalidity Division OHIM, No ICD000000552, 15 September 2005. The design in question was for a transparent cup used in a food mixer.

<sup>15</sup> No ICD000000040, 14 June 2004.

<sup>16</sup> Conflicting designs do not need to be protected as such and may be protected by other rights, such as trade mark rights and copyright. A three-dimensional trade mark may still be a design for the purposes of novelty and individual character: see Case No 000000222, *Mafin SpA’s Design* [2005] ETMR 1239, 22 October 2004.

<sup>17</sup> See, for example, Case No 000000222, *Mafin SpA’s Design* [2005] ETMR 1239, 22 October 2004, at paras 26–28; and Case No 000000024, *Arrmet Srl’s Design Application* [2005] ECDR 251, 27 April 2004, at paras 17 and 18.

<sup>18</sup> [2008] FSR 208.

‘informed user’ was not the ‘average consumer’ of trade mark law. The informed user would be more discriminating and what mattered was what stuck in the mind when looking at the design, not what stuck in the mind after it had been looked at. The role of imperfect recollection was, therefore, a limited one. The informed user would also know that some designs were the way they were because of limitations on design freedom. Where this was the case, smaller differences might be sufficient to create a different overall impression.

The cut-off date for designs made available to the public is the same as for novelty for the UCD or RCD as appropriate. For example, for the UCD individual character is assessed in the light of designs made available to the public before the design in question was itself made available to the public. One advantage of registration is that an application may be filed before the design is made available to the public, freezing the ‘state of the art’ at that date. It is also possible to defer publication of the design, for example, to prevent competitors seeing the design prematurely.

In determining whether a design has individual character, the degree of freedom the designer has in developing the design is taken into consideration. Therefore, the less the design freedom, the more likely that a design, not substantially different from existing designs, will be protected,<sup>19</sup> though novelty may still be an issue if the design does not differ except in immaterial details from existing designs. Design freedom was an issue in *Pepsico Inc’s Design*<sup>20</sup> which involved a design for a disk having annular rings or corrugations to be applied to a promotional item for games. There was a prior similar design. The Invalidity Division of OHIM noted that the degree of design freedom was limited only in certain respects, such as cost and child safety. Otherwise there was ample design freedom. It was said that the informed user would be familiar with promotional items for games and would know that their surfaces often have graphical elements added and would be aware that targeted consumers would pay more attention to the graphical elements than minor variations in shape. Consequently, it was held that the design was invalid as it did not produce a different impression on the informed user compared with the earlier design.

In relation to the RCD, there is a 12-month period of grace and certain disclosures do not prejudice novelty nor individual character, being where the design is made available to the public by the designer, successor in title or third person as a result of information provided by, or action taken by, the designer or successor in title (Article 7(2)). The period starts 12 months prior to the date of filing the application or priority date if applicable. Note that the reference is to the designer and not the owner. This is surely wrong and should be a reference to the owner or successor in title to cover the situation where the design is developed by an employee in the execution of his duties or following instructions given by his employer. The 12-month period of grace also applies to disclosures to the public made in breach of confidence, described in Article 7(3) as an abuse in relation to the designer or successor in title.

## EXCLUSIONS FROM THE COMMUNITY DESIGN

Article 8 contains a number of exclusions from Community design. Features of appearance that are dictated solely by technical function are excluded (it may still be possible to claim protection for other features, if any). In *3M Innovative Properties Co’s Designs*,<sup>21</sup> the Invalidity Division said that the informed user would concentrate on features not necessarily dictated by function in determining whether a design had an individual character. Together with the wording of the exception, this suggests that other features may be protectable. This would accord with previous practice in the courts in the UK which accepted that only if *all* the features were dictated by function was a design

<sup>19</sup> *Procter & Gamble Co v Reckitt Benckiser (UK) Ltd* [2008] FSR 208.

<sup>20</sup> No ICD000000172, 20 June 2005.

<sup>21</sup> No ICD000000040, 14 June 2004.

excluded from protection on this basis.<sup>22</sup> A similar approach was accepted as correct in the Court of Appeal in *Landor & Hawa International Ltd v Azure Designs Ltd*.<sup>23</sup> The exception for designs dictated solely by function was a narrow one and would apply only if that design and no other could perform the function in question. Old tests under the Registered Designs Act 1949 before amendment by the Directive on the legal protection of designs were no longer helpful.<sup>24</sup>

Article 8(2) provides for a ‘must-fit’ exclusion, where features have to be reproduced identically to fit another product so that either can perform its function. This applies to features of mechanical connections or other interconnections, including where two products abut each other. This exception is broadly equivalent to that for the UK unregistered design right, discussed in the following chapter. The exception will apply to features such as the pins on an electrical plug, the electrical contacts and bayonet fitting on an electric light bulb, the runners on a drawer, all manner of interfaces such as that between a teapot and its lid, screw, push-fit and other connections, even where the features are those permitting two products to be simply placed against each other so that either may perform its function.

As a result of the definition of product, the exception will not apply to features of a product designed to fit the human hand,<sup>25</sup> such as a computer mouse or the handle of various tools, such as a pair of scissors, or the brake levers on a bicycle (although the connections between the lever and the handlebar and the brake cable will be excluded).

Modular systems are excepted from the exclusion in Article 8(2) to the extent that designs which permit the multiple assembly or connection of mutually interchangeable products within a modular system may be protected if new and having individual character. This could apply to an interconnection such as a snap-fit connection allowing the assembly of flooring units such as those in issue in the patent case of *Unilin Beheer NV v Berry Floor NV*,<sup>26</sup> discussed in Chapter 12. Recital 11 to the Regulation provides the rationale for the potential protection of such interconnections and says that the mechanical fittings of modular products:

... constitute an important element of the innovative characteristics of modular products and present a major marketing asset, and therefore should be eligible for protection.

Under Article 9, a Community design shall not subsist in a design which is contrary to public policy or to accepted principles of morality. There is no further guidance as to the scope of this exception. These are somewhat vague concepts and there is the added problem that they vary from Member State to Member State. They are also likely to be concepts that will shift with time, especially in relation to accepted principles of morality.<sup>27</sup>

It is notable that the exclusions from the Community design are not as wide as the grounds for invalidity. It would seem possible to claim a right in an unregistered Community design or register a design that would be held invalid if challenged.<sup>28</sup> This may be a consequence of the examiners at OHIM not carrying out searches for novelty and individual character when considering registrability.

## Duration

The registered Community design lasts initially for 5 years from the date of filing the application to register the design: Article 12 of the CDR. This period is not reduced where the design has a priority date. Thereafter, the registration may be renewed for further 5-year periods up to a maximum of 25 years.

Under Article 11(1) of the CDR, the unregistered Community design lasts for three years from the date the design was first made available to the public within the Community. Duration is not based on the end of the relevant calendar year so, if the

<sup>22</sup> See, for example, *Interlego AG v Tyco Industries Inc* [1989] AC 217 per Lord Oliver. This aspect of the case, under an old version of the Registered Designs Act 1949 which required eye-appeal, should still be good law to the extent of the proposition above. Of course, those aspects not dictated by function should be novel and have individual character and, it is submitted, not be *de minimis*.

<sup>23</sup> [2007] FSR 181. See also *Bailey v Haynes* [2007] FSR 199 in the Patents County Court.

<sup>24</sup> In particular, the House of Lords decision in *Amp Incorporated v Utilux Pty Ltd* [1972] RPC 103, taking a wide view of the equivalent exception in the Registered Designs Act 1949 as it then was, could not be applied to Article 8(1) of the CDR.

<sup>25</sup> In a UK unregistered design case, *Ocular Sciences Ltd v Aspect Vision Care Ltd* [1997] RPC 289, Laddie held that the human eye could be an article for the purposes of the equivalent exception. However, the definition of ‘product’ clearly does not apply to parts of the human or animal body.

<sup>26</sup> [2005] FSR 56.

<sup>27</sup> Under the Registered Designs Act 1949, before amendment, there was an exception where a design was contrary to law or morality. Two cases could be contrasted to show how the test of morality changed over the years, being *La Marquise Footwear’s Application* (1947) 64 RPC 27 and *Re Masterman’s Application* [1991] RPC 89. Both designs incorporated representation of male genitalia.

<sup>28</sup> Invalidity proceedings for a registered Community design may be brought before OHIM or at a Community design court on a counterclaim in infringement proceedings. An unregistered Community design may be declared invalid only in a Community design court either on application for such or on a counterclaim in infringement proceedings. In the UK, the Community design courts are the High Court, Patents County Court and Court of Appeal (in Scotland, the Court of Session).

design was first made available to the public on 1 July 2007, it will expire on midnight 30 June 2010. A design is made available to the public when it is published, exhibited, used in trade or otherwise disclosed in such a way that, in the normal course of business, these events could reasonably have become known to the circles specialised in the sector concerned, operating within the Community. No account is taken of any making available to the public for the sole reason that it has been disclosed to a person under an explicit or implicit obligation of confidence.

## ENTITLEMENT TO A COMMUNITY DESIGN

The basic rule is given in Article 14(1) and is that a Community design vests in the designer or his successor in title. Where a design is jointly developed by two or more persons, the Community design vests in them jointly. Where a design is developed by an employee in the execution of his duties or following instructions given by his employer then, unless otherwise agreed or specified under national law, the Community design vests in the employer under Article 14(3). In the case of a registered Community design, the person in whose name it is registered is presumed to be the person entitled to it in proceedings before OHIM or in any other proceedings. An equivalent presumption is made in relation to applications so that the person filing the application is deemed to be the person entitled.

There are no specific provisions for entitlement of designs developed under a commission by a designer who is not employed by the person commissioning the development of the design. This is in contrast to the position under the UK registered design where the person commissioning the development of a design for money or money's worth will be entitled to be the proprietor of it.<sup>29</sup> This could mean that the person entitled to be the owner of a Community design could be someone other than the person entitled to be the proprietor of a UK registered design. Say that Sarah is a self-employed freelance designer who has been asked to develop a new design for a toaster for Acme Household Products Ltd. Her contract with Acme makes no mention of ownership and contains no assignment of the rights in the design. Sarah was paid handsomely for the design. Acme will be entitled to be the proprietor of the UK registered design by virtue of s 2(1A) of the Registered Designs Act 1949 (and will be the owner of the UK unregistered design right, if it subsists in the design, under s 215(2) of the Copyright, Designs and Patents Act 1988). However, Sarah would appear to be entitled to the Community design. In court proceedings in the UK, this anomaly could be dealt with by holding that Acme was the beneficial owner of the Community design (or by an implied licence on its behalf). It is far from clear how the OHIM or other Member States would deal with this problem.

The fact that, without a specific assignment of the right to a Community design created under a commission, the person commissioning the creation of the design will not be entitled to it was confirmed in the Court of Justice in Case C-32/08 *Fundación Española para la Innovación de la Artesanía (FEIA) v Cul de Sac Espacio Creativo SL*.<sup>30</sup> FEIA set up a design project which included, *inter alia*, the commissioning of a design of cuckoo clock from Cul de Sac. The Court of Justice ruled that the terms 'employee' and 'employer' in Article 14(3) were not to be interpreted widely so as to include persons creating a design under a commission, even though such persons were paid contractually and under the direction of the commissioner. The court noted that the language of Article 14(3) referred to an employee in the execution of his duties or following instructions given by his employer. Neither the term 'agent' nor 'principal' were used. Indeed, although an earlier proposal provided for the right to commissioned designs to vest in the commissioner, that proposal was not retained in the Regulation.

<sup>29</sup> Registered Designs Act 1949 s 2(1A).

<sup>30</sup> 2 July 2009.

Furthermore, the court confirmed that Article 14(1) must be interpreted as meaning that the right to a Community design vests in the designer, unless it has been assigned by way of contract to his successor in title. There appears to be no place for the right to a Community design to be subject to equity and in the absence of provision for commissioned designs under the Community Design Regulation, contrary to the position under the UK registered design and the UK unregistered design, it is vital that express contractual provision is made as to the rights in commissioned designs.

As regards employee designs, an agreement between employee and employer as to entitlement, such that the employee is entitled, could take the form of an express or implied agreement. As in the copyright case of *Noah v Shuba*,<sup>31</sup> it would be reasonable that previous conduct could form the basis of an implied agreement that the employee was entitled to the Community design.

Challenges to entitlement can be made under Article 14 in respect of either the UCD or RCD. If a UCD is disclosed or claimed by, or an RCD is applied for or registered in the name of a person not entitled under Article 14, the person entitled may claim to be recognised as the legitimate holder of the design. This is without prejudice to any other remedy open to that person. Similarly, a challenge may be made by someone claiming to be a joint proprietor. However, under Article 15(3) challenges may not be brought more than three years from the date of publication of an RCD or, in the case of the UCD, more than three years from the date it was disclosed to the public. Presumably this means made available to the public under the provisions of Article 7 on disclosure. The time bar on challenges to entitlement does not apply where a person not entitled to the design was acting in bad faith at the time the design was applied for or disclosed or assigned to him. As an example, say that Andrew developed a design in circumstances that he was entitled to the rights in the design. He disclosed it to a potential licensee, Dodgy Dealers. The licence was executed and Dodgy Dealers honestly thought, having agreed to pay Andrew a royalty on products incorporating the design, that it was entitled to register the design, which it duly did. The licence was silent on ownership. Four years after the design was published, Dodgy Dealers assigned the RCD to Williams & Co, which was well aware that Dodgy Dealers was not entitled to the RCD, nor did it have the right to assign it. Soon after, Andrew discovers that he is entitled to the RCD and he may now apply to be recognised as the legitimate holder of it even though more than three years have elapsed since the design was published.

Where there is a challenge to entitlement of an RCD, the fact that proceedings have been instituted, together with the final decision or other termination of the proceedings (for example, where the challenge is withdrawn) and any resulting change of ownership, will be entered on the register of designs.

The effect of a complete change of ownership as a result of proceedings under Article 15(1) is that all licences and other rights lapse on such entry on the register (Article 16(1)). However, where a person in good faith, before the institution of such proceedings, was entered on the register and the holder of a Community design has exploited it within the Community or made serious and effective preparations to do so, he may continue to exploit it providing that he requests from the new holder a non-exclusive licence to be granted for a reasonable period and on reasonable terms providing he makes such request within three months of the date of entry on the register of the new holder.<sup>32</sup>

Under Article 18, the designer has the right to be cited as such and, where the design is the result of teamwork, the citation may be that of the team itself rather than the individual designers. Although Article 18 is silent on the point, Article 36, on the information to be provided in an application to register a Community design, makes it clear that the right to be cited may be waived.

<sup>31</sup> [1991] FSR 14. This case is discussed in Chapter 4.

<sup>32</sup> The period of three months is set out in Article 24(5) of Commission Regulation (EC) No 2245/2002 of 21 October 2002 implementing Council Regulation (EC) No 6/2002 on Community designs, OJ L 341, 17.12.2002, p 28 (the 'Implementing Regulation').

As the Community design is declared to have a unitary character, it should not be possible for the UCD and RCD to be owned by different persons. However, the CDR does not require the applicant for an RCD to declare that he is also entitled to the UCD. A problem could occur where, for example, a designer assigns the UCD and then, later, applies for the RCD in his own name. What, in such a situation, would a court do if the designer claims that he intended the assignee to have rights only until the time the UCD expired?

## DEALING WITH THE COMMUNITY DESIGN

A Community design is an object of property to be dealt with in its entirety (reflecting its unitary nature) and for the whole area of the Community as a national design right (Article 27). This is subject to some of the provisions of the CDR mentioned below. In respect of the national law governing dealing with a Community design, the relevant Member State is that in which on the relevant date:

- (a) the holder has his seat or domicile; or
- (b) in other cases, the holder has an establishment.

Where there are joint holders of a Community design, and two or more of them fall within (a) or (b), in the case of the UCD, the Member State is that of the joint holder designated by the common agreement between those joint holders. In the case of the RCD it is the first such joint holder to be mentioned in the register.

Where none of these provisions apply, that is where the holder or none of the joint holders, as the case may be, fall in neither (a) nor (b) above, the relevant Member State is that in which the OHIM is situated, presently Spain. Therefore, if the holder is a Canadian company, the law relating to dealing with design is Spanish law, subject to the other provisions of the CDR mentioned below.

There is no definition of ‘relevant date’ and one can only assume that it must be the date of the dealing in question. So, for example, if the holder of a Community design is a company established in France then, subject to the other provisions of the CDR mentioned below, French law relating to designs will govern dealing with it, including assignment and licensing. Thus, if the rights are assigned to an English company, the assignment will be subject to French law. If the English company then later assigns the design to a German company, that assignment will be subject to English law.

The forms of dealing with a Community design are assignment (referred to as transfer in the CDR)<sup>33</sup> and licensing. Furthermore, an RCD may be given as security or subject to rights *in rem* and may be levied in execution.<sup>34</sup> In all cases where an RCD is involved, the transfer, grant, rights, etc. shall, at the request of one of the parties, be entered on the register.<sup>35</sup> Certain formalities must be complied with for the transaction to be registered. For example, registration of a transfer requires, *inter alia*, proof of transfer. This can be satisfied where the application is signed both by the rightholder and successor in title (or their representatives) or, where the successor in title submits the application, a declaration made by the rightholder or by his representative agreeing to the transfer or by submitting the completed transfer form or document signed by both parties or their representatives.<sup>36</sup>

Under Article 31, insolvency proceedings in which a Community design is involved may only be brought in the Member State within the territory of which the centre of the debtor’s main interests is situated. This applies also to the share of a joint proprietor. This indicates that joint proprietorship is on the basis of tenants in common.

<sup>33</sup> Note that, because of its unitary nature, a Community design may only be transferred in respect of the whole Community: Article 1(3) of the CDR.

<sup>34</sup> The courts and authorities of the Member State determined in accordance with Article 27 have exclusive jurisdiction in relation to levy of execution: Article 30(2).

<sup>35</sup> These provisions are in Articles 28, 29, 30 and 32.

<sup>36</sup> Article 23(4) of the Implementing Regulation.

Where an RCD is transferred, a successor in title may not invoke the rights arising from registration until such time as the transfer has been entered on the register. Licences may be in relation to the whole or part of the Community and may be exclusive or non-exclusive. The holder of the rights conferred by a Community design may invoke those rights against a licensee who is in breach of the terms of the licence on duration, the form in which the design may be used or the range and quality of products, notwithstanding legal proceedings based on contract law (Article 32(2)).

A licensee can bring legal proceedings for infringement if the holder consents, although proceedings may also be brought by a licensee if the holder, having been given notice to bring proceedings, fails to do so within an appropriate period. A licensee may also intervene in an action brought by the holder so as to obtain compensation for any loss suffered by him.

Under Article 33, the effects on third parties of the legal acts referred to in relation to transfer, security, rights *in rem*, levy of execution and licensing shall be as provided by the law of the Member State determined in accordance with Article 27. However, as regards transfers, security, rights *in rem* and licences, these do not have effect on third parties in all Member States until after entry on the register. There are some exceptions to this, the first being where a third party acquired rights in an RCD after the date of the legal act in question but who knew of that act at the time he acquired the rights. This means, for example, that a third party who obtained a transfer of an RCD and knew of a licence granted earlier will be bound by the licence even though it had not been entered on the register at the time the RCD was transferred to him. Nor does a failure to register the legal acts mentioned apply to a person who acquires an RCD or right concerning an RCD in relation to a transfer of the whole of an undertaking or by way of other universal succession. Effects on third parties of insolvency proceedings are governed by the law of the Member State in which such proceedings are first brought under applicable national law or regulations.

Article 34 confirms that the above provisions on dealing also apply, *mutatis mutandis*, to applications for an RCD. Where the effect of a provision in Article 28 to 33 is conditional upon an entry in the register, that formality shall be performed upon registration of the resulting RCD.

The formalities as to assignment and licensing, for example, are left to national law. Thus, an assignment of a Community design, whether a UCD or RCD, if subject to English law, should be made with full title guarantee to take advantage of the implied covenants under the Law of Property (Miscellaneous Provisions) Act 1994. Provisions as to beneficial ownership and implied licences also ought to apply to the Community design where it is subject to the English law on dealing with design rights under Article 27 of the CDR.

## RIGHTS AND INFRINGEMENT

The rights of the holder of a Community design are the same whether or not it is registered but with one difference. If unregistered, the right is limited to prevent the infringing acts only if they result from copying the protected design. Independent creation by a person not reasonably thought to be familiar with the design made available to the public does not infringe.<sup>37</sup> The right conferred is to use the design and to prevent third parties from using it without the holder's consent. Infringing acts are, if carried out by a third party not having the rightholder's consent, in particular making, offering, putting on the market, importing, exporting or using a product in which the design is incorporated or to which it is applied or stocking a product for those purposes. Note the use of the phrase 'in particular'. This suggests that the list of infringing acts is not

<sup>37</sup> Contrary to the test with copyright, it would appear that the burden of proof may rest with the alleged infringer to show that he was not familiar with the design and ought not to have been familiar on reasonable grounds.

exhaustive. Article 10(1) of the CDR also states that the scope of protection includes any design which does not produce on the informed user a different overall impression. Under Article 10(2) design freedom is taken into account, therefore the less the design freedom, the smaller the differences which may produce a different overall impression. Issues of infringement will, of course, be determined by national Community design courts, not the OHIM.

38 [2008] FSR 208.

39 Recital 14 to the CDR.

In *Procter & Gamble Corp v Reckitt Benckiser (UK) Ltd*<sup>38</sup> the Court of Appeal held that in relation to infringement, the notional informed user, as in the case of individual character for registrability, was taken to be familiar with the ‘existing design corpus’.<sup>39</sup> What mattered was whether the alleged infringing design created a different overall impression. It was not correct to say that it had to create a *clearly* different overall impression. Furthermore, the informed user would be familiar to design issues and would be fairly familiar with them. Jacob LJ (at para 35) made a number of additional observations on the application of the statutory test for infringement. The court should ‘don the spectacle of the informed user’ and compare the designs with a reasonable degree of care. Identify the overall impression produced by the registered design with care. The court must take care not to descend to too general a level of generality. The appropriate level is that which would be taken by the informed user. Do the same for the alleged infringement. The final step of the exercise is to ask whether the overall impression of each design is different. Jacob LJ said that this is almost the equivalent to asking whether they are the *same*, adding that the difference is nuanced, probably, involving a question of onus and no more.

The limitation on the rights of the holder of a UCD apply also in respect of an RCD where the holder has applied for deferment of publication until such time as the relevant entries in the register and the file have been made available to the public. This is the *quid pro quo* for keeping the design secret by deferring publication. However, the right to continue use begun, or commence use following serious and effective preparations made, before the filing date (or priority date) of an application for an RCD is not affected by deferred publication. Deferring publication does not extend the deadline for the right of prior use which remains the filing date or earlier priority date, if appropriate.

If legal proceedings are commenced during the period of deferred publication, it is a condition that the holder communicates to the defendant the information contained in the register and the file (Article 50(6)). If it were otherwise, of course, the defendant might not know precisely what the design in question was and whether the claimant was indeed the registered holder of the RCD.

## LIMITATIONS AND DEFENCES

A number of limitations are specified in Article 20. The rights in a Community design are not infringed by:

- acts done privately and for non-commercial purposes;
- acts done for experimental purposes;
- acts of reproduction for the purposes of making citations or teaching if they are compatible with fair trade practice, do not unduly prejudice the normal exploitation of the design and mention is made of the source.

As regards mention of the source of a design, the CDR gives no further guidance. It would seem reasonable to assume that the obligation would be fulfilled by a brief statement giving the identity of the holder of the right and, if an RCD, the registration number.

The rights in a Community design may also not be exercised in relation to equipment on ships and aircraft registered in a third country temporarily in the territory of

the Community, importing spare parts into the Community to repair such craft and executing repairs on such craft.

The doctrine of exhaustion of rights applies under Article 21 so that the Community design rights cannot be used to prevent further commercialisation of any products, in which the design is incorporated or to which it has been applied, which have been put on the market in the Community by or with the consent of the holder of the Community design.

For the RCD only, there is a right to continue use of a design commenced before the filing date, or priority date if there is one, or to use a design where serious and effective preparations had been made before the filing date or priority date, if appropriate.<sup>40</sup> This is similar to the equivalent provision for patents though there is no such right in respect of the UK registered design, except in relation to the restoration of a lapsed registration. As with patents, this is not just a defence but is a right although licences may not be granted by the person taking advantage of the prior user provisions. The right is limited to the purposes to which the design was put, or in respect of which serious and effective preparations were made. This means that if the prior use related to applying the design to a particular type of product, it does not appear that it can be later applied to a different type of product by the prior user. Where the prior use related to a range of products, that use may continue in relation to that range of products. It is not clear what the position would be if the prior use and a subsequent use were in respect of closely related products, such as a teapot and coffee pot. It would seem sensible to allow subsequent uses in similar products where they are normally sold in a set of like products, such as a dinner service.

<sup>40</sup> Article 22 CDR.

The right of prior use can be transferred but only in respect of the business or part of a business for which the act was done or preparations made provided that the business or part of it is also transferred. This allows the right to be transferred to a business successor, such as where a trader sells his business to another trader as a going concern along with the right to continue to apply the design to the products in question.

As the right to prior use applies only to the RCD and not to the UCD and it does not apply in respect of the UK registered design (except where a lapsed registration is restored),<sup>41</sup> this could have some strange consequences, as noted in the following examples. (Assume that the designs are identical or do not differ except in immaterial details and that the Community design and the UK registered design are capable of subsisting in them.)

<sup>41</sup> The Directive on the legal protection of designs does not have any provisions on prior use.

### Example 1

Acme Designs Ltd ('Acme'), a company established in the UK, owns a new design for an electric toaster which was created during March 2008. Acme first placed toasters on the design on the market in the UK on 5 June 2008. Taking advantage of the period of grace, Acme delayed filing an application at OHIM to register the design until 6 November 2008.

On 7 August 2008, Electrix Consumer Products ('Electrix'), placed electric toasters on the market which incorporated Acme's design.

Electrix has a right of prior use as far as the RCD is concerned but can be sued for infringing the UCD if it has copied Acme's design (and the UK unregistered design right, if it subsists in the design). The right of prior use for the RCD is of use to Electrix only if it did not copy Acme's design.

### Example 2

As above, but Electrix first marketed its toaster during April 2008 (having recorded its design in a design document during that month).

Electrix will have its own UCD. Acme does not infringe that right as it could not have copied, having created its design first. Electrix may be able to challenge Acme's RCD, once granted, on the grounds that it is invalid for lack of novelty and individual character. Electrix may even claim that it is entitled to the RCD. However, Acme may have a UK unregistered design right in the design but could only enforce that right on proof of copying.

If Electrix copied Acme's design (perhaps because an employee of Acme gave a copy of the design document to Electrix in April 2008 in breach of confidence) the fact that Electrix made the design available to the public will be ignored as being an abuse in relation to the designer under Article 7(3). Acme will be the holder of both the UCD and RCD and may also sue for infringement of the UK unregistered design right if it subsists in the design. There may also be an action for breach of confidence.

### Example 3

As example 1 (Acme created the design in March 2008 and first marketed toasters on 5 June 2008) but Acme applied for a UK registered design on 6 November 2008 and applied for an RCD on 5 May 2009, claiming the priority of the UK application.

Electrix first marketed its toasters to the design on 7 August 2008.

Electrix has a right of prior use in relation to the RCD though not in relation to the UK registered design (as there is no such right except for restoration of a lapsed design). Electrix can be sued for infringing the UK registered design though it has a prior use defence in relation to the RCD. Electrix may be sued for infringing the UCD (and the UK unregistered design right if it subsists) if there is proof of copying.

### Example 4

As for example 3 above but Electrix first marketed its toasters to the design on 18 December 2008.

Electrix has no right of prior use under the RCD as the act was done after the priority date of the RCD and also infringes the UK registered design. On proof of copying, Electrix may also be sued for infringing the UCD and, if it subsists, the UK unregistered design right.

The right of prior use is one reason why it is not necessarily wise to take advantage of the period of grace. Even though it might be possible to rely on the UCD, proof of copying may not always be easy to obtain. Although deferring publication of the RCD does not change the situation with the right of prior use, it also limits infringement to acts of copying.

There are further 'exceptions' to the Community design which are found in the provisions on invalidity under Article 25, discussed later. Thus, apart from looking at the limitations on the Community design, a defendant may choose to challenge the validity of the design on the basis of one or more of the grounds for invalidity. Apart from failing to meet the basic requirements for protection, including conflicts with earlier designs, challenges to entitlement, specially protected emblems, etc. and works protected by copyright, there is also a 'must-match' exception under Article 110.<sup>42</sup> Although it does not appear that the OHIM will reject an application to register a design on this basis, it certainly is available as a defence.

Article 23 of the CDR provides for government use of Community designs but only to the extent that the use is necessary for defence or security needs. In the UK, specific provision for Crown use is made by the Community Design Regulations 2005,<sup>43</sup> the Schedule to which contains the detailed provisions. These are narrower than the Crown use provisions for the UK registered design (and the UK unregistered design right) and

<sup>42</sup> This is a transitional provision and applies until such time as the Regulation is amended with respect to 'must-match' spare parts. However, as the Commission is proposing to remove Member States' ability to retain protection for such parts if they choose, it seems unlikely that the exception for such parts under Article 110 will be repealed.

<sup>43</sup> SI 2005/2339. These Regulations came into force on 1 October 2005.

are, in line with the CDR, limited to service of the Crown necessary for essential defence and security needs. The Schedule contains all the provisions relating to settlement of terms, the impact on third parties including licensees and assignees, payment of compensation to the holder or exclusive licensee where a contract is not awarded to either of them because of Crown use and reference of disputes to the court.<sup>44</sup>

Finally, a potential defendant may decide to pre-empt matters and apply to a Community design court for a declaration of non-infringement. However, under Article 84(4), the validity of a Community design may not be put in issue in such proceedings.

<sup>44</sup> The Patents County Court or High Court in England and Wales, the Court of Session in Scotland and the High Court in Northern Ireland.

## REMEDIES

The remedies available in an action for infringement or threatened infringement are set out in Article 89 and are: an order prohibiting the acts (an injunction in England and Wales); an order to seize infringing products and materials and implements predominantly used to manufacture infringing goods (providing their owner knew the effect of the intended use or where it would be obvious in the circumstances); and other appropriate sanctions provided by the law of the Member State in which the acts are committed or threatened, including its private international law. As regards the UK this would mean damages or an account of profits as an alternative.

Under Article 90, where the law of a Member State allows, provisional, including protective, measures may be granted.<sup>45</sup> This would permit the grant of interim injunctions. In such actions, a plea otherwise than by way of counterclaim for invalidity shall be admissible.<sup>46</sup> A court only having jurisdiction on the basis of Article 82(5) (place where infringement alleged) may not grant provisional measures, including protective measures, and may only find infringement within that Member State in which it is situated. Provisional, including protective, measures can be granted only by courts having jurisdiction on the basis of the domicile of the defendant or claimant, as appropriate, or Spain where neither is domiciled or has an establishment in any Member State, or where the parties agree that a particular Community design court has jurisdiction.

<sup>45</sup> A plea other than by way of a counterclaim relating to invalidity shall be admissible though Article 85(2) applies *mutatis mutandis* (presumption of validity of UCD on proof that Article 11 is complied with and indication of individual character made).

<sup>46</sup> Article 85(2) applies *mutatis mutandis*. This is the presumption of validity for a UCD where the rightholder proves that the UCD is still current and indicates what constitutes its individual character. The defendant may contest validity by way of plea or counterclaim for invalidity.

<sup>47</sup> SI 2005/2339.

<sup>48</sup> This is so even though the unregistered Community design otherwise bears little resemblance to the UK unregistered design right, discussed in the following chapter.

### Groundless threats

There is a remedy of groundless threats of infringement proceedings in the UK which was provided for by the Community Design Regulations 2005<sup>47</sup> and which came into force on 1 October 2005. In terms of the registered Community design, the provisions are equivalent to those applicable to the UK Registered Design. In relation to the unregistered Community design, the provisions are equivalent to those for the UK unregistered design right.<sup>48</sup> Regulation 2 provides that where a person makes a threat of infringement proceedings, whether by circulars, advertisements or otherwise and whether or not entitled to or having an interest in a Community design, any person aggrieved may bring an action for groundless threats. Note that the action may be brought by any person aggrieved. It does not have to be the person receiving the threats. The action may be brought by a person manufacturing alleged infringing products where the threats have been directed at a retailer supplied by the manufacturer where the threat to the retailer relates to him stocking, selling or offering for sale the alleged infringing products.

The remedies are a declaration that the threats are unjustified, an injunction against a continuation of the threats and damages for any loss sustained as a result of the threats. However, the action is not available if the threats relate only to the making or importing of anything and the defendant has a defence if:

- in the case of the RCD, he shows that the acts complained of infringe the right and the claimant has not shown that the registration is invalid, or
- in the case of the UCD, the defendant shows that the right is infringed.

Mere notification that a design is an RCD or is protected by the UCD does not constitute a groundless threat of infringement proceedings.

A registered Community design which has not been published because the applicant requested that publication be deferred may be used as a basis for threats of litigation. In such a case, the person threatened may not be able to see the design alleged to have been infringed unless the proprietor is prepared to let him have sight of it. In *Quad 4 Kids v Dr Colin Campbell*,<sup>49</sup> the defendant was the proprietor of a number of registered Community designs subject to deferred publication. He informed eBay, using the formal VeRO notification procedure, that a number of quad bikes listed by the claimant on eBay infringed his Community designs. After receiving the notification, eBay removed the listings forthwith and informed the claimant accordingly in 'not entirely friendly terms'. The claimant brought a groundless threats action.

49 [2006] EWHC 2482 (Ch).

It is a defence to a groundless threats action to show that the design is or would be infringed by the acts complained of unless the claimant can show that the registration is invalid. However, validity of a registered Community design can only be raised in an application for invalidity before the Office for the Harmonisation of the Internal Market (Trade Marks and Designs) (OHIM) or by way of a counterclaim in infringement proceedings before a Community design court. It does not appear to be possible to challenge the validity of a Community design in a groundless threats action.<sup>50</sup> Where an action is brought concerning a registered Community design subject to deferred publication, Article 50(6) of the Regulation requires that the information in the register and in the file relating to the application has been communicated to the *person against whom the action is brought* (emphasis added). This clearly applies to infringement actions and not groundless threats actions.

50 The Community Design Regulation makes no provision for this possibility whatsoever. This may have been something those drafting the UK Community Design Regulations 2005 did not appreciate.

In *Quads 4 Kids*, eBay, in line with its usual policy when informed of potential infringements, removed the alleged infringing listings. It was said by counsel for the claimant that eBay's approach could be described as an institutionalised avoidance of litigation when faced with a threat.<sup>51</sup> Pumfrey J, said it was remarkably difficult to say whether the notification to eBay amounted to a groundless threat. On the one hand, if there were not an implicit threat of proceedings against eBay, why would it withdraw the listing? On the other hand, eBay would probably have been surprised if it was sued on the basis of the alleged offending listing. Nevertheless, Pumfrey J came to the conclusion that there was a seriously triable issue as to whether the notification to eBay was a threat of proceedings. He said (at para 28):

51 Although Dr Campbell claimed to have sent representations of his designs along with his notification by email to eBay there was no evidence of that and, in the meantime, it appeared that Dr Campbell's email system had been destroyed.

It may well be that we have to take a very slightly wider view of what amounts to an actionable threat than has previously been taken in the case, but the nature of the potential abuse in this case is quite clear.

He went on to say that unsupported and unchallengeable allegations of infringement of registered design rights are, potentially, an exceptionally damaging abuse of those rights. He was satisfied that there was, at least arguably, a threat of infringement proceedings in the notification to eBay. Had eBay not adopted its VeRO system and policy of removing material alleged to infringe, it would most likely have considered itself at risk of infringement proceedings. In the light of his finding, Pumfrey J then had to decide whether to grant an injunction restraining the issue of further threats. He thought the test in *American Cyanamid Co v Ethicon Ltd*<sup>52</sup> favoured the grant of an injunction. If the owner of an intellectual property right thinks that right is being infringed, he can commence infringement proceedings. He does not have to issue

52 [1975] AC 396.

threats first. In the present case, there was potential damage caused by making the threat as the claimant would lose sales as a result of the listings being removed. Moreover, it was far from clear whether Dr Campbell would be in a position to pay damages should an injunction be refused. He seemed to have been reluctant to bring infringement proceedings. This may have been because of the potential financial risks involved. A further factor was that the claimant had alleged that the designs were likely to be shown to be invalid on the basis of lack of novelty. The claimant had been selling its bikes before Dr Campbell applied to register his designs.<sup>53</sup> Pumfrey J said (at para 16):

... it will be seen immediately that what has in fact happened is that a removal and possible consequential commercial damage has been achieved by reference to a registered design, publication of which has been deferred, and which could only therefore be sued on in court if Dr Campbell was both willing to reveal the file of the applications, and also, to make an allegation of copying . . .

<sup>53</sup> Even taking account of the 12-month period of grace allowed to enable the owner of the Community design to test the market before deciding whether it is worth registering the design.

## OFFENCES

As for the UK registered design, there are offences associated with falsely representing that a design is protected as a Community Design. The Community Design Regulations 2005 reg 3 makes it an offence for a person falsely to represent that a design applied to, or incorporated in, a product sold by him is a RCD. The offence is triable summarily only and the maximum penalty on conviction is a fine on level 3 of the standard scale.

It is also an offence, after expiry of a RCD, to represent, expressly or by implication, that a design applied to, or incorporated in, a product sold is still an RCD. This offence is also triable only summarily and the maximum penalty on conviction is a fine not exceeding level 1 on the standard scale.

## REGISTRATION OF COMMUNITY DESIGN

Under Article 35 of the CDR, an application for registering a Community design must be filed at the OHIM or, to be forwarded to the OHIM, at the Member State's central industrial property office (Patent Office in the UK) or, in the Benelux countries, at the Benelux Design Office. The OHIM will inform the applicant indicating the date of receipt.<sup>54</sup>

The application must comply with a number of conditions under Article 36.<sup>55</sup> It must contain:

- request for registration;
- information identifying the applicant;
- a representation of the design suitable for reproduction (but if the design is two-dimensional and the application contains a request for deferment of publication, it may be replaced by a specimen);<sup>56</sup>
- an indication of the products in which the design is intended to be incorporated or to which it is intended to be applied.

Furthermore, other information may be required, depending on the circumstances, being:

- a description explaining the representation or specimen;
- a request for deferment of publication under Article 50;
- information identifying a representative, if appointed;

<sup>54</sup> No less than ten years after the CDR came into force, the Commission is to draw up a report on the operation of the system of filing applications with, if appropriate, proposals for revision.

<sup>55</sup> The fine detail of the information to be provided is contained in Commission Regulation (EC) No 2245/2002 of 21 October 2002 implementing Council Regulation (EC) No 6/2002 on Community design, OJ L 341, 17.12.2002, p 28.

<sup>56</sup> Under Article 5(2) of the Implementing Regulation, the specimen must not exceed 26.2 × 17 cm in size and weigh no more than 50 g or not exceed 3 mm thick and be capable of being stored unfolded alongside other documents, being of A4 size. The specimen must itself be replaced by a representation when finally published.

<sup>57</sup> The classification system is contained in the Annex to the Locarno Agreement Establishing an International Classification for Industrial Designs, 1968. There are 31 classes and a further miscellaneous class. Classes have one or more sub-classes. An example of a Locarno classification is 14.02 which is for data processing equipment as well as peripheral apparatus and devices.

- the relevant classification of products under the Locarno classification;<sup>57</sup>
- the citation of the designer or team of designers unless the right to be cited has been waived.

The application must also be accompanied by the fees, being the registration fee and publication fee or deferment fee, if appropriate. The current fees (all in euros) at the time of writing are as follows (the additional fees are calculated per each additional design):

<b>Registration fee</b>	230
Additional registration fee for 2–10 designs	115
Additional registration fee for more than 11 designs	50
<b>Publication fee</b>	120
Additional publication fee for 2–10 designs	60
Additional publication fee for more than 11 designs	30
<b>Deferred publication fee</b>	40
Additional deferment fee for 2–10 designs	20
Additional deferment fee for more than 11 designs	10

Therefore, if an application is to register five designs, all of which are to be published, the total fee will be €1,050. If applications are filed at a national central industrial property office of the Benelux Design Office for forwarding to OHIM, there will be an additional handling fee. At present the UK Intellectual Property Office (formerly known as the Patent Office) charges £15 for this.<sup>58</sup>

The information to be provided is, in relation to an indication of the relevant products, a description of the representation or specimen and the Locarno classification does not affect the scope of protection afforded by registration. The right given is to prevent third parties using the design without permission without being specific as to the type of product to which it is applied or in which it is incorporated.

The application may be made in any one of the official EU languages but a second language must also be used from among English, French, German, Italian or Spanish.

Several designs may be included in an application but, with the exception of ornamentation, must be in the same Locarno class. Each design in a multiple application may be dealt with separately, including being renewed, assigned or licensed separately (Article 37).

The date of filing is the date the application was filed at the OHIM, national central industrial property office or the Benelux Design Office, as appropriate. However, under Article 38, if the application is not forwarded within two months, the date of its receipt at the OHIM will be treated as the date of filing.

The priority of an earlier application in a State party to the Paris Convention for the Protection of Industrial Property or the World Trade Organisation may be claimed up to six months from filing that first application. The provisions also extend to countries giving a right of priority under bilateral or multilateral agreements. The rules on priority are contained in Article 41. Where a subsequent application has been made in a priority State but an earlier application to register that design in that State has been withdrawn, abandoned or refused without being published and without leaving any rights outstanding, not having been used for priority purposes, the subsequent application is the relevant one for the purposes of priority. That is, the earlier abortive application is of no consequence.

If priority is being claimed, a declaration to that effect must be made on the application form and a copy of the earlier application relied upon must be submitted, with a translation if required into one of the languages of the OHIM (Article 42). Priority may also be claimed under Article 44 for up to six months in relation to official or

<sup>58</sup> Community Design (Fees) Regulations 2002, SI 2002/2942 which came into force on 1 January 2003.

officially recognised international exhibitions within the terms of the Convention on International Exhibitions, signed at Paris 1928 as revised. The applicant must file evidence in the form of a certificate issued by the appropriate authority.

The effect of priority is that the priority date counts as the date of filing for the purposes of novelty, individual character, disclosure, right of prior use, conflicts with earlier RCD or national registered designs and the period of deferment.

Deferment of publication may be useful where the owner of a design does not want to give competitors advance notice of its appearance. Deferment may be useful, for example, in the fashion industry and give the owner time to have products made incorporating the design or to which it has been applied in advance of publication. Under Article 50, deferment of publication of an RCD will be 30 months from the date of filing or priority date, if there is one. At the end of the 30-month period, or earlier if the rightholder requests, the file and representation will be published in the Community Designs Bulletin provided that the publication fee is paid and, where the applicant has submitted a specimen instead of a representation (where the design is two-dimensional) a representation of the design is filed. Failure to comply with these requirements will have the effect of the design being treated as never having the effects specified in the CDR, that is, it will be as if it never existed.

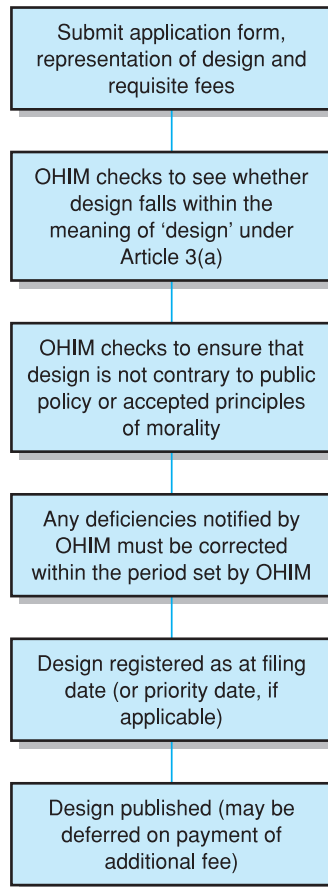

The registration procedure is set out in Articles 45 to 48 and is fairly straightforward, being basically a check that the necessary information has been provided and formal requirements met in accordance with the CDR and Implementing Regulation. There is no substantive examination for novelty or inventive character or for whether the exceptions apply apart from checking that the design falls within the meaning of design in Article 3(a) and it is not contrary to public policy or accepted principles of morality (Article 47). The OHIM may request that the applicant remedies deficiencies that are correctable with a period set by the OHIM (Article 46). Once everything is in order and the requirements have been satisfied, the application will be registered as an RCD, bearing the date of filing of the application in accordance with Article 38. The basic procedure for registration is shown in Figure 17.1.

Renewal of registration is covered by Article 13 and the Implementing Regulation and takes effect on the day following the day on which the registration expires. Renewal may be made up to four times, giving a maximum period of protection of 25 years. The renewal fee must be paid. The current renewal fees, in euros, are as follows.

1st renewal:	90
2nd renewal:	120
3rd renewal:	150
4th renewal:	180

Although the OHIM has to inform the rightholder and persons having a right under the RCD entered in the register of the forthcoming expiry of a registration in good time, it is under no legal duty to do so. Renewal may be made within a period of six months following the day the registration expires or within a further six months. The additional fees for late renewal are 25 per cent of the relevant renewal fee. If the design has not been renewed within the periods for late renewal, it may be restored on payment of a fee of €200 during the following six months but only if due care was taken to renew.<sup>59</sup> There must be a statement of grounds but restitution is discretionary. If, in the period between the loss of rights and restitution, a third party, in good faith, puts on the market products to the design, the rightholder may not invoke his rights against that third party who, in the two months following publication of the mention of re-establishment of the rights, may bring third party proceedings against the decision re-establishing the rights.

<sup>59</sup> Article 67. The provisions for *restitutio in integrum* are not limited to late renewal and also apply to other time limits.

**Figure 17.1** Registration of a Community design

## INVALIDITY AND SURRENDER

Unlike the position with the Community trade mark, there are no provisions for opposition to the registration of a Community design. As a result of this and the absence of a substantive examination of designs for novelty, individual character and some other requirements, the procedures for invalidity take on some importance. In some cases, ensuring that the register does not contain a substantial proportion of designs that are potentially invalid depends on the vigilance of others, in particular, those having conflicting rights, including designs that are similar to designs registered subsequently. Often invalidity will be brought up by way of a counterclaim in an action for infringement of a Community design.

The validity of a Community design may be brought up by way of counterclaim in an infringement action or, in the case of an RCD, by application to the OHIM. An application for invalidity of an UCD may only be brought before a Community design court, either on an application for invalidity or by way of a counterclaim in an infringement action. A further possibility is that a plea of invalidity of an RCD can be brought up in a Community design court in the absence of an infringement action if based on Article 25(1)(d) where the applicant claims it is invalid on the basis of an earlier national registered design right.

There is a presumption of validity of an RCD under Article 85(1) and also such a presumption in relation to the UCD where the holder proves the right still subsists and indicates its individual character. The defendant may challenge the validity of the UCD by way of a plea or counterclaim.

In the case of an action for a declaration of non-infringement, the validity of a Community design may not be put in issue (Article 84(4)).

Article 24 sets out the circumstances when an RCD or a UCD may be declared invalid. These provisions do not exactly tie up with the provisions of Articles 84 and 85 on actions before the Community design courts on invalidity and presumptions as to validity. In particular, Article 24 does not encompass a plea of invalidity in the absence of a counterclaim to an infringement action where the challenge is based on an earlier national registered design and is made by its owner as stated in Article 85(1).

The grounds of invalidity are set out in Article 25 and there are some restrictions as to the identity of the person who may invoke particular grounds. The grounds and, where applicable, limitations on persons who may invoke them are as follows:

- (a) the design does not fall within the meaning of ‘design’ in Article 3(a);
- (b) the design does not fulfil the requirements of Articles 4–9 (requirements including novelty, individual character, disclosure, technical function and interconnections exceptions, and exceptions based on public policy and accepted principles of morality);
- (c) by virtue of a court decision, the rightholder is not entitled (under the provisions as to entitlement in Article 14) – *this ground may only be invoked by the person who is entitled*;
- (d) conflict with earlier design made available to the public after the filing date or priority date, if there is one, but which is protected earlier. This applies to earlier RCDs or national registered designs having earlier filing dates (or priority dates, if applicable) but which had not yet been published when the application for the design in question had been filed (or at its priority date if relevant). Also included now are international registrations under the Geneva Act of the Hague Agreement which have effect in the Community – *this ground may be invoked either by the applicant for or holder of the earlier right or by the appropriate authority in the Member State concerned if national law permits this*;<sup>60</sup>
- (e) where a distinctive sign is used in a subsequent design and Community law or the law of a Member States gives the rightholder the right to prohibit such use (this could apply where the sign is a Community trade mark, a national trade mark or a sign protected by the law of passing off) – *this ground may only be invoked by the holder of that earlier right*;
- (f) where the design constitutes the unauthorised use of a work of copyright protected under the law of a Member State – *this ground may only be invoked by the copyright owner*;
- (g) where the design constitutes the improper use of badges, emblems, etc. protected under Article 6ter of the Paris Convention for the Protection of Industrial Property or other badges, emblems, etc. of particular public interest in a Member State – *this ground may be invoked either by the person or entity concerned by such use or the appropriate authority in the Member State concerned if national law permits this*.

Where an RCD has been declared invalid under grounds (b), (e), (f) or (g) it may be maintained in amended form provided it complies with the requirements for protection and the identity of the design is retained (Article 25(6)). This may require registration of a partial disclaimer.

Under Article 26, if a Community design is declared invalid, it is deemed to be invalid from the outset. In other words, it is as if it never existed. If partially invalid, that

<sup>60</sup> This is equivalent to anticipation of a patent application by a patent having an earlier priority date but which had not been published at the time the application was filed under the Patents Act 1977 s 2(3).

takes effect from the outset to the extent that it is declared invalid. However, invalidity does not affect any final decision on infringement which has been enforced before the invalidity decision nor any contract concluded prior to the invalidity decision in so far as it has been performed before that decision. Repayment of any sums paid under the contract may be claimed on the grounds of equity.

Under Article 52, an application for a declaration of invalidity before the OHIM must include a written reasoned statement and the fee for a declaration of invalidity (currently €350). The application will not be admissible if the matter has been finally decided in a Community design court. Any third party involved in current relevant infringement proceedings may be joined as a party to invalidity proceedings within three months of the commencement of the infringement proceedings, providing a written reasoned statement and the invalidity fee are paid (Article 54). Figure 17.2 shows the basic procedure for invalidity proceedings.

**Figure 17.2** Invalidation procedure before OHIM

Where, in proceedings before a Community design court, validity is put in issue by way of a counterclaim for a declaration of invalidity, and any of the grounds in Article 25 are found to prejudice the maintenance of a Community design, the court shall declare it invalid (Article 86). Where a counterclaim for invalidity of an RCD has been filed before a Community design court, it must inform the OHIM of the date it was filed and this fact will be entered on the register. The court may, on application of the rightholder of an RCD and after hearing the other parties, stay proceedings and ask the defendant to submit an application for a declaration of invalidity to the OHIM within a specified time limit. Failure to submit within the time limit has the effect of the counterclaim being withdrawn and the proceedings will continue without considering invalidity. Where a court has made a final ruling on a counterclaim for invalidity of an RCD, it will send a copy of the judgment to the OHIM, mention of which will be made in the register. A counterclaim for invalidity of an RCD may not be made if an application relating to the same subject matter and involving the same parties has already been determined by the OHIM in a decision that has become final.

When a judgment on invalidity of a Community design court has become final and it has found the design invalid, it is treated as having the consequences of invalidity specified in Article 26 in all the Member States,<sup>61</sup> as is the case on a finding of invalidity by the Invalidity Division of the OHIM.

An RCD may be surrendered by written declaration submitted to the OHIM by the rightholder but shall not have effect until entered in the register (Article 51(1)). If subject to deferred publication at the time, it shall be treated as never having had the effects specified in the CDR, that is, it will be as if it never existed. Partial surrender is possible providing its amended form complies with the requirements for protection and the identity of the design is retained. Surrender shall only be with the agreement of the proprietor of a right entered in the register. If a licence has been registered, the rightholder must prove that the licensee has been informed first of the intention to surrender. Where an action has been brought as to entitlement under Article 14 before a Community design court, the fact of surrender will only be registered if the claimant agrees.

61 Article 87.

## APPEALS FROM DECISIONS AT THE OHIM

Provisions for appeals from decisions of the OHIM in respect of the RCD are similar to those applicable to the Community trade mark. Article 55 gives a right of appeal against decisions of the examiners, the Administration of Trade Marks and Designs and Legal Division and Invalidity Divisions. An appeal has suspensive effect.<sup>62</sup> Any party to proceedings adversely affected by the decision may appeal with the other parties to the proceedings being parties to the appeal proceedings as of right (Article 56).

Notice of appeal must be filed in writing at the OHIM within two months of the date of notification of the decision being appealed but will only be deemed to be filed when the fee is paid, currently €800. Within a further four months after the date of the decision, a written statement setting out the grounds of appeal must be filed (Article 67).

The department whose decision is contested may, under Article 68, decide to rectify its decision if it thinks the appeal is admissible and well-founded, provided the appellant is not opposed by another party to the proceedings. If not rectified, the appeal must be remitted to the Board of Appeal without delay and without comment as to its merits.

If the appeal is admissible, under Article 59, the Board of Appeal shall examine whether the appeal should be allowed, inviting the parties, as often as necessary, to file observations, within a period fixed by the Board of Appeal, on communications from the other parties or issued by itself. The Board of Appeal then decides the appeal and

62 decision that does not terminate proceedings as regards one of the parties can only be appealed together with the final decision unless the decision allows separate appeal: Article 55(2).

may exercise any power within the competence of the department responsible for the decision or remit the case to that department for further prosecution, in which case the department will be bound by the *ratio decidendi* of the Board of Appeal in as much as the facts are the same (Article 60).

Decisions of the Boards of Appeal take effect only after the period of two months after notification of its decision (the time limit for bringing a further appeal to the European Court of Justice) or where an action has been brought before the Court of Justice, from the date such action was rejected, if that was the decision of the Court of Justice.

Appeals against decisions of the Boards of Appeals go to the European Court of Justice on grounds of lack of competence, infringement of an essential procedural requirement, infringement of the EC Treaty, the CDR or any rule of law relating to their application or abuse of power (Article 61). The Court of Justice may annul or alter the contested decision and the action shall be open to any party before the Board of Appeal adversely affected by its decision. The OHIM shall take necessary measures to comply with the judgment of the Court of Justice.

## JURISDICTION

Each Member State is required to designate as limited a number as possible of national courts and tribunals as Community design courts under Article 80 which have to be communicated to the Commission no later than 5 March 2005. In the UK, the designated courts are the Patents County Court, the High Court, the Court of Appeal and the Court of Session in Scotland.

Community design courts have exclusive jurisdiction on actions for infringement of Community designs, actions for invalidity of the UCD and counterclaims for declarations of invalidity for the RCD connected with infringement actions. Where the national law permits (as it does in the UK) the courts also have jurisdiction for declarations of non-infringement of Community designs. Community design courts also appear to have jurisdiction to hear actions relating to entitlement. This is not explicit in the main provisions governing the jurisdiction of Community design courts but Article 51(5) makes it clear that they do have such jurisdiction; although Article 51 deals with surrender, it refers to actions in Community design courts pursuant to Article 14 which covers entitlement.<sup>63</sup>

Under Article 82, the international jurisdiction of Community design courts is established for claims referred to in Article 81<sup>64</sup> subject to applicable provisions of the Convention on Jurisdiction and the Enforcement (the 'Brussels Convention') according to Article 79<sup>65</sup> (see below). There are three main rules for determining jurisdiction, only one of which will apply in a particular case. They are:

- the Member State in which the defendant is domiciled or, if not domiciled in any Member State, any Member State in which he has an establishment;<sup>66</sup>
- where the defendant is neither domiciled nor has an establishment in any Member State, the action shall be brought before the courts in the Member State in which the claimant is domiciled or has an establishment, as appropriate;
- if neither the defendant nor claimant are domiciled or have an establishment in any Member State, proceedings shall be brought in the Member State in which the OHIM is based, being Spain.

There remain some alternative ways of determining in which Member State the Community design courts have jurisdiction. Articles 17 and 18 of the Brussels Convention apply, which allow the parties to agree that a different Community design court shall

<sup>63</sup> Article 15, which covers claims relating to entitlement, makes no mention of the forum for such claims.

<sup>64</sup> These are infringement actions, declarations of non-infringement, declarations for invalidity of the UCD and counterclaims for invalidity of a Community design raised in infringement actions.

<sup>65</sup> Convention on Jurisdiction and Enforcement of Judgments in Civil and Commercial Matters signed in Brussels on 27 September 1968, OJ L299, 31.12.1972, p 32. For most purposes and for most Member States, this has been replaced by Council Regulation (EC) No 44/2001 of 22 December 2000 on jurisdiction and the recognition and enforcement of judgments in civil and commercial matters, OJ L12, 16.01.2001, p 1 (the 'Brussels Regulation'). Article 79 of the CD Regulation disapplies certain provisions of the Brussels Convention, in particular Articles 2, 4, 5(1), (3), (4) and (5), 16(4) and 24 in relation to actions and claims referred to in Article 85 of the CD Regulation.

<sup>66</sup> Article 82. This is subject to those parts of the Brussels Convention applicable by virtue of Article 79 of the CD Regulation.

have jurisdiction and a different court may have jurisdiction if the defendant enters an appearance there, otherwise than solely to challenge jurisdiction.

Where proceedings relate to infringement (and a declaration of invalidity, if raised, in an infringement action), under Article 82(5) the Community design courts in the Member States in which the infringement has been committed or threatened also have jurisdiction though, in this case, under Article 83(2), the court will have jurisdiction only in respect of acts of infringement committed or threatened without the territory of the Member State in which the court is situated. In the other cases above, the court has jurisdiction in relation to acts of infringement committed or threatened within the territory of any Member State. It can be seen that a defendant may prefer to enter an appearance in a court in a jurisdiction most suitable for him in accordance with Article 18 of the Brussels Convention, though this is not available where the sole purpose is to contest the court's jurisdiction. A defendant cannot go forum shopping by virtue of Article 82(5) to take advantage of jurisdiction limited to infringement in the Member State in which the court is situated because such an action may only be commenced by the person alleging infringement. Where the alleged infringement is taking place in a number of jurisdictions, a claimant would select a court on the basis of the other provisions.<sup>67</sup>

The provisions in the Brussels Convention that are disapplied in the case of actions and claims in Article 85 (proceedings for infringement and presumption of validity) are:

- Article 2 – persons domiciled in a Contracting State shall be sued in that State.
- Article 4 – if a person is not domiciled in a Contracting State, the jurisdiction of the courts in each Contracting State shall, subject to Article 16 of the Convention, be governed by the laws of that State.
- Article 5(1), (3), (4) and (5) – supplementary rules on jurisdiction applying to contract, tort, damages or restitution based on criminal liability and in respect of disputes concerning a branch, agency or establishment.<sup>68</sup>
- Article 16(4) – where registration or validity of a patent, trade mark, design or similar right subject to formalities such as registration or deposit is involved.<sup>69</sup>
- Article 24 – applications for provisional, including protective, measures may be made in a Contracting State other than the one having jurisdiction as to the substance of the matter.

Invalidity actions may only be brought before the Community design courts on the same grounds as apply to applications for invalidity before the OHIM and may only be brought by the persons entitled to make such applications before the OHIM (Article 84). If a counterclaim for invalidity is an action in which the rightholder is not already a party, he shall be informed and may be joined as a party.

The applicable law in cases before the Community design courts is stated in Article 88 as that set out in the CD Regulation except where not covered by the Regulation, in which case it will be the law of the Member State in which the court is situated, including its private international law. In terms of procedure a Community design court will apply the rules governing the same type of action relating to a national design right in its Member State.

A Community design court must stay an action, other than one for a declaration of non-infringement, where the validity of a Community design is already in issue as a result of a counterclaim or, in the case of an RCD, where an application for invalidity has been filed at the OHIM.<sup>70</sup>

Where a national court is dealing with an action other than one under Article 81, it must treat a Community design as valid.<sup>71</sup> The presumption as to validity applies under Article 85(2) providing the rightholder proves that the conditions in Article 11 apply and indicates what the individual character is (Article 94).

<sup>67</sup> A further rule for determining jurisdiction for actions outside Article 81 is given in Article 93 on the basis of *ratione loci* and *ratione materiae* (jurisdiction based by reason of location or the subject matter respectively).

<sup>68</sup> Under Article 5(1), where a breach of contract is alleged, the action may be brought in the State in which the obligation in question was to be performed.

<sup>69</sup> In such cases, the courts in the State in which the right was secured by registration or deposit have sole jurisdiction.

<sup>70</sup> Article 91. Where the OHIM has an application for invalidity and it is in issue in a Community design court, the OHIM must stay proceedings; although one of the parties at a Community design court may ask the court to stay proceedings, in which case the OHIM will continue with the proceedings. Whichever case applies, the court or the OHIM may continue regardless if there are special grounds to continue the hearing. Even if staying the action, a Community design court may still grant provisional measures including protective measures for the duration of the stay.

<sup>71</sup> An example is where entitlement is in issue.

Finally, there are provisions to deal with parallel actions under Article 95. Where actions are brought before the courts of different Member States, one on the basis of a Community design and the other on the basis of a national design right providing simultaneous protection, the court other than the one first seized must decline jurisdiction on its own motion. It may instead stay the action if the jurisdiction of the other court is contested. What must be meant here is that there is a Community design and a registered national design for the same (that is, identical) design. The national design right cannot be an unregistered design right, as in the UK, as Article 96 states that the Regulation is without prejudice to the law of Member States relating to, *inter alia*, unregistered designs.

Where a Community design court is hearing an action for infringement or threatened infringement on the basis of a Community design, it shall reject the action if a final decision on the merits has been given on the same cause of action between the same parties on the basis of a design right providing simultaneous protection and vice versa. This prevents parties re-litigating what is essentially the same issue. This is all without prejudice to provisional measures including protective measures.

Appeals from Community design courts of first instance to ‘second instance’ courts are permissible in respect of Article 81 proceedings subject to the conditions for appeal determined by national law in a Member State. National rules governing further appeal shall be applicable in respect of judgments of Community design courts of second instance (Article 92). In the UK, the Patents County Court and High Court are courts of first instance, the Court of Appeal is the court of second instance and final appeal to the House of Lords is possible.<sup>72</sup>

<sup>72</sup> Although, given the lack of jurisprudence on the CD Regulation, it is likely that a reference to the Court of Justice under Article 234 of the EC Treaty would be made before it got that far.

## UK REGISTERED DESIGN

The UK’s registered design system goes back quite a long way and has undergone many changes, perhaps the most radical being as a result of implementing Directive 98/71/EC of the European Parliament and of the Council of 13 October 1998 on the legal protection of designs.<sup>73</sup> This Directive, intended partially to harmonise registered design law throughout the European Community, made significant changes to the UK law on registered designs and also brought it into conformity with the CD Regulation in many respects.<sup>74</sup> Whilst the CD Regulation left a number of aspects to be determined largely by national laws (such as dealing with a Community design), many of the important provisions of design law, particularly in relation to the criteria for protectability and invalidity, are essentially the same; although there are some differences.

This part of the chapter looks at the UK registered design system as modified by the Directive and subsequently. It concentrates on those features that are additional to or different to those under the Community design,<sup>75</sup> though it is worth recalling that the Community design has a unitary nature and applies throughout the Community and cannot be registered, assigned, surrendered or found to be invalid or its use prohibited except in relation to the whole Community unless provided for in the CD Regulation. The UK national registered design, of course, applies only within the territory of the UK and other countries to which it has been extended. Another significant difference is that the Community design provides for an informal unregistered right of three years in addition to a registrable right (equivalent to the UK registered design but on a Community-wide scale). The UK’s Registered Designs Act 1949 does not extend to an informal right and the UK’s unregistered design right, provided for by Part III of the Copyright, Designs and Patents Act 1988, bears little resemblance to either the Community design and the UK registered design although, in a good proportion of

<sup>73</sup> OJ L 289, 28.10.1998, p 28.

<sup>74</sup> The Community design came later than harmonisation of national registered designs but the latter was clearly influenced by the plans to create a unitary Community design.

<sup>75</sup> There is bound to be some repetition as some of the provisions are the same, equivalent or very nearly the same as for the Community design. It must be remembered, however, that the Community design is completely separate to the national registered design systems and decisions in one system are not binding on the other system. This has been stated on a number of occasions by the European Court of Justice in respect of the Community trade mark and the harmonised national trade mark systems and there is no reason to believe the same will not apply to designs.

cases, a design may be protected by the RCD, the UCD, the UK registered design and the UK unregistered design.<sup>76</sup>

<sup>76</sup> The UK unregistered design is the subject matter of the following chapter.

## BRIEF HISTORY OF THE UK REGISTERED DESIGN

A system of registration for designs has been around since the early part of the nineteenth century. The initial demand for a system of registration came from the textile industry, but now all manner of designs are registered, some of the most common kinds of designs for which registration is applied for in the classes of packaging and containers, recording, communications and information retrieval equipment and furnishing. Initially dealt with separately, for example, by the Copyright in Designs Act 1839, registered designs were for some time governed by the same statute as patents and, for a time, trade marks.<sup>77</sup> Eventually, in 1949, patents and designs legislation were separated and the present statute dealing with registered designs is the Registered Designs Act 1949 which was amended by the Copyright, Designs and Patents Act 1988.<sup>78</sup> That amended version of the 1949 Act came into force on 1 August 1989.

<sup>77</sup> For example, the Patents, Designs and Trade Marks Act 1883 and the Patents and Designs Act 1907.

<sup>78</sup> Prior to this amendment, the right was referred to as the 'copyright in the registered design' under the old Registered Designs Act 1949 s 7(1).

<sup>79</sup> OJ L 289, 28.10.1998, p 28.

The 1949 Act was amended yet again by the Registered Designs Regulations 2001 as from 9 December 2001. The changes were made so as to comply with Directive 98/71/EC of the European Parliament and of the Council of 13 October 1998 on the legal protection of designs<sup>79</sup> which was intended to harmonise some aspects of the registered designs system in Europe and, in some respects, the UK law on registered designs has been very significantly altered. In particular, the new law differs in terms of subsistence, rights of the proprietor, infringement, exceptions and invalidity. Consequently, a good proportion of the case law that was applicable under previous versions of registered design law is of little or no relevance under the law as it now stands. The old law prior to 2001 is largely of academic interest now though may give some insight into the rationale of design law and why it has changed. Further significant modification and clarification has been introduced by virtue of the Intellectual Property (Enforcement, etc.) Regulations 2006<sup>80</sup> and the Regulatory Reform (Registered Designs) Order 2006.<sup>81</sup> The following description of the UK Registered Designs Act 1949 takes account of these changes.

<sup>80</sup> SI 2006/1028, in force 29 April 2006.

<sup>81</sup> SI 2006/1974, in force 1 October 2006.

## IMPLEMENTATION OF THE DIRECTIVE

As mentioned earlier, Directive 98/71/EC on the legal protection of designs was not intended to harmonise design law fully but was aimed at harmonising, in particular, those aspects of registered designs that could otherwise affect trade between Member States. Essential to this purpose was the creation of a level playing field in terms of the requirements for registrability and exceptions thereto and provision throughout the Community for the same scope of protection, being the rights of the proprietor, acts of infringement and defences to infringement. Provisions relating to sanctions, remedies and enforcement were left to national law and Member States are free to determine procedural provisions concerning registration, renewal and invalidation; but the grounds of invalidity are set out in the Directive. Even then, the Directive left some discretion to Member States, for example, in respect of some of the grounds for invalidity.

A more controversial aspect of the Directive was that it allowed Member States to continue to protect 'must-match' spare parts such as replacement panels for vehicles. The only proviso was that any changes to the protection could only be to liberalise the market. Some Member States, such as the UK, chose to deny protection for such parts whilst others, such as France, continued to protect them. As mentioned at the beginning of this chapter, moves are now afoot to modify the Directive to deny protection

through design law of such parts, bringing the Directive and CD Regulation together on this issue.

The latest date for compliance with the Directive was 28 October 2001. The UK was late implementing it and the new law came into force on 9 December 2001 as a result of the Registered Designs Regulations 2001 which contain a number of transitional provisions dealing with other matters.

The late implementation of the Directive was subject to a challenge on the basis that the Regulations, or part of them, were *ultra vires*. The problem was that Article 11(8) of the Directive allowed Member States to retain their old law in relation to invalidity in respect of designs for which registration was applied for before the last date for compliance with the Directive, being 28 October 2001, which is what the UK purported to do. This meant that, where registration of a design was applied for before that date, the benefit of the 12-month period of grace did not apply. As the new law was not implemented until 9 December 2001, that meant that there would be some applications (filed between 28 October 2001 and 9 December 2001) which should have the advantage of the period of grace but did not in the UK.<sup>82</sup> Regulation 12(2) and (3) of the Registered Designs Regulations 2001 provided that registrations resulting from applications made on or after 1 August 1989 and before the coming into force of the 2001 Regulations should continue to be subject to the old provisions on cancellation and invalidity.

<sup>82</sup> It is not possible to legislate retrospectively by means of a statutory instrument, hence the Regulations could not backdate the period of grace to 28 October 2001.

<sup>83</sup> [2006] Ch 337. A submission that the Regulations were invalid in their entirety was rejected.

<sup>84</sup> Under the old law a design had to be new. A design was not new, *inter alia*, if it had been previously 'published' in the UK. This was interpreted strictly.

<sup>85</sup> [2005] RPC 713.

In *Oakley Inc v Animal Ltd*<sup>83</sup> (with the Secretary of State for Trade and Industry as intervener), the claimant filed its application to register a design for sunglasses on 27 September 1996, claiming the priority of an earlier application elsewhere. The priority date was 10 June 1996. However, exactly one month before the priority date, the claimant commenced importing sunglasses to the design into the UK. Therefore, if the old law applied, the design would be invalid for lack of novelty,<sup>84</sup> but, if the new law applied, the design would meet the requirements for novelty because of the period of grace. Even if the provision could have been rewritten to make the relevant cut-off date for the old law on validity as 28 October 2001, this would not help Oakley. However, it was submitted that, as the provision in the Directive allowing Member States to choose whether or not to retain their old law on validity to pre-existing applications was a derogation, this required a policy choice which could only be taken by Parliament. That being so, reg 12(2) and (3) should be excised from the Regulations, leaving the period of grace available for all earlier applications to register.

At first instance,<sup>85</sup> Peter Prescott QC sitting as deputy judge of the High Court agreed that the transitional provisions retaining the old law were *ultra vires* as the Secretary of State did not have the power to implement a derogation under s 2(2) of the European Communities Act 1972. However, rather than strike the offending provisions out he held that he could rewrite them so that the effective date was 28 October 2001. Oakley appealed to the Court of Appeal where all three judges held that the Regulations were validly made by the Secretary of State whose powers to make such Regulations extended to implementing derogations from Directives. The consequences of a decision to the contrary would have had profound implications in all fields of law where Directives containing derogations, as many do, had been implemented. In the Court of Appeal, Jacob LJ said (at para 48):

Who would have guessed that a pair of fashion sunglasses could lead to a case of such constitutional importance that the Government found it necessary to intervene by its chief law officer, the Attorney General?

<sup>86</sup> Formerly Article 189.

Article 249 of the EC Treaty<sup>86</sup> states that Directives '... shall be binding, as to the result to be achieved, upon each Member State to which it is addressed, but shall leave to the national authorities the choice of forms and methods'. Jacob LJ said that this gave

Member States some discretion as to how a Directive is implemented. As a result, it was common for Directives to be couched in general terms and to provide for alternatives. He said that there were three types of provision in a Directive, being those which:

- may be implemented only in one way;
- allow a choice of alternatives;
- allow Member States to fill in the details.

He also said that there was no rational basis for distinguishing between an option to derogate and an option to achieve one of a number of alternatives. In relation to the Directive on the legal protection of designs, Jacob LJ noted that it contained an option (refusal of registration or invalidity of certain badges and emblems, etc.) and a derogation allowing Member States to apply the old law on invalidity for pre-existing design registrations. He saw no reason to differentiate between the two.

Section 2(2) of the European Communities Act 1972 states:

(2) Subject to Schedule 2 to this Act, at any time after its passing Her Majesty may by Order in Council, and any designated Minister or department may by regulations, make provision –

- (a) for the purpose of implementing any Community obligation of the United Kingdom, or enabling any such obligation to be implemented, or of enabling any rights enjoyed or to be enjoyed by the United Kingdom under or by virtue of the Treaties to be exercised; or
- (b) for the purpose of dealing with matters arising out of or related to any such obligation or rights or the coming into force, or the operation from time to time, of subsection (1) above;

and in the exercise of any statutory power or duty, including any power to give directions or to legislate by means of orders, rules, regulations or other subordinate instrument, the person entrusted with the power or duty may have regard to the objects of the Communities and to any such obligation or rights as aforesaid.

Section 2(2) contemplates Directives being implemented by statutory instrument but certain things, including taxation, mentioned in Sch 2, can only be implemented by an Act of Parliament. Jacob LJ said that he found startling the conclusion of the deputy judge that derogations in Directives, not being within Sch 2, can only be implemented by Acts of Parliament.

In relation to s 2(2)(a), Jacob LJ said that the test of whether it allows the transposition of a Directive by statutory instrument is whether there is anything in it which is not explicitly contemplated in the Directive. If there is not, then it falls within s 2(2)(a) as it is made for the sole purpose of implementing the Directive. He said that the Registered Designs Regulations 2001 was such a case, rejecting the deputy judge's view that the section applied only to those parts of Directives which were essential and non-optional. The result would be that anything involving any sort of policy decision would have to be implemented by Act of Parliament, which would mean that almost all Directives would have to be complied with, at least in part, by Act of Parliament. This, as Jacob LJ pointed out, could hardly be what Parliament had intended when it passed the European Communities Act 1972.

Although not strictly relevant because of the finding in relation to s 2(2)(a), Jacob LJ went on to look at s 2(2)(b) which allows implementation by statutory instrument, matters arising out of or relating to Community obligations or Treaty rights. The deputy judge considered that a narrow construction should be taken, as this was what he described as a 'King Henry VIII' clause.<sup>87</sup> Another factor was that monopolies were to be tolerated only when good reason could be shown.

These views were both rejected by the Court of Appeal. Jacob LJ said the approach to s 2 could not be different depending on whether it involved an intellectual property right granting a monopoly. He held that the approach to King Henry VIII clauses was

<sup>87</sup> A reference to the King's supposed appetite for absolute powers.

not applicable as the European Communities Act 1972 was *sui generis* and its general purpose was to bring European Community law into the UK and this was a paramount consideration.

Jacob LJ considered the difference in the ambit of s 2(2)(a) and (b). If s 2(2)(a) enabled the provision of the detail to implement a Community obligation, then s 2(2)(b) appeared to go further and allowed more to be done by delegated legislation. On the other hand, if the provision of detail is not covered by s 2(2)(a), it must be within s 2(2)(b). The wider the ambit of s 2(2)(a), the narrower that of s 2(2)(b). Section 2(2)(b) must add more to s 2(2)(a) but just how much more will depend on the circumstances, with the statutory language as a guide. Jacob LJ preferred the view that ‘related to’ meant not distinct, separate or divorced from the Community obligation in question.<sup>88</sup> However, that did not mean that the power to make subordinate legislation was virtually unlimited.<sup>89</sup> Waller LJ thought that s 2(2)(a) permitted the implementation of a derogation by statutory instrument as a derogation did not arise out of or relate to a Community obligation but was part of bringing the obligation into force. He also thought that s 2(2)(b) enabled further measures to be taken which naturally arise from or closely relate to the primary purpose to be achieved.

Consequently, the Court of Appeal considered that the Registered Designs Regulations 2001 were validly made and it was unnecessary to decide whether reg 12 was severable or should be rewritten. However, the deputy judge had already submitted a reference to the European Court of Justice for a preliminary ruling under Article 234 of the EC Treaty asking whether late adoption of a derogation could still be valid or whether the opportunity to adopt the derogation ceased to exist after the latest date for implementing the Directive.<sup>90</sup> The case was later withdrawn and removed from the register of the Court of Justice.<sup>91</sup> It seems we will never know which is the correct view.

<sup>88</sup> Two apparently conflicting decisions on the scope of s 2(2)(b) were considered, being *R v Secretary of State for Trade & Industry ex parte Unison* [1996] ICR 1003 and *Addison v Denholm Ship Management (UK) Ltd* [1997] ICR 389. In the latter, Lord Johnson suggested that if the Directive is the parent, the child cannot be larger, wider or have greater implications than the parent allows.

<sup>89</sup> Jacob LJ’s view, *obiter*, was that s 2(2)(a) covers all forms of implementation, ‘... whether by choice of explicit options or by way of supply of detail’.

<sup>90</sup> Case C-267/05 *Oakley Inc v Animal Ltd*.

<sup>91</sup> OJ C 154, 01.07.2006, p 14.

## REQUIREMENTS FOR REGISTRABILITY

The requirements for registrability of a UK registered design closely follow those for the Community design, being that:

- the design comes within the definition of ‘design’;
- the design is new;
- the design has individual character;
- the right is not excluded under the provisions relating to technical function or because it is contrary to public policy or morality;
- registration is refused because the design involves the use of certain emblems, etc.

Substantive grounds for refusal of registration contained in s 1A of the Act were repealed by the Regulatory Reform (Registered Designs) Order 2006<sup>92</sup> with effect from 1 October 2006. Consequently, applications to register designs are no longer examined for novelty and individual character. The Registrar still examines applications for the technical function exceptions, public policy and morality and whether they involve the use of certain emblems, etc. He also has a discretion to refuse if the application does not comply with rules under the Act.<sup>93</sup> He must also refuse an application if it appears to him that the applicant is not entitled to apply.<sup>94</sup> Of course, it remains possible for the validity of a registration to be challenged in invalidity proceedings brought under s 11ZB.<sup>95</sup>

### Meaning of ‘design’

Designs are incorporated in or applied to products. Under s 1(3) of the Registered Designs Act 1949, a ‘product’ means:

<sup>92</sup> SI 2006/1974.

<sup>93</sup> The current rules are the Registered Designs Rules 2006, SI 2006/1975.

<sup>94</sup> Section 3A.

<sup>95</sup> The grounds of invalidity are set out in s 11ZA and, *inter alia*, relate to the definition of design, novelty, individual character, designs dictated by technical function, public policy or morality and in relation to certain emblems, etc. In some cases, invalidity proceedings can be brought by any person interested.

... any industrial or handicraft item other than a computer program; and, in particular, includes packaging, get-up, graphic symbols, typographic type-faces and parts intended to be assembled into a complex product.

And a complex product is:

... a product which is composed of at least two replaceable component parts permitting disassembly and reassembly of the product.

Finally, a 'design' is, under s 1(2):

... the appearance of the whole or a part of a product resulting from the features of, in particular, the lines, contours, colours, shape, texture or materials of the product or its ornamentation.

These definitions are almost identical to the equivalent ones for the Community design and in the Directive but there are some very minor differences, none of which should have any consequence. Where these provisions are in issue, the court will simply turn to the text of the Directive. It could be questioned why, in implementing these provisions, the definitions in the Directive were not simply restated verbatim rather than rewriting them introducing very minor differences.<sup>96</sup> This draftsman's penchant for rewriting rather than copying out measures from the European Patent Convention was criticised by Jacob LJ as unhelpful.<sup>97</sup> The same sentiment should hold true in terms of implementing Directives where the provisions do not require the addition of detail.

As with the Community design, the definition of product is very wide and the examples given within it are not exhaustive. Although couched in terms of 'items', whether industrial or handicraft, the inclusion of graphic symbols does not mean that the definition is necessarily restricted to tangible items, notwithstanding the exclusion of computer programs. Graphic symbols and icons generated on the screen display of a computer or mobile phone come within the meaning and should be registrable if the other requirements are satisfied.<sup>98</sup> The Directive gives no guidance although the exclusion of certain protected emblems and the fact that a declaration of invalidity of a registered design can be sought, *inter alia*, by the owner of the copyright in any work used in the design without consent, adds weight to this argument.<sup>99</sup>

The meaning of a complex product is important in respect of the substantive grounds for refusal of registration but another point to bear in mind is that, otherwise and in principle, there is nothing to prevent registration of component parts or larger products. However, as a complex product is still a product, registration of a design applied to the whole of a complex product when assembled should be possible if the other requirements are met. For example, in the case of a chest of drawers the design of the item of furniture as a whole could be registrable. The drawers themselves may be registered if, for example, they have some decoration applied to them, notwithstanding the exceptions for designs dictated by technical function, described later.

It is possible for the product in question to have a three-dimensional shape or to be flat or to be made from a piece of wire, like a wire coat hanger. Even a product's material could be deemed a design, for example, if the product is made of gold and like products have never before been made of gold. Of course, a limiting factor will be the other requirements for registrability.

A design can relate to part of a product only. This is important where other features of the appearance of the product are not new, do not have individual character or are otherwise excluded. If part only of the overall design of the product is new, has individual character and is not otherwise excluded, that part of the design will be registrable. In such a case, registration may be subject to a disclaimer if the representations

<sup>96</sup> For example, the definition of design in the Directive refers to '... texture and/or materials of the product itself and/or its ornamentation' whereas the Act refers to 'texture or materials of the product or its ornamentation'.

<sup>97</sup> *Unilin Beheer NV v Berry Floor NV* [2005] FSR 56 at para 39.

<sup>98</sup> Of course, it is the symbol itself for which protection would be afforded, not the computer program which generates it. Before changes to the Act to comply with the Directive, icons and screen displays had been accepted as potentially registrable when inherently built into a machine such as a computer on the basis that they were inherently built into software, the inclusion of which in a computer was part of an industrial process: see *Apple Computer Inc's Design Applications* [2002] FSR 602.

<sup>99</sup> Registered Designs Act 1949 s 11ZA(4).

**100** However, under s 11ZD, any modification, including a disclaimer, must not be such that the identity of the design is not retained.

of the design submitted with the application show aspects that are not, in themselves, registrable.<sup>100</sup>

Although there is no express requirement for eye-appeal or aesthetic quality it is clear that appearance is an important requirement. The definition of ‘individual character’, discussed below, reinforces this. However, whilst the design has to have visual impact, this does not mean that the design has to possess any aesthetic quality. Recital 14 to the Directive makes this clear.

## Novelty

Under s 1B(1), a design must be new and have individual character (that latter aspect is examined in the subsequent section of this chapter). Section 1B(2) states that a design is new if:

... no identical design or no design whose features differ only in immaterial details has been made available to the public before the relevant date.

There are some differences here when compared with the Community design which also has to deal with novelty for the UCD. The provisions in the Registered Designs Act 1949, as amended, should however be equivalent to those in the Directive. However, the Act has to make specific provision for the situation where an application to register a design is subsequently modified.

The first question to consider is, how similar must a pre-existing design be to prevent a design being considered to be new? The phrase ‘design whose features differ only in immaterial details’ was also used in the old version of the Act to determine novelty and, as the Directive uses the same test,<sup>101</sup> it is reasonable to assume that prior case law can still be of assistance. Although the old law also used the test of variants commonly used in the trade, the comments of Laddie J in *Household Articles Ltd’s Registered Design*<sup>102</sup> remain apt. In that case, he said (at 685):

... if *all* the differences between the prior art and the design in suit are immaterial or common trade variants then the design in suit is deemed not to be novel. Immaterial details are features which make no significant visual impact on the design.<sup>103</sup> (original emphasis)

Laddie J also held that novelty did not have to be of a startling or groundbreaking variety. He also confirmed that novelty should be judged through the eyes of the ordinary customer for, or trader in, the relevant goods. In other words, someone familiar with goods of that type. The Act does not state this explicitly but it seems reasonable to expect novelty still to be determined in this way, especially as the test for individual character is in terms of the overall impression the design makes on the informed user.

To be new the design must not have been made available to the public before the relevant date. Under s 1B(7) the relevant date is the date on which the application for registration was made, or is treated as being made by virtue of:

- the date when an application to register has been modified such that it has altered significantly (this is at the Registrar’s discretion) (s 3B(2));
- where an application has disclosed more than one design which has been modified to exclude one or more designs and these are then applied for subsequently, the Registrar may treat the date of application as the date the earlier application was made (again the Registrar has discretion) (s 3B(3));
- following refusal of registration (for failure to comply with ss 1B–1D or Sch 1A – specially protected emblems etc.), any later application modified so as to comply for

**101** Although the Directive expresses it in a slightly different way, stating that designs shall be deemed to be identical if their features differ only in immaterial details: Article 4.

**102** [1998] FSR 676.

**103** He went on to say that, on the other hand, a common trade variant may well have visual significance.

effectively the same design is treated as having been made at the date of the first application (s 3B(5));

- where the application is based on the priority of an earlier application in a Convention country, the date is treated to be the date of that application (if more than one, the date of the earliest) but no application can be made to take advantage of this provision if the earlier or earliest application in a Convention country was made more than six months before the application in the UK (s 14).<sup>104</sup>

Whilst these provisions are fairly self-explanatory, in most cases, the relevant date will be the date of filing the application; the next most common will be where priority is claimed from a Convention country.

The relevant date is the date taken to determine whether a design has been made available to the public. To the basic rule there are a number of disclosures which will be ignored in determining whether a design has been made available to the public before the relevant date. Under s 1B(5), a design has been made available to the public before the relevant date if it has been published (whether following registration or otherwise), exhibited, used in trade or otherwise disclosed before that date, and the disclosure does not fall within the excepted disclosures in s 1B(6). Those are, including the 12-month period of grace:

- (a) disclosures such that the design could not reasonably have become known before the relevant date in the normal course of business to persons carrying on business in the European Economic Area (EEA)<sup>105</sup> and specialising in the sector concerned;
- (b) disclosures made to a person other than the designer, or any successor in title, under conditions of confidentiality (whether express or implied);
- (c) disclosures made by the designer, or any successor in title, during the period of 12 months immediately preceding the relevant date;
- (d) disclosures made by a person other than the designer, or any successor in title, during the period of 12 months immediately preceding the relevant date in consequence of information provided or other action taken by the designer or any successor in title;
- (e) disclosures made during the period of 12 months immediately preceding the relevant date as a consequence of an abuse in relation to the designer or any successor in title.

Under the old law, the relevant public was the public in the UK. However, it is at least arguable that, because of (a) above, the question should be determined on the basis of the public within the EEA. The OHIM does not carry out searches for novelty (or individual character) and, since 1 October 2006, nor does the UK Design Registry. In practice, this is unlikely to cause too many problems and, although there are no provisions for opposition to registration, there are detailed provisions for declarations of invalidity on a number of grounds including lack of novelty and individual character.

A design might be in use outside the EEA but not be known within the EEA by those specialising in the particular sector. For example, products in which a design is incorporated or to which a design has been applied might have recently been placed on the market in the Sudan and there have been no trade exhibitions (anywhere in the world) where the design would have been disclosed to persons specialising in the sector in the EEA who might have attended such an exhibition. Certainly, one would not expect any marketing to have taken place in the EEA, though it might be possible, in very limited circumstances, that some products have been imported into the EEA for future sale. Very limited marketing or use in the EEA would probably attract the attention of those specialising in the trade, but whether (a) above applies must always be a question of

<sup>104</sup> Convention countries are specified in numerous Orders in Council made under s 13 which nominate countries with a view to fulfilling the UK's obligations under the Paris Convention for the Protection of Industrial Property 1883. The most recent is the Designs (Convention Countries) Order 2007, SI 2007/277.

<sup>105</sup> Note that reference is made in the Act to the EEA. The Community design does not, however, extend outside the European Community to the other EEA states.

fact, depending on the particular circumstances. The presence of exception (a) does, however, qualify the approach to novelty taken in patents cases, where very limited use in public, or a document in a library open to the public but never actually read by anyone, will anticipate a patent.

Exception (b) covers a breach of confidence by any person to whom the designer (or successor in title) has disclosed the design. The breach could be by a potential manufacturer, investor or adviser, for example. Unlike the case under the law of patents, there is no time limit although, as soon as a designer is aware of the breach of confidence, he would be well advised to apply to register the design.

As with the RCD, there is a 12-month period of grace during which the designer can test the market to see whether his design is likely to be successful before he applies for registration. In the exceptions in s 1B(6), (c) applies to disclosures by the designer (or successor in title) and (d) applies to disclosure by others as a result of information provided by or other action by the designer (or successor in title). This could be the result of publication of the design or displaying products to the design at a trade fair or exhibition or by way of contract with a third person to manufacture the products or as a result of licensing the design. However, this provision may have dangers. If the design is disclosed in such a way and unauthorised copies are made and sold (particularly from a number of sources), this could make it difficult for the designer to fend off an attack on his design on the grounds that it was not new unless he can clearly show that his disclosure was the first in time and that the copies were a result of some abuse, as in (e) above. In any event, it may not be safe to rely on (e) as it is not clear what its scope is. After all, how can there be an abuse in relation to the designer in respect of a right which does not yet exist, unless there is a breach of confidence or the design is protected in other ways, such as by copyright.

It is likely that, because of this period of grace, the Registered Designs Act 1949, as it now is, omits any provision for exhibitions certified by the Secretary of State being excluded from the test of novelty.<sup>106</sup> However, whatever disclosure is contemplated by the designer, he would be wise to ensure that they are made under an express obligation of confidence<sup>107</sup> or, more simply, as the application to register a design is not a particularly difficult and time-consuming business, the designer would be wise to apply to register the design before any disclosures.

As appearance is an essential aspect of the requirements for registrability of a design, protection is denied to the appearance of features not normally seen during normal use of a product which is a component part of a complex product. Section 1B(8) states that a design applied to or incorporated into a product which is a component part of a complex product shall only be considered to be new and have individual character if, once incorporated into the complex product, it remains visible during normal use of the complex product and to the extent that those visible features are new and have individual character. Normal use is defined in s 1B(9) as use by the end-user and does not include any maintenance, servicing or repair work in relation to the product. This provision is intended to exclude 'under the bonnet' spare parts from protection. Internal components have no visual significance during normal use though they may be protected by the UK unregistered design right which does not depend on the article to which the design has been applied being visible, whether during normal use or at any other time.

Internal components may be registrable if they are visible, for example, where they are encased in a transparent material such as the vortex on a bagless vacuum cleaner or visible through a transparent cover such as the internal mechanism of a watch under a clear watch face. It should not be the case that the entire component product must be visible during normal use and it should be sufficient if those parts that remain visible during normal use are themselves new and have individual character.

<sup>106</sup> There are, however, provisions for exhibition priority in the CD Regulation.

<sup>107</sup> An express obligation is safer than relying on the courts to imply an obligation of confidence in respect of prototypes left with buyers for potential retailing organisation: see *Carflow Products (UK) Ltd v Linwood Securities (Birmingham) Ltd* [1996] FSR 424, discussed in Chapter 10.

## Individual character

Not only must a design be new but it must also have individual character to be registrable. A design has individual character, under s 1B(3), if:

... the overall impression it produces on the informed user differs from the overall impression on such a user by any design which has been made available to the public before the relevant date.

The relevant date is that as for novelty, with specific provision for modified designs and priority. The degree of freedom of the author in creating the design is to be taken into consideration in determining whether a design has individual character (s 1B(4)). Thus, the less the design freedom, the smaller the differences compared to the prior art might need to be for a design to have individual character. Under the Act before amendment, it was usual for the courts to view the design through the eyes of the customer who buy products of the type in question and the differences which strike such persons as important.<sup>108</sup> This is probably somewhat weaker than the test of the informed user who can be considered to be a customer or other buyer, for example, a person who buys products as part of his employment duties and who takes a particular interest in the type of products concerned.

In *Woodhouse UK plc v Architectural Lighting Systems*,<sup>109</sup> a case before the Patents County Court concerned with the design of lanterns for street lights, Michael Fysh QC said (at para 48) that the ‘informed user’ was ‘... a debutante to the pantheon of fictional English legal characters’. He said of such a user, *obiter*, that he must be a user of articles of the type subject to the registered design in question and probably a regular user: a consumer or buyer or someone otherwise familiar with the subject matter, for example, through use at work. He is a person to whom the design is directed. He went on to say that the informed user was not a manufacturer of the products concerned nor is he the man in the street. The use of the word ‘informed’ suggests that he is rather more familiar with the relevant type of product than the average consumer. He would have basic knowledge of product trend and availability and technical considerations, if any. Michael Fysh QC said that he felt uncomfortable with any analogy to the person skilled in the art. He thought that appearance would be more important than function or operational or manufacturing technology. This was accepted as the correct approach by Lewison J in *Procter & Gamble Co v Reckitt Benckiser (UK) Ltd*,<sup>110</sup> at first instance. Although the appeal against Lewison J’s ruling was successful in the Court of Appeal,<sup>111</sup> this view of the ‘informed user’ was not itself criticised. However, the Court of Appeal added that the informed user was not the same as the ‘average consumer’ of trade mark law. The informed user was more discriminating. He would be aware of the existing design corpus and would also be aware that some designs were required to be as they were, to some extent at least, because of function.

*Rolawn Ltd v Turfmech Machinery Ltd*<sup>112</sup> concerned allegations of infringement of the UK registered design and the UK unregistered design right in relation to wide-area grass mowers. The design in question had been created by a company engaged in growing and selling turf which had built mowers to the design for use in its business only.<sup>113</sup> As regards the registered design, Mann J said that the informed user was someone who uses machines in the turf-growing industry. He was not as narrow as someone familiar only with mowers or wide-area mowers but he would certainly be familiar with them. It was held that the claimant’s mowers had individual character as there was a clear difference between the design and the prior art, even taking account of the considerable scope for design freedom.

The informed user is also important in relation to infringement where the alleged infringing design is not identical to the protected design. The designs in question were

**108** *A Fulton Co Ltd v Totes Isotoner (UK) Ltd* [2003] RPC 499. As the products in question were foldaway umbrellas, Michael Fysh QC, in the Patents County Court, said nearly everyone was familiar with the design field and he had no difficulty in putting himself in the role of the typical customer for such products.

**109** [2006] RPC 1.

**110** [2007] FSR 290. This was a case on Community design but the principles must surely be the same. This was the test used also in the Design Registry by the Hearing Officer in *Walton v Zap Ltd* [2007] ECDR 209.

**111** *Procter & Gamble Co v Reckitt Benckiser (UK) Ltd* [2008] FSR 208.

**112** [2008] EWHC 989 (Pat).

**113** The claimant did not sell these mowers. They could only be seen by third parties at a distance.

for lanterns for street lights. Despite what he said about technical considerations and manufacturers, Michael Fysh QC went on to hold that the informed user was a regular member of a design team primarily interested with the appearance of street furniture though he would also have a basic grasp of the product's 'technical underlay' and, perhaps, cost. This seems a contradiction of his own generalisation of what an informed user was and is not the same as appears to be used at the OHIM Invalidity Divisions.<sup>114</sup> He had discounted manufacturers but said that the informed user was someone to whom the design had been directed. In the case of street furniture, surely the informed user would be a person whose work involved buying street furniture including lighting or, for example, specifying a design of street light to be supplied and erected under a contract such as an employee of a local authority street lighting department.

Although the informed user is not necessarily 'nerd-like'<sup>115</sup> he may well be, depending on the types of products in question, something of a 'train-spotter', for example, where the products are mobile phones, motor cars, football club shirts or sports footwear such as trainers.

The requirement for individual character is completely new to UK registered design law but it could be said to be broadly equivalent to the old test for novelty in that common trade variants were excluded as not being new. Under the old law a design was not new if it differed from an earlier design only in immaterial details or in features which were variants commonly used in the trade. In *Household Articles Ltd's Registered Design*,<sup>116</sup> Laddie J distinguished between 'differed in immaterial details' and 'common trade variants' saying that the former made no significant visual impact on the design but the latter could be visually significant. In that case, Laddie J accepted that the design for a piston-type coffee pot was novel. Although many other designs had a family resemblance (indeed, in most cases, the glass jar was a standard size as obtained from glass manufacturers), where the designer had a free hand, virtually all those details were different to the prior art.

Although the test for individual character cannot be identical to the old test of common trade variants, it is possible that its effect will be very much the same. Under the old law, in *Valeo Vision SA v Flexible Lamps Ltd*,<sup>117</sup> Aldous J looked at the prior art (rear light clusters for vehicles) and held that, as the position and number of lens fixing screws varied from lamp to lamp, those in the registered designs were simply variants commonly used in the trade. It is likely that, in such a case, the designs would not have created a different overall impression on the informed user over the prior art and, consequently, they would have lacked an individual character, had they been subject to the new law.

A design might fail to be registrable on the basis of lack of individual character even though it is new. This means that individual character applies where the design differs in material details over the prior art, otherwise the question should not arise. But, as we have seen under the old law, differences over what has been made available do not have to be either numerous or significant for a design to be registrable. Perhaps the acid test is whether registration would hamper designers who create designs based on the prior art and make only changes in immaterial details or commonly used features.<sup>118</sup> However, that is not to say that a new combination of pre-existing features cannot be registrable.

## Refusal of registration

Although the substantive grounds for refusal of registration under s 1A have been swept away, the Registrar still may refuse an application in some cases. They are set out in s 3A and are:

<sup>114</sup> See, for example, Case No 000000222, *Mafin SpA's Design* [2005] ETMR 1239, 22 October 2004, discussed earlier in the section on Community design.

<sup>115</sup> Per Jacob LJ, describing the person skilled in the art for the purposes of patents in *Technip France SA's Patent* [2004] RPC 919.

<sup>116</sup> [1998] FSR 676.

<sup>117</sup> [1995] RPC 205.

<sup>118</sup> *Household Articles Ltd's Registered Designs* [1998] FSR 676 at 685 per Laddie J.

- The application does not comply with rules made under the Act. This is expressed as a discretion by the phrase ‘he may refuse to register’.
- If it appears that the applicant is not the person entitled to register the design or designs under s 3(2) (the applicant is the person claiming to be the proprietor) or s 3(3) (where the UK unregistered design right subsists in the design or designs, the applicant is the owner of that right or rights) or s 14 (where applicable, the applicant is the person who applied to register the design or designs in a Convention country in the previous six months<sup>119</sup> or he is his personal representative or assignee) the Registrar must refuse to register the design or designs in question.
- The Registrar shall refuse the application if it appears to him to include:
  - something which does not fulfil the requirements of s 1(2) (the definition of ‘design’);
  - the design does not fulfil the requirements of s 1C (design dictated by technical function) or 1D (design contrary to public policy or morality); or
  - a ground of refusal under Sch A1 applies (certain emblems, etc.).

Otherwise, the Registrar must not refuse the application to register the design or designs in question.

### Designs dictated by technical function

Features of appearance of a product which are solely dictated by the product’s technical function are excluded under s 1C(1). That does not prevent registration of a design which *includes* such features; it is just that features dictated by function are not to be considered when judging the requirements for registrability. Note also the inclusion of the word ‘solely’. This exclusion is worded similarly to the equivalent exclusion under the old law and but appears to be interpreted more narrowly than under the old law as in *Amp Incorporated v Utilux Pty Ltd*,<sup>120</sup> where the House of Lords rejected an argument that the equivalent exclusion applied only when a precise shape and no other was necessary to perform a particular function. The exception under s 1C(1) is equivalent to that under Article 8(1) of the CDR and, in *Landor & Hawa International Ltd v Azure Designs Ltd*,<sup>121</sup> the Court of Appeal held that the Article 8(1) exception only applied to exclude a design which was the only design by which a product could perform its function. The same must apply to the exclusion under s 1C(1). The fact that there remains a some degree of design freedom should take the design out of the exception, even if it is only a small or limited degree of freedom. For example, in a design applied to a corkscrew, there is freedom in the design of the helix of the screw itself: for example, in the overall length of the formed screw, the diameter of material used to form the coil, and the pitch and curvature of the coils of the helix. The corkscrew as a whole, if new and having individual character should be registrable. The dictated by function exception will apply in very limited circumstances. It is not easy to think of a design that is dictated solely by function such that that shape and no other can be used to perform that function. It is clear, however, that it is not to be interpreted in the same way as the equivalent exception to the registrability of shapes as trade marks.<sup>122</sup> One reason being that a trade mark has a different nature and serves a different purpose compared with a design subject to design rights.

Features of appearance of mechanical interconnections between products are excluded under s 1C(2), which states that a registered design:

... shall not subsist in features of appearance of a product which must necessarily be reproduced in their exact form and dimensions so as to permit the product in which the design is incorporated or to which it has been applied to be mechanically connected to, or placed in, around or against, another product so that either product may perform its function.

<sup>119</sup> Or where there is more than one such prior application in a Convention country, the earliest must be no more than six months previously. Convention countries are set out in the Designs (Convention Countries) Order 2007, SI 2007/277.

<sup>120</sup> [1972] RPC 103.

<sup>121</sup> [2007] FSR 109. This was a case on the UK unregistered design and the unregistered Community design.

<sup>122</sup> See Case C-299/99 *Koninklijke Philips Electronics NV v Remington Consumer Products Ltd* [2002] ECR I-5475 discussed in Chapter 20, in particular in relation to the exclusion from the registration of shapes necessary to obtain a technical result.

This would apply, for example, to a bayonet or screw fitting of a light bulb or a grooved rail for a desk drawer. Another example might be the vertical edges of pieces in the jigsaw. The wording of the exception is similar to that of the ‘must-fit’ exception for the unregistered design right under s 213(3) of the Copyright, Designs and Patents Act 1988. It is likely that the exceptions will apply in the same cases but there are some differences in terminology. An important distinction is that the unregistered design right applies in the context of ‘articles’ whereas the registered design applies in connection with ‘products’. A ‘product’ is defined in s 1(3) of the Registered Designs Act 1949 but ‘article’ is not defined in that part of the Copyright, Designs and Patents Act 1988 dealing with the unregistered design right.<sup>123</sup>

Again, the exception only excludes from the determination of registrability and protection those aspects of the overall design caught by the exception.

The Directive was careful not to prevent the registration of modular systems by the working of this exception and s 1C(3) states that s 1C(2) does not prevent the right from subsisting in a design serving the purpose of allowing multiple assembly or connection of mutually interchangeable products within a modular system. Thus, features of interconnections between tiling, paving or shelving systems may still be registrable if the other requirements are satisfied. Parts of a jigsaw are not included as the pieces are not mutually interchangeable.

### Contrary to public policy or immoral designs

Section 1D states that the right in a registered design shall not subsist in a design which is contrary to public policy or to accepted principles of morality. It is the whole design (whether applied to or incorporated in the whole or part of a product) which is excluded. Previously, it was a question of whether the design was contrary to law or morality in the Registrar’s opinion. Under the new provisions, in effect, the Registrar will have to take a view on whether a particular design is contrary to public policy or accepted principles of morality, a difficult task, especially considering how vague the notion of public policy is. If the Registrar considers that the exception does not apply, it will be open to any person to ask for a declaration of invalidity on the basis, *inter alia*, that the design should not have been accepted for registration because of s 1D.

### Certain emblems, etc.

Designs will be refused registration if they relate to certain emblems, etc. and one of the grounds of refusal in Sch A1 applies. This Schedule is new although r 24 of the old version of the Registered Designs Rules 1995<sup>124</sup> required consent in the case of designs including representations of any member of the Royal Family or reproductions of armorial bearings, insignia, orders of chivalry, decorations or flags of any country, etc. The new provisions go further than before. The provisions in Sch A1 are set out in Table 17.1 in brief summary form (reference should be made to the Schedule for full details). The grounds apply where the design involves the use of the relevant emblem.

Paris Convention countries are countries other than the UK which are parties to the Paris Convention for the Protection of Industrial Property 1883. There are notice requirements for state emblems of Paris Convention countries and emblems, abbreviations or names of international organisations. The provisions relating to national flags, state emblems, official signs or hallmarks of Paris Convention countries and emblems of international organisations apply also to anything which, from a heraldic point of view, imitates the flags, emblem, sign or hallmark. However, the provisions relating to emblems, etc. of Paris Convention countries do not prevent an application for registration by a national of a country who is authorised to make use of the state

<sup>123</sup> In *Ocular Sciences Ltd v Aspect Vision Care Ltd* [1997] RPC 289, Laddie J accepted that an article for the purposes of the equivalent exception to the subsistence of the unregistered design right could be a human eyeball. Before amendment by the Registered Designs Regulations 2001, the Registered Designs Act 1949 contained a definition of ‘article’ which no longer has any relevance for the UK registered design and, probably, neither the UK unregistered design right.

<sup>124</sup> SI 1995/2912. These Rules have been repealed and replaced by the Registered Designs Rules 2006, SI 2006/1975.

**Table 17.1** Grounds for refusal of registration in relation to emblems, etc.

<i>Emblem</i>	<i>Condition for registration to proceed</i>
Royal arms, crown or flags or Royal insignia, etc. or representations of members of the Royal family, or designs suggesting Royal patronage.	If it appears to the Registrar that consent has been given by Her Majesty or, as the case may be, the relevant member of the Royal family.
Union Jack or flags of England, Wales, Scotland, Northern Ireland or the Isle of Man.	Providing it does not appear to the Registrar that the use would be misleading or grossly offensive.
Arms granted by the Crown or insignia so nearly resembling them so as to be likely to be mistaken for them.	If it appears to the Registrar that consent has been given by or on behalf of the person concerned and the use is not in any way contrary to the law of arms.
Representations controlled by the Olympic Symbol etc. (Protection) Act 1995.	Application was made by the person appointed under that Act as proprietor of the Olympics Association right.
Flags of Paris Convention countries.	Either authorisation of the competent authority of the country concerned has been given or it appears to the Registrar that the use of the flag in the manner proposed is permitted without such authorisation.
Armorial bearings or other state emblems of Paris Convention countries protected under that Convention.	If it appears to the Registrar that authorisation of the competent authorities of that country has been given.
Official signs or hallmarks adopted by Paris Convention countries indicating control and warranty where the sign of hallmark is protected under the Paris Convention and where the design could be applied to or incorporated in goods of the same or similar kind as those for which the sign or hallmark indicates control or warranty.	If it appears to the Registrar that authorisation of the competent authorities of that country has been given.
Armorial bearings, flags or other emblems and abbreviations and names of international intergovernmental organisations of which one or more Paris Convention countries are members where such emblems, abbreviations or names are protected under the Paris Convention.	Either the authorisation of the international organisation has been given or it appears to the Registrar that the use proposed is not such as to suggest to the public a connection between the organisation and the design and is not likely to mislead the public as to the existence of a connection between the user and the organisation.

emblem, official sign or hallmark of that country even though it may be similar to that of another country.

## REGISTRATION

Application for registration is made on Form DF2A by the person claiming to be the proprietor of the design or designs (s 3). Where the unregistered design right subsists in the design, the application must be made by the person claiming to be the owner of that right. The application must be accompanied by one or more representations or specimens of the design or designs. The Registrar no longer carries out searches for

novelty and individual character. Where the priority of an earlier application in a convention country is claimed, the details of that application must also be given. The Form also contains a space for limitations or disclaimers to be recorded. Where the application is to register more than one design, after completing the front sheet, a second sheet, plus illustration sheets are used for each design. The Registrar will then determine whether the application should be accepted under s 3A, discussed earlier.

The Registrar may allow the applicant to make any modification to the application as the Registrar thinks fit before the application is determined under s 3B. The Registrar has discretion as to the date an application is to be treated as having been made where the design is altered significantly, or in the case of divided applications (where the original application contained more than one design). Where a design is modified so as to overcome a refusal under s 3(4)(b) or (c) (dictated by technical function, contrary to public policy or morality or provisions relating to emblems, etc.) there is no discretion and the application is deemed to have been made on the date the original application was made or treated as having been made providing the identity of the design is retained and any modifications were made in accordance with any rules made under the Act. A modification may, in particular, be effected by making a partial disclaimer. The importance of determining the date an application is treated as having been made is that it determines the date on which novelty and individual character are assessed in the case of invalidity proceedings.

The date of registration of the design is determined under s 3C. The basic rule is that a design is registered as of the date on which the application was made or treated as having been made. However, that does not apply in relation to designs registration of which had previously been applied for in a Convention country under s 14(2) within the preceding six months: that is, where the application is treated as having been made by virtue of the priority provisions. This is complicated further where the application has been modified. The outcome is as follows as regards the deemed date of registration:

- it is the date the application was made in the Convention country (if applied for in more than one Convention country, the earliest) providing not earlier than six months before the application in the UK;
- in the case of a subsequent application (where the original application disclosed more than one design which was divided out and subject to the current application), treated as having been made on a particular date by virtue of the operation of s 3B(3) by reference to s 14(2), the date on which the earlier application was made;
- in the case of a design which was modified so as to overcome grounds of refusal in s 1A(1)(b) or (c) and treated as having been made on a particular date by virtue of the operation of s 3B(5) by reference to s 14(2), the date on which the original application was made.

The effect is to apply the priority provisions to determine the date of registration to the date the application is treated as having been made where it is subject to modification by excluding one of the designs applied where multiple designs are included in an application and that excluded design is applied for subsequently or modified to overcome one of the grounds of refusal other than the first ground relating to the meaning of 'design'.

The Registered Designs Rules 2006 contain the fine detail in respect of applications and modifications.<sup>125</sup> Fees are set out in the Registered Designs (Fees) (No 2) Regulations 2006.<sup>126</sup> For the first design, the application fee is £60 (or £40 if consent to publication is not given).<sup>127</sup> For additional designs the fees are £40 (or £20 without consent to publication). The fee for subsequent consent to publication is £40 per design. Renewal fees for subsequent five-year periods are £130, £210, £310 and, for the final five-year period, £450.

<sup>125</sup> SI 2006/1975.

<sup>126</sup> SI 2006/2617.

<sup>127</sup> The applicant may choose to defer publication for a period of 12 months. If not applied for within that time, the application will be deemed to have been abandoned.

By virtue of s 3D, an appeal lies from any decision of the Registrar under s 3A or 3B of the Act (provisions for determination of applications and modification of applications for registration).

## CANCELLATION AND INVALIDITY

The registration may be cancelled by the Registrar following a request made by the proprietor in the prescribed manner (there is a form for this) (s 11). The grounds for invalidity are set out in s 11ZA and a registration may be declared invalid:

- if the design does not conform to the definition of ‘design’ in s 1(2) (s 11ZA(1)(a));
- if the design lacks novelty and individual character under s 1B (s 11ZA(1)(b));
- if the design is dictated by function under s 1C (s 11ZA(1)(b));
- if the design is contrary to public policy or morality under s 1D (s 11ZA(1)(b));
- if the design lacks novelty or individual character compared with a design made available to the public before the date the application is treated as having been made where that ‘earlier design’ is registered or has been applied for under the Registered Designs Act 1949, the Community Design Regulation or an international registration designating the Community (s 11ZA(1A));<sup>128</sup>
- where the registered proprietor is not the proprietor and the proprietor objects to the registration (s 11ZA(2));
- if registration would involve the use of an earlier distinctive sign, on the ground of an objection by the holder of rights to the sign which includes a right to prohibit such use in the UK (this could apply, for example, where the earlier sign is a registered trade mark) (s 11ZA(3));
- where the design constitutes an unauthorised use of a work protected by copyright in the UK, on the ground of an objection by the copyright owner (s 11ZA(4)).

Generally, references to the registration of a design include references to a former design except one cancelled under s 11.

The identity of who can apply for an application for a declaration of invalidity differs depending on the grounds. This is set out in s 11ZB as follows:

- grounds in s 11ZA(a)(1) or (b) (not a ‘design’, lacking novelty or individual character, dictated by technical function, contrary to public policy or morality) – *any person interested* may apply;
- grounds relating to specially protected emblems as set out in Sch A1 – *any person concerned* by the use in question may apply (for example, relevant member of the Royal family, competent authority, etc.);
- grounds under s 11ZA(1A) (earlier design) – *the relevant person*, being registered proprietor of the earlier design or the applicant to register the earlier design, including the Community design, as the case may be;
- ground that the registered proprietor is not the proprietor of the design – *the proprietor of the design*;
- ground that the design involves the use of an earlier distinctive sign – *the holder of the right to prohibit the use of the sign in the UK*;
- ground that the design constitutes the unauthorised use of a work protected by copyright law in the UK – *the owner of that copyright*.

An application for invalidity may be made any time after the design has been registered. If the application does not appear to the Registrar to have been made in accordance with any rules made under the Act or to have been made in accordance with s 11ZB above (that is, by the person entitled to bring the application), the Registrar may refuse

<sup>128</sup> Sections 11ZA(1A) and (1B) were inserted by the Regulatory Reform (Registered Designs) Order 2006, SI 2006/1974. The reference to an international registration designating the Community was inserted by the Designs (International Registrations Designating the European Community) Regulations 2007, SI 2007/3378.

the application for a declaration of invalidity under s 11ZC. Subject to this, the Registrar shall make a declaration of invalidity if it appears to him that the ground specified has been established in relation to the registration. Where appropriate, the declaration may be one of partial invalidity.

Where the Registrar intends to make a declaration of invalidity under 11ZA(1)(b) or (c), (1A), (3) or (4), he shall inform the registered proprietor of this fact under s 11ZD. The proprietor may apply to modify the design, and such modification may include a partial disclaimer. If allowed, the modification shall be treated always to have had effect from the grant of registration. However, the Registrar shall refuse any modification not made in accordance with rules made under the Act or where the identity of the design is not maintained or where the modified design would be invalid under s 11ZA.

To take an example, say that the registered proprietor of a design sues someone responsible for applying the design or a similar design to a product and that person (now being a 'person interested') applies for a declaration of invalidity and the proprietor is successful in modifying the design so as to save it from invalidity. Whether the alleged infringing acts carried out in the past actually did infringe depends on a comparison of the scope of the design as modified with the alleged infringing articles.

Cancellation of a design takes effect from the date of the Registrar's decision or from such other date as the Registrar may direct (s 11ZE(1)). Where the registration of a design is declared invalid to any extent, the registration is treated as having been invalid to that extent from the date of registration or such other date as the Registrar shall direct (s 11ZE(2)). Thus, the Registrar has some discretion except in the case of a successful modification during invalidity proceedings where the design is treated as being in its modified form from the date of registration.

An appeal lies from any decision of the Registrar in respect of applications to cancel a design or for a declaration of invalidity under s 11ZF. Of course, the validity of designs is likely to be challenged in infringement proceedings. Unlike the case with patents, the Registered Designs Act 1949 does not specifically state that validity may be contested by way of a defence.<sup>129</sup>

<sup>129</sup> See Patents Act 1977 s 74(1).

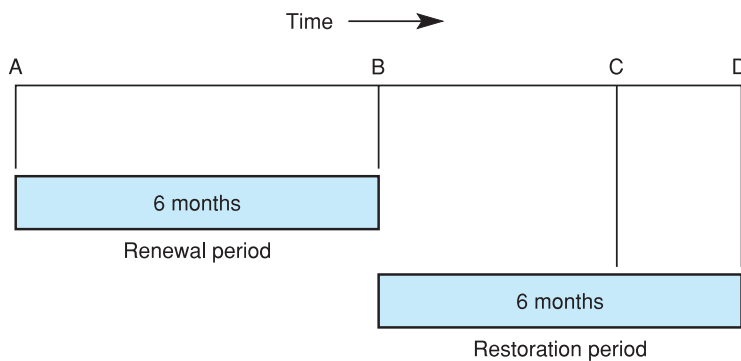

## DURATION

The initial registration period is five years from the date of registration of the design under s 8(1). Registration may be renewed for a second, third, fourth and fifth period of five years. Most designs have a limited commercial life and it is unlikely that many will be renewed for a fourth or fifth period (s 8(2)). There is effectively a period of six months' grace, during which time the registration can be renewed without affecting its validity. For designs first registered on or after 1 August 1989, there is a further six-month period during which the right can be restored.<sup>130</sup> Application must be by the person who was the registered proprietor or by any other person who would have been entitled to the right had it not expired. Where two or more persons held the design jointly, by the leave of the Registrar, the application for restoration can be made by any one or more without joining the others. The Registrar publishes notices of applications for restoration, but it is not an automatic right, the Registrar has a discretion and must be satisfied that the failure to renew under s 8(2) or (4) was unintentional. If restoration is applied for and granted there are some effects as regards infringement of the right. Figure 17.3 applies to a design first registered on or after 1 August 1989.

Referring to Figure 17.3, during the period A to B the right may be renewed (provided it has not previously been renewed for a fifth period of five years) on payment of the appropriate renewal fee plus an additional fee (£24 per month excluding the first month). Under s 8(4), the design is treated as if it had never expired. For the sake of

<sup>130</sup> The Registered Designs Act 1949 s 8A refers to a prescribed period during which the right can be restored. By the Registered Designs Rules 2006, SI 2006/1975 r 13, the prescribed period is 12 months from the date on which the right expired.

**Figure 17.3** Renewal and restoration of registered design

argument, imagine that an application to restore the right is made at time C. Then, even if the restoration is permitted, a person may acquire rights in respect of the design if, during the period B to C, he began an act in good faith or made effective and serious preparations to do such an act.<sup>131</sup> If the registration is restored, acts which would normally have infringed the design which were done during the period A to B are treated as infringing acts, as are continuations or repetitions of earlier infringing acts. However, an act that would have infringed, which was carried out during the period B to C, gives the proprietor no remedy unless it was a repeat of an earlier infringing act.<sup>132</sup> Fees for renewal are £130 for a second term, £210 for a third term, £310 for a fourth term and £450 for the fifth and final term. Restoration fees amount to £240 plus the renewal fee.<sup>133</sup>

## OWNERSHIP AND DEALING WITH REGISTERED DESIGNS

The person creating a design is known as the author of that design and the basic rule is that the author is entitled to be the original proprietor of the design.<sup>134</sup> There are exceptions to this basic rule and, if the design is commissioned for money or money's worth, the person commissioning the design is, under the Registered Designs Act 1949 s 2(1A), the original proprietor.<sup>135</sup> Otherwise, under s 2(1B), if the design is created by an employee in the course of employment, the employer is treated as the original proprietor. The person by whom the arrangements necessary for the creation of a computer-generated design are made is taken to be the author of the design, under s 2(4). A computer-generated design (as with original works of copyright) is one which is generated by computer in circumstances such that there is no human author.

There is a difference as regards first ownership between registered designs and copyright in that the commissioners of designs are automatically given the right of ownership of a registrable design. This little inconvenience is exaggerated when the ownership of the design right is considered, because s 3(3) requires that a person making an application to register a design must also be the owner of the design right where it subsists concurrently in the design.<sup>136</sup> Usually, a person commissioning a design will be the proprietor of the registered design and also will be the owner of the design right. In some cases, however, a design right will be owned by the person first marketing articles made to the design in the UK, and this could be a different person claiming to be the proprietor of the design as regards the application to register.

To take an example, consider a design, which is registrable and in which the design right is capable of subsisting, created by a Chinese national resident in China under a commission for money or money's worth from a Saudi Arabian company. Articles

<sup>131</sup> The right is to do the act or to continue to do the act: Registered Designs Act 1949 s 8B(4). Section 8B(5) allows business partners and acquirers of the person's business to do the acts.

<sup>132</sup> Registered Designs Act 1949 s 8B(3).

<sup>133</sup> Registered Designs (Fees) (No 2) Rules 2006, SI 2006/2617. This comprises the restoration fee of £120 and the additional fee for late renewal of £120.

<sup>134</sup> Registered Designs Act 1949 s 2. Proprietorship is equivalent to ownership in copyright law.

<sup>135</sup> Importers, retailers and licensees of the owner of a design are not entitled to be the proprietor: *Lazarus v Charles* (1873) 16 Eq 117; *Re Guiterman's Registered Design* (1886) 55 LJ Ch 309.

<sup>136</sup> The present application form DF2A no longer contains a declaration to the effect that the applicant claims to own any design right subsisting in the design. The previous application form included such a declaration.

**137** The Italian company would have to be exclusively licensed to place articles to the design on the market in the UK: Copyright, Designs and Patents Act 1988 ss 215(4) and 220.

**138** Copyright, Designs and Patents Act 1988 s 224.

**139** The Registrar may also cancel the registration under the Registered Designs Act 1949 s 11(2).

**140** Registered Designs Act 1949 s 19(3A).

**141** [2006] RPC 1.

**142** Now, under the Act as amended, an application for invalidity could be made by the true proprietor under s 11ZB on the basis that the registered proprietor is not the true proprietor: s 11ZA(2). Rectification of the register by amending the name of the proprietor to the true proprietor is now clearly countenanced by s 20 though this is still discretionary. However, in *Re Guiterman's Registered Designs* (1886) 55 LJ Ch 309 it was held that a deliberate but *bona fide* application by the wrong person could not be rectified.

made to the design are marketed in the European Community by an Italian company which has the consent of the Saudi Arabian company.<sup>137</sup> The latter would be entitled to register the design in the UK under s 3(2) but for the fact that the Italian company is the owner of the design right. The Italian company would be entitled to apply to register the design under s 3(3), being the owner of the unregistered design right in the UK but this conflicts with s 3(2). It is possible that s 3(3), requiring the applicant to be the owner of the unregistered design right, where it subsists, takes precedence over s 3(2) which requires the application to be by the person claiming to be the proprietor of the design; in which case, the Italian company would be entitled to apply to register the design. Such difficulties should not come about by assignment because, under s 19(3B), an assignment of the UK unregistered design right automatically includes an assignment of the registered design if their respective owners are one and the same and a contrary intention does not appear. Similarly, an assignment of a registered design automatically carries with it an assignment of the design right, unless the latter is owned by someone other than the proprietor of the registered design.<sup>138</sup> If the design right is later assigned without an assignment of the registered design, the court has the power to order rectification of the register on the application of, *inter alia*, any person aggrieved (s 20(1)).<sup>139</sup>

The Registered Designs Act 1949 s 2(2) envisages the situation where the design is assigned, or is otherwise transmitted to another person. The transferee becomes the proprietor. Joint proprietorship is expressly provided for where one of the proprietors is the original proprietor, and both are treated as being 'the proprietor'. Section 19(1) requires that where a person becomes entitled by assignment, transmission or operation of law to a registered design or to a share in a registered design, that person shall apply to the Registrar for registration of his title as proprietor or co-proprietor. Similar provisions apply where a person acquires an interest in a registered design by way of a mortgage, licence or otherwise. Alternatively, the application to register the entitlement or interest may be made by the assignor, mortgagor, licensor or other party to the instrument (s 19(2)).

The Registrar shall make the relevant entry on the register of designs if satisfied as to proof of title. A person claiming to have an interest in a registered design must also show a corresponding interest in the unregistered design right where such right subsists in the design.<sup>140</sup> It is important that the above transactions are noted on the register as, under s 19(5), documents in respect of which no entry has been made shall not be admitted in any court as evidence of the title of any person in respect of the design unless the court otherwise directs. This does not apply, however, in respect of applications to rectify the register. Equities in respect of the design may be enforced in the same way as with any other personal property (s 19(4)).

It is important that the register accurately reflects the true position as to proprietorship. Section 3(2) of the Registered Designs Act 1949 states that an application to register a design shall be made by the person claiming to be the proprietor of the design. If the wrong person applies, it does not matter whether he is acting in good faith or not. The entry will be wrong (as will be the entry of any subsequent dealings). In *Woodhouse UK plc v Architectural Lighting Systems*,<sup>141</sup> in the Patents County Court, it was held that an entry of the wrong person as proprietor should not be rectified and the only way forward was to cancel the registration.<sup>142</sup> This aspect of the case concerned the Act as it was before the changes made by the Registered Designs Regulations 2001. This was a result of the transitional provisions in the Regulations which retained the old law on cancellation for designs for which application was made on or after 1 August 1989 and before the new provisions came into force (9 December 2001). Causing a false entry to be made on the register is a criminal offence under s 34; however, knowledge that the entry is false is required for this. Therefore, someone who deliberately applies to

register a design knowing that he is not entitled to be the proprietor of the design commits the offence.

A registered design and an application to register a design is, under s 15A, personal property, or in Scotland, incorporeal moveable property. A registered design or application to register a design is transmissible by assignment, testamentary disposition or by operation of law as with any other personal property or moveable property: s 15B(1). An assignment or assent is not effective unless in writing and signed by or on behalf of the assignee.<sup>143</sup> These provisions also apply to an assignment by way of security and a registered design or application may be subject to a charge. Any equities (rights in Scotland) are enforceable in like manner as with other personal property or moveable property.

Under s 15B(7), the proprietor of a registered design may grant licences. Exclusive licences must be in writing and be signed by or on behalf of the proprietor: s 15C. An exclusive licensee has the same rights against a successor in title to the proprietor who is bound by the licence. An exclusive licensee may bring an infringement action, normally with the proprietor joined in the action.

<sup>143</sup> In the case of a corporation in Scotland, this is satisfied by affixing its seal.

### Anti-competitive practices

Anti-competitive practices are dealt with under s 11A and s 11AB, powers exercisable in protection of the public interest and following mergers and markets investigations. Under s 11A, where a report of the Competition Commission has been laid before Parliament which concludes on a competition reference that a person was engaged in an anti-competitive practice which was operated or may be expected to operate against the public interest, or a reference under s 11 of the Competition Act 1980 concludes that a person is pursuing a course of conduct which operates against the public interest, the appropriate Minister may apply to the Registrar to take action.<sup>144</sup> The Registrar may cancel or modify any condition in a licence in respect of a registered design where that condition restricts the use of the design by the licensee or the right of the proprietor to grant further licences.

<sup>144</sup> There are provisions for publications of notices and a period of time for making representations.

Section 11AB applies in respect of the power to take remedial action following merger and market investigations under certain provisions of the Enterprise Act 2002. The Competition Commission or the Secretary of State, as the case may be, may request that the Registrar takes action cancelling or modifying conditions in licences in respect of registered designs which restrict the use of the design by the licensee or the right of the proprietor to grant further licences.

### RIGHTS OF PROPRIETOR

The registered proprietor of a design has the exclusive right to use the design and any design which does not produce on the informed user a different overall impression (s 7(1)). As the definition of individual character is in terms of producing a different overall impression on the informed user, there is little danger that the rights in two different registered designs will overlap. As with individual character, the degree of freedom of the author in creating the design is taken into consideration in determining whether a design produces a different overall impression on the informed user.<sup>145</sup> Under s 7(2), 'use' includes a reference to:

<sup>145</sup> Registered Designs Act 1949 s 7(3).

- (a) the making, offering, putting on the market, importing, exporting or using of a product in which the design is incorporated or to which it is applied; or
- (b) stocking such a product for those purposes.

**146** Although the CD Regulation and the Directive say that use ‘... shall cover, in particular ...’ whereas the Act states that use ‘... includes a reference to ...’ The different wording is unlikely to be of any consequence and, in case of any doubt, it is the wording of the Directive that should be referred to.

**147** Registered Designs Act 1949 s 19(4). This is also subject to any equities in respect of the design.

This is the same as for the Community design and, similarly, the meaning of ‘use’ is not exhaustive.<sup>146</sup> The scope of the rights of the proprietor appears wider than under the old UK law on registered designs and expressly includes exporting and stocking a product, neither of which were mentioned under the Act before amendment.

The rights of the registered proprietor are subject to any limitation attaching to the registration, including any partial disclaimer or declaration of partial invalidity (s 7(4)). Where there are two or more joint proprietors, each is treated as the proprietor. Consequently, each has the full rights of proprietor. The person or persons registered as proprietor can, subject to the rights vested in others of which notice is entered on the register, assign, grant licences or otherwise deal with the design and give effectual receipts for any consideration for any such assignment, licence or dealing.<sup>147</sup>

## INFRINGEMENT AND EXCEPTIONS

Infringement of a registered design is actionable by the registered proprietor and there are also provisions for an exclusive licensee to bring an infringement action: s 24F. Where there is an exclusive licence, the rights of the proprietor and licensee are concurrent and, where applicable, the leave of the court is required if one brings an action without joining the other, as is normal in such cases.

Under s 7A(1), the right in a design is infringed by a person who, without the consent of the registered proprietor, does anything which falls within the exclusive rights of the registered proprietor under s 7. If a design has a number of features and not all are used in the alleged infringing product, the question is whether the latter produces a different overall impression of the informed user. The concept of ‘informed user’ was considered by Michael Fysh QC in the Patents County Court in *Woodhouse UK plc v Architectural Lighting Systems*,<sup>148</sup> where he distinguished this newcomer to English law from the average consumer, and would be someone who was familiar with the type of product in which the design was incorporated or to which it had been applied. He would be a regular user, someone who was a consumer or buyer or otherwise familiar with the type of product. Appearance was more important than function or technical considerations. In that case, which involved designs for lanterns for streetlights, Michael Fysh QC held that the informed user was a regular member of a design team primarily interested with the appearance of street furniture. He also went on to say that where a design was strikingly different to what had gone before, the scope of protection would be broader than a design surrounded by ‘kindred prior art’.<sup>149</sup>

**148** [2006] RPC 1.

**149** Although the judge ordered cancellation of the design registration, he went on to consider infringement in case he was wrong on the issue of validity.

A number of acts are stated in s 7A(2)–(5) as not infringing a registered design. These are new to UK registered designs law, apart from s 7A(5) which is very loosely equivalent to the ‘must-match’ exception under the old law.

Under s 7A(2), the right in a registered design is not infringed by:

- (a) an act done for private and non-commercial purposes,
- (b) an act done for experimental purposes,
- (c) an act of reproduction for teaching purposes or for the purpose of making citations provided the act of reproduction is compatible with fair trade practice and does not unduly prejudice the normal exploitation of the design and mention is made of the source,
- (d) the use of equipment on ships or aircraft which are registered in another country but which are temporarily in the UK,
- (e) the importation into the UK of spare parts or accessories for the purpose of repairing such ships or aircraft; or
- (f) the carrying out of repairs on such ships or aircraft.<sup>150</sup>

**150** Again, there are some very minor, inconsequential, changes to wording compared with the text of the Directive.

These exceptions to infringement are almost identical to those in the CD Regulation and are similar in some respects to a number of exceptions that apply in relation to infringement of a patent. However, there is no equivalent in patent law to the teaching and citation exception, though these exceptions do have some similarities to exceptions under copyright law and in respect of the database right.

The right in a registered design subsisting in a component part which may be used for the purpose of repair of a complex product so as to restore its original appearance is not infringed by the use for that purpose of any design protected by the registration (s 7A(5)).<sup>151</sup> This exception, which can be described as a ‘must-match’ exception, replaced the equivalent one under the old law but is different in some respects. Under the old law, registration was refused for features of shape, configuration, pattern or ornament which were dependent upon the appearance of another article of which the article was intended by the author to form an integral part.<sup>152</sup> The new law does not prevent the scope of registration extending to such features (bearing in mind changes in terminology) but simply states that the protection afforded by registration is not so extensive that it prevents the use of the design to use it to repair a complex product so as to restore its original appearance. The language in s 7A(5) is in terms of *any* design protected by the registration, showing that only those aspects of the design, as registered, which must be reproduced so as to restore the original appearance of the complex part can be used without infringement. If some of the other features of the design occur in an alleged infringing product, it will be a matter of comparing it with the registered design to determine whether it produces a different overall impression on the informed user, disregarding those aspects of the design which must be reproduced so as to restore the original appearance of the complex product of which the product in question is a component part.

This particular exception frees up the aftermarket in replacement parts for complex products, in particular, body panels for vehicles to replace worn or damaged parts. Harmonisation was not possible at the time the Directive was adopted as there was no consensus on this issue between Member States. In some Member States, such parts enjoy full protection under national design laws (though not under the Community design). The European Commission has proposed an amendment to the Directive to deny protection to such replacement parts in line with the Community design and the position already prevailing under some national registered designs systems including the UK.

The doctrine of exhaustion of rights is now very familiar in respect of patents, trade marks and even copyright. It has been difficult to apply in respect of registered designs in the past through lack of harmonisation but now that there is limited harmonisation of registered design law throughout the EEA, exhaustion of rights is provided for by s 7A(4). This states that the right in a registered design is not infringed by an act which relates to a product, in which any design protected by registration is incorporated or to which it is applied, that has been put on the market in the EEA by the registered proprietor or with his consent. Thus, subsequent dealings with such a product cannot infringe the right. However, there is no proviso with this form of exhaustion as there is with trade marks where, notwithstanding the doctrine, the proprietor of a registered trade mark may still object to subsequent marketing on the basis that there are legitimate reasons to oppose further commercialisation: for example, where the condition of the goods to which the mark has been applied has been changed or impaired.<sup>153</sup> Of course, one can see the sense of this in respect of trade marks which operate as a badge of origin or quality, particularly where the trade mark is applied to goods where safety is involved. But there are dangers for proprietors of registered designs if the product is modified subsequently in a manner which reflects badly on the proprietor. Furthermore, there are no provisions to deal with the situation where a component part is

<sup>151</sup> At the present time, not all Member States have this exception. Article 14 of the Directive allowed Member States to continue their previous policy on protecting such spare parts providing any changes made would be only to liberalise the market. Prior to the changes implementing the Directive, the UK already had a ‘must-match’ exception, though differently expressed.

<sup>152</sup> Old s 1(1)(b)(ii). In *Ford Motor Co Ltd & Iveco Fiat SpA's Design Applications* [1993] RPC 399, it was held that this extended to main body panels, doors, bonnet and boot lids and windscreens but not to designs that could be different such as wing mirrors, wheels, seats and steering wheels. However, the House of Lords dealt with the case on the basis of the definition of ‘article’ instead: *Ford Motor Co Ltd's Design Applications* [1995] RPC 167.

<sup>153</sup> Article 7(2) of First Council Directive 89/104/EEC of 21 December 1988 to approximate the laws of the Member States relating to trade marks, OJ L 40, 11.02.1989, p 1.

reproduced for the purposes of repair of a complex product where the purpose is not to restore the original appearance but to restore functionality apart from the exceptions based on technical function and interconnections.<sup>154</sup>

<sup>154</sup> These exceptions are defined in terms of a product rather than a complex product in Article 7(1) and (2) of the Directive. However, Article 7(3), in effect, waives these exceptions in relation to complex products which fit together in modular systems.

<sup>155</sup> And the RCD and UCD where these also apply to the design.

## DEFENCES

A defendant is likely to attack the validity of the registered design on one or more of the grounds for invalidity set out in s 11ZA<sup>155</sup> (bearing in mind the unregistered design right may also subsist in the design and different provisions apply here in respect of subsistence and infringement). Other defences may focus on the alleged infringement producing a different overall impression on the informed user or that the features of the alleged infringing product fall within any limitation on the rights of the proprietor.

Further defences may be based on the acts which are stated as not infringing under s 7A(2)–(5), discussed above. Another possibility is that the defendant began or made serious and effective preparations to do the acts complained of during the restoration period in the case of a registration which had undergone restoration following a failure to renew within the allotted time. For the UK registered design, there is no equivalent defence in the period up to the filing date or earlier priority date of the design, unlike the case with the RCD.

## REMEDIES

Previously, the Registered Designs Act 1949 did not specifically state what remedies are available. Now, as a result of the Intellectual Property (Enforcement, etc.) Regulations 2006, the remedies are spelt out in s 24A(2) as being damages, injunctions, accounts or otherwise as is available in respect of an infringement of any other property right. Section 24B excuses an ‘innocent’ infringer from an award or damages or an account of profits.<sup>156</sup> This is where the defendant can show that, at the time of infringement, he was not aware and had not reasonable grounds for supposing that the design was registered. It makes good sense, therefore, for a notice to be placed upon products incorporating the design or to which the design has been applied. However, to be effective, such a notice would have to include the registration number in addition to the word ‘registered’ or some abbreviation. Merely affixing the words ‘Registered Design’ would, under s 24B(2), appear to be insufficient, but how in such a case a defendant could argue that he had no reasonable grounds for supposing that the design incorporated in or applied to the product was not a registered design is hard to imagine. However, marking a product with the word ‘registered’ is not conclusive that the defendant did not know and had no reasonable grounds for supposing the design was registered. It simply means that that fact alone is not sufficient to impute knowledge or reasonable grounds to suppose. Although an innocent infringer may escape an award of damages or an account, this does not prevent an injunction being granted to prevent further infringement.

Orders are now expressly available for delivery up of infringing articles and destruction of infringing articles: ss 24C and 24D. Previously, the court granted such order in any case.<sup>157</sup> An article is an ‘infringing article’ if its making to the design was an infringement of the registered design under s 24G. Also covered are articles which have been or are proposed to be imported into the UK if their making in the UK would have been an infringement of the registered design or would have been a breach of an exclusive licence. There is a presumption that where it is shown that an article was made to a design which is or has been registered, it was made at a time when the right in the registered design subsisted.

<sup>156</sup> There is no equivalent provision under the Community Design Regulation and no possible policy reason for giving an innocent infringement defence under the national right but not under the Community right: *J Choo (Jersey) Ltd v Towerstone Ltd* [2008] EWHC 346 (Ch).

<sup>157</sup> See, for example, *Cow (PB) & Co Ltd v Cannon Rubber Manufacturers Ltd* [1959] RPC 240.

## GROUNDLESS THREATS OF INFRINGEMENT PROCEEDINGS

We have seen earlier in the chapter that there is a remedy of groundless threats of infringement proceedings in relation to the Community design, registered and unregistered. There is an equivalent provision (of older pedigree) in the Registered Designs Act 1949 with respect to groundless threats, whether by circulars, advertisement or otherwise.<sup>158</sup> The threats do not need to come from the proprietor of the design as the threats may be made by ‘any person’. The remedies for groundless threats of infringement proceedings are:

- (a) a declaration to the effect that the threats are unjustifiable;
- (b) an injunction against the continuation of the threats;
- (c) damages, if any have been sustained – for example, the aggrieved party’s business may have been detrimentally affected by the threats, or his sales of the articles concerned may have been adversely affected.

It would seem that this provision extends to the situation where a person publicises his views that another design infringes his registration and that he will take legal action for that infringement. The burden of proof remains with the person making the threats, that is that the acts (or contemplated acts) complained of infringe the right in the registered design, although the claimant has the burden of proving the registration invalid if the acts do fall within the protection afforded by registration. The action is not available if the threats relate to making or importing anything, though the proprietor should take care to ensure that the threats cannot be constructed more widely than that. Furthermore, mere notification of the fact of registration of the design is not an actionable threat.

In *Reckitt Benckiser UK v Home Parfum Ltd*,<sup>159</sup> Laddie J noted that the groundless threats action was in conflict with the emphasis on encouraging parties to settle disputes in the Civil Procedure Rules. In that case, the claimant sued the defendant for infringing its design of air fresheners.<sup>160</sup> The defendant applied to join the claimant’s solicitors as Part 20<sup>161</sup> defendants to its counterclaim based on groundless threats made by the solicitors on behalf of the claimant. The application was struck out as Laddie J considered that it was made for an illegitimate purpose, being to retaliate and make the relationship between the claimant and its solicitors as uncomfortable as possible.

## OFFENCES

There are three offences directly associated with registered designs; and if such an offence is committed by a body corporate with the consent or connivance of an officer of the body, such as a director, manager or secretary, that person in addition to the corporate body is guilty of the offence.<sup>162</sup> This also applies to persons purporting to act in such a capacity.

Under s 35, it is an offence for a person falsely to represent that a design applied to, or incorporated in, any product sold by him is registered.

‘Represented’ has a restricted meaning in that the offender must have affixed the word ‘registered’, or any other word(s) to the effect that the design is registered, to the product, for example by stamping, engraving or impressing such word(s). Word of mouth is not sufficient. The liability appears to be strict, albeit in a very narrow sense. For example, it is committed by a person selling the product who has impressed the word ‘registered’ believing that the design is subject to a valid registration and that he has the right so to mark the product.<sup>163</sup> This offence is triable summarily only and carries a fine not exceeding level 3 on the standard scale. It is also an offence to mark

<sup>158</sup> Registered Designs Act 1949 s 26. It is arguable whether threats made by telephone or electronic mail direct to an alleged infringer would fall within the meaning of ‘otherwise’.

<sup>159</sup> [2004] FSR 774.

<sup>160</sup> On the basis of the claimant’s trade marks, registered designs and unregistered design right in addition to claims for passing off and breach of confidence.

<sup>161</sup> A Part 20 claim is one made other than by the claimant against the defendant and includes a counterclaim by a defendant against the claimant and some other person: CPR 20.2. Under CPR 20.5(1) application must be made for a court order where a counterclaim is made against a party other than the claimant for that person to be made a defendant to the counterclaim.

<sup>162</sup> Registered Designs Act 1949 s 35A(1).

<sup>163</sup> Registered Designs Act 1949 s 35(2). Liability is strict in a narrow sense because it will not apply, for example, where the person is a dealer who sells such products which were already marked when he obtained them. The person has to do the marking himself. However, other offences might be committed, such as under the Fraud Act 2006.

products in a like fashion after expiry of the right in a registered design (maximum fine not exceeding level 1 on the standard scale). This offence could easily be committed by the proprietor of a recently expired design. However, selling products to which a design relates after expiry of the design registration is not an offence provided the products were marked before the expiry of the right.

<sup>164</sup> SI 2005/2339. Regulation 3 of these Regulations also provided for equivalent offences in relation to the Community design though there is no presumption as to the use of the word 'registered' in this case.

Under s 35(3), inserted by the Community Designs Regulations 2005,<sup>164</sup> the use of the word 'registered' or any other word or symbol importing a reference (express or implied) to registration shall be deemed to be a reference to registration under the Registered Designs Act 1949 unless it is shown that the reference is in relation to registration elsewhere and the design is in fact so registered.

Section 34 deals with the falsification of the register of designs. It is an offence, triable either way, to make or cause to be made either a false entry on the register or a counterfeit copy of a register entry. The falsification offence extends to producing, tendering or causing to be produced or tendered in evidence a counterfeit copy of an entry in the register. *Mens rea* is required for this offence, that is, the person involved must know that the entry or written copy is false. Constructive knowledge is not sufficient. If tried on indictment, the maximum punishment is a term of imprisonment not exceeding two years, or a fine or both. On summary conviction a person may be sentenced to imprisonment for a term not exceeding six months, or a fine not exceeding the statutory maximum or both. The offence is worded 'makes or causes to be made', so it could apply to the Registrar and his staff in addition to others.

The Registered Designs Act 1949 s 5 concerns requirements for secrecy in respect of designs of specified classes which are relevant for defence purposes and allows the Registrar, subject to notification by the Secretary of State, to issue instructions prohibiting or restricting the publication or communication of information pertaining to such a design. Written permission may also be required by a person resident in the UK before an application can be made outside the UK for the registration of a design of a prescribed class. Any person who fails to comply with such instructions, or who makes or causes to be made such an application, commits an offence under s 33. The offence is triable either way and carries the same maximum penalties as an offence under s 34.

## CROWN USE AND SECRECY PROVISIONS

In common with patents and the design right, the Crown can make use of the subject matter of the right. As regards registered designs, the Registered Designs Act 1949 Sch 1 contains the necessary provisions.<sup>165</sup> Under para 1(1), any government department may use, or authorise the use of, any registered design for the services of the Crown. Terms must be agreed, either before or after use, between the government department concerned and the registered proprietor with the approval of the Treasury. If agreement cannot be reached, the terms are to be determined by reference to the High Court. 'The services of the Crown' are defined in para 1(6) and include:

- (a) the supply to the government of a country outside the UK of products required for the defence of that country or of any other country, subject to an agreement or arrangement involving Her Majesty's Government;
- (b) the supply to the UN or any country belonging to the UN of products required for any armed forces operating in pursuance of a UN resolution, subject to an agreement or arrangement involving Her Majesty's Government.

This is not an exhaustive definition; it merely indicates that the above situations fall within the meaning of 'Crown use'. It would also extend to use for the armed forces of the UK. Given the nature of registered designs, it is unlikely that these provisions will

<sup>165</sup> Minor consequential amendments were made to Sch 1 by the Registered Designs Regulations 2001.

be used to any great extent. An example could be where the design relates to an item of clothing or kit which could be used by soldiers. Alternatively, it could be that a patented product wanted for Crown use is also protected by a registered design. The only time payment will not be made is when the design has been recorded or applied by or on behalf of a government department prior to the date of registration.<sup>166</sup> This does not apply in respect of direct or indirect communications by the registered proprietor or any person through whom he derives title. The effect of this very limited provision is to allow free Crown use of a design independently and concurrently developed by a government department.

Crown use is also available in respect of the Community design as discussed earlier in the chapter. However, in this case, the use is limited to services of the Crown which are necessary for essential defence or security needs, in accordance with the Directive provisions allowing government use.

Under s 5 of the Registered Designs Act 1949, the Secretary of State may give notice to the Registrar that a class of designs is relevant for defence purposes. If, in a particular case, it appears to the Registrar that the design is indeed within that class, he may give directions prohibiting or restricting the publication of information concerning the design or the communication of such information to any person or class of persons specified in the directions. Where these provisions apply, the representation of the design (or specimen, if appropriate) will not be open to public inspection while the directions remain in force. These provisions are subject to review by the Secretary of State and the directions may be revoked.

Where a design falls within a prescribed class under s 5(4), application may not be made outside the UK by any person resident there unless an application has already been made in the UK at least six weeks before and either no directions under s 5(1) have been issued or, if they have, they have been revoked. This does not apply to a non-UK resident who first filed outside the UK. There are criminal penalties for breach of the secrecy provisions.

<sup>166</sup> Registered Designs Act 1949 Sch 1 para 1(2).

# THE UK UNREGISTERED DESIGN RIGHT

## INTRODUCTION

<sup>1</sup> For a comprehensive and lively description of the background to the design right, see Walton, A. 'The Copyright, Designs and Patents Act 1988 (1)' (1989) 133 *Solicitors Journal* 646.

<sup>2</sup> Other rights could subsist such as trade marks and goodwill depending on the nature of the article.

<sup>3</sup> Graham J in *Sifam Electrical Instrument Co Ltd v Sangamo Weston Ltd* [1973] RPC 899 applying *Dorling v Honnor Marine Ltd* [1965] Ch 1. In those days, the term of protection for the original works of copyright was generally the life of the author plus 50 years.

<sup>4</sup> The Copyright Act 1956 s 10 effectively removed dual protection for registrable designs. The Design Copyright Act 1968 reinstated artistic copyright protection but limited it to 15 years for registrable designs.

<sup>5</sup> [1986] 2 WLR 400.

<sup>6</sup> *Intellectual Property and Innovation*, Cm 9712, HMSO, 1986.

<sup>7</sup> Turner, B. 'A true design right: *C & H Engineering v Klucznik & Sons*' [1993] 1 EIPR 24.

<sup>8</sup> The Patent Office (1992) *Designs: Basic Facts*, The Patent Office, p 6.

The introduction of the design right must be seen in the context of the history of design law prior to the enactment of the right.<sup>1</sup> Until the Design Copyright Act 1968, there was a gap in protection for designs which were primarily functional in nature. Copyright protected artistic works, patents were available for new inventions, and designs having eye-appeal could be protected by registration. However, a design having no eye-appeal, for example an overflow pipe for a washing machine, had no form of protection *per se*.<sup>2</sup> The effect of the Design Copyright Act 1968 was to extend copyright protection to designs applied industrially for a period of 15 years from the end of the calendar year during which the relevant articles were first marketed. Eventually, by way of unanticipated judicial creativity, copyright was recognised as providing protection for functional designs through the medium of drawings for 50 years after the author's death.<sup>3</sup> Thus, unregistrable designs were given much longer protection than the 15 years maximum then available for registered designs.<sup>4</sup> Later, attempts were made to redress this inequality, as in *British Leyland Motor Corp Ltd v Armstrong Patents Co Ltd*.<sup>5</sup> It was seen to be important that persons buying complex products that would need repairing during their life should be able to have access to a free market in spare parts, and that if a right in functional designs were to be established, some balance would have to be taken into account. Several options faced Parliament:

- 1 it could introduce a petty patent (utility model) system similar to that existing in some countries;
- 2 it could extend registered design law to include functional designs; or
- 3 it could maintain the status quo, leaving protection to be gained via the medium of drawings.

The White Paper that preceded the Copyright, Designs and Patents Act 1988<sup>6</sup> rejected all other solutions and suggested a new right that would apply, automatically, to original designs for three-dimensional articles broadly along copyright principles. However, this was not to be an unfettered quasi-copyright. The design right is an emasculated form of artistic copyright as it applied to industrial designs.<sup>7</sup> A contrast can be made at once with registered designs, for which protection is along lines analogous to patent law, giving a monopoly right whereas infringement of the design right requires proof of copying.

The Patent Office (now UK Intellectual Property Office) described the design right as:

a new intellectual property right which applies to original, non-commonplace designs of the shape or configuration of articles . . . [It] is not a monopoly right but a right to prevent copying.<sup>8</sup>

Like copyright, the design right is a property right subject to qualification requirements. No formalities are required. However, the duration of the right is much less, being effectively no more than ten years. The right really applies only to designs for three-dimensional articles as surface decoration is excluded and is based on features of shape or configuration. There are some exceptions which allow the making of spare parts by others. There is an overlap between this right and the right in a registered design, whether the national registered design or the Community design and some designs that are subject to the design right may be registered and also protected by the unregistered Community design (UCD). However, there are different requirements for the UK unregistered design right compared with the other rights and this overlap is not, therefore, complete and a great many designs will be protected by the Community design or the UK registered design and not the UK unregistered design right and vice versa. One thing to stress at this stage is, despite any potential overlap between different rights in designs, that the UK unregistered design right is quite different in many respects to the UK registered design and the Community design, whether registered or unregistered.

Examples of articles in which a design right is capable of subsisting include parts for motor vehicles (including under the bonnet parts), component parts of vacuum cleaners, tools, kitchen utensils, office equipment and furniture, packaging, mobile phones and folding umbrellas: in fact all manner of articles. Design right is limited so that it will not usually extend to features that must be the shape they are so that the article the design is applied to can fit or match another article. But the presence of such ‘must-fit’ or ‘must-match’ features is not fatal to the subsistence of the right as it can apply to the whole or part of an article. Compared to registered designs, the design right is weaker as it is not a monopoly right and it is of shorter maximum duration. Furthermore, in the last five years of the right, licences are available as of right.<sup>9</sup> However, the advantages of the design right are that it is informal, has impressive scope and has been litigated successfully on numerous occasions.

The design right came into existence on 1 August 1989 and is contained in the Copyright, Designs and Patents Act 1988 Part III. The provisions are not retrospective and designs that were expressed in a tangible form<sup>10</sup> prior to this date are not protected by the design right. Such designs may have been protected through their preparatory drawings as s 51 of the 1988 Act does not apply for ten years to such designs, that is until 1 August 1999.<sup>11</sup> The design right provisions apply to England and Wales, Scotland and Northern Ireland. This may be extended to the Channel Islands, the Isle of Man or to any colony by Her Majesty’s Order in Council.<sup>12</sup>

As a result of compliance with a European Community Directive, the UK afforded specific protection to the topographies of semiconductor products.<sup>13</sup> Eventually, this was done by means of the design right and the design right provisions of the Copyright, Designs and Patents Act 1988 were adapted to provide the required degree of protection. This special form of the design right is dealt with towards the end of this chapter.

The Directive on the protection of semiconductor topographies can be seen as providing the model for the design right. Thus, the design right has different origins to the registered design and, even though some of the terminology used for both rights is the same or similar, caution must be exercised; meanings applicable to one right are not necessarily directly transferable to the other right.<sup>14</sup> However, changes to the Registered Designs Act 1949 have removed much of the overlap in terminology between the two rights.

## SUBSISTENCE OF RIGHT

Under the Copyright, Designs and Patents Act 1988 s 213(1), for the design right to subsist in a design it must be an original design. Furthermore, there is a requirement

<sup>9</sup> This does not apply in relation to semiconductor topographies protected by a modified form of the design right.

<sup>10</sup> Being recorded in a design document or by having an article made to the design.

<sup>11</sup> Copyright, Designs and Patents Act 1988 Sch 1 para 19. For an example, see *Valeo Vision SA v Flexible Lamps Ltd* [1995] RPC 205. Unless otherwise stated, in this chapter statutory references are to the Copyright, Designs and Patents Act 1988.

<sup>12</sup> Copyright, Designs and Patents Act 1988 s 255. No such Order has been made, however. Instead, the Channel Islands and the Isle of Man and a number of other countries, including New Zealand, enjoy reciprocal protection under the Design Right (Reciprocal Protection) (No 2) Order 1989, SI 1989/1294, made under s 256 of the Act.

<sup>13</sup> Council Directive 87/54/EEC of 16 December 1986 on the legal protection of topographies of semiconductor products, OJ L 24, 27.01.1987, p 36.

<sup>14</sup> See *Ocular Sciences Ltd v Aspect Vision Care Ltd* [1997] RPC 289 at 421 per Laddie J.

for qualification which must be satisfied and the design must be fixed in some tangible form by recording it in a design document or by making an article to the design. Computer-generated designs are defined in s 263(1) as designs generated by computer in circumstances such that there is no human designer. What has been said about computer-generated original works of copyright applies equally here and one can question whether there can ever be such a thing as a computer-generated design.<sup>15</sup>

‘Design’ means the ‘design of any aspect of the shape or configuration (whether external or internal) of the whole or part of an article.’<sup>16</sup> An aspect of shape or configuration must be such that it is readily discernible or recognisable.<sup>17</sup> As it can apply to a part of an article, apart from the right applying to the whole of an article, it can apply to individual aspects of its design. Subject to the requirements of originality (and not being commonplace) and the exceptions, design right is very wide and a host of design rights can subsist in respect of a single article. This is so whether it is a single article having its own separate existence or whether it is an article which is a part of a complex article comprising a number of sub-articles. Jacob LJ in *Dyson Ltd v Qualtex (UK) Ltd*<sup>18</sup> rejected a test of ‘visual significance’. He said (at para 23) that ‘... one cannot simply forget an aspect of the design of a whole article on the grounds that it is a visually insignificant feature of the design of the whole article’.

‘Configuration’ is not just another way of saying shape and the word cannot have exactly the same meaning though what the difference is has long puzzled both judges and writers.<sup>19</sup> It is reasonable to assume that configuration means the relative arrangement of parts of an article. In *Mackie Designs Inc v Behringer Specialised Studio Equipment (UK) Ltd*,<sup>20</sup> Pumfrey J accepted that an electronic circuit diagram was a design document (being either a drawing or a written description) for the purposes of the design right within s 263(1). The design itself was the components and their interconnections and Pumfrey J rejected the submission that there must be only a single design recorded in a design document. Even though many circuit boards could be made from the diagram in such a way that the arrangement of the physical parts differed, the merit of the design was the selection of the components and their interconnections.

This case highlighted an anomaly. The claimant was an American company which brought an action for infringement of copyright in its drawings of circuit diagrams for electrical equipment known as a mixer. The defendant was alleged to have copied the circuitry from one of the claimant’s mixers. As the circuit diagram was a design document for the purposes of the design right, s 51 applied and prevented the defendant’s acts being an infringement of copyright. As the design had been created by an American citizen in America, the design did not qualify for the design right. Thus, citizens of the USA are not entitled to the design right (unless habitually resident in Europe or another qualifying country). The scope of copyright protection to which they are entitled has been limited by s 51 to prevent copyright protection for designs subject to a design right. To protect such designs, Americans must obtain patent protection or register the design under the Registered Designs Act 1949 or CD Regulation or rely on the UCD, assuming that their designs are patentable or satisfy the requirements for protection under the other forms of rights in designs.

Giving a broad meaning to configuration was rejected by David Young QC, sitting as deputy judge of the High Court in *Baby Dan AS v Brevi SRL*.<sup>21</sup> He said that the relative positioning of component parts of a child’s safety barrier would be contrary to s 213(3)(a) which specifically excludes from protection methods or principles of construction. The deputy judge did accept, however, that configuration could be a form of arrangement of elements such as the ribbing arrangement of a hot water bottle, citing *Cow (PB) & Co Ltd v Cannon Rubber Manufacturers Ltd*,<sup>22</sup> a registered designs case. Unfortunately, *Baby Dan* was not referred to in *Mackie Designs* and the exception in s 213(3)(a) was not discussed in that case.<sup>23</sup>

15 See Chapter 8, p 295.

16 Copyright, Designs and Patents Act 1988 s 213(2). Jacob LJ rejected counsel’s submission that the use of the word ‘aspect’ had a limiting effect meaning a ‘way of looking at’ in *A Fulton Co Ltd v Totes Isotoner Ltd* [2004] RPC 301. Jacob LJ gained support from the Design Right (Semiconductor Topographies) Regulations 1989, discussed towards the end of this chapter.

17 Per Jacob LJ in *A Fulton Co Ltd v Totes Isotoner Ltd* [2004] RPC 301 at para 31.

18 [2006] RPC 769.

19 This was noted by Jacob LJ in *Lambretta Clothing Co Ltd v Teddy Smith (UK) Ltd* [2005] RPC 88. The old law of registered designs also used the term ‘shape or configuration’.

20 [1999] RPC 171.

21 [1999] FSR 377.

22 [1959] RPC 240.

23 The judgment in *Baby Dan* was handed down a few months before that in *Mackie Designs*.

In *Lambretta Clothing Co Ltd v Teddy Smith (UK) Ltd*,<sup>24</sup> the claimant owned a design for leisure-wear garments known as track tops. They had a blue body with red sleeves and had a white stripe down the arms. At first instance, the judge held that the juxtaposition of the colours was not an aspect of shape or configuration but were merely surface decoration, excluded from the ambit of the design right. This was confirmed in the Court of Appeal. Jacob LJ expressed some doubt as to the precise nature of ‘configuration’ but noted that, for more than a century, it was never held that simply colouring an article in a novel way was a configuration for the purposes of registered design law, which also used the term ‘shape or configuration’.<sup>25</sup> He said that this was a telling point against an argument that an arrangement of colours was a configuration. The fact that colours were configured to produce the overall finished garment did not mean that colour had anything to do with configuration.

There is no requirement for eye-appeal for the design right and, as a result, the right should be capable of subsisting in details which are not readily discernible or distinguishable by the naked eye. The subsistence of the design right in contact lenses was considered by Laddie J in *Ocular Sciences Ltd v Aspect Vision Care Ltd*.<sup>26</sup> After some initial doubt, he accepted that, as the right was intended for functional designs, the right could subsist in respect of detailed relative dimensions because the value of such designs over similar designs may be due to these tiny differences.<sup>27</sup> However, as we shall see, this does not square up with the test for infringement which relies on looking at the whole of the articles to which the design is applied through the eye of the interested person. In *Ocular Sciences*, Laddie J also noted that, as the design can be applied to the whole of any part of an article, a claimant can trim his claims accordingly, focusing on those aspects of the defendant’s design which most closely match his. Again this is not consistent with the test for infringement given in the statute and as interpreted by the courts. It has been ‘explained’ subsequently. In *A Fulton Co Ltd v Totes Isotoner (UK) Ltd*,<sup>28</sup> Jacob LJ said (at para 34):

... I do not fully go along with Laddie J’s suggestion that what a proprietor can do is to ‘trim his design right claim’. It is not really a question of ‘trimming’ – it is just identifying the part of his overall design which he claims has been taken exactly or substantially.<sup>29</sup>

Although there might be some flexibility in what is claimed under the unregistered design right, it is important that the claim as asserted in the pleadings is drafted with precision.<sup>30</sup>

It is possible for the design right to subsist in designs which are basic geometric shapes, such as a spiral, and an argument that there could be no property right in ‘shapes at large’ was rejected by Roger Wyand QC sitting as deputy judge of the High Court in *Sales v Stromberg*.<sup>31</sup> He said that the shape of a sphere may be a commonplace design for a ball but not for a wireless receiver. In that case, the design in question was for a spiral made from copper tubing, sealed at both ends and containing imploded water. An argument that the design document, from which articles to the design were made, was so crudely drawn and lacking dimensions that it was impossible to make an article precisely to the design found some sympathy with the judge apart from the fact that the defendant had no difficulty in producing a prototype to the design. As crudely drawn as the design documents were, they still were the result of skill and labour sufficient to pass the test of originality.

The design right provisions also apply to articles made in a kit of parts being a complete or substantially complete set of components intended to be assembled into an article, and it is possible that a design right subsists in a component as distinct from the design right in the assembled article.<sup>32</sup> However, as will be seen later, those features of components in the kit of parts which are shaped or configured specifically to match or fit other components are barred from design right protection.

<sup>24</sup> [2005] RPC 88.

<sup>25</sup> In the registered design cases of *Cow (PB) & Co Ltd v Cannon Rubber Manufacturers Ltd* [1959] RPC 347 the ribbing on a hot-water bottle was held to be shape and in *Sommer Allibert (UK) Ltd v Flair Plastics Ltd* [1987] RPC 599, it was held that grooves on plastic chairs were a feature of shape or configuration.

<sup>26</sup> [1997] RPC 289.

<sup>27</sup> [2004] RPC 301.

<sup>28</sup> [1997] RPC 289 at 422.

<sup>29</sup> Reflecting the fact that the unregistered design right can subsist in the design of part of an article.

<sup>30</sup> Per H H Judge Fysh in the Patents County Court in *Bailey v Haynes* [2007] FSR 199.

<sup>31</sup> [2006] FSR 89.

<sup>32</sup> Copyright, Designs and Patents Act 1988 s 260.

In some respects the design right applies to a broader type of design than is the case with designs that fall within the scope of the UK registered design or the Community design. For example, the aspects of shape or configuration can be internal and may apply to an article that is not visible in normal use, such as ‘under the bonnet’ component parts. For a UK registered design or Community design, the requirement that the design relates to appearance means that the features must be external unless the outside surface of the product is transparent so that the product or relevant features of it are normally visible. However, the UK registered design and the Community design can also relate to parts of articles – for example, a new design of spout for a teapot may be protectable and will not be rejected because it relates only to a part of the teapot and not to the whole pot. This is inherent in both the harmonising Directive and the CD Regulation in the definition of ‘design’ which is the same for both.

## ORIGINALITY

For a design right to subsist in a design it must be original. Whatever the meaning of original, s 213(4) states what is not original, being a design which is ‘commonplace in the design field at the time of its creation’. What, then, does originality mean in the context of the design right? It is clear that it is not as high a standard as required for novelty for a registered design,<sup>33</sup> yet it appears to be more stringent than is usually the case in copyright which has been interpreted by judges to require simply that the work has originated from the author and has not merely been copied.<sup>34</sup> The statutory test suggests a two-stage approach. First, is the design original in a copyright sense (it is the author’s own work) and, second, even if it is original in that sense, was it commonplace in the design field in question at the time of its creation? This approach was taken by Aldous J in *C & H Engineering v F Klucznik & Sons Ltd*<sup>35</sup> where he said that the word ‘original’ should be given the same meaning as in respect of copyright, that is, not copied but the independent work of the designer. He went on to say that this should be contrasted with the novelty requirement for registered designs. However, Aldous J continued (at 428):

The word ‘commonplace’ is not defined, but [section 213(4)] appears to introduce a consideration akin to novelty. For the design to be original it must be the work of the creator and that work must result in a design which is not commonplace in the relevant field.

There can be sufficient skill in adopting a mistake for the purposes of originality. In *Guild v Eskander Ltd*,<sup>36</sup> the design related to knitwear in the form of an ethnic dress. A mistake resulted in the garment being 100cm wide instead of the usual 88cm. This mistake was adopted and it was held that it could be the product of skill if not labour. However, the decision to adopt that width was not attributable to the claimant alone and other features, such as a cross-over collar and other details, were insufficient to confer originality on the design of the garment. The Court of Appeal said that it was important to guard against a piecemeal approach and the question was whether all, not just one or more, of the additional features gave rise to the requisite quality of originality.<sup>37</sup>

The design of an article might comprise a combination of old aspects or it may combine both old and new aspects. In *Dyson Ltd v Qualtex (UK) Ltd*,<sup>38</sup> the defendant made ‘pattern parts’ for the claimant’s bagless vacuum cleaners. These are spare parts that have the same shape and appearance and the original parts. Examples being the ‘wand’ handle, brush bar and various tools attached to the wand handle, such as the stair tool. At first instance, Mann J found that design rights subsisted in various parts of the vacuum cleaners and these had been infringed by the defendant, whose appeal to the Court of Appeal was dismissed. Jacob LJ accepted that a combination of old aspects

<sup>33</sup> In terms of being disclosed to the public, notwithstanding the period of grace.

<sup>34</sup> For example, see the judgment of Lord Pearce in *Ladbroke (Football) Ltd v William Hill (Football) Ltd* [1964] 1 WLR 273.

<sup>35</sup> [1992] FSR 421.

<sup>36</sup> [2003] FSR 23.

<sup>37</sup> The Court of Appeal accepted, nevertheless, that some consideration of individual features was inevitable.

<sup>38</sup> [2006] RPC 769.

could involve originality but adding an old cable winder to a new handle lacked originality, being a mere collocation.

As the test for originality seems to be that as for copyright, this will be an issue only rarely and the focus will be on whether the design was commonplace in the design field in question at the time of its creation. However, before looking at what is or is not commonplace, the identification of the relevant design field is important as, without defining the design field, one cannot decide whether a design is commonplace and, consequently, denied protection.

## Design field

The Copyright, Designs and Patents Act 1988 gives no guidance as to how the relevant design field should be determined.<sup>39</sup> A wide or narrow meaning can be taken: for example, a design field could be kitchen furniture, bathroom furniture, soft furnishings, household furniture, office furniture, garden furniture or furniture generally. The choice may be decisive and a wide approach may mean that many designs are denied protection through the design right. It may be that a particular design is commonplace in fields other than the design field to which the design under consideration belongs. This will not prevent the design right from subsisting in the design, of course.<sup>40</sup> The issue is subsistence and there is no test of design field for the purposes of infringement, nor is there any need for such a test. The most sensible approach is to consider who is in the best position to know what the scope of a design field is and the answer can only be determined through the eyes of designers.<sup>41</sup> These are the people who know what a design field is. Not only will designers be aware of, and have a familiarity with, the design of articles which they themselves design, but they can also be expected to take an interest in related design fields. A certain amount of cross-fertilisation is to be expected. In our furniture example, it is likely that someone who specialises in the design of dining room furniture will be interested in other furniture designs found in a house and even, to some extent, in relevant office furniture. He may find his inspiration from looking at designs in these other related fields. As infringement requires copying and is expressed in terms of alleged infringing designs being exactly or substantially to the design,<sup>42</sup> there is no need to take a particularly broad approach to the determination of the design field in a particular case. However, the present trend seems to take a less restrictive view on the breadth of the relevant design field.

The earlier cases on the unregistered design right took a fairly restricted approach to the scope of the design field.<sup>43</sup> In *Mark Wilkinson Furniture Ltd v Woodcraft Designs (Radcliffe) Ltd*,<sup>44</sup> it was held that the design field in question was ‘fitted kitchen furniture’ not ‘cabinetry generally’, because the former was a discrete design field with its own particular problems and characteristics. In this respect, subsistence and infringement may not mirror each other. A design right might subsist in an infringing design just as a copyright might subsist in an arrangement of music which is itself an infringement as an adaptation of the original music. In *Farmers Build Ltd v Carrier Bulk Materials Handling Ltd*,<sup>45</sup> the Court of Appeal decided that the relevant design field was slurry separators not agricultural machinery generally. The design in question was for a slurry separator which separated out manure into solids and liquid.

A determination of the relevant design field from which to view whether a design is commonplace can be influenced by particular features of the article to which the design is applied: for example, the materials from which the article is made. In *Scholes Windows Ltd v Magnet Ltd*,<sup>46</sup> the decorative horns applied to windows were viewed from the perspective of a design field comprising window design in general. The judge refused to limit the design field to U-PVC windows as the horns were purely decorative features and could easily have been made in other materials. He thought the design field was

<sup>39</sup> Nor can any guidance be gleaned from registered design law. The concept of ‘informed user’ cannot assist as this suggests consumers or buyers of the type of products in question whereas one would expect the design field to be something determined through the eyes of designers.

<sup>40</sup> In *Sales v Stromberg* [2006] FSR 89, drawings of a spiral design were held to be common in rock art and other cultures, notably native American culture but the defendants failed to adduce any evidence that they were common in the design of articles of any kind, let alone the kind of article made by the claimant.

<sup>41</sup> In *Lambretta Clothing Ltd v Teddy Smith (UK) Ltd* [2005] RPC 88, Jacob LJ referred to designs of which the notional designer of the article concerned would be familiar.

<sup>42</sup> Copyright, Designs and Patents Act 1988 s 226.

<sup>43</sup> The question of the scope of design field was considered in the first major case on design right, *C & H Engineering v F Klucznik & Sons Ltd* [1992] FSR 421 involving an allegation of infringement of design right in a pig fender by a lamb creep feeder. Although pig fenders of that type were commonplace, the one in issue had a 2-inch round tube welded to the top.

<sup>44</sup> [1998] FSR 63.

<sup>45</sup> [1999] RPC 461.

<sup>46</sup> [2000] FSR 432.

window design generally. The Court of Appeal agreed, adding that the nature or purpose of an article or its material structure were not incorporated expressly or impliedly in the definition of ‘design field in question’.<sup>47</sup> The Court of Appeal also confirmed that the fact that an old design had fallen into disuse did not necessarily exclude them from the design field. It was a question of whether they could fairly and reasonably be considered to be part of the design field at the relevant time. The litmus test would be whether they were still familiar to designers.

<sup>47</sup> *Scholes Windows Ltd v Magnet Ltd* [2002] FSR 172.

<sup>48</sup> [2001] RPC 39.

<sup>49</sup> This case was not cited in the Court of Appeal in *Scholes Windows Ltd v Magnet Ltd* [2002] FSR 172 but now must be doubted on the question of whether materials are a factor to be taken into account in determining the relevant design field for the inquiry as to whether a design is commonplace.

<sup>50</sup> [2001] RPC 257.

<sup>51</sup> The appeal to the Court of Appeal was dismissed: *A Fulton Co Ltd v Totes Isotoner (UK) Ltd* [2004] RPC 301. The scope of design field was not in issue in the Court of Appeal.

<sup>52</sup> [2005] RPC 894.

<sup>53</sup> The reference to materials introduces something rejected earlier by the Court of Appeal in *Scholes Windows Ltd v Magnet Ltd* [2002] FSR 172, a decision not referred to in *Ultraframe*.

However, it is likely that it was used in a different way as a feature to widen the design field rather than restricting it.

<sup>54</sup> Neuberger LJ dissented on the patent issue in the case.

<sup>55</sup> [2005] RPC 88.

<sup>56</sup> [2006] FSR 89.

<sup>57</sup> [2002] FSR 172.

In *Christopher Tasker’s Design Right References*,<sup>48</sup> the hearing officer selected two different design fields. One, being aluminium sliding mirror wardrobe doors, was chosen for the purpose of determining whether some of the design features were commonplace. This was because the design of those features was influenced by the choice of material.<sup>49</sup> However, as regards other features where the nature of the structural material was not important, the relevant design field was wardrobe doors generally. In *A Fulton Co Ltd v Grant Barnett & Co Ltd*,<sup>50</sup> Park J declined an invitation to choose between two design fields, folding umbrellas and compact folding umbrellas, saying that he would have come to the same conclusion either way.<sup>51</sup>

The Court of Appeal has taken a broader approach to deciding the design field in question in *Ultraframe (UK) Ltd v Eurocell Building Plastics Ltd*<sup>52</sup> which involved modular units for conservatory roofs. The court held that the design field in question was not limited to conservatory roofs but was wider and would cover windows, doors, conservatories and materials used to construct them.<sup>53</sup> Jacob LJ, with whom the other two judges agreed on the design right point,<sup>54</sup> referred to the decision of the Court of Appeal in *Lambretta Clothing Ltd v Teddy Smith (UK) Ltd*<sup>55</sup> where Jacob LJ himself, at para 45, said that ‘[w]hat matters are the sort of designs with which a notional designer of the article concerned would be familiar’. In *Ultraframe*, Jacob LJ developed the rationale for taking a broad approach to design field, saying (at para 54) that were it otherwise:

... a designer would be able to obtain UDR in designs with which other similar designers were wholly familiar, just because the ‘field’ was narrowly drawn. That would be to impose too much of a fetter on freedom to use known designs ... Suppose conservatory designers were completely familiar with a well-known design of window panel. Why should the law give a particular designer UDR protection for choosing to use in a conservatory roof a design known to all conservatory designers?

A narrower approach to design field was taken by Roger Wyand QC, sitting as deputy judge of the High Court in *Sales v Stromberg*,<sup>56</sup> which involved a design for ‘personal harmonisers’, pendants to a ‘Celtic-type’ spiral design containing imploded water and made from copper tubing. He decided that the design field was ‘complementary medical devices including ornamental or decorative such devices’ notwithstanding the defendant’s much wider view of the relevant design field. The Court of Appeal decision in *Scholes Windows Ltd v Magnet Ltd*<sup>57</sup> was distinguished as regards the view that purpose should not be taken into account. In finding that one of the defendant’s designs infringed the claimant’s design right, Roger Wyand QC thought that the Court of Appeal did not intend to rule out purpose but, as the design field was window design, that itself implied purpose to some extent. It does seem difficult to divorce purpose from design field. In *Sales v Stromberg*, the defendants included like designs used for other purposes in their view of what the design field was, which included designs for artefacts for good luck, religious faith, ancient (especially Celtic) civilisations. However, the judge could have narrowed the design field down by looking through the eyes of the notional designer of an article of the type made by the claimant.

It is reasonable to take the approach of looking at the design field through the eyes of the notional designer. However, the scope of the design field was a matter for the

court and not for expert witnesses although they could give evidence of the sort of matter that was well known to designers of the type of articles in question.<sup>58</sup> Once the design field has been determined, it is then a matter of considering whether the design in issue is or is not commonplace.

<sup>58</sup> *Ultraframe (UK) Ltd v Eurocell Building Plastics Ltd* [2005] RPC 894.

## Commonplace

The meaning of ‘commonplace’ is important as a defendant is likely to argue that the claimant’s design was commonplace in the design field in question at the time of its creation. This could be taken as meaning that, although some examples of the design may exist, they are not well known or commercialised and can only be found by a thorough search. Alternatively, it may mean that the design must differ from the existing art in the relevant design field, though not by a significant amount. In *Ultraframe (UK) Ltd v Eurocell Building Plastics Ltd*,<sup>59</sup> Jacob LJ said (at para 60):

<sup>59</sup> [2005] RPC 894.

That which is commonplace in a design field will be ready to hand, not matter that has to be hunted for and found at the last minute. After all, one is trying to prove a prior design is *commonplace*, not merely (as for instance in a patent case) that it was made available to the public by use. (original emphasis)

It is self-evident that the requirement that a design not be commonplace is not the same as novelty for registered designs or patents. In *Ultraframe*, the defendant had managed to trace some products shown in catalogues of German extrusion companies. The possibility that someone in the UK might go abroad to find a maker of that sort of roof panel was, Jacob LJ said, miles away from showing that the claimant’s designs were commonplace. However, if the test of whether a design is commonplace is limited to an enquiry into designs made available in the UK only, this creates a paradox for, as we shall see, a design can qualify for protection in a number of ways. One of these is where the designer is a British citizen or a citizen of another State of the European Economic Community.<sup>60</sup> This means, for example, that a design could be created by an Italian citizen (not being an employee or acting under a commission for money or money’s worth), who created the design in Italy, which satisfies the other requirements for subsistence, and which is commercialised in Italy. No articles to the design are exported to the UK and nothing is published about the design in the UK. The design qualifies for the UK design right. A third party in the UK, not having seen the Italian design, subsequently creates a design to be applied to articles in the same design field and which is, to all intents and purposes, identical. Does that third party get his own UK design right or is it vulnerable to a challenge that it was commonplace when it was created? It would be strange if designs which qualify for the UK design right, but are created and commercialised not in the UK but within other parts of the European Economic Community, are not taken into account in determining whether a design is commonplace. If this is so, there could be several owners of what are essentially the same designs, all of which could bring infringement actions in the UK.

<sup>60</sup> Still expressed as such in the Act: see ss 206, 217 and 220.

The Act gives no further assistance to what ‘commonplace’ means and it is a term of art new to English law.<sup>61</sup> In *Ocular Sciences Ltd v Aspect Vision Care Ltd*,<sup>62</sup> Laddie J remarked that the word ‘commonplace’ derives from the Directive on the protection of semiconductor topographies which imposed a test of intellectual creation and not being commonplace in the semiconductor industry. Although he said that it was undesirable ‘to replace one ambiguous expression by another’, he went on to approve counsel’s submission that:

<sup>61</sup> Being adopted from the Directive on the legal protection of topographies of semiconductor products.

<sup>62</sup> [1997] RPC 289.

Any design which is trite, common-or-garden, hackneyed or of the type which would excite no peculiar attention in those in the relevant art is likely to be commonplace.<sup>63</sup>

<sup>63</sup> [1997] RPC 289 at 429, followed by Englehart QC in *Philip Parker v Stephen Tidball* [1997] FSR 680.

A design which is made up of commonplace elements may yet qualify for protection by virtue of the combination of elements provided the combination itself is not commonplace.<sup>64</sup>

<sup>64</sup> *Farmers Build Ltd v Carier Bulk Materials Handling Ltd* [1999] RPC 461 at 467 per Mummery LJ.

<sup>65</sup> [1999] RPC 461. This was the first case on the design right before the Court of Appeal.

The tests for originality and whether a design was commonplace when it was created were considered in depth in the Court of Appeal in *Farmers Build Ltd v Carier Bulk Materials Handling Ltd*.<sup>65</sup> In that case, the defendant designed an agricultural rotary screen slurry separator machine for the claimant. It had been agreed that the claimant would own all the intellectual property rights in the machine. Later, the defendant designed his own machine, which looked different externally, but which contained internal machinery which was almost identical to that in the claimant's machine.

Mummery LJ confirmed that the test of originality was as that for copyright. He accepted that it would be wrong to regard the requirement for a design not to be commonplace as the same as a requirement for novelty. He then set out a five-factor test for whether a design was commonplace, noting that the word should be interpreted narrowly rather than broadly, otherwise many designs of functional articles would be excluded from protection. Indications that this should be so could be derived from considering the short duration of the design right, the narrow scope of protection against copying and the prima facie protection given to designs of functional articles. The test is as follows:<sup>66</sup>

<sup>66</sup> Some modification to the wording of the test has been made as Mummery LJ also included aspects related to an alleged infringement.

- 1 Compare the design with the design of other articles in the same field.
- 2 Has the design simply been copied from the design of an earlier article? The court must not forget that, in the field of designs of functional articles, one design may be similar, or even identical, to another design and yet not be a copy. If the design has been slavishly copied from another, then it is not original in the copyright sense and the commonplace issue does not arise.
- 3 If the court is satisfied that the design has not been copied from an earlier design, then it is original in the copyright sense. The court then has to decide whether it is commonplace. This requires comparison of the design for similarity with the design of similar articles in the same field of design made by persons unconnected with the parties.
- 4 The comparison must be conducted objectively and in the light of the evidence, including evidence from experts in the relevant field pointing out similarities and differences and explaining the significance of them. Of course, the final determination of whether a design is commonplace is for the court, being based on fact and degree. The closer the similarity of various designs to each other, the more likely it is that they are commonplace, especially if there is no causal link which accounts for the resemblance of the compared designs.
- 5 If there are aspects of the design in question which are not to be found in any other design in the relevant field, that is suggestive that the design is not commonplace.

Looking at point 4 above, Mummery LJ said that the fact that a number of designers working independently created very similar designs by coincidence suggested that there was only one way of designing the particular article and that such a design could be fairly described as commonplace. Furthermore, this would be a good reason for denying protection. Any such design would be bound to be substantially similar, whether or not it had been copied.

<sup>67</sup> [2000] FSR 432.

In *Farmers Build*, Mummery LJ was concerned with purely functional designs and, in *Scholes Windows Ltd v Magnet Ltd*,<sup>67</sup> Nicholas Underhill QC, sitting as deputy judge of the High Court, said that some of Mummery LJ's observations might be less relevant in the case of a design created so as to have aesthetic qualities (in particular, the observations in the preceding paragraph and point 3 of the test). *Scholes Windows* involved the design of a U-PVC window which was designed to look like a Victorian sash window

and, in particular, had two projections on the bottom of the two side members of the upper casement, called horns, which were typically found on Victorian windows. It was held that the design of the horns was commonplace. The Victorian designs, although over a century old, were still current as they were to be seen *in situ* in numerous Victorian buildings all over the country. Although none of the Victorian designs were identical to the claimant's design, the latter did not differ from the Victorian designs sufficiently to 'lift it out of the ordinary run of such designs'.

The Court of Appeal dismissed the claimant's appeal against the decision at first instance that the design was commonplace.<sup>68</sup> On the basis of the House of Lords decision in *Designers Guild Ltd v Russell Williams (Textiles) Ltd*,<sup>69</sup> an appellate court should not interfere with a trial judge's finding of fact unless satisfied that he had misdirected himself or erred in principle. Mummery LJ thought the trial judge used the correct approach and he rejected the submission that the issue of whether a design is commonplace should be decided from the perspective of the designer who is an expert in the design field in question. Therefore, if the notional designer is used as a basis to decide what the relevant design field is, it is the viewpoint of the type of person to whom the design is marketed that is important in deciding whether a design is commonplace. Although expert evidence might help the court to perceive and appreciate the similarities and differences between designs, it is not necessary to be an expert to appreciate such similarities and differences nor to form an opinion as to whether the design in issue is commonplace. Indeed, over-reliance on one side's expert witness may lead a judge to fall into error. In *Lambretta Clothing Co Ltd v Teddy Smith (UK) Ltd*,<sup>70</sup> the judge at first instance preferred the opinion of the claimant's expert witness as to the design field in question and this resulted in him finding that the design of the track-top was not commonplace. The Court of Appeal held that the judge had fallen into error, which enabled the court to look afresh at the issue of whether the design was commonplace. In holding that the judge at first instance had wrongly excluded retro-designs from the design field, the Court of Appeal went on to find that the design was commonplace.<sup>71</sup>

The addition of the test of whether a design is commonplace can be said to limit the number of designs that are subject to the design right and to prevent the right applying to designs so like earlier designs that enforcement would be difficult. But then the right is a right to prevent copying and the fact that a similar work may be independently created and have its own separate copyright does not seem to have caused any 'floodgate' problems under copyright law.

Of course, the test for whether a design is commonplace has to be judged at the time of the creation of the design and not later. As the right is informal and much of the 'prior art' that may be used to attack a design right as being commonplace may also not be subject to formal rights, establishing the design field at the time of the creation of the design may not be an easy task. This could be made even more difficult when one considers that design does not subsist until it is recorded in a design document or an article is made to the design. As neither act necessarily coincides with the time articles to the design are put on the market or otherwise made available to the public, fixing the time of creation may be difficult if the designer has not kept proper records.<sup>72</sup>

If the meaning of commonplace is simply that the design has been made available to the public, but not on a scale to have become well known in the design circles in the relevant design field, all manner of difficulties could arise. There would be more than one design right subsisting in the same design, or very similar design, and the test of whether a design is commonplace could be very difficult to apply. For example, consider the following situations involving two designs which are similar and have been created by two designers, Alice and Bernard. The designs are unlike any prior designs

<sup>68</sup> [2002] FSR 172.

<sup>69</sup> [2001] FSR 113.

<sup>70</sup> [2003] RPC 728.

<sup>71</sup> [2005] RPC 88. The claimant's expert witness had considered the design of the track-top as a whole, including items which should be ignored. Attention should have been directed at the red, white and blue colourways.

<sup>72</sup> Keeping full, accurate and verifiable records is important in relation to all forms of intellectual property rights.

and are intended to be applied to a locking mechanism for sliding doors. They have been created independently.

- 1 Alice and Bernard create their designs and record them at around the same point in time.
- 2 Alice and Bernard create their designs and record them at around the same point in time, but there is a time difference in the marketing of articles made to the designs. Articles to which Alice's design has been applied reach the marketplace in advance of articles made to Bernard's design. In the meantime, articles to Alice's design do not sell in large numbers.
- 3 Again, Alice and Bernard create and record their designs at the same time and articles made to Alice's design reach the marketplace first, but this time large numbers of articles to Alice's design are sold before the appearance of articles made to Bernard's design. Generally, most designers in the same field would have seen the design before articles to Bernard's design are marketed.
- 4 Bernard does not create and record his design until after small numbers of articles made to Alice's design have been marketed or sold. (Bernard has not seen the articles and they are not yet generally known to designers in the field.)
- 5 Bernard creates and records his design after large numbers of articles made to Alice's design have been marketed and sold. (Again, Bernard does not see any of the articles to Alice's design but most designers in the field will have seen Alice's design.)
- 6 Several other similar designs have been recorded and articles made to the designs have been marketed and sold before Bernard, in ignorance of these, creates his similar design. Again, most designers working in that field will be familiar with the design.

In 1, 2 and 3 above, both Alice and Bernard have created designs in which the design right is capable of subsisting subject, of course, to the exceptions. The design was not commonplace at the time of its creation by Alice and by Bernard because the creation of the designs was coincident in time, or nearly so.<sup>73</sup> The fact that numbers of articles have been sold is irrelevant to the subsistence of the design rights and reference must be made to the time when the designs were created, at which time the design or variants of it were not commonplace. Situation 6 is easily dealt with – it is clear that, at the time Bernard creates his design, the design has become commonplace in the design field. Situations 4 and 5 are less easy to distinguish, but it is clear that the test will be applied objectively, probably through the eyes of an interested person: for example, someone working in or knowledgeable about the design field in question. It is suggested that, if only small numbers of articles made to Alice's design have been sold, there is a possibility that Bernard's design can still attract the design right. This prompts another question as to whether it is sufficient that only one other example of a similar design has been created and applied to articles, or whether the design, or variants of the design, are commonly used by a majority of designers in the particular design field. Incidentally, in none of the examples above does Bernard infringe Alice's design right as he has not copied her design.

In *A Fulton Co Ltd v Grant Barnett & Co Ltd*,<sup>74</sup> it was held that prior art comprising an obscure article which looks fairly similar to the design in question would not be sufficient to make the design commonplace. In *Frayling Furniture Ltd v Premier Upholstery Ltd*,<sup>75</sup> a case involving a design applied to armchairs, Park J said:

... it does not disqualify the Sienna from design right if Premier [the defendant], having scoured the trade magazines, manages to come up with one or two fairly obscure items which may be said to have a close similarity.

To hold otherwise would be to impose a test of novelty not unlike that which applies in the case of a patent. If Parliament had intended to apply a test of novelty

<sup>73</sup> The time of the creation of a design may be of crucial importance in a case like this and the need for independent evidence as to the date of the creation of a design is a matter which should not be overlooked by designers, their employers and commissioners.

<sup>74</sup> [2001] RPC 257.

<sup>75</sup> (Unreported) 5 November 1998.

to a design subject to the design right it would have done so using clear language to that effect.

In *Dyson Ltd v Qualtex (UK) Ltd*,<sup>76</sup> Jacob LJ noted the different approaches to the meaning of commonplace in *Farmers Build*, *Ocular Sciences* and *Lambretta Clothing*. He said he doubted whether the differences had any significance and that it was important to focus on the context in which the questions arose.<sup>77</sup> He referred to Mann J at first instance where he spoke of a paradox. A very good design which became well known would lose design right because it had become commonplace. Jacob LJ thought the judge had fallen into error on this point as there was no question of this happening as the relevant time to consider whether a design was commonplace was the time of its creation. However, it is not clear whether Mann J really suggested otherwise as it appeared that he was dealing with counsel's submission to the effect that a subsequent design, having only trite differences compared with an earlier design, would be commonplace as a result of the commercial success of the earlier design upon which it was based. Nonetheless, Jacob LJ went on to consider afresh whether a later version of the wand handle was commonplace. He noted that the differences over the earlier design were significant and that the later design was the result of a redesign exercise that was no trivial operation. Similar considerations applied to another part, being the stair tool.

<sup>76</sup> [2006] RPC 769.

<sup>77</sup> At para 106.

## TANGIBLE FORM REQUIREMENT

The design right springs into force when the design is recorded in a design document, or alternatively when an article has been made to the design, whichever happens first.<sup>78</sup> 'Design document' is defined by s 263, which contains minor definitions, as 'any record of a design, whether in the form of a drawing, a written description, a photograph, data stored in a computer or otherwise'.<sup>79</sup> This would appear to cover virtually any form of recording and would be likely to include data stored on a compact disc, magnetic tape or a computer disk, depending on the meaning of 'or otherwise'. Bearing in mind the wide variety of forms of storage mentioned specifically, it is certain that this will be construed very widely. The only difficulty could be with temporary storage; and on the basis of the House of Lords judgment in *R v Gold*,<sup>80</sup> temporary storage in a computer's volatile memory may not be sufficient, although as soon as the relevant data is copied on to a computer disk this will be deemed to be recorded. One question which arises is whether storage on a removable computer disk is storage *in a computer*. However, this should be caught by the scope of the phrase 'or otherwise'.

<sup>78</sup> Copyright, Designs and Patents Act 1988 s 213(6).

<sup>79</sup> It should be noted that it is the design that is protected, not the design document.

<sup>80</sup> [1988] 2 WLR 984.

Old designs cannot be resurrected by the design right because s 213(7) declares that the right does not subsist in designs which were recorded in a design document or which have been applied to an article prior to the commencement of the Copyright, Designs and Patents Act 1988 Part III.<sup>81</sup>

<sup>81</sup> The commencement date was 1 August 1989.

## QUALIFICATION

As with copyright law, some qualification requirements must be satisfied for the right to subsist in a design. These may be fulfilled by reference to the designer, or, where relevant, the designer's employer or the commissioner of the design. A further route to satisfying the qualification requirements is through the first person who markets articles made to the design and the country in which that first marketing took place. There are, therefore, four possible routes to qualification. However, before the provisions can be understood, three terms used have to be defined: they are 'qualifying country', 'qualifying individual' and 'qualifying person'.<sup>82</sup>

<sup>82</sup> Defined in the Copyright, Designs and Patents Act 1988 s 217.

<sup>83</sup> Still expressed as European Economic Community in the Act.

<sup>84</sup> Design Right (Reciprocal Protection) (No 2) Order 1989, SI 1989/1294. Regulation 2 gives a full list of countries designated as enjoying reciprocal protection.

<sup>85</sup> In respect of the UK, a citizen is a living person who is a British citizen or, in relation to a colony of the UK, a British Overseas Territories citizen in connection with that colony.

<sup>86</sup> Section 217(2).

<sup>87</sup> Copyright, Designs and Patents Act 1988 s 214.

<sup>88</sup> Copyright, Designs and Patents Act 1988 s 259(1).

<sup>89</sup> Copyright, Designs and Patents Act 1988 s 218(1).

<sup>90</sup> Copyright, Designs and Patents Act 1988 s 263(1).

<sup>91</sup> Copyright, Designs and Patents Act 1988 s 220.

<sup>92</sup> Copyright, Designs and Patents Act 1988 s 221.

‘Qualifying country’ means the UK and other Member States of the European Community.<sup>83</sup> Other countries may be added by Order in Council, either under s 255 or 256, the latter applying where the other country has reciprocal provisions for design rights. Bermuda, the Channel Islands, Gibraltar, the Isle of Man, New Zealand, amongst others, have been added to the list of qualifying countries by Order under s 256.<sup>84</sup>

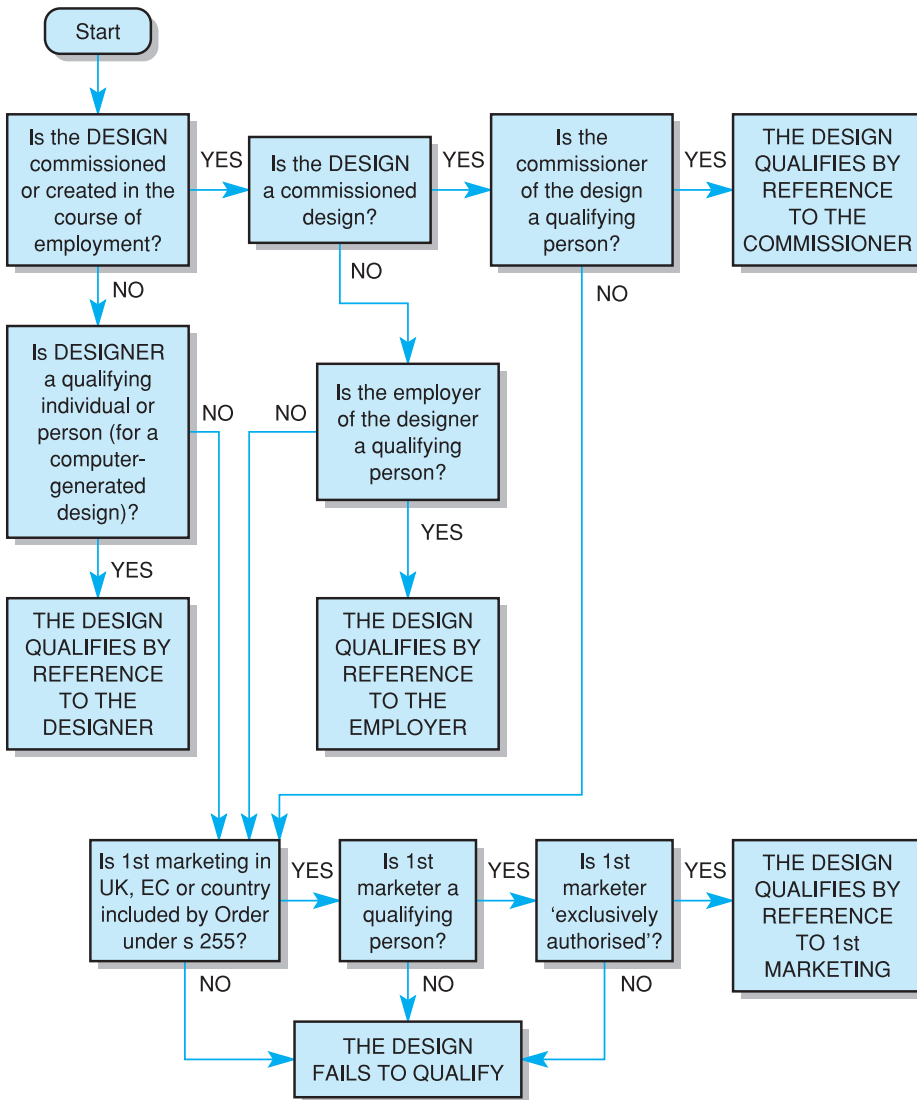

‘Qualifying individual’ is a citizen, subject or person habitually resident in a qualifying country.<sup>85</sup>

‘Qualifying person’ means a qualifying individual or a body having legal personality, including a body corporate which has been formed under the law of a qualifying country and which has, in any qualifying country, a place of business at which substantial business activity is carried out. In determining whether substantial business is carried out, no account is to be taken of dealings with goods which are, at all material times, outside the qualifying country. References to a qualifying person include the Crown and the government of any other qualifying country.<sup>86</sup> Under s 263(1) ‘business’ includes a trade or profession.

The routes to qualification are by reference to:

- 1 The designer, being the person who creates the design. If the design is computer-generated, the designer is taken to be the person by whom the arrangements necessary for the creation of the work are undertaken.<sup>87</sup> Under s 218(2), a design qualifies for protection if the designer is a qualifying *individual*, or, if the design is computer-generated, the designer is a qualifying person. A joint design is the result of collaboration between two or more designers such that their individual contributions are indistinct from one another.<sup>88</sup> A joint design qualifies if any of the designers is a qualifying individual (or a qualifying person for a computer-generated joint design). These provisions do not apply, however, if the design is created in the pursuance of a commission or in the course of employment.<sup>89</sup>
- 2 The commissioner, if the design is commissioned and the commissioner is a qualifying *person* (s 219(1)). A commissioned design is one commissioned for money or money’s worth.<sup>90</sup>
- 3 The employer, if the design is created by the designer in the course of employment and the employer is a qualifying *person* (s 219(1)). Section 263(1) states that ‘employee’, ‘employment’ and ‘employer’ refer to employment under a contract of service or of apprenticeship. This definition is identical to that applying to copyright works.
- 4 The first marketing of articles made to the design.<sup>91</sup> This can apply only if the other qualification requirements do not. In this case, the requirement is that the first marketing is done by a qualifying *person* exclusively authorised to put such articles on the market in the UK and it takes place in the UK, any other Member State of the European Community or other country to which Part III of the Act has been extended by Order under s 255, but not to countries affording reciprocal protection included by Order under s 256. ‘Exclusively authorised’ refers (a) to authorisation by the person who would have been the first owner of the right as designer, commissioner or employer had he (or it) been a qualifying person, including a person lawfully claiming under him, and (b) to exclusivity capable of legal enforcement in the UK.

In the case of a joint commission, or a joint employment or joint marketing, the design qualifies if any of the commissioners, employers or marketers is a qualifying person. A design which would not otherwise qualify may so qualify for protection subject to specified requirements in an Order in Council so that an international obligation of the UK is fulfilled.<sup>92</sup> The flowchart in Figure 18.1 sets out the various routes to qualification and their relationship.

**Figure 18.1** Qualification for the design right

## EXCEPTIONS

The design right is declared under s 213(3) not to subsist in:

- (a) methods or principles of construction;
- (b) features of shape or configuration which:
  - (i) enable the article to be connected to, placed in, around or against another article so that either article may perform its function (the 'must-fit' exception), or
  - (ii) are dependent upon the appearance of another article of which the article is intended by the designer (creator of the design) to form an integral part (the 'must-match' exception);
- (c) surface decoration.

A final exception which will not be examined in more detail later as it is self-explanatory is the exception from design right of a design which consists of or contains a controlled representation within the meaning of the Olympic Symbol etc. (Protection) Act 1995. This exception is provided for under s 213(5A), which was inserted into the Copyright, Designs and Patents Act 1998 by that Act of 1995. The protection is afforded to the Olympic symbol, Olympic motto (*citius, altius, fortius*) and protected words (Olympiad, Olympiads, Olympian, Olympians, Olympic and Olympics). Of course, as design right applies only in respect of shape or configuration, it is highly unlikely that it could subsist in the words; although the Olympic symbol is another matter if represented in three-dimensional form. The 1995 Act contains remedies for infringement and criminal offences, not unlike those that apply to the trade marks offences.

### Methods or principles of construction

The first exception is very similar to that which used to apply to registered designs, being identically worded, and it would seem reasonable to look to case law on registered designs for guidance.<sup>93</sup> In *Kestos Ltd v Kempat Ltd*,<sup>94</sup> Luxmoore J said (at 151):

A mode or principle of construction is a process or operation by which a shape is produced as opposed to the shape itself.

This was cited with approval by Park J in *A Fulton Co Ltd v Grant Barnett & Co Ltd*,<sup>95</sup> in which two particular methods were used to manufacture a case for a folding umbrella. One was a method by which the case retained its rectangular box-like shape; the other was a stitching technique, giving the cases outwardly pointing seams. Park J said (at para 70):

... the design of the case is the shape or configuration produced by those methods or construction, not the methods by which that shape or configuration is produced. The fact that a special method or principle of construction may have been used in order to create an article with a particular shape or configuration does not mean that there is no design right in the shape or configuration.

In *Christopher Tasker's Design Right References*,<sup>96</sup> the Hearing Officer, again referring to *Kestos v Kempat*, said that it may be possible to obtain protection for a particular shape or configuration resulting from using a particular method or principle of construction. However, he went on to say that where the method or principle of construction leads to the manufacture of articles with a shape or configuration which may be capable of variation within very wide limits, then to allow protection for such a general conception of shape or configuration would be effectively to give protection to that method or principle of construction.<sup>97</sup> This must be treated with some caution and the Hearing Officer was dealing with written claims to a design right and a claim to a general shape might well be caught by the exception. However, where there is design freedom, the particular shape or configuration claimed cannot be a claim to a method or principle of construction if others using that same method or principle can manufacture articles with different shapes or configurations.

The exception must relate to techniques used to construct an article rather than the technical function the article is designed to perform. Consequently, the exception will apply only in rare cases, especially if one accepts that the presence of design freedom suggests that the shape or configuration of an article cannot be a method or principle of construction.<sup>98</sup> The function an article performs cannot be subject to a design right, *per se*, and features of shape or configuration resulting from technical function are likely to be caught by the 'must-fit' exception.

In *Dyson Ltd v Qualtex (UK) Ltd*,<sup>99</sup> at first instance, it had been argued by the defendant that a tool for the claimant's vacuum cleaner which was perforated with holes to

<sup>93</sup> Under registered designs law as it now stands, the equivalent exception has been repealed. Features of appearance of a product which are solely dictated by the product's technical function are excluded from protection instead: Registered Designs Act 1949, s 1C(1).

<sup>94</sup> (1936) 53 RPC 139.

<sup>95</sup> [2001] RPC 257.

<sup>96</sup> [2001] RPC 39. The references were brought under the Copyright, Designs and Patents Act 1988 s 246.

<sup>97</sup> The Hearing Officer considered this was what Luxmoore J said in *Kestos v Kempat* and what Parker J said in *Pugh v Riley Cycle Company Ltd* (1912) 29 RPC 196 at 202.

<sup>98</sup> That being so, the decision of Pumfrey J in *Baby Dan AS v Brevi SRL* [1999] FSR 377, to the extent that he held that the relative positioning of component parts of a child's safety barrier would be contrary to s 213(3)(a), which excludes from protection methods or principles of construction, must be viewed with some caution.

<sup>99</sup> [2005] RPC 393. The case demonstrates the continuing usefulness of the UK unregistered design right as a means of protecting designs.

admit air into the cleaner for the purpose of assisting in cooling the motor was within the exception. Mann J rejected this argument. The exception could apply to the idea of using holes but not to a particular design of holes. In *Landor & Hawa International Ltd v Azure Designs Ltd*,<sup>100</sup> Neuberger LJ considered that the exception did not preclude a design simply because it had a functional purpose. The exception was there to prevent a monopoly in articles made in a particular way. In that case, the design in question related to a suitcase with a particular arrangement of piping and a zipper. It was held that the exception would only apply if that design was the only way of achieving the functional purpose of the design. It might be hard to think of a design where this might be so but, in *Bailey v Haynes*,<sup>101</sup> HH Judge Ford held that the design of a micromesh used in the manufacture of textile containers to hold bait used by anglers was caught by the exception. The mesh was produced using a particular warp stitch method and, although its appearance might vary from product to product, it inevitably was a method or principle of construction.

<sup>100</sup> [2007] FSR 181.

<sup>101</sup> [2007] FSR 199.

### ‘Must-fit’

The purpose of the ‘must-fit’ exception is to prevent a designer using his design right to stop others making parts which fit his article. It is often referred to as the ‘interface’ exception.<sup>102</sup> In fact, as with the ‘must-match’ exception, it is not just an exception to infringement; it is an exception to subsistence of the design right in respect of the parts of the article that have to be a particular shape or configuration to fit another article so that either can perform its function. As design right can subsist in part of a design, it was important to exclude such elements of a design from subsistence of the right.<sup>103</sup>

<sup>102</sup> For example, in *Apps v Weldrite Products Ltd* [2001] FSR 703, it was held that the widths of slots for receiving bolts on a stabiliser to be fitted to children’s bicycles were caught by the ‘must-fit’ exclusion.

<sup>103</sup> Per Jacob LJ in *A Fulton Co Ltd v Totes Isotoner (UK) Ltd* [2004] RPC 301 at para 32.

<sup>104</sup> [1997] RPC 289 at 424.

According to Laddie J in *Ocular Sciences Ltd v Aspect Vision Care Ltd*<sup>104</sup> it does not matter if those aspects excluded have other functions or if a number of different designs of interface will do. Providing the articles can be fitted together to enable either to perform its function, the exception applies. However, in *A Fulton Co Ltd v Grant Barnett & Co Ltd*, Park J did not accept that a case of rectangular box-like shape to fit around a folding umbrella was caught by the exception, saying (at paras 74 and 75) that, in his view, it would be:

unacceptable to construe the provision as meaning that any article which shaped so as to cover or contain another article cannot qualify for design right . . . section 213(3)(b)(i) does not provide that design right cannot subsist in an article if it can be placed in, around or against another article. Rather it provides that design right cannot subsist in features of shape or configuration which enable the article to be so placed.

At first sight this seems to contradict Laddie J’s view of the exception but it is consistent with it. The fact that certain features of a hat have to be a particular shape to fit on a head, does not mean that the other features of the shape of the hat, such as the shape of the brim or circumferential band, cannot be protected by the design right. On the other hand, the interface between the hat and the head could be circular, oval or even elliptical in plan view. Although many different alternatives exist (although perhaps only varying in small detail) they will all be caught by the ‘must-fit’ exception.

This approach is consistent with that of David Young QC, sitting as deputy judge of the High Court, in *Baby Dan AS v Brevi SRL*<sup>105</sup> where he said that, where design right subsisted in component parts of a larger article, it would be circumscribed by the ‘must-fit’ provisions. In respect of a whole article made up of component parts, if the design right is claimed in respect of the assembled article, the ‘must-fit’ provisions do not apply to the shape or configuration of the various parts that enable them to be assembled. On the other hand, if what is claimed is the design rights subsisting in the

<sup>105</sup> [1999] FSR 377 at 382.

component parts as individual articles, the ‘must-fit’ provisions apply to curtail the design rights in those parts, *per se*. The rationale for such an approach was that the ‘must-fit’ provisions were introduced to deny protection to articles such as spare parts and this required, according to David Young QC, a purposive approach to the construction of s 213(3)(b)(i). However, it should be noted that the exception applies only to those features of shape or configuration that enable the articles to be interfaced so that either can perform its function. The design right may subsist in other features of shape or configuration, if any. The provision does not deny protection to spare parts completely but it merely allows the manufacture of other articles that can be interfaced with the article in question. In the umbrella case, the object of the design right was not denied protection altogether. Although the case was designed to fit around the umbrella in its folded state, certain aspects of the design such as the outwardly facing seams were not present to enable the case to be placed around the umbrella. They were there to make the case look more attractive.

The exception is concerned primarily with enabling function, whether that of the article in question or the other with which it connects with or is in proximity with as described in the subsection. In *Dyson Ltd v Qualtex (UK) Ltd*,<sup>106</sup> it was held that the articles did not actually have to physically touch and clearances might, theoretically, be acceptable. However, if the design of the article in question was simply to provide enough clearance to prevent it fouling the operation of the other article, that was not, *per se*, enough for the exception to apply. Enabling the function of some third article did not count. Thus, providing a vacuum cleaner nozzle with holes to prevent the cleaner’s motor from overheating was not a relevant function. The nozzle was placed against a carpet, not the motor. The holes allowed the nozzle to function as a vacuum cleaner nozzle. The ‘must-fit’ test is an objective one and does not depend on which article was designed first. Designing an article later which fits with an earlier article can mean that some aspects of the design of the earlier article are caught by the exception. This could be the case, for example, where the first article has lugs as part of the casting and the later article is designed so that it has protuberances to fit over the lugs. It is clear that, although certain parts of an article are caught by the exception, other parts may still be subject to the design right. If one element of an article’s design is constrained to enable that or the other article to enable either to perform its function, that is not to say that the remaining aspects are also excluded from protection.

The article in the ‘must-fit’ exception does not have to be an inanimate object. Laddie J refused to construe the exception narrowly to exclude the human eye in *Ocular Sciences Ltd v Aspect Vision Care Ltd*<sup>107</sup> in finding that some features of the design of contact lenses were caught by this exception as they adopted a particular shape to fit the human eye, so that the eye and the lens could perform their respective functions.<sup>108</sup> It was from the viewpoint of these functions that the features were evaluated in terms of the exception.

### ‘Must-match’

The ‘must-match’ exception in s 213(3)(b)(ii) is more strongly worded than the ‘must-fit’ exception in that the shape or configuration has to be *dependent* upon the appearance of the other article. Furthermore, it appears that both articles are likely to have a common designer (though not essential), unlike the case with the ‘must-fit’ exception. The provision speaks of the intention of the designer that the article forms an integral part of the other article. An argument that the handle of the umbrella in *A Fulton Co Ltd v Grant Barnett & Co Ltd*<sup>109</sup> was caught by the exception and was of a flat, rectangular cuboid shape to match the shape of the umbrella in its case (flat

106 [2006] RPC 769.

107 [1997] RPC 289 at 425.

108 Laddie J considered the presumed legislative intent was to exclude all interfaces.

109 [2001] RPC 257.

and rectangular) was rejected as the designer could have used other shapes and was not constrained to use the particular shape chosen, having precisely the same aspects of shape or configuration.

Section 213(3)(b)(ii) states that the exception applies where the features of shape or configuration ‘. . . are *dependant* upon the appearance of another article of which the article is intended by the designer to form an integral part . . .’ (emphasis added). Design dependency is, therefore, an important aspect, rather than the features of shape or configuration simply being a match. An example was given in *Dyson Ltd v Qualtex (UK) Ltd*<sup>110</sup> by Mann J, being where an obvious curved shape has to be sustained and bridged across a gap by the article in question. He also accepted that the subject article (article No 1) must be comprised in ‘another article’ (article No 2). That is, the subject article is part of a complex article such as a body panel for a motor car. This was the accepted approach by the Divisional Court of the High Court in *Ford Motor Co Ltd’s Design Applications*, considering the then equivalent exception in relation to registered designs.<sup>111</sup> For example, when considering a replacement wing for a car, one had to look at the whole car including the wing, rather than the car minus the wing.

110 [2005] RPC 393.

111 [1994] RPC 545.

In *Dyson*, it had been suggested that dependency does not presuppose a single available design solution. For example, a boot lid could be designed for a car. Later, there is a facelift model in which the design of the boot lid is modified. In both cases, the designer created a dependency because he saw the car as an integral whole and designed the boot lid as such. Appearance is an important factor as is design dependency. The more design freedom there is, the less room there is for the exception. In respect of the Dyson vacuum cleaner, the key point about the design of the wand handle was whether it had to be exactly the same design so as to keep the overall appearance of the vacuum cleaner the same.

At first instance, Mann J thought that changing one or more features of the handle would not result in the vacuum cleaner as a whole, including the handle, looking radically different. In the Court of Appeal, Jacob LJ thought this was a useful test. If the handle did not have ribbing on it, the consumer would probably not care. It would not matter if the cleaner with a replacement handle looked a bit different compared with the original. This was in contrast to replacement body panels for vehicles where it was important to consumers to restore the original appearance of the vehicle. In any case, Mann J had to make a value judgment as to dependency, and an appeal court would not interfere with his finding unless there had been an error of principle.

### Implications of ‘must-fit’ and ‘must-match’

The ‘must-fit’ and ‘must-match’ exceptions have significant implications for the manufacturers of replacement parts. These exceptions are also relevant to manufacturers of accessory parts: for example, a lamp to fit on a bicycle mounting, or a dust cover for a typewriter. As a result of the ‘must-fit’ exception, features that accordingly must be a certain shape or configuration can be made without infringing the design right. In the examples quoted this would extend to the connecting features of the lamp enabling it to be connected to the mounting bracket on the bicycle and the shape of the dust cover in as much as it had to be that shape to fit over the typewriter for which it was designed. Three points must be noted with respect to these exceptions:

- 1 *The exceptions do not extend to other features.* For example, in the case of an exhaust system for a motor car, only those parts of the design that relate to the fixing of the exhaust system to the mounting brackets on the car and to the outlet at the engine manifold are excepted from the design right. These features of shape or configuration enable the exhaust to be fitted to the car body and to the engine so that

the exhaust system can perform its function, that is, the control of noise and engine emissions. Other features of the shape or configuration of the exhaust system may be subject to the right: for example, if an unusual shape is selected for a silencer box (perhaps elliptical or rectangular in cross-section rather than circular) that has nothing to do with the connection of the system to the car. A spare part manufacturer may copy the ‘connecting’ or interface details but nothing else, unless the other features are commonplace or any design right in them has expired. This seems to be less generous than the ‘licence to copy’ replacement parts granted by the House of Lords in *British Leyland Motor Corp Ltd v Armstrong Patents Co Ltd*.<sup>112</sup>

<sup>112</sup> [1986] 2 WLR 400.

<sup>113</sup> ‘Connection’ is taken in a wide sense here, covering all the situations described in the Copyright, Designs and Patents Act 1988 s 213(3)(b).

- 2 *The other article referred to in s 213(3) could be made by the same person who makes the article we are interested in.* For example, if a person manufactures something comprising two articles (or an article that can be taken apart), then the connection between the articles will not be protected by the design right irrespective of the amount of research and development which may have been expended in the design of the connection.<sup>113</sup> The only time this exception cannot operate is if the connection is not relevant to the performance of function by either article. However, this would be highly unlikely. With the ‘must-match’ exception, the article has to have been designed with the intention that it will form an integral part of another article. This means that, in many cases, the two articles will have a common designer but this is not essential, such as where a designer creates a design of an article intended to form an integral part of a pre-existing article.
- 3 *The ‘must-match’ exception is effective only where there is a design dependency so that it operates only where there is no or very little design freedom.* This prejudices competition by ‘pattern’ manufacturers of spare parts for complex articles, where the level of design dependency is missing. This is not the case with certain types of spare parts such as body panels for motor cars but the exception does not appear to extend to other articles where there is some latitude, such as in the case of vacuum cleaners and, probably also, many other household articles. The ‘must-fit’ exception allows competition in spare parts from manufacturers who only copy interfaces but independently design other features.

Another example of the ‘must-fit’ exception is where a manufacturer makes a television set and sells it together with a stand on which the set can be supported and swivelled around. The connection between the stand and the base of the television set (the mechanical interface) is not protected by the design right. All other features of the shape or configuration of both the television set and the stand are in principle (subject to the other requirements such as originality) capable of design right protection. Another manufacturer can make replacement stands for the television sets, copying details of the interface but no other details, unless they are commonplace or if the design right in relation to them has expired.

Even if there is design dependency so that the ‘must-match’ exception applies, it may not apply to all the design features of the article in question. Again, the motor car can provide a good example. Consider replacement doors for a car. They obviously have to be a certain profile on the outside to match the sweep of the bodywork and would look extremely odd if they did not have this profile. The replacement doors also have to be a certain shape to fit the gap left for the door in the car body and to follow the lines and contours of the outer shape of the car. All these features are excepted from the design right. There is a high level of design dependency. However, most car doors have an inner skin which is hidden from view by upholstery. The inner skin of a car door usually has holes to reduce the overall weight and stiffening ribs for strength and may also contain a side impact bar and/or airbag. The position and size of the holes and configuration of the ribs and other features are irrelevant as regards appearance and, if their

design is original, they may be protected by the design right and do not fall within the scope of the exception. Spare parts manufacturers must be aware of this and be careful not to copy those aspects of shape or configuration in which a design right might subsist and only to copy those elements falling within the exceptions. It must not be forgotten that a design in which the design right subsists may relate to a part of an article and that that part may be internal. It may be difficult, in many cases, to determine where the design right does and does not apply. Also, whether a particular right has expired could be extremely difficult to ascertain as there is not the benefit of a registration system and register that can be consulted to resolve such questions.

## Surface decoration

We have seen that a raised embossed or ribbed surface may be held to be a feature of shape or configuration. But is the converse true and what are the limits on surface decoration? Does it extend beyond decoration which is flat or planar? It would seem sensible to assume that the intention was the exclusion from design right protection of *decoration applied to the surface* of an article. That decoration may take many forms. It could be painted decoration or it could be a raised or embossed pattern. It could be like the dimples on a golf ball or plaster mouldings fixed to a fireplace surround or item of furniture. *Mark Wilkinson Furniture Ltd v Woodcraft Designs (Radcliffe) Ltd*<sup>114</sup> concerned an alleged infringement of design right subsisting in furniture for fitted kitchens. Noting that the Act gave no assistance, Parker J said (at 73) that ‘surface decoration’ includes:

both decoration lying on the surface of the article (for example, a painted finish) and decorative features of the surface itself (for example, beading or engraving).

Parker J decided that the painted surface, the cockbeading (a chamfered edge to the line around a recess) and v-grooves (vertical grooves accentuating the curved corners of the units) were surface decoration, but not the cornice nor the recessed panels in the doors which formed part of the overall shape and configuration of the units and were themselves subject to surface decoration.<sup>115</sup> This latter explanation, that features are not likely to be surface decoration if they themselves are subject to surface decoration, appears attractive at first sight. However, it can be of little assistance in practice if simply applying paint is surface decoration. If a carved shallow wooden relief moulding is applied to the surface of a wooden fire surround, for example, does it cease to be surface decoration if it is painted, varnished, sandblasted or subjected to further detailed carving?

In *Mark Wilkinson*, Parker J rejected a claim by the defendant that the ‘must-match’ exception applied as the appearance of each unit was dependent upon the appearance of another article with which it was intended to form an integral part, that other article being the whole fitted kitchen. It was held that the fitted kitchen was made up of a number of matching units, none of which formed an integral part of another.

Whilst surface decoration can be three-dimensional, the fact that something exists only in a small third dimension does not automatically mean that it is surface decoration. In such cases, according to Park J in *A Fulton Co Ltd v Grant Barnett & Co Ltd*,<sup>116</sup> there is a value judgment for the court to make. There he held that the outwardly pointing seams of the umbrella case were significant aspects of the shape or configuration of the case and more than merely surface decoration. In *Lambretta Clothing Co Ltd v Teddy Smith (UK) Ltd*,<sup>117</sup> Jacob LJ said that a debate about whether design right is limited to three-dimensional articles does not assist. The right could subsist in what was normally considered to be a flat or two-dimensional thing such as a new design for a doily. All articles, even thin flat ones, are three-dimensional if one takes a Euclidean view of the world.

<sup>114</sup> [1998] FSR 63.

<sup>115</sup> Otherwise, the design right applied to other features and was held to be infringed.

<sup>116</sup> [2001] RPC 257 at 280.

<sup>117</sup> [2005] RPC 88 at para 24.

In *Lambretta*, the Court of Appeal held that the fact that colour runs through the thickness of a garment does not mean to say that it is not surface decoration. The exclusion for surface decoration still applied otherwise it would depend on how deep the colours went and Parliament could not have intended such a capricious result. Following *Mark Wilkinson*, the Court of Appeal accepted that surface decoration was not limited to something that was essentially flat.

118 [2006] RPC 769.

In *Dyson Ltd v Qualtex (UK) Ltd*,<sup>118</sup> it was argued that the design right could only subsist in three-dimensional designs. Consequently, the surface decoration exclusion applied to three-dimensional shapes only. Jacob LJ rejected this and he gave an example of a two-dimensional shape, being a shape cut out from a piece of paper. He said that what was essentially two-dimensional decoration could be applied to three-dimensional objects, an example being a willow pattern applied to a plate. The reason for the exclusion of surface decoration was because it could be protected by copyright instead. This was the result of s 51 of the Copyright, Designs and Patents Act 1988. Jacob LJ considered that design law should conform with what the ordinary reasonable consumer or designer would perceive as a decorated surface. That being so, the ribbing on the wand handle was not surface decoration. Furthermore, features which had a significant function should not be classed as surface decoration. The ribbing of the wand handle of the vacuum cleaner served the purpose of providing a grip and, therefore, was not surface decoration.

## DURATION OF DESIGN RIGHT

An important date in measuring the duration of a design right is the end of the calendar year during which the design was first either recorded in a design document or an article was made to the design. In other words, this is the end of the calendar year during which the right came into existence. In the discussion below, this date is referred to as the 'end of the creation year'. The generosity of the law with regard to the duration of protection for functional designs through their drawings was severely curtailed and now the maximum length of protection for a functional design by way of the design right is 15 years from the end of the creation year. In many cases, where the design has been commercially exploited, the period will be less than that. If articles made to the design have been made available for sale or hire anywhere in the world by or with the licence of the owner of the right within five years from the end of the creation year then, by s 216(1)(b), the design right expires ten years from the end of the calendar year during which that happened (the end of the first exploitation year).

In *Dyson Ltd v Qualtex (UK) Ltd*, the meaning of making available for sale or hire was considered. It fell to be decided whether it should be construed on the basis of the date that orders for articles to the design were placed or the date when the articles which had been ordered were actually delivered. This could make a difference to the total duration of the design right, depending of the actual times of placing orders and delivery, for example, when orders were placed on 3 November 2008 but the articles were not delivered until 2 February 2009. Jacob LJ agreed with the finding of Mann J, at first instance, on this point where he said that the natural meaning of 'made available' suggests that something is actually in existence. Taking orders for articles which are not yet made is not making them available for sale or hire. In the above example, the design right will expire at the end of 2019, not 2018.<sup>119</sup> Similarly, licences of right will be available from the end of 2014, not the end of 2013.

<sup>119</sup> Assuming, of course, that the design subject to the design right was not created before the end of 2003.

<sup>120</sup> Copyists must still beware of other areas of law which might apply to the articles such as registered design or passing off. In practice the owner will have little more than ten years depending on the time of year he commences offering articles for sale or hire.

The owner of the design right is given, effectively, ten years to exploit his design. However, during the last five years licences are available as of right.<sup>120</sup> The possible reduction in the term of protection from 15 years will not occur if articles made to the

Key:

- A – Designer has idea for a design
- B – Design recorded in a design document or article made to design (creation)
- C – End of calendar year during which creation happens (end of creation year)
- D – Articles made to the design are made available for sale or hire (first exploitation)
- E – End of calendar year during which articles to design are made available for sale or hire (end of first exploitation year)
- F – Right expires.

**Figure 18.2** Duration of design right

design have been offered for sale or hire by a person without the permission of the owner of the right, for example in the case of counterfeit articles, or if articles made to the design are placed in a public exhibition. However, if the owner of the design delays beyond the first five years, that will eat into the time he has in which to exploit the work. Figure 18.2 shows how the duration rules work, assuming that, at some time, articles made to the design are made available for sale or hire.

If period  $x$  is less than five years, then the total duration of the right,  $d$ , is  $w + x + y + 10$  years, that is,  $z = 10$  years (Date E + 10 years). However, if period  $x$  is more than five years, the total duration of the right,  $d$ , is  $w + 15$  years (Date C + 15 years) and the period  $z$  is reduced accordingly. For example, if the design was created (and put in a tangible form) in April 1998, but articles made to the design were not made available for sale or hire until July 2005, the right expires at the end of year 2013. It is, therefore, important to exploit the design commercially within the first five years for maximum duration of commercial protection.

Design rights will always expire at the end of a calendar year irrespective of the actual dates of creation or first exploitation. In Figure 18.2, time interval A to B is of no relevance as regards the design right. Of course, during this period, the design right has not yet been born and there is no remedy in design law if it is reproduced, say from an oral description, although there may be a remedy under the law of breach of confidence. If the oral description is recorded on magnetic tape, with or without the permission of the designer, the right is born because the design has been recorded in a design document, and the definition of ‘design document’ in s 263(1) should be wide enough to include this form of storage. However, the description would have to be sufficiently precise so that the design can be appreciated for what it is. The person recording the design will have no design right in it by reason of having recorded it because rights are allocated by reference to the designer who is the person who creates the design. The designer need not be the person recording the design.<sup>121</sup> However, a person who records an oral

<sup>121</sup> This point was made by Aldous J in *C & H Engineering v F Klucznik & Sons Ltd* [1992] FSR 421.

description of a design will have rights under copyright law in the sound recording thus created.

## OWNERSHIP

The rules for first ownership of the design right are fairly straightforward and the situation is more satisfactory than is the case with works of copyright where the concepts of an implied licence or of beneficial ownership may be called upon to do justice in the case of commissioned works where no provision has been made for ownership. Of course, first ownership is conditioned by the route to qualification and four possibilities exist, there being a one-to-one correlation between the qualifying individual or person and the first owner.

- 1 *Qualification by reference to the designer*, that is, in respect of a design not created either in the course of employment or in pursuance of a commission. In this case, the designer is the first owner of the design right.<sup>122</sup>
- 2 *Qualification by reference to the commissioner*. The commissioner is the first owner of the design right.
- 3 *Qualification by reference to the employer* (not being a design created in the pursuance of a commission). The employer is the first owner of the design right.
- 4 *Qualification by reference to the first marketing of articles made to the design*. The person so marketing the articles is the first owner of the design right.

The provisions as to ownership were considered in detail in *Ultraframe (UK) Ltd v Fielding*<sup>123</sup> in which the two parties claimed to be entitled to the design right subsisting in the design of roof panels for conservatory roofs. The designs in question had been created by a Mr Davies who operated through various companies as *de facto* controlling director.<sup>124</sup> Mr Davies became bankrupt and the trustee in bankruptcy purported to assign the design rights to the claimant. The defendants were directors of a company which claimed that it derived title by an assignment of the design rights from Mr Davies' companies, now defunct. If the designs had been created by Mr Davies as an employee of his companies or under a commission for money or money's worth with his companies, those companies would have been the first owners, as appropriate, of the design rights and the defendants' company which derived title through those companies would now own the design rights. On the other hand, if Mr Davies owned the design rights, they would have passed to the claimant from his trustee in bankruptcy. The defendants further claimed that, if the designs were not created by Mr Davies in pursuance of a commission or in the course of employment, then he held the designs on trust for his companies.

At first instance, Laddie J held that Mr Davies created the designs as an employee in the course of his employment and the fact that he was a director and controlling shareholder did not prevent him from being an employee. The Court of Appeal dismissed the claimant's appeal but held that when Mr Davies created the designs he was acting as a trustee of the company. Important aspects of the case are set out below.

### Employee designs

The meaning of employee has its well-understood meaning of employment acting under a contract of service or apprenticeship: s 263(1). Waller LJ said that Laddie J failed to take into account guidance by Lord Woolf CJ in *Secretary of State for Trade and Industry v Bottrill*<sup>125</sup> to the effect that factors such as the degree of control exercised by the company over the shareholder employee should be taken into account. This

<sup>122</sup> The basic statements of first ownership are contained in the Copyright, Designs and Patents Act 1988 s 215.

<sup>123</sup> [2004] RPC 479.

<sup>124</sup> At one time, he owned all the shares in some of the companies which failed and, after he was convicted of offences under s 217 of the Insolvency Act 1986, he was disqualified from acting as a company director but a new company was set up through nominees and he continued to act as director and controller of the company.

<sup>125</sup> [2000] 1 All ER 915.

suggests consideration of whether there are other directors and whether the constitution of the company is such that he is answerable only to himself and is incapable of being dismissed. If he is a director, do the articles of association allow him to vote on matters in which he has a personal interest, such as termination of his contract of employment. Mutuality of obligation is also an important factor – an irreducible minimum of obligation on each side to create a contract of service: *Nethermere (St Neots) Ltd v Taverna*.<sup>126</sup>

Waller LJ said that Laddie J failed to make the distinction between Mr Davies working for the company in producing the designs because he was a 100 per cent shareholder and would benefit by virtue of that fact and creating the designs because he was under an obligation to do so under a contract of service. Although, as a 100 per cent shareholder, Mr Davies gave the orders and exercised control, albeit of himself, this may not remove the irreducible minimum of control but it must be by way of an obligation as an employee. Waller LJ said (at para 25):

Did Mr Davies as the 100% shareholder and director of the companies place himself under an obligation to be at work a certain number of hours per week, and any obligation to produce designs in return for the £250 per week? The proper inference from the findings of fact would in my view be a clear ‘no’.<sup>127</sup>

<sup>126</sup> [1984] IRLR 240.

<sup>127</sup> Mr Davies drew £250 per week by way of wages.

## Commissioned designs

For a commissioned design to belong to the commissioner at first instance, it must be created *in pursuance of* the commission. Waller LJ referred to *Apple Corps Ltd v Cooper*,<sup>128</sup> concerning the position of commissioned photographs under the Copyright Act 1956. In that case, it was held that the act of commissioning must come before the creation of the work, imposing an obligation to pay for the work, prior to its creation.<sup>129</sup> In *Ultraframe*, Mr Davies had not placed himself under any obligation to produce the designs before he produced them, just as he did not have any equivalent obligation as an employee. If, for example, he failed to produce the designs, it was obvious that the companies would not have been entitled to sue him for breach of contract. Therefore design rights did not belong to the companies on the basis that they were created under a commission for money or money’s worth.

In respect of commissioned designs, in *Sales v Stromberg*,<sup>130</sup> it was confirmed that an agreement to pay for a design provisional upon it being liked by the person alleging that it was created under a commission did not fall within the provisions for commissioned designs. A letter stating that, if they liked the design, the defendants would pay a royalty (of unspecified amount) to the claimant or, alternatively, manufacture articles to the design exclusively for the claimant was far from being a letter of commission.

<sup>128</sup> [1993] FSR 286.

<sup>129</sup> Copyright Act 1956 s 4(3). This vested copyright in a photograph made in pursuance of a commission where the person commissioning the photograph paid for it or agreed to pay for it. This should be contrasted with the position under the Copyright, Designs and Patents Act 1988 in respect of ownership of copyright works.

<sup>130</sup> [2006] FSR 89.

## Designer as trustee

Directors are fiduciary agents for their company and trustees of the property of the company in their hands or under their control. A transaction distributing a company’s assets to shareholders other than by way of distribution of profit lawfully made or by a reduction of capital sanctioned by the court would be *ultra vires*. Waller LJ referred to Hoffmann J (as he then was) in *Aveling Barford Ltd v Perion Ltd*<sup>131</sup> where he said (at 631):

A company can only lawfully deal with its assets in furtherance of its objects. The incorporators may take assets out of the company by way of dividend, or, with the leave of the court, by way of reduction of capital, or in a winding up. They may of course acquire them for full consideration. They cannot take assets out of the company by way of voluntary disposition, however described, and if they attempt to do so, the disposition is *ultra vires* the company.

<sup>131</sup> [1989] BCLC 626.

<sup>132</sup> From *Re Duomatic Ltd* [1969] 2 Ch 365.

<sup>133</sup> This was produced to prevent an inference being drawn that he was a director or *de facto* director of the company.

<sup>134</sup> Section 259(1).

<sup>135</sup> [1997] FSR 680.

<sup>136</sup> [2001] RPC 257.

<sup>137</sup> If the designers' contributions are distinct then each will be regarded as the sole designer in respect of his own efforts: Copyright, Designs and Patents Act 1988 s 259(1). The design is thus divisible and can be regarded as a combination of separate designs which can be owned by different persons.

<sup>138</sup> See Copyright, Designs and Patents Act 1988 ss 218(4), 219(3) and 220(3).

<sup>139</sup> Of course, a design might also be subject to the unregistered Community design and, if registered, Community and national registered designs.

<sup>140</sup> An example of the latter would be in the case of the liquidation of a company that owns a design right.

An argument that the 'Duomatic principle'<sup>132</sup> applied to the effect that all shareholders may formally or informally assent to or approve an arrangement or a transaction so that it is binding on the company was rejected because the principle cannot apply to *ultra vires* transactions. Furthermore, there was no evidence of any specific act of assent by Mr Davies nor was there any evidence of any act of ratification. Waller LJ said that to say 'the shareholders would have been happy if they had been asked' was not enough. In fact the documents suggested the opposite. There was a post-dated contract of employment produced. This indicated that it was Mr Davies' intention to ensure the rights vested in his company.<sup>133</sup> Later, there was a purported assignment of the design rights from that company to a new company which Mr Davies controlled through nominees. In the circumstances, therefore, Waller LJ held that Mr Davies held the design rights on trust for the company through whom he was operating his business at the time he created the designs.

### Joint designs and joint ownership

Joint first owners are possible where there is a joint design, being one created by two or more designers acting in collaboration where the contribution of each is not distinct from the other(s).<sup>134</sup> A joint owner's contribution need not be in respect of recording the design but it has to be in relation to the design itself and it is not sufficient if it only relates to the manufacture of articles made to the design. For example, in *Philip Parker v Stephen Tidball*,<sup>135</sup> one of the defendants was responsible for stitching together leather cases for mobile telephones. He made suggestions and contributions but they related to the construction of the cases and not to their design. Consequently, he was not a joint owner of the designs in issue. Similarly, in *A Fulton Co Ltd v Grant Barnett & Co Ltd*,<sup>136</sup> persons making moulds for umbrella handles and sewing machinists making cases for the umbrellas were working under the instructions of an employee of the claimant and were not, subsequently, designers in respect of the design right.

A joint design will satisfy the qualification requirements if only one individual or person meets those requirements.<sup>137</sup> This leaves the problem of what rights the other joint designers, commissioners, etc. have in terms of ownership, and the approach taken by the Act is that they have absolutely none; only those individuals or persons who meet the qualification requirements are entitled to the design right.<sup>138</sup> For example, if a design is created by three self-employed designers, one being a British citizen, one being a French citizen and the third being a Taiwanese citizen, as far as UK law is concerned, assuming the design was not created in pursuance of a commission, the joint first owners of the design will be the British citizen and the French citizen; the Taiwanese citizen will not be entitled to any ownership rights unless he qualifies by virtue of being habitually resident in a qualifying country. However, the ownership provisions are relatively generous in the scope of their reach and protection is afforded, for example, to citizens of Member States of the European Economic Community without there being any equivalent and reciprocal provisions for protection of functional designs created by British citizens in the EC unless by virtue of copyright law or individual national design laws.<sup>139</sup> In all cases, the place where the design was created is irrelevant.

### ASSIGNMENT AND LICENSING

Design rights can be assigned but, under s 222(3), this must be done in writing and signed by or on behalf of the assignor. The right can also pass by testamentary disposition or by operation of law.<sup>140</sup> An assignment may be partial, limited to apply to not all the exclusive rights of the owner, or limited in terms of duration. Licences may be

granted by the owner and may be exclusive or otherwise. An exclusive licence, under s 225, must be in writing signed by or on behalf of the design right owner and an exclusive licensee has the same rights and remedies, except against the owner, as if the licence had been an assignment.<sup>141</sup> The Act contains provisions for the exercise of concurrent rights by the owner and an exclusive licensee.<sup>142</sup> Although there is little practical difference between an assignment and a licence, the latter is vulnerable if the design right is assigned to a purchaser in good faith for valuable consideration and without actual or constructive notice of the licence. This also applies to persons taking the right through a *bona fide* purchaser, even if such other persons have knowledge of the licence or are made a gift of the design right.

Of course, an assignment grants a proprietary interest whereas a licence, even an exclusive licence, does not. This applies to all forms of intellectual property rights and accords with the law on licences generally.<sup>143</sup> An exclusive licence is, however, a right over property and a non-cash asset for the purposes of the Companies Act 2005 and previous Companies Acts.<sup>144</sup> This was confirmed in *Ultraframe (UK) Ltd v Fielding (No 2)*<sup>145</sup> in relation to an exclusive licence under unregistered design rights. It fell to be classed as a non-cash asset for the Companies Act. Although assignments and exclusive licences are different and have different effects, they are both non-cash assets.<sup>146</sup> It would be inconsistent otherwise as assignments and exclusive licences can have very similar economic effect. It does not follow that a non-exclusive licence can be classed as a right over property. The reason is that an exclusive licence grants the right to carry out certain acts *to the exclusion of the owner* of the intellectual property right.

A future design right, one that will or may come into existence, can be dealt with by assignment or licence just as an existing design right.<sup>147</sup> Prospective ownership of design right is provided for under s 223 in a like manner to copyright. Thus it is possible for the prospective owner of design right to assign that right to another by an agreement in writing and signed by or on behalf of the prospective owner. On the right coming into existence, the right will automatically vest in the assignee but will be subject to any licences granted by the prospective owner except a purchaser in good faith for valuable consideration and without actual or constructive notice or any person deriving title from him. An assignment of future design rights can apply to rights which will or might come into existence in respect of a future design or class of designs or upon the occurrence of some future event. Thus, a person who would otherwise be the first owner of a set of designs to be applied to a set of cutlery may assign those rights to a person who may reassign those rights to yet another person, and so on, before the design rights have come into existence.

In the case of a design where there is an overlap between a design right and a UK registered design, that is when both rights apply to a design, an assignment of the registered design right<sup>148</sup> serves also to assign the design right if the proprietor of the registered design is also the person who owns the design right, and vice versa, unless a contrary intention appears.<sup>149</sup> However, although it will be unusual, it is possible for the two rights to become separated, for example by an express term to the contrary in the document containing an assignment of either right. The automatic transfer of the other right is a presumption only. Of course, in such circumstances the person obtaining the one right will clearly know that the other right is not to be assigned to him and will be able to predict what he can and cannot do in relation to the design. If there is some doubt – for example, if the words expressing the contrary intention are not clear – the *contra proferentum*<sup>150</sup> rule of construction might be applied by the court, or a licence might be implied. At first sight, it might appear that the qualification requirements could frequently lead to separate ownership of the rights. However, under s 3(3) of the Registered Designs Act 1949, the Registrar will not entertain an application for registration of a

<sup>141</sup> Copyright, Designs and Patents Act 1988 s 234(1).

<sup>142</sup> Copyright, Designs and Patents Act 1988 s 235.

<sup>143</sup> See, for example, *Thomas v Sorrell* (1671) 2 Keb 791.

<sup>144</sup> A non-cash asset is defined as any property or interest in property, other than cash: s 1163 Companies Act 2005.

<sup>145</sup> [2006] FSR 293.

<sup>146</sup> Under s 190 of the Companies Act 2005, as with previous companies legislation, there are controls over the acquisition by directors and connected persons acquiring substantial non-cash assets from the company and vice versa. *Ultraframe* concerned the equivalent provision under the Companies Act 1985 (s 320).

<sup>147</sup> Copyright, Designs and Patents Act 1988 s 223.

<sup>148</sup> Copyright, Designs and Patents Act 1988 s 224. There is no equivalent presumption in relation to the Community design.

<sup>149</sup> Registered Designs Act 1949 s 19(3B).

<sup>150</sup> This rule is used particularly in the context of exclusion clauses where a term that one person relies on to exclude or limit his liability (for example, under a contract where one party seeks to exclude his liability for breach of contract) is ambiguous. The court will usually take the meaning which is least favourable to the party seeking to rely on the term.

**151** The Registered Designs Act 1949 s 19(3A) imposes similar requirements in respect of registration of an interest in a registered design. The applicant for registration has to sign a declaration to this effect.

**152** *Stafford Engineering Services Ltd's Licence of Right (Copyright) Application* [2000] RPC 797. This case involved an application under the transitional copyright but the principles are the same.

**153** This operates on the fiction that the parties are happy to negotiate a licence and licences in relation to designs applied to similar articles may provide a guideline as to the royalty rate they would be likely to agree to. Of course, in most cases, the design right owner will be very unwilling to have a licence forced upon him, often in favour of a competitor. This is made even worse when the track record of the Comptroller in settling terms is considered and royalty payments are often set at no more than a few per cent, arguably much less than if a licence was being freely negotiated.

**154** *NIC Instrument Ltd's Licence of Right (Design Right) Application* [2005] RPC 1. The profits available approach looks at the overall profit likely to result from the right and to apportion this between the parties.

**155** Of course, being of much shorter duration, the unregistered Community design will almost certainly have expired before application can be made for a licence of right in respect of the UK design right.

**156** Copyright, Designs and Patents Act 1988 s 263(3).

**157** [1999] FSR 377.

design unless it is made by the person claiming to be the owner of the UK design right.<sup>151</sup>

Licences are available as of right in relation to the design right during the last five years of the subsistence of the right, under s 237. If the parties are unable to agree terms they will be settled by the Comptroller-General of Patents, Designs and Trade Marks (the 'Comptroller'). This provision significantly weakens the design right. It could be argued that, because the design right is not a monopoly right and because it is further constrained by wide-ranging exceptions, there is no need for this provision.

The would-be licensee under a licence as of right may be faced with one problem stemming from the lack of formalities for the right. That problem is how to determine the date at which the design has five years left to run. It may be difficult to determine when the design was created or first commercially exploited. In the circumstances, the owner of the right is unlikely to be particularly helpful about dates. Another difficulty for the potential licensee is that other rights may apply, such as the UK registered design and/or Community design, and licences are unlikely to be available for such other rights.

Under s 247, the licence of right takes effect from the date the application for such is made to the Comptroller or, if the application is made before licences of right are available, the earliest date such licences are available. No application can be made earlier than one year before the earliest date that licences are available as of right. Although the language of s 237(2) is in terms of the licence being settled by the Comptroller *in default of agreement*, it is not necessary for the parties to have entered into negotiations before an application for a licence of right can be made.<sup>152</sup>

Although a person applying for a licence of right might hope to limit the damages available against him in any subsequent infringement action (see later in respect to s 239), the Comptroller has no jurisdiction to take potential damages into account when settling the terms of a licence. The normal way in working out the payment to be made is to consider the right owner as right owner and not as a potential supplier. A 'willing parties' basis should be used if comparable licences exist<sup>153</sup> but, if not, a profits available approach could be used.<sup>154</sup> There is little point in including a termination for breach clause as the licensee can immediately apply for a new licence of right and, as licence is imposed on the right owner, it is inappropriate for there to be warranty to the effect that it subsists in the design and the licensor is indeed the true owner of the right. A licence of right in respect of the design right cannot affect other rights, such as copyright, trade mark rights, the UK registered design or Community design.<sup>155</sup>

## RIGHTS OF OWNER AND INFRINGEMENT

Under s 226(1), the owner of a design right subsisting in a design has the exclusive right to reproduce the design for commercial purposes by making articles to the design, or by making a design document recording the design for the purpose of enabling such articles to be made. 'Commercial purposes' refers to things done with a view to the article in question being sold or hired in the course of business.<sup>156</sup> As the definition in s 226(2) of 'reproduction' in relation to making articles to the design uses the word 'copying', the design right will not be infringed by a person who independently produces an article made to the same design. Copying a design by making articles exactly or substantially to the design is reproduction by making articles to the design, but substantiality appears to be construed differently to its qualitative meaning in copyright law. In *Baby Dan AS v Brevi SRL*,<sup>157</sup> it was held that, where differences between the design in question and earlier designs are small, making the degree of originality small, the claimant can only succeed if the differences between the claimant's design and

defendant's design are closer in comparison. The test of whether the articles are exactly, or substantially, to the same design is answered by looking through the eyes of the person to whom the designs are directed.

Apart from the above, the same general principles apply as for infringement of copyright by copying in that there must be a causal connection. That is, the infringing design must have been copied, directly or indirectly, from the first design.<sup>158</sup> Whilst it is rare for there to be direct evidence of copying, a close similarity coupled with an opportunity for copying will often be sufficient to change the burden of proof. This applies equally to the design right as it does copyright.<sup>159</sup> In *Sales v Stromberg*<sup>160</sup> the judge said that the objective similarity between the claimant's spiral copper tube design and one of the defendant's designs was such to raise an inference of copying. However, he did not need to consider that inference as there was correspondence between the parties sufficient to provide evidence of a causal connection. The requirement to show copying may be one good reason why it is preferable to register a design as a UK registered design or a registered Community design, if the design meets the requirement for registrability under those systems.

### Primary infringement

The design right is infringed by any person who does anything without the licence of the right owner which is by virtue of s 226 the exclusive right of the owner. In *C & H Engineering v F Klucznik & Sons Ltd*,<sup>161</sup> in an action brought by the claimant who claimed infringement of copyright in his drawings of lamb creep feeders, the defendant counterclaimed that the claimant had infringed his design right in pig fenders.<sup>162</sup> The pig fender in question had a round tube attached to the top edge. Apart from this tube, the design of the pig fender was commonplace. It was held that s 226 required the owner of the design right to show copying before infringement could be proved, and in this respect the design right is similar to copyright. However, the test for infringement is different, requiring the alleged infringing article to be compared with the design document or model embodying the design to discover whether the alleged infringing article is made exactly to the design or substantially to that design. This requires an objective test, through the eyes of the person to whom the design is directed (in this case, a pig farmer), looking at the differences and similarities between the designs.<sup>163</sup> In this particular case, Aldous J held that there was no infringement – the claimant's pig fender was not made to the defendant's design or made substantially to that design. The objective pig farmer would consider the two designs to be different but with a similar design feature, that is a round bar or tube around the top.

To show infringement, two separate criteria must be present – copying and making articles exactly or substantially to the design. Mere similarity between the design and the alleged infringement is not enough. Of course, where copying is established, except in the case of an incompetent copyist, it is likely that the copy will be exactly or substantially to the design. In the absence of evidence of copying, such a level of similarity cannot infringe the unregistered design right, though a rebuttable inference of copying may be raised.<sup>164</sup> The role of experts in relation to this question is to point out to the court the similarities and differences between the designs so that the court can come to a view as to whether such an inference exists. If an expert concentrates on the similarities alone or differences alone, this can lead to an unbalanced view.

The design right does not protect abstract underlying ideas and underlying concepts. In *Rolawn Ltd v Turfmech Machinery Ltd*,<sup>165</sup> Mann J said (at para 79):

... the concept of 'design' (which is what is protected) which is a physical manifestation of an idea, not some underlying abstraction, and it is reinforced by the definition of the 'designer' in section 214 as: 'the person who *creates* [the design]' (my emphasis). You cannot create

<sup>158</sup> *Mark Wilkinson Furniture Ltd v Woodcraft Designs (Radcliffe) Ltd* [1998] FSR 63 at 74 per Parker J.

<sup>159</sup> *A Fulton Co Ltd v Grant Barnett & Co Ltd* [2001] RPC 257 at para 95. In that case, the judge found copying had taken place on this basis.

<sup>160</sup> [2006] FSR 89.

<sup>161</sup> [1992] FSR 421.

<sup>162</sup> A pig fender is a device placed around the entrance to a pig shelter to allow the sow to step out into the field while retaining the piglets.

<sup>163</sup> In *Mark Wilkinson Furniture Ltd v Woodcraft Designs (Radcliffe) Ltd* [1998] FSR 63 it was accepted that infringement should be looked at through the eyes of a person to whom the design was directed: for example, a person interested in buying articles made to the design.

<sup>164</sup> Per Lewison J in *Virgin Atlantic Airways Ltd v Premium Aircraft Interiors Group Ltd* [2009] EWHC 26 (Pat).

<sup>165</sup> [2008] EWHC 989 (Pat).

a design until you have actually reduced it to a particular form. It is not a design while it is a conception in the designer's head, and it becomes a design when it takes physical shape on paper or in the flesh.

It was held that Rolawn could not claim a design right in the concept of a mower having arms folding back on themselves at the mid-way point. If anything, what had been copied was methods or principles of construction which are excluded from the design right. Consequently, there was no infringement of design right.

It has already been noted that the design right can apply to a part of an article, but in his interpretation of the test for infringement Aldous J compared the design of the whole articles. This view is supported by the language of s 226(2), which speaks of reproduction in terms of producing articles (not parts of articles) exactly or substantially to the design.<sup>166</sup> This weakens the right where it is applied or limited to a part of an article only and, as in the *C & H Engineering* case, a significant design improvement may accordingly go unprotected. Turner suggests the judge was wrong to look at the whole of the article in testing for infringement;<sup>167</sup> nevertheless, this is what the statute requires.

By using the test of the eye of the interested person, Aldous J applied a test not dissimilar to that used for testing for infringement of registered designs. However, the design right can apply to an internal part of an article that may be concealed from view. Comparison of whole articles does not make sense in relation to internal designs and can be undertaken only when the alleged infringing article has been dismantled and the relevant part considered and compared with the equivalent part of the design document or article made to the design.

Copyright infringement requires that the alleged infringing work contains the whole or a substantial part of the original work. This is a different test to whether an article is made substantially to the same design as that alleged to have been infringed. The difference is greater if the design right subsists in the design of part of an article only where the enquiry will be directed to whether the whole design containing an element which has been copied is substantially to the same design as the protected design. The Court of Appeal confirmed this distinction between copyright infringement and design right infringement in *L Woolley Jewellers Ltd v A & A Jewellery Ltd*<sup>168</sup> concerning the alleged infringement of the design for a pendant. The judge in the Patents County Court did not direct himself as to the different test for design right compared with copyright and the Court of Appeal remitted the case back to the same judge.<sup>169</sup>

In *A Fulton Co Ltd v Totes Isotoner (UK) Ltd*,<sup>170</sup> counsel for the defence spoke of a design chimera<sup>171</sup> in the context of a design which had a missing element (a cut-away) compared with the claimant's design for folding umbrella cases. Where a design relates to parts only of an article, Jacob LJ rejected the analogy, saying that the designer of a whole article necessarily designs all its parts. Although a defendant in a design right action might not know what parts he is alleged to have infringed until the letter before action or claim form, that does not mean that he does not know where he stands. As design right infringement depends on copying, the defendant will know what part or parts he has taken exactly or substantially. Although it is for the design right owner to frame his claim properly, the subsistence of his rights does not depend on how he frames his claim.<sup>172</sup>

It was accepted in *Ocular Sciences Ltd v Aspect Vision Care Ltd*<sup>173</sup> that the design right can subsist in detailed dimensions, for example, applied to a range of articles which differ only slightly from one another, even if those differences are not readily distinguishable by the naked eye. However, where the design right subsists in relation to such detailed dimensions, for infringement to be made out the defendant's designs must be extremely close to those of the claimant. In this case, the designs were for a range of

<sup>166</sup> This approach was followed in *Philip Parker v Stephen Tidball* [1997] FSR 680.

<sup>167</sup> Turner, B. 'A true design right: *C & H Engineering v Klucznik & Sons*' [1993] 1 EIPR 24 at 25.

<sup>168</sup> [2003] FSR 255.

<sup>169</sup> *L Woolley Jewellers Ltd v A & A Jewellery Ltd (No 2)* [2004] FSR 932. The judge confirmed, after applying the correct test, that there had still been an infringement of design right.

<sup>170</sup> [2004] RPC 301.

<sup>171</sup> A chimera is a mythical fire-breathing female monster with the head of a lion, the body of a goat and a serpent's tail.

<sup>172</sup> To that extent, Jacob LJ disagreed with Laddie J's suggestion, in *Ocular Sciences*, that the claimant can trim his claim to fit the alleged infringement.

<sup>173</sup> [1997] RPC 289.

contact lenses (220 designs in total) and Laddie J found that some of the defendant's designs were extremely close to those of the claimant. However, he accepted that there had been no act of copying the claimant's designs and, consequently, there could be no infringement.

Indirect reproduction also infringes, and it is immaterial whether any intervening acts themselves infringe. Therefore, if reproduction is preceded by taking apart an article made to the design it will still be an infringement. However, if such 'reverse engineering' is done so that only non-protected elements can be copied – for example, features, that fall within the 'must-fit' or 'must-match' exceptions – then there will be no infringement of the design. Making a drawing of an article made to the design will infringe only if it is done for the purpose of enabling such articles to be made, so that making a drawing to be displayed in an exhibition of drawings will not infringe design right.<sup>174</sup> However, giving or selling the drawing to a manufacturer who intends to make the article would infringe if that was the purpose of making the drawing because it enables articles to be made to the design. It would appear from the language of s 226(1) that the 'purpose of enabling' should be present at the time the drawing, or other design document, was made.

In the Scottish case of *Squirewood Ltd v H Morris & Co Ltd*<sup>175</sup> the Court of Session granted an interim interdict<sup>176</sup> to restrain an alleged infringement of the design right subsisting in office furniture. Together with the *Mark Wilkinson* case, in which kitchen units were held to be protected, this case shows that the design right is not restricted to purely functional articles, but also applies to articles for which appearance is important in the eye of the person acquiring articles made to the design.

<sup>174</sup> There may be an infringement of the copyright in the drawings in such cases.

<sup>175</sup> (Unreported) 1 April 1993. For a description and discussion, see MacQueen, H.L. 'A Scottish Case on Unregistered Designs' [1994] 2 EIPR 86.

<sup>176</sup> Equivalent to an interim injunction in England and Wales.

## Secondary infringement

Another similarity with copyright law is the provision for secondary infringement which approximates to commercial dealing with infringing articles, but there are no equivalent criminal penalties for infringement of the design right as there are in relation to copyright. An infringing article is one the making of which to a particular design was an infringement of the design right subsisting in that design.<sup>177</sup> The definition of 'infringing article' extends to articles which have been or are to be imported into the UK if their making in the UK would have been an infringement or a breach of an exclusive licence in respect of the design. A design document, however, is not an infringing article. Secondary infringement occurs when a person, without the licence of the design right owner, does any of the following acts in relation to an article which is an infringing article and the person knows this or has reason to believe it to be so:

- (a) imports into the UK for commercial purposes;
- (b) has in his possession for commercial purposes;
- (c) sells, hires or offers or exposes for sale or hire, in the course of a business.

It would seem that the knowledge requirement is the same as that for secondary infringement of copyright.<sup>178</sup> To determine whether a person has reason to believe involves the concept of knowledge of facts from which the reasonable man would arrive at the relevant belief. The test in *LA Gear* was applied by Park J in *A Fulton Co Ltd v Grant Barnett & Co Ltd*,<sup>179</sup> in which he held that the defendant was liable also for secondary infringement as the defendant had reason to believe it was dealing with infringing articles. However, it was held that the defendant did not have reason to believe the handle of its umbrella infringed until three weeks after service of a substituted statement of claim.<sup>180</sup> Under s 228(4), there is a useful presumption in favour of the claimant that when an article was made to the design in which the design right subsists or has subsisted, it was made at a time when the right subsisted unless the

<sup>177</sup> Copyright, Designs and Patents Act 1988 s 228.

<sup>178</sup> See the discussion of the Court of Appeal decision in *LA Gear Inc v Hi-Tec Sports plc* [1992] FSR 121 in Chapter 6.

<sup>179</sup> [2001] RPC 257.

<sup>180</sup> The original statement of claim was too general to put the defendant on notice.

contrary can be proved. Bearing in mind that the claimant may be the only person with proof of the time the design right first arose, this is very favourable for the claimant.

181 [2006] FSR 1.

In *Badge Sales v PMS International Group Ltd*,<sup>181</sup> the defendant imported handbags into the UK from China which were alleged to infringe three designs of handbags belonging to the claimant. The defendant asserted that he had no reason to believe that the handbags he imported into the UK were subject to UK design rights. The claimant applied for an interim injunction. Lewison J accepted that the test of knowledge for innocent acquisition was an objective test and the burden of proof was on the defendant to show this on a balance of probabilities. This could only be done at trial, rather than an application for interim relief but, nevertheless, s 233(2), which limits damages for innocently acquired articles in allegations of secondary infringement to no more than a reasonable royalty, did not preclude the grant of interim relief in the meantime. An interim injunction was granted pending the substantive hearing of the case, preventing the defendant from selling more handbags from its stock of around 5,500 handbags.<sup>182</sup>

182 The defendant offered an undertaking not to import any more of the bags in question.

## EXCEPTIONS TO INFRINGEMENT

It is not an infringement to copy features of a design that are excluded from the scope of subsistence of design right or parts of the design of an article that are otherwise not protected, for example, because they lack originality. However, other rights may be infringed, such as registered designs (both the UK and Community registered design), the unregistered Community design, registered trade marks and, in some cases, copyright. By s 236, if copyright subsists in a work which consists of or includes a design in which design right subsists, it is not an infringement of the design right to do anything which is an infringement of the copyright in the work. The overlap of actions between the design right and copyright is removed, leaving an action in copyright only. During the last five years of a design right, licences are available as of right<sup>183</sup> on terms to be fixed by the Comptroller-General of Patents, Designs and Trade Marks in the absence of agreement.<sup>184</sup> The Secretary of State has the power, under s 237(3), to exclude by statutory instrument certain designs from the licence as of right provisions in order to comply with an international obligation, or for purposes relating to reciprocal protection for British designs in other countries.<sup>185</sup> Under s 245, the Secretary of State also has the power on the same basis to provide that certain acts do not infringe design right. In effect, this permits a reduction in the protection offered in respect of a foreign country if that country does not give full reciprocal protection to British designs.

183 This does not apply to the topography right, described later.

184 Licences of right may also be available under s 238 as a result of the exercise of powers under the Enterprise Act 2002.

185 No such Orders have yet been made.

If the owner of a design right imposes restrictive conditions in a licence or refuses to grant licences, those conditions may be cancelled or modified or licences declared available as of right under certain provisions of the Competition Act 1980 and the Enterprise Act 2002. The terms of licences of right, in default of agreement, shall be settled by the Comptroller.

There are provisions for Crown use of designs subject to the design right. These apply in relation to the defence of the realm, foreign defence purposes and health service purposes, the latter being the provision of primary medical services and dental services, pharmaceutical, general medical or general dental services under relevant legislation. There are provisions for the settlement of terms and the award of compensation if the owner of the right or an exclusive licensee has suffered any loss as a result of not being awarded a contract because of Crown use.<sup>186</sup> It could be argued that the provisions for Crown use are inappropriate here since design right does not give rise to monopolies. However, the provisions may be important if the design is also registered under the Registered Designs Act 1949 or the Community Design Regulation (although

186 See Copyright, Designs and Patents Act 1988 ss 240–244.

the scope of Crown use is more limited in respect of the UK registered design and the registered Community design). It would be a nonsense if Crown use applied to one right and not the other if both rights subsisted in the same design.

## DEFENCES TO INFRINGEMENT ACTIONS

A person who has allegedly infringed a design right may plead several defences. Again, the best form of defence often is to attack the validity of the right. In the case of the design right, such an attack is almost inevitable. For example, a defendant might plead that:

- 1 the right is not valid because the features copied fall within the exceptions (for example, they relate to a method or principle of construction);<sup>187</sup>
- 2 the claimant's design did not originate from the designer or is commonplace and therefore not original in that sense;<sup>188</sup>
- 3 the qualification requirements are not satisfied in respect of the claimant's design;<sup>189</sup>
- 4 the design right has expired;
- 5 the design was recorded prior to 1 August 1989.

<sup>187</sup> Copyright, Designs and Patents Act 1988 s 213(3).

<sup>188</sup> Copyright, Designs and Patents Act 1988 s 213(4).

<sup>189</sup> Copyright, Designs and Patents Act 1988 s 213(5) and ss 218–221.

Assuming that the design is valid, other defences which might be raised by the defendant include:

- (a) the claimant does not have *locus standi*,<sup>190</sup> for example, he is neither the owner nor the exclusive licensee;
- (b) that the act does not fall within the scope of primary or secondary infringement;
- (c) the defendant's articles are neither exactly nor substantially made to the claimant's design;
- (d) the alleged infringement occurred before the right existed or after the right expired (but here the defendant has the burden of proof);
- (e) in the case of an alleged secondary infringement, that the defendant did not know and had no reason to believe that the article was an infringing article (this has the effect of limiting remedies to damages amounting to no more than a reasonable royalty: s 233(2));
- (f) that the act complained of falls within one of the exceptions to infringement – for example, the acts infringe copyright instead (s 236), or under the Secretary of State's powers to Order, under s 245, that specified acts do not infringe (although no such Order has yet been made);
- (g) an undertaking to take a licence of right where such a licence is available under s 239. This is not a complete defence but serves to limit remedies to an award of damages not exceeding double the amount that would have been payable under a licence of right (*see later*).

<sup>190</sup> The right to bring a legal action.

Acquiescence is always a potential defence where the circumstances are such that the claimant has made it clear by his conduct that he has assented to the infringement and will not commence proceedings in respect of it. As regards the limitation period, for a tort it is six years from the date on which the cause of action arises.<sup>191</sup> Where the infringement continues or is repeated, fresh causes of action will arise. However, s 36 of the Limitation Act 1980 states that nothing in the Act affects 'any equitable jurisdiction to refuse relief on the ground of acquiescence or otherwise'. For acquiescence to apply, it is not enough that the claimant merely delays bringing an action.

<sup>191</sup> Limitation Act 1980 s 2(1).

In *Farmers Build Ltd v Carier Bulk Materials Handling Ltd*,<sup>192</sup> the claimant knew that its rights were being infringed but decided to wait to see how successful the defendant's infringing machines were. This was not sufficient to count as acquiescence even when the claimant and defendant continued to have a trading relationship during the period

<sup>192</sup> [1999] RPC 461.

the infringement was taking place to the knowledge of the claimant. The Court of Appeal held that the fairly modest delay by the claimant in bringing the action was not sufficient for acquiescence. None of the claimant's conduct would have led the defendant to believe that the infringement was being assented to, nor did the claimant's inactivity or other conduct cause the defendant to act to its detriment in any way.

193 [2005] RPC 393.

At first instance, in *Dyson Ltd v Qualtex (UK) Ltd*,<sup>193</sup> a defence based on acquiescence or estoppel was rejected. It appeared that the defendant placed some articles on the market to 'test the water' and, because there had been no objection by the claimant, the defendant was encouraged to copy further designs. However, there was no evidence that the claimant knew of the defendant's activities at a high enough level for some time. There was no evidence of encouragement and there were also problems with detriment. Mann J said that the defendant's activities could be described as an attempt to establish a mutation of estoppel which he described as estoppel by entrapment. This defence was not raised on appeal.

As with the UK registered design and the Community design in relation to the UK, there is provision for a remedy against groundless threats of infringement proceedings. The remedies for groundless threats of infringement proceedings are:

- (a) a declaration to the effect that the threats are unjustifiable;
- (b) an injunction against the continuation of the threats;
- (c) damages, if any have been sustained as a result of the threats.

The burden of proof is on the person making the threats to show that the acts to which the threats relate do, indeed, infringe or will infringe his design right. An exception to the right is in respect to threats consisting of allegations of making or importing anything and it is not a threat of proceedings merely to notify a person that a design is protected by design right.

### Licences of right

A further possibility exists for an infringer to limit remedies should he be found to infringe a design right when licences are available as of right in respect of the design, as they are during the last five years of the right.<sup>194</sup> Under s 239, the defendant can undertake to take a licence on terms to be agreed or, failing agreement, on terms to be fixed by the Comptroller. If the defendant makes such an undertaking, an injunction will not be granted against him, no order for delivery up will be made and the amount recoverable in damages or by way of an account of profits shall not exceed double the amount which he would have paid had he obtained a licence on the terms that would have been agreed or fixed by the Comptroller before the earliest infringement.

194 Copyright, Designs and Patents Act 1988 s 237.

The undertaking may be given any time before the final order in the proceedings without any admission of liability (s 239(2)). However, the position with respect to interim injunctions is more difficult, especially where the defendant makes the undertaking conditional upon losing at trial. In *Dyrlund Smith A/S v Turberville Smith Ltd*,<sup>195</sup> the claimant was a Danish company which made and sold office furniture. It owned unregistered design rights in three similar designs of office furniture, the design rights in two of which were in their last five years of subsistence. The claimant brought infringement proceedings against the defendants: the first defendant was a company with a paid-up share capital of £2 and the second defendant was the controlling shareholder and director of the first defendant. The defendants claimed that the designs were commonplace and the first defendant offered to undertake to take a licence of right conditional upon losing at trial. The trial judge refused to grant an interim injunction to the claimant.

195 [1998] FSR 774.

The claimant's appeal to the Court of Appeal was successful and an interim injunction was granted. It was held that where there is a reasonable ground to doubt the ability of a defendant to accept and comply with the financial provisions in a licence, the defendant should put evidence before the court to show that it has a reasonable prospect of being able to enter into and discharge its obligations under the licence. The Court of Appeal said that there was nothing in the policy of s 239 that bears upon the ordinary principles used in deciding whether or not to grant an interim injunction.<sup>196</sup> Of course, the licence of right takes effect on the date of application and past infringements remain infringements. The only effect of s 239 in respect of such past infringements is to limit the award of damages to no more than double what would have been payable under the licence. The ability of the defendant to pay such damages was, therefore, a factor to be taken into account when considering the balance of convenience when deciding whether or not to grant an interim injunction. Further clarification of s 239 was given in *Dyrlund Smith* and the Court of Appeal said that, where it states that no injunction shall be granted against the defendant, it meant no injunction against infringing the design right. It did not preclude the grant of an injunction for other reasons: for example, to enforce compliance with the terms of a licence of right by the licensee.

<sup>196</sup> As in *American Cyanamid Co v Ethicon Ltd* [1975] AC 396.

Jacob LJ made some criticism of s 239 in *Ultraframe (UK) Ltd v Eurocell Building Plastics Ltd*,<sup>197</sup> where he said that the provision had not been properly thought out although he agreed with Neuberger LJ who made a distinction between an undertaking to obtain a licence of right and the general right to obtain such a licence under s 237. In the case of the former, it was a matter of limiting remedies, whereas, with the latter, it was a voluntary move to exercise a right to take such a licence. It could be said that the former was driven by damage limitation, unlike the latter which was driven by exercising a right to exploit a design belonging to another. A problem in *Ultraframe* was that the undertaking to take a licence of right under s 239 was given after the design right had expired. It was argued that it was no longer possible to exercise the right after the design right expired as s 239 spoke in terms of making such an undertaking where a licence *is available* as of right under s 237. However, this was rejected by the Court of Appeal which said that to limit s 239 in such a way would lead to arbitrary consequences depending on whether infringement proceedings were commenced before or after expiry of the design right. Neuberger LJ said that s 239 was concerned with a hypothetical licence, which may or may not lead to an actual licence, and was intended to limit remedies, including a retrospective effect in relation to damages. He said that to restrict s 239 to a situation where the design right was still in subsistence would lead to strange consequences and would be:

<sup>197</sup> [2005] RPC 894.

... rather unfair on an infringer, who copied in the reasonable and honest belief that there was no design right, and against whom proceedings were brought only after the design right had expired. Such an infringer would, for quite understandable reasons, not have applied, even on a protective basis, for a licence under s 237, because of his honest belief that no design right existed ... there does not appear to me to be any good reason for such a strict time limit in s 239(1). It is not as if there is any magic in the undertaking being given before the expiry of the design right ... if the undertaking is given very shortly before the design right expires, it would still be effective, even though there would be wholly insufficient time for the terms of any licence to be agreed or determined pursuant to s 247.

There is much force in this argument as an undertaking given on the last day of the subsistence of design right would otherwise be effective to limit remedies whereas one given the day after would not and would expose the defendant to the full panoply of remedies which include additional remedies. Another consequence, not alluded to in *Ultraframe*, is that the submission that an undertaking under s 239 would be ineffective once the design right had expired would encourage claimants to delay commencing

proceedings tactically to deprive the defendant of the opportunity to make such an undertaking.

The limit on damages or accounts where licences are available as of right and a defendant undertakes to take such a licence, should now be read with reg 4 of the Intellectual Property (Enforcement, etc.) Regulations 2006.<sup>198</sup> These Regulations implemented, *inter alia*, Directive 2004/48/EC of the European Parliament and of the Council of 29 April 2004 on the enforcement of intellectual property rights.<sup>199</sup> Regulation 4 provides a formula for the assessment of damages which should be appropriate to the actual prejudice suffered by the claimant where the defendant knew or had reasonable grounds for knowing that he was engaged in infringing activity. The court should take into account all appropriate aspects including, in particular, the negative economic consequences, including any lost profits, which the claimant has suffered, and any unfair profits made by the defendant; and elements other than economic factors, including the moral prejudice caused to the claimant by the infringement. Alternatively, where appropriate, damages may be awarded on the basis of the royalties or fees which would have been due had the defendant obtained a licence. It is arguable that, in some cases, such as where the infringement has been quite flagrant and deliberate and the claimant has suffered losses greater than twice the notional royalty,<sup>200</sup> the limit in s 239 is contrary to reg 4. However, it is clear that any such conflict must be resolved in favour of the Regulations as reg 4(3) states that the regulation does not affect the operation of any enactment or rule of law relating to remedies for the infringement of intellectual property rights *except to the extent that it is inconsistent* with the provisions of reg 4 (emphasis added).

<sup>198</sup> SI 2006/1028.

<sup>199</sup> OJ L 195, 02.06.2004, p 16.

<sup>200</sup> Or the defendant has made a profit of more than twice the notional royalty.

## REMEDIES

An infringement is actionable by the design right owner, but under s 234 an exclusive licensee has, except against the design right owner, the same rights and remedies as if he were the owner of the right. Damages, injunctions, accounts or otherwise are available to the claimant as they are in respect of the infringement of any other property right.<sup>201</sup> However, an award of damages is not available in the case of a primary infringement, without prejudice to other remedies, if it is shown that, at the time of the infringement, the defendant did not know and had no reason to believe that the design right subsisted in the design.<sup>202</sup> In the case of a secondary infringement, a defendant who shows that the infringing article was acquired innocently by him or his predecessor in title will be liable only to pay damages not exceeding a reasonable royalty.<sup>203</sup>

It has also been noted earlier that, under s 239, if licences are available as of right, a defendant may undertake to take such a licence at any time in proceedings until the final order and, if so, no other remedy will be available apart from an award of damages not exceeding double the amount payable under such a licence had it been taken before the earliest infringement on terms to be agreed (subject now to reg 4 of the Intellectual Property (Enforcement, etc.) Regulations 2006 as noted above. Failing agreement, the terms will be settled by the Comptroller. This is, of course, without prejudice to remedies in respect of infringements occurring before licences of right were available. Jacob LJ thought that this provision had not been properly thought out as the normal measure of damages in an action where licences are available as of right would be the appropriate royalty rate.<sup>204</sup> If that is so, why set a limit of twice what would normally be payable? However, it could be that the legislature had in mind the possibility of an award for additional damages (*see below*) as well as ordinary damages or an award of an account of profits which would amount to considerably more than a notional royalty rate. It is clear that there would be no point in granting an injunction as all the

<sup>201</sup> Copyright, Designs and Patents Act 1988 s 229. Bear in mind the effect of reg 4 of the Intellectual Property (Enforcement, etc.) Regulations 2006, *supra*.

<sup>202</sup> Copyright, Designs and Patents Act 1988 s 233(1).

<sup>203</sup> Copyright, Designs and Patents Act 1988 s 233(2). The meaning of 'innocently acquired' is given in s 233(3), being where the person did not know and had no reason to believe that the article was an infringing article.

<sup>204</sup> *Ultraframe (UK) Ltd v Eurocell Building Plastics Ltd* [2005] RPC 894 at para 71.

defendant would have to do is apply for a licence of right. To see the workings of s 239, consider the following example.

During 1999, Folly Fabrications Ltd created a new design for a wheelbarrow which is subject to design right. Wheelbarrows to the design are put on sale the same year and sell in large numbers. Grimes Industries plc copy Folly's design and manufacture and sell wheelbarrows substantially to that design from 17 July 2003 to 31 March 2008. On 4 September 2008, Folly commenced infringement proceedings against Grimes in relation to design right. During the trial, when it becomes clear to Grimes that it will lose the action, it decides to undertake to take a licence of right. As wheelbarrows to the design were first made available in 1998, licences of right were available from 1 January 2005. Therefore, following Grimes' undertaking, the only remedy available in respect of infringement from 1 January 2005 to 31 March 2008 is an award of damages limited to no more than double what would have been payable under the licence of right. However, from 17 July 2003 to 31 December 2004, the full panoply of remedies are available to Folly, apart from an injunction, of course, which would be meaningless. It may be that Folly claims damages and additional damages for the period 17 July 2003 to 31 December 2004 as it believes Grimes' infringement was quite blatant and deliberate.

There are practical difficulties in respect of undertakings to take licences of right made during legal proceedings. For example, what if the defendant tries to unduly prolong negotiations as to the terms of the licence? Can the claimant unilaterally declare that the parties have failed to agree terms, thereby triggering a reference to the Comptroller to settle terms, if the defendant maintains that it is still prepared to negotiate? Does the court have the power to remit the settlement of terms to the Comptroller in the face of a defendant who claims that he is still prepared to negotiate? The Civil Procedure Rules probably would permit this in the interests of speedy resolution of disputes.<sup>205</sup> However, there are likely to be proceedings before the Comptroller with both sides making submissions as to the terms before he can settle terms. This can all take quite a long time although the court could order an interim payment to be made by the defendant to the claimant.

The court has a discretion to award additional damages which are provided for under s 229(3) using an identical formula to that used for copyright under s 97(2); that is, having regard to all the circumstances – in particular, the flagrancy of the infringement and the benefit accruing to the defendant. It is unlikely that additional damages will be awarded frequently in design right cases as, usually, normal damages or an account of profits will be satisfactory.

Orders for delivery up, forfeiture or disposal of infringing articles are possible and proceedings can be brought for these forms of relief in county courts in England and Wales and, subject to the county court limit for actions in tort, Northern Ireland.<sup>206</sup> In relation to disposal under s 231 (forfeiting articles to the design right owner, or destruction), persons having an interest in the articles in question shall be served notices and may take part in proceedings in relation to the making of orders for disposal and may appeal against such orders. Persons having an interest include persons in whose favour an order could be made under a number of provisions relating to other rights such as copyright, trade marks, UK registered designs and Community trade marks and designs.

<sup>205</sup> On the basis of the overriding objective and the court's case management powers: rr 1.1–1.4.

<sup>206</sup> Copyright, Designs and Patents Act 1988 ss 230–232.

## SEMICONDUCTOR TOPOGRAPHY DESIGN RIGHT

Integrated circuits are commonly known as 'silicon chips' or, quite simply, 'chips'. They are usually made from layers of materials by a process which includes etching, using various 'masks' (templates) which are made photographically. The simplest integrated

circuit consists of three layers, one of which is made from semiconductor material. A semiconducting material, in terms of its ability to conduct electricity, is one which lies between a conductor, such as copper, and an insulator, such as rubber. Examples of semiconducting materials include silicon, germanium, selenium and gallium arsenide. A wafer of semiconductor material is coated with a layer of silicon oxide (an insulator) and the electronic components (for example, transistors) are formed by a process of diffusion (chemically doping the semiconductor material with impurities through holes etched through the oxide). Finally, an aluminium coating is applied which is partly evaporated using a mask, leaving behind the interconnections between components formed in the semiconductor layer.

The patterns formed by the processes of etching the layers and evaporation of the conductor make the electrical circuitry of the integrated circuit. These patterns represent the circuit design. The processes involved in the making of integrated circuits fall within the province of patent law, and the first patents for integrated circuits were filed in the late 1950s. Licences were readily available and in 1961 the first chips were available commercially. Now that the early patents have expired and much of the know-how associated with making integrated circuits lies in the public domain, it is essential that the considerable effort that goes into the design and development of new integrated circuits is protected. The feature of an integrated circuit which is specifically protected in its own right is its topography.

## History

The protection of semiconductor topographies has a fairly short history, as might be expected. Before legislation was introduced, it was possible that integrated circuits were protected by copyright through drawings or photographs. Most of the masks used in the manufacture were produced photographically and would be protected as photographs. The USA was the driving force behind the development of specific protection for semiconductor topographies, and in 1984 the USA enacted the Semiconductor Chip Protection Act which gave specific protection to the circuitry contained in the layers of semiconductors. The European Community felt duty bound to follow this lead on pain of loss of reciprocal protection for European designed topographies.<sup>207</sup> This led to the adoption of Council Directive 87/54/EEC of 16 December 1986 on the legal protection of topographies of semiconductor products,<sup>208</sup> and, under the authority of the European Communities Act 1972 s 2(2), the Semiconductor Products (Protection of Topography) Regulations 1987 were made and came into force on 7 November 1987.<sup>209</sup> The 1987 Regulations gave a right (called a ‘topography right’) in the layout of an integrated circuit. However, with the advent of the Copyright, Designs and Patents Act 1988, it was decided to replace these regulations with an amended version of the new design right by the Design Right (Semiconductor Topographies) Regulations 1989, which came into force on 1 August 1989.<sup>210</sup> The right, referred to below as the ‘semiconductor design right’, draws heavily on the Copyright, Designs and Patents Act 1988 Part III which deals with the unregistered design right, but with some differences as far as semiconductor topographies are concerned. The problem with this is that we now have the situation where some sections of the 1988 Act are different, depending on whether they are being applied to semiconductor designs or to designs for other articles.

## Design Right (Semiconductor Topographies) Regulations 1989

The 1989 Regulations are similar to the 1987 Regulations in several respects: for example, it is the topography of a semiconductor which is protected, being, by reg 2(1),<sup>211</sup> a design which is either:

<sup>207</sup> For a discussion on the American approach and other possibilities for protection of computer programs, see Tapper, C. (1989) *Computer Law* (4th edn) Longman, pp 131–33.

<sup>208</sup> OJ L 24, 27.01.1987, p 36.

<sup>209</sup> SI 1987/1497.

<sup>210</sup> SI 1989/1100, as amended by the Design Right (Semiconductor Topographies) (Amendment) Regulations 2006 SI 2006/1833. It is probable that the 1987 Regulations were a model for the new design right.

<sup>211</sup> Jacob LJ referred to this provision in *A Fulton Co Ltd v Totes Isotoner (UK) Ltd* [2004] RPC 301 to help him reject counsel’s submissions on the use of the word ‘aspect’ in relation to the design right in the Copyright, Designs and Patents Act 1988 s 213(2).

- (a) the pattern fixed, or intended to be fixed, in or upon –
  - (i) a layer of a semiconductor product, or
  - (ii) a layer of material in the course of and for the purpose of the manufacture of a semiconductor product; or
- (b) the arrangement of the patterns fixed, or intended to be fixed, in or upon the layers of a semiconductor product in relation to one another.

‘Semiconductor product’ is also defined in reg 2(1) and is:

an article the purpose, or one of the purposes, of which is the performance of an electronic function and which consists of two or more layers, at least one of which is composed of semi-conducting material and in or upon one or more of which is fixed a pattern appertaining to that or another function.

To be protected, the semiconductor topography must be original, and it is not original if it is commonplace in the design field in question at the time of its creation.<sup>212</sup> As discussed earlier in this chapter, although ‘original’ is liberally interpreted in copyright law, the requirement that the topography is not commonplace is likely to lead to a much narrower interpretation. The qualification requirements are very similar to those for ‘normal’ designs, with some minor differences.<sup>213</sup> In terms of the first marketing qualification rule, normally no account is to be taken of any sale or hire, or any offer or exposure for sale or hire which is subject to an obligation of confidence.<sup>214</sup> On the international scene, the provisions also apply to persons from member countries of the World Trade Organisation.<sup>215</sup>

The ownership provisions are very similar to those for the normal design right; however, the qualification provisions are slightly changed and commissioners or employers do not have to be qualifying persons.<sup>216</sup> The right given is as with normal designs and on the whole infringement (primary and secondary) is similarly defined, but reproduction of the design privately for non-commercial aims is specifically excluded from the scope of the right as is an equivalent to some of the permitted acts, including fair dealing, in copyright. Section 226(1A)(b) allows reproduction for the purpose of analysing or evaluating the design, or analysing, evaluating or teaching the concepts, processes, systems or techniques embodied in it. This can be seen as paving the way for reverse analysis of existing semiconductors in the development of new, non-competing products. This is reinforced by reg 8(4), which states that it is not an infringement of the semiconductor design right to create another original topography as a result of such analysis or evaluation, or to reproduce that other topography.<sup>217</sup> As regards reverse analysis, a limiting factor will be the requirement for the new topography to be original and not commonplace. Regulation 8(5) retains the substantiality test for infringement. Secondary infringement does not apply if the article in question has previously been sold or hired within the UK by or with the licence of the owner of the right, or within the European Community or Gibraltar by or with the consent of the person who, at the time, was entitled to import it or sell it within the appropriate territory. Thus, the doctrine of exhaustion of rights applies to semiconductor topographies.

The duration of the semiconductor design right depends on whether and when the topography is commercially exploited. A new s 216 is substituted for semiconductor products. Normally, the right endures for ten years from the end of the year in which it was first commercially exploited (anywhere in the world). However, if the right is not commercially exploited within 15 years of the creation of the topography, the right expires 15 years from the time the topography was first recorded in a design document or the time when an article was first made to the design, whichever is the earlier. Contrary to the position with other designs in which the design right subsists, licences as of right are not available during the last five years of the semiconductor design right. However, licences may be declared available as of right, as a result of a report from the

<sup>212</sup> Copyright, Designs and Patents Act 1988 s 213(4).

<sup>213</sup> For semiconductor products, the 1989 Regulations substitute different sections and parts of sections into the Copyright, Designs and Patents Act 1988: for example, a new s 217 is substituted.

<sup>214</sup> Design Right (Semiconductor Topographies) Regulations 1989, SI 1989/1100, reg 7. This does not apply if any of these things have previously been done or in terms of a Crown obligation.

<sup>215</sup> Design Right (Semiconductor) Regulations 1989, as amended by the Design Right (Semiconductor Topographies) (Amendment) Regulations 2006, SI 2006/1833.

<sup>216</sup> Design Right (Semiconductor Topographies) Regulations 1989 regs 4 and 5.

<sup>217</sup> At first sight, this seems to defeat the whole object of the Regulations, but, although reproducing the topography is permitted, reproducing by making articles is not. In some respects, this provision is similar to the decompilation right in relation to computer programs.

Competition Commission, as with other designs. Remedies for infringement are as for the design right generally.

The topography right is a result of international pressure, especially from the USA. However, because the Copyright, Designs and Patents Act 1988 s 51 removes protection from design documents (in effect), the protection for topographies in the UK is now significantly weaker than it was before. Although copying a topography will infringe the copyright in the photographic masks and s 236 suppresses the design right in favour of copyright, it cannot apply as s 51 means that the copyright in the photographic masks is not infringed by making a semiconductor product to the same design.

# Part Five

## DESIGN LAW SUMMARY

### KEY POINTS

Design protection takes a variety of forms, some of which are informal whilst others are subject to registration. There are significant differences between some forms of protection compared to other forms.

Types of designs protected range from aesthetic to functional designs, from two-dimensional to three-dimensional designs and from designs applied to tangible articles and products to software designs. Even colours and lines may be protected.

Legal protection of designs is afforded by:

- The Community design
  - (i) registered, and
  - (ii) unregistered
- The UK registered design
- The UK unregistered design right.

Other intellectual property laws may also protect designs such as artistic copyright, trade mark law and the law of passing off.

The Community design (registered or unregistered) has a unitary character and has equal effect throughout the Community. It may not be registered, transferred, declared invalid, or its use prohibited except in relation to the whole Community. This does not prevent licences to be granted which are territorially limited to part of the Community.

The scope of protection depends on whether the design is registered (formal) or unregistered (informal). Registration gives a monopoly right whereas unregistered rights require proof of copying for infringement.

The unregistered Community design applies to designs which generally can also be registered as Community designs and/or by registration as a UK registered design. The UK unregistered design is wholly unlike other forms of design protection though may subsist in designs subject to the Community design and/or the UK registered design.

### Community design and UK registered design

The criteria for protection are equivalent and a design must fall within the definition of 'design' and be used in relation to a 'product', which includes a 'complex product'. Graphic symbols and typefaces are included in the definition of product, making it possible to protect software-generated designs. However, computer programs are excluded from the definition of 'product'.

The main criteria for protection are that, at the relevant time, the design is new and has individual character. As regards novelty, there is a one-year 'period of grace'. A design is not new if it has been made available to the public. However, this is not as stringent as the test of novelty for patents. Certain types of events which would otherwise be novelty-destroying are ignored where they could not reasonably have become known in the normal course of business to circles specialising in the sector concerned, operating within the Community. Individual character is judged from the perspective of the informed user and the overall impression it has on such a user compared with designs which have been made available to the public. The degree of design freedom is taken into account.

There are a number of specific exclusions as to what may be protected:

- designs dictated solely by their technical function;
- designs of interconnections are not protected (except designs which allow the multiple assembly or connection of mutually interchangeable products within a modular system);
- designs of products which are parts of complex products not visible during normal use ('under-the-bonnet' parts);
- designs of component parts of complex products used in repair to restore the original appearance (such as a body panel for a vehicle);
- designs contrary to public policy or accepted principles of morality.

Despite the exclusions, other aspects of a design applied to or incorporated into an article may be protected if the requirements are satisfied. For example, only one part of a design may be dictated by technical function, in which case, other elements of the design may be protected.

Initial registration gives protection for five years. This may be renewed in five-year periods up to a maximum of 25 years. The unregistered Community design only lasts for three years from the date it was first made available to the public.

The scope of protection for a design includes designs which do not produce on the informed user a different overall impression, taking into account the degree of freedom the designer had when developing his design.

### UK unregistered design

The UK unregistered design is an informal right, similar in some respects, to a copyright. It protects the design of the shape or configuration of the whole or part of an article, whether external or internal. The right was originally intended to protect functional designs but may also protect many attractive or aesthetic designs.

The basic requirement is that the design must be original (interpreted as being as for copyright) but it is not original if it was commonplace in the design field in question at the time of its creation. As with copyright, the design must qualify for protection.

There are a number of exceptions to the design and it does not apply:

- to methods or principles of construction;
- in the case of 'must-fit' designs;
- in the case of 'must-match' designs;
- to surface decoration.

The design right lasts for up to 15 years but this will be reduced to a maximum of 10 years if commercially exploited. Licences of right are available during the last five years of its subsistence.

There are provisions for secondary infringement but no associated criminal offences under the design right.

A modified version of the unregistered design right protects semiconductor topographies.

### DISCUSSION QUESTIONS

**1** The Community Design Regulation provides for a comprehensive, rational and balanced form of protection for designs, whether for aesthetic or functional articles. Consequently, there is no longer any need for the UK

registered design and the UK unregistered design right. Discuss.

**2** Apex Crafts Ltd specialises in the manufacture of handcrafted wooden household items. Paul, a designer employed by Apex has created a new design for a wooden cuckoo clock in the shape of a house. Apex have applied to register the design of the clock as a Community design. The application describes the design as being intended to be applied to clocks. No mention was made in the application to the Locarno Classification. Unknown to Apex and Paul, wooden dolls' houses made to a very similar design are already on the market outside the European Community, specifically in the United States and Canada. Discuss whether, and/or under what circumstances, Apex's design application will succeed.

**3** The overlap between design protection in the UK and artistic copyright is compromised by sections 51 and 52 of the Copyright, Designs and Patents Act 1988. Consider the scope of these provisions and related provisions such as section 236. Article 96(2) of the Community Design Regulation states that '[a] design protected by the Community design shall also be eligible for protection under the law of copyright of Member States . . . The extent to which, and conditions under which, such a protection is conferred, including the level of originality required, shall be determined by each Member State'. In the light of this, discuss whether the above UK statutory provisions should be modified and, if so, consider how.

**4** Discuss the extent to which spare parts are protected under both the Community design and the UK design protection regime. Consider the legal provisions limiting the protection of designs applied to spare parts and discuss the underlying policy issues which informed decisions to limit such protection accordingly.

**5** Discuss the extent to which the requirement for novelty and individual character for the Community design and the UK registered design differs from the requirement of originality for the UK unregistered design right.

# TRADE MARKS – INTRODUCTION AND BACKGROUND

## INTRODUCTION

This chapter concentrates on the basic nature and development of trade mark law. The law of registered trade marks was the subject of some unsatisfactory and difficult legislation in the UK, in particular the Trade Marks Act 1938, now repealed and replaced by the Trade Marks Act 1994 which was brought in to implement the Directive on the legal protection of trade marks.<sup>1</sup> The result is that trade mark law in the UK has been substantially modified and reformed by the 1994 Act which very much marks a clean break with the past. Consequently, there are relatively few cases on the 1938 Act, preceding Acts and the common law before trade mark law was put on a statutory footing, that now have any authority, binding or otherwise. That is not to say that there is a lack of useful case law on our present trade mark law: quite the opposite, as the 1994 Act and interpretation of the harmonising Directive have together generated an impressive body of case law. Preliminary rulings from the European Court of Justice have been particularly useful in providing guidance on those parts of the Trade Marks Act 1994 that are required to implement the Directive. The Community trade mark, which provides for trade marks that have a unitary nature and apply throughout the EC, has proved a great success and has also generated a significant amount of case law on the Community trade mark Regulation. There are numerous similarities between the Trade Marks Act 1994, the Directive and the Community trade mark Regulation.<sup>2</sup> After looking at the nature of and rationale for trade marks and the history of trade mark law, mention is made of the relationship between the UK trade mark and the Community trade mark and the scheme and structure of the following chapters on trade marks.

Trade marks are a diverse and familiar feature in both industrial and commercial markets. Trade marks have long been used by manufacturers and traders to identify their goods and distinguish them from goods made or sold by others. In Roman times it was common for pottery to be embossed or impressed with a mark (for example, a representation of a dolphin or the maker's initials), as a visit to the British Museum will testify. Merchants' marks were used in commerce in Britain from the thirteenth century; William Caxton used the mark W74C and gold and silver articles were hall-marked as early as the fourteenth century.<sup>3</sup> By the end of the sixteenth century it was very common for shopkeepers to erect signs illustrating their trade. Traders took to using cards bearing their name and address, often accompanied by a device of some sort, an early form of business card. The Industrial Revolution saw an enormous growth in the use of names and marks in advertising and the modern trade mark was born. Some of the nineteenth-century marks were glorious in their pictorial detail.<sup>4</sup>

Marks are a very valuable form of intellectual property because they become associated with quality and consumer expectations in a product or service. Some goods

<sup>1</sup> It also made provision for the Community trade mark and gave effect to the Madrid Protocol Relating to the International Registration of Trade Marks and certain provisions of the Paris Convention for the Protection of Industrial Property, as amended. The trade marks Directive (First Council Directive of 21 December 1988 to approximate the laws of the Member States relating to trade marks, OJ L 40, 11.02.1989, p 1) was repealed and replaced by the codifying Directive 2008/95/EC of the European Parliament and of the Council of 22 October 2008 to approximate the laws of the Member States relating to trade marks, OJ L 299, 08.11.2008, p 25. References to the repealed Directive should be construed as references to the new Directive, read in accordance with the correlation table in Annex II to the new Directive. Hence, references to the trade marks Directive in this part of the book apply equally to the new codified version of the Directive unless stated otherwise.

<sup>2</sup> Of course, except in the case of derogations and options, the Trade Marks Act 1994 should accurately reflect the provisions of the Directive.

<sup>3</sup> Hallmarking is now covered by the Hallmarking Act 1973.

<sup>4</sup> A dated but useful practical and descriptive history of trade marks is to be found in Caplan, D. and Stewart, G. (1966) *British Trade Marks and Symbols*, Peter Owen.

become almost synonymous with their trade name: for example, Hovis bread, the soft drink Coca-Cola, Mars confectionery bars, Nescafé coffee, Hamlet cigars, Domestos bleach, Cadbury's chocolate, Levi jeans, etc. Coupled with intensive advertising campaigns, the utility of marks to their owners as marketing weapons is plain to see and trade mark rights usually will be vigorously asserted and defended.

It is difficult to estimate the economic value of the power of symbolism in marketing. For example, the value of the Coca-Cola trade mark must be immense when one considers the size of worldwide sales in what could be described as a beverage based on a formula for an unexceptional syrup. Symbolism here is also reinforced by the shape of the Coca-Cola bottle (based on the shape of the coca bean), which was designed to prevent the dissipation of the company image resulting from the variety of bottles made.<sup>5</sup> Why else would such an expensive and impractical form of packaging be used?<sup>6</sup> As a matter of interest, an earlier attempt to register the Coca-Cola bottle itself as a trade mark in the UK failed.<sup>7</sup> Of course, the use of a similar shaped bottle by competitors would almost certainly amount to passing off. Advertising permits the creation of an image associated with a product that might have nothing at all to do with the qualities of the product itself. An old example was the advertising describing a particular brand of menthol tipped cigarettes as being 'fresh as a mountain stream', creating an image completely contrary to medical evidence of the harm that can be caused by smoking.<sup>8</sup>

A trade mark must be used or intended to be used in relation to certain goods or services.<sup>9</sup> A fundamental principle is that there is a connection between a trader and the goods or services in question, and there can be no such connection if the mark is not being used, even though it might have been so used in the past. A mark that is dormant is susceptible to challenge on the grounds of validity and may be revoked for lack of use. Another important aspect is that the mark must be distinctive in some way, and this basic fact limits the scope of signs or symbols that can be used as marks. Ownership of a mark, referred to as proprietorship, gives what can be described as a restricted monopoly in that mark, and the proprietor of a registered trade mark has a property right in the mark. The right is limited by reference to the classes of goods or services against which the mark is registered and also by way of exceptions to the rights granted to proprietors. Trade marks are afforded legal protection through a system of examination, publication and registration. Marks can be registered in one or more of the 34 classes of goods and 11 classes of services.<sup>10</sup>

A related area of law is called *passing off*. This can be likened to a common law version of trade mark law, and indeed both of these areas of law share a common background in the UK. Passing off, in relation to goods, can be said to be the use by a person on his own goods of a mark or get-up belonging to another person with the intention of passing off the goods as being those of that other person.<sup>11</sup> Quite often, a particular set of circumstances will give rise to the possibility of a cause of action in both trade mark law and passing off. Indeed, it is usual to add a claim for passing off in a trade mark action because of the risk of the registration being held invalid. The somewhat wider scope of passing off could also be important. Passing off is dealt with in Chapter 23. Another, less used, area of law is trade libel, sometimes referred to as malicious falsehood. A remedy under this might be available, for example, where one trader falsely and maliciously claims that goods of another trader are not genuine<sup>12</sup> or another trader is working an invalid patent.

The law relating to trade marks is substantially civil law, but there are criminal penalties associated with the unauthorised use of trade marks which could be described as draconian and which have been challenged on the basis of the right to a fair trial. Other offences apply to the falsification of the register or in relation to false copies of register entries or falsely claiming that a trade mark is registered. Other areas of criminal law

<sup>5</sup> A great deal of this beverage is now sold in cans, but the shape of the bottle is still in evidence in the form of a curved white stripe alongside the name.

<sup>6</sup> The bottles are not seen very often nowadays.

<sup>7</sup> Under the 1938 Act in *Re Coca-Cola Co* [1986] 2 All ER 274. The bottle shape (with and without the stylised word Coca-Cola) was registered in 1995 under the 1994 Act (registration numbers 2000546 and 2000548).

<sup>8</sup> Eisenschitz makes this point and emphasises the power of such advertising: see Eisenschitz, T.S. (1987) *Patents, Trade Marks and Designs in Information Work*, Croom Helm, pp 168–69.

<sup>9</sup> There was an exception: defensive registration of well-known marks under the 1938 Act.

<sup>10</sup> The classification system for trade and service marks can be seen in Appendix 1 to this book.

<sup>11</sup> This is passing off in its traditional sense. 'Get-up' could include the appearance of goods, packaging or the general manner in which the goods are displayed, advertised or sold.

<sup>12</sup> *Thomas v Williams* (1880) 14 ChD 864.

may be relevant, depending on the circumstances, such as trade descriptions, theft, forgery and deception offences.

## RATIONALE

Trade marks can be seen as serving two main purposes: first, reflecting the fact that a registered trade mark is an item of property, to protect business reputation and goodwill; and, second, to protect consumers from deception, that is to prevent the buying public from purchasing inferior goods or services in the mistaken belief that they originate from or are provided by another trader. As a form of consumer protection this area of law has been an effective weapon against counterfeit and inferior goods, considerably strengthened by the introduction of draconian criminal penalties for the unauthorised use of registered trade marks. However, as far as the control of the use of marks in the civil courts is concerned, the action lies with the proprietor of the mark, enforcing his property right in the trade mark, and consumers are protected indirectly through the self-interest of those with property rights in trade marks.<sup>13</sup> Another way of justifying a system of trade marks is that it gives effect, to some extent, to the European notion of unfair competition.

<sup>13</sup> A licensee may also be able to bring an infringement action, depending on the circumstances and the terms of the licence agreement.

Consumer protection, as desirable and worthy though it may be, is little more than a by-product of trade mark law. When the statutory provisions are examined, it is apparent that the overriding purpose that a trade mark serves is to distinguish the goods or services of one undertaking from those of another, to use the language of the 1994 Act. In other words, a trade mark should act as a badge of origin. According to Lord Nicholls of Birkenhead in *Scandecor Developments AB v Scandecor Marketing AB*.<sup>14</sup>

<sup>14</sup> [2002] FSR 122 at para 33.

Inherent in this definition is the notion that distinctiveness as to business source (the ‘goods of one undertaking’) is the essential function of a trade mark today.

Previous trade mark Acts used different language. For example, the Trade Marks Act 1905 s 3 defined a trade mark as a mark used on or in connection with goods ‘for the purpose of indicating that they are the goods of the proprietor of such mark by virtue of manufacture, selection, certification, dealing with, or offering for sale’. A broader definition was in the Trade Marks Act 1938, s 68(1) of which defined a trade mark as a mark ‘used in relation to goods for the purpose of indicating a connection in the course of trade between the goods and some person having the right either as proprietor or as registered user to use the mark’.

The basis of trade marks being to show a connection between undertakings and their goods or services so as to distinguish them from other undertakings has important implications in terms of character merchandising and in relation to memorabilia. When a person buys a product that carries the name or image of a famous person or fictitious character, he is buying it because it carries the name or likeness and will usually be indifferent as to the source. In *ELVIS PRESLEY Trade Marks*,<sup>15</sup> Laddie J said (at 554):

<sup>15</sup> [1997] RPC 543.

When a fan buys a poster or cup bearing an image of his star, he is buying a likeness, not a product from a particular source. Similarly, the purchaser of any one of the myriad of cheap souvenirs of the royal wedding bearing pictures of Prince Charles and Diana, Princess of Wales, wants mementoes with likenesses. He is likely to be indifferent as to the source.

That being so, the name, image or other mark is unlikely to serve the primary purpose of acting as a *badge of origin* and, consequently, it will not satisfy the basic requirement for registration as a trade mark. The same might apply to sports memorabilia such as football scarves carrying a football club’s colours and other club logos. In such cases,

and to at least some persons, the scarf could be said to act as a badge of allegiance rather than a badge of origin of the scarf itself.<sup>16</sup>

## BRIEF HISTORY

Although the application of distinguishing marks to goods has a long history, the law relating to trade marks is relatively young, going back to the early part of the nineteenth century.<sup>17</sup> However, an earlier example of an abuse of a mark is the case of *Southern v How*,<sup>18</sup> where one clothier applied another's mark to his own inferior cloth which gave rise to an action in deceit. Due to the importance of obtaining injunctions against infringers of marks, the Court of Chancery became popular for pursuing actions concerning marks, although the common law courts also began to hear such actions: for example, in *Sykes v Sykes*<sup>19</sup> where some basic principles were laid down. However, it soon became clear that this area of law needed clarifying and strengthening, and pressure grew from traders for an effective statute which would provide for a system of registration like that adopted in France. One of the problems of litigation had been that the owner of the mark might have to prove his title to the mark every time an infringer came along, and proving title depended on establishing a goodwill associated with the mark, a problem that is still present in passing off actions. This increased the expense and the uncertainty of legal proceedings.

The first statute was the Trade Marks Registration Act 1875, which established a register for trade marks and which was extremely successful judging by the number of registrations applied for. The very first mark registered was one used for beer, a label for pale ale bearing the famous Bass red triangle, the UK's No 1 trade mark which remains registered as a trade mark today and still very much in use.<sup>20</sup> This particular mark has been infringed on many occasions, especially in the nineteenth century and the early part of the twentieth century. The trade mark is now owned by *Brandbrew SA* by assignment.<sup>21</sup> *Bass plc*, the predecessor in title to the trade mark, reckoned that it had to deal with some 1,900 examples of infringement of the red triangle mark. Retrospectively, this can be seen as very flattering as a measure of perceived quality and reputation of Bass ales and beers.<sup>22</sup> In 1862 the Merchandise Marks Act was passed. This was a forerunner to the Trade Descriptions Act 1968 and, *inter alia*, made it a criminal offence to forge a trade mark.

After some amending legislation, trade mark law was consolidated in the Patents, Designs and Trade Marks Act 1883. A later consolidating statute, the Trade Marks Act 1905, gave a statutory definition of 'trade mark' for the first time, and a later amending statute, the Trade Marks Act 1919, divided the register into Part A and Part B marks.<sup>23</sup> Registration in Part A was subject to more stringent requirements but gave better protection in terms of remedies than Part B. Then came the Trade Marks Act 1938, which consolidated the 1905 and the 1919 statutes together with the Trade Marks (Amendment) Act 1937, which was instantaneously enacted and repealed on the day the 1938 Act came into force, 27 July 1938. The 1938 Act was an outstanding example of intricate and difficult draftsmanship which attracted judicial criticism on a number of occasions. In an early case of comparative advertising, *Bismag Ltd v Amblins (Chemists) Ltd*,<sup>24</sup> MacKinnon LJ found he was unable to understand s 4 (the section on infringement) saying that it was of 'fuliginous obscurity'.

The difficulty with the 1938 Act was compounded by the need to refer to earlier legislation. In *GE Trade Mark*<sup>25</sup> Lord Diplock said (at 325):

My Lords it may well be a legitimate criticism of our methods of drafting legislation that in order to ascertain the meaning of an Act of Parliament passed in 1938, it should be necessary not only to consider its legislative history over the previous 63 years but also to engage in what

<sup>16</sup> This somewhat controversial argument was adopted by Laddie J in *Arsenal Football Club plc v Reed* [2001] RPC 922. The European Court of Justice noted that even if a person buying goods sees a disclaimer as to the origin of the goods, there may be others who come across them later who will think they came from the trade mark proprietor: Case C-206/01 *Arsenal Football Club plc v Matthew Reed* [2002] ECR I-10273, discussed further in the following chapter.

<sup>17</sup> For a history of the legal development of trade marks and passing off, see Kitchin, D., Llewelyn, D., Mellor, J., Meade, R., Moody-Stuart, T., Keeling, D. and Jacob, R. (2005) *Kerly's Law of Trade Marks and Trade Names* (14th edn) Sweet & Maxwell.

<sup>18</sup> (1618) Popham 144.

<sup>19</sup> (1824) 3 B & C 541.

<sup>20</sup> Bass & Co also registered two similar marks and the red triangle device on its own in the same year. The red triangle trade mark can be viewed at the Patent Office website by searching the trade mark records.

<sup>21</sup> The Bass brewing business was sold, including its trade marks, and is now owned by *Brandbrew SA*, a company incorporated in Luxembourg.

<sup>22</sup> Reputedly loved by Napoleon.

<sup>23</sup> Fortunately, this unnecessary complexity was removed by the Trade Marks Act 1994.

<sup>24</sup> [1940] 1 Ch 667.

<sup>25</sup> [1973] RPC 297.

in other systems of law might be regarded as antiquarian research, namely the state of the common law as it existed before the first Act to alter it was passed nearly 100 years ago. But, in my view, the Act of 1938 which purports to consolidate our existing law becomes intelligible only when this course . . . is adopted.

In comparison, the Trade Marks Act 1994 should be relatively 'free-standing' as regards previous trade marks Acts; however, Aldous J also found it necessary to delve into the provisions in earlier law, including the Acts of 1883, 1888 and 1905 and the common law before 1875, in *Loudoun Manufacturing Co Ltd v Courtaulds plc*.<sup>26</sup>

Following recommendations made in a Green Paper,<sup>27</sup> the Trade Marks (Amendment) Act 1984 was passed, and this made amendments to the 1938 Act and extended the scheme to service marks which can be registered in respect of services such as laundries and banking.<sup>28</sup> These provisions came into force on 1 October 1986 and made a bad Act even worse. The way the amendments were made required two copies of the 1938 Act to be used, and indeed the twelfth edition of *Kerly's Law of Trade Marks and Trade Names* had the two copies on facing pages. Prior to this marks could be registered only in respect of goods. Further amendments to the Act were made by the Patents, Designs and Trade Marks Act 1986 and the Copyright, Designs and Patents Act 1988. The complexity of the 1938 Act was not alleviated, only added to.

The current statute is the Trade Marks Act 1994.<sup>29</sup> This long-awaited legislation brought trade mark law up to date and generally was warmly welcomed. Primarily intended to implement First Council Directive 89/104/EEC of 21 December 1988 to approximate the laws of the Member States relating to trade marks,<sup>30</sup> the Act makes provisions for the Community trade mark and enabled the UK to give effect to the 1989 Madrid Protocol relating to the international registration of trade marks.<sup>31</sup> The opportunity was also taken to make some much-needed improvements to trade mark law and to bring it more in line with acceptable modern trading practices.<sup>32</sup> The Act came into force on 31 October 1994.

## THE TRADE MARKS ACT 1994

The Trade Marks Act 1994 represented a milestone in trade mark law and it contains, without question, the most radical changes since the first trade mark legislation. The need for reform of trade mark law had become clear some time ago, but the opportunity to make the necessary changes was put on hold pending harmonisation of trade mark law throughout the European Community. At the end of 1988, the Council of the European Communities adopted a Directive aimed at harmonising trade mark law throughout the European Community.<sup>33</sup> Although most of the basic principles of trade mark law were unaffected by the Directive there were, nevertheless, some significant and far-reaching changes required to be made to UK law.

The Directive required compliance by 1 January 1993, but the UK failed to meet this deadline. A Trade Marks Bill was introduced in the House of Lords in December 1993 for the primary purpose of implementing the regime of trade mark law contained in the Directive. It received the Royal Assent on 21 July 1994 and the Trade Marks Act 1994 came into force on 31 October 1994.<sup>34</sup> In the period between 1 January 1993 and 31 October 1994 the Registrar continued to apply the law in conformity with the 1938 Act and rules made in pursuance of it. But, in Case C-106/89 *Marleasing SA v La Comercial Internacional de Alimentación SA*,<sup>35</sup> it was held that national courts should interpret national laws in accordance with European Community law so that, in respect of registration of marks and infringement thereto in particular, there was a conflict between the position taken by the Registrar and the position likely to have been taken by the courts in respect of provisions of the Directive that were of 'direct effect'.<sup>36</sup> The

<sup>26</sup> *The Times*, 14 February 1994.

<sup>27</sup> *Intellectual Property Rights and Innovation*, Cmnd 9117, HMSO, 1983.

<sup>28</sup> Previously service industries relied on the law of passing off.

<sup>29</sup> The 1994 Act was supplemented by the Trade Marks Rules 1994, SI 1994/2583. The 1994 Rules were revoked and replaced by the Trade Marks Rules 2000, SI 2000/136. These rules were in turn revoked and replaced by the Trade Marks Rules 2008, SI2008/1797.

<sup>30</sup> OJ L40, 11.02.1989, p 1.

<sup>31</sup> The UK ratified the Protocol in 1995.

<sup>32</sup> For example, comparative advertising was permitted providing it was in accordance with honest practices. The previous law did not allow trade marks to be registered for the purposes of licensing their use in a manner unconnected with the proprietor, something described as a complete anachronism by Lord Bridge of Harwich in *Holly Hobbie Trade Mark* [1984] FSR 199.

<sup>33</sup> First Council Directive of 21 December 1988 to approximate the laws of Member States relating to trade marks, OJ L40, 11.02.1989, p 1. A White Paper was published subsequently setting out the government's plans to conform with the Directive, *Reform of Trade Mark Law*, Cm 1203, HMSO, 1990.

<sup>34</sup> The 1994 Act was supplemented by the Trade Mark Rules 1994, SI 1994/2583, which were revoked and replaced on 17 February 2000 by the Trade Mark Rules 2000, SI 2000/136. These rules have been amended on a number of occasions, most recently by the Trade Marks (Amendment) Rules 2007, SI 2007/2076.

<sup>35</sup> [1990] ECR I-4135.

<sup>36</sup> See Nissen, D. and Karet, I. 'The Trade Marks Directive: can I prevail if the state has failed?' [1993] 3 EIPR 91.

Registrar was placed in a difficult position because of the delay in implementing the Directive, but in the event there seem to have been no major problems. Certainly, as far as the changes to registrability were concerned, it appeared that traders were satisfied to wait until the new Act was in force before applying to register marks that would have been of doubtful registrability under the 1938 Act.

The need for reform of UK trade mark law goes back to long before the Directive, and the Trade Marks Act 1938 had been subject to much judicial criticism. But difficult and obscure though the 1938 Act was, the need for change was also a reflection of a changing advertising and commercial environment. The 1938 Act sought to protect consumers from deceptive practices by making comparative advertising unlawful but it failed to take account of character merchandising by its prohibition on trafficking in trade marks, described by Lord Bridge in *Holly Hobbie Trade Mark*<sup>37</sup> as a complete anachronism. In retrospect, the 1938 Act was far too restrictive in the nature of marks that could be registered and the way the legislation was altered to provide for service marks by the Trade Marks (Amendment) Act 1984 was clumsy in the extreme.

The Trade Marks Act 1994 brought a welcome breath of fresh air to trade mark law. It is fairly lengthy, comprising 110 sections and five Schedules,<sup>38</sup> and makes significant and substantial reforms to this important area of law. Gone is the obscure drafting of the 1938 Act. The 1994 Act, though not without difficulty, is more clearly drafted and it paved the way for improvements in both the substantive and procedural law relating to trade marks. Greater provision was made for the international aspects of trade mark law (for example, with respect to the Community trade mark), and it enabled the UK to ratify the Protocol to the Madrid Agreement on the International Registration of Marks during 1995. As was to be expected, the law of passing off is unchanged though some commentators considered that it would lessen in importance compared to trade marks law, because more marks would meet the requirements for registrability under the 1994 Act. Of course, it is difficult to tell whether this has happened to any significant extent for a number of reasons though relatively few cases have been reported recently on passing off. Many businesses fail to register their marks as trade marks due to ignorance or inertia or both. Also, even though the scope of what is registrable as a trade mark has expanded, the law of passing off remains potentially wider in scope and has demonstrated its ability to address new situations, such as in respect of internet domain names, as will be seen in Chapter 23.

The Trade Marks Act 1994 heralded the possibility of registering all manner of marks that would certainly not have been registrable before. There was much speculation and excitement surrounding the possibility of registering three-dimensional marks, containers, sound, and even smells.<sup>39</sup> However, a meander through the *Trade Marks Journal* (in which applications to register trade marks are published) leaves one with the impression that nothing much has changed, as the overwhelming proportion of applications are for marks distinctly lacking in frontier-expanding innovation. Even so, a few interesting examples can be found. Applications were submitted on 31 October 1994 to register the Coca-Cola bottle as a trade mark. Other registered trade marks include container marks such as the Chanel perfume bottle (No 2001783) and the Domestos bottle including wording on the bottle (No 2149830). The British School of Motoring's pyramid with L and BSM lettering has been registered (No 2000021). There are a number of sound marks including 'The sound of a dog barking' (No 2007456). Most sound marks are represented by musical notation together with a written description such as 'The mark consists of the following notes in the key of F major: a melodic eighth note triplet, F, B Flat and G and the quarter note C . . .' (No 2105886). There are also at least two olfactory marks being 'a floral fragrance/smell reminiscent of roses as applied to tyres' (No 2001416) and 'the strong smell of bitter beer applied to flights for darts' (No 2000234). However, as will be seen, although olfactory trade marks are possible in

<sup>37</sup> [1984] FSR 199 at 202.

<sup>38</sup> As at Royal Assent.

43 [1996] RPC 281.

44 [1996] FSR 205.

45 A provision in a Directive which is clear, unambiguous and unconditional must be implemented faithfully by national legislation. Using the old, though familiar, language of previous legislation may distort the implementation of a Directive and be invalid as Directives are binding as to the result to be achieved under Article 249 of the EC Treaty. The apparent preference of UK legislative draftsmen to rewrite rather than copy out provisions in Directives is unhelpful and, in many cases involving provisions implemented from Directives, judges will go directly to the text of the Directive rather than the Act or SI.

principle, the difficulty in representing smells and odours graphically seems insurmountable at the present time, notwithstanding that some have got through the net.<sup>40</sup> Furthermore, s 32 of the Trade Marks Act 1994 requires that an application to register a trade mark must contain a representation of the mark. In *John Lewis of Hungerford Ltd's Trade Mark Application*,<sup>41</sup> it was held that the identity of a mark must be clearly and unambiguously recorded in the graphical representation filed under s 32. In that case, 'the smell, aroma or essence of cinnamon' was refused registration on the basis that it lacked precision.

It must be noted that the new law represents such a sea change in trade mark law that the utility of previous case law is questionable, particularly where the wording in the Act closely follows that in the Directive. Of course, some of the prior case law will remain helpful in interpreting the new law, but in many cases it will be inappropriate to rely on it to any great extent. In *Allied Domecq Spirits and Wines Ltd v Murray McDavid Ltd*,<sup>42</sup> Lord MacFadyen preferred the approach of Jacob J in *British Sugar plc v James Robertson & Sons Ltd*<sup>43</sup> where, in approaching the interpretation of s 11(2) from first principles rather than relying on earlier decided cases, he said (at 285):

The Trade Marks Act 1994, implementing an EC Directive, has swept away the old law.

In *Bravado Merchandising Services Ltd v Mainstream Publishing (Edinburgh) Ltd*,<sup>44</sup> Lord McCluskey suggested that the use in a new statute of words and phrases used in earlier Acts which had been subject to judicial examination showed that the legislature, in deciding to use the same language, intended the same meaning as before.<sup>45</sup> However, in *Allied Domecq*, Lord MacFadyen said that such an approach to the construction of the new Act must be severely limited. This must be right; otherwise, if each Member State followed its own prior case law, the harmonising purpose of a Directive would be severely prejudiced. In any case, in *Allied Domecq*, the previous equivalent statutory provision used different language and concepts. Nevertheless, Lord MacFadyen felt it inappropriate to decide whether the defender's use of the pursuer's trade mark was saved by s 11(2)(b) which permits the use in the course of trade of a trade mark by a third party to indicate, *inter alia*, geographical origin provided it is in accordance with honest practices in industrial or commercial matters. The defender had obtained a quantity of the pursuer's whisky from a third party blender. The pursuer, which distilled and matured whisky at its Laphroaig Distillery on Islay, had registered 'LAPHROAIG' as a trade mark. The defender sold the whisky as being from the Laphroaig Distillery, which indeed it was. On the basis of the balance of convenience, Lord MacFadyen discharged the interim interdict which had been granted to the pursuer.

## THE ACT, THE DIRECTIVE AND THE REGULATION

46 Together with the Trade Marks Rules 2000, SI 2000/136, as amended.

47 OJ L 11, 14.01.1994, p 1.

48 Formerly the UK Patent Office.

Trade mark law in the United Kingdom is governed by the Trade Marks Act 1994,<sup>46</sup> interpreted in accordance with the Directive, for the UK registered trade mark, and the Council Regulation (EC) No 40/94 of 20 December 1993 on the Community trade mark<sup>47</sup> (the 'CTMR'), where issues relate to the Community trade mark ('CTM'). Applications to register a CTM can be made through the UK Intellectual Property Office<sup>48</sup> (Trade Mark Registry) and a number of forms of legal actions concerning the CTM in the UK are brought before the UK's CTM Courts, which are the High Court, the Patents County Court and a number of other County Courts (for example, Birmingham, Bristol, Cardiff and Manchester), the Court of Session in Scotland, the High Court of Northern Ireland and the Court of Appeal.

There are a number of similarities between the Directive (and consequently also the Trade Marks Act 1994) and the CTMR. Some of the main provisions on registrability

and refusal, rights and infringement, limitation of rights and revocation are the same or very similar. However, it is clear that the CTM is a distinct system which stands apart from domestic trade mark laws. The Court of First Instance<sup>49</sup> confirmed this in Case T-106/00 *Streamserve Inc v OHIM*.<sup>50</sup> An application to register STREAMSERVE, in respect of data processing equipment and such like, had been turned down by the Office for the Harmonisation of the Internal Market (Trade Marks and Designs) ('OHIM'). The appellant claimed that the mark had been accepted in Sweden, Norway, the Benelux trade mark office and France and, in the UK and Germany, had been advertised for opposition purposes without their trade mark offices raising any objections on the absolute grounds of refusal. The Court of First Instance confirmed (at para 47):

... the Community trade mark regime is an autonomous system with its own set of objectives and rules peculiar to it; it is self-sufficient and applies independently of any national system (Case T-32/00 *Messe Munchen v OHIM (electronica)* 2000 ECR II-3289, paragraph 47). Consequently, the registrability of a sign as a Community mark must be assessed by reference only to the relevant Community rules. Accordingly, the Office and, if appropriate, the Community judicature are not bound by a decision given in a Member State, or indeed a third country, that the sign in question is registrable as a national mark. That is so even if such a decision was adopted under national legislation harmonised with Directive 89/104 or in a country belonging to the linguistic area in which the word sign in question originated.

This means that the decisions on the CTM are not binding as regards domestic trade mark law, even those parts implemented in line with provisions of the Directive which are identical to the equivalent provisions of the CTMR. The converse must also hold true, although the European Court of Justice sometimes refers to previous preliminary rulings on the interpretation of the Directive in the context of CTM appeals and its own judgments in CTM appeals in cases on the Directive.<sup>51</sup> The European Court of Justice is unlikely to depart from its own previous decisions or rulings though it cannot treat them as binding on cases involving the other system of trade marks.

The OHIM is not influenced by what has been accepted in the past as registrable as CTMs and each application is examined on its merits. In Case C-191/09P *OHIM v Wm Wrigley Jr Company*,<sup>52</sup> Wrigley's application to register the word DOUBLEMINT as a CTM had been refused by the Board of Appeal at the OHIM. The Court of First Instance annulled that decision and the OHIM appealed to the Court of Justice. Wrigley pointed out that a number of composite words had previously been found to be acceptable, such as Alltravel, Megatours, Transeuropean and Oilgear. Case C-383/99P *Procter & Gamble Co v OHIM*,<sup>53</sup> accepting that BABY-DRY for nappies had a distinctive character, was also cited by Wrigley. None of these impressed the Court of Justice (or were even further mentioned), which held that the Court of First Instance was wrong in suggesting that a trade mark had to be exclusively descriptive to be refused registration on the basis of Article 7(1)(c) of the CTMR.

<sup>49</sup> To which appeals from the Boards of Appeal at the Office for the Harmonisation of the Internal Market (Trade Marks and Designs) first go. From the Court of First Instance, appeals go to the Court of Justice.

<sup>50</sup> [2002] ECR II-723.

<sup>51</sup> See, for example, Joined Cases C-456/01P and C-457/01P *Henkel KgaA v OHIM* [2004] ECR I-5089 in respect of the former and Case C-120/04 *Medion AG v Thomson GmbH* [2005] ECR I-8851 in respect of the latter.

<sup>52</sup> [2003] ECR I-12447.

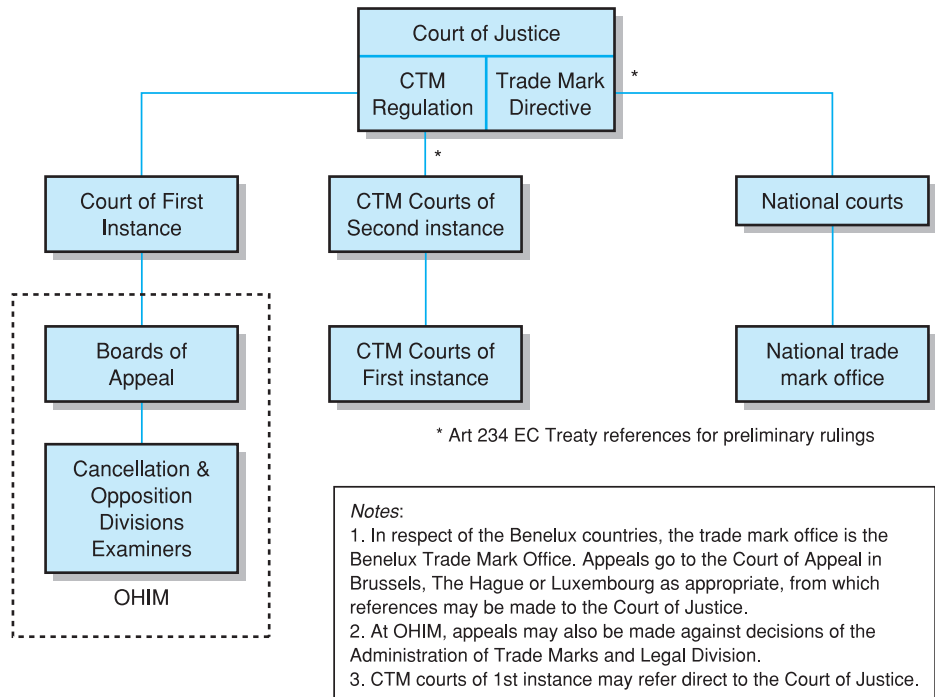

<sup>53</sup> [2001] ECR I-6251.

<sup>54</sup> OJ L 40, 11.02.1989, p 1.

<sup>55</sup> A court of last resort must make such a referral where there is an issue involving the interpretation of Community legislation.

## HIERARCHY OF COURTS AND TRADE MARK OFFICES

As regards the UK registered trade mark system, appeals against decisions of examiners refusing registration and opposition proceedings go to a Hearing Officer at the Trade Marks Registry. From there, appeals may go either to a person appointed under the Trade Marks Act 1994 or the Chancery Division of the High Court (in England). Further appeals go to the Court of Appeal and House of Lords. Where the case involves the interpretation of the First Council Directive 89/104/EEC of 21 December 1988 to approximate the laws of Member States relating to trade marks,<sup>54</sup> a reference may be made to the Court of Justice for a preliminary ruling under Article 234 of the EC Treaty.<sup>55</sup>

**Figure 19.1** Hierarchy of trade mark offices and the courts

In the CTM system, there are two routes to the Court of Justice. One concerns appeals originating from decisions at the OHIM whereas the other route is from national CTM courts. The OHIM has its own Board of Appeals which hears appeals from decisions of its examiners and opposition and cancellation divisions.<sup>56</sup> From there, appeals go to the Court of First Instance and then to the Court of Justice. There are CTM courts of first instance and second instance (in England and Wales; for example, the High Court is one of the courts of first instance and the Court of Appeal is the court of second instance). From either court, there may be references for preliminary rulings as to the interpretation of provisions in the CTMR under Article 234 of the EC Treaty. Figure 19.1 indicates the hierarchy of the trade mark offices and the courts.

It is not impossible for references to be made from a Community trade mark court on the basis of both the CTM and a national registered trade mark. This could happen, for example, where there is an infringement action involving both the CTM and the national trade mark. Although the CTM was not in issue, the Court of Appeal, in *Société des Produits Nestlé SA v Mars UK Ltd*,<sup>57</sup> referred the following question to the Court of Justice for a preliminary ruling under Article 234 of the EC Treaty:

May the distinctive character of a mark referred to in Article 3(3) of [the Directive] and Article 7(3) of [the Regulation] be acquired following or in consequence of the use of that mark as part of or in conjunction with another mark?

However, as the case involved only the UK trade mark, the Court of Justice restricted its ruling to the Directive even though the relevant part of the equivalent provision in the Regulation is similarly, though not identically, worded.<sup>58</sup>

As far as domestic courts are concerned with their national registered trade marks, preliminary rulings from the Court of Justice on the interpretation of the Directive are binding. Decisions and rulings on the CTM, although not strictly binding on cases on the harmonised national registered trade marks, will be followed in the domestic courts

<sup>56</sup> In addition to appeals from its Administration of Trade Marks and Legal Division.

<sup>57</sup> [2004] FSR 16.

<sup>58</sup> Case C-353/03 *Société des Produits Nestlé SA v Mars UK Ltd* 7 July 2005, [2006] FSR 4. Does this mean that, if a question arises about the interpretation of Article 7(3) of the Regulation, a national court would refer the matter to the Court of Justice or simply apply the ruling on Article 3(3) of the Directive?

where the provision in question is identical to that in the Directive. Where the provisions are not identical, a domestic court may treat a decision or ruling on the CTM as persuasive (or may be able to distinguish it) in relation to a case on the national registered trade mark. Alternatively, a domestic court may feel it necessary to refer a question to the Court of Justice for a preliminary ruling on the Directive.

Community trade mark courts will be in a similar position with respect to rulings on the meaning of provisions in the Directive which may be considered to be highly persuasive or distinguishable, depending on the level of identity between the corresponding provisions of the Regulation and the Directive. If there is some doubt as to the meaning of a provision in the CTMR with no appropriate guidance from the Court of Justice, a Community trade mark court will submit a question for a preliminary ruling to the Court of Justice. The relationship between Community trade mark courts and the OHIM may be important, especially where there is a counterclaim for invalidity. In such a case, a Community trade mark court may stay proceedings and require an application for a declaration for invalidity to be made to the OHIM. Otherwise, Community trade mark courts are unlikely to regard decisions of the Boards of Appeal at the OHIM as binding or particularly persuasive and vice versa.

The jurisdiction of the Community trade mark courts and their relationship with the OHIM are described in Chapter 22.

## SCHEME AND STRUCTURE OF THE CHAPTERS ON TRADE MARKS

Given the status of Court of Justice rulings on the interpretation of the Directive for the national registered design systems, the following chapter on registrability of trade marks under the Trade Marks Act 1994 leans heavily on those rulings. The majority of Court of Justice rulings on the Directive relate to the requirements for registration of a trade mark. A number of decisions of the Court of Justice on the CTM also have relevance where they deal with provisions which are equivalent to those in the Directive. There is a tendency for judges in the UK courts to refer directly to provisions in the Directive rather than those in the Act where the latter are supposed to be the same as the Directive. That being so, and in view of the numerous references to provisions in the Directive by the Court of Justice, Table 19.1 gives a list of some of the main provisions covered in the Trade Marks Act 1994 which are (or should be) equivalent to those in the Directive,<sup>59</sup> with references to the section numbers in the Act, the Article numbers in the Directive and, for completeness' sake, the equivalent provisions in the CTM Regulation.

Of course, large parts of the Trade Marks Act 1994 are outside the scope of the Directive, which left a number of features of trade mark law to be determined in accordance with national law. The Directive did not seek to achieve full harmonisation, merely an approximation of national trade mark laws. The Directive aimed to harmonise those parts of trade mark law that were most likely to affect the functioning of the internal market: in particular, the conditions for registration and renewal of trade marks, the protection afforded by a registered trade mark, exhaustion of rights, the consequences of non-use, licensing of trade marks, and acquiescence by the proprietor of an earlier trade mark depriving him from subsequently challenging a later trade mark. Other aspects, such as the registration procedure, dealing with trade marks, surrender and, of course, criminal offences, are left to Member States. The Directive also contained a number of options, allowing Member States to afford more protection to trade marks enjoying a reputation.

The section on registrability in the following chapter contains numerous references to Court of Justice rulings and a few to that court's decisions on the CTM. Chapter 21

<sup>59</sup> The original Directive (First Council Directive 89/104/EEC of 21 December 1988 to approximate the laws of the Member States relating to trade marks, OJ L 40, 11.02.1989, p 1) was repealed and replaced by a new codified version, Directive 2008/95/EC of the European Parliament and of the Council of 22 October 2008 to approximate the law of the Member States relating to trade marks, OJ L 299, 08.11.2008, p 25. There are no significant substantive changes but some mainly minor structural changes. In most cases, the numbering of the Articles is unchanged. References in the following chapters are to the new Directive. Usefully, the new Directive contains a correlation table in Annex II.

**Table 19.1** Reference table of provisions in the Act, Directive and Regulation

<i>Provision</i>	<i>Trade Marks Act 1994</i>	<i>Directive on the legal protection of trade marks</i>	<i>CTM Regulation</i>
<i>Basic meaning of a trade mark</i>	S 1(1)	Art 2	Art 4
<i>Absolute grounds for refusal</i>			
Signs not within basic meaning	S 3(1)(a)	Art 3(1)(a)	Art 7(1)(a)
Trade marks devoid of distinctive character	S 3(1)(b)	Art 3(1)(b)	Art 7(1)(b)
'Descriptive' or 'laudatory' trade marks	S 3(1)(c)	Art 3(1)(c)	Art 7(1)(c)
Trade marks that have become customary in <i>bona fide</i> practices	S 3(1)(d)	Art 3(1)(d)	Art 7(1)(d)
Proviso that certain grounds can be overcome if trade mark has acquired a distinctive character	S 3(1) proviso thereto	Art 3(3)	Art 7(3)
Shapes (nature of goods, technical effect or giving substantial value to goods)	S 3(2)	Art 3(1)(e)	Art 7(1)(e)
Trade marks contrary to public policy/accepted principles of morality	S 3(3)(a)	Art 3(1)(f)	Art 7(1)(f)
Deceptive trade marks	S 3(3)(b)	Art 3(1)(g)	Art 7(1)(g)
Specially protected state emblems etc. (see Article 6 <sup>ter</sup> of the Paris Convention)	S 4	Art 3(1)(h) & Art 3(2)(c)	Art 7(1)(h)(i)
Trade mark, use of which is prohibited by law	S 3(4)	Art 3(2)(a)	No direct equivalent but prohibitions on designations of origins in Art 7(1)(j) and (k)
Signs of high symbolic value, in particular, a religious symbol	No direct equivalent	Art 3(2)(b)	No direct equivalent
Bad faith	S 3(6)	Art 3(2)(d)	Missing but bad faith is a ground for invalidity: Art 51(1)(b)
<i>Relative grounds for refusal</i>			
Identical sign and identical goods or services compared with earlier trade mark	S 5(1)	Art 4(1)(a)	Art 8(1)(a)
Not complete identity of sign and goods or services compared with earlier trade mark but likelihood of confusion	S 5(2)	Art 4(1)(b)	Art 8(1)(b)
Identical or similar sign and unfair advantage or damage to repute to earlier trade mark having a reputation	S 5(3)	Art 4(3) & 4(4)(a)	Art 8(5)
Conflict with earlier right	S 5(4)	Art 4(4)(b) & (c)	Art 8(4) (partly)

Table 19.1 *cont'd*

<i>Provision</i>	<i>Trade Marks Act 1994</i>	<i>Directive on the legal protection of trade marks</i>	<i>CTM Regulation</i>
<i>Infringement</i>			
Identical sign and identical goods or services compared with earlier trade mark	S 10(1)	Art 5(1)(a)	Art 9(1)(a)
Not complete identity of sign and goods or services compared with earlier trade mark but likelihood of confusion	S 10(2)	Art 5(1)(b)	Art 9(1)(b)
Identical or similar sign and unfair advantage or damage to repute to earlier trade mark having a reputation	S 10(3)	Art 5(2)	Art 9(1)(c)
Meaning of using a sign	S 10(4)	Art 5(3)	Art 9(2)
<i>Limits on effect of trade mark</i>			
Own name and address	S 11(2)(a)	Art 6(1)(a)	Art 12(a)
'Descriptive', eg kind, quality, geographic origin	S 11(2)(b)	Art 6(1)(b)	Art 12(b)
Intended purpose, in particular accessories and spare parts	S 11(2)(c)	Art 6(1)(c)	Art 12(c)
Use of earlier right in a particular locality	S 11(3)	Art 6(2)	No equivalent
Exhaustion of rights	S 12	Art 7	Art 13
<i>Revocation (certain grounds only)</i>			
Non-use	S 46(1)(a) & (b)	Art 10(1) & Art 12(1)	Art 15(1) & Art 50(1)(a)
Trade mark has become a common name for goods or services because of proprietor's inactivity	S 46(1)(c)	Art 12(2)(a)	Art 50(1)(b)
Liable to mislead public as a consequence of use by proprietor	S 46(1)(d)	Art 12(2)(b)	Art 50(1)(c)

covers rights, infringement, defences, remedies and criminal offences. The section on rights and infringement and, to the extent that it covers limitations on trade marks, defences also contains numerous rulings from the Court of Justice. Chapter 22 looks at the CTM in detail and includes many cases from the Court of First Instance and the Court of Justice on the CTM Regulation. That chapter also looks at registration of trade marks under the Madrid System, to which the European Community is now a Contracting Party, allowing international applications to register trade marks to include an application to register a CTM.

The CTM has proved very popular but it has not had the impact on the UK registered trade mark systems as the Community design has had on the UK registered design system which attracts less than 5,000 applications a year, almost half what it was before the Community design was available. Consequently, the UK registered trade mark remains popular for those seeking protection in the UK and, during 2004, there were nearly 28,000 applications (including applications to register in multiple classes) to register a

UK trade mark. The provisions on seniority for the CTM also make the application for a national trade mark attractive as it can later be surrendered or not renewed without losing its priority in relation to a later CTM. In some cases, a CTM or an application for a CTM can be converted into an application for a national trade mark. The CTM was designed to complement national systems of trade mark registration.

The final chapter in this part of the book covers passing off in the UK. This remains a useful action to protect business goodwill which, in many cases, may involve a trade name or trade mark, whether or not registered. Passing off has been unaffected by trade mark law and this is confirmed by s 2(2) of the Trade Marks Act 1994.

Visit [www.mylawchamber.co.uk/bainbridgeip](http://www.mylawchamber.co.uk/bainbridgeip) for access to major updates in the law, live weblinks, and multiple choice, problem and essay questions to test yourself on this chapter.

## Chapter 20

# THE UK TRADE MARK – REGISTRABILITY, SURRENDER, REVOCATION AND INVALIDITY, PROPERTY RIGHTS AND REGISTRATION

### INTRODUCTION

This chapter is concerned with the requirements for registration of a sign as a trade mark, the registration process and assignment and licensing of trade marks. The basic statutory definition of a trade mark appears simple and indicates the basic function of a trade mark. If a sign can be represented graphically and can serve the function of distinguishing the goods or services of one undertaking from those of other undertakings then it is, *prima facie*, registrable. However, there are a number of grounds for refusal of a trade mark, named absolute and relative grounds for refusal.<sup>1</sup> Overall, the provisions on registrability have generated a substantial amount of case law, both nationally and in the European Court of Justice (the ‘Court of Justice’). To some extent, this was to be expected as a result of the broadening of the scope of what is registrable as a trade mark, such as shapes, sounds and even smells. The statutory provisions on what signs are registrable as trade marks are also important in other ways: for example, persons opposing the registration of trade marks base their grounds of opposition on the statutory framework governing what is and what is not registrable. This is especially so where opposition is based on the identity or similarity of the mark for which registration is applied for with the opponent’s earlier trade mark under what are known as the relative grounds for refusal. We also see the equivalent of the relative grounds for refusal cropping up again in the provisions defining infringement. Consequently, many of the cases on the relative grounds for refusal are also useful in relation to infringement and vice versa. Indeed, they are exchangeable except where infringement issues also include other aspects such as limitations on the effects of trade marks. For example, in Case C-291/00 *LTJ Diffusion SA v Sadas Vertbaudet SA*,<sup>2</sup> the Court of Justice said (at para 53):

... the question submitted will be examined below solely in the light of Article 5(1)(a) of the Directive, but the interpretation adopted following that examination will also apply to Article 4(1)(a) of the Directive since that interpretation will be transposable, *mutatis mutandis*, to the latter provision.<sup>3</sup>

The relationship between the relative grounds of refusal and the provisions on infringement was also noted by Geoffrey Hobbs QC, as the Appointed Person, in *10 Royal Berkshire Polo Club*<sup>4</sup> where he said of the Trade Marks Act 1994 s 5(2) (part of the section on the relative grounds of refusal) and s 10(2) (the equivalent provision on infringement):

Objections under section 5(2) are conceptually indistinguishable from actions under section 10(2) . . . They serve to ensure that trade marks whose use could successfully be challenged before the courts are not registered.<sup>5</sup>

<sup>1</sup> So named in the Trade Marks Act 1994. The trade marks Directive does not describe this way but lists them as grounds for refusal and further grounds for refusal.

<sup>2</sup> [2003] ECR I-2799.

<sup>3</sup> Article 4(1)(a) of the Directive is the relative ground for refusal where a trade mark is identical to an earlier trade mark and is to be used for identical goods or services. Article 5(1)(a) covers infringement by use of a sign identical to a trade mark in relation to identical goods or services.

<sup>4</sup> [2001] RPC 643.

<sup>5</sup> Echoing the same sentiment expressed in the Court of Justice in Case C-39/97 *Canon Kabushiki Kaisha v Metro-Goldwyn-Mayer Inc* [1998] ECR I-5507 (at para 21).

Thus, the intended scheme appears to have been that the register should only hold trade marks that could be effectively enforced against infringers and withstand attacks on their validity on the basis of earlier trade marks or other earlier rights, such as copyright or goodwill protected by the law of passing off.

In addition to looking at the basic procedure for registration, there is some discussion of the proceedings before the Trade Marks Registry and the Appointed Person and the role of the Chancery Division of the High Court. Particular attention is given to opposition proceedings, which are now very numerous. Surrender, revocation and invalidity are also discussed. Other aspects covered in this chapter include certification and collective trade marks.

As the Trade Marks Act 1994 was heavily influenced by implementing the First Council Directive 89/104/EEC of 21 December 1988 to approximate the laws of the Member States relating to trade marks,<sup>6</sup> full reference is made to preliminary rulings of the Court of Justice in this and the following chapter. These rulings give interpretation of the relevant provisions in the Directive.

In recent years, there have been so many rulings by the Court of Justice on the interpretation of some of the main provisions of the Directive, that it is considered better to refer to those provisions of the Directive and to other provisions where the UK has chosen to implement an option or derogation in the Directive.<sup>7</sup> Cross-referencing to the Act is given where appropriate but kept to a minimum to improve clarity. This approach conforms to that increasingly being used by judges in the UK, many of whom tend to go straight to the text of the Directive where the equivalent provision in the Act should be the same and have the same effect as that in the Directive. In this respect, we can do no better than follow Jacob LJ's approach as he described in *Bongrain SA's Trade Mark Application*<sup>8</sup> at para 7:

In accordance with my usual practice I do not use the numbering of those provisions in the UK Trade Marks Act which enact the provisions of Directive 89/104. The language is the same and use of our local numbering merely makes our judgments less intelligible in a wider European context.

Of course, there are many provisions in the Act which have no direct parallel with the text of the Directive as certain matters are left to Member States: for example, the registration procedure, assignment, offences and the detailed provisions on licensing. For these, of course, reference must be to the provisions in the Act. Readers are encouraged to look at the Directive, which is thankfully a relatively short piece of legislation, and compare the provisions with the equivalent ones in the Trade Marks Act 1994; Table 19.1 in the previous chapter, *see* pp 665–6, may prove helpful in this respect.<sup>9</sup>

## REGISTRABLE TRADE MARKS

The Directive makes a basic statement of what a trade mark is in Article 2 (equivalent to s 1(1) of the Act)<sup>10</sup> and then sets out various grounds for refusal of registration. The grounds are set out in two categories, the first being what are known as the absolute grounds for refusal. These are a somewhat disparate set of grounds though some are concerned with signs or trade marks that are not distinctive or fail to meet the basic requirement. Others apply where the trade mark in question is excluded on grounds associated with protected emblems and the like, on policy considerations or because the application was made in bad faith. The relative grounds of refusal are based on the conflict or potential conflict between the trade mark for which registration is sought and earlier trade marks (whether or not registered) and other earlier rights: for example, a figurative sign protected by copyright belonging to a third party.

<sup>6</sup> OJ L 40, 11.02.1989, p 1. This Directive has now been repealed and replaced by a new codified version, Directive 2008/95/EC of the European Parliament and of the Council of 22 October 2008 to approximate the law of the Member States relating to trade marks, OJ L 299, 08.11.2008, p 25. There are no significant substantive changes but some mainly minor structural changes. In most cases, the numbering of the Articles is unchanged. References in the following chapters to the 'Directive' are to the new Directive. Usefully, the new Directive contains a correlation table in Annex II.

<sup>7</sup> An example of an option is Article 4(4) which permits Member States, *inter alia*, to give enhanced protection to trade marks of repute (which the UK has taken up). An example of a derogation is Article 15(2) which allows Member States to allow the registration of geographical names as collective and certification marks. Again, the UK has taken advantage of this.

<sup>8</sup> [2005] RPC 306.

<sup>9</sup> The full text of the Directive and all other Community legislation including legislation in preparation is available at <http://europa.eu.int/eur-lex/en/index.html>. The full text of European Community case law is also available from that site including the European Community Reports (ECR).

<sup>10</sup> Except the definition in Article 2 uses 'signs' whereas the UK Act, as the original Directive, uses 'sign'.

The basic definition of what constitutes a registrable mark has been significantly widened compared with the previous trade mark law in the UK and Article 2 of the Directive defines a trade mark in the following terms:

A trade mark may consist of any signs capable of being represented graphically, particularly words, including personal names, designs, letters, numerals, the shape of goods or of their packaging, provided that such signs are capable of distinguishing the goods or services of one undertaking from those of other undertakings.<sup>11</sup>

The list of examples given in Article 2 is not an exhaustive one<sup>12</sup> but it does make it clear that shapes are registrable in principle though shapes are subject to some specific grounds for refusal of registration, discussed later.

There are two features to Article 2 which a sign must possess before it can be considered to be a trade mark, whether or not otherwise registrable. These are that the sign must be capable of being represented graphically and also capable of distinguishing goods or services of one undertaking from those of other undertakings, that is, that it is capable of fulfilling the purpose of informing the public as to the origin of the goods or services. These two features are explored below, starting with the latter. Following this, the absolute and relative grounds for refusal are described.

## CAPABLE OF DISTINGUISHING

To be capable of distinguishing goods or services of one undertaking from those of other undertakings, the sign must say, or be capable of saying,<sup>13</sup> on its face, that these goods or services come from X rather than from Y or Z or any other. It will still perform this function even if members of the public do not know much about who X is, provided they associate the goods or services with X and no other. It may be that the sign is an old well-known trade mark that originally belonged to a company which was long ago swallowed up by a large conglomerate that now owns and uses the trade mark.<sup>14</sup>

The sign must be capable of distinguishing the goods or services of one undertaking from those of other undertakings and the importance of this is borne out by the recitals to the Directive. The tenth recital states that the function of a registered trade mark is ‘... to guarantee the trade mark as an indication of origin’.<sup>15</sup> The mark must serve as a guarantee of trade origin: a badge of origin. If the sign cannot do this then it is not registrable, notwithstanding the grounds for refusal of registration. The sign does not get past the first hurdle. The Directive (and the Act follows in this respect) uses the terms ‘sign’ and ‘trade mark’ in the basic definition and in the absolute grounds for refusal. The two are not interchangeable and there is a distinction between them. Of course, ‘sign’ is not defined. It has a very wide meaning, but in this context can be said to be a mark, symbol, device or indicator (for example, an indication of quality or character). Trade marks are included within the meaning of a sign but are but a sub-species, as defined above. They are graphical representations indicating origin. When we look at the absolute grounds of refusal, some refer to signs whilst others refer to trade marks. Some trade marks are refused registration because, even though they may fall within the definition of a trade mark, there are other objections to them. Unless they are trade marks within the basic definition, signs are simply not registrable. This is confirmed in Article 3(1)(a) which states that signs which cannot constitute a trade mark shall not be registered or, if registered, shall be liable to be declared invalid.<sup>16</sup> The distinction between signs and trade marks is also seen in Article 3(1)(e) (equivalent to s 3(2)) which prohibits the registration of a sign consisting exclusively of certain categories of shapes. Thus, a sign that consists exclusively of the shape which results from the nature

<sup>11</sup> This definition was implemented by s 1(1) and is considerably wider than the definitions of a ‘mark’ and ‘trade mark’ in the 1938 Act. The provision of retail services falls within the meaning of services: see Case C-418/02 *Praktiker Bau und Heimwerkermärkte AG* [2005] ECR I-5873. This is in contrast to the law under the 1938 Act where applications in relation to retail services as such were not registrable: see *Dee Corp plc* [1990] RPC 159. Note that the new version of the Directive uses ‘signs’ in the plural unlike the original Directive. The UK Act still is expressed in the singular.

<sup>12</sup> For example, slogans such as ‘TESCO WE SELL FOR LESS’ may be registrable in principle: *Tesco Stores Ltd’s Trade Mark Application* [2005] RPC 361.

<sup>13</sup> The use of the word ‘capable’ presumably is intended to apply in the context of applications to register new trade marks that have not yet been put to use commercially.

<sup>14</sup> A good example is the UK’s No 1 trade mark for Bass Pale Ale, first registered in the name of Bass, Ratcliff & Gretton Ltd, now belonging to and used by Brandbrew SA, a Luxembourg company.

<sup>15</sup> The importance of this purpose was stressed in Case C-39/97 *Canon Kabushiki Kaisha v Metro-Goldwyn-Mayer Inc* [1998] ECR I-5507.

<sup>16</sup> The Trade Marks Act 1994 s 3(1)(a) states that a sign that does not satisfy the requirements of s 1(1) shall not be registered.

17 ‘Undertaking’ is the word used in the Directive and the Act to describe what used to be commonly known as a ‘trader’.

18 [2002] ECR I-5475. The case involved the shape of a three-headed electric shaver.

19 Article 3(3) allows trade marks to be registered that would otherwise be refused under some, though not all, of the relative grounds of refusal (this is equivalent to the proviso to s 3(1) of the Trade Marks Act 1994).

20 [1998] ECR I-5507 at para 28.

21 Case C-87/07 *L’Oréal SA v Bellure NV* [2009] ETMR 987 at para 58.

22 [1999] FSR 491.

23 Section 10. In *Messiah from Scratch Trade Mark* [2000] RPC 44, Simon Thorley QC, as the Appointed Person, accepted that there was no distinction between s 3(1)(b) of the Trade Marks Act 1994 (refusal of registration on the basis that the mark is devoid of distinctive character) and s 10 of the Trade Marks Act 1938.

24 (1927) 44 RPC 412 at 425.

25 The proviso to s 3(1).

26 [1997] RPC 168.

27 [2002] FSR 191. The Chancery Division decision is reported at [2000] FSR 697.

28 FLOWERS is equivalent to 3569377 on a telephone keypad.

29 [2001] FSR 461.

of goods is not registrable. This is not a capricious prohibition. It simply reflects the fact that such a sign can never act as a trade mark, as a badge of origin. Even if an undertaking<sup>17</sup> uses such a sign very extensively, it still cannot operate as a trade mark as it cannot distinguish that undertaking’s goods from the same goods from other undertakings. As the Court of Justice said, in Case C-299/99 *Koninklijke Philips Electronics NV v Remington Consumer Products Ltd*,<sup>18</sup> of the exclusion of signs consisting exclusively of certain types of shapes (at para 75): ‘... a sign which is refused registration under Article 3(1)(e) of the Directive can never acquire a distinctive character for the purposes of Article 3(3) by the use made of it.’<sup>19</sup> However, the Court of Justice also ruled in *Philips v Remington* that a shape mark did not have to have some capricious addition, such as an embellishment having no functional purpose, to be capable of distinguishing. For the purposes of satisfying Article 2, a shape mark should not be treated differently to any other type of sign.

That a trade mark must act as an indicator of origin, denoting from whom goods or services come rather than what the goods or services are, is fundamental to trade mark law. The Court of Justice in Case C-39/97 *Canon Kabushiki Kaisha v Metro-Goldwyn-Mayer Inc* has stressed this in the following terms:

... the essential function of the trade mark is to guarantee the identity of the origin of the marked product to the consumer or end user by enabling him, without any possibility of confusion, to distinguish the product or service from others that have another origin.<sup>20</sup>

Apart from this essential function, a trade mark has other functions, in particular, the functions of communication, investment or advertising.<sup>21</sup>

In *Jeryl Lynn Trade Mark*,<sup>22</sup> the mark was registered in relation to medicinal and pharmaceutical preparations and used for mumps vaccines. The name had been chosen in honour of Jeryl Lynn Hilleman, from whom her father isolated the original mumps virus. The mark was declared invalid, as it was the name by which the virus had become known. It served as a technical name and became overwhelmingly generic. Laddie J rejected the submission that the name had acquired a secondary function as a trade mark because the evidence simply did not show that that was the case.

The phrase ‘capable of distinguishing’ was also used in the Trade Marks Act 1938.<sup>23</sup> It was the basic test for registration in Part B of the register which afforded lesser protection than Part A. In *Davies v Sussex Rubber Co*<sup>24</sup> Sargant LJ suggested that the mark is capable in time of becoming distinctive with use or, at least, not incapable of becoming distinctive. It is arguable that this equates to the test under the 1994 Act as some of the absolute grounds for refusal can be overcome if it is shown that the trade mark has acquired a distinctive character through the use made of it.<sup>25</sup> However, this is retrospective in that it looks at the question at the time of applying for registration whereas Sargant LJ appears to have been looking to the future. There is nothing in the Directive, and no case law from the Court of Justice, to suggest anything other than requiring that the trade mark is already capable of distinguishing the goods or services of the applicant from those of other undertakings and that it already possesses that distinctive character.

In *AD2000 Trade Mark*<sup>26</sup> it was held that a sign is capable of distinguishing the goods or services of one undertaking from those of other undertakings even if it is so capable only to the limited extent of being not incapable of distinguishing. As in that case, the Court of Appeal in *1-800 FLOWERS Inc v Phonenames Ltd*,<sup>27</sup> accepted that alphanumeric marks could be capable of distinguishing goods or services. However, the application to register 800-FLOWERS as a trade mark failed as, on the evidence, the focus was on the mark as a mnemonic for a telephone number rather than on the applicant’s business.<sup>28</sup> In *Premier Luggage and Bags Ltd v Premier Company (UK) Ltd*,<sup>29</sup> the court held that, although ‘Premier’ was an ordinary laudatory word, it was capable

of distinguishing the claimant's cases and bags, as it was not incapable of distinguishing them from those of other traders. Judicial examples of signs which are unregistrable on the ground that they are not capable of distinguishing as they describe the article to which they are applied include 'soap', 'banana', 'Bunsen burner' and 'Wellington boot'. The same could be said for marks for services such as 'window cleaning', 'car washing' or 'legal advice'.

## GRAPHICAL REPRESENTATION

The Directive caused considerable excitement amongst trade mark proprietors and intellectual property lawyers because it seemed to be very liberal in the scope of signs that could be registrable as trade marks. Article 2 expressly mentioned the possibility of registering shapes and gave particular examples of what could be a trade mark being words (including personal names), designs, letters, numerals or the shape of goods or their packaging. The list is not an exhaustive one. There was talk of being able to register colours, sounds and, in addition to shapes, smells and fragrances. After all, the only requirement apart from possessing the ability to distinguish one undertaking's goods or services from those of other undertakings was that the sign must be capable of being represented graphically.

A limiting factor in determining whether a sign is capable of being represented graphically is the requirement for a representation of the mark to be contained in the application to register a trade mark under s 32(1). Another factor is the advertising of marks in the *Trade Marks Journal*. The application form TM3 has a square box (8 cm × 8 cm)<sup>30</sup> in which the representation must be placed. One of the main purposes of advertising is to enable other undertakings to see if newly applied for marks are identical to or very similar to their marks, or are otherwise unregistrable, which may lead them to commence opposition proceedings. This purpose could be defeated if the character of the mark was not readily apparent from an inspection of the journal and, while it may not be unreasonable to expect a person to read or play a sound mark expressed in musical notation to appreciate its character entirely, it would be unfair to expect readers of the *Trade Marks Journal* to undertake difficult, lengthy, complex or expensive procedures to be able to know the precise nature and character of the mark. The same considerations apply in relation to other national trade mark systems and the CTM system.

The Court of Justice has confirmed on numerous occasions that the requirement that a trade mark is capable of being represented graphically must:

... enable the sign to be represented visually, particularly by means of images, lines or characters, so that it can be properly identified ... [It must be] clear, precise, self-contained, easily accessible, intelligible, durable and objective.<sup>31</sup>

The reasons for this were set out in Case C-273/00 *Ralf Sieckmann v Deutsches Patent- und Markenamt*<sup>32</sup> as being so that:

- the precise subject of the protection afforded by registration can be determined;
- competent authorities (that is, in the UK, the Trade Marks Registry) must know what the sign is with clarity and precision so that they can fulfil their obligations: for example, in relation to examination, publication and maintaining the register;
- economic operators must also be able, by consulting the register, to find out, with clarity and precision, about registrations and applications made by current or potential competitors and to receive information about the rights of third parties.

<sup>30</sup> A larger image may be submitted if application is made electronically. The Community trade mark system requires that the representation must not exceed 17 cm × 26.2 cm but it must be suitable for reduction down to 8 cm × 16 cm, the size it will be reproduced at in the *Community Trade Mark Bulletin*.

<sup>31</sup> Case C-273/00 *Ralf Sieckmann v Deutsches Patent- und Markenamt* [2002] ECR I-11737 at paras 46 and 55.

<sup>32</sup> [2002] ECR I-11737.

These considerations require that the graphical representation of a trade mark is such as to serve legal certainty. The trade mark and the nature and scope of the rights associated with it can only be determined if the representation is precise and complete on its face. A graphical representation bearing the characteristics and qualities set out in *Sieckmann* together with the description of the goods and services for which the trade mark is to be used fully defines the true extent of the monopoly as provided for in accordance with the Trade Marks Act 1994. However, the Court of Justice has held that using musical notation is an acceptable way of representing a sound mark graphically<sup>33</sup> even though the sign is not itself capable of being perceived visually and many persons cannot read music. In *Ty Nant Spring Water Ltd's Trade Mark Application*,<sup>34</sup> Geoffrey Hobbs QC, as the Appointed Person, said that:

The degree of precision with which the sign is represented must be sufficient to permit full and effective implementation of the provisions of the Act relating to absolute unregistrability (section 3), relative unregistrability (section 5), infringement (section 10) and public inspection of the Register (section 63).

He went on to say that there may be more than one way of representing the sign with the required degree of precision and that with some signs, such as sounds or smells, the graphical representation may be acceptable even though 'interpretation or analysis may be required to detect or demonstrate use of it'.<sup>35</sup> It is submitted that the amount of interpretation or analysis should be minimal and easily undertaken by any reasonable person so that predictable and consistent results will be achieved. Persons consulting the register should not have to undertake detective work to find out just what the trade mark is.

Signs that comprise moving images may be represented graphically by means of drawings, perhaps supplemented by a written description. Typically, a series of drawings can effectively represent a moving computer-generated image or hologram, particularly if the description makes clear the sequence or order of the images and other information such as the speed and direction of rotation or transition. Perhaps unfortunately, it is not yet possible to submit a computer file which, when run, reproduces the moving image accurately. Nor is it possible to submit a hologram as such as a representation of the sign for which registration is sought.<sup>36</sup>

Bearing in mind that the vast majority of applications to register trade marks are for words (whether stylised or not) or graphical symbols (usually referred to as device or figurative marks) or a combination of these, attempts to register colours, sounds, smells and fragrances and shapes have generated a disproportionately high volume of case law both before the UK courts and the Court of Justice. In terms of whether a sign is capable of being represented graphically, it is colour marks, sound marks and smell and fragrance marks (known as *olfactory* marks) that have caused the most problems. Each of those categories is now considered in relation to the requirement for graphical representation.<sup>37</sup>

### Colour marks

It is clear that it will not do simply to describe a colour vaguely by a verbal description such as 'red' or 'pale yellow' or even 'horizontal alternating green and purple stripes, the green stripe being 8 mm wide, the purple stripe being 6 mm wide'. The immediate objection is that it does not tell us enough about the colour or its shade. Such descriptions lack precision and make it difficult for others to predict whether their use of colour is likely to infringe such a trade mark if it is registered without further information about the colour.

There are two possibilities to overcome this objection. The first is to include the colour or colours either as a sample or by means of an image of the goods to which the

<sup>33</sup> Case C-283/01 *Shield Mark BV v Joost Kist* [2003] ECR I-14313.

<sup>34</sup> [2000] RPC 55 at 56.

<sup>35</sup> This is now very doubtful in the context of smells. See the section on olfactory marks, below.

<sup>36</sup> Similar limitations apply in respect of sounds. Hopefully, trade mark law will catch up with technology before long. Some progress has been made, for example, by accepting e-filing but there remains an outdated desire to have representations, even if submitted in digital form, capable of being printed out on paper.

<sup>37</sup> Shape marks have caused problems because of the specific absolute grounds of refusal that apply to shapes, discussed later.

colour is applied. The second is to use a well-known referencing systems for colours. One such system is the Pantone system.<sup>38</sup> One problem with providing samples of colours was that they tended to fade over time but this is no longer the problem it was as trade mark applications in the UK and for the Community trade mark ('CTM') may be filed electronically together with a digital image of the trade mark.

Applying to register as a trade mark a single colour or a colour combination in the abstract will not be easy. In Case C-104/01 *Libertel Groep BV v Benelux-Merkenbureau*,<sup>39</sup> an application was made to register the single colour orange in the field of telecommunications and a representation was submitted in the form of a rectangle of colour with no other indication of the colour such as a reference to a colour coding system. The Court of Justice ruled that a single colour, not spatially limited, may be acceptable if an internationally recognised colour code is used but simply reproducing the colour on paper does not satisfy the requirement of being capable of graphical representation.<sup>40</sup>

Submitting a representation showing two colours on a piece of paper, the top half being one colour, the bottom half being the other colour may satisfy the requirement of being capable of graphical representation if the colours are referred to by an internationally recognised colour coding system. This is so even if the colours are claimed in the abstract without contours provided the representation indicates a systematic arrangement of associating the colours in a predetermined and uniform manner. The Court of Justice so ruled in Case C-49/02 *Heidelberger Bauchemie GmbH*<sup>41</sup> where the sign applied for was on a rectangle of paper, the top half being blue and the bottom half being yellow, with both colours referenced by codes. The applicant sold a large number of goods for the building trade and added a description to its application being 'The mark applied for constitutes the colours of the applicant's enterprise which are utilised in all conceivable forms, in particular on packaging and labels'. Of course, there could be objection to such an application on the basis of the absolute grounds of refusal and it would still have to be shown, in particular, that the sign possessed a distinctive character in relation to the goods or services for which it was to be used, taking account of the use already made of it. A further factor would be the public interest in not unduly restricting the availability of colours for other undertakings which market goods or provide services of the same type as covered by the application for registration.<sup>42</sup> This 'depletion' rule is not one limited to colour marks but simply a matter for consideration under Article 3(1)(b) and (c) and, possibly, other Article 3 objections.<sup>43</sup>

The consequence of these Court of Justice cases is that single colours and colour combinations applied for in the abstract are, in principle, capable of graphical representation if they are referred to by an internationally recognised colour coding system such as the Pantone system. The grounds of refusal may, however, prove insurmountable in many cases although there are a number of registrations for single colours and simple colour combinations.<sup>44</sup> Failure to use a method of defining the colour precisely and objectively is unlikely to overcome an objection that it is not capable of graphical representation.

In *Ty Nant Spring Water Ltd's Trade Mark Application*,<sup>45</sup> a description of a blue bottle of certain thickness and including references to spectrophotometer readings was rejected as an unsatisfactory representation. Geoffrey Hobbs QC, as the Appointed Person, said (at 59):

unless and until [readers of the description] took such steps [tests to determine which colours fell within the readings] the actual identity of the sign put forward for registration would remain veiled by the wording of the representation. The representation did not mention the colour cobalt blue or include a graphic example of the relevant colour.

Although it is accepted that some additional information, material or benchmark (such as a Pantone colour chart) might be needed to determine the sign with precision, it

<sup>38</sup> Pantone Inc has what is claimed to be the most well-known standard for colour classification.

<sup>39</sup> [2003] ECR I-3793.

<sup>40</sup> Applied in *Duckham & Co's Trade Mark Application* [2004] RPC 557 in respect of the colour green applied to engine oil. However, there was insufficient evidence to show that consumers relied upon the colour of the oil as indicating origin.

<sup>41</sup> [2004] ECR I-6129.

<sup>42</sup> The public interest in not tying up signs that other undertakings might reasonably want to use is not explicit in the Directive though could fall under the absolute ground of refusal based on public policy.

<sup>43</sup> Per Jacob LJ in *Bongrain SA's Trade Mark Application* [2005] RPC 306 at para 23.

<sup>44</sup> See, for example, the single colour orange (Pantone 151) used for, *inter alia*, telephone handsets and services (UK registration No 2007850) and the colour red (Pantone 485) applied to the surface of a passenger transport bus (UK registration No 2103551).

<sup>45</sup> [2000] RPC 55.

would be ridiculous to expect someone consulting the register to go to such lengths as carrying out spectrophotometer tests over a range of blue bottles of all shades and tones to determine the precise shade and tone applied for, especially as using a Pantone number would have easily overcome the objection.

### Sound marks

Whilst it is now the position that the use of conventional musical notation is appropriate for representing music used as trade marks,<sup>46</sup> confirmed by the Court of Justice in Case C-283/01 *Shield Mark BV v Joost Kist*,<sup>47</sup> how other sounds may be represented graphically remains unclear. In *Shield Mark*, a whole range of sound marks were in issue, including a musical stave including the first nine notes of 'Für Elise', by Ludwig van Beethoven, descriptions of music using 'E, D#, E, D#, E, B, D, C, A', one with reference to being played on a piano, another was the denomination 'Kukelekuuuuu' (an onomatopoeia suggesting, in Dutch, a cockcrow), and, finally, a sound mark consisting of a cockcrow.

The Court of Justice ruled that Article 2 of the Directive permitted the registration of sound marks in principle, emphasising again the requirement for graphical representation in that the sign must be clear, precise, self-contained, easily accessible, intelligible, durable and objective. This could be achieved by conventional musical notation with '... a stave divided into measures and showing, in particular, a clef, musical notes and rests whose form indicates the relative value and, where necessary, accidentals'. The requirement could not be met, however, by a description in words, including a list of notes, a description of the sound (such as it being the cry of an animal) or by means of a simple onomatopoeia, without more.

The ruling in *Shield Mark* casts serious doubts over some sound marks previously accepted for registration. The prime example is 'The mark consists of the sound of a dog barking.'<sup>48</sup> This is vague in the extreme and begs questions such as 'What breed of dog?' 'Is it a friendly, warning or aggressive bark?' 'How loud is it?' 'How long is the duration?' etc. The description inevitably leads to the reader's subjective interpretation and the mark must surely be invalid if challenged. It singularly fails the simple test, 'Is the graphical representation clear and unambiguous?' Apart from presenting other traders with the difficulty of not being able to know what the mark is with anything approaching precision, it would be virtually impossible to prove infringement. How could you tell whether the alleged infringing sound was similar to the trade mark?

In the future, it may become acceptable to file a sound mark in digital form<sup>49</sup> so that it can be played by accessing the file by computer. This should now be possible as the *Trade Marks Journal* is available electronically. However, two things stand in the way of this. It is likely that the requirement for graphical representation would have to be relaxed for digital sound and music files (unlike digital image files, they cannot be reproduced on paper in a meaningful way). The second problem is that a sound mark may not be exactly the same when played through different computer and audio systems. Until such time, if ever, that sound marks can be submitted in digital file format, it appears that conventional musical notation is the only option although, of course, the Court of Justice did not rule out other means of graphical representation in *Shield Mark*.<sup>50</sup> It just said what could not satisfy the requirement.

### Olfactory marks

The registration of smells, odours and fragrances has met with very little success. This is not surprising, given the Court of Justice's views on what being capable of a graphical representation requires. How does one represent a smell graphically in a way which

<sup>46</sup> For example, the Direct Line Insurance plc telephone jingle (UK registration Nos 2030045, 2127794 and 2127799).

<sup>47</sup> [2003] ECR I-14313.

<sup>48</sup> The trade mark belongs to Imperial Chemical Industries plc (UK registration No 2007456). It was registered in 1995.

<sup>49</sup> For example, as a WMA or MP3 file.

<sup>50</sup> Would a representation of sound in wave form comply?

is clear, precise, self-contained, easily accessible, intelligible, durable and objective? A written description would seem out of the question as lacking precision and depending on the subjective viewpoint of the person reading the description. Nevertheless, a small number of examples of registered olfactory marks exist in the UK:

- the trade mark is a floral fragrance/smell reminiscent of roses applied to tyres (registration No 2001416);
- the mark comprises the strong smell of bitter beer applied to flights for darts (registration No 2000234).

At the Office for the Harmonisation of the Internal Market (Trade Marks and Designs) ('OHIM') an application to register 'The smell of fresh cut grass' for tennis balls was accepted (registration No 000428870). This is the only registered olfactory CTM though an appeal is pending in one other case.<sup>51</sup> An application was rejected for 'The smell of ripe strawberries' by the Board of Appeal at OHIM, and this was confirmed by the Court of First Instance in Case T-305/04 *Eden SARL v OHIM*.<sup>52</sup> The CTM Regulation has the same requirements for graphical representation as does the Directive and the 1994 Act.

Applicants hoping to register olfactory marks soon realised that a written description on its own may not be sufficient to fulfil the requirements of graphical representation and they demonstrated some not inconsiderable ingenuity.<sup>53</sup> In *John Lewis of Hungerford Ltd's Trade Mark Application*,<sup>54</sup> the trade mark was described as '... comprising the smell, aroma or essence of cinnamon' and was applied for in respect of furniture. In an attempt to overcome an objection that the description lacked precision (for example, it presupposed the reader was familiar with the smell of cinnamon), the applicant submitted evidence from an 'electronic nose' analysis which gave a graphical profile or 'fingerprint' of the smell of cinnamon. Geoffrey Hobbs QC, as the Appointed Person, rejected the applicant's appeal, saying (at 592):

... the need to have regard to something outside the graphic representation in order to obtain a direct perception of the sign it represents does not always or necessarily indicate that the graphic representation is inadequate for the purposes of examination and registration under the Act.

He went on to point out that the accepted practice was to name colours by reference to Pantone chart numbers and to represent sound by musical notation. The 'something outside the graphic representation' alluded to by Geoffrey Hobbs QC may be some form of accessible benchmark. He gave an example of a form of description that might be acceptable in relation to olfactory marks, being 'the smell of [for example, cinnamon] as emitted by x' where the nature and condition of x, the benchmark, was clearly and unambiguously defined. In view of the Court of Justice's ruling in *Ralf Sieckmann*, below, this now probably goes too far as it still is subject to an objection that it permits too much subjectivity.

Case C-273/00 *Ralf Sieckmann v Deutsches Patentund Markenamt*<sup>55</sup> is the most authoritative case on graphical representations and olfactory marks. The application was in respect of a fruity smell which included a cinnamon-like smell. Mr Sieckmann went to great lengths to try to ensure that he satisfied the requirement of a graphical representation. He described the mark thus:

Trade mark protection is sought for the olfactory mark deposited with the Deutsches Patent und Markenamt of the pure chemical substance methyl cinnamate (= cinnamic acid methyl ester), whose structural formula is set out below. Samples of this olfactory mark can also be obtained via local laboratories listed in the Gelbe Seiten (Yellow Pages) of Deutsche Telekom AG or, for example, via the firm E. Merck in Darmstadt.

<sup>51</sup> In respect of 'El olor a limon' (the smell of lemon).

<sup>52</sup> [2005] ECR II-4705.

<sup>53</sup> What appears to be a waveform representation and a chromatograph have been used without success.

<sup>54</sup> [2001] RPC 575.

<sup>55</sup> [2002] ECR I-11737.

Fearing this was not enough he added the following addendum:

The trade mark applicant hereby declares his consent to an inspection of the files relating to the deposited olfactory mark methyl cinnamate pursuant to . . . [here he refers to specific provisions of German trade mark law]

He also submitted a sample in a container which stated that the scent was usually described as ‘balsamically fruity with a slight hint of cinnamon’.

The Court of Justice again confirmed that for the purposes of Article 2 of the Directive, a trade mark may consist of a sign which is not in itself capable of being perceived visually, provided that it can be represented graphically, particularly by means of images, lines or characters, and that the representation is clear, precise, self-contained, easily accessible, intelligible, durable and objective. In relation to olfactory marks, the requirement that the sign is capable of being represented graphically cannot be satisfied by a chemical formula, by a description in written words, by the deposit of a sample of the smell or by a combination of those means.

The Court of Justice did not rule out the principle that olfactory marks may be represented graphically in an acceptable manner, but it is difficult to see what form of representation can suffice. A chemical formula does nothing to inform the reader of the nature of the smell<sup>56</sup> and samples suffer from the disadvantage that they are likely to deteriorate and change with time. It is probably the written description that comes nearest to fulfilling the requirement, though plainly, on the basis of the ruling in *Ralf Sieckmann*, a description on its own is not good enough. It may be that the form of words suggested by Geoffrey Hobbs QC in *John Lewis of Hungerford*, ‘the smell of X as emitted by Y’ where ‘Y’ is a generally accessible and stable benchmark, might just succeed. Fresh cut grass might be such a benchmark. However, it seems that combining a description with an image of the ‘benchmark’ will not satisfy the requirement as in CTM case T-305/04 *Eden SARL v OHIM*,<sup>57</sup> where the description ‘the smell of ripe strawberries’ was accompanied by a colour image of a strawberry.

56 Unless the reader is a chemist familiar with the odour produced by the substance represented by the formula.

57 [2005] ECR II-4705, Court of First Instance.

## Shape marks

There should be no difficulty in providing a graphical representation of a shape mark by means of a drawing or set of drawings from different angles,<sup>58</sup> perhaps accompanied by a description which may include some reference to dimensions. A written description alone is unlikely to suffice unless the shape is very well known, such as a sphere or a pyramid, but then other objections based on, for example, lack of distinctive character may be raised.

The Court of Justice has made it clear that shape marks are to be treated no differently to other types of signs for the purposes of fulfilling the requirements under Article 2 of the Directive.<sup>59</sup>

Drawings, even coupled with written descriptions, can still suffer from the defect of lacking precision and clarity. In *Triomed (Proprietary) Ltd v Beecham Group plc*,<sup>60</sup> the South African High Court revoked a shape mark used for pharmaceuticals. One of the reasons was that, although the representation consisted of a plan and side elevation, the description was that the mark consisted of the ‘shape and configuration of a tablet *substantially* as shown in the representation’ (emphasis added) and, furthermore, the registration applied to all dimensions of the tablet and in all colours. The registration extended beyond the actual representation to a shape ‘substantially’ as depicted. An additional ground for revocation was that the mark was incapable of distinguishing the goods of the proprietor from those of other traders.<sup>61</sup>

In the UK, in *Swizzels Matlow Ltd’s Trade Mark Application*,<sup>62</sup> the sign ‘The trade mark consists of a chewy sweet on a stick’ was held not to be capable of graphical representation as lacking precision and being ambiguous. A second application, which had

58 A single drawing showing a perspective view might suffice.

59 C-299/99 *Koninklijke Philips Electronics NV v Remington Consumer Products Ltd* [2002] ECR I-5474.

60 [2001] FSR 583.

61 The judge accepted that decisions on the provisions in the UK Trade Marks Act 1994 corresponding to s 10(1) of the South African Trade Marks Act 1993 were equally applicable to the South African Act. Section 10(1) prohibits registration of marks that do not constitute trade marks. Section 2 requires that marks are ‘capable of distinguishing’ and capable of being represented graphically.

62 [1998] RPC 244.

a flattened version of the sweet itself attached to the application form and which indicated that the mark was a shape, had earlier wisely been withdrawn by the applicant. An application to register a mark described as ‘a circular compressed tablet bearing a raised heart outline on both flat surfaces and containing within the heart outline on one side any one of several different words or phrases’ (sweets sold under the trade mark ‘LOVE HEARTS’) also failed. This was because the description was inadequate as there was no restriction to the size, location, thickness or shape of the heart outline or to the area available for the words and phrases.<sup>63</sup> It was also held that the word ‘graphically’ extended the meaning of ‘represented’ and did not restrict it to a purely visual image. Thus, the graphical form used could be by writing, drawing, musical notation, written description or any combination of these. This latter point arose because a case before the Board of Appeal in the OHIM had seemingly indicated that a visual image of a mark was essential in the case of non-word marks.<sup>64</sup> In the present case, Simon Thorley QC, as the Appointed Person, rejected such a limitation. He said that he doubted that the Board of Appeal would have intended to place such a limitation on the equivalent provision in the CTM Regulation.

Some specific examples of trade marks are given in Article 2, being words (including personal names), designs, letters, numerals, or the shape of goods or their packaging.<sup>65</sup> This allows the registration of distinctive containers and, although there are exceptions, this could include designs registrable under the Registered Designs Act 1949 or the Community Design Regulation or protected by the unregistered Community design or the UK unregistered design right.<sup>66</sup> This could mean that designs which could only be protected for a maximum of 25 years under design law could be protected as registered trade marks indefinitely. However, there is an important proviso stated in Article 3(1)(e) and a sign will not be registered if it consists exclusively of the shape which gives substantial value to the goods, is necessary to obtain a technical result<sup>67</sup> or results from the nature of the goods themselves. Nevertheless, there remains a class of designs which may be subject to dual protection under design law and trade mark law.

A disadvantage some shape marks may have to overcome to be registrable is that the public does not necessarily regard them as trade marks.<sup>68</sup> This may be the case where goods of a certain shape are well known as being from a particular manufacturer, but it is the name of the manufacturer rather than the shape of the goods which is recognised as being the trade mark by the public. For example, the shape of Lego bricks, having raised circular studs which fit into tubes in the underside of the bricks, is so well known that almost everyone would instantly recognise them as Lego bricks. However, in spite of this, it was held that an application to register a brick as a trade mark must fail in *Interlego AG's Trade Mark Applications*.<sup>69</sup> There was no real evidence that the public recognised the bricks or the raised knobs or studs as trade marks. The Lego bricks had been subject to a patent, which had expired. Neuberger J observed that this was a factor which should be taken into account in deciding whether to register a trade mark. He rejected the existence of a rule to the effect that dual protection could not be possible,<sup>70</sup> but said the decision to register required balancing the very substantial benefit to the proprietor in registering a mark with the public interest against monopolies in products (as opposed to marks).

The Directive and the Act both have a ground for refusal for signs contrary to public policy but there is no express prohibition based on public interest as such. However, the Court of Justice has, on several occasions, said that the rationale of some of the grounds of refusal are based on public interest, such as the ground under Article 3(1)(c) where a trade mark consists exclusively of signs or indications describing a characteristic of goods or services, for example, in relation to kind, quality, purpose or geographical origin.<sup>71</sup> Other undertakings should be free to use such signs in relation to their goods or services, providing that they have not become distinctive of the goods or services

<sup>63</sup> *Swizzels Matlow Ltd's Three Dimensional Trade Mark Application* [1999] RPC 879. A similar mark but having dimensions (diameter and thickness) together with a visual image has been registered (No 2153268).

<sup>64</sup> *Antoni and Alison's Application* [1998] ETMR 460.

<sup>65</sup> Under the previous law, a trade mark had to be something distinct from the article marked. In *Re James Trade Mark* (1886) 33 ChD 392, an application to register a shape mark (a dome of blacklead) was refused.

<sup>66</sup> Indeed, in *SmithKline & French Laboratories Ltd v Sterling Winthrop Group Ltd* [1976] RPC 511, Lord Diplock accepted that design registration and trade mark registration were not mutually exclusive.

<sup>67</sup> This exception applies even if there exists more than one shape to achieve a particular technical result: see Case C-299/99 *Koninklijke Philips Electronics NV v Remington Consumer Products Ltd* [2002] ECR I-5475.

<sup>68</sup> See, for example, Jacob LJ in *Bongrain SA's Trade Mark Application* [2005] RPC 306 at para 25. The trade mark in question was for a shape applied to cheese.

<sup>69</sup> [1998] RPC 69.

<sup>70</sup> Suggested by Peterson J in *Moore's Modern Methods Ltd's Application for a Trade Mark* (1919) 36 RPC 12, where an application had been made to register a trade mark, the subject matter of a patent which was about to expire.

<sup>71</sup> Joined Cases C-108/97 and C-109/97 *Windsurfing Chiemessee v Huber and Attenberger* [1999] ECR I-2779.

of one particular undertaking. Otherwise, the common language of a particular type of business enterprise might end up being tied up in the hands of a few undertakings.

Registration will be refused if the application is made in bad faith, and it is arguable that an applicant who subsequently wishes to gain further protection for a registered design or patent, which is about to expire, could be deemed to apply in bad faith. However, bad faith requires conduct approaching dishonesty, as will be seen later.

The bad faith argument was used by the opponent in *Unilever plc's Trade Mark Applications*.<sup>72</sup> Unilever was the proprietor of a patent in respect of a 'layered confection product' (actually 'Vienetta' ice cream). That patent was due to expire in August 2001 and Unilever applied to register two shape marks using drawings showing the ice-cream products. The opponent claimed that the application was made in bad faith as the applications were made in order to prolong indefinitely, and to extend the scope of, the protection that had been afforded by the patent. This argument was not fully explored by the Hearing Officer, as he did not believe that registration of the marks would prevent anyone making use of the patents once they had expired.

Another hurdle that stands in the way of registering shape marks results from the basic requirement that the mark must be capable of distinguishing goods or services of one undertaking from those of others. If the shape is not being generally appreciated by the public as being a trade mark, it will not be registrable, even if the public recognises or is familiar with the shape. It has to operate as a trade mark – a badge of origin.<sup>73</sup>

If the sign for which registration as a trade mark is sought complies with the basic requirements in Article 2, there are a number of grounds of refusal of registration, absolute and relative, and it is to these that our attention must now turn.

<sup>72</sup> (Unreported) 9 August 2001, Trade Marks Registry. One of the two marks (the more distinctive) was accepted for registration.

<sup>73</sup> *Triomed (Proprietary) Ltd v Beecham Group plc* [2001] FSR 583.

## UNREGISTRABLE SIGNS

Inevitably, there are some important exceptions to the types of signs that can be registered as trade marks. There are two sets of grounds for refusal of registration: absolute and relative. Generally, for the absolute grounds, marks caught are unregistrable *per se*; however, in some cases, trade marks may still be registrable if they have become distinctive through use even though they would normally be rejected (for example, a geographical name). An example is 'Yorkshire', registered for tea and which proceeded to registration on the basis of distinctiveness acquired through use.<sup>74</sup> For the relative grounds of refusal, the relationship between the mark for which registration is applied for and earlier trade marks or other rights is important. The relative grounds for refusal have a close parallel in terms of the ways in which registered trade marks can be infringed as a comparison between the relative grounds for refusal under Article 4(1) and (4)(a) and the forms of infringement in Article 5(1) and (2) demonstrate (the equivalent provisions in the Act are s 5(1)–(3) and s 10(1)–(3)).<sup>75</sup> The process of examination by the Trade Marks Registry and the fact that trade mark applications can be opposed are important features of the trade mark system.<sup>76</sup> As the Court of Justice stated in *Case C-39/97 Canon Kabushiki Kaisha v Metro Goldwyn Mayer Inc* (at para 21):<sup>77</sup>

For reasons of legal certainty and proper administration, it is necessary to ensure that trade marks whose use could successfully be challenged before the courts are not registered.

Under Article 13 of the Directive, where the grounds for refusal exist only in respect of some of the goods or services for which registration is sought, refusal will cover those goods or services only, leaving registration possible in respect of the others applied for.<sup>78</sup>

The relative grounds for refusal of registration may now only be raised by the proprietor of the earlier trade mark or other earlier right in opposition proceedings as a

<sup>74</sup> UK Registration No 1570522.

<sup>75</sup> Article 5 on rights and infringement (see s 10 of the Act) is less extensive than the relative grounds in Article 4 (see s 5 of the Act) as there is no need for an equivalent provision on infringement for refusal of registration based on an earlier unregistered trade mark. Article 4(4)(b) or some other earlier right in Article 4(4)(c) as an infringement action can be brought on the basis of passing off (in the UK) or, for example, copyright.

<sup>76</sup> Observations may also be submitted by any person under s 38(3) without becoming a party to the proceedings on the application.

<sup>77</sup> [1998] ECR I-5507.

<sup>78</sup> This also applies to revocation and invalidity.

result of the Trade Marks (Relative Grounds) Order 2007.<sup>79</sup> This brings the UK in line with practice at the OHIM in relation to the Community trade mark.

<sup>79</sup> SI 2007/1976. This Order came into force on 1 October 2007.

## ABSOLUTE GROUNDS FOR REFUSAL OR INVALIDITY

The absolute grounds for refusal are set out in Article 3 (s 3 of the Act). The term ‘absolute grounds for refusal’ is used in the Act but not in the Directive, Article 3 of which is simply headed ‘Grounds for refusal or invalidity’.<sup>80</sup> Apart from requiring compliance with the basic meaning of a trade mark in Article 2, the trade mark must have an inherent or acquired distinctiveness. Where the mark is a shape mark, it will be refused (or vulnerable to invalidity if registered) where the sign consists exclusively of a shape resulting from the nature of the goods, necessary to obtain a technical result or which gives substantial value to the goods. Other grounds for refusal or invalidity apply where the mark is contrary to public policy or accepted principles of morality, deceptive, or if the application is made in bad faith. Further grounds apply in the context of specially protected emblems and trade marks, the use of which could be prohibited by law. The main ‘absolute’ grounds for refusal, under Article 3(1)(a)–(d) and (3), are set out below.<sup>81</sup>

<sup>80</sup> One of the grounds for invalidity in the Act is if the trade mark was registered in breach of s 3: Trade Marks Act 1994 s 47(1). This is subject to a proviso that breach of s 3(1)(b), (c) or (d) will not invalidate the registration if the trade mark has become distinctive through use.

### Article 3 Grounds for refusal or invalidity

- (1) The following shall not be registered or if registered shall be liable to be declared invalid:
  - (a) signs which cannot constitute a trade mark;
  - (b) trade marks which are devoid of any distinctive character;
  - (c) trade marks which consist exclusively of signs or indications which may serve, in trade, to designate the kind, quality, quantity, intended purpose, value, geographical origin, or the time of production of the goods or of rendering the service, or other characteristics of goods;
  - (d) trade marks which consist exclusively of signs or indications which have become customary in the current language or bona fide and established practices of the trade

...

- (3) A trade mark shall not be refused registration or be declared invalid in accordance with paragraph (1)(b), (c) or (d) if, before the date of application for registration and following the use which has been made of it, it has acquired a distinctive character. Any Member State may in addition provide that this provision shall also apply where the distinctive character was acquired after the date of application for registration or after the date of registration.

<sup>81</sup> These find their equivalent in s 3(1)(a)–(d) and the proviso to s 3(1) in the Act. They have equal effect to those in the Directive.

Before looking at the case law on these provisions, a few points can be made. Article 3(1)(a) is obviously a reference to the basic meaning of ‘trade mark’ in Article 2.<sup>82</sup> It should also be noted that acquired distinctiveness cannot rescue a sign caught by Article 3(1)(a) as Article 3(3) applies only to trade marks within Article 3(1)(b), (c) and (d).<sup>83</sup> Finally, the option in the final sentence of Article 3(3) has been taken up by the UK so that a challenge on the validity of a trade mark based on a breach of Article 3(1)(b), (c) or (d) can be defeated by proof of distinctiveness acquired through use.<sup>84</sup>

<sup>82</sup> At the equivalent place in the Trade Marks Act 1994 (s 3(1)(a)), there is a reference back to the basic meaning in s 1(1). That Article 3(1)(a) relates directly to Article 2 was confirmed by the Court of Justice in Case C-299/99 *Koninklijke Philips Electronics NV v Remington Consumer Products Ltd* [2002] ECR I-5475.

<sup>83</sup> Nor does it apply to shape marks within Article 3(1)(e): see later.

<sup>84</sup> See the proviso to s 47(1) of the Act.

The grounds under Article 3(1)(a)–(d) (taken together with Article 3(3)) can be justified on the basis of public interest. It is not in the public interest to have signs and marks registered as trade marks which do not serve the primary function of indicating the origin of goods or services: for example, signs which are not capable of distinguishing the goods or services of one undertaking from those of other undertakings or which do not have any distinctive character. There is also a public interest in not registering trade marks which would prejudice the rights of other undertakings to use ordinary language to describe the nature and characteristics of their goods and services or which would prevent the use by others of the common stock of language generally

<sup>85</sup> The presence of the limitations on the rights afforded by registration in Article 6 of the Directive, such as the use by a trader of his own name or using indications describing characteristics of goods or services has no bearing on the operation of Article 3 which should be seen as the first line of protection of other traders' legitimate interests: 'Cycling . . . IS' *Trade Mark Applications* [2002] RPC 729.

used in a particular sector.<sup>85</sup> In some cases, however, a word or a term used to describe characteristics of goods or services or which was commonly used in the trade may have been used to such an extent by one undertaking that it has become synonymous with its goods or services. A mark that otherwise lacked distinctiveness may have become distinctive through continual and extensive use by one particular undertaking. In such cases, the public interest is no longer best served by denying registration. Where marks have become distinctive through use and function as indicators of origin there can be no objection, especially as the undertaking concerned may have built sufficient goodwill in the mark to be protected by the law of passing off.

### Relationship between the grounds under Article 3(1)(a)–(d)

It is inevitable that there will be some overlap between the four grounds under Article 3(1)(a)–(d), but each remains independent of the others. In *Case C-517/99 Merz & Krell GmbH*,<sup>86</sup> an application was made to register the word 'Bravo' as a trade mark for writing implements. It was objected to on the grounds that the word was within Article 3(1)(d) as it had become customary in the current language or *bona fide* and established practices in the trade and that it did not need specifically to describe the goods in question. The Court of Justice ruled that the purpose of Article 3(1)(d) was to prevent the registration of trade marks which could not distinguish the goods or services of one undertaking from those of other undertakings and it was necessary to consider the application of Article 3(1)(d) in the context of the goods or services in respect of which registration was sought. Although there was a clear overlap between Article 3(1)(c) and (d), marks covered by the latter were excluded, not because they were descriptive, but on the basis of current usage in the sectors covering trade in the goods or services for which registration was sought. The Court of Justice confirmed the independent nature of the grounds again in *Case C-363/99 Koninklijke KPN Nederland NV v Benelux-Merkenbureau*,<sup>87</sup> in which the application was for the word 'Postkantoor' (which may be translated as 'post office') for a number of classes of goods and services including paper, insurance, postage stamps, construction, telecommunications, etc. which had been refused as being exclusively descriptive. The Court said (at para 67):

. . . it is clear from Article 3(1) of the Directive that each of the grounds for refusal listed in that provision is independent of the others and calls for a separate examination . . . That is true in particular of the grounds of refusal listed in paragraphs (b), (c) and (d) of Article 3(1), although there is a clear overlap between the scope of the respective provisions . . .

### Article 3(1)(a) – not a trade mark

If a trade mark is distinctive as a matter of fact, whether through use or otherwise, it is arguable whether there is any room for testing the mark against Article 3(1)(a), at least to the extent that it is incapable of distinguishing the goods or services of one undertaking from those of other undertakings. The Court of Justice did not go quite as far as saying this in *Case C-299/99 Koninklijke Philips Electronics NV v Remington Consumer Products Ltd*,<sup>88</sup> where it ruled that there is no category of marks that are not excluded under Article 3(1)(b), (c) or (d) and Article 3(3) which is nonetheless excluded from registration by Article 3(1)(a). The case involved the shape of a three-headed shaver. However, the Court was making a generalisation in answer to the question submitted, asking whether there was a class of marks that were *de facto* distinctive which were nevertheless incapable of being distinctive *de jure* on the basis of Article 3(1)(a). Remington had sought to rely on the distinction between Article 3(1)(a) (which was based on Article 2) and the other grounds under Article 3(1)(b)–(d), arguing that signs

<sup>86</sup> [2001] ECR I-6959.

<sup>87</sup> [2004] ECR I-1619.

<sup>88</sup> [2002] ECR I-5475.

caught by Article 3(1)(a) could never be registered, regardless of evidence of distinctiveness. This was rejected by the Court of Justice which said that there is no class of marks which are distinctive as a result of the use made of them which is not capable of distinguishing goods or services within Article 2.

### Article 3(1)(b) – devoid of any distinctive character

Simple geometric shapes, single colours and descriptive or laudatory words may all fall into this ground for refusal. In some cases, such as with words such as ‘Soap’, ‘Luxury’ or ‘Wholesome’, there is likely to be objection also under Article 3(1)(c) and, possibly, also Article 3(1)(d). Of course, trade marks which once were devoid of any distinctive character may become distinctive through the use that is made of them.<sup>89</sup> Even a single colour, *per se*, may be found to be distinctive under Article 3(1)(b) and (3), as in Case C-104/01 *Libertel Groep NV v Benelux-Merkenbureau*<sup>90</sup> which concerned an application to register the colour orange in the abstract to be used in relation to telecommunications. Of course, it does not follow as a matter of inexorable logic that a mark which is not wholly descriptive must be distinctive.<sup>91</sup>

In assessing whether a trade mark is devoid of distinctive character under Article 3(1)(b), reference should be made to the goods or services for which registration is sought and to the perception of the relevant public, being average consumers of the goods or services in question, who are reasonably well-informed and reasonably observant and circumspect.<sup>92</sup>

The test for distinctiveness of a trade mark which is a surname is no different to that for any other form of trade mark and the fact that there is a limitation to the rights of a trade mark under Article 6(1)(a) so that a third party may not be prevented from using his own name and address in the course of trade is of no relevance.<sup>93</sup>

A question arises as to whether Article 3(1)(b) adds anything to or supplements Article 3(1)(a), especially in terms of distinctiveness.<sup>94</sup> One might say that it must provide an additional barrier otherwise there would be no need for the provision. In *British Sugar plc v James Robertson & Sons Ltd*,<sup>95</sup> Jacob J approached the question the other way round. He said that the requirement that the mark is ‘capable of distinguishing’ did not add anything to the equivalent provision to Article 3(1)(b) and (3), which ‘bars the registration of a mark which is *devoid of distinctive character* unless it has *in fact acquired a distinctive character*’ (original emphasis). He then went on to say that if a mark was, on its face, non-distinctive (such as a descriptive or laudatory word) but was shown to have a distinctive character in fact, then it must be capable of distinguishing.

In *British Sugar plc v James Robertson & Son Ltd*,<sup>96</sup> Jacob J considered that the phrase ‘devoid of any distinctive character’ required consideration of the mark on its own, assuming no use. He said (at 306):

Is it the sort of word (or other sign) which cannot do the job of distinguishing without first educating the public that it is a trade mark?

Thus, for a trade mark to be caught by the ground under Article 3(1)(b) it must be potentially capable of distinguishing the goods or services of one undertaking from those of others but, because of lack of use, it is not perceived as a badge of origin. Where the mark’s inherent distinctiveness is an issue, as it is in Article 3(1)(b), the mark must perform the function of indicating origin even before the relevant public has been educated that it is to be used for that purpose.<sup>97</sup> Article 3(3) provides a means of escaping the prohibition by showing that the relevant public has been so educated. The distinction between a mark being inherently distinctive or having acquired distinctiveness could be described as the difference between nature and nurture as noted in *AD2000 Trade Mark*<sup>98</sup> by Geoffrey Hobbs QC, as the Appointed Person, where he said (at 175):

<sup>89</sup> A triangle and diamond shape are registered trade marks dating back to 1876 in the UK (registration numbers 914 and 817).

<sup>90</sup> [2003] ECR I-3793.

<sup>91</sup> Per Geoffrey Hobbs QC as the Appointed Person in ‘*Cycling . . . IS’ Trade Mark Applications* [2002] RPC 729 at paras 43 and 44, explaining the Court of Justice ruling in Case C-383/99P *Procter & Gamble Co v OHIM* [2001] ECR I-6251.

<sup>92</sup> See, for example, Case C-363/99 *Koninklijke KPN Nederland NV v Benelux-Merkenbureau* [2004] ECR I-1619. This test is of wider application and has been used in relation to shape marks.

<sup>93</sup> Case C-404/02 *Nichols plc v Registrar of Trade Marks* [2004] ECR I-8499 and *Oska’s Ltd’s Trade Mark Application* [2005] RPC 525.

<sup>94</sup> Of course, there cannot be complete overlap between the provisions as Article 2, on which Article 3(1)(a) is based, requires also that the mark is a sign capable of being represented graphically. The issue is whether it automatically follows that a mark which is incapable of distinguishing must be devoid of a distinctive character and vice versa.

<sup>95</sup> [1996] RPC 281.

<sup>96</sup> [1996] RPC 281.

<sup>97</sup> See *Yakult Honsha KK’s Trade Mark Application* [2001] RPC 756.

<sup>98</sup> [1997] RPC 168.

... a sign possesses a distinctive character if and when it is endowed by nature and/or nurture with the capacity to communicate the fact that the goods or services with reference to which it is used recurrently are those of one and the same undertaking.

The burden of proof, to show that a mark has acquired a distinctive character as a result of the use made of it, lies on the applicant to register the mark. Whether this can be satisfied without evidence of actual use is uncertain. In Case C-342/97 *Lloyd Schuhfabrik Meyer & Co GmbH v Klisjen Handel BV*,<sup>99</sup> the Court of Justice said in relation to the assessment of whether a sign had a distinctive character:

<sup>99</sup> [1999] ECR I-3819 at para 24.

... account should be taken, in particular, of the inherent characteristics of the mark, including the fact that it does or does not contain an element descriptive of the goods or services for which it has been registered; the market share held by the mark, how intensive, geographically widespread and long-standing use of the mark has been; the amount invested by the undertaking in promoting the mark; the proportion of the relevant section of the public which, because of the mark, identifies the goods or services as originating from a particular undertaking; and statements from chambers of commerce and industry or other professional associations.

This certainly points to actual use, and probably substantial actual use, before a mark that would otherwise be caught by Article 3(1)(b)–(d) can have any chance of being shown to have acquired a distinctive character through use. However, in a number of cases, lack of evidence of use has not prevented the question from being considered, as in *AD2000 Trade Mark* above.<sup>100</sup> Another example is *SM Jaleel & Co Ltd's Trade Mark Application*<sup>101</sup> where there was only a statutory declaration from an expert in the field of resin and packaging products to the effect that the shape of a bottle having a six-fingered petaloid base was unique and distinctive. Geoffrey Hobbs QC, as the Appointed Person, disagreed. An important aspect of his decision is that he said that even if a shape mark complied with the basic meaning of trade mark and was not excluded by the grounds of refusal relating to shape marks (see below), it would still have to possess a distinctive character. It is submitted, however, that it will be highly unlikely that a mark will be saved from the grounds under Article 3(1)(b)–(d) without compelling evidence of use showing a causal link between that use and the fact that a significant proportion of the relevant public (consumers and end-users at least) perceive the trade mark as indicating the origin of the goods or services in question.

<sup>100</sup> See also *Ty Nant Spring Water Ltd's Trade Mark Application* [1999] RPC 392 where the Hearing Officer decided that the application was caught by s 3(1)(b) in the absence of any evidence of use.

<sup>101</sup> [2000] RPC 471.

Distinctiveness in terms of shape marks is a particular issue as, in many cases, the public will not perceive them as trade marks.<sup>102</sup> An argument that the shapes of toasters, subject to the application, were inherently distinctive was rejected by Lloyd J in *Dualit Ltd's (Toaster Shapes) Trade Mark Applications*.<sup>103</sup> It is possible that the public needs educating that shapes are now generally registrable as trade marks (subject to the other grounds of refusal, in particular those specifically applying the shape marks under Article 3(1)(e)) and, even then, a particular shape mark should contain some unusual or idiosyncratic feature when compared to shapes already in use for similar articles before it is likely to have a distinctive character. Failure to educate the public that the shape of a bottle had a trade mark significance was fatal to an application in *Yakult Honsha KK's Trade Mark Application*.<sup>104</sup>

<sup>102</sup> A good example of an exception to this basic premise is the Coca-Cola bottle.

<sup>103</sup> [1999] RPC 890.

<sup>104</sup> [2001] RPC 756.

The Court of Justice confirmed that it may be more difficult to show that signs consisting of the shape of packaging are distinctive compared with word or figurative marks in Case C-218/01 *Henkel KGaA v Deutsches Patentund Markenamt*.<sup>105</sup> Average consumers are not in the habit of making assumptions about the origin of goods on the basis of the shape of their packaging, absent any graphic or word element. The test for whether the trade mark possessed a distinctive character was modified in cases where the trade mark consisted of the shape of packaging for goods packaged in the trade for

<sup>105</sup> [2004] ECR I-1725.

purposes connected with their character (for example, in the case of a liquid or powder). The assessment was still to be based on the average consumer who was reasonably well-informed and reasonably observant and circumspect. However, additionally, such a consumer must be able to distinguish the product concerned from those of other undertakings without conducting an analytical or comparative examination and without paying particular attention.

The fact that a shape may be different may not be enough to overcome the difficulty that the public generally do not perceive shapes as trade marks. Mere use is not enough; it must be shown that the public actually perceive the shape as being a trade mark. In *Bongrain SA's Trade Mark Application*,<sup>106</sup> involving an application to register a three-dimensional shape for cheese, Jacob LJ said (at para 28):

... an average consumer, surveying the myriad of cheeses on display in a good supermarket or on a restaurant cheese platter, would, I think, be astonished to be told that one of the shapes was a trade mark. Consumers do not expect to eat trade marks or part of them ... without established use and recognition it cannot be said that he would, without more, regard shape alone as giving him a guarantee of origin – the essence of what a trade mark is.

The level of attention of the average consumer to trade marks is also likely to vary according to the category of goods or service in question. For example, the level of attention of consumers is not likely to be high in relation to the shape and colour of washing machine and dishwasher tablets, being everyday consumer goods.<sup>107</sup> The same could be said to apply to striped toothpaste and, again, the problem is that such a sign is unlikely to be taken as having a trade mark significance.<sup>108</sup> Even the fact that the trade mark applied for has been used by only one undertaking with a *de facto* monopoly in the mark may not overcome an objection based on lack of distinctive character.<sup>109</sup>

### Article 3(1)(c) – descriptive of characteristics, etc. of goods or services

There are numerous cases on this ground for refusal, as might be expected. Again, the ground can be overcome by showing distinctiveness acquired through use. The public interest in allowing others freely to describe their goods or services is paramount here and subject only to acquired distinctiveness under Article 3(3).<sup>110</sup> For example, in *Besnier SA's Trade Mark Application*,<sup>111</sup> it was held that the use of the trade mark for which registration was sought, 'Day by Day', would naturally be used by other traders to describe the time of delivery for their goods and services, and the main purpose of Article 3(1)(c) was to prevent the registration of words and phrases that other undertakings would want to use in a non-trade mark sense. One would expect evidence of distinctiveness acquired through use to be convincing to overcome this public interest.

The ground for refusal requires that the signs or indications in question '... may serve, in trade, to designate ...'. The use of 'may' suggests a degree of foreseeability in applying the ground and it is not necessary that the trade mark already does indicate the characteristics caught by Article 3(1)(c) such as kind and purpose of geographical origin.<sup>112</sup>

It must be noted that the ground for refusal applies only if the trade mark consists exclusively of signs or indications of the type covered by the ground. The same applies to Article 3(1)(d). Notwithstanding the independence of the two grounds, there is clearly a large overlap between them and they serve the same public interest, being to keep free words and phrases used by or likely to be used by undertakings in relation to their goods and services by way of description or common appellation including words and phrases likely to be associated with goods and services where persons and operators in the trade can be expected to have a reasonable expectation that they are free to use them.

<sup>106</sup> [2005] RPC 306.

<sup>107</sup> Joined Cases C-468/01P to C-472/01P, *Procter & Gamble Co v OHIM* [2004] ECR I-5141 at para 11; a case on the equivalent provisions in the CTM Regulation. See, in respect of the Directive, Case C-342/97 *Lloyd Schuhfabrik Meyer & Co GmbH v Klisjen Handel BV* [1999] ECR I-3819 at para 26.

<sup>108</sup> In *Colgate-Palmolive Co's Trade Mark Application* [2002] RPC 523, the sign in question was a slug of striped toothpaste which was held to lack a distinctive character. The stripes were more likely to be seen as the arrangement of the product, mere decoration or even indicating the active ingredients of the toothpaste.

<sup>109</sup> See *Dyson Ltd's Trade Mark Application* [2003] RPC 821. Questions submitted to the Court of Justice were stayed pending resolution of the outcome of an appeal from the OHIM to the Court of First Instance in relation to the same mark, being the transparent bin used on Dyson vacuum cleaners (though not claimed to be a shape mark).

<sup>110</sup> See, for example, Joined Cases C-53/01 to C-55/01 *Linde AG, Winward Industries Inc and Rado Uhren AG* [2003] ECR I-3161 (concerning applications to register a vehicle, torch and wrist-watch as trade marks). The Court confirmed that Article 3(1)(c) is also relevant to shape marks under Article 3(1)(e), discussed later.

<sup>111</sup> [2002] RPC 260.

<sup>112</sup> *Cycling ... IS' Trade Mark Applications* [2002] RPC 729.

Speaking of signs and indications which may serve to indicate geographical origin of the goods or services for which registration is sought, the Court of Justice said in Joined Cases C-108/97 and C-109/97 *Windsurfing Chiemsee v Huber and Attenberger*<sup>113</sup> (at para 26):

113 [1999] ECR I-2779.

... it is in the public interest that they remain available, not least because they may be an indication of the quality and other characteristics of the categories of goods concerned, and may also, in various ways, influence consumer tastes by, for instance, associating the goods with a place that may give rise to a favourable response.

The applicant had applied to register various trade marks including the word ‘Chiemsee’, which is the name of the largest lake in Bavaria. The Court of Justice confirmed that the Directive did not prohibit the registration of a geographical name as trade marks where the name was associated in the minds of the relevant class of persons with the category of goods concerned. Where there is no such association currently, an assessment should be made as to whether it is reasonable to assume that such a name is capable of designating the geographical origin of the goods in question, taking into account the degree of familiarity of the relevant class of persons with the name, the characteristics of the place designated by the name and the category of goods concerned. The Court went on to say that it was not necessary for the goods to be made in a particular location to be associated with it.

The term ‘relevant class of persons’ is important though there is surprisingly little case law on what it means. In *Windsurfing*, the Court of Justice said that it was persons in the trade and average consumers of the category of goods in the territory for which registration is sought. It is well-settled, however, that the Court ought to take into account the presumed expectations of the average consumer who is taken to be reasonably well-informed and reasonably observant and circumspect for the purposes of determining distinctiveness.<sup>114</sup>

114 See Case C-299/99 *Koninklijke Philips Electronics NV v Remington Consumer Products Ltd* [2002] ECR I-5475 at para 63 referring to Case C-210/96 *Gut Springenheide GmbH and Rudolf Tuský* [1998] ECR I-4657 at para 31, although, in the latter case, the context was whether a description including a trade mark was misleading.

115 However, there are a number of registrations for ‘speakeasy’.

116 *WEBSHERE Trade Mark* [2004] FSR 796.

117 [2004] ECR I-1699.

A neologism comprising two or more familiar descriptive words or abbreviations which refer to attributes of the goods or services in question may not overcome the ground under Article 3(1)(c) unless it is unusual in some way such that it does not have a meaning which is descriptive. For example, ‘mildsoap’, ‘cleanfresh’, ‘easytalk’ or ‘quickshine’ are all likely to be unregistrable in the absence of acquired distinctiveness through use.<sup>115</sup> To be registrable, a neologism comprising ordinary descriptive words must be more than the sum of its parts: for example, the word ‘WEBSHERE’.<sup>116</sup> If it has more than one possible meaning, it may still be unregistrable if one of those meanings is descriptive of characteristics of goods or services.

In Case C-265/00 *Campina Melkunie BV v Benelux-Merkenbureau*,<sup>117</sup> the application was for ‘BIOMILD’ for goods which included foodstuffs and milk products. The Benelux trade mark office, which referred the case to the Court of Justice for a preliminary ruling, had initially rejected the application on the basis that its sole meaning was that the goods for which it was intended to be used were biological and mild. The Court of Justice ruled that a neologism made up of elements which were themselves descriptive of the goods or services was itself descriptive unless there was a perceptible difference between the neologism and the sum of its parts. Whilst a word such as that in issue may not have been used previously, it is sufficient for the ground of refusal to apply that it could be used to describe the qualities or other characteristics of the goods or services. A word must be refused registration, therefore, if at least one of its possible meanings designated a characteristic of the goods or services concerned. Here, the Court of Justice referred to a case under the CTM Regulation to that effect: Case C-191/01P *OHIM v Wm Wrigley Jr Co*,<sup>118</sup> which concerned a refusal to register ‘DOUBLEMINT’, in particular, for chewing gum. The Court of First Instance had applied a test based on whether the word was ‘exclusively descriptive’ of the goods or services. The Court of

118 [2003] ECR I-12447.

Justice, in referring the case back to the Court of First Instance, ruled that this was not the correct test under Article 7(1)(c) of the CTM Regulation.<sup>119</sup> The issue was whether it was capable of being used by others to designate characteristic of their goods or services. In Case C-383/99P *Procter & Gamble Co v OHIM*<sup>120</sup> the mark in question was ‘BABY-DRY’, used for disposable nappies for babies. It was held that, although the word combination alluded to the function the goods were supposed to fulfil (that is, keeping a baby dry) the syntactically unusual combination was not a familiar expression in the English language either to describe babies’ nappies or their essential characteristics.<sup>121</sup>

The Court of Justice in *OHIM v Wrigley* distinguished (or clarified) the BABY-DRY case, noting that the word in question does not have to be in current use to preclude registration, but there should be a reasonable apprehension that it may be used descriptively by others in the future. Also, the fact that more than one term can be used to describe the characteristics of particular goods does not mean that those terms cease to be descriptive. It is submitted that what the Court intended in the previous sentence was in relation to the existence of more than one term used to describe a *particular* characteristic of particular goods.

In *Campina*, the Court of Justice went on to say that an unusual combination could create an impression sufficiently removed from that produced by the mere combination with the result that the word was more than the sum of its parts. The Court also confirmed, along the lines of its decision in *OHIM v Wrigley*, that the existence of synonyms for each component, so that competitors could use the combination of synonyms instead to describe the same properties, was not relevant. The Court of Justice, In Case C-363-99 *Koninklijke KPN Nederland NV v Benelux-Merkenbureau*<sup>122</sup> confirmed that a sign made up of two words, each of which is descriptive of a characteristic of goods or services remains descriptive but the combination may create an impression sufficiently removed from that produced from the simple combination of those words. Further confirmation of that approach was given, in relation to the CTM, in Case C-273/05 P *OHIM v Celltech R & D Ltd*<sup>123</sup> where the Court of Justice stressed that the sign must be judged as a whole and the Court of First Instance had been correct to hold that it had not been established that CELLTECH, even understood as ‘cell technology’, was descriptive of the goods and services for which registration was sought.<sup>124</sup>

An example of an unregistrable neologism in the UK was ‘EUROLAMB’ and, in *EUROLAMB Trade Mark*,<sup>125</sup> it was held that the word for lamb meat would be understood as lamb from Europe and this was descriptive of the kind and geographical origin of the goods. The applicant cited a great many registered marks containing the word ‘Euro’, such as ‘EUROCOOK’ for cookware, ‘EURO-CELL’ for battery goods and ‘EURODOG’ for dog food. Geoffrey Hobbs QC, as the Appointed Person, said that evidence of what had previously been accepted for registration was irrelevant. The same applies generally and was confirmed by the Court of Justice in Case C-363/99 *Koninklijke KPN Nederland NV v Benelux-Merkenbureau*<sup>126</sup> where, at para 44, it ruled that:

... the fact that a trade mark has been registered in a Member State in respect of certain goods or services has no bearing on the examination by the trade mark registration authority of another Member State on an application for registration of a similar mark in respect of goods or services similar to those in respect of which the first mark was registered.

Similar considerations apply in respect of applications to register CTMs. There are a number of reasons why evidence of registration elsewhere should not be taken into account in a pending registration (or application for invalidity). The prevailing economic and commercial circumstances may be different, as may be the relevant public’s perception of trade marks and their level of education of trade marks. Socio-economic factors vary from Member State to Member State. There is also the possibility that there

<sup>119</sup> This is the same ground for refusal as Article 3(1)(c) of the Directive.

<sup>120</sup> [2001] ECR I-6251.

<sup>121</sup> SURF UNLIMITED was unregistrable through lack of distinctive character even though it may have satisfied the BABY-DRY approach under Article 3(1)(c): *Telewest Communication plc’s Trade Mark Application* [2003] RPC 493.

<sup>122</sup> [2004] ERC I-1619.

<sup>123</sup> [2007] ERC I-2883.

<sup>124</sup> Being ‘pharmaceutical, veterinary and sanitary preparations, compounds and substances’, ‘surgical, medical, dental and veterinary apparatus and instruments’, and ‘research and development services; consultancy services; all relating to the biological, medical and chemical sciences’.

<sup>125</sup> [1997] RPC 279.

<sup>126</sup> [2004] ERC I-1619.

have been changes to social, economic and other factors since the earlier trade marks were registered. There are likely to be variations in the quality of examination of and the level of opposition to trade mark applications, not only between different Member States but also internally, as between different trade mark examiners in a particular Member State. There may also be procedural differences. All of these could have a bearing on subsequent registrability elsewhere. There are other reasons, none the least that it would over-complicate proceedings for registration and it would encourage registration first in Member States or third countries which are fairly ‘soft’ on accepting for registration trade marks of dubious distinctiveness.

### Article 3(1)(d) – customary signs or indications

This ground excludes those trade marks consisting of signs or indications that are in common use in trade. Although not explicit in the provision, this has been interpreted as applying only in respect of the goods or services for which registration is sought. The sign or indication must designate the goods or services although this may be by association rather than in relation to the specific properties or characteristics of the goods or service. Examples of trade marks that could be caught under this provision are ‘SOFA SALE’, ‘BARGAIN BOOZE’<sup>127</sup> and ‘Grandma’s Home Cooking’.

<sup>127</sup> This trade mark has been registered on the basis of acquired distinctiveness.

<sup>128</sup> [2001] ECR I-6959.

Some clarification of Article 3(1)(d) was given by the Court of Justice in Case C-517/99 *Merz & Krell GmbH*.<sup>128</sup> The Court ruled that for the ground for refusal to apply the sign or indication in question must designate the goods or services in respect of which registration is sought. However, it is immaterial whether the signs or indications actually describe the properties or characteristics of the goods or services. In that case, the word in question was ‘Bravo’, to be used for writing implements. Such a word certainly does not describe any of the properties, characteristics or other features of writing implements.

Jacob J held that the word ‘TREAT’ for dessert sauces and syrups probably also fell within this ground for refusal in *British Sugar plc v James Robertson & Sons Ltd*.<sup>129</sup> It was a word that had become customary in the current language as lots of people use ‘Treat’ in their advertisements and on their goods.<sup>130</sup>

<sup>129</sup> [1996] RPC 281. On this ground, the judge said the mark probably also fell within 3(1)(d).

<sup>130</sup> Jacob J also considered the trade mark was devoid of any distinctive character and it designated the kind, quality and intended purpose of the product.

### Article 3(3)

Where a trade mark appears to be unregistrable because of the grounds for refusal under Article 3(1)(b), (c) or (d), it can overcome the objection if there is evidence that the trade mark has, nevertheless, acquired a distinctive character in consequence of the use that has been made of it. The logical approach would be first to consider the representation of the trade mark, on its face and in the abstract, without any consideration of any use that has been made of the trade mark. Only then should attention be turned to evidence of acquired distinctiveness to see if the relevant ground (or grounds) for refusal have been overcome. Article 3(3) is not expressed as applying to an objection under Article 3(1)(a) but it seems reasonable to assume that acquired distinctiveness means that the sign must be capable of distinguishing the goods or services of one undertaking from those of other undertakings. So, acquired distinctiveness should overcome any objection that the sign does not fulfil the second requirement under Article 2. The Court of Justice confirmed in Case C-299/99 *Koninklijke Philips Electronics NV v Remington Consumer Products Ltd*<sup>131</sup> that there is no category of signs that are not excluded by Article 3(1)(b), (c) or (d) and Article 3(3) that are nonetheless excluded by Article 3(1)(a) on the basis that the mark is incapable of distinguishing the goods or services of one undertaking from those of other undertakings. Whether a distinctive trade mark can yet be incapable of being represented graphically is another point and

<sup>131</sup> [2002] ECR I-5475.

not a possibility specifically referred to in *Philips v Remington* even though this would be a problem under Article 3(1)(a) as the first limb of Article 2 would not be satisfied. However, the Court of Justice only referred to the second limb of Article 2 in terms of distinctiveness under Article 3(1)(b)–(d) and (3).

Article 3(3) does not apply to signs consisting exclusively of shapes caught by Article 3(1)(e), discussed later. However, if a shape is not excluded on the basis of Article 3(1)(e), it may still be subject to acquired distinctiveness if there are other objections based on Article 3(1)(b)–(d). This was accepted in *Philips v Remington* where the Court of Justice made the general finding that (at para 65):

... where a trader has been the only supplier of particular goods to the market, extensive use of a sign which consists of the shape of those goods may be sufficient to give the sign a distinctive character for the purposes of Article 3(3) of the Directive in circumstances where, as a result of that use, a substantial proportion of the relevant class of persons associates that shape with that trader and no other undertaking or believes that goods of that shape come from that trader. However, it is for the national court to verify that the circumstances in which the requirement under that provision is satisfied are shown to exist on the basis of specific and reliable data, that the presumed expectations of an average consumer of the category of goods or services in question, who is reasonably well-informed and reasonably observant and circumspect, are taken into account and that the identification, by the relevant class of persons, of the product as originating from a given undertaking is as a result of the use of the mark as a trade mark.

In Joined Cases C-108/97 and C-109/97 *Windsurfing Chiemsee v Huber and Attenberger*<sup>132</sup> the Court of Justice found, in the context of the perceived importance of keeping a geographical name available for use by other undertakings, that Article 3(3) required an overall assessment of the evidence as to whether the mark has come to identify the product concerned as coming from a particular undertaking and thus to distinguish that product from goods of other undertakings. If a significant proportion of the relevant class of persons identify goods as originating from a particular undertaking because of the trade mark, the competent authority must hold that the requirement for registering it has been satisfied. The Court of Justice even advocated the use of an opinion poll where the national trade mark authority had difficulty in making its assessment.

<sup>132</sup> [1999] ECR I-2779.

The acquired distinctiveness may come about even if the mark in question has not previously been used on its own but as part of a trade mark. In Case C-353/03 *Société des Produits Nestlé SA v Mars UK Ltd*,<sup>133</sup> the application was for ‘HAVE A BREAK’ for use with chocolate products and the like. The application was opposed by Mars on the basis that it was devoid of any distinctive character under Article 3(1)(b). Nestlé had earlier registrations for both ‘KIT KAT’ and ‘Have a break . . . Have a Kit Kat’ and argued that a phrase used in conjunction with and associated with a trade mark may, through repetition over time, acquire a distinctive character. The Court of Justice found that this was indeed a possibility and ruled that the distinctive character could be acquired in consequence of the use of the mark as part of or in conjunction with a registered trade mark.

<sup>133</sup> [2005] ECR I-6135, on reference from the Court of Appeal.

The last part of Article 3(3) gives Member States the option of using acquired distinctiveness as a way of overcoming an application for invalidity based on breach of Article 3(1)(b)–(d). The UK has taken advantage of that option: see the Trade Marks Act 1994 s 47(1).

### Article 3(1)(e) – shape marks

Shape marks are treated in the same way as other forms of trade marks with one important exception. There are three specific grounds for refusal of registration (or invalidity)

that apply to signs which consist exclusively of one of three particular types of shape. The rationale for this could be said to be that certain types of shape can never be sufficiently distinctive to serve as indicators of origin, capable of distinguishing the goods or services of one undertaking from those of other undertakings. Another argument for denying protection as trade marks to certain types of shape is that potentially unlimited protection could otherwise be afforded to shapes that ought to be protected by design law, patent law or, in some countries though not at present the UK, utility model law. Article 3(1)(e) prevents the registration of signs which consist exclusively of:

- (i) the shape which results from the nature of the goods themselves; or
- (ii) the shape of goods which is necessary to obtain a technical result; or
- (iii) the shape which gives substantial value to the goods.<sup>134</sup>

<sup>134</sup> The wording in the equivalent provision in the Trade Marks Act 1994, s 3(2) is, to all intents and purposes, identical.

<sup>135</sup> For example, in Joined Cases C-53/01 to C-55/01 *Linde AG, Winward Industries Inc and Rado Uhren AG* [2003] ECR I-3161, it was held that Article 3(1)(c) was applicable also to shape marks, independently of Article 3(1)(e).

<sup>136</sup> Joined Cases C-53/01 to C-55/01 *Linde AG, Winward Industries Inc and Rado Uhren AG* [2003] ECR I-3161 at para 44.

<sup>137</sup> Case C-299/99 *Koninklijke Philips Electronics NV v Remington Consumer Products Ltd* [2002] ECR I-5475.

<sup>138</sup> [1999] RPC 304.

<sup>139</sup> Registration was refused on other grounds.

<sup>140</sup> The better view is that artificially created shapes are outside the exception. A number of questions on this exception were referred to the Court of Justice but appear to have been withdrawn: *Unilever plc's Trade Mark Applications* [2003] RPC 651 which concerned the registrability of the shape of 'Viennetta' ice cream products.

Shapes excluded can thus be described loosely as natural, functional or ornamental. It should be noted first that the grounds in Article 3(1)(e) apply only if the sign consists *exclusively* of the type of shape mentioned. Therefore, signs which consist of shapes which are not exclusively of one of the types listed are, subject to the other grounds for refusal, potentially registrable.<sup>135</sup> Of course, if a shape mark is caught by Article 3(1)(e) that is the end of the matter and the mark is simply not registrable regardless of the other grounds for refusal. For shape marks, Article 3(1)(e) is preliminary to the other grounds for refusal.<sup>136</sup> It should also be noted that acquired distinctiveness under Article 3(3) does not apply to Article 3(1)(e). That does not mean to say, however, that Article 3(3) is of no consequence for shape marks and it may be relevant where a shape mark is not fully within one of the grounds for refusal in Article 3(1)(e). Another point is that all the grounds relate to the shape of goods. Therefore, the grounds have no application whatsoever to shapes used by providers or services where they are not also applied to goods.

Article 2 applies generally to shape marks and does not itself require that a shape mark includes some capricious addition, such as an embellishment serving no functional purpose. The question is whether the shape in question is capable of distinguishing the product of the trade mark proprietor from those of other undertakings, so guaranteeing the origin of the product.<sup>137</sup>

### Shape resulting from the nature of the goods

This ground for refusal prevents the registration of a shape which results from the nature of the goods themselves, examples being the shape of an apple, potato crisp, banana or tyre for a car. However, the addition of some additional stylised feature might overcome the ground for refusal. In *Dualit Ltd's (Toaster Shapes) Trade Mark Applications*,<sup>138</sup> it was accepted that the shape of toasters, for which registration was applied for, possessed certain styling features which prevented them consisting exclusively of shapes resulting from the nature of goods themselves.<sup>139</sup>

It seems reasonable to assume that references to 'the shape' did not necessarily limit the scope of the first exception under Article 3(1)(e) to cases where the nature of the goods results in a single shape. There is something to be said for the Hearing Officer's proposition in *Dualit* that the provision should be interpreted as meaning 'a shape which results from the nature of the goods themselves'. This accords with common sense when one considers that no two bananas are exactly identical in shape and there may be some considerable variety of shapes of bananas within basic parameters. It is unclear, however, whether the exception applies only to naturally occurring shapes.<sup>140</sup>

In relation to determining which goods are the goods for the purposes of Article 3(1)(e)(i), one could take a wide view or a narrow view. It might depend on how the goods are described in the application. At first instance, in *Philips Electronics NV v*

*Remington Consumer Products Ltd*,<sup>141</sup> Jacob J gave an example of a registration for balls compared with one for American footballs. In that case, Jacob J did not consider that the three-headed shaver was caught by the exception. He said that the answer depended on how the goods are viewed in practice as articles of commerce: how they are seen as a single type. In the present case, he said that they would be seen as ‘electric shavers’, which are seen as a single type of commercial article even though there exist different sorts of electric shavers. In the Court of Appeal, Aldous LJ considered that the ‘goods’ must be those in respect of which the mark is to be registered for rather than the particular goods for which the mark is intended to be used. There was no one shape for electric shavers, or even no one shape for three-headed electric shavers.<sup>142</sup> Aldous LJ considered that the exception must be read in the context of the other two grounds for refusal of shape marks and was intended to exclude registration of basic shapes which should be available for use by the public at large.<sup>143</sup>

Where the goods do not have an intrinsic form, such as a liquid or powder, and they are normally sold in containers or packaging, the question arises as to whether the shape of the containers or packaging can be said to result from the nature of the goods themselves. In Case C-218/01 *Henkel KgaA v Deutsches Patentund Markenamt*,<sup>144</sup> an application was made to register the shape of a plastic container used for liquid detergent. The Court of Justice ruled that, for three-dimensional trade marks consisting of the packaging of goods which are packaged in the trade for reasons linked to the very nature of the goods (for example, because they are in liquid or powder form), the packaging must be assimilated with the shape of the goods so that the shape of the packaging may constitute the shape of the goods within Article 3(1)(e). The shape of packaging imposes itself on the shape of goods. This is unlike the position where the goods have their own intrinsic shape. The Court of Justice gave the example of nails. In such cases, the shape of the packaging is not assimilated with the shape of the goods themselves.

### Shape necessary to obtain a technical result

The most important case on shape marks is undoubtedly Case C-299/99 *Koninklijke Philips Electronics NV v Remington Consumer Products Ltd*<sup>145</sup> which was a preliminary ruling following a reference to the Court of Justice from the Court of Appeal in a case involving a three-headed electric shaver allegedly infringed by Remington which challenged the validity of the trade mark registration. Philips registered a drawing showing the face of its three-headed shaver under the Trade Marks Act 1938.<sup>146</sup> It had been transferred to the register under the 1994 Act. The registration of three-dimensional trade marks was not generally possible under the 1938 Act so the trade mark must have been the two-dimensional drawing itself. However, everyone thereafter was prepared to consider the representation as covering also a three-dimensional mark.<sup>147</sup>

The Court of Justice confirmed that the ground for refusal applies where the essential functional features of the shape are attributable only to the technical result. This is so even if there is more than one way of obtaining the same technical result.<sup>148</sup> This conformed with the view of Jacob J in the Patents Court where he said that it could not have been intended to limit the ground for refusal to an object that *must be a particular shape* to perform the function. That could make it ‘. . . possible to obtain permanent monopolies in matters of significant engineering design’.<sup>149</sup> The word ‘necessary’ in Article 3(1)(e)(ii), cannot be taken in a strong sense. The exception to registrability applies, therefore, where the shape is purely functional and cannot be overcome by showing that other shapes could perform the same function. The Philips shaver had its three shaving heads arranged in an equilateral triangle which had been designed on the basis of technical considerations. The fact that it was possible to arrange the three heads in an isosceles triangle did not prevent the ground for refusal applying.

<sup>141</sup> [1998] RPC 283.

<sup>142</sup> [1999] RPC 809 at 820.

<sup>143</sup> The Court of Justice was not asked to rule on the ground for refusal for shapes resulting from the nature of the goods: Case C-299/99 *Koninklijke Philips Electronics NV v Remington Consumer Products Ltd* [2002] ECR I-5475.

<sup>144</sup> [2004] ECR I-1725.

<sup>145</sup> [2002] ECR I-5475.

<sup>146</sup> The drawing can be seen in the law report in the Patents Court at *Philips Electronics NV v Remington Consumer Products Ltd* [1998] RPC 283 or by visiting the Patent Office website (registration No 1254208). Even though the trade mark was revoked eventually, the representation is still available to view.

<sup>147</sup> *Philips Electronics NV v Remington Consumer Products Ltd* [1998] RPC 283 at 290. Jacob J found that the trade mark was not capable of distinguishing, was devoid of distinctive character and that the shape consisted exclusively from a shape necessary to obtain a technical result. The Court of Appeal agreed (*Philips Electronics NV v Remington Consumer Products Ltd* [1999] RPC 809) but referred a number of questions to the Court of Justice.

<sup>148</sup> Other aspects of the Court of Justice ruling are discussed above.

<sup>149</sup> *Philips Electronics NV v Remington Consumer Products Ltd* [1998] RPC 283 at 308. Jacob J noted that the majority in the Swedish court in *Ide Line AG v Philips Electronics NV* [1997] ETMR 377, involving the three-headed shaver trade mark, considered that it was not enough that the shape was functional, it also had to be necessary to achieve the result; and the exception could be defeated if it could be shown that other shapes could achieve the same technical result.

<sup>150</sup> *Koninklijke Philips NV v Remington Consumer Products Ltd* [2005] FSR 325.

In applying the ruling of the Court of Justice in the High Court, Rimer J revoked the Philips trade marks. In explaining certain aspects of the ruling, Rimer J confirmed that, if the essential features necessary to obtain a technical result also had some inherent aesthetic appeal, that would not take the sign out of the exception.<sup>150</sup> The word ‘only’ in the ruling where the Court of Justice said that ‘. . . the shape of a product is unregistrable by virtue [of Article 3(1)(e)(ii) – equivalent to s 3(2)(b) of the Act] if it is established that the essential functional features of that shape are attributable *only* to the technical result’ (emphasis added) was, in Rimer J’s view, not intended to limit the exception. Had the Court of Justice intended to limit it in this way, it would have explained this in its judgment. Furthermore, the Court of Justice’s general observations about the policy underlying Article 3(1)(e) did not suggest that it had any such limitation in mind. Rimer J was also of the view that the subjective intention of the designer was not relevant. The question of functionality had to be determined objectively.

### Shape giving substantial value to the goods

The obvious types of shape excluded by this ground for refusal are those applied to goods which are bought for the appearance of the goods rather than the intrinsic value of the goods themselves. Examples include ornaments such as porcelain figurines, garden statuary, fashion clothing and accessories, furniture, watches and clocks, vases and candlesticks. It may be difficult to know where to draw the line between the intrinsic value of the goods and the value added by the application of a particular shape. For example, would the shape of a design applied to jewellery made from diamonds set in gold add substantial value to the goods? What would the answer be if the same shape was used for jewellery made from base metal and paste? It would seem reasonable to interpret the provision on the basis of its supposed purpose in excluding certain types of signs from registration. That purpose (and the one based on shapes giving a technical result) was ‘. . . to prevent the exclusive and permanent right which a trade mark confers from serving to extend the life of other rights which the legislature has sought to make subject to limited periods. I refer, specifically, to legislation on industrial patents and designs.’<sup>151</sup>

<sup>151</sup> Per Advocate General Ruiz-Jarabo Colomer at para 30 of his Opinion in Case C-299/99 *Koninklijke Philips Electronics NV v Remington Consumer Products Ltd* [2002] ECR I-5475.

That being so, it seems reasonable to set the standard of added value relatively low and ask the question – do consumers buy the goods because their primary motive is to acquire goods of that type or do they buy the particular goods from amongst other like goods because the shape of them indicates that they come from a particular source? In other words, does the shape act as a badge of origin in the minds of the average consumers of that type of goods?

Substantial value cannot be limited to aesthetic considerations and may result from improved functional performance or other technical considerations. Again the question is whether the average consumer purchases the goods because of technical considerations or because the shape tells them the goods come from a particular undertaking. But, even if the latter is the case, the sign may still be refused registration if the shape does indeed add substantial value.

The *Philips v Remington* case is also important in respect of the third exception from registration in Article 3(1)(e) though the Court of Justice did not have to rule on this. At first instance, in *Philips Electronics NV v Remington Consumer Products Ltd*,<sup>152</sup> Jacob J said that the shape of the three-headed electric shaver gave substantial value to the goods, being recognised as an engineering function. He pointed out that good trade marks do add value to goods, that being one of their purposes from a trader’s point of view. That being so, the exception to registrability for shapes that add substantial value must not be taken too literally. He suggested that the shape must exclusively add something of value, whether it be design or functional appearance, disregarding any value attributable to the trade mark’s function of identifying the source of the goods.

<sup>152</sup> [1998] RPC 283.

Whilst agreeing that the ground for refusal must not be taken too literally as good trade marks add value to goods, the Court of Appeal disagreed with Jacob J on the proposition that recognition of the shape as having an engineering function added substantial value to the goods.<sup>153</sup> Aldous LJ said that there may be some overlap between paragraphs (ii) and (iii) of Article 3(1)(e) but their purposes were different. The former was intended to exclude functional shapes whereas the latter was intended to exclude aesthetic shapes. Consideration must be given as to whether the shape gives substantial value. This requires determination of whether the value is substantial and this, in turn, requires a comparison between the shape for which registration is sought and shapes applied to equivalent articles. In the present case, Aldous LJ thought the shape applied for had no more value than other shapes which were shown to be as good and cheap to produce. He dismissed the notion that added value resulting from substantial advertising and reliability could be factors. In other words, the shape would have to be inherently better than equivalents to be excluded. This could be, for example, that it performed much more efficiently than any alternative shape or was significantly more attractive visually.

It is unfortunate that we have, as yet, no significant guidance from the Court of Justice on the scope of the ground for refusal based on shape giving substantial value. It is submitted that the Court of Appeal was wrong to suggest that functional shapes could not also add substantial value and that comparison should be made with other shapes for the same type of goods. It is submitted that the correct approach is to consider whether the goods to which the shape has been applied are bought because the shape operates as a badge of origin or because the shape is perceived as desirable *per se*, whether for aesthetic or functional reasons. One does not buy a pre-packed joint of meat on a shaped plastic tray covered in clear plastic to acquire the plastic tray. It may be that a design of plastic food tray of a particular shape and colour could become distinctive of a range of meat products and function as a trade mark. Even though this fact might help boost sales and add value from the producer's perspective, enabling him to charge a premium, it does not add substantial value to the joints of meat as joints of meat.

### Article 3(1)(f) – contrary to public policy or accepted principles of morality

Trade marks cannot be registered if they are contrary to public policy or accepted principles of morality. In terms of public policy, accepting that, on this point, the Directive was confined to matters covered by the French term *ordre public*, Jacob J did not think it extended to a situation where an applicant was attempting to extend protection afforded by other forms of intellectual property rights.<sup>154</sup> He soundly rejected the 'it-was-once-patented, or expired' argument, saying that there was no rule of law which generally prevented protection by parallel intellectual property rights.<sup>155</sup> Nor is there any public policy that a celebrity should have the exclusive right to use his own character for merchandising purposes. This possibility has been rejected on numerous occasions<sup>156</sup> and there appears to be a reluctance to provide such rights by legislation or to protect persons' names by the law of passing off.<sup>157</sup> In *JANE AUSTEN Trade Mark*,<sup>158</sup> the Hearing Officer said that, given this unwillingness, he would be unwise to assume that there was a public policy interest in acquisitively registering as trade marks the names of famous historical figures. However, in that case, the application was refused on the basis that the mark was devoid of any distinctive character.

Objections raised on the basis that a trade mark is contrary to accepted principles of morality are relatively rare. It is clear that the standard to be applied should be set in the context of current views and vulnerabilities. Under the 1938 Act, the equivalent test was whether the trade mark was contrary to morality.<sup>159</sup> In *La Marquise Footwear*

<sup>153</sup> *Philips Electronics NV v Remington Consumer Products Ltd* [1999] RPC 809.

<sup>154</sup> *Philips Electronics NV v Remington Consumer Products Ltd* [1998] RPC 283 at 310. The Court of Appeal did not consider this point, nor did the Court of Justice on the reference to it.

<sup>155</sup> Although this seems to have been the basis for the second and third grounds for refusal of registration for signs consisting exclusively of certain types of shapes.

<sup>156</sup> An example being *ELVIS and ELVIS PRESLEY in ELVIS PRESLEY Trade Marks* [1999] RPC 567.

<sup>157</sup> See, for example, *McCulloch v Lewis A May Ltd* (1948) 65 RPC 58.

<sup>158</sup> [2000] RPC 879.

<sup>159</sup> Trade Marks Act 1938 s 11.

160 (1946) 64 RPC 27.

161 The word was in stylised form with the ‘OO’ made to look like a pair of eyes, possibly increasing the connotation of sex appeal. The mark remains on the Register.

*Inc’s Application*,<sup>160</sup> the word ‘OOMPHIES’ was applied for in respect of shoes. It was rejected by the Trade Marks Registry on the ground that the word had connotations with sex appeal.<sup>161</sup> Evershed J allowed the applicant’s appeal against that decision but said that the Registrar’s duties were (at 30):

. . . to consider not merely the general taste of the time, but also the susceptibilities of persons, by no means few in number, who still may be regarded as old-fashioned.

Essentially, the exercise of this duty is very much a matter of balance. Trade mark registries must be in touch with current standards and not locked into past values but should also be wary not to allow registration of a trade mark which would cause offence to many, even if they represent a minority of society.<sup>162</sup>

162 See *HALLELUJAH Trade Mark* [1976] RPC 605.

It is reasonable to assume that the same test applies under the Directive and the 1994 Act, though the test may vary between different Member States. There is no case law at the Court of Justice in the scope of this ground for refusal but there has been some case law in the UK.

163 [2002] RPC 628.

In *Ghazilian’s Trade Mark Application*,<sup>163</sup> the application was for ‘TINY PENIS’ to be used for clothing, footwear and headgear. The Hearing Officer refused registration, confirming that the mark should be judged against current views and thinking and refusal would be warranted if registration would be likely to offend persons who might be in a minority in society yet be a substantial number. She said that the words in a proper descriptive context would be unlikely to offend very many persons but, seeing the words out of context, used in advertising and displayed on goods in public, would cause offence to a substantial number of the public. Simon Thorley QC, as the Appointed Person, confirmed that there was no discretion and, if the registration was contrary to public policy or morality, it must be refused. Nor was there discretion to refuse in the opposite case. Simon Thorley QC dismissed the applicant’s appeal against the refusal to register the trade mark, saying that the question was whether its use would offend the moral principles of right-thinking members of the public so that it would be wrong in law to protect it. He distinguished between offence causing distaste and offence causing outrage or to undermine current religious, family or social values. The latter would be grounds for refusal of registration if it affected an identifiable section of the public but the higher the outrage, the smaller the section of the public it affected, for refusal to be justified, and vice versa. It is noteworthy that the word ‘FCUK’ has been accepted for registration both under the 1994 Act and under the CTM Regulation.<sup>164</sup>

164 FCUK was subject to an unsuccessful application for summary judgment for infringement of the trade mark and passing off in *French Connection (UK) Ltd v Sutton* [2000] ETMR 341. The defendant has registered FCUK.com as his internet domain name.

Although there is no direct case law on this ground for refusal from the Court of Justice, in his Opinion in Case C-299/99 *Koninklijke Philips Electronics NV v Remington Consumer Products Ltd*,<sup>165</sup> Advocate General Ruiz-Jarabo Colomer gave the example which surely would be refused as being contrary to public policy, being ‘Babykiller’ for a pharmaceutical abortifacient (a drug that effects or encourages abortion).

165 [2002] ECR I-5475.

166 [2005] RPC 611.

In the UK, an application was made to register ‘JESUS’ for a range of goods in *Basic Trademark SA’s Trade Mark Application*.<sup>166</sup> It was rejected on the basis that it was contrary to public policy or accepted principles of morality. The appeal to the Appointed Person was dismissed. He considered that, although registration for trade marks including the name ‘JESUS’ had been accepted by the OHIM and some national trade mark registries, this was not binding on him. The fact that there may be room for more than one view did not make the process arbitrary and Geoffrey Hobbs QC said (at para 23):

The requirement for use of the trade mark to be seriously troubling in terms of the public interest in the ‘prevention of disorder’ or ‘protection of morals’ under Art 10 ECHR [Council of Europe Convention for the Protection of Human Rights and Fundamental Freedoms] provides . . . a proper basis for objective determination of the legal rights of persons applying for registration.

He went on to say that the view of Christians that their religious beliefs should be respected was deep-seated and widespread and the idea that the name 'JESUS' should be used for commercial exploitation would be anathema to them and to others who believed that religious beliefs generally ought to be respected. Registration would have caused greater offence than mere distaste.

If the fair and normal use of the trade mark would be likely to lead to violence, that could be sufficient to refuse registration even if the use did not amount to incitement to violence and even if that was not the intention of the applicant. Opposition by Manchester United Merchandising Ltd on the basis that the registration would be contrary to public policy was successful in *CDW Graphic Design Ltd's Trade Mark Application*,<sup>167</sup> in which an application was made to register 'www.standupifyouhateanu.com' for T-shirts, baseball caps and other garments.

167 [2003] RPC 567.

### Article 3(1)(g) – deceptive marks

A trade mark will not be registered if it is of such a nature as to deceive the public, for instance as to the nature, quality or geographical origin of the goods or service.<sup>168</sup> A trade mark may be deceptive in a number of ways and the list of possibilities is not an exhaustive one and merely serves to give examples. Under the Trade Marks Act 1938, a number of examples of trade marks were held to be deceptive such as 'DAIRY GOLD' (for synthetic margarine), 'Livron' (for a medicine – there is a French town of the same name),<sup>169</sup> and a mark containing the words 'Forrest' and 'London' (for a watchmaker based in Coventry),<sup>170</sup> 'Orlwoola' (for textile clothing)<sup>171</sup> and 'SWISS MISS' (for preparations for making chocolate and cocoa drinks, etc.).<sup>172</sup>

168 The wording in the equivalent provision in the Trade Marks Act 1994, s 3(3)(b), is to the same effect.

169 *Boots Pure Drug Co's Trade Mark* (1937) 54 RPC 129.

170 *Hill's Trade Mark* (1893) 10 RPC 113.

171 *Orlwoola Trade Mark* (1906) 26 RPC 683.

172 *SWISS MISS Trade Mark* [1997] RPC 219.

173 [2000] ECR II-2893. The case concerned a challenge against a Council Regulation on the organic production of agricultural products and the like.

There is no direct authority on the scope of Article 3(1)(g) from the Court of Justice but there are a number of cases where it has been mentioned or where parallels can be drawn with other legislation concerning misleading advertising or designations of origin. For example, in *Case T-268/99 Fédération nationale d'agriculture biologique des régions de France v Council of the European Union*,<sup>173</sup> the Court of First Instance noted that Article 3(1)(g) of the Directive would prevent the registration of 'Bio' for non-organic products.

174 OJ L 208, 24.07.1992, p 1.

175 [1999] ECR I-1301.

Council Regulation (EEC) No 2081/92 of 14 July 1992 on the protection of geographical indications and designations of origin for agricultural products and food-stuffs<sup>174</sup> was in issue in *Case C-87/97 Consorzio per la tutela del formaggio Gorgonzola v Käiserei Champignon Hofmeister GmbH & Co KG*<sup>175</sup> in which objection was taken to the use of the trade mark 'Cambozola' for a creamy blue cheese, resembling Gorgonzola cheese. The defendants' cheese was made in Germany and Austria and was packaged with an indication of its origin. Article 14(1) of the Regulation prohibits the subsequent registration of trade marks which were the same, similar to or evoked a protected designation of origin but Article 14(2) contains a saving for earlier registered trade marks applied for in good faith. The use of these may continue provided the grounds under Article 3(1)(c) and (g) or 12(2)(b) of the trade marks Directive do not apply. In other words, the use of prior trade marks may continue unless they consist exclusively of signs or indications serving in trade to designate geographical origin, are deceptive as to geographical origin or have become deceptive in such a way because of the use made of them. In the present case, 'Cambozola'<sup>176</sup> had been registered as a trade mark before Gorgonzola because it was a protected designation of origin. The Court of Justice ruled that the word 'Cambozola' evoked the protected designation 'Gorgonzola' even though it was packaged bearing its geographical origin, but it was for the national court to determine whether the conditions under Article 14(2) of the Regulation allowed the use of the earlier registered trade mark to continue.

176 Cambozola does not refer to a real place name.

An example of one effect of deception in advertising is given by the definition of misleading advertising. In Case C-44/01 *Pippig Augenoptik GmbH & Co KG v Hartlaeur Handelsgesellschaft mbH*,<sup>177</sup> reference was made to the definition of misleading advertising, being advertising that ‘... deceives or is likely to deceive the persons to whom it is addressed or whom it reaches and which, by reason of its deceptive nature, is likely to effect their economic behaviour or which, for those reasons, injures or is likely to injure a competitor’. This may be relevant in most cases under Article 3(1)(g) but may not extend to every form of deception within the provision.

<sup>177</sup> [2003] ECR I-3095. In that case, the parties sold spectacles and lenses and the claimant objected to the defendant’s comparative advertising where misleading advertising was also a feature.

There is little case law on the equivalent provision under the Trade Marks Act 1994, s 3(3)(b). Under the 1938 Act an accepted test where deception as to origin was concerned was whether a substantial proportion of the public would be misled into thinking that the goods are those of another trader.<sup>178</sup> This can be generalised to say that the subsection simply requires that a substantial proportion of the public would be deceived in the relevant manner. Of course, if the deception relates to the origin of goods or the identity of the service provider, this may amount to passing off and the trade mark applied for would be vulnerable to a challenge on that basis under the relative grounds for refusal or, if registered, an application for invalidity.

<sup>178</sup> *Neutrogena Corp v Golden Ltd* [1996] RPC 473.

The wording used in the Directive and the 1994 Act is to the effect that the nature of the mark is such ‘as to deceive the public’ whereas s 11 of the 1938 Act was in terms of ‘likely to deceive or cause confusion’. It is arguable that the absence of the word ‘likely’ results in a modification of the previously accepted test.

<sup>179</sup> [2000] RPC 879.

The form of deception argued in *JANE AUSTEN Trade Mark*<sup>179</sup> was that the public would be deceived into thinking that the goods (cosmetics and toiletry products) were approved by the trustees of the Jane Austen Memorial Trust or somehow connected with Jane Austen’s literature. The trust owned Jane Austen’s house and museum in Hampshire and sold souvenirs relating to the famous writer. However, the hearing officer did not think that the public would make either connection, being well aware of the nature of commercial trade in such goods. Furthermore, he considered that the ground of opposition under s 3(3)(b) was framed more like an opposition under s 5(4), one of the relative grounds of opposition. It must be noted that this was an opposition hearing and not an appeal against refusal of registration and must be treated with a little caution in relation to s 3(3)(b).

### Use prohibited by law

Article 3(2) of the Directive provides Member States with the option of a ground of refusal based on the use of the trade mark being prohibited by law, other than the trade mark law of the Member State concerned or of the Community or where the trade mark covers a sign of high symbolic value, in particular a religious symbol. The UK has not expressly implemented the latter of these options although there could be other grounds that apply in such circumstances, such as public policy, morality or that the mark is deceptive. What the UK has provided for, in s 3(4), is a prohibition on registering marks to the extent that their use could be prohibited in the UK by any enactment or rule of law or by any provision of Community law. However, that omits any exclusion of trade mark law as stated in the Directive.

<sup>180</sup> Council Regulation (EEC) No 823/87 of 16 March 1987 laying down special provisions relating to quality wines produced in specified regions, OJ L 84, 27.03.1987, p 59. The name would also be refused under s 3(3)(b), being deceptive as to geographical origin and use of the mark would be passing off (see *Taittinger SA v Allbev Ltd* [1993] FSR 641) which is itself a relative ground for refusing registration under s 5(4) (Article 4(4)(b) of the Directive).

If the prohibition relates to part of the mark, it will be unregistrable under this provision to this extent. As an example of the working of this provision, an application to register a word mark ‘Somerset Champagne’ would be refused because its use would contravene a European Council Regulation.<sup>180</sup> Areas of UK law that might be relevant here include the Hallmarking Act 1973 or consumer protection legislation such as the Trade Descriptions Act 1968. In fact there are numerous Acts, statutory instruments,

EC Treaties, Directives and Regulations that could apply in a particular circumstance. Nor is the provision limited to legislation. The prohibition may come about by civil law or criminal law. In practice, s 3(4) is likely to be an issue in very few cases.

Section 3(4) has been used as a ground of opposition in a number of unreported cases before the Trade Marks Registry. In some cases, the basis has been that the use of the mark applied for would amount to passing off or infringement of a registered trade mark. This is an unacceptable use of the provision as the text of the Trade Marks Directive states that the objection to registration applies where and to the extent that ‘the use of the mark may be prohibited pursuant to provisions of law *other than trade mark law* of the Member State or of the Community’<sup>181</sup> (emphasis added). It is reasonable to assume that the phrase ‘trade mark law’ includes the law of passing off in the UK and Eire, therefore, the subsection cannot be used where passing off or trade mark infringement is alleged. In *SUREFIRE Trade Mark*,<sup>182</sup> the hearing officer speaking of the opponent’s objections under s 3(3)(b) and (4) said that they were in fact ‘relative grounds masquerading as absolute grounds.’ In *Bentley’s Trade Mark Applications*,<sup>183</sup> the Hearing Officer reiterated the view that s 3(4) is an absolute ground:

... intended to prevent the registration of trade marks which would contravene the law because of some intrinsic feature of the trade mark, and is not concerned with the circular argument that the mark does not belong to the applicants or resembles someone else’s trade mark and cannot therefore be distinctive of them. The question of the other party’s rights in the mark is a matter to be dealt with in considering relative grounds for refusal.

<sup>181</sup> Article 3(2).

<sup>182</sup> (Unreported) 13 July 2001, Trade Marks Registry.

<sup>183</sup> (Unreported) 4 August 1999, Trade Marks Registry.

### Specially protected emblems, etc.

Article 6ter of the Paris Convention for the Protection of Industrial Property 1883 requires Contracting States to prohibit the registration, without authorisation, as trade marks, of certain armorial bearings, flags and other emblems, etc. of the States and international organisations and hallmarks and other official signs indicating control and warranty under certain circumstances. Article 3(1)(h) of the Directive prohibits the registration of such trade marks unless authorised by the competent authorities. Furthermore, Member States have the option, under Article 3(2)(c), to prohibit the registration, as trade marks, of badges, emblems and escutcheons of public interest in addition to those covered by Article 6ter of the Paris Convention.

In the UK, s 3(5) of the Trade Marks Act prohibits the registration of specially protected emblems and the like set out in s 4. These include trade marks consisting of or containing things such as the Royal arms, flags, representations of Her Majesty or members of the Royal family, words, letters or devices likely to lead persons to think that the applicant has or recently has had Royal patronage or authorisation,<sup>184</sup> the UK national flag, flags of England, Wales, Scotland, Northern Ireland or the Isle of Man, national emblems of countries belonging to the Paris Convention and members of the World Trade Organisation (s 57 provides more detail) and of certain international organisations: for example, the UN (see s 58). In relation to the UK national flag and the flags of England, Wales, Scotland, Northern Ireland or the Isle of Man, consent is not a precursor to registration but trade marks including these will not be permitted if it appears to the Registrar that the use of the trade mark would be misleading or grossly offensive.

<sup>184</sup> Registration is possible with consent by or on behalf of Her Majesty or the relevant member of the Royal family.

Section 99 makes it an offence, *inter alia*, without authority, to use in connection with business any device, emblem or title in such a manner as to be calculated to lead to the belief that he supplies goods or services to the Royal family. However, this provision has nothing to do with the grounds for refusal of registration and does not supplement s 3(5). There are material differences between s 99(2) and the equivalent ground of refusal provided under s 3(5), being s 4(1)(d) (things likely to lead persons to think the applicant either has or recently has had Royal patronage or authorisation).

**185** (Unreported) 7 January 2000, Trade Marks Registry.

**186** The application to register ROYAL SHAKESPEARE for beers and other drinks was successful.

This was confirmed in *Royal Shakespeare Trade Mark*,<sup>185</sup> in which the Hearing Officer refused to allow an application by the opponent, the Royal Shakespeare Company, to amend one of its grounds of opposition from s 99 to s 4(1)(d).<sup>186</sup>

### Article 3(2)(d) – application made in bad faith

Applying to register a trade mark in bad faith has long been a ground for refusal or invalidity of a trade mark and bad faith has been alleged on numerous occasions. Bad faith is a ground for refusal under Article 3(2)(d) of the Directive and finds its equivalent in s 3(6) of the Trade Marks Act 1994. There has been a great deal of litigation in the UK where bad faith has been alleged though relatively little at the Court of Justice. In a case concerning a Commission Regulation concerning marketing standards for olive oil it was accepted by the Court of Justice that applying to register a trade mark before the Regulation came into force to avoid its impact would be made in bad faith and contrary to Article 3 of the trade marks Directive.<sup>187</sup> Before looking further at the case law, it should be pointed out that the Trade Marks Act 1994 s 32(3) requires that an applicant to register a trade mark declares that the trade mark is being used in relation to the goods or services for which registration is sought or there is a *bona fide* intention that it will so be used. As we shall see later, lack of a *bona fide* intention can be equated to making an application in bad faith. The Directive has no equivalent in relation to the application to register. As this is a procedural aspect, Member States are left free to fix their own provisions<sup>188</sup> so this point does not come up for preliminary rulings at the Court of Justice. Another point to note is that in the CTM Regulation bad faith crops up only in respect of invalidity and is not a ground for refusal of registration. Article 51 of the CTM Regulation states that a trade mark shall be declared invalid if, *inter alia*, the application was made in bad faith. The application to register a CTM does not have a declaration of present use or a *bona fide* intention to use the trade mark in relation to the goods or services for which registration is sought.

**187** Case C-99/99 *Italian Republic v Commission of the European Communities* [2000] ECR I-11535.

**188** Fifth recital to the Directive.

**189** In *Tesco Stores Ltd's Trade Mark Applications* [2005] RPC 361 it was said that the scope of the provision was notoriously unclear.

The main difficulty with bad faith is determining exactly what it means.<sup>189</sup> A number of meanings are possible. It might be restricted to cases where some dishonesty or fraud is involved on the part of the applicant or it may be relevant where the behaviour of the applicant falls below what are considered to be acceptable practices in business. Bad faith could extend to a situation where the applicant is not using the mark and has no intention of doing so: for example, where a person makes an application to register a famous name as a trade mark with the sole intention of selling it to the organisation to whom it would be expected to belong.<sup>190</sup> The meaning of bad faith is particularly important as it is frequently raised in opposition or revocation proceedings.

**190** An equivalent activity to 'cybersquatting' where someone registers a famous name as a domain name. There are a number of examples of this in the chapter on passing off.

**191** [1982] FSR 72.

**192** There are in fact numerous registrations for 'Merit' for a wide variety of goods and services, including cigarettes.

Under the 1938 Act, it was held that an application for a 'ghost mark' 'Nerit' was in bad faith: *Imperial Group Ltd v Philip Morris & Co Ltd*.<sup>191</sup> The Court of Appeal considered the application for the ghost mark was not in good faith though the court did not regard it as dishonest. The applicant sold 'Merit' cigarettes but it was thought 'Merit' was unregistrable, being a laudatory word.<sup>192</sup> 'Nerit' would be close enough to bring an infringement action against someone else who used 'Merit' for cigarettes.

**193** [1996] FSR 805.

In *Road Tech Computer Systems Ltd v Unison Software (UK) Ltd*,<sup>193</sup> Robert Walker J found difficulty in determining the meaning of 'bad faith' for the purposes of the 1994 Act. It could have the narrow meaning of dishonesty, or a wider meaning including a lack of genuine intention or purpose. Robert Walker J, whilst not deciding the point, thought it was rather easier to see an application being partly genuine and partly insincere rather than partly honest and partly dishonest.

**194** [1999] RPC 367.

The leading authority in the UK for what constitutes bad faith for the purposes of s 3(6) is *Gromax Plastics Ltd v Don & Low Nonwovens Ltd*.<sup>194</sup> In that case, the claimant sold spun-bonded non-woven polypropylene sheeting (described sometimes

as ‘fleece’) used in agriculture, being laid in sheets over the ground or over hoops over crops. The parties had agreed to sell it under the name ‘Gro-Shield’. Unknown to the claimant, the defendant had, in 1989, registered the name as a trade mark in respect of non-woven textile fabrics included in Class 24. In 1996, the relationship between the parties broke down and the claimant registered ‘Gro-Shield’ in Class 17, having been advised that this was the correct class for fleece. The claimant sought a declaration that the defendant’s trade mark was invalid because it had been applied for in bad faith.<sup>195</sup> It was argued that, as it was always intended that the claimant should be the sole distributor of the fleece, it was bad faith for the defendant to register the mark. Of the meaning of bad faith, Lindsay J said (at 379):

I shall not attempt to define bad faith in this context. Plainly it includes dishonesty and, as I would hold, includes also some dealings which fall short of the standards of acceptable commercial behaviour observed by reasonable and experienced men in the particular area being examined. Parliament has wisely not attempted to explain in detail what is or is not bad faith in this context; how far a dealing must so fall short in order to amount to bad faith is a matter best left to be adjudged not by some paraphrase by the courts (which leads to the danger of the courts then construing not the Act but the paraphrase) but by reference to the words of the Act and upon a regard to all material surrounding circumstances.

It was held that the defendant’s application was not made in bad faith.<sup>196</sup> Lindsay J said that the fact that the claimant, as exclusive distributor, would be seen as the guarantor of quality, did not amount to bad faith on the part of the defendant. The fact that any complaints about the quality of the fleece would be directed towards the claimant was simply one of the concomitants of an exclusive distributorship. He did say, however, that it might have been different if the defendant had abandoned all control over and regulation of the quality or origin of the fleece.

Although Lindsay J made it clear that he was not trying to lay down a universal test for bad faith under s 3(6), that seems to have been the consequence as the above quote has been used in cases on bad faith ever since. Dishonesty or at least something approaching dishonesty is required, such as reprehensible conduct. In *DAAWAT Trade Mark*<sup>197</sup> it was held by Geoffrey Hobbs QC, as the Appointed Person, that there was no justification for adopting a two-step approach advocated in the House of Lords in *Twinsectra Ltd v Yardley*,<sup>198</sup> a case on liability for acting as an accessory in a breach of trust case. The two-step approach is very similar to that used for dishonesty for the purposes of the Theft Acts 1968 and 1978 as in Lord Lane CJ’s judgment in *R v Ghosh*,<sup>199</sup> referred to by Lord Hutton in *Twinsectra*. Effectively, the test is whether ordinary honest persons would regard what the applicant was doing as dishonest and, secondly, did the applicant know that this was the case. A purely subjective approach (called ‘the Robin Hood test’ by Lord Hutton) is inappropriate as the trade mark system is not there to enable dishonest persons or those with low moral standards to obtain trade mark registration in circumstances where persons abiding by reasonable standards would not. However, the two-step test in *Twinsectra* was reinstated in *Harrison’s Trade Mark Application*<sup>200</sup> in which the applicant applied to register ‘CHINAWHITE’ for various alcoholic and non-alcoholic drinks. He had previously been involved in the opponent’s nightclub called ‘Chinawhite’ and there the applicant assisted the bar manager in developing a recipe for a cocktail to be called ‘Chinawhite’. In the Court of Appeal, Sir William Aldous, approving of what Lord Hutton said in *Twinsectra*, said (at para 26):

The words ‘bad faith’ suggest a mental state. Clearly when considering the question of whether an application to register is made in bad faith all the circumstances will be relevant. However, the court must decide whether the knowledge of the applicant was such that his decision to apply for registration would be regarded as in bad faith by persons adopting proper standards.<sup>201</sup>

<sup>195</sup> The defendant sought revocation of the claimant’s mark. Allegations of passing off and trade mark infringement were also made.

<sup>196</sup> It was further held that the claimant’s trade mark was invalid (under s 5(1) and/or s 5(2)), the defendant was not guilty of passing off and the defendant’s trade mark had been infringed by the claimant.

<sup>197</sup> [2003] RPC 187.

<sup>198</sup> [2002] 2 AC 164, in which the House referred to its own earlier judgment in *Royal Brunei Airlines Sdn Bhd v Tan* [1995] 2 AC 378, another breach of trust case.

<sup>199</sup> [1982] QB 1053, a case which should be very familiar to all students of criminal law.

<sup>200</sup> [2005] FSR 177.

<sup>201</sup> The applicant’s appeal to the Court of Appeal was dismissed. He had argued that the test for bad faith was dishonesty.

<sup>202</sup> *Ajit Weekly Trade Mark* [2006] RPC 633, before the Appointed Person.

<sup>203</sup> [2008] FSR 254.

<sup>204</sup> This was the mascot for the 1966 Football World Cup.

<sup>205</sup> [2000] RPC 345.

<sup>206</sup> Presumably because its use for mineral water would have been deceptive.

<sup>207</sup> (Unreported) 12 November 1999, Trade Marks Registry.

<sup>208</sup> This ground applies where an identical or similar mark is used in relation to non-similar goods or services where, without due cause, it takes unfair advantage of or is detrimental to the distinctive character of a trade mark of repute: see below.

<sup>209</sup> [2000] RPC 484.

The objective part of the two-step test is that set out by Lindsay J above and does not appear to have been altered by *Harrison's Trade Mark Application*.<sup>202</sup> Taking legal advice and, in the light of that, applying to register a trade mark in the opinion that the applicant was doing nothing wrong does not necessarily prevent a finding of bad faith. In *Jules Rimet Cup Ltd v Football Association Ltd*,<sup>203</sup> applications were made by the claimant to register 'WORLD CUP WILLIE'<sup>204</sup> with a lion device as a trade mark. The defendant made it clear it would oppose the application and also informed a licensee who terminated the licence. The claimant brought proceedings for a declaration that the applications could not be successfully opposed and claimed relief for unlawful interference with its business. It was held that the claimants were aware of a residual goodwill in World Cup Willie from the 1966 football tournament and the applications were made in bad faith, notwithstanding that the claimant had made enquiries of the defendant as to whether it claimed any rights in World Cup Willie, without response and had carried out internet searches which indicated no one was using the mark. The claimant had been advised to apply to register the trade marks by its trade mark attorney.

It is often claimed that a lack of a *bona fide* intention to use a trade mark is equivalent to a finding that the application has been made in bad faith. The motive of the applicant might have been to prevent the use of the trade mark by another or to sell on the trade mark to an undertaking that would be interested in it or concerned about the potential of its use by a third party. In *DEMON ALE Trade Mark*,<sup>205</sup> an application was made to register 'DEMON ALE' (an anagram of LEMONADE) for beer and mineral water. This was subsequently restricted to beer only.<sup>206</sup> The owner of the trade mark 'BIERE DU DEMON', used for beer, filed an opposition. There was evidence that the applicant only intended to register the trade mark in order to prevent 'alcopop' manufacturers using it. There was no evidence that there was any *bona fide* intention that the mark would be used by the applicant or with his consent. This was a breach of statutory requirement in s 32(3) and this alone was sufficient to find that the application had been made in bad faith. It was also stressed that a finding of bad faith could be made even if the applicant saw nothing wrong with his own behaviour.

Offering to sell a trade mark application for a very high price to an organisation, which might have an interest in acquiring it, can be very suggestive of a lack of a *bona fide* intention to use the mark. In *Baywatch Trade Mark Application*,<sup>207</sup> the applicant, who was unconnected with the makers of the television series of that name, applied to register 'BayWatch' in respect of restaurant services in Class 42. Inevitably, there was an opposition by the production company which made the television series. The opponent's mark 'BAYWATCH' was already registered, *inter alia*, in respect of fast food items. When the opponent contacted the applicant requesting that the application be withdrawn, he responded by saying that he was willing to sell the trade mark for £15 million plus royalties. Although it was suspected that the true purpose behind the application was to sell the trade mark at an inflated price, the Hearing Officer was unconvinced that this was the original intention. Although an attempt to capture the opponent's goodwill might be a ground for refusal under s 5(3) by taking unfair advantage of the repute of the opponent's mark, this was not, *per se*, enough to amount to bad faith. However, it was accepted that, as the applicant's business plans were very sketchy and insufficiently developed at the time of the application, he had no *bona fide* intention to use the mark.

Whether an application that would otherwise be vulnerable under s 5(3) of the relative grounds for refusal<sup>208</sup> could be deemed to be made in bad faith seems entirely possible, given the presence of an appropriate motive on the part of the applicant. In *CA Sheimer (M) Sdn Bhd's Trade Mark Application*,<sup>209</sup> an application was made to register VISA for, *inter alia*, condoms and contraceptive devices. This was opposed by Visa International Service Association which operated the familiar Visa credit card. The

applicant had just surrendered an earlier registration for VISA for the same goods.<sup>210</sup> Geoffrey Hobbs QC, as the Appointed Person, found bad faith on the basis that the applicant's use of the mark would have been detrimental to the opponent's mark by altering perceptions of the mark negatively from the perspective of a provider of financial services. He said (at 506):

Visa International should not have to carry the burden of advertising condoms and prophylactics at the same time as it promotes its own services.

A finding that the applicant wanted to take advantage of the repute of the opponent's trade mark was sufficient to find bad faith even if an opposition under s 5(3) was not made out.<sup>211</sup>

The wording of s 3(6) is that the trade mark shall not be registered 'if or to the extent that the application is made in bad faith'. This suggests that, in appropriate cases, particular reference should be made in relation to the specification of goods or services for which registration had been requested. Thus, where an applicant makes a statement relating to the goods or services for which the mark is to be used which is over-ambitious, including goods or services in respect of which the mark is not being or is unlikely to be used, then the application might fail partially.<sup>212</sup> This poses a difficult problem for applicants who may want their registration to extend to goods or services that they *might* sell or supply in the future, perhaps as a result of business expansion or diversification. Too wide a coverage may be picked up by the examiner in the Trade Marks Registry or, more likely, by an opponent. Furthermore, in the future, an over-extensive specification of goods or services may give rise to proceedings for partial revocation under s 46 based on five or more years' non-use.

Another form of bad faith is where there is no intention to use the trade mark in the form applied for. In *BETTY'S KITCHEN CORONATION STREET Trade Mark*,<sup>213</sup> the specification of goods was far too wide but there was some use in respect of hot pot meals. However, the elements of the mark 'BETTY'S KITCHEN' and 'CORONATION STREET' were placed far apart on the packaging and the two elements were depicted in completely different styles. Overall, there was nothing to suggest that a single composite mark was intended. A further factor was that the applicant, Granada Television Ltd, knew of the opponents' registrations for 'BETTY'S KITCHEN' and, it was thought, had tried to modify its mark to put just sufficient distance between its mark and that of the opponents to achieve registrability. The above factors were such as to find that the applicant's behaviour fell below 'acceptable commercial behaviour' and the application was, therefore, made in bad faith.<sup>214</sup> The point was made in the case that some latitude in how a trade mark may be used is permissible but must not go so far as to undermine the desirability of a person consulting the Register to determine the protection afforded by registration.

The above case pushes forward the boundaries of bad faith in two senses. First, it may be bad faith to use a trade mark in a form which differs significantly from the form in which it is registered. However, without more, it is hard to see how that can be. Of course, it may be relevant to revocation on the grounds of non-use or infringement. The second sense is that the decision suggests that a deliberate attempt to get as near as possible to someone else's trade mark may constitute bad faith. But is it bad faith to get as near to another trader's mark *as it is lawful to do*? The case should be treated somewhat cautiously and it is submitted that the two elements, the fact of use in a very different form and motive, taken together may be evidence of bad faith but that might not be the case if only one element is present.

Bad faith in relation to the CTM Regulation<sup>215</sup> has been construed in a fairly narrow sense in the OHIM in *TRILLIUM Trade Mark*.<sup>216</sup> The First Cancellation Division said that:

<sup>210</sup> Proceedings had been initiated by the opponent for revocation on the grounds of non-use.

<sup>211</sup> Geoffrey Hobbs QC also said that s 3(6) did not require an application 'to submit an open-ended assessment of its commercial morality'. He had less faith in his suggestion that 'bad faith' had moral overtones and could apply in the absence of a breach of duty, obligation or prohibition legally binding on the applicant. He thought that guidance on this matter might be required from the Court of Justice.

<sup>212</sup> This was a successful ground of opposition in *BETTY'S KITCHEN CORONATION STREET Trade Mark* [2000] RPC 825.

<sup>213</sup> [2000] RPC 825.

<sup>214</sup> Another reason why the application was made in bad faith was that it was held that the applicant had no intention to use the mark over the range of goods specified. The applicant failed to show that it had made preparations to license third parties to use the mark in respect of the other goods.

<sup>215</sup> Council Regulation (EC) No 40/94 of 20 December 1993 on the Community trade mark, OJ L 11, 14.4.94, p 1.

<sup>216</sup> (Unreported) 28 March 2000, OHIM, Case No C000053447/1.

**217** In *Baume & Co Ltd v AH Moore* [1958] RPC 226, a case under the 1938 Act, Romer LJ said that the ‘truth is that a man is either honest or dishonest in his motives; there is no such thing, so far as we are aware, as constructive dishonesty’. This casts a doubt about the term ‘constructive fraud’ used in *TRILLIUM*.

**218** See the discussion of this by Pumfrey J in *Decon Laboratories Ltd v Fred Baker Scientific Ltd* [2001] RPC 293. In respect to the Community Trade Mark, the Chancery Division was acting as a Community Trade Mark Court.

**219** However, in *Knoll AG’s Trade Mark* [2003] RPC 175, Neuberger J thought that *TRILLIUM* was at one with the meaning of bad faith under the 1994 Act. Dishonesty, or at least something approaching dishonesty, was required for a finding that the application had been made in bad faith.

**220** 11 June 2009.

**221** However, in such a case, the third party may be able to successfully oppose the application or, if the mark is registered and he is sued later for trade mark infringement, raise a counterclaim based on passing off or unfair competition and/or seek a declaration of invalidity.

**222** *Ferrero SpA’s Trade Marks* [2004] RPC 583.

**223** *NONOGRAM Trade Mark* [2001] RPC 355.

Bad faith is the opposite of good faith, generally implying or involving, though was not limited to, actual or constructive fraud, or a design to mislead or deceive another, or any other sinister motive. Conceptually, bad faith can be understood as a dishonest intention.<sup>217</sup>

Under the CTM Regulation, unlike the Trade Marks Act 1994, there is no requirement for a statement by the applicant that the mark is being used by him or with his consent or that he has a *bona fide* intention that it will be so used.<sup>218</sup> This may explain the narrower approach and it may accord more with the law in the UK under the 1938 Act but the difficulty is, if dishonesty is the key to bad faith, contemplating how an application can be made partly in good faith and partly in bad faith.<sup>219</sup> The CTM Regulation allows revocation in respect of only some of the goods or services for which the mark is registered, as does the UK Act.

Further guidance was given by the Court of Justice in another case involving the CTM. In *Case C-29/07 Chocoladefabriken Lindt & Sprüngli AG v Franz Hauswirth GmbH*,<sup>220</sup> the defendant counter-claimed for invalidity of the claimant’s CTM on the ground that it had been applied for in bad faith. The trade mark was a shape mark in the form of a gold-coloured chocolate bunny, in a sitting position, wearing a red ribbon and a bell. It had been used for a number of years by the applicant but very similar chocolate bunnies wrapped in foil had been marketed by other undertakings for some time before the application was filed. The Court of Justice ruled that a determination of bad faith requires an assessment of all the factors relevant to the particular case. In a case such as the present one, this required consideration of:

- whether the applicant knows or must know that a third party was using, in at least one Member State, an identical or similar sign for identical or similar goods which was capable of being confused with the sign for which registration had been sought;
- whether the applicant’s intention was to prevent a third party from using that sign;
- the degree of legal protection enjoyed by the third party’s sign and the sign for which registration had been sought.

Intention is an important factor but the fact that the applicant for registration knew or must be taken to know of the existence and use of the third party sign was not, *per se*, sufficient for a finding of bad faith. The court did recognise that it might be possible that the applicant for registration had a legitimate motive, such as preventing a newcomer entering the market and using an identical or similar sign as that used for some time by the applicant for registration. A further factor in the case of shape marks is that bad faith may be more readily established where competitors are constrained from entering the market by reason of technical or commercial factors and offering comparable goods. This ruling must be treated with some caution and it is submitted that it was very much conditioned by the facts of the case. Obviously it will be bad faith to apply for a trade mark for the purpose of trying prevent a third party continuing to use a sign he has used for some time but failed to register as a trade mark.<sup>221</sup>

If an application has been made in bad faith, any subsequent event or transaction cannot cure it. The application must be viewed as at the time it is filed. Bad faith is judged at the time of the application but matters occurring later may be taken into account if they assist in determining the state of mind of the applicant at the time of the application.<sup>222</sup>

Where an application to register a trade mark was made by a person who was not entitled to the mark but the application was subsequently assigned to a person acting in good faith, the application must be refused.<sup>223</sup> The fact that the applicant knew he was not entitled to the mark was sufficient for a finding of bad faith even though that person claimed to be acting to protect the interests of the person rightfully entitled to the mark. It would also be bad faith to register a trade mark, having no existing title in the mark, with the intention of interfering with the rights of those who did have title

to the mark and had consistently used it.<sup>224</sup> Where a company director registered the company name as a trade mark in his own right and for his own personal interest, without the consent of the company, this would normally amount to a breach of the director's fiduciary duties and a court would usually grant relief by ordering that the trade mark be assigned to the company and the register rectified accordingly.

In *Ball v The Eden Project Ltd*,<sup>225</sup> the defendant was an operating company through which the 'The Eden Project', the famous tourist attraction in Cornwall, operated. The claimant was a co-founder of the project and a director of the company when he registered the trade mark 'The Eden Project' in his own name. A dispute had arisen about compensation payable to the claimant for his work on the project and he sought compensation under a *quantum meruit* with a promise to assign the trade mark and other intellectual property rights to the defendant upon payment of the sums due. It was held that the claimant was in breach of his fiduciary duty to the defendant company. An argument that the application had been made in bad faith was not alleged in the counterclaim as the defendant sought assignment of the trade mark rather than a finding of invalidity. However, had the circumstances been different, an application by a company director to register the company name as a trade mark for his own benefit would surely be deemed to have been made in bad faith.

<sup>225</sup> [2002] FSR 686.

## RELATIVE GROUNDS FOR REFUSAL

The Directive contains in Article 4 a number of 'further grounds for refusal or invalidity concerning conflicts with earlier rights'. The Trade Marks Act 1994 provides for these further grounds in s 5 (supplemented by the definition of 'earlier trade marks' in s 6) under the heading 'relative grounds for refusal of registration'.<sup>226</sup> This is one part of trade mark law where the UK Act is generally easier to follow than the provisions in the Directive which contain a number of options for Member States. The relative grounds for refusal of registration are so described because they depend on the relationship of the trade mark subject to the application with an earlier trade mark or other earlier right, such as an unregistered trade mark or a copyright.

<sup>226</sup> These grounds are also grounds for invalidity under s 47(2). The CTM Regulation also describes the equivalent grounds of refusal as 'relative grounds for refusal' in Article 8.

When the Trade Marks Act 1994 was enacted, it was possible for anyone to bring opposition proceedings, whether or not they were the proprietor of earlier conflicting trade marks or other rights.<sup>227</sup> Section 8 of the Act empowered the Secretary of State to restrict opposition applications only to those who were proprietors of earlier trade marks or other rights alleged to conflict with the mark applied for. This was to bring the UK in line with the position under the CTM Regulation where opposition can only be brought by the proprietor of the earlier trade mark or other earlier right which is the basis of opposition. The earliest time for making this change to UK law was 1 January 2006, that is, ten years after the first day for filing applications to register CTMs. With effect from 1 October 2007, by virtue of the Trade Marks (Relative Grounds) Order 2007,<sup>228</sup> only proprietors of earlier trade marks or other earlier rights may raise the relative grounds for refusal of registration. This must be done in opposition proceedings. Unless such opposition is raised, the Registrar shall not refuse to register a trade mark on the basis of the relative grounds for refusal under s 5. Furthermore, where opposition is based on an earlier trade mark registered for more than five years.<sup>229</sup> Before, these changes, in practice, the relative grounds for refusal were usually raised in opposition proceedings brought by proprietors of earlier trade marks or other earlier rights.

<sup>227</sup> Any person can make observations without becoming a party to the proceedings on the application under s 38(3). The observations can relate to any aspect and include observations on the absolute grounds for refusal also.

<sup>228</sup> SI 2007/1976.

<sup>229</sup> Section 6A, described in detail later. If the earlier trade mark has not been put to use within the preceding five years it is vulnerable to revocation under s 46.

Comparison of the further (relative) grounds for refusal under Article 4 with Article 5, setting out the rights conferred by a trade mark, shows some marked similarities between some of those further grounds and acts that infringe a registered trade mark. The Trade Marks Act 1994 is even clearer and comparison between s 5 and s 10 (in particular

s 5(1)–(3) and 10(1)–(3) are, in their different contexts, equivalent). This means that an application to register a sign as a trade mark, the use of which would infringe under s 10(1)–(3), should be refused on the basis of s 5(1)–(3), or the equivalent provisions in the Directive. The rationale for this is that it should limit the possibility of conflicting trade marks on the register and keep off the register trade marks which could be successfully challenged.<sup>230</sup>

The Court of Justice tends to treat the provisions in Article 4 and their equivalent in Article 5 the same and often rules on the pair of provisions together.<sup>231</sup> The Court also often notes the similarity with the equivalent provisions in the CTM Regulation.<sup>232</sup> Although the CTM Regulation is completely separate from national trade mark systems, as there are many similarities and, *mutatis mutandis*, identical provisions, it is sensible to adopt a common approach so that the Boards of Appeal at the OHIM and the Court of First Instance can refer to Court of Justice decisions on the Directive, even though they are not strictly binding. It is reasonable to assume that many cases on the relative grounds for refusal are helpful in interpreting the provisions on infringement and vice versa. There are numerous examples of cases on infringement and on the relative grounds being used in this way. This is particularly true in respect of whether there exists a ‘likelihood of confusion’ resulting from the use of the mark applied for or the use of the alleged infringing mark.

As some of the relative grounds depend on an earlier trade mark, before looking at the provisions in Article 4 in detail, it is worth looking at the definition of ‘earlier trade mark’ in Article 4(2) (s 6 of the Trade Marks Act 1994).

### Earlier trade mark

Article 4(2) defines an earlier trade mark as one having an earlier application date, taking any priority into account, being a Community trade mark, one registered in a Member State or at the Benelux Trade Mark Office<sup>233</sup> or registered under international arrangements having effect in the Member State.<sup>234</sup> Where the earlier trade mark has not yet been registered, it will be treated as an earlier trade mark subject to its registration. Also included are CTMs having a valid claim to seniority even though the CTM has been surrendered or allowed to lapse. Seniority applies where an applicant for a CTM already holds a valid national registered trade mark for identical goods or services. The applicant for the CTM can claim the seniority of that national trade mark, preserving his prior rights even if he subsequently surrenders or does not renew the national trade mark. The reason is that the CTM system is designed to complement national systems. Of course, once a CTM has been acquired, there seems little reason to renew a national registration for an identical mark used for identical goods or services. The Trade Marks Act 1994 has been modified to include also marks having seniority converted from a CTM or international trade mark designating the EC to a national registered mark or international registration designating the UK.

The CTM may now also be acquired by application through the Madrid Protocol,<sup>235</sup> with effect from 1 October 2004, the date of the accession of the European Community to the Madrid Protocol. As a result of this, the UK Trade Marks Act 1994 has been amended to include earlier international applications designating the EC.

Earlier well-known trade marks under Article 6bis of the Paris Convention for the Protection of Industrial Property 1883 also fall within the meaning of ‘earlier trade mark’. As a result of the Agreement establishing the World Trade Organisation (the ‘WTO Agreement’),<sup>236</sup> the UK Trade Marks Act 1994 has been modified to include also a reference to the WTO Agreement.<sup>237</sup> In determining whether a trade mark is well known, account is taken of the knowledge of it in the relevant sector of the public including knowledge obtained through promotion of it.<sup>238</sup> Section 56(1) of the Trade

<sup>230</sup> However, there remains a possibility of conflicting marks through consent on the part of the proprietor of an earlier trade mark or other right (Article 4(5) or s 5(5)) or honest concurrent use (s 7).

<sup>231</sup> See, for example, Case C-251/95 *Sabel BV v Puma AG, Rudolf Dassler Sport* [1997] ECR I-6191 and Case C-291/00 *L’Oréal Diffusion SA v Sadas Verbaudet SA* [2003] ECR I-2799.

<sup>232</sup> See, for example, Case C-353/03 *Société des Produits Nestlé SA v Mars UK Ltd* [2005] ECR I-6135.

<sup>233</sup> In the case of Belgium, Luxembourg or the Netherlands. This Office is now known as the Benelux Intellectual Property Office.

<sup>234</sup> For example, under the Madrid Protocol.

<sup>235</sup> The Madrid System (the Madrid Agreement and the Protocol to the Agreement) allows for the international application for trade marks in a number of different countries. The Madrid System is described in Chapter 22.

<sup>236</sup> Signed at Marrakesh 15 April 1994.

<sup>237</sup> Section 6(1)(c).

<sup>238</sup> Article 16 of the WTO Agreement on the Trade Related Aspects of Intellectual Property Rights.

Marks Act 1994 defines a well-known trade mark in terms of it being well known in the UK as the mark of a person who is a national of a Convention country or is domiciled in or has a real or effective industrial or commercial establishment in a Convention country. It does not matter if the trade mark is not used in the UK or that the proprietor of the trade mark has no goodwill in the UK.<sup>239</sup> All this means is that an application to register a trade mark can be challenged on the basis of a well-known trade mark registered in a country outside the EC, such as the US, even though there is no registration for that trade mark in any Member State or as a CTM.

Trade marks whose registration has expired are taken into account for a period of one year after expiry, unless the Registrar is satisfied there was no *bona fide* use during the two years immediately preceding the expiry.<sup>240</sup> The question arises as to whether an expired mark can be taken into account if it expired between the date an application is filed and the date the final decision as to registrability is made. This can be a problem if the time between application and final decision is lengthy. Consider the following example: an application is filed in October 2005 and a similar earlier trade mark lapsed in December 2005 and has not been renewed. Opposition proceedings based on the earlier trade mark take place in April 2007. At that time the lapsed mark cannot be restored. Therefore, if the relevant time for taking into account the expired mark is the time the application is filed for the new mark, the earlier trade mark must be taken into account. However, if the relevant time is the time the decision is made (April 2007), the earlier expired trade mark cannot be taken into account. The latter view was preferred in *TRANSPAY Trade Mark*<sup>241</sup> where it was accepted that it was proper to take account of developments such as the lapse of an earlier trade mark between the date of filing the application and the date the decision as to registrability is taken.

Before looking in detail at the relative grounds for refusal, Table 20.1 sets them out in summary form, by reference to the provisions in the Directive and the Act. Also included are the grounds for refusal based on earlier rights other than in respect of registered trade marks.

The relative grounds for refusal will now be looked at in detail.

<sup>239</sup> The proprietor may also be able to obtain injunctive relief in the UK under s 56(2).

<sup>240</sup> The provision in the Directive is Article 4(4)(f) which sets the period after expiry at a *maximum* of two years.

<sup>241</sup> [2001] RPC 191.

**Table 20.1** Relative grounds for refusal

Directive (Article)	Trade Marks Act 1994 (section)	Relationship with earlier mark	Relationship with goods or services for which earlier mark registered or earlier right used	Proof of likelihood of confusion	Notes
4(1)(a)	5(1)	Identical	Identical	No	Unregistrable <i>per se</i> .
4(1)(b)	5(2)	Identical	Similar	Yes	
		Similar	Identical or similar	Yes	
4(3) & 4(4)(a)	5(3)	Identical or similar to earlier trade mark having a reputation	None required*	No	Must take unfair advantage of, or be detrimental to the distinctive character or repute of the earlier trade mark
4(4)(b)	5(4)(a)	Nothing specific but use can be prohibited	Probably similar or same field of activity at least	Deception, probably	If prevented by law, in particular, passing off
4(4)(c)	5(4)(b)	Nothing specific but use can be prohibited	Depends on relevant rights and infringement	No	Other earlier right such as a copyright, design right or registered design

\* Although the Directive states that the goods or services must be 'not similar', in Case C-292/00 *Davidoff & Cie SA v Gofkid Ltd* [2003] ECR I-389, the Court of Justice held that the provision also applied in the case of identical and similar goods or services. The UK Trade Marks Act 1994 was amended accordingly.

### Article 4(1)(a) – identical trade mark, identical goods or services

There is no need to enquire into the effect of using the mark for which registration is sought for the purposes of Article 4(1)(a) as it is simply a question of whether it is identical to an earlier trade mark and is intended to be used for identical goods or services. Where there is complete identity of the sign and the trade mark and the goods or services, a likelihood of confusion is presumed.<sup>242</sup> Article 4(1)(a) states that a trade mark shall not be registered, or, if registered, shall be liable to be declared invalid:

... if it is identical with an earlier trade mark, and the goods or services for which the trade mark is applied for or is registered are identical with the goods or services for which the earlier trade mark is protected.

As one might imagine, this ground of refusal is quite rare. Anyone applying to register a trade mark will probably have the benefit of a trade mark search and will be aware of any potential conflict under this head. It makes little sense to attempt to register a mark identical with an earlier trade mark with the intention of using it in relation to the same goods or services.

The scope of the ground for refusal depends on how much it is possible to depart from complete identity of the marks and/or goods and services and it might be expected that very slight modifications that would tend not to be noticed in practice should be ignored. At the end of the day, the question whether a sign is identical to an earlier trade mark is a question of fact for the national court to decide but the Court of Justice has given some guidance on the matter. In Case C-291/00 *LTJ Diffusion SA v Sadas Vertbaudet SA*,<sup>243</sup> the claimant argued that the defendant's trade mark infringed its trade mark. Both parties' trade marks were registered in France for clothing, the claimant's being the earlier trade mark which was the word 'Arthur' in a stylised form appearing like a signature. The defendant's trade mark was 'Arthur et Félicie' in normal type. The Court of Justice referred to the ruling in Case C-342/97 *Lloyd Schuhfabrik Meyer & Co GmbH v Klisjen Handel BV*<sup>244</sup> (at para 29) to the effect that:

... the perception of identity between the sign and the trade mark must be assessed globally with respect to an average consumer who is deemed to be reasonably well informed, reasonably observant and circumspect. The sign produces an overall impression on such a consumer. That consumer only rarely has the chance to make a direct comparison between signs and trade marks and must place his trust in the imperfect picture of them that he has kept in his mind. Moreover, his level of attention is likely to vary according to the category of goods or services in question.

On that basis, the Court of Justice concluded that the marks did not have to be completely identical in all respects and '... a sign is identical to a trade mark where it reproduces, without any modification or addition, all the elements constituting the trade mark or where, viewed as a whole, it contains differences so insignificant that they may go unnoticed by an average consumer'. However, the Court of Justice did note that the criterion must be interpreted strictly<sup>245</sup> so that the absolute protection afforded by Article 5(1)(a) (the equivalent provision on infringement) should not be extended to situations that properly fell within Article 5(1)(b) where a likelihood of confusion is required.

In the UK, it has been accepted that applying to register a trade mark which is identical to an earlier trade mark but to which additional material has been added may be caught by this ground of refusal. For example, in *Decon Laboratories Ltd v Fred Baker Scientific Ltd*,<sup>246</sup> it was held that the use of an identical sign with a suffix descriptive of the nature and quality of the goods was use of an identical sign.<sup>247</sup> The claimant's registered trade mark was the word 'Decon' and the defendants used signs such as 'Decon-Phene', 'Decon-Phase' and 'Decon-Clean'. However, in *Compass Publishing BV v*

<sup>242</sup> Case C-245/02 *Anheuser-Busch Inc v Budejovicky Budvar* [2004] ECR I-10989 at para 8.

<sup>243</sup> [2003] ECR I-2799.

<sup>244</sup> [1999] ECR I-3819.

<sup>245</sup> This seems to contradict the 'imperfect picture' test. The opacity of the judgment in this respect was noted by Jacob LJ in *Reed Executive plc v Reed Business Information Ltd* [2004] RPC 767 at para 25.

<sup>246</sup> [2001] RPC 293.

<sup>247</sup> Unlike the relative grounds, which refer to registration of a trade mark, the equivalent parts of s 10 refer to the use of a sign, for obvious reasons.

*Compass Logistics Ltd*,<sup>248</sup> it was held that ‘COMPASS LOGISTICS’ was not identical to ‘COMPASS’ as the differences were apparent and the public would distinguish them without prior coaching. The question is what was the name that the public would perceive as being the trade mark. This might depend on the nature of the use made of the mark. That is not to say, of course, that there might be a likelihood of confusion between the two marks and objection could be taken under the grounds for refusal where there is not complete identity of the marks and goods or services. In *IDG Communications Ltd’s Trade Mark Application*,<sup>249</sup> the hearing officer in the Trade Marks Registry held that ‘DIGIT’ and ‘digits’ were not identical though clearly very similar.<sup>250</sup>

Ignoring inconsequential alterations such as additions that do not affect the dominant character of a trade mark seems reasonable, especially as some persons might be likely to abbreviate the full trade mark and end up referring to the goods or services by the most distinctive part which may be identical to the earlier trade mark. It is also likely that slight changes will not be sufficient to overcome this ground of refusal, particularly if the test in *LTJ Diffusion* applies so that the average consumer, with his imperfect recollection of the marks, is likely not to notice the differences.<sup>251</sup> The point might seem academic because, if the sign for which registration is sought is not identical to the earlier trade mark, the next ground for refusal should apply, where a similar sign is used for identical or similar goods. However, this ground of refusal, like the equivalent form of infringement, requires a likelihood of confusion to be present. That being so, when challenging an application to register a sign as a trade mark which is very similar to, or differs only in insignificant details from, an earlier trade mark, it will be usual to base opposition on both Article 4(1)(a) and (b) (or, in the UK, on the basis of s 5(1) and (2)).

As a little leeway is possible when considering whether a sign is identical to an earlier trade mark, the same ought to apply to the description of goods and services. However, the difference should be so slight as to go unnoticed in the normal course of events, bearing in mind the ground of refusal where there is not complete identity of the sign and the earlier trade mark and the goods or services is present. In *GALILEO Trade Mark*,<sup>252</sup> Professor Ruth Annand, as the Appointed Person, held that overlapping specifications would satisfy the test of identical goods or services but there was no need for them to co-extend. As a likelihood of confusion is presumed where there is complete identity of the sign and the earlier trade mark and the goods or services, the ground of refusal under Article 4(1)(a) should be reserved for those cases where a significant proportion of consumers would think there was complete identity given that it has been accepted that consumers do not usually make a direct comparison between the sign and the earlier trade mark.<sup>253</sup>

In *Reed Executive plc v Reed Business Information Ltd*,<sup>254</sup> Jacob LJ did not think that ‘Reed Business Information’ was identical to ‘Reed’. The claimants provided employment agency services and the defendants had a recruitment website, said to be the electronic analogue of job advertisements found in the job sections of numerous publications. It was held that the services were not identical. The defendants were not operating as employment agents who put potential employees in touch with employers. Whether a person consulting the website contacted an employer advertising there was unknown to the defendants and their remuneration was unaffected by whether this happened.

### Article 4(1)(b) – incomplete identity of mark and goods or services

This ground for refusal is fairly common and often used in opposition or invalidity proceedings and has generated a considerable amount of case law, both in the Court of Justice and in the UK courts. It applies in circumstances as indicated in Table 20.2.

<sup>248</sup> [2004] RPC 809.

<sup>249</sup> [2002] RPC 283.

<sup>250</sup> However, the Hearing Officer applied the decision of Simon Thorley QC, as the Appointed Person, in *Baywatch Trade Mark Application* (unreported) 12 November 1999, Trade Marks Registry, where he said that ‘identical’ should be given its normal English meaning. This case pre-dated the Court of Justice decision in *LTJ Diffusion* and must now be doubted on this point.

<sup>251</sup> In *WEBSPHERE Trade Mark* [2004] FSR 796, it was held that ‘WEBSPHERE’ was identical to ‘Websphere’, applying the imperfect recollection test and also considering the aural and conceptual similarities.

<sup>252</sup> [2005] RPC 569.

<sup>253</sup> Case C-342/97 *Lloyd Schuhfabrik Meyer & Co GmbH v Klisjen Handel BV* [1999] ECR I-3819.

<sup>254</sup> [2004] RPC 767.

**Table 20.2** Grounds for refusal under Article 4(1)(b)

<i>Relationship between the sign applied for and the earlier trade mark</i>	<i>Relationship between the goods or services for which the sign is intended to be used and those for which the earlier trade mark is used</i>
Identical	Similar
Similar	Identical
Similar	Similar

Article 4(1)(b) states that a trade mark shall not be registered or, if registered, shall be liable to be declared invalid:

... if because of its identity with, or similarity to the earlier trade mark and the identity or similarity of the goods or services covered by the trade marks, there exists a likelihood of confusion on the part of the public, which includes the likelihood of association with the earlier trade mark.

Article 4(1)(b) would seem to include the case where there is complete identity (unlike the position under the equivalent provision, s 5(2), in the Trade Marks Act 1994, which does not). This is an unnecessary possibility given the presence of Article 4(1)(a) and the Court of Justice's view that, in a case of complete identity, a likelihood of confusion is presumed. As the protection afforded by a trade mark is absolute in the case of the use of an identical sign for identical goods or services,<sup>255</sup> this reinforces the view that the inclusion of complete identity in Article 4(1)(b) is no more than the result of clumsy drafting.

<sup>255</sup> Article 5(1)(a) and the tenth recital to the Directive.

As there is incomplete identity for Article 4(1)(b), this explains the need for showing a likelihood of confusion on the part of the public. One difficulty with this was the addition of the phrase 'which includes a likelihood of association'. Previously, under the Benelux trade mark system, it was considered that this extended to 'non-origin association': that is, where consumers are not deceived as to the origin of the goods or services but the use of the offending sign conjures up in the mind of the consumer the owner of the earlier trade mark. This might be because of some similarity between the sign applied for and an earlier trade mark, perhaps being a different word written in a similar stylised form as the earlier trade mark or having a similar semantic content: for example, if someone attempted to register a device and word mark comprising the word 'Pixie' and a drawing of a walking baby wearing a nappy, used for soaps and detergents. Even if consumers would not think it came from the same stable as Fairy washing up liquid, it would be likely to conjure that product up in their minds.

Where the similarity with an earlier trade mark results only from elements disclaimed in that earlier trade mark, there can be no similarity if no other elements are the same or similar. In *TORREMAR Trade Mark*,<sup>256</sup> the opponent's trade marks had been registered with the right to exclusive use of the word 'TORRES' disclaimed. There was no other similarity between the opponent's earlier trade marks and the mark now applied for.

<sup>256</sup> [2003] RPC 89.

The first time the relevance of 'likelihood of association' and its impact on the scope of 'likelihood of confusion on the part of the public' was considered judicially was in the Chancery Division of the High Court *Wagamama Ltd v City Centre Restaurants plc*,<sup>257</sup> in which Laddie J rejected the notion that the composite phrase included non-origin association in the absence of confusion as to the origin of the goods or services. Soon after, the Court of Justice agreed in Case C-251/95 *Sabel BV v Puma AG, Rudolf Dassler Sport*,<sup>258</sup> ruling (at para 26) that:

<sup>257</sup> [1995] FSR 713.

<sup>258</sup> [1997] ECR I-6191.

... the mere association which the public might make between two trade marks because of their analogous semantic content [images of bounding felines in this particular case] is not in itself a sufficient ground for concluding that there is a likelihood of confusion ...

However, the court also said that the more distinctive the earlier mark, the greater will be the likelihood of confusion, adding (at para 24):

... it is therefore not impossible that the conceptual similarity resulting from the fact that two marks use images with analogous semantic content may give rise to a likelihood of confusion where the earlier mark has a particularly distinctive character, either *per se* or because of the reputation it enjoys with the public.

Thus, we can say that likelihood of association is not sufficient by itself to give rise to a likelihood of confusion but confusion as to origin might result from the association the public makes between a very distinctive mark and the mark applied for.

In Case C-425/98 *Marca Mode CV v Adidas AG*,<sup>259</sup> the Court of Justice clarified the ruling in *Sabel* saying that:

259 [2000] ECR I-4861 at para 39.

The negative formulation 'it is therefore not impossible' [used in *Sabel*] simply underlines the possibility that a likelihood may arise from the conjunction of the two factors analysed. It in no way implies a presumption of likelihood of confusion resulting from the existence of a likelihood of association in the strict sense. By such wording, the Court referred by implication to the assessment of evidence which the national court must undertake in each case pending before it. It did not excuse the national court from the necessary positive finding of the existence of a likelihood of confusion which constitutes the matter to be proved.

Having accepted that non-origin association, *per se*, is an insufficient basis for a finding of a likelihood of confusion, the precise scope of that term can be considered. There is ample guidance from the Court of Justice. Again, Case C-251/95 *Sabel BV v Puma AG, Rudolf Dassler Sport*,<sup>260</sup> is instructive. There it was said that the determination of whether there is a likelihood of confusion requires a global appreciation of the visual, aural or conceptual similarity of the marks based on the overall impression given by them, bearing in mind their distinctive and dominant components. In this respect, the perception of the average consumer plays a decisive role in that global appreciation and the more distinctive the mark, the greater will be the likelihood of confusion. A further point was that the court was of the opinion that the average consumer normally perceives a trade mark as a whole and does not proceed to analyse its various details.

260 [1997] ECR I-6191.

The *Sabel* case has been approved on numerous occasions. In Case C-39/97 *Canon Kabushiki Kaisha v Metro Goldwyn Mayer Inc*,<sup>261</sup> the Court of Justice confirmed that:

261 [1998] ECR I-5507 at para 17.

A global assessment of the likelihood of confusion implies some interdependence between the relevant factors, and in particular a similarity between the trade marks and between these goods or services. Accordingly, a lesser degree of similarity between these goods or services may be offset by a greater degree of similarity between the marks, and *vice versa*.

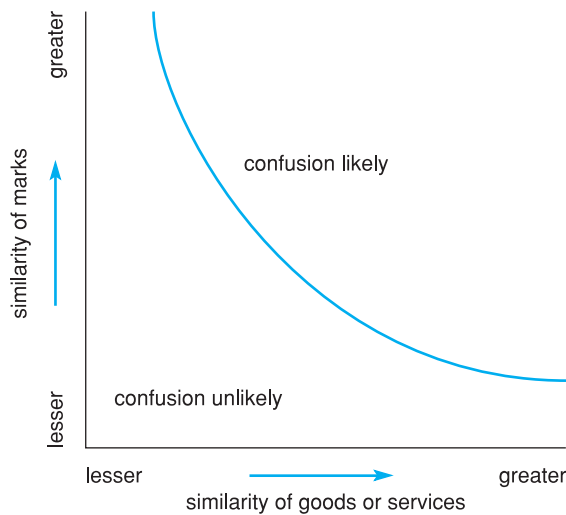

This suggests a two-axis approach to determining whether there is a likelihood of confusion, as indicated in Figure 20.1. Where, of course, both the marks and the goods or services are very similar, there will be little doubt that a likelihood of confusion exists. Where the distinctiveness of the earlier mark is very strong, that may lessen the degree of similarity required but it does not eliminate it altogether.<sup>262</sup> There is, however, no minimum threshold level of similarity which has to be established before consideration of whether there existed a likelihood of confusion.<sup>263</sup> As Jacob LJ said in *esure Insurance Ltd v Direct Line Insurance plc*<sup>264</sup> (at para 71):

262 *Sihra's Trade Mark Application* [2003] RPC 789.

263 *esure Insurance Ltd v Direct Line Insurance plc* [2008] ETMR 1258, overturning Lindsay J on this point.

264 [2008] ETMR 1258.

The Judge's attempt to analyse what is essentially a question of fact into 'a threshold', albeit low test, followed by a further consideration of the position seems to me to complicate things unnecessarily. It is all a question of fact and degree and no more.

**Figure 20.1** Confusion and similarity of marks and goods or services

In respect of confusion, the relevant section of the public may be confused about the place where goods are produced but, even then, there can be no likelihood of confusion if the relevant section of the public does not believe that the goods come from the same undertaking or economically linked undertakings (for example, in the case of a subsidiary company).<sup>265</sup> This was held in Case C-39/97 *Canon Kabushiki Kaisha v Metro Goldwyn Mayer Inc.*<sup>266</sup> Confusion requires that the relevant section of the public believes the goods or services came from the same undertaking or economically linked undertakings. Again, the basic function of a trade mark, to operate as an indicator of origin,<sup>267</sup> would not be fulfilled in such a case.

The leading case before the Court of Justice which looks at the likelihood of confusion is Case C-342/97 *Lloyd Schuhfabrik Meyer & Co GmbH v Klisjen Handel BV.*<sup>268</sup> This case reinforces the *Sabel* and *Canon* cases and the ‘global assessment’ approach and also confirms that an aural similarity might suffice.<sup>269</sup> The court declined to set a percentage threshold at which a likelihood of confusion would exist. Emphasis was placed on the inherent characteristics of the mark and whether it contained descriptive elements. In Case C-120/04 *Medion AG v Thomson Multimedia Sales Germany & Austria GmbH*<sup>270</sup> the trade marks in question were ‘LIFE’ and ‘THOMSON LIFE’, both used for leisure and electronic devices. The Court of Justice ruled that, where the goods are identical, juxtaposing a company name with an earlier trade mark could result in a likelihood of confusion, where the latter still has an independent and distinctive role in the composite mark.

The use of a disclaimer displayed where goods are sold does not prevent the possibility of a finding that there is a likelihood of confusion. There may be a wider circle of consumers who do not buy the goods themselves: for example, where they are bought as presents or the goods are seen by others after sale.<sup>271</sup> The position is less clear where the disclaimer is part of the trade mark itself. However, trying to register a trade mark such as ‘NOT CADBURY’S’ to be used with confectionery would surely be caught by Article 4(1)(a) as it probably would be considered to be use of a sign identical with the Cadbury trade mark.<sup>272</sup>

In *BETTY’S KITCHEN CORONATION STREET Trade Mark*,<sup>273</sup> due to the fact that it could be shown that a sufficient number of people would be confused (because of their lack of detailed knowledge of the television soap and the character Betty Turpin), the application to register the trade mark could not be saved by showing that there was

<sup>265</sup> It seems also that a belief in the existence of a licence agreement or a joint venture is sufficient for a belief that the undertakings are economically linked: Case C-9/93 *IHT Internationale GmbH v Ideal Standard GmbH* [1994] ECR I-2789 and Case C-63/97 *Bayerische Motorenwerke AG v Ronald Karel Deenik* [1999] ECR I-905.

<sup>266</sup> [1998] ECR I-5507 at paras 29 and 30.

<sup>267</sup> See the tenth recital to the Directive.

<sup>268</sup> [1999] ECR I-3819, a reference from the Landgericht in Munich.

<sup>269</sup> The marks in question were LLOYD’S and LOINT’S.

<sup>270</sup> [2005] ECR I-8551.

<sup>271</sup> Although concerned with the use of an identical sign for identical goods, this view formed part of the Court of Justice’s reasoning in Case C-206/01 *Arsenal Football Club plc v Matthew Reed* [2002] ECR I-10273.

<sup>272</sup> Case C-291/00 *LTJ Diffusion SA v Sadas Verbaudet SA* [2003] ECR I-2799, above.

<sup>273</sup> [2000] RPC 825.

another group of people who, because of their detailed knowledge of the programme, would not be confused.

There have been a number of cases in the UK on likelihood of confusion. Almost invariably, the above Court of Justice cases have been applied rigidly. However, in *ENER-CAP Trade Mark*,<sup>274</sup> having had his attention drawn to the *Sabel* case, the Appointed Person, Simon Thorley QC, thought that it gave guidelines but did not provide much assistance in identifying the criteria to be applied. For rules of comparison, he turned to the former law under the 1938 Act, citing, *inter alia*, Parker J in *Pianotist Co's Application*,<sup>275</sup> where he suggested the following factors should be taken into account for word marks:

274 [1999] RPC 362.

275 (1906) 23 RPC 774 at 777.

- the look and sound of the words;
- the goods to which the marks were applied;
- the nature and kind of customer (for example, trade customers would be less likely to be confused as to origin than ordinary consumers);
- the surrounding circumstances;
- a consideration of what would be likely to happen if both marks were to be used.

Jacob J further developed these factors in *British Sugar plc v James Robertson & Sons Ltd*,<sup>276</sup> being:

276 [1996] RPC 281 at 296.

- (a) the respective uses of the respective goods;
- (b) the respective users of the respective goods;
- (c) the physical nature of the goods;
- (d) the respective channels of trade;
- (e) in the case of self-serve consumer items, where in practice they are respectively found or likely to be found in supermarkets and in particular whether they are, or are likely to be, found on the same or different shelves;
- (f) the extent to which the respective goods or services are competitive. This inquiry may take into account how those in trade classify goods – for instance, whether market research companies, who of course act for industry, put the goods or services in the same or different sectors.

However, in *LIFESYSTEMS Trade Mark*,<sup>277</sup> the Hearing Officer said that, in the light of the *Canon* case, such factors could only be general guidance. Nevertheless, he applied those of Jacob J's factors relevant in that case. It is submitted that these factors, though of earlier pedigree, will continue to prove useful under the 1994 Act. They provide detailed criteria which may prove helpful in deciding whether there is a likelihood of confusion in fact, providing the factors are seen in the context of the Court of Justice decisions: in particular, in *Sabel*, *Canon* and *Lloyd*.

277 [1999] RPC 851.

The Hearing Officer in *CODAS Trade Mark*<sup>278</sup> usefully summarised the test for likelihood of confusion derived from the Court of Justice cases, saying that it was clear from these cases that:

278 [2001] RPC 240 at 246.

- the likelihood of confusion must be appreciated globally, taking account of all relevant factors (perhaps these could at least include the factors identified by Jacob J above);
- the matter must be judged through the eyes of the average consumer, of the goods/services in question, who is deemed to be reasonably well informed and reasonably circumspect and observant – but who rarely has the chance to make direct comparisons between marks and must instead rely upon the imperfect picture of them he has kept in his mind;
- the average consumer normally perceives a mark as a whole and does not proceed to analyse its various details;<sup>279</sup>

279 Case C-251/95 *Sabel BV v Puma AG, Rudolf Dassler Sport* [1997] ECR I-6191 at para 23. Under the old UK law, Evershed J said in *Smith Hayden Co's Application* (1946) 63 RPC 97 at 102 that 'It is not profitable . . . to indulge in a minute analysis of letters and syllables, a process indeed notoriously productive of confusion in regards to words.'

- the visual, aural and conceptual similarities of the marks must therefore be assessed by reference to the overall impression created by the marks bearing in mind their distinctive and dominant components;
- a lesser degree of similarity between the marks may be offset by a greater similarity between the goods (or services), and vice versa;
- there is a greater likelihood of confusion where the earlier trade mark has a highly distinctive character, either *per se*, or because of the use that has been made of it.

Extensive use of a trade mark does not, *per se*, prove that it is distinctive but the less use that has been made of a trade mark, the more the protection afforded will be limited to the inherent distinctiveness of the trade mark. For use to be relevant to distinctiveness, that use must have been in a distinctive sense to have any material effect.<sup>280</sup> In fact, if there has been no such use in respect of a mark lacking inherent distinctiveness, it is likely to be refused under the absolute grounds of refusal.

<sup>280</sup> Per Morritt LJ in *BACH and BACH FLOWER REMEDIES Trade Marks* [2000] RPC 513 at 530.

Where part of a word trade mark is descriptive or has a common meaning or is the same as part or all of an earlier word mark, it might be thought that this might have an impact on whether confusion is likely. However, the decision in *Sabel* shows us that, for the purposes of finding whether a likelihood of confusion exists, the marks must be compared as a whole rather than comparing similarities and differences in the detail of the marks. A mark may still possess sufficient distinctiveness notwithstanding an element which is common or the same as an element of another mark. In *POLACLIP Trade Mark*,<sup>281</sup> the opponent's mark was POLAROID. It was held that POLACLIP was registrable as the two words were unlikely to be confused even allowing for imperfect recollection and some slurring of speech when pronouncing the words. In the absence of evidence to the contrary, the public were more likely to take POLACLIP to mean polarising clip-on sunglasses rather than an abbreviated form of POLAROID clip-on sunglasses. Of course, when comparing two marks (as is usual in opposition proceedings) if both marks contain descriptive elements, the protection they will enjoy is limited. As the Hearing Officer said in *TRANSPAY Trade Mark*<sup>282</sup> when comparing TRANSPAY and TRANSCHEQ:

<sup>281</sup> [1999] RPC 282.

<sup>282</sup> [2001] RPC 191 at 200.

... the two trade marks, *prima facie*, consist of descriptive terms or at least terms which individually lack distinctiveness. The penumbra of protection each deserves is, therefore, in my view, very limited.

He went on to hold that the mark applied for 'TRANSPAY' was nevertheless registrable as, although the marks had a common prefix 'TRANS' (which might be understood as short for 'transfer'), they had different suffixes and the public was unlikely to be confused. Another example is the case of *10 Royal Berkshire Polo Club Trade Mark*<sup>283</sup> which was opposed by Polo Lauren Club LP, which had a registered trade mark POLO for similar goods including perfumery and shampoos. It was held that the semantic content of the marks was not such as to give rise to a belief that the opponent's goods and the applicant's goods came from the same undertaking or economically linked undertakings.<sup>284</sup>

<sup>283</sup> [2001] RPC 643.

<sup>284</sup> In the opponent's trade mark the word POLO was used as a noun whilst, in the applicant's mark, it was used adjectively. The fact that the public would be very unlikely to fail to notice the other words in the applicant's trade mark was an important factor.

The application of the test of likelihood of confusion, either in opposition or infringement proceedings, is fraught with difficulties and will depend on the circumstances of each particular case and will be heavily influenced by evidence of confusion (or lack of it) before the court. Unfortunately, the outcome will be difficult to predict in a good proportion of cases, particularly in opposition proceedings where the applicant for registration may not have had the benefit of using his trade mark previously or to any reasonable extent and this will make the task of adducing convincing evidence to the effect that there is not a likelihood of confusion considerably more difficult, especially as an opponent is likely to adduce evidence to the contrary, possibly in the form of a survey.

### Article 4(3) and (4)(a) – unfair advantage of or damage to repute of trade mark having a reputation

Under the Directive, Article 4(3) provides for a ground of refusal where there is an earlier CTM having a reputation where the use of a sign (being identical or similar to the CTM) for which registration is sought without due cause would take unfair advantage of, or be detrimental to, the distinctive character or the repute of the earlier CTM. Article 4(4)(a) provides that Member States may also have a ground for refusal (and invalidity) in similar circumstances where the sign for which registration is sought is identical or similar to an earlier national trade mark.<sup>285</sup> Both these grounds for refusal, and the equivalent provisions on infringement,<sup>286</sup> are based on the application to register being in respect of goods or services that are *not similar* to those for which the earlier CTM or national trade mark is registered. We shall see that the requirement that the goods or services are not similar is misleading and, as a result of Court of Justice rulings, it matters not whether the goods or services are identical, similar or not similar for these grounds of refusal (and invalidity) to apply.<sup>287</sup> It appears that the word ‘similar’ has the same meaning in this context as with Article 4(1)(b) where there is not complete identity of signs and goods or services.<sup>288</sup>

Where the ground under Article 4(1)(b) applies, it is almost certain that a finding under Article 4(3) will follow. For if there is a likelihood of confusion, it is just about inevitable that there will be unfair advantage of or detriment to the well-known trade mark.<sup>289</sup>

The UK elected to extend this ground of refusal to national trade marks as well as CTMs<sup>290</sup> as permitted by the Directive under Article 4(4)(a). The Trade Marks Act 1994 s 5(3), as amended applies in respect of earlier trade marks having a reputation in the UK or, in the case of CTMs or international trade marks designating the EC, within the Community. The section now makes no distinction as to whether the goods or services are identical, similar or non-similar. The reason for the change was a reference for a preliminary ruling to the Court of Justice on the scope of Article 4(4)(a) and the equivalent infringement provision under Article 5(2) in Case C-292/00 *Davidoff & Cie SA v Gofkid Ltd*.<sup>291</sup> In that case, referred by the Bundesgerichtshof in Germany, the Swiss-based claimant used the trade mark ‘Davidoff’ in relation to high-class goods. The defendant, established in Hong Kong, used a word and device mark ‘Durrfee’, which was alleged to be similar to the Davidoff trade mark, for a range of goods which were partly identical and partly similar to those of the claimant. It was claimed that the defendant had tried to take unfair advantage of the prestige value of the claimant and there would be damage to the reputation of its trade mark as persons do not tend to associate high-quality goods with China.

The Court of Justice ruled that Articles 4(4)(a) and 5(2) applied also in a situation where the goods and services were identical or similar to those for which the earlier trade mark was registered. The justification was that, on the basis of the overall scheme and objectives of the system of which the Directive is a part, the wording in the Articles in question should not be interpreted solely on the basis of their wording; otherwise, trade marks having a reputation would be afforded lesser protection where the goods or services were identical or similar than where they were not similar. Undoubtedly, it was the intention when the Directive was being drafted to provide additional protection (and corresponding additional grounds for refusal) for trade marks having a reputation to protect that reputation from ‘blurring’ (taking unfair advantage by seeking to ride on the back of the reputation) or ‘tarnishing’ or ‘denigrating’ (damaging the reputation, for example, by using a mark for inferior or distasteful goods or services).<sup>292</sup> It was probably also considered that the use of signs identical or similar to the earlier trade mark for identical or similar goods would be caught by the other grounds for

<sup>285</sup> Unlike Article 4(3), this is expressed as being a ground for refusal or invalidity to the extent that without due cause the trade mark takes unfair advantage of or is detrimental to the repute of the earlier trade mark.

<sup>286</sup> Article 5(2).

<sup>287</sup> The Trade Marks Act 1994 has been amended to take account of these rulings: below.

<sup>288</sup> *CREDITMASTER Trade Mark* [2005] RPC 551.

<sup>289</sup> *esure Insurance Ltd v Direct Line Insurance plc* [2008] ETMR 1258.

<sup>290</sup> This accords with the CTM Regulation (see Article 8(5)) and also Benelux trade mark law.

<sup>291</sup> [2003] ECR I-389.

<sup>292</sup> See Chapter 21 for examples of blurring and tarnishing.

refusal or forms of infringement, as the case might be. For some reason, those drafting the Directive did not foresee a situation, for example, where the goods or services were identical or similar and the sign was similar to the earlier trade mark, but there was no likelihood of confusion.

293 [2003] ECR I-12537.

Case C-408/01 *Adidas-Salomon AG v Fitnessworld Trading Ltd*<sup>293</sup> confirmed the finding in *Davidoff v Gofkid* in relation to Article 5(2) that identical and similar goods or services were also caught and the provision was not limited to goods or services that are not similar, despite the express words used. The Court of Justice also confirmed in that case that, for Article 5(2), there was no need to show any likelihood of confusion and this was sufficient if the similarity between the sign and the trade mark having a reputation was such as to establish a link between the sign and the mark in the minds of the relevant public.<sup>294</sup> The same considerations must apply to Article 4(3) and (4)(a). Of course, without that link there can be no unfair advantage or damage to the repute of the earlier trade mark. In *Intel Corp Inc v CPM United Kingdom Ltd*,<sup>295</sup> invalidity proceedings were brought by the Intel Corp Inc (proprietor of the ‘INTEL’ mark for computers and the like) against the registration of ‘INTELMARK’ for marketing and telemarketing services. The ground relied upon was that INTELMARK took unfair advantage of and was detrimental to the distinctive character of INTEL by gradually whittling away the distinctive character of the INTEL mark, a case of dilution. The application for invalidity failed and Intel Corp Inc appealed to the Court of Appeal, which referred a number of questions to the Court of Justice for a preliminary ruling. The first question was, where:

294 The Court of Justice also said that where the sign is seen purely as an embellishment to the trade mark having a reputation, that is not sufficient to establish the required link.

295 [2007] RPC 846.

- (a) the earlier mark has a huge reputation for certain specific types of goods or services;
- (b) those goods or services are dissimilar or dissimilar to a substantial degree to the goods or services of the later mark;
- (c) the earlier mark is unique in respect of any goods or services; and
- (d) the earlier mark would be brought to mind by the average consumer when he or she encounters the later mark used for the services of the later mark,

Are those facts sufficient in themselves to establish (i) ‘a link’ within the meaning of [*Adidas-Salomon*] and/or (ii) unfair advantage and/or detriment within the meaning of [Article 4(4)(a)]?

The Court of Appeal thought that the answer should be no, otherwise trade mark law would be ‘oppressive and all powerful’. But, if the answer was no, further guidance was sought as to what factors should be taken into account. The Court of Appeal was also of the view that a trade mark’s distinctive character or repute must be judged in relation to the goods or services for which it was registered and Article 4(4)(a) did not call for an enquiry about whether distinctiveness was affected generally. However, it is instructive to remind ourselves that the wording of Article 4(4)(a) mentions goods or services which are not similar to those for which the earlier trade mark is registered and this suggests an investigation as to whether distinctiveness is affected generally, irrespective of the goods and services. By extending the provision to identical and similar goods or services, *Davidoff v Gofkid* and *Adidas-Salomon* did not strike out the reference to non-similar goods and services. Cases on infringement under Article 5(2),<sup>296</sup> discussed in the next chapter and the other ‘INTEL’ case below, suggest that the Court of Appeal’s preferred view is at odds with these cases and also incompatible with the law of passing off which can apply to use for non-similar goods or services where there is a danger of dilution of the claimant’s goodwill.<sup>297</sup>

296 The equivalent provision on infringement.

297 See, in particular, *Taittinger SA v Allbev Ltd* [1993] FSR 641, discussed in Chapter 23.

298 [2009] ETMR 233.

The Court of Justice ruling in Case C-252/07 *Intel Corporation Inc v CPM United Kingdom Ltd*,<sup>298</sup> confirmed that a global assessment is called for, taking into account all the factors relevant to the circumstances of the case, in order to establish whether there is a link in the *Adidas-Salomon* sense. If, for the average consumer, who is reasonably

well-informed and reasonably observant and circumspect, the later mark calls into mind the mark with a reputation, this is tantamount to the existence of such a link. The same 'global assessment test' is used to determine whether the use of the later mark would be detrimental to or would take unfair advantage of the earlier mark. In a case such as the present, where it was accepted that the earlier registered trade mark was unique in respect of any goods or services and had a huge reputation for specific types of goods or services which are dissimilar or dissimilar to a substantial degree to those for which the later mark is registered, this alone does not necessarily imply such a link.

The fact that the earlier mark is unique in respect of any goods or services and has a huge reputation for specific types of goods or services which are dissimilar or dissimilar to a substantial degree to those for which the later mark is registered and, for the average consumer (as defined above) the later mark calls into mind the earlier mark, this is not sufficient to establish that the use of the later mark takes or would take unfair advantage of, or is or would be detrimental to, the distinctive character or repute of the earlier mark. The use of the later mark may be detrimental to the distinctive character of the earlier mark with a reputation even if that mark is not unique. However, the first use of the later mark may suffice to be detrimental to the distinctive character of the earlier mark. Furthermore, proof that the use of the later mark is or would be detrimental to the distinctive character of the earlier mark requires evidence of a change in the economic behaviour of the average consumer of the goods or services for which the earlier trade mark was registered, consequent on the use of the later mark, or a serious likelihood that such a change will occur in the future.

The ground for refusal under Article 4(3) and (4)(a) differs from the ground for refusal under Article 4(1)(b) as there is no specific requirement for showing that there is a likelihood of confusion;<sup>299</sup> rather the test is set in terms of taking an unfair advantage of or being detrimental to the reputation of the earlier trade. This conjures up two possibilities, the first being where some of the goodwill associated with the earlier mark is captured, diluting or blurring its distinctiveness. The sign for which registration is applied for may be used in a positive sense such that it takes unfair advantage of the earlier trade mark: for example, by drawing upon its reputation to increase the marketing impact of the applicant's goods or services. Alternatively, it may be used in a negative sense to be detrimental to the distinctive character of the earlier trade mark: for example, by causing damage to it by the cross-pollination which will occur.<sup>300</sup> This may be by using an identical or similar sign in relation to goods or services that are of inferior quality or have some sort of stigma attached to them. It is entirely possible for unfair advantage to be found in the absence of detriment and vice versa. In either case, the form of use which is objectionable can be described as parasitic use.<sup>301</sup> It seems entirely reasonable to expect that either confusion as to the origin of goods or services or non-origin association will be sufficient. A minimum is that there is a linkage between the sign and the trade mark in the eyes of the public which causes the possibility of unfair advantage or detriment.<sup>302</sup> This accords with the view of the Court of Justice in Case C-251/95 *Sabel BV v Puma AG, Rudolf Dassler Sport*,<sup>303</sup> to the effect that a likelihood of confusion was not necessary for this ground for refusal, as now confirmed in *Adidas-Salomon* in relation to the equivalent provision for infringement.<sup>304</sup> The omission of any requirement for a likelihood of confusion must have been deliberate and not the result of an oversight, especially as non-origin association appears to be a form of harm targeted by this provision and now confirmed in *Adidas-Salomon* in relation to the equivalent form of infringement. In *CORGI Trade Mark*,<sup>305</sup> Geoffrey Hobbs QC, as the Appointed Person, said (at 558):

It looks to me as though the requirement for a likelihood of confusion was deliberately included in the provisions of the Directive implemented by section 5(2) and deliberately omitted from the provisions of the Directive implemented by section 5(3).

<sup>299</sup> As confirmed in *Adidas-Salomon*, above, in relation to the equivalent provision under Article 5(2) on infringement.

<sup>300</sup> See CA *Sheimer (M) Sdn Bhd's Trade Mark Application* [2000] RPC 484.

<sup>301</sup> See *Inlima SL's Application for a 3-Dimensional Trade Mark* [2000] RPC 661.

<sup>302</sup> *CREDITMASTER Trade Mark* [2005] RPC 551 at para 66.

<sup>303</sup> [1997] ECR I-6191 at para 20.

<sup>304</sup> In *Baywatch Production Co Inc v Home Video Channel* [1997] FSR 22 it was held that a likelihood of confusion was necessary but this is now clearly wrong.

<sup>305</sup> [1999] RPC 549.

306 [2000] RPC 484.

He admitted that he could see no reason why the mischief (unfair advantage or detriment) should only be objectionable where a likelihood of confusion exists. However, as he pointed out in *CA Sheimer (M) Sdn Bhd's Trade Mark Application*,<sup>306</sup> (the VISA condom case), the purpose of this ground for refusal is not to raise an absolute bar to the registration of a mark which is the same or similar to a mark having a reputation, nor does it make it automatically objectionable to register a mark that would, in use, remind one of another trade mark. The presence of either an unfair advantage or detriment is a requisite.

307 [2003] RPC 789.

In *Sihra's Trade Mark Application*,<sup>307</sup> registration was sought for 'INTER-TEL' in respect of 'hand-held constructional toys being puzzles'. The famous Intel Corporation Inc, makers of the Intel computer chips, opposed registration on the basis of its registration of 'INTEL' for computer games, apparatus and software. It was held, *inter alia*, that the use of the applicant's trade mark would undoubtedly dilute the strength of the 'INTEL' mark and reduce the distinctive character of it, causing detriment to it. A desire by the applicant to increase sales of its puzzle was no justification for needing to use a mark incorporating the word 'INTEL'. This seems to have been a fairly blatant case of wishing to 'cash-in' on the goodwill associated with the opponent's trade mark.<sup>308</sup>

308 The previous trade mark used by the applicant was 'LOXOL!'

The ground of opposition under the equivalent provision in the Trade Marks Act 1994, s 5(3), requires that the earlier trade mark has a reputation in the UK or, in the case of a CTM or international trade mark designating the EC, a reputation in the European Community. There is no clear guidance as to what is required before a trade mark is deemed to have a reputation in the Directive and the Trade Marks Act 1994. Nor does the Paris Convention for the Protection of Industrial Property or the WTO TRIPs Agreement assist in the meaning although 'well known' trade marks registered elsewhere are given special protection. Article 4(2)(d) of the Directive and s 6(1)(c) of the Act (part of the definition of earlier trade marks) uses the phrase 'well known' as used in Article 6bis of the Paris Convention for the Protection of Industrial Property. This requires that the mark is considered by the competent authority of the country of registration or use to be *well known in that country* as being already the mark of a person entitled to the benefits of the Paris Convention. In other words, the mark must be considered to be well known, in the UK, by the Registrar of Trade Marks. There is no requirement for the proprietor of the well-known mark to carry on trade in the UK. It appears that the terms 'well known' and 'having a reputation' are not synonymous as the former is viewed from the perspective of the competent authority whilst the latter is a question of the public's perception of the trade mark. In practice, this will be an evidential issue in a case where this is disputed by the applicant to register a sign as a trade mark or in an invalidity application or in an infringement action as the case may be.

309 [1999] ECR I-5421.

310 The Benelux countries – Belgium, Luxembourg and the Netherlands – have enjoyed a unified trade mark system for some time.

Reputation has to be judged from the perspective of the UK or the European Community as appropriate. In *Case C-375/97 General Motors Corp v Yplon SA*,<sup>309</sup> the claimant was the proprietor of a Benelux<sup>310</sup> trade mark 'CHEVY' for motor vehicles and associated goods. Yplon was the proprietor of a Benelux trade mark 'CHEVY' registered in different classes of goods and used the mark in respect of detergents and cleaning fluids. The Court of Justice held that 'reputation' implies a certain degree of knowledge of the earlier trade mark among the public. Depending on the goods or services involved, this may mean either the public at large or a more specialised section of the public such as traders in a specific sector. The factors to be taken into account in judging reputation include, in particular:

- market share;
- the intensity, geographic extent and duration of use of the earlier trade mark; and
- the size of investment made by undertaking the promotion of the earlier trade mark.

The court also held that it is sufficient for the reputation to exist in a substantial part of the relevant territory or Member State but it did not have to exist across the entirety of the Member State or territory. This was so even though the Directive is couched in terms of the reputation ‘in the Member State.’<sup>311</sup> The court also held that the stronger the earlier trade mark’s distinctive character and reputation is, the easier it will be to find that detriment will be caused to it.

For this ground for refusal to apply, the use must be without due cause. Therefore, in some circumstances, use which takes unfair advantage of, or is detrimental to the distinctive character of, the earlier trade mark will not be a reason for refusal of registration of the later mark. It is difficult to predict examples of use not being without due cause but it could include use of a trader’s own name or use of words descriptive of his goods or services, assuming the absolute ground has been overcome by use. In *PACO/PACO LIFE IN COLOUR Trade Marks*,<sup>312</sup> the word ‘PACO’ was common to the applicant and opponent’s marks. However, the applicant had chosen it because Paco was the first name of the founder of the applicant’s company. It was held that this did not offend as the use was not without due cause.

<sup>311</sup> The same sentiment ought to hold true in relation to a CTM where the reputation may exist in a substantial part of the Community but not the whole of its territory.

<sup>312</sup> [2000] RPC 451.

### Article 4(4)(b) and (c) – use may be prohibited by an earlier unregistered trade mark or other earlier right

Article 4(4)(b) and (c) is optional<sup>313</sup> and allows Member States to adopt grounds of refusal based on earlier unregistered trade marks and other rights, such as copyright and industrial property rights. The UK took advantage of this option and provided, under s 5(4), that a trade mark shall not be registered if, or to the extent that, its use in the UK is liable to be prevented:

<sup>313</sup> As is the remainder of Article 4.

- (a) by virtue of any rule of law (in particular the law of passing off) protecting an unregistered trade mark or other sign used in the course of trade, or
- (b) by virtue of an earlier right [other than earlier trade marks, whether or not registered, or earlier trade marks having a reputation, that is, those covered by the preceding relative grounds for refusal] . . . in particular by virtue of the law of copyright, design right or registered designs.<sup>314</sup>

<sup>314</sup> This provision was not modified to refer explicitly to the Community design, whether or not registered, but must be taken to include it also.

A person so entitled to prevent the use of the trade mark for which registration is sought is known as the proprietor of the earlier right. For example, a trader may use an unregistered trade mark to which substantial goodwill is attached or may use a logo protected by artistic copyright. The purpose of this provision is, therefore, to prevent registration of a mark which would infringe one of those earlier rights. For example, in *DU PONT Trade Mark*,<sup>315</sup> opposition based on passing off succeeded. The opponent had a reputation in relation to fabrics in the name DU PONT. The applicant, S D Dupont, applied to register ‘S D DUPONT’ in stylised form as a trade mark for clothing. The Court of Appeal held that persons hearing the trade mark spoken or seeing it would think that the clothes were made from the opponent’s fabric. Therefore the use of the applicant’s trade mark would be liable to be prevented by the law of passing off.

<sup>315</sup> [2004] FSR 293.

The forms of intellectual property rights mentioned are not exhaustive and other forms of rights might be relevant such as the right to prevent the publication of confidential information. Although the rights mentioned are within the field of intellectual property, it is possible that the provision is more extensive and could apply in the case of data subjects’ rights in relation to personal data including an image of an individual. Support for this can be found in the Directive, Article 4(4) of which lists a right to a name, a right or personal portrayal, a copyright and an industrial property

**316** Amendment other than in respect of a restriction to the goods and services covered by the application is limited to the applicant's name and address, errors of wording or copying or obvious mistakes: s 30.

**317** [1998] RPC 455.

**318** Until such time as objection under the relative grounds of refusal will be restricted to the proprietor of the earlier trade mark or owner of the earlier right, a trade mark examiner may properly take s 5(4) into account.

**319** [1999] RPC 453.

**320** See, for example, *Tom & Jerry Trade Mark Applications* (unreported) 23 May 2001, Trade Marks Registry.

**321** The UK has no specific provision for guarantee marks.

**322** See the discussion on the meaning of 'earlier trade mark', p 703.

**323** See below, pp 773–4.

right. The latter covers, in this context, patents and design rights. The prohibition is not necessarily absolute. For example, it may be possible to file a new application after suitable modification to remove the offending material.<sup>316</sup>

An opposition under s 5(4) must make it clear which of the paragraphs are the basis of the opposition. In some cases it may be both, such as a stylised word in which both goodwill and copyright subsist. A specific indication of which earlier right is claimed to be a reason for preventing use of the trade mark applied is required for the interests of justice and fairness. So it was held in *WILD CHILD Trade Mark*.<sup>317</sup> It was also said that the opponent should identify the matters claimed to prevent use and state whether the objection related to all or just some of the goods or services specified in the application.

The onus is on the opponent to demonstrate that the use of the trade mark will amount to passing off or infringement of another earlier right.<sup>318</sup> In *WACKERS Trade Mark*,<sup>319</sup> an application to register 'WACKERS' for toys and games was opposed on the grounds of passing off and bad faith. Both grounds of opposition failed. On the passing off point, the opponent had used the name in the US but had only sent two shipments of samples to the UK. Such use was *de minimis* and insufficient to establish goodwill in the UK.

In terms of copyright, the work concerned does not have to be a UK work of copyright provided it is protected in the UK by virtue of reciprocal protection as a result of the Berne Copyright Convention, the Universal Copyright Convention, the WTO TRIPs Agreement or the European Community.<sup>320</sup>

### Other grounds for refusal under Article 4

Article 4 contains some other grounds for refusal of registration (or invalidity) which were optional. Three grounds, under Article 4(4)(d)–(f), relate to recently expired trade marks, collective marks and guarantee<sup>321</sup> or certification marks. If implemented, Member States had some discretion to set the maximum period since the expiry of the relevant trade mark, though limited in two of the three cases. The UK approach has been to treat all recently expired trade marks the same under s 6(3) and they may be taken into account as a basis for refusal if they had expired no more than one year previously provided that the Registrar is satisfied that there had been no *bona fide* use of the trade mark in the two years immediately preceding expiry.<sup>322</sup>

Article 4(4)(g) of the Directive provided a ground for refusal based on the possibility of confusion with a mark in use abroad where the applicant was acting in bad faith. The need for including this ground for refusal is doubtful as bad faith is one of the absolute grounds for refusal. Where the mark used abroad is well known or has a reputation, other grounds for refusal would also apply. The UK has made no separate provision for bad faith in relation to trade marks in use abroad.

### Article 4(5) – consent

This provision is another optional one and, if adopted (as it has been in the UK in s 5(5) of the Act), none of the relative grounds of refusal prevent the registration of a trade mark where the proprietor of the earlier trade mark or earlier right consents to the registration. In practice, consent may be by virtue of a licence, whether or not a bare licence. It would appear that consent could come after the date the application to register was filed. Whether it can be implied by virtue of acquiescence coupled with a failure to oppose the applications is a moot point but does seem a reasonable interpretation, especially when one considers that acquiescence can be a reason for preventing a challenge on the validity of a registered trade mark.<sup>323</sup>

## Honest concurrent use

The provisions governing honest concurrent use are contained in s 7 of the Trade Marks Act 1994 but, from 1 October 2007, that section no longer has effect.<sup>324</sup> The following description is included for interest only and should no longer be relevant. The provisions are effectively redundant now as, in the absence of opposition by the proprietor of an earlier trade mark or other earlier right, the application will proceed to registration, assuming that the other requirements, in particular the absolute grounds for refusal, were satisfied. The Directive has no specific provision covering honest concurrent use which applied where an undertaking had honestly been using a sign identical or similar to an earlier trade mark or other right for an overlapping period of time without objection having been made. The concept of honest concurrent use allowed registration of what would otherwise be a conflicting trade mark could be seen as being based on acquiescence.<sup>325</sup> Section 7 of the Trade Marks Act 1994 allowed an application to proceed on the basis of honest concurrent use in the absence of opposition by the proprietor of an earlier trade mark or other earlier right which could have been used successfully to mount a challenge on the basis of the relative grounds. In such a case, if the applicant could satisfy the Registrar that there had been honest concurrent use, the application would proceed to registration providing it otherwise complied with the basic meaning of a trade mark within s 1(1) and was not caught by the absolute grounds for refusal under s 3.<sup>326</sup> Under s 7(3) ‘honest concurrent use’ meant such use in the UK by the applicant or with his consent which would have amounted to honest concurrent use under s 12(2) of the Trade Marks Act 1938. That provision did not say what honest concurrent use was but simply allowed registration in such a case of identical or nearly resembling trade marks in respect of the same goods or the same description of goods. The registration could be subject to conditions and limitations and the Registrar or court had a discretion whether or not to allow the application to proceed to registration.

To discover the meaning of honest concurrent use, we must turn to the case law on s 12(2) under the 1938 Act. If there was any doubt about the rights of the two proprietors, the Registrar could delay registration until after this had been resolved.<sup>327</sup> This might have applied where two persons had used identical or similar marks for at least five years or more in all honesty and had each built up goodwill in ignorance of the use of the mark by the other company.<sup>328</sup> Even though one mark was already registered, the second could be accepted for registration. There was no minimum period laid down as being acceptable.<sup>329</sup>

Lord Tomlin set out some criteria for deciding if the second mark should be registered in such circumstances in *Pirie’s Application*<sup>330</sup> as follows:

- 1 the likelihood of confusion that may arise from the use of both marks;
- 2 whether the original choice and subsequent use of the second mark was honest – it could be honest even if the second company knew of the existence of the first mark if it believed there would be no confusion, this being a subjective test;
- 3 the length of time that the second mark has been used – five years was deemed sufficient in the *Pirie case*, but normally the Registrar might expect more;
- 4 whether there was evidence of confusion in actual use;
- 5 whether the second company’s trade is larger than the first company’s trade – if so, this fact could help the second company’s application.

This list was not exclusive – all the surrounding circumstances would be considered in addition.

The nature and scale of the applicant’s use of the trade mark had to be such as to satisfy the Registrar that it was a case of honest concurrent use.<sup>331</sup> The relationship

<sup>324</sup> Section 7(5) states that the section does not apply once there is an order under s 8 in effect. The Trade Marks (Relative Grounds) Order 2007 was made under s 8 and limited the raising of the relative grounds of refusal to proprietors of earlier trade marks or other earlier rights.

<sup>325</sup> The Directive does have provisions on acquiescence but these apply to invalidity and the rights afforded by registration only: Article 9.

<sup>326</sup> Section 7(4) made it clear that the absolute grounds of refusal were not affected nor were applications for invalidity under s 47(2).

<sup>327</sup> Trade Marks Act 1938 s 12(3).

<sup>328</sup> For example, *NUCLEUS Trade Mark* [1998] RPC 233.

<sup>329</sup> A period of just over two years had been accepted in exceptional circumstances: see *Peddie’s Applications* (1944) 61 RPC 31.

<sup>330</sup> (1933) 50 RPC 147.

<sup>331</sup> *REACT Trade Mark* [1999] RPC 529. A submission of honest concurrent use failed as the use was not sufficient and an argument that confusion was not likely because of the applicant’s reputation failed as the trade mark could be assigned to another company at any time.

332 [2001] RPC 240.

between the relative grounds for refusal and the honest concurrent use provisions was explored by the Hearing Officer in *CODAS Trade Mark*.<sup>332</sup> Before 1 October 2007 when the relative grounds could be raised by anyone, the examiner in the Trade Marks Registry carried out a search for earlier conflicting trade marks. In the absence of any opposition, if the examiner discovered an earlier conflicting mark, he would raise an objection based upon it. The application might then have been saved if the applicant could satisfy the Registrar that there had been honest concurrent use. If there was an opposition based on one of the relative grounds for refusal, other than on the basis of complete identity of the marks and goods or services, refusal of the application was not necessarily automatic. A likelihood of confusion or the other conditions for refusal in the case of trade marks having a reputation, as the case may be, would have to be shown. In such cases, the presence of honest concurrent use would have been a factor to be taken into account.

If an application proceeded on the basis of honest concurrent use, it could be restricted in terms of the specification of goods or services in respect of which the application was made. In the *CODAS* case, the application was for the word ‘CODAS’ for Classes 9, 37 and 41 and covered, *inter alia*, computers, computer hardware and software, installation, maintenance and repair services and educational and training services relating to computers, all for use in the oil distribution industry. The opponent had used the registered trade mark ‘CODA’, registered against Classes 9, 41 and 42 and used, *inter alia*, in relation to computer software for financial and accounting purposes, software for composing music, and design and consultancy services relating to such software. The opponent had customers in the oil industry. It was accepted that the two marks had been able to function as trade marks for their respective owners without evidence of confusion and that this would continue to be the case if there was some restriction to the goods and services applied for. Honest concurrent use was made out even though there was an opposition. The wording of s 7(2), taken literally, was to the effect that refusal automatically followed if one of the relative grounds for refusal was raised in opposition proceedings by the proprietor of the earlier trade mark or other earlier right. It did not say that the opposition has to succeed.<sup>333</sup> It was, however, a matter of common sense that the ground had to be made out. Otherwise, providing that none of the absolute grounds for refusal applied, the two marks could happily coexist without the later mark infringing the other.

333 Section 7(1) applies these provisions if ‘it appears’ to the Registrar that one of the grounds apply. Again there is no mention of it being successful.

334 See Article 8 of the CTM Regulation.

335 Article 11(1) and (2) together with Article 10(1)–(2) or (3) of the Directive.

336 Inserted by the Trade Marks (Proof of Use, etc.) Regulations 2004, SI 2004/946 with effect from 5 May 2004.

## Proof of use

Under the CTM Regulation, as is now also the case with the UK trade mark, only proprietors of earlier trade marks or other earlier rights can oppose registration under the relative grounds for refusal.<sup>334</sup> Under Article 43(2) of the CTM Regulation, if the applicant so requires, an opponent basing his opposition on his earlier CTM must furnish proof of use within the preceding five years or give proper reasons for non-use, if the CTM has been registered for at least five years. The trade marks Directive also envisaged the possibility of making opposition and invalidity subject to proof of use in the Member State concerned of an earlier conflicting trade mark.<sup>335</sup> As regards opposition, Article 11(2) made this an option for Member States.

The UK adopted this approach in respect of opposition and invalidity. In respect of the former, s 6A<sup>336</sup> provides that, where opposition of registration of a trade mark under the relative grounds for refusal is based on an earlier trade mark, the Registrar will not refuse to register the trade mark by reason of the earlier trade mark unless the ‘use conditions’ are satisfied. These are that:

- (a) within the period of five years ending with the date of publication of the application the earlier trade mark has been put to genuine use in the United Kingdom by

- the proprietor or with his consent in relation to the goods or services for which it was registered, or
- (b) the earlier trade mark has not been so used, but there are proper reasons for non-use.

The section applies where the application has been published and there is an earlier trade mark in respect of which one of the relative grounds for refusal based on earlier trade marks applies.<sup>337</sup> The proof of use provisions do not apply, of course, unless the earlier trade mark has been registered for at least five years at the date of publication of the application.

Where the use conditions are satisfied only in respect of some of the goods or services for which the earlier trade mark is registered, the registration is taken to be limited accordingly. Therefore, if an application is made to register 'GORGE' for snack foods and there is an earlier trade mark 'GEORGE' registered for snack foods and also restaurant services but it has only been used by or with the consent of the proprietor for the latter during the previous five years, the opposition must fail even though the marks are similar (providing there are no proper reasons for non-use in relation to snack foods). Furthermore, the registration 'GEORGE' is vulnerable to invalidity proceedings in relation to snack foods through non-use during those five years.

'Use' includes use in a form differing in elements which do not alter the distinctive character of the trade mark in the form it was registered<sup>338</sup> and use in the UK includes affixing the trade mark to goods or their packaging in the UK solely for export purposes. Where the earlier trade mark is a CTM, references to use are in relation to the European Community.

As the proof of use provisions require use in the UK or European Community, as appropriate, opposition cannot be based on an earlier well-known trade mark under Article 6bis of the Paris Convention for the Protection of Industrial Property unless it is a trade mark having effect within the UK or is a CTM or international registration designating the UK or EC. This seems to contradict the wider scope of the relative grounds for refusal set out in s 5 and supplemented by the definition of earlier trade mark in s 6.<sup>339</sup> However, under s 56(2) the proprietor of a well-known trade mark may be able to obtain injunctive relief to prevent the use in the UK of an identical or similar mark used for identical or similar goods or services, providing such use is likely to cause confusion.

The proof of use provisions force a person opposing an application on the basis of an earlier trade mark to 'put up or shut up'. Proof of use is also required in invalidity proceedings where the challenge to registration is also based on an earlier trade mark. It may also be an issue in infringement proceedings where the defendant counterclaims for revocation on the basis of non-use.

## CERTIFICATION MARKS

Article 1 of the trade marks Directive states that it applies to individual trade marks, collective trade marks, guarantee and certification marks.<sup>340</sup> Certification marks were available in the UK before the 1994 Act, unlike the case with collective marks; hence certification marks will be discussed first.

The purpose of certification marks is to indicate goods or services with certain objective standards: for example, in respect to material, safety or quality. Examples are the Woolmark and the BSI Kitemark (which dates from 1921). The Trade Marks Act 1994 applies to certification marks subject to provisions set out in Sch 2 to the Act.<sup>341</sup> The term 'certification mark' is itself defined in s 50 as:

<sup>337</sup> Section 5(1)–(3) of the Act, equivalent to Article 4(1), (3) and (4)(a).

<sup>338</sup> This is the same as an equivalent provision in relation to invalidity on the basis of non-use which bears a marked resemblance to the proof of use provisions.

<sup>339</sup> The Directive also limits opposition to a requirement of genuine use of an earlier trade mark in the Member State concerned: see the combined effect of Articles 10(1) and 11(2).

<sup>340</sup> A guarantee mark is one which guarantees certain characteristics of goods of undertakings. There is no provision for these in the UK or under the CTM system. The certification mark probably serves the purposes of guarantee marks in the UK.

<sup>341</sup> References to paragraph numbers in this section of the text refer to paragraphs in Sch 2 to the Act.

... a mark indicating that the goods or services in connection with which it is used are certified by the proprietor of the mark in respect of origin, material, mode of manufacture of goods or performance of services, quality, accuracy or other characteristics.

The distinctiveness required by s 1(1) must be in terms of distinguishing the goods or services certified from those which are not and, unlike the usual provisions, signs denoting geographical origin may be registered.<sup>342</sup> The mark must not be misleading as to the character or significance of the mark, especially if it is likely to be taken as something other than a certification mark (para 5(1)), and to that end the Registrar may insist that the mark carries some indication that it is a certification mark and any application is amended accordingly.

An applicant for a certification mark must file regulations governing the use of the mark with the Registrar. By para 6(2), the regulations must indicate:

- who is entitled to use the mark;
- the characteristics to be certified by the mark;
- how the certifying body is to test those characteristics and supervise the use of the mark;
- what fees, if any, are to be paid in connection with the operation of the mark; and
- procedures for resolving disputes.

The mark will not be registered if the regulations do not comply with para 6(2) and further requirements imposed by rules, or are contrary to public policy or accepted principles of morality, or if the applicant is not competent to certify the goods or services for which the mark is to be registered: para 7(1). The regulations are published and may be subject to opposition or observations. The applicant must not, himself, trade in the goods or services to which the certification relates (para 4).

Assignment of a certification mark requires the consent of the Registrar. There are a number of additional grounds for revocation and invalidity of certification marks.

The grounds for revocation additional to those in s 46 are set out in para 15 and are as follows:

- the proprietor has begun to trade in the goods or services certified;
- the manner in which the mark has been used by the proprietor has caused it to become liable to mislead the public as to its character or significance – in particular, if it is likely to be taken to be something other than a certification mark;
- that the proprietor has failed to observe, or to secure the observance of, the regulations governing the use of the mark;
- that an amendment of the regulations has been made so that the regulations no longer comply with para 6(2), or are contrary to public policy or to accepted principles of morality; or
- the proprietor is no longer competent to certify the goods or services for which the mark is registered.

The grounds for invalidity additional to s 47 are that the mark was registered in breach of the provisions of paras 4, 5(1) or 7(1).

## COLLECTIVE MARKS

Collective marks were introduced into UK trade mark law by the 1994 Act. They are defined by s 49 as:

... a mark distinguishing the goods or services of members of the association which is the proprietor of the mark from those of other undertakings.

<sup>342</sup> Member States could allow the registration of designations of geographical origins as collective and certification marks by way of derogation: Article 15(2). An example in the UK is the STILTON certification mark. There is a word mark 'STILTON CERTIFICATION TRADE MARK' and device and word marks 'STILTON' and 'STILTON CHEESE'. The proprietor of these certification trade marks is the Chairman of the Stilton Cheese Makers Association.

Thus, a trade association (for example, the ‘Association of West Midlands Metal Bashers’) may register a mark which can be used by its members on its goods or stationery. The ‘Yorkshire Institute of Professional Decorators’ may do likewise, as may the ‘Society of Balti Restaurateurs’. At the author’s former place of work, Aston Business School, there was a plaque at the front of the building denoting the collective mark ‘Conference Centres of Excellence’.<sup>343</sup>

The Act applies to collective marks as it does to ordinary marks subject to the provisions of Sch 1 to the Act. The mark must be capable of distinguishing the goods or services of members of the association from those of other undertakings and, as with certification marks, signs indicating geographical origin may be permitted. The mark must not be misleading as to the character or significance of the mark, especially if it is likely to be taken as anything other than a collective mark (para 4(1)). The Registrar may insist on an indication that the mark is a collective mark.

Regulations governing the use of the mark must be filed with the Registrar for approval and, by para 5(2), must specify the persons authorised to use the mark, the conditions of membership and any conditions and sanctions relating to the use of the mark. The mark will not be registered if the regulations fail to comply with the requirements of para 5(2) and any rules, or are contrary to public policy or accepted principles of morality: para 6(1). There are corresponding provisions to s 30 determining the rights of authorised users in cases of infringement and additional grounds of revocation and invalidity. The grounds for revocation, additional to those in s 46, are as follows:

- that because of the manner in which it has been used by the proprietor it has become liable to mislead the public as regards the character or significance of the mark, in particular if it is likely to be taken to be something other than a collective mark;
- that the proprietor has failed to observe, or to secure the observance of, the regulations governing the use of the mark; or
- that an amendment of the regulations has been made so that they no longer comply with para 5(2) or are contrary to public policy or to accepted principles of morality.

The grounds for invalidity additional to those in s 47 are that it was registered in breach of para 4(1) or 6(1).

## SURRENDER OF REGISTERED TRADE MARK

The Directive contains provisions on revocation and invalidity of registration of trade marks but is silent on the issue of surrender of a trade mark, except in relation to the grounds for refusal based on earlier trade marks where a CTM claims seniority from an earlier national trade mark that has been surrendered or has been allowed to lapse.

The proprietor of a registered trade mark may surrender the registration in respect of some or all goods or services for which the mark is registered, by s 45. Rule 33 of the Trade Marks Rules 2008 requires that the proprietor certify that any person having an interest in the mark has been given three months’ notice and either is not affected or consents. The reason for this is that surrendering a trade mark might affect the rights of a licensee of the proprietor. Following surrender, the Registrar will then make the appropriate entry in the register and publish it.

Surrender may come about as part of a settlement in an infringement action, particularly in respect of some of the goods or services for which the trade mark is registered. This may be a way of saving a registration from a counterclaim for revocation across the full extent of goods or services for which it is registered. Surrender may also be considered where an application for invalidity is made which the proprietor

<sup>343</sup> The full text of the mark (which is a device and word mark) is ‘Conference Centres of Excellence: A Consortium of Specialist Independent Conference Centres’. The registration expired during 2005. Further examples of collective trade marks are ‘Association of Pharmaceutical Importers’ and ‘Association of Consulting Engineers’.

does not wish to fight, perhaps having lost interest in the trade mark. If the proprietor no longer wishes to use a registered trade mark, in the absence of any proceedings in respect of it, the best course otherwise would be simply to let the registration lapse when it is next due for renewal.

## REVOCATION

Revocation of a trade mark means that it is removed from the register because it has not been used for a continuous period of five or more years without proper reasons for non-use ('non-use'), because it has become a common name for the goods and services for which it was registered, or, because of the use made of it by the proprietor, it has become likely to mislead the public ('deceptive'). Revocation may be partial where the grounds apply only in respect of some of the goods and services in respect of which the trade mark is registered. The grounds for revocation are set out in Article 12 of the Directive (see s 46 of the Trade Marks Act 1994).<sup>344</sup>

Revocation must be distinguished from invalidity. Revocation is a means of removing a trade mark from the register because of the presence of one or more of the above grounds. The impact of revocation is that it brings to an end the rights of the proprietor from the date of the application for revocation (or earlier, if the grounds existed at an earlier date). A trade mark may be declared invalid if any of the absolute or relative grounds for refusal of registration are found to exist, in which case the trade mark will be removed from the register on the basis that it should never have been registered. The outcome is different to revocation because, with invalidity, it is as if the trade mark never existed.<sup>345</sup> As with revocation, invalidity may be partial and relate only to some of the goods or services for which the trade mark is registered. Applications for revocation on the basis of non-use are fairly common.<sup>346</sup>

Section 46(1) of the Trade Marks Act 1994 states that a 'registration of a trade mark *may* be revoked . . .' (emphasis added) and this suggests that, notwithstanding the evidence shows that one of the grounds for revocation is satisfied, the Registrar retains a discretion as to whether or not to revoke the registration. There is an apparent conflict with the wording of the trade marks Directive, Article 12(1) of which begins 'A trade mark shall be liable to revocation . . .' In *Zippo Trade Mark*<sup>347</sup> the Hearing Officer in the Trade Marks Registry accepted, given the language of the Directive, that there was no discretion. However, in *Gromax Plasticulture Ltd v Don & Low Nonwovens Ltd*,<sup>348</sup> Lindsay J accepted that a discretion existed as, in the circumstances, he said that this would have been a case where the discretion to revoke should not have been used had the ground for revocation been made out. However, in *AJ & MA Levy's Trade Mark (No 2)*,<sup>349</sup> the Appointed Person noted that the Directive suggested by its language that there was no such discretion. The House of Lords referred the question of whether there was a discretion to revoke if one or more of the grounds for revocation applied in *Scandecor Developments AB v Scandecor Marketing AB*.<sup>350</sup> Unfortunately, the application for a preliminary ruling was withdrawn and there have been no further decisions on the matter or rulings from the Court of Justice. The question remains open, although the better view is that there is no discretion. The phrase in the Directive 'shall be liable' surely means that the trade mark will be revoked if any of the grounds for revocation exist subject only to someone applying for revocation.

Each of the grounds for revocation is now described in more detail.

### Non-use

There are two forms of non-use being where the trade mark has been registered for five or more years and has never been used in relation to all or some of the goods or

<sup>344</sup> In the following section of this chapter, references are made primarily to the Act, which sets out the grounds for revocation and invalidity in a neater manner than is the case with the Directive, unless specific reference is made to the Directive or Court of Justice cases. The relevant provisions in the Directive are Articles 10(1)–(2), 11(3), 12, 13 and 14.

<sup>345</sup> Although transactions past and closed are unaffected. It will not be possible, for example, on the basis of invalidity alone to claim reimbursement of any fees paid in respect of an assignment of a registered trade mark.

<sup>346</sup> Revocation may also come about by reason of a counterclaim in an infringement action.

<sup>347</sup> [1999] RPC 173.

<sup>348</sup> [1999] RPC 367.

<sup>349</sup> [1999] RPC 358.

<sup>350</sup> [2002] FSR 122 at para 33.

services for which it is registered or where use has been suspended for a continuous period of five years. Section 46(1) lists the grounds for revocation of a registration of a trade mark on the basis of non-use as being:

- that within five years of the date of completion of the registration procedure, [the mark] has not been put to genuine use in the United Kingdom, by the proprietor or with his consent, in relation to the goods or services for which it is registered and there are no proper reasons for non-use;
- that such use has been suspended for an uninterrupted period of five years, and there are no proper reasons for non-use.

Under s 46(2), ‘use’ in terms of revocation includes use in a different form provided this does not alter its distinctive character, and use in the UK includes affixing the mark to goods or packaging in the UK solely for export purposes. Genuine use does not mean the opposite of fake or sham use and advertisements in US magazines, which readers knew were from the US, and a few sales to US customers which were posted to the UK is not sufficient. Jacob J confirmed this in *Euromarket Designs Inc v Peters and Crate & Barrel*<sup>351</sup> where he said (at 304) ‘... “genuine use” must involve that which a trader or consumer would regard as a real or genuine trade in this country’. The required use must be genuine use judged by commercial standards but could be established in circumstances where no actual sales of the goods had taken place.<sup>352</sup> This could be the case where, for example, promotional literature had been distributed.

<sup>351</sup> [2001] FSR 288.

<sup>352</sup> *FLORIS Trade Mark* [2001] RPC 329.

The Court of Justice gave some guidance as to the meaning of ‘genuine use’ in Case C-40/01 *Ansul BV v Ajax Brandbeveiliging BV*<sup>353</sup> in which Ansul was the proprietor of the Benelux trade mark ‘Minimax’ used for various goods including fire extinguishers and associated products. Ansul’s official authorisation to sell fire extinguishers ceased during 1989 but since that time it had used the trade mark in relation to component parts and substances for use in fire extinguishers. Ajax was a subsidiary of a German company Minimax GmbH and started selling fire extinguishers in the Benelux countries in 1994. When Ansul objected, Ajax applied for revocation of Ansul’s trade mark and the question of what constituted genuine use was referred to the Court of Justice, which ruled that genuine use does not include token use for the sole purpose of preserving the rights conferred by a trade mark. When assessing whether use is genuine, regard should be had to all the facts and circumstances relevant to deciding whether the commercial exploitation is real, in particular:

<sup>353</sup> [2003] ECR I-2439 at para 43.

- whether such use is viewed as warranted in the economic sector to maintain or create a market share in relation to the goods or services for which it is registered;
- the nature of the goods or services;
- the characteristics of the market and the frequency of the use of the mark.

Furthermore, the Court of Justice ruled that the fact that a mark is used in relation to goods not newly available on the market but sold in the past does not mean to say that the use is not genuine if the use is in respect of component parts integral to the make-up or structure of the goods or for goods or services directly connected with goods previously sold and intended to meet the needs of customers of those goods. As regards use prior to the sale of goods or the provisions of services, such as in advertising and promotional literature, suggested as being within the scope of genuine use by Jacob J in *Euromarket v Peters*, the Court of Justice accepted that use could be in relation to goods or services about to be marketed for which preparations were already underway to secure customers, such as by means of an advertising campaign.<sup>354</sup> Internal use by the proprietor or a licensee is ignored when considering whether use is genuine. Use in relation to goods excluded from the description of goods for which a mark has been

<sup>354</sup> At para 37.

registered does not preclude its use for goods within the description. For example, in *Crocodile International Pte Ltd v La Chemise Lacoste*,<sup>355</sup> the word CROCODILE was registered for ‘shirts, not including sports shirts’. Although the mark had been used on shirts sold in sports shops, there was also evidence that it had been used extensively for shirts marketed and sold as casual wear during the relevant period.

In Case C-442/07 *Verein Radetzky-Orden v Bundesvereinigung Kameradschaft ‘Feldmareschall Radetzky’*,<sup>356</sup> the Court of Justice accepted that use of a trade mark by a non-profit-making association in its relations with the public, in announcements of forthcoming activities, on business papers and on advertising materials and on badges worn by the association’s members when collecting and distributing donations was genuine use. However, use of a trade mark on goods given away as free gifts to persons buying other goods was held not to be genuine use in Case C-495/07 *Silberquelle GmbH v Maselli-Strickmode GmbH*.<sup>357</sup> In that case, the trade mark ‘WELLNESS’ was used in relation to a non-alcoholic drink given away free to persons who bought clothes sold by the trade mark proprietor. The clothes did not bear the trade mark nor were they sold under it.

In determining whether there has been genuine use, the size of the undertaking is a factor that can be taken into account. It was important to have regard to all the relevant facts and circumstances including the size of the undertaking as this could help determine whether the commercial exploitation was real.<sup>358</sup>

Although token use will not suffice, minimal use or use by a single importer might where it serves a real commercial purpose. The Court of Justice so ruled in Case C-295/02 *La Mer Technology Inc v Laboratoires Goemar SA*,<sup>359</sup> in which the proprietor had sold around £800-worth of goods during the relevant five-year period. The Chancery Division of the High Court found that this was more a reflection of commercial failure than use solely for the purpose of maintaining the trade mark on the register. Shortly after the relevant period for revocation, the proprietor recruited a new sales agent to boost sales in the UK. However, applying the Court of Justice ruling, the trade mark was ordered to be revoked by the Chancery Division but the proprietor’s appeal to the Court of Appeal was upheld.<sup>360</sup>

In *ELLE Trade Marks*,<sup>361</sup> the proprietor had two registrations, one for ‘elle’ in lower case within a circle with a cross (the female symbol) and ‘ELLE’ in upper case type. There was a disclaimer to any exclusive right to the use of the word ‘elle’. Application had been made for the two marks to be revoked due to non-use under s 46. It was held that, although there had been some use of the word ‘elle’ without the device, this was not use of the trade mark as such use altered the distinctive character in a significant and substantial way.<sup>362</sup> Similarly, in *United Biscuits (UK) Ltd v Asda Stores Ltd*,<sup>363</sup> four pictorial marks depicting penguins, which had been used for Penguin biscuits in the past, were ordered to be revoked as there was no evidence of genuine use within the last five years either in the exact form of the marks or in a similar form so as to retain their distinctive character. Walker LJ in the Court of Appeal suggested that a two-step approach should be taken with s 46(2) in *Bud and Budweiser Budbräu Trade Marks*.<sup>364</sup> The first step is to determine what were the differences between the mark as used and the mark as registered. The second step then was to decide whether they altered the distinctive character of the mark as registered. Although the characteristics of the mark which made it striking and memorable were unlikely to be analysed by the average consumer, they were, nevertheless, capable of analysis. It was for the Registrar to analyse the visual, aural and conceptual qualities of the mark so as to make a global appreciation of the impact on the average consumer who normally perceived the mark as a whole and did not proceed to analyse its various details.

Use of a second trade mark will not save the mark under consideration if, when looking at the mark under attack with the common elements removed, it remains a distinctive mark in its own right.<sup>365</sup> On the other hand, use of an alternative may be

364 [2003] RPC 477.

365 *Cabañas Habana (Device) Trade Mark* [2000] RPC 26. The mark under attack consisted of an elaborate device resembling a coat of arms with words and letters.

considered to be use of the mark in such a form so as not to alter its distinctive character if it is the phonetic equivalent of the registered trade mark. In *SECOND SKIN Trade Mark*,<sup>366</sup> the registered trade mark was ‘SECOND SKIN’ but the proprietor had only ever used ‘2ND SKIN’. As the public would be likely to perceive the marks as having the same meaning, that was use for the purposes of s 46(1)(b). Whether oral use, for example, by customers ordering the product over the telephone, was sufficient was left open. The hearing officer doubted that, even if oral use alone was sufficient to defeat an application for revocation on the grounds of non-use, oral use *by customers* was probably not enough.<sup>367</sup> Whether or not the two marks would be accepted by the Trade Marks Registry as a series of trade marks under s 41(2) was not relevant even though that provision defines a series of trade marks in similar, though not identical, terms. Indeed, in *Digeo Broadband Inc’s Trade Mark Application*,<sup>368</sup> in which application was made to register no less than 308 marks as a series, it was held that s 41(2) permitted less variation than s 46(2) and, in respect of the former, it was necessary also that the variations had no substantial effect on the identity of the trade mark.

There have to be proper reasons for the non-use if the proprietor is to escape an application for revocation under s 46. In *INVERMONT Trade Mark*,<sup>369</sup> it was argued that the non-use was due to the long and complex process of introducing a new brand into the alcoholic drinks market. It was held that the phrase ‘proper reason for non-use’ has to be considered in a business sense. ‘Proper’ means ‘apt, acceptable, reasonable, justifiable in all the circumstances’ and proper reasons for non-use related to abnormal situations and temporary serious disruptions affecting the proprietor’s business alone. It did not cover the normal difficulties to be found in trade. The mark was ordered to be revoked; apart from failing to show that such an abnormal situation or serious disruption applied, the proprietor had failed to provide evidence as to preparations to use the mark and, therefore, the prospect of imminent future use was remote. Failure to use a mark for five years because of production difficulties outside the proprietor’s control could be a proper reason for non-use. In *MAGIC BALL Trade Mark*,<sup>370</sup> a trade mark was registered for a new type of lollipop to be made by a new manufacturing technique. Unexpected delays were met in developing the machinery needed to make the lollipops. By the time of the application for revocation, the problems had been all but solved and the evidence was that the proprietor would soon start to use the mark. Delays caused by regulations or trade embargoes will not necessarily be proper reasons for non-use. A trade embargo imposed by the US on goods from Cuba, which at the time of the hearing had been in place for 33 years, was described as a normal condition of trade in *Cabañas Habana (Device) Trade Mark*.<sup>371</sup> Non-use resulting from a European Community Regulation governing tar content of cigarettes was not a proper reason for non-use in *K-2 Trade Mark*<sup>372</sup> as the proprietor had chosen not to modify his cigarettes to comply as this would have affected their taste.

Revocation will not be ordered on grounds of non-use if the use is commenced or resumed after five years but before application for revocation is made. However, there is a three-month period prior to the application for revocation when use will be ignored unless preparations for a commencement or resumption of use were made before the proprietor became aware that an application for revocation might be made (s 46(3)).<sup>373</sup> This does not prevent an applicant for revocation bringing his application immediately the five-year period has elapsed.<sup>374</sup> An application for revocation may be made by anyone to the Registrar or to the court. If proceedings before the court are pending, the application must be made to the court and, in other cases, the Registrar may refer the application to the court. Revocation may be whole or partial, under s 46(5). Partial revocation may be applicable where the trade mark has been used but only in respect of some of the goods or services for which it was registered. In considering partial revocation, the court must first determine what use has been made of the

<sup>366</sup> [2001] RPC 605.

<sup>367</sup> In *ELLE Trade Mark*, above, the trade mark was a stylised word and, in such a case, it is the visual significance which is important.

<sup>369</sup> [1997] RPC 125.

<sup>370</sup> [2000] RPC 439.

<sup>371</sup> [2000] RPC 26. It was held that there were no proper reasons for non-use. The proprietor had failed to apply for an exemption to the embargo and there was no evidence of use prior to it.

<sup>372</sup> [2000] RPC 413.

<sup>373</sup> According to Jacob J in *MINERVA Trade Mark* [2000] FSR 734 at 736, the purpose of this provision is to enable the parties to negotiate. *MINERVA and Decon Laboratories Ltd v Fred Baker Scientific Ltd* [2001] RPC 293 provide examples of partial revocation.

<sup>374</sup> ‘*Philosophy di Alberta Ferretti*’ *Trade Mark* [2003] RPC 287.

375 *Thomson Holidays Ltd v Norwegian Cruise Lines Ltd* [2003] RPC 586.

376 [2003] FSR 816.

377 Jacob J accepted this sentiment in *ANIMAL Trade Mark* [2004] FSR 383, in which he embarked upon an impressive pruning exercise of the specification of goods for which the mark had been registered. He also said that the notional average consumer should approach the task after being told about the scope of protection for identical and similar marks.

378 See, for example, *MINERVA Trade Mark* [2000] FSR 734 and *CORGI Trade Mark* [1999] RPC 549.

379 *‘Philosophy di Alberta Ferretti’ Trade Mark* [2003] RPC 287. A proprietor who does nothing for most of the five-year period and then embarks on what is known to be a lengthy procedure before the goods reach the market is unlikely to show proper reasons for non-use.

trade mark, in fact. When cutting down the specification of goods, it was important not to leave a wide specification because of the possibility of infringement in relation to similar goods and services which had the effect of widening the rights under the trade mark.<sup>375</sup> The court should adopt the mantle of the reasonably informed consumer of the products in question and consider how he would describe such use as had been made of them. In *West (t/a Eastenders) v Fuller Smith & Turner plc*,<sup>376</sup> the trade mark ‘E.S.B.’, previously used as an abbreviation for ‘Extra Special Bitter’, was registered in respect of beers. It had never been used for any sort of beer other than bitter beer and the Court of Appeal agreed that the specification should be cut down to bitter beer only. It was held that partial revocation of the ground of non-use should be such that the restricted specification was ‘a fair description which would be used by the average consumer of the products for which the mark had been used by the proprietor’.<sup>377</sup>

The consequences of revocation are that the proprietor’s rights are deemed to cease from the date of the application for revocation, or at an earlier date if the Registrar or the court is satisfied that the grounds for revocation existed earlier: s 46(6).

Where a question arises in civil proceedings as to the use to which a trade mark has been put, it is the proprietor who has the burden of proof under s 100.<sup>378</sup> This is regardless of s 72 which states that registration of a person as a proprietor of a trade mark is prima facie evidence of the validity of the original registration. The proprietor also has the burden of proving that there existed proper reasons for non-use and the grant of a licence, *per se*, is not sufficient. Obstacles arising independently of the will of the proprietor might amount to proper reasons.<sup>379</sup>

### Common name for goods or services

Successful trade marks can become so well known that they pass into the language as being the name by which a type of product is referred to rather than the name by which the product of a particular undertaking is sold. In other words, the trade mark has become a generic name for a type of product. Many trade proprietors are active in ensuring that this does not happen by always using a phrase such as ‘registered trade mark’, the ® symbol or some other form of words signifying the trade mark is indeed a registered trade mark. Steps often go beyond this, for example, where a trade mark has been used in a generic sense in a publication, by notifying publishers accordingly and asking them to make the trade mark’s status as a registered trade mark clear in future.

Article 12(2)(a) (and s 46(1)(c) of the Act) provides for revocation if, in consequence of the acts or inactivity of the proprietor, the trade mark has become a common name for a product or service in respect of which it is registered. Note the use of the word ‘product’ rather than ‘goods’; presumably, the word product is used in a narrow sense, being a type of or a particular species of goods. Note also that the ground applies where the trade mark has become a common name as a result of acts or inactivity on the part of the proprietor. It may be that the proprietor has engaged on an advertising campaign that causes this so that consumers ask for the product by its trade mark rather than the description of the type of product (for example, if consumers ask for a ‘Hoover’ rather than asking for a vacuum cleaner). Alternatively, inactivity may be failing to police and educate others using the trade mark generically that it is indeed a registered trade mark. This ground for revocation will not be available, however, if the trade mark has become a common name otherwise as a result of the acts or inactivity of the proprietor.

In Case C-371/02 *Björnekulla Fruktindustrier AB v Procordia Food AB*<sup>380</sup> revocation of Procordia’s trade mark ‘Bostongurka’ was sought as it was claimed that it had become a generic name for chopped pickled gherkins in Sweden. An issue arose as to the identity of the class of persons to whom the trade mark has become a common name.

380 [2004] ECR I-5791.

Procordia relied on a survey amongst those in the catering trade but Björnekulla's claim for revocation was based primarily on market surveys of consumers. The Swedish court was uncertain as to the class of persons to be considered under Article 12(2)(a) of the Directive and submitted a question about this to the Court of Justice for a preliminary ruling under Article 234 of the EC Treaty. The Court of Justice ruled that, where intermediaries are involved in the distribution of a product to the consumer or end user, the relevant class of persons are primarily all consumers and end users but, depending on the features of the market concerned, all those in the trade who deal with the product commercially must also be taken into account where they are in a position to influence decisions to purchase.<sup>381</sup>

<sup>381</sup> See paras 23–26.

<sup>382</sup> [2005] RPC 657.

In *Hormel Foods Corp v Antilles Landscape Investments NV*,<sup>382</sup> a claim that the trade mark 'SPAM' used for canned meats had become a common name for tinned luncheon meat because of the proprietor's inactivity was rejected. There was no evidence that it had become generic and, in any case, the proprietor had been active in policing its use in order to prevent it becoming generic. On the other hand, it was held, *obiter*, that the trade mark 'SPAMBUSTER' had become generic because of the inactivity of its proprietor. In the case of a highly descriptive trade mark, there is a heavier burden to prevent it becoming generic. It was also held that the inactivity of a proprietor did not have to be the sole cause of a trade mark becoming a common name for this ground for revocation to be made out.

Of course, if a trade mark has become a common name for a product or service, it loses its basic function of serving to indicate the origin of goods or services by distinguishing those of one undertaking from those of other undertakings. Where a trade mark has become a common name for a product or service, revocation may be partial as the registration may cover other goods and service where it still retains its distinctive character. If it has become a common name but not because of anything the proprietor has done or failed to do, an application for invalidity may be made instead on the absolute grounds: for example, on the basis that it no longer constitutes a trade mark under Article 3(1)(a), that it now lacks a distinctive character under Article 3(1)(b) or even that it has become customary in the trade.

### The mark has become misleading through use

Under Article 12(2)(b) of the Directive (s 46(1)(d) of the Trade Marks Act 1994) a further ground for refusal applies where a trade mark, in consequence of the use made of it by the proprietor or with his consent in respect of the goods or services for which it is registered, is liable to mislead the public, particularly as to the nature, quality or geographical origin of those goods or services. The list of examples is illustrative only. For the purposes of this ground for revocation 'use' does not necessarily have the same meaning as for the grounds of revocation based on non-use. For the purposes of revocation for non-use, Article 10(2)(a) extends the meaning of use to use of the trade mark in a form differing in elements which do not alter the distinctive character of the trade mark in the form in which it was registered. The Trade Marks Act 1994 by s 46(2) uses this wider meaning of use for all the grounds for revocation. In practice it is unlikely to make any difference. The question is whether the trade mark, in fact, is liable to mislead the public because of the use made of it by the proprietor or with his consent. It seems beyond doubt that this could include use of a sign similar to or including the registered trade mark and not limited to the use of the trade mark exactly as registered. In other words, it is the consequence of use that is important for this ground for revocation rather than the nature and extent of the use.

It is submitted that the relevant class of persons are consumers and end users and, where they exist, intermediaries who are in a position to influence consumers in

their choices, thereby passing on any misunderstanding to which they are subject to the consumers and end users.

This ground of revocation, unlike the one relating to trade marks that have become common names, is couched in terms of use by the proprietor or with his consent. We can only assume that the difference is deliberate. On that basis, revocation on the ground that a trade mark has become a common name because of the acts or inactivity of the proprietor must be restricted to the proprietor's act or inactivity and not someone having his consent: for example, a licensee. For trade marks that have become misleading, this can clearly encompass use by the proprietor's licensee or distributor.

## INVALIDITY

In the trade marks Directive, the grounds and further grounds for refusal of registration are also stated to apply to declarations of invalidity. The Trade Marks Act 1994 sets the grounds for invalidity out separately under s 47 which relates back to the absolute and relative grounds for refusal of registration. There is a saving where a trade mark has acquired a distinctive character after registration in cases where invalidity is alleged on the basis of s 3(1)(b), (c) or (d) (equivalent to Article 3(1)(b), (c) or (d) in the Directive).<sup>383</sup> Where invalidity is based on an earlier trade mark or other earlier right, it will be defeated where the proprietor of the earlier trade mark or other earlier right has consented to the registration.<sup>384</sup> Where a trade mark is revoked, the rights in it exist up to the date of revocation unless the Registrar was satisfied that the grounds for revocation existed earlier. That being so, it is possible to apply for a declaration of invalidity of a trade mark on the basis of an earlier trade mark which has, in the meantime, been revoked.<sup>385</sup>

A feature in the Act is that the Registrar may himself apply to the court for a declaration of invalidity on the ground of bad faith in the registration of a trade mark.<sup>386</sup> Otherwise, anyone can apply for a declaration of invalidity.

Where the relative grounds of refusal are raised as a ground for invalidity on the basis of an earlier trade mark, the person applying for a declaration of invalidity must show proof of use of that earlier trade mark where it has been registered for five or more years (or show proper reasons for non-use).<sup>387</sup> These provisions are the same, *mutatis mutandis*, as those for opposition based on an earlier trade mark as discussed above under s 6A in relation to the relative grounds for refusal.

Where the grounds for invalidity apply only in relation to some of the goods and services for which the trade mark is registered, the declaration of invalidity will be limited accordingly to those goods and services, leaving the registration intact for those goods and services for which it remains valid.<sup>388</sup>

Application may be made by anyone to the Registrar or to the court: s 47(3). If proceedings in the court are pending, the application must be made to the court and, in other cases, the Registrar may refer the application to the court. The effect of a declaration of invalidity is that the registration will be void *ab initio* (s 47(6)). However, this will not affect any transactions past and closed.

In terms of invalidity on the basis of the absolute grounds, if the proprietor claims that the mark has acquired a distinctive character through use, he will need to do more than simply show that there has been extensive use of the mark. The use must have been such that a substantial number of persons have come to recognise the sign as a trade mark.<sup>389</sup>

In *British Sugar plc v James Robertson & Sons Ltd*,<sup>390</sup> Jacob J found that the claimant's 'TREAT' mark was invalid as being within at least some of the absolute grounds for

<sup>383</sup> These relate to lack of a distinctive character, 'descriptive signs' or signs that have become customary in the trade.

<sup>384</sup> As consent relates to the registration of the mark and not its continuing registration, it would seem that any attempt to withdraw consent after registration will be of no effect as far as the validity of the registration is concerned.

<sup>385</sup> *RIVERIA Trade Mark* [2003] RPC 883.

<sup>386</sup> Section 47(4).

<sup>387</sup> Section 47(2A)–(2E).

<sup>388</sup> Section 47(5). See also Article 13 of the Directive which similarly provides also for refusal of registration and revocation.

<sup>389</sup> *British Sugar plc v James Robertson & Sons Ltd* [1996] RPC 281.

<sup>390</sup> [1996] RPC 281.

refusal. However, he noted that, having declared the mark invalid, he did not have the power to order its revocation, as the grounds for revocation are different. This would mean that an invalid mark would remain upon the register until such time as the proprietor failed to renew the registration.

An applicant for a declaration of invalidity bears the burden of proof due to the presumption of validity in s 72. In *AMAZE COLLECTION Trade Mark*,<sup>391</sup> the applicant for a declaration of invalidity based his challenge on the use by him of unregistered trade marks AMA ZING and AMAZING. Originally, the application was made on the basis of s 5(2)(b), (3) and (4).<sup>392</sup> As the applicant's marks were unregistered, only s 5(4) was relevant but, on the evidence, a passing off action was unlikely to succeed and the applicant failed to discharge the burden of proof. When the applicant chooses to object on the basis of more than one ground under s 5, it is desirable to separate them out and adduce evidence directed to each one. The reason is that the grounds in s 5 differ *inter se*. In particular, the assimilation of an objection based on an earlier registered trade mark with an objection based on some other earlier right is inappropriate.<sup>393</sup>

A person who has made one attack on the validity of a trade mark may be estopped from making subsequent attacks. In *Hormel Foods Corp v Antilles Landscape Investments NV*,<sup>394</sup> the applicant for a declaration for invalidity was the proprietor of the 'SPAM' trade mark for canned meats and had previously applied for a declaration of invalidity of the trade mark 'SPAMBUSTER' in stylised form for computer programming. This application failed but a new application was made. It was held that the same principles of cause of action estoppel applied as they did for patents and registered designs. A person attacking validity was under a duty to put his full case in support and he would be barred from attacking validity in subsequent proceedings even on different grounds.<sup>395</sup> This estoppel did not prevent a fresh attack based on revocation, however, as this was a fundamentally different claim. But now bringing an attack based on revocation was an abuse of process as nothing had happened since the Registrar's earlier decision to justify a fresh application to revoke the trade mark.

As with revocation, Article 14 of the Directive provides for establishing invalidity *a posteriori* in the case of a trade mark which has been surrendered or allowed to lapse and which was used to claim seniority in relation to a CTM. This could be important where an infringement action is brought in relation to a national trade mark which has been surrendered or allowed to lapse after the acts alleged to constitute infringement took place. The equivalent provisions in the UK are in reg 3 of the Community Trade Mark Regulations 1996<sup>396</sup> made under s 52 of the Trade Marks Act 1994.

## TRADE MARKS AS PROPERTY

The Directive has little to say as far as trade marks as property, assignment and licensing are concerned as these are primarily a matter for national law. Consequently, there is little in the Directive relevant to this part of the chapter except that Article 8(1) provides that trade marks may be licensed in respect of all or some of the goods or services for which they are registered and for the whole or part of the Member State concerned. Trade mark proprietors may also invoke their trade mark rights against licensees who contravene any provision of the licensing contract '... with regard to its duration, the form covered by the registration in which the trade mark may be used, the scope of the goods or services for which the licence is granted, the territory in which the trade mark may be affixed, or the quality of the goods manufactured or of the services provided by the licensee': Article 8(2). The list is exhaustive<sup>397</sup> but the Court of Justice accepted that 'quality of goods' covers not just the material characteristics of goods but 'the allure and prestigious image which bestows on those goods an aura of luxury'.<sup>398</sup> Most references

<sup>398</sup> *Copad v Christian Dior*, *op cit*.

in the following material on trade marks as property necessarily refer to the Trade Marks Act 1994 and case law on the Act.

The Trade Marks Act 1994 states that a registered trade mark is an item of personal property (ss 2(1) and 22, or, in Scotland, incorporeal moveable property). An application for a trade mark is also a property right under s 27 and where an applicant body was dissolved without provision for ownership of the application, it would not evaporate but vest in the Crown as *bona vacantia*.<sup>399</sup> Under the provisions of the Act, trade marks are easily alienable. Under s 24, trade marks can be assigned, or pass by testamentary disposition or by operation of law in the same way as other personal property with or without the goodwill of a business.

Assignments may be partial in terms of:

- some, but not all, goods or services for which the mark is registered;
- use in a particular manner or in a particular locality.

This is wider than before. Under the previous law, it was possible to divide a business and assign marks with that part of the goodwill which had been divested provided that the part of the business retained was in relation to different goods.<sup>400</sup>

Assignments or vesting assents are not effective unless in writing and signed by or on behalf of the assignor (or personal representative) (s 24(3)). This also applies to an assignment by way of security. A registered trade mark may be subject to a charge as is other personal property. Under s 23(1), each joint proprietor is entitled to an equal, undivided share. Therefore, it would appear that they are tenants in common, unlike the position under the 1938 Act which was based on a joint tenancy. However, this is subject to any agreement to the contrary, so joint proprietors could agree on a joint tenancy. The change could reflect the desire to make the property rights in trade marks more easily alienable.

A limiting factor on split assignments will probably be the desire to retain the distinctive character of a trade mark. If the mark becomes incapable of distinguishing the goods of one undertaking from those of other undertakings, this could be a ground for invalidity or revocation if the public is liable to be misled.

There are clearer rules for joint proprietorship of trade marks. Under s 23(3), each co-proprietor may do any act for his own benefit that would otherwise infringe, but may not, under s 23(4), without the consent of the other co-proprietors, grant a licence to use the mark, or assign or charge his share in the registered trade mark.

Unlike the 1938 Act, there are detailed provisions for licensing (exclusive, non-exclusive and sub-licences). Under s 28(1), a licence may be limited – in particular in terms of the goods and services for which it is registered, or in terms of use in a particular manner or locality. A licence must be in writing and signed by or on behalf of the grantor (s 28(2)). Unless otherwise provided for, a licence is binding on the grantor's successor in title. Sub-licences are recognised as possible and, under s 28(4), references in the Act to licences include sub-licences.

The registered user provisions in the 1938 Act required that the proprietor must have some control over the use of the mark: for example, by exercising quality control.<sup>401</sup> This is not required under the 1994 Act. Licensing of trade marks has been freed from the restrictions of the old law. If the function of a trade mark is to act as a badge of origin, then even an exclusive licence which does not contain any provisions for quality control by the proprietor would seem unobjectionable. The public would perceive the goods or services as being those of the exclusive licensee. This may yet be the case where the licence is a bare exclusive licence. In *Scandecor Developments AB v Scandecor Marketing AB*,<sup>402</sup> Lord Nicholls of Birkenhead, referring the question to the Court of Justice,<sup>403</sup> suggested that a trade mark should not be regarded as liable to mislead if

<sup>399</sup> *Joe Cool (Manchester) Ltd's Trade Mark Application* [2000] RPC 926. A purported assignment was void, as the assignor company had been dissolved before the date of the assignment. See also *SKYLIFT Trade Mark* (unreported) 19 July 2000, Trade Marks Registry.

<sup>400</sup> *Sunbeam Motor Co's Application* (1916) 33 RPC 389.

<sup>401</sup> Registered users existing at commencement were transferred to the register under the 1994 Act for transactions affecting the mark: Sch 3 para 9(2).

<sup>402</sup> [2002] FSR 122 at para 33.

<sup>403</sup> The reference was subsequently withdrawn.

the origin of the goods is a bare exclusive licensee. This accords with modern business practices but the argument can be developed further.

Non-exclusive licences which are limited geographically to different regions or which are limited to different goods or services may also be possible without being vulnerable to revocation or invalidity proceedings on the basis that they are likely to be misleading or give rise to a likelihood of confusion. This is a welcome step and the inclusion of provisions for quality control by proprietors inserted into licence agreements, should no longer be required unless, of course, the proprietor actually does wish to exercise quality control. It is suspected that, in many cases, these provisions were not used but simply inserted into licence agreements to circumvent the restrictions under previous trade mark law.

The Trade Marks Act 1994 contemplates exclusive licensees and non-exclusive licensees commencing legal proceedings against infringers, although the right of a licensee to do this can be affected by the terms of the licence agreement. Under s 31(1), an exclusive licensee may, provided the licence agreement so provides, have the same rights and remedies as the proprietor. However, under s 31(4), if either the proprietor or the exclusive licensee brings an infringement action, he must join the other except by leave of the court, although this does not apply to interim remedies.

Under s 30(2), unless the licence provides otherwise, a licensee may call upon the proprietor to take action, and if the proprietor refuses or fails to take action within two months of being called on to do so, a licensee (including a sub-licensee) may bring proceedings in his own name as if he were the proprietor. Again, the proprietor would normally be joined in the action unless the court gave leave otherwise.

In terms of an exclusive licence, it is not clear whether ss 30 and 31 are mutually exclusive or complementary. There is an apparent contradiction in s 30 between s 30(1) and (7). The former suggests that s 30 does not apply where, or to the extent that, an exclusive licensee has by virtue of s 31(1) the right to bring proceedings in his own name, whereas s 30(7) states that s 30 applies in relation to an exclusive licensee if or to the extent that he has, by virtue of s 31(1), the rights and remedies of an assignee as if he were the proprietor.

In practice, the licence agreement will probably address issues dealing with rights to bring proceedings. For example, an exclusive licence may grant the licensee the same rights and remedies as if it had been an assignment. As such rights and remedies are declared by s 31(2) to be concurrent with those of the proprietor and a current proprietor with concurrent rights must be joined in the action except by leave of the court, the licence should provide for this eventuality also. The licence may state that the proprietor agrees to take part in any action as co-claimant subject to payment of his expenses by the licensee, and the licence may also provide for any apportionment of an award between the proprietor and licensee. Where the proprietor and exclusive licensee have concurrent rights, the court shall take into account the terms of the licence and any pecuniary remedy already awarded or available to either in respect of the infringement: s 31(6). In directing an account of profits, the court shall apportion the profits between the proprietor and exclusive licensee as the court considers just, subject to any agreement between them.

The following transactions affecting registered trade marks must be registered on application to the Registrar by a person claiming to be entitled to an interest in or under the mark concerned by virtue of any such transaction, under s 25(1) and (2):

- an assignment of the mark or any right in it (this could include, for example, the assignment of a licence);
- the grant of a licence under the mark;

- the grant of a security interest (fixed or floating charge) over the mark, or over any right in or under it;
- the making by personal representatives of a vesting assent in relation to the mark or any right in or under it;
- a court order (or order of other competent authority – for example, the Appointed Person or the Trade Marks Registrar) transferring the mark or any right in or under it.

Under s 25(3), until the application for registration of the transaction has been made, it is ineffective against a person acquiring a conflicting interest in or under the mark in ignorance of the transaction, and any person claiming to be a licensee because of the transaction does not have any rights and remedies for infringement.

A person becoming a proprietor or licensee has six months to register his interest (the court has discretion to extend if it was not practicable to register within six months). Failure to register within that time will mean that the new proprietor or licensee cannot obtain costs in respect of infringements occurring between the date of the transaction and the date of registration of the interest (s 25(4)).<sup>404</sup>

No trusts shall be entered on the register, but equities in relation to registered trade marks may be enforced as with other personal property (s 26). This permits action by beneficial owners of trade marks.

As some months may pass between application and registration, the provisions in the Act relating to assigning, licensing and registration are also effective in relation to an application to register a trade mark (s 27). Thus it is possible to grant an assignment or a licence in respect of a trade mark before it has been formally registered.

<sup>404</sup> Previously, damages or an account of profits would not be available. The change was made by the Intellectual Property (Enforcement, etc.) Regulations 2006, SI 2006/1028.

## REGISTRATION

Under s 32 of the Trade Marks Act 1994, an application to register a trade mark requires the submission of the following items:

- a request for registration;
- the name and address of the applicant;
- a statement of goods or services in relation to which it is sought to register the trade mark;
- a representation of the trade mark;
- a statement that the trade mark is being used, by the applicant or with his consent, in relation to those goods or services, or that he has a *bona fide* intention of so using it;
- the prescribed fee (application plus class fees).

In the case of a three-dimensional mark, there must be a statement to the effect that such is claimed and, in respect of a colour, there must be a statement to that effect and the colour must be specified.<sup>405</sup> The date of filing will be the date when all the necessary documents have been furnished to the Registrar (s 33).<sup>406</sup> This is the date of application. Section 35 provides for priority from earlier filings from Paris Convention countries for up to six months.

The applicant to register a trade mark (or the proprietor of an existing mark) may disclaim the right to exclusive use of a specified element of the trade mark, or agree to a limitation (for example, a territorial limitation) under s 13. Under r 31 of the Trade Marks Rules 2008,<sup>407</sup> this must be by written notice, and the Registrar will make the

<sup>405</sup> If the sign is a repeating pattern, that must be stated also.

<sup>406</sup> Under r 2(3), filing means delivery to the Registrar at the Office unless a contrary intention appears.

<sup>407</sup> SI 2008/1797. The references to rules in this part of the chapter are to the Trade Marks Rules 2008.

appropriate entry in the register and publish the disclaimer or limitation. A requirement that an application include details of colour and size was not a limitation but was required so as to make the trade mark distinctive.<sup>408</sup>

Under s 17(1) of the 1938 Act, the applicant had to be the person claiming to be the proprietor of the trade mark.<sup>409</sup> There is no equivalent requirement under the 1994 Act.<sup>410</sup> In the absence of any ground to challenge an application on this basis, it remains possible that any other person claiming to have the right to use it may oppose the application on the basis of the relative grounds or on the ground that the application was made in bad faith under s 3(6).<sup>411</sup> In *Ball v Eden Project Ltd*,<sup>412</sup> in an infringement action, it was held that registration of a company name by a director of that company without that company's consent for the apparent purpose of giving the director a personal benefit was a breach of the director's fiduciary duty.

The application to register a trade mark is made on Form TM3, a copy of which can be obtained from the Patent Office website together with guidance as to completion of the form and an example application.

### Registration procedure – basic steps

The registration procedure is laid out in ss 37–41. The stages are as follows (*see* Figure 20.2):

- *File application* – it is now possible to apply online, by electronic communication.<sup>413</sup>
- *Examination* – to ensure that the requirements in the Act and rules are satisfied. Although the Registrar is no longer required to carry out a search of earlier trade marks,<sup>414</sup> he may carry out such a search for the purpose of notifying the applicant and other persons about the existence of earlier trade marks which might be relevant to the proposed registration. Where the Registrar considers that the requirements under the relative grounds for refusal are not met, the applicant and the proprietor of the earlier trade mark are notified accordingly.<sup>415</sup> The opportunity will be given to the applicant to make representations and/or amend the application if the Registrar thinks that the requirements are not met (s 37).
- *Acceptance* – if it appears to the Registrar that all the requirements for registration have been met he *shall* accept the application (under the 1938 Act, the Registrar had a discretion) (s 37(5)).
- *Publication* – in the *Trade Marks Journal* (rr 16 and 81 – including particulars and such information required under the rules and any other information as the Registrar thinks fit).
- *Opposition* – under s 38(2), any person may give written notice of opposition within two months of the date of publication (r 17).<sup>416</sup> The grounds for opposition must be stated. Opposition based on the relative grounds for refusal may only be raised by the proprietor of the earlier trade mark or other earlier right. Where opposition is based on an earlier trade mark which has been registered for five or more years, there is a requirement that the opponent shows genuine use of that trade mark or proper reasons for non-use of it; otherwise, the Registrar shall register the trade mark. Additionally, by s 38(3), any person may make observations in writing before registration without becoming a party to the proceedings on the application. The observations will be sent to the applicant: r 22. The detailed procedure for opposition is set out in the rules and includes the possibility of a 'cooling-off' period. Where opposition is based on the relative grounds for refusal under s 5(1) to (3), licensees of the earlier trade mark may intervene in opposition proceedings, as may authorised users in the case of collective or certification marks.<sup>417</sup>
- *Registration* – where the application has been accepted and there has been no opposition (or, if there has been, the proceedings have been decided in favour of the

<sup>408</sup> *Nestlé SA's Trade Mark Application* [2005] RPC 77.

<sup>409</sup> *AL BASSAM Trade Mark* [1995] RPC 511.

<sup>410</sup> In *Sprints Ltd v Comptroller of Customs (Mauritius)* [2000] FSR 815, a challenge was mounted on the basis that the applicant did not have the right to use the mark as required by s 4 of the Mauritian Trade Marks Act 1868. The 'right' was accepted by the Privy Council to be a common law right to use the trade mark.

<sup>411</sup> See Article 3(2)(d) of the Directive. Alternatively, if the mark has been registered, any person claiming to have a prior right to use it may apply for a declaration of invalidity. It would not seem possible that the provisions on rectification under s 64 could be used, as rectification is not possible where the validity of the registration is affected.

<sup>412</sup> [2002] FSR 686.

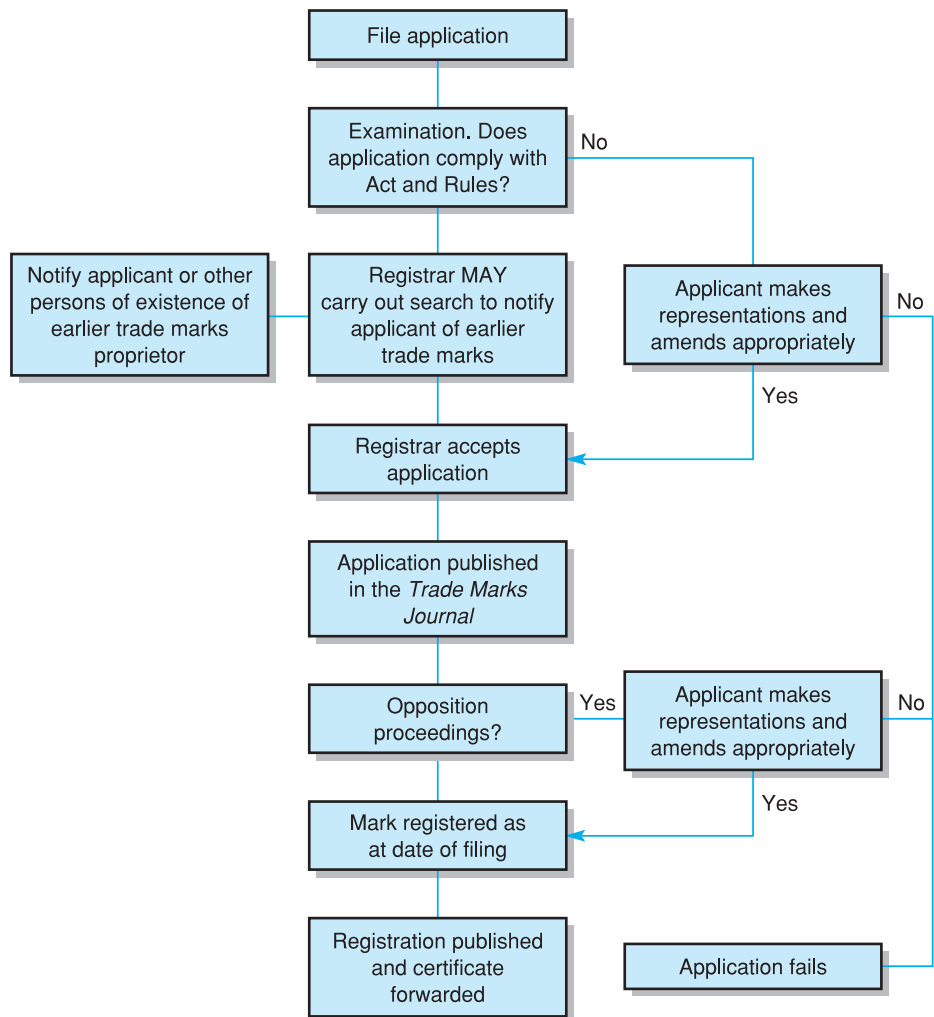

<sup>413</sup> Rule 78 of the Trade Marks Rules 2008 permit this. Under rule 69A, unless the contrary is proved, such communication is deemed to be delivered immediately upon transmission, unless the contrary is proved: r 79.

<sup>414</sup> Section 37(2), which required this, was repealed by the Trade Marks (Relative Grounds) Order 2007, SI 2007/1976.

<sup>415</sup> Rule 14(1), Trade Marks Rules 2008, SI 2008/1797. Notification need not be given to proprietors who have opted out (in the case of earlier UK trade marks) or have not opted in (CTMs): r 14(2).

<sup>416</sup> Under the old Trade Marks Rules 2000, this period was three months. It remains three months where an application for an extension of time in filing Form 7 (the form for notice of opposition) has been made.

<sup>417</sup> Rule 14A of the Trade Marks Rules 2000.

**Figure 20.2** Registration procedure

applicant) then, unless it subsequently appears to the Registrar that the registration requirements other than those under s 5(1)–(3) were not met at the time of acceptance (s 40),<sup>418</sup> the trade mark shall be registered as of the date of filing, which shall be deemed to be the date of registration (s 40(3)). The registration will then be published specifying the date the mark was entered on to the register (r 23) and a certificate issued to the applicant (s 40(4)).

The wording in s 40(1), ‘the registrar shall register the trade mark’, appears mandatory but this is subject to the Registrar believing that, with regard to matters coming to his attention (apart from opposition under s 5(1)–(3)), the requirements for registration were met. Laddie J explained the meaning of s 40(1) in *CREOLA Trade Mark*<sup>419</sup> where a mark had been advertised in the *Trade Marks Journal* but the word CREOLA appeared very indistinctly. There had been no opposition, but the Registrar decided to re-advertise the mark printed more clearly and, on this occasion, there was an opposition. The applicant argued that the mark should automatically have been registered after the opposition period, based on the first advertisement. This was rejected by Laddie J who said that, at the end of the opposition period and in the absence of opposition, the

<sup>418</sup> The limitation in respect of s 5(1), (2) or (3) (relative grounds of refusal on the basis of an earlier trade mark) was a result of amendment by the Trade Marks (Proof of Use, etc.) Regulations 2004, SI 2004/946.

<sup>419</sup> [1997] RPC 507. The section has been amended subsequently but not so as to affect the decision in this case.

Registrar was obliged to take steps timeously to place the mark on the register. However, until such time as the mark was placed on the register, the Registrar could take note of any material brought to his attention. Registration does not follow automatically. Had that been the intention, the statute could have provided for that in clear language.

Under s 39, the applicant may withdraw his application at any time, or restrict the goods or services covered by application. Amendment is also allowed, but only in respect of the name or address of the applicant, errors of wording or copying or obvious mistakes, provided the correction does not substantially affect the identity of the trade mark or extend the goods or services covered by the application (s 39(2)).

Applications can be divided, or merged or made in respect of a series of marks.<sup>420</sup> The Trade Marks Rules 2008 rr 26, 27 and 28 deal with the fine detail. The advantage of division might be that it is a way to isolate an objection while allowing the unchallenged aspects to proceed. Where an application is divided, each divisional application is to be treated as a separate application with the same filing date as the original application.<sup>421</sup> In *DUCATI Trade Mark*,<sup>422</sup> an original application (No 2055227) was divided (Nos 2055227A and 2055227B). A notice of opposition incorrectly referred to No 2055227 (it had been intended to oppose No 2055227A) and the Trade Mark Registry pointed this out and returned the fee. The mark was then registered, there being no opposition recorded against it, and the subsequent application for rectification of the register was refused. As from 1 October 2009, no more than six marks may be applied for in a series (prior to this there was no limit).<sup>423</sup>

A series of marks means a number of trade marks resembling each other as to their material particulars and differing only as to matters of a non-distinctive character so as not substantially to affect the identity of the mark. This is equivalent to the registration of series of marks as associated marks under the old law. However, there is no limitation on the separate assignment of such marks as there was under the old law.

The duration of registration, under s 42, is for a period of ten years from the date of registration (date of filing). It may then be renewed for further ten-year periods, *ad infinitum*.<sup>424</sup> Under s 43, the Registrar will send a reminder between one month and six months prior to the expiry of the last registration (r 34). Renewal shall be made on the appropriate form within six months before the expiry of the last registration. There are provisions for late renewal (if a mark has not been renewed, that fact shall be published). Renewal may take place in the six months following expiry, subject to payment of an additional fee. Otherwise the mark will be removed from the register (r 36). However, within a further six months the mark may be restored subject to an additional restoration fee if the Registrar thinks it is just to do so in the circumstances (r 37).

Generally, once registered, a trade mark may not be altered (s 44). However, an alteration may be permitted where the mark includes the proprietor's name and address – for example, where there is a change to the name or address of the proprietor – provided that the alteration does not substantially affect the identity of the mark. The alteration will be published and persons claiming to be affected by it may object.

Under s 72, registration of a person as proprietor of the mark is prima facie evidence of the validity of the original registration of a trade mark and any subsequent assignment or other transmission of it. This applies in relation to proceedings relating to a registered trade mark including proceedings for rectification.<sup>425</sup>

The fee to register a trade mark or series of marks is £200 plus £50 for each additional class over one. An application for an expedited examination of a single mark may be made under r 5(2) of the Trade Marks Rules 2008. The fee for this is £300. Renewal is also £200, plus £50 for each class renewal over one. A request to enter details of an assignment is £50 but there is no charge to record a licence or other registrable transaction or to apply for rectification. Serving notice of opposition costs £200 and this is the fee also in respect of filing applications for revocation or a declaration of invalidity.<sup>426</sup>

<sup>420</sup> Section 41. A series of marks are, under s 41(2), a number of marks which resemble each other as to their material particulars and differ only as to matters of a non-distinctive character not substantially affecting the identity of the trade mark.

<sup>421</sup> Rule 26(2).

<sup>422</sup> [1998] RPC 227.

<sup>423</sup> Rule 11 of the Trade Marks and Trade Marks and Patents (Fees) (Amendment) Rules 2009, SI 2009/2089, makes the necessary amendment to r 28 of the Trade Marks Rules 2008.

<sup>424</sup> Of course, the trade mark must be used. In the absence of proper reasons, non-use for five or more years is a ground of revocation under s 48(1).

<sup>425</sup> Consequently, any person seeking to challenge the validity of a trade mark has the burden of proof, as is usual. He who seeks must prove: *AMAZE COLLECTION Trade Mark* [1999] RPC 725.

<sup>426</sup> Trade Marks (Fees) Rules 2008, SI 2008/1958.

As from 1 October 2009, changes to the fee structure were introduced. There is an ‘e-filing discount’ of £30 if the full fees are paid with the application. A ‘right-start’ application system becomes available but only where the e-filing system is used. This allows the applicant to apply and pay only £100 plus £25 for each additional class of goods or services (that is, half the standard fees). An examination report is sent to the applicant. If the applicant decides to proceed, the balance of the fees must be paid within 14 days of the date of the examination report. The e-filing discount does not apply to right-start applications.

### Specific procedural aspects

The basic registration procedure has been described above. In this section some specific procedural aspects are considered including hearings before the Trade Marks Registry and appeals against the Registrar’s decision.

Examiners at the Trade Marks Registry check whether an application meets the requirements of the Trade Marks Act and the Trade Marks Rules: s 37. A search may be made of earlier trade marks for the purpose of notifying the applicant and any relevant proprietor about the existence of an earlier registered trade mark which may be relevant to the proposed registration.<sup>427</sup> Where there are potential conflicting earlier registered trade marks, the proprietor may later bring opposition proceedings. Guidance to trade mark examiners is given in a Works Manual. This is a useful tool which gives assistance on the application of the Act in practice. Subsequent editions of the Works Manual are printed to keep up with developments, particularly to reflect legal decisions. Of course, the Works Manual does not carry the force of law. The Trade Marks Registry also adopts *Practice Notes*. For example, in *Practice Note 13/00 – Change of Practice on ‘Retail Services’*,<sup>428</sup> the practice used in relation to applications to register trade marks for certain forms of retail services was changed. Previously, applications to register services provided by department stores and supermarkets in respect of bringing together a variety of goods were refused. Such applications may now be accepted where the service is adequately defined.<sup>429</sup> For example, in *Land Securities plc v Registrar of Trade Marks*,<sup>430</sup> several applications to register trade marks for services provided by operators of retail shopping centres were refused as not being services within the meaning of the Directive and the applications also lacked sufficient clarity. The Chancery Division noted that the services had to be such as were normally provided for remuneration.<sup>431</sup> However, the concept of remuneration was not a narrow one and could apply to services provided by a shopping centre operator which carried on activities of a commercial nature. Such an operator could be said to be remunerated in a manner which was directly related to the custom which it attracted. The applicants were to be given an opportunity to overcome the objections raised in relation to the clarity of their applications.

If it appears that the requirements of the Act are not met, the Registrar will notify the applicant who then has an opportunity to make representations: s 37(3). If the applicant takes up this opportunity normally there will follow a ‘without notice’ (*ex parte*) hearing before a Hearing Officer at the Registry.

For applications that are accepted, there may be an opposition after it has been published. In respect of oppositions, there will normally be a ‘with notice’ (*inter partes*) hearing before a Hearing Officer at the Registry unless the opposition is withdrawn.

An appeal lies from any decision of the Registrar (including the exercise of a discretion)<sup>432</sup> and, under s 76, such appeal may be brought either before the Appointed Person or before the court (in England and Wales and Northern Ireland, the High Court or the Court of Session in Scotland: s 75). The Appointed Person is provided for by s 77 and is a person appointed by the Lord Chancellor to hear and decide appeals under the Act. The Appointed Person may refer a case to the court if it appears to

<sup>427</sup> This is discretionary. Notification will be given to proprietors of UK trade marks who have not opted out of notification or proprietors of CTMs or international registrations designating the EC who have requested this – for which payment of a fee of £50 is required: Trade Marks (Fees) Rules 2008, SI 2008/1958.

<sup>428</sup> [2001] RPC 37.

<sup>429</sup> The change was prompted by a number of factors including that the OHIM accepts such marks if adequately defined. In any case, the trade marks Directive does not expressly require that services have to be provided for remuneration. The Court of Justice also accepts that services which are paid for indirectly are acceptable.

<sup>430</sup> [2008] ETMR 1084.

<sup>431</sup> See Article 50 of the EC Treaty.

<sup>432</sup> There are some exceptions where a right to appeal does not exist, for example, in respect of a decision regarding re-classification of goods or services: r 54.

involve a point of general importance, if the Registrar so requests or if such a request has been made by a party to the proceedings before the Registrar: s 76(3). The power to refer to the court should be used sparingly and primarily reserved for cases where a general point of legal importance arose.<sup>433</sup> The *raison d'être* of the right of appeal to the Appointed Person is that this can provide a quicker and cheaper way of resolving appeals from the Registrar. This might be particularly important if one of the parties might have to discontinue the action because of the financial risks involved.

Where the Appointed Person hears and determines an appeal, his decision is final. There is no provision for appeal from it. Notwithstanding this, the Appointed Person's decision is still subject to judicial review, although he accepts that he can make a reference to the Court of Justice for a preliminary ruling under Article 234. This would be very unusual, however, and where a point of general legal importance is involved, it would be usual for the Appointed Person to refer the case to the High Court (or Court of Session, as appropriate) from which a reference to the Court of Justice could be made.<sup>434</sup> However, the Appointed Person retains a discretion whether or not to refer an appeal to the court even if it appears to him that the case involves a point of general legal importance.<sup>435</sup>

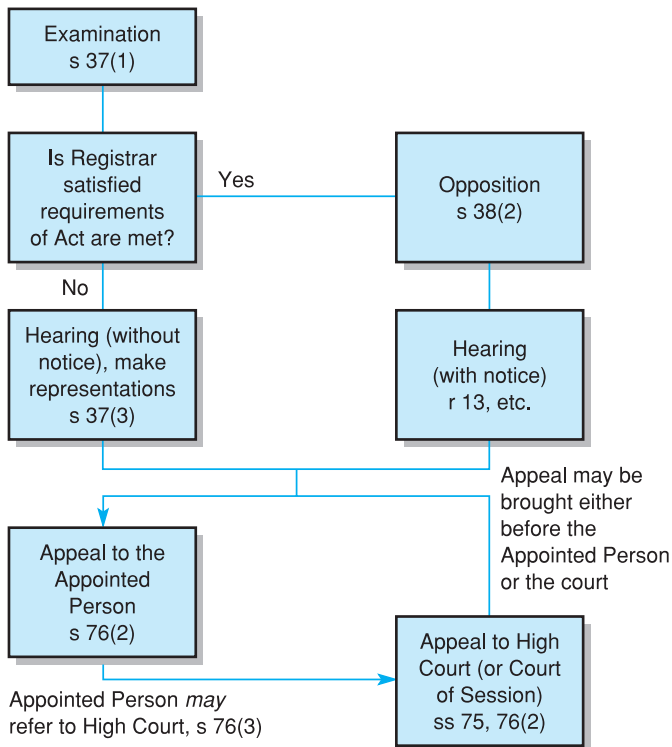

Figure 20.3 indicates the hearing and appeal system. The figure assumes that the applicant makes representations and appeals against the decision or there is an appeal from the decision in the opposition proceedings.

Under r 74, the Registrar has a discretion to rectify procedural irregularities. The Registrar also has a discretion with regard to things coming to the Registrar's attention after acceptance of the application but before registration where it appears that the application was accepted in error: s 40(1). In *Andreas Stihl AG & Co's Trade Mark*

<sup>433</sup> *ACADEMY Trade Mark* [2000] RPC 35.

<sup>434</sup> For example, see *Maasland NV's Application for a 3-Dimensional Trade Mark* [2000] RPC 893.

<sup>435</sup> *Elizabeth Emanuel Trade Mark* [2004] RPC 293.

Note: Where appeal is brought before the Appointed Person, his decision shall be final (s 76(4)).

**Figure 20.3** Hearing and appeal system for trade mark applications

436 [2001] RPC 215.

*Application*,<sup>436</sup> the trade mark in question was published in the *Trade Marks Journal* with a specification of goods which was not that agreed by the applicant and the Registrar and some goods had been omitted. There was no opposition and the mark was registered. Later, the error was noticed by the proprietor and an application for rectification under s 64 was made. The issue was whether the specification could be modified by extending it to include the omitted goods. To allow the amendment would have the effect of extending the protection conferred and this did not seem possible under s 64 which prevents rectification if it affects the validity of the trade mark. In referring the matter to the High Court, the Appointed Person suggested that the Registrar had the power to correct procedurally irregular acts of registration and refusal of registration. It would be an unwanted restriction on that power if it existed only in respect of the period between the acts of accepting the application and registration.

There are usually a few hundred or so opposition proceedings each year. This is a reflection of how trade mark proprietors jealously guard their trade marks and how they try to prevent the registration of another mark which they consider might have a detrimental impact on their trade marks. The opposition procedure now provides for the possibility of a cooling-off period of 12 months if both parties agree and, in any proceedings before the Registrar, provisions for case management and a pre-trial hearing. The procedure in opposition proceedings is set out in rr 17 to 21.

It has been common for opponents to plead every ground of opposition they can think of, for example, by trying to make their arguments and evidence meet every ground under ss 3 and 5 as could possibly apply, however remotely. That practice is to be deprecated and is grossly unfair, especially when the applicant is a sole trader or small company with few resources to answer all the grounds mentioned in the opponent's statement. There are numerous examples of grounds being pleaded which have no hope of succeeding and which are often dropped when it comes to, or close to, the hearing. This may have resulted in significant expense for the applicant.

437 [2000] RPC 345.

438 Section 56 allows the proprietor of a well-known trade mark to restrain the use of an identical or similar trade mark in respect of identical or similar goods or services.

In *DEMON ALE Trade Mark*,<sup>437</sup> the opponent relied on no less than nine grounds of opposition. They were the grounds in ss 3(3)(b), (4), (6), 5(1), (2), (3), (4) and 56,<sup>438</sup> in addition to a further ground based on the Registrar's discretion. Logically, the grounds under s 5(1), (2) and (3) are mutually exclusive (though a combination could be pleaded if there was some doubt about whether the marks in question were identical or whether the goods or services in question were or were not similar). The only ground to succeed was under s 3(6) as the applicant admitted that he had no intention to use the mark applied for. Geoffrey Hobbs QC, as the Appointed Person, referred to a paper delivered by the principal Hearing Officer in which he said:

It is a common practice in *inter partes* [with notice] proceedings before the Trade Marks Registry for the 'kitchen sink' to be pleaded . . . However, as evidence is filed, in the vast majority of cases, it becomes clear that there is no justification for the breadth of the pleadings.

The Appointed Person, whilst accepting that the application had been made in bad faith as through a lack of *bona fide* intention to use the mark, allowed the applicant's appeal against the Registrar's decision to award costs against the applicant of £300. He said that the justice of the case required that the costs of the successful opposition (though the only successful ground was not originally pleaded) be set against the costs the applicant was *prima facie* entitled to in the light of all the failed grounds.

## Chapter 21

# THE UK TRADE MARK – RIGHTS, INFRINGEMENT, LIMITATIONS AND DEFENCES, REMEDIES AND CRIMINAL OFFENCES

### INTRODUCTION

This chapter focuses on the rights of the registered proprietor of a trade mark, infringement, limitations on the rights afforded by a registered trade mark and defences, remedies and criminal offences. As noted in Chapter 20, there is a great deal of similarity between the relative grounds of refusal of registration and the acts that amount to infringement. The European Court of Justice (the ‘Court of Justice’) recognises the equivalence between the two sets of provisions and many of the cases and rulings on the relative grounds, discussed in full detail in the previous chapter, have relevance for infringement also. Consequently, the section on infringement of registered trade marks is relatively short and focuses only on those aspects of trade mark law which are not fully dealt with in that chapter. For example, in relation to infringement based on the identity and/or similarity of the sign alleged to infringe and the registered trade mark, there is no point in repeating the same rulings of the Court of Justice which have been fully described in the previous chapter in the context of the relative grounds for refusal, apart from a brief summary. The discussion in the part of this chapter on infringement focuses on issues that may be different in the UK because of derogations, options or areas where the Directive leaves Member States some freedom in how they legislate. There is also some discussion of trade marks used on webpages and the territorial implications of such use.

There is one important difference between the relative grounds for refusal based on earlier trade marks and infringement, apart from context. An application to register a trade mark can be opposed on the basis of an earlier UK trade mark or a CTM or trade marks resulting from international applications which have effect in the UK or as a CTM. The rights and infringement under the Trade Marks Act 1994 can only relate to UK trade marks or international registrations having effect in the UK. The provisions on infringement are concerned with the use of an offending sign whereas the relative grounds for refusal are concerned with conflict with an earlier trade mark, even where the trade mark subject to opposition has never been used. Having said that, and apart from case law on use of a sign in the course of trade or use of a sign in a trade mark sense, case law on the relative grounds for refusal is exchangeable and applicable to actions on infringement.

First Council Directive 89/104/EEC of 21 December 1988 to approximate the laws of Member States relating to trade marks<sup>1</sup> describes in Article 5 the rights conferred by a trade mark and, in doing so, also specifies the acts that infringe a trade mark. Member States are given some discretion to give further protection for trade marks having a reputation in the Member State concerned. Article 6 limits the rights so as to allow, for

<sup>1</sup> OJ L 40, 11.02.1989, p 1. The original Directive was repealed and replaced by a new codified version, Directive 2008/95/EC of the European Parliament and of the Council of 22 October 2008 to approximate the law of the Member States relating to trade marks, OJ L 299, 08.11.2008, p 25. There are no significant substantive changes but some mainly minor structural changes. In most cases, the numbering of the Articles is unchanged. References in this chapter to the ‘Directive’ are to the new Directive.

example, others using their own name or address or describing certain characteristics of their own goods and services. These limitations may, typically, be used as a defence to an infringement action along with other defences, such as the use complained of not being in the course of trade or a defence based on acquiescence. As with patents and designs, there is an action for groundless threats of infringement proceedings which also now applies in respect of the Community trade mark ('CTM').

Remedies are left to Member States though injunctions are envisaged by the Directive.<sup>2</sup> The Trade Marks Act 1994 also contains a number of criminal offences, some of which carry a maximum penalty of ten years' imprisonment and/or a fine. Of course, the Directive does not expressly cover criminal sanctions but the usual principle of Community law ought to apply so that penalties must be effective, proportionate and dissuasive.<sup>3</sup> Article 10 of the EC Treaty requires that Member States should take appropriate measures to ensure fulfilment of Treaty obligations or those resulting from action taken by Community institutions. We will see the application of this principle by the House of Lords later in the chapter in relation to the trade mark offences. Some of the offences also apply in relation to the CTM.

Although the relative grounds for refusal based on earlier trade marks and infringement of a registered trade mark are equivalent, one difference should be pointed out. The former applies in relation to applications to register a *trade mark*. On the other hand, infringement is based on the use of a *sign* identical or similar to the registered trade mark. 'Sign' is not defined but the Trade Marks Act 1994 uses the word in the same way as in the Directive. Clearly it covers the use of a trade mark, whether registered or not,<sup>4</sup> or some other symbol or device. Dictionary definitions of 'sign' are very wide-ranging but its natural meaning in this context is that it is placed on or around or used in relation to some thing to distinguish it from other things or another class of things in some way. The word itself does not infer use in the course of trade or even use as a trade mark but, in the context of trade mark infringement, it would seem reasonable to assume that these are required. There were, however, some doubts about whether use must be use as a trade mark.

Comparative advertising is permissible under the 1994 Act where this is in accordance with honest practices and does not take unfair advantage of or damage the repute of the other proprietor's trade mark.<sup>5</sup> The Directive allows Member States so to provide under Article 5(5). Other laws may also be relevant where comparative advertising takes place, such as the Control of Misleading Advertisements Regulations 1988<sup>6</sup> which, as amended, has specific provisions for allowing it under specific circumstances. There is also an 'Olympic association right' which, *inter alia*, gives rights against persons using in the course of trade the Olympic symbol, motto or protected words or a representation so similar to the symbol or motto as to create in the public mind an association with it.<sup>7</sup>

## RIGHTS CONFERRED BY REGISTRATION AND INFRINGEMENT

Article 5 of the Directive sets out the rights conferred by a registered trade mark. These rights are exclusive and negative in nature as, under the circumstances covered by the rights, the proprietor is given the right to prevent the use of a sign in the course of trade by a third party without the proprietor's consent.<sup>8</sup> Infringement can extend to the spoken use of words as well as to a graphic representation as, under the Trade Marks Act 1994, s 103(2), 'use' includes use otherwise than by means of a graphic representation.

The scope of the rights under a registered trade mark is subject to specific limitations by virtue of Article 6 and the doctrine of exhaustion of rights under Article 7. However,

<sup>2</sup> Article 5 provides that the proprietor shall have a right to prevent certain uses of a sign identical or similar to the trade mark by third parties without consent.

<sup>3</sup> Case C-326/88 *Anklagemyndigheden v Hansen & Soen I/S* [1990] ECR I-2911.

<sup>4</sup> Though s 11(1) states that a registered trade mark is not infringed by the use of another registered trade mark, this applies only in connection with the goods or services for which the other is registered. In any event, the owner of the earlier mark might apply for a declaration of invalidity instead.

<sup>5</sup> Strictly speaking, comparative advertising infringed under the Trade Marks Act 1938 but there were relatively few cases on it as it seemed to be tolerated by most trade mark proprietors.

<sup>6</sup> SI 1988/915, as amended.

<sup>7</sup> Olympic Symbol etc. (Protection) Act 1995.

<sup>8</sup> The equivalent provisions in the Act are set out in ss 9(1) and 10. Of course, for the purposes of the Act, the use to which the offending sign is put must be use in the UK.

there is no general limitation based on not unduly restricting the availability of certain signs. Such an argument was rejected in Case C-102/07 *Adidas AG v Marca Mode CV*.<sup>9</sup> In that case the claimant was the proprietor of the well-known three-stripe logo applied to shoes and sports clothing. The defendants used similar logos but using two stripes. The Court of Justice confirmed that Article 6(1)(b) alone applied to the availability argument. There was no general interest form of keeping certain signs available for use by other undertakings.

<sup>9</sup> [2008] ECR I-2439.

In the UK, the rights have effect from the date of registration (s 9(3)). This is the date of filing of the application in accordance with s 40(3). However, the proprietor cannot begin infringement proceedings before the date on which the mark is in fact registered, that is, the date that registration is granted. The language in the two provisions is somewhat tautologous. Section 36(3) states that the date the mark is in fact registered is the date of filing. As it is retrospective it is nonetheless a question of fact. But obviously no proceedings can be entertained until it is known that the mark has been registered.

Before looking at the individual forms of infringement, it should be noted that the use complained of, apart perhaps that for the purposes of Article 5(5), must be use in the course of trade. There is also an issue as to whether the use in question has to be use as a trade mark, that is, use in a form that indicates the origin of the goods or services.

### Use in course of trade

Apart from Article 5(5) of the Directive (which in the UK is equivalent to s 10(6), permitting honest, fair and non-detrimental comparative advertising), the rights are infringed by using a sign in the prohibited circumstances in the course of trade. In the Trade Marks Act 1994, the infringing acts are set out in s 10 but s 9(1) makes a basic statement of the rights given by registration, saying that the proprietor ‘. . . has exclusive rights in the trade mark which are infringed by use of the trade mark in the United Kingdom without his consent’. The subsection then goes on to state that the infringing acts are specified in s 10. This is quite a clumsy way to set out the rights and infringement and, because s 9(1) is not limited to use in the course of trade, it is arguable that the rights are somehow wider than the right to prevent infringement as specified in s 10 and any use of the trade mark in the UK without consent will infringe that right.

In *British Sugar plc v James Robertson & Sons Ltd*,<sup>10</sup> it was argued that s 9(1) put a gloss upon s 10, requiring that infringing use had to be use as a trade mark. Jacob J rejected this, describing s 9(1) as no more than a ‘chatty introduction to the details set out in s 10’, noting that s 9(1) had no equivalent in the Directive because, except as mentioned above, the Directive is quite clear that the rights are in connection with the use of a sign in the course of trade. That being so, it is safe to ignore any suggestion that s 9(1) gives more extensive rights than those set out in s 10. It is, however, arguable that use does not have to be use in the course of trade for the purposes of Article 5(5) of the Directive and s 10(6) of the Act, as discussed later, *see p 753*.<sup>11</sup>

<sup>10</sup> [1996] RPC 281.

It is not clear whether ‘spillover’ advertising, such as where an advertisement in a magazine (or on an internet website) intended for customers in one country reaches persons in another country, is use in the course of trade. In *Euromarket Designs Inc v Peters and Crate & Barrel*,<sup>12</sup> the advertisements complained of consisted of one in a magazine and another on the defendant’s website. The magazine was published in the UK but the advertisement was directed to trade at the defendant’s shop in Dublin. The nature of the trade (sofas, tableware, beds and lighting accessories) was that of a shop and there was no evidence of mail order trade. That being so, and the same applied in respect of the website, the use of the claimant’s trade mark, registered in the UK and as a CTM, was not an infringing use as it was not in the course of trade in the UK.

<sup>11</sup> If that is so, this could explain the omission of any reference to the course of trade under s 9(1).

<sup>12</sup> [2001] FSR 288.

If it were otherwise, the Directive could inadvertently have given rise to conflict in the internal market. However, this was an application for summary judgment and Jacob J rightly said that his view was provisional.

Under the Trade Marks Act 1994, s 103(1) ‘trade’ includes any business or profession. Article 5(3) gives some examples of what forms of use may be caught by the main forms of infringement under Article 5(1) and (2) as:

- (a) affixing the sign to goods or to the packaging thereof;
- (b) offering the goods, putting them on the market or stocking them for these purposes under that sign, or offering or supplying services thereunder;<sup>13</sup>
- (c) importing or exporting goods under the sign;
- (d) use of the sign on business papers and in advertising.<sup>14</sup>

<sup>13</sup> Calling a car showroom ‘Autodrome’ did not infringe the registered mark ‘AUTODROME’ used for motor cars because it was not used in relation to goods under the Trade Marks Act 1938 s 4: *AUTODROME Trade Mark* [1969] RPC 564. But compare with *Cheetah Trade Mark* [1993] FSR 263 where use on an invoice was held to infringe.

<sup>14</sup> Section 10(4) of the Trade Marks Act 1994 is expressed in very similar terms.

<sup>15</sup> *Beautimatic International Ltd v Mitchell International Pharmaceuticals Ltd* [2000] FSR 267.

<sup>16</sup> [1998] FSR 92.

The list is not exhaustive and other forms of use may be caught. Of course, in terms of the UK Act, the use must be in relation to goods within the UK. That being so, a person who affixes the offending sign to material in the UK to be used to package goods outside the UK does not infringe under s 10(4)(a) (Article 5(3)(a) of the Directive).<sup>15</sup> However, using the sign on business papers or in advertising in the UK in respect of goods packaged in the UK for sale outside the UK may infringe.

The meaning of import and export came up for determination in *Waterford Wedgwood plc v David Nagli Ltd*<sup>16</sup> in which the defendant had acquired through a third party a consignment of counterfeit Waterford Crystal valued at around £700,000 which was situated in Bilbao, Spain. The defendant gave instructions for the shipment of the crystal from Bilbao to New York. Unknown to the defendant, the crystal was loaded on a ship bound for Felixstowe, where it was transferred to another ship bound for New York. Although it was accepted that the property in the crystal had passed to the buyer in New York, it was held that the defendant had infringed the UK trade marks of the claimant by importing into and exporting from the UK. The shippers were acting as agents under the instructions of the defendant as principal.

The court confirmed that importation consists of bringing goods into the territorial jurisdiction of the UK and exportation consists of their removal from territorial jurisdiction. As the crystal was imported and exported in packing cases bearing the claimant’s trade marks, the defendant had infringed by importing and exporting under the sign, even though the crystal was only temporarily in the UK, and even though the crystal was brought into the UK en route for New York. As regards a claim that the defendant had infringed by using the trade marks on invoices and other papers, it was held there was no infringement as the defendant, who thought the crystal was genuine, thought it was referring to genuine Waterford Crystal. The luckless defendant had challenged the validity of some of the claimant’s trade marks, arguing that WATERFORD was a geographical name and LISMORE was a name for a pattern in customary use in the trade. However, this was rejected as Article 3(3) allows such marks to be registered if they have become distinctive through use, which was the case here.<sup>17</sup>

<sup>17</sup> The claimant’s request for an account of profits was not granted as the court indicated that the defendant had not made a profit!

<sup>18</sup> [2008] FSR 313.

<sup>19</sup> [2005] ECR I-8735.

Where goods pass through the UK under customs control onward processing procedure from outside the EEA for trans-shipment to a destination country also outside the EEA, this does not constitute importing the goods into the UK for the purposes of trade mark infringement. So it was held in *Eli Lilly & Co v 8PM Chemists Ltd*<sup>18</sup> in which pharmaceuticals were obtained in Turkey, brought to the UK and then sent to the US. Using a trade mark in the course of trade required bringing them into the EEA for the purpose of placing them on the market within the EEA. This was in accordance with the earlier Court of Justice ruling in Case C405/03 *Class International BV v Colgate-Palmolive Co.*<sup>19</sup> The correctness of *Waterford Wedgwood v Nagli* must now be doubted though a distinction is that of the customs procedures under *Eli Lilly* and *Class International*. In *Class International*, the goods (Aquafresh toothpaste from South

Africa intended to be shipped to the Ukraine) were brought into the Netherlands under the Community customs code of ‘non-Community goods’.<sup>20</sup>

## Use as a trade mark

The question here is whether it is required that the offending sign is being used in a trade mark sense, as an indicator of origin. There was considerable doubt as to whether the use of the sign must be use as a trade mark. In the Scottish case of *Bravado Merchandising Services Ltd v Mainstream Publishing (Edinburgh) Ltd*,<sup>21</sup> the defendant published a book about the pop group ‘Wet Wet Wet’ under the title *A Sweet Little Mystery – Wet Wet Wet – The Inside Story*. ‘Wet Wet Wet’ was registered as a trade mark and the proprietor brought an action for an interdict (injunction) against this use of the name. Lord McCluskey, *obiter*, said that use must be use as a trade mark. He said it would be bizarre if trade mark legislation, which was designed to protect indications of origin, was used to prevent publishers using a trade mark in a book about the proprietor of the trade mark or the product to which it was applied.

Jacob J disagreed with this view in *British Sugar plc v James Robertson & Sons Ltd*,<sup>22</sup> where he held that there was no such requirement in s 10(1) or (2) (equivalent to Article 5(1)(a) or (b) of the Directive). In that case, the claimant had registered ‘TREAT’ for dessert sauces and syrups and complained of the defendant selling a sweet spread labelled ‘Robertson’s Toffee Treat’. The defendant claimed that it used the word descriptively and not as a trade mark. Jacob J said there was no reason to limit s 10 in such a way and purely descriptive use would not infringe because it would be within s 11(2) which states, *inter alia*, that indications of kind, quality, quantity, intended purpose, etc. do not infringe if in accordance with honest practices in industrial or commercial matters.<sup>23</sup> However, Jacob J held that the trade mark was invalid and, even if it was valid, it would not have been infringed and, consequently, what he said about infringing use not being required to be use as a trade mark must not be taken too seriously.<sup>24</sup> In *Trebor Bassett Ltd v The Football Association*,<sup>25</sup> Rattee J felt it unnecessary to decide the point.

In *Arsenal Football Club plc v Reed*,<sup>26</sup> Laddie J thought that the scarves and other items bearing the football club’s trade marks sold by a third party from a stall sited outside the Arsenal football ground and carrying a disclaimer to the effect that the goods were not official Arsenal merchandise, was not use of the trade marks as indicating origin. They operated rather as badges of support for, loyalty or affiliation to the trade mark proprietor. However, he referred the matter to the Court of Justice which ruled in Case C206/01 *Arsenal Football Club plc v Matthew Reed*<sup>27</sup> that it made no difference that the trade marks were perceived as badges of support for, loyalty or affiliation to the trade mark proprietor. The use of the trade marks suggested that there was a material link in the course of trade between the proprietor and the goods. The use of a disclaimer did not prevent this as there would be persons who came across the goods after they had been sold and they might read the trade marks as meaning that Arsenal Football Club was the undertaking of origin of the goods.

A little earlier, in Case C2/00 *Holterhöff v Freiesleben*,<sup>28</sup> the Court of Justice considered the position where the trade mark had been used solely to describe the characteristics of the goods and there was no danger that anyone would take it as an indication of origin. Mr Freiesleben was the proprietor of two trade marks, ‘Spirit Sun’ and ‘Context Cut’, used for diamonds and other precious stones. The trade marks were associated with two particular cuts of the stones. Mr Holterhöff was a dealer in precious stones and used the names to describe stones he offered for sale. Clearly the use was in the course of trade though he claimed he had only used the trade marks to describe the type of cut of the stones offered for sale and he had not used the trade marks to indicate origin. The Court of Justice confirmed that the exclusive rights of the proprietor

<sup>20</sup> Article 4(7) and (8) of Council Regulation (EEC) No 2913/92 establishing the Community customs code, OJ L 302, 19.10.1992, p 1.

<sup>21</sup> [1996] FSR 205.

<sup>22</sup> [1996] RPC 281.

<sup>23</sup> Article 6(1)(b) of the Directive.

<sup>24</sup> Nor was there any need to decide this point in *Bravado Merchandising* above, as the s 11(2) defence applied there also.

<sup>25</sup> [1997] FSR 211.

<sup>26</sup> [2001] RPC 922.

<sup>27</sup> [2002] ECR I-10273.

<sup>28</sup> [2002] ECR I-4187.

of a registered trade mark within Article 5(1) did not extend to a situation where a third party, in the course of commercial negotiations, reveals the origin of goods which he has produced himself and only uses the trade mark to indicate the particular characteristics of the goods he is offering for sale such that there is no question of the trade mark being perceived as a sign indicative of the undertaking of origin. In other words, provided a trade mark is not used as an indication of origin but is used to describe the goods, and this is clear in the circumstances, there can be no infringement. The trade mark has not been used in a trade mark sense. This makes sense when it is recalled that the primary function of a registered trade mark is to act as an indication of origin.<sup>29</sup>

<sup>29</sup> See the tenth recital to the Directive.

In its ruling in *Holterhöff*, the Court of Justice was careful to limit the ruling to circumstances such as those in the case, being:

- where a third party refers to the trade mark in the course of commercial negotiations with a potential customer, being a professional jeweller;
- where the reference to the trade mark is made purely to describe the characteristics of the product offered for sale to the potential customer who is familiar with the characteristics of the products covered by the trade mark; and
- where the reference to the trade mark cannot be interpreted by the potential customer as indicating the origin of the product.

The Court of Justice said that, in such a case, the interests of the proprietor which Article 5(1) was intended to protect were not affected. One major distinction between *Arsenal* and *Holterhöff* is that, in the former, other persons might come across the goods later and take the trade marks as indicating origin: for example, by seeing someone wearing one of Mr Reed's scarves or being given one as a present. In *Holterhöff*, the trade mark was used descriptively to a potential customer and was not attached to the precious stones or written on associated documentation in such a way that there would be a danger that persons other than the potential customer would see the trade mark and the stones and think that they came from the trade mark proprietor. However, in *Holterhöff*, the Court of Justice did not address the possibility that a customer who is a professional jeweller might sell the precious stones to one of his customers and use the trade marks to describe the stones so that his customer, not being knowledgeable about the particular cuts, might think that the trade marks were being used to indicate origin.<sup>30</sup> This would prejudice the basic function of the trade marks and the interests of the proprietor protected by Article 5(1). It would, of course, be an infringement by the intermediary but would it also be an infringement by the first seller?

<sup>30</sup> Under the Trade Marks Act 1994 s 103(2) 'use' includes use other than by graphic representation and will, therefore, include spoken use.

<sup>31</sup> Use of an identical sign for identical goods or services or, where there is incomplete identity of the sign or the goods or services, use resulting in a likelihood of confusion.

<sup>32</sup> [2005] FSR 79.

To say that, to infringe under Article 5(1)(a) or (b),<sup>31</sup> use of a sign must be use as a trade mark is not strictly accurate and the better position is to say that infringement requires that there are or may be some persons who will take the sign, which is identical or similar to the registered trade mark, to signify that the goods or services are those of a particular undertaking. In *Electrocoin Automatics Ltd v Coinworld Ltd*,<sup>32</sup> the trade marks 'BARX' and 'OXO' registered for gaming machines and the like could not be taken by reasonably well-informed and reasonably observant and circumspect consumers to be anything other than origin-neutral integers because of their past common use on fruit machines. The judge also held that the fact the claim for infringement failed did not necessarily provide justification for a finding of invalidity.

A company providing search engine facilities on the internet does not itself use a trade mark where persons using the search engine enter the trade mark to carry out a search. In *Wilson v Yahoo! UK Ltd*,<sup>33</sup> the claimant was the proprietor of the Community trade mark 'MR SPICY' used for certain types of food and provision of such foods. He alleged infringement of his trade mark by Yahoo! as entering Mr Spicy in the search

<sup>33</sup> [2008] ETMR 558.

engine would direct them to Sainsbury's and Pricegrabber's websites. It was held that the trade mark was not used by Yahoo! but was used by the browsers entering 'Mr Spicy' in the search engine.<sup>34</sup>

<sup>34</sup> There was no evidence to show that 'Mr Spicy' was a sponsored phrase although it appears that 'spicy' was.

### Article 5(1)(a) – identical sign, identical goods or services

The use in the course of trade, without the consent of the proprietor, of a sign which is identical to the registered trade mark in relation to goods or services identical to those for which the trade mark is registered, infringes. Nothing else is required such as proof of a likelihood of confusion or unfair advantage of or detriment to the registered trade mark. In that sense liability can be described as absolute though subject to the limitations on the effect of trade marks and other defences. The state of mind of the infringer is of no relevance to a finding of infringement and there is no statutory provision limiting an award of damages in a case of 'innocent' infringement.

In relation to infringement under Article 5(1)(a), the use should be such as to impact on the functioning of the registered trade, in particular, its essential function of guaranteeing to consumers the origin of goods. In Case C48/05 *Adam Opel AG v Autec AG*,<sup>35</sup> the claimant was the well-known manufacturer of motor cars. It objected to the use of its Opel trade mark, registered for motor vehicles and toys, on remote control scale model cars of the claimant's Opel Astra V8 Coupe manufactured by the defendant. The Court of Justice ruled that the use in question could infringe under Article 5(1)(a) if the use affects or is likely to effect the functions of the trade mark as a trade mark registered for toys. Although a likelihood of confusion is not expressly required for infringement under Article 5(1)(a), this decision suggests that an absence of confusion as to origin could mean that the defendant escapes. This could be the case where consumers do not think that the defendant's goods originate from the trade mark proprietor or his licensee. This could be the case in relation to scale models of motor vehicles. In other words, the use of the sign by the defendant is, at least arguably, not *use as a trade mark*.

<sup>35</sup> [2007] ECR I-1017. The Court's ruling in relation to Article 5(2) is discussed later.

Where a sign is identical to the trade mark and the goods or services are also identical, a likelihood of confusion is presumed. This presumption is stated in Article 16(1) of the TRIPs Agreement. If it can be shown that there is no confusion, there will be no infringement, for example, because the trade mark is not being used in a trade mark sense, but to describe the characteristics of the goods or services and the customer is not deceived as to origin as he realises the sense in which the trade mark is being used. The basic function of the trade mark which Article 5 seeks to protect is not compromised.<sup>36</sup>

<sup>36</sup> Case C-2/00 *Holterhoff v Freiesleben* [2002] ECR I-4187, discussed above.

The Court of Justice has given guidance on whether a sign is identical to a registered trade mark in Case C342/97 *Lloyd Schuhfabrik Meyer & Co GmbH v Klisjen Handel BV*<sup>37</sup> and Case C291/00 *LTJ Diffusion SA v Sadas Vertbaudet SA*,<sup>38</sup> as discussed in the previous chapter. In summary, those cases require that the investigation is carried out from the perspective of the average consumer who is reasonably well informed, reasonably observant and circumspect. As the average consumer does not usually have an opportunity to make a direct comparison of the sign and the trade mark and carries an imperfect picture of them in his mind, it is the overall impression that is important. Furthermore, the level of attention of the average consumer will vary depending on the category of goods or services in question.

<sup>37</sup> [1999] ECR I-3819.

<sup>38</sup> [2003] ECR I-2799.

A sign will be identical to a trade mark where it reproduces all its elements without modification or addition or where, as a whole, the differences are so insignificant as to go unnoticed by the average consumer. However, a strict interpretation must be taken, bearing in mind the protection of trade marks where the sign is similar for identical goods or services, where a likelihood of confusion exists under Article 5(1)(b).

<sup>44</sup> *Digipos Store Solutions Group Ltd v Digi International Inc* [2008] EWHC 3371 (Ch).

<sup>45</sup> *Rousselon Freres et Cie v Horwood Homewares Ltd* [2008] EWHC 881 (Ch).

<sup>46</sup> [2000] ECR I-6959.

<sup>47</sup> [1997] ECR I-6191. *Sabel* was concerned with Article 4(1)(b) but the Court of Justice in *Marca Mode* accepted that the same interpretation must also apply to Article 5(1)(b).

We have seen that a stylised word may be deemed to be identical to the same word in type form and the addition of another word<sup>39</sup> or suffix may not prevent the sign being judged to be identical.<sup>40</sup> In relation to goods and services being considered identical, overlapping specifications of goods or services might be considered identical even though not coextensive<sup>41</sup> and the service of placing job advertisements was not identical to a recruitment agency service.<sup>42</sup>

### Article 5(1)(b) – incomplete identity of mark and goods or services

For infringement under Article 5(1)(b), where the sign is identical or similar to the registered trade mark and is used for identical or similar goods or services, a likelihood of confusion on the part of the public, which includes a likelihood of association, is required. Consequently, the more distinctive a trade mark is, the stronger will be the protection it enjoys where a likelihood of confusion is relevant to infringement. In Case C39/97 *Canon Kabushiki Kaisha v Metro-Goldwyn-Mayer Inc*,<sup>43</sup> the Court of Justice said (at para 18) that where protection depends on a likelihood of confusion:

... marks with a highly distinctive character, either *per se* or because of the reputation they possess on the market, enjoy broader protection than marks with a less distinctive character.

Conversely, where the mark is weak, for example, because it contains a descriptive element, the average consumer is more likely to consider that the descriptive element was not being used to identify the goods in question.<sup>44</sup> Where a composite mark includes an earlier mark, there could be a likelihood of confusion if the earlier mark had an independent distinctive role but, otherwise, a likelihood of confusion would not always follow automatically.<sup>45</sup>

Apart from the distinctiveness of the registered trade mark, the degree of similarity will also be an issue and the greater the similarity of the sign and the trade mark and the goods or services, the more easy it will be to find infringement.

As with Article 4(1)(b), the equivalent provision on infringement appears to apply also where the sign and the trade mark are identical and the goods or services are also identical. Of course, where this is the case, there is infringement under Article 5(1)(a) and there is no need to show a likelihood of confusion. If there is any doubt as to whether the sign and the trade mark are identical or the goods or services are identical, one would expect both provisions to be pleaded in an infringement action.

As with the equivalent ground for refusal under Article 4(1)(b), the requirement for ‘... a likelihood of confusion on the part of the public, which includes a likelihood of association between the sign and the trade mark’, has been interpreted as meaning that a mere association in the minds of the public, *per se*, is not enough. There is no presumption of a likelihood of confusion resulting from a likelihood of association in a strict sense: Case C425/98 *Marca Mode CV v Adidas AG*,<sup>46</sup> following Case C251/95 *Sabel BV v Puma AG, Rudolf Dassler Sport*.<sup>47</sup> Non-origin association, where consumers are not mistaken about the origin of the goods to which the sign has been applied, is not sufficient on its own to give rise to a likelihood of confusion. That is not to say that it can never result in a likelihood of confusion and a likelihood of association may do this if the trade mark is particularly distinctive or because of its reputation and, as said in *Sabel*, the sign and the trade mark has a similar semantic content.

Both *Sabel v Puma* and *Canon v Metro-Goldwyn-Mayer* provide important guidance on the question of whether a likelihood of confusion exists. The average consumer, who perceives the trade mark as a whole and who does not break it down into its constituent parts, makes a global appreciation of the visual, aural or conceptual similarity of the marks based on the overall impression given by them, bearing in mind their distinctive and dominant components. The more distinctive the mark, the greater will be the likelihood of confusion. There is some interdependence between the sign and the trade

mark and the goods or services so that the greater the similarity of the sign and the trade mark, the lesser the similarity of the goods or services would need to be to find infringement and *vice versa*. The type of confusion required is confusion as to origin; in other words, the average consumer would think the goods or services came from the same or economically linked undertakings.<sup>48</sup>

It would appear that the possibility that there will be some persons who may be confused as to origin is sufficient to find a likelihood of confusion even though the persons buying goods to which a trade mark has been applied are not confused: for example, because the goods are sold under a disclaimer.<sup>49</sup> There may even be a likelihood of confusion without any evidence of actual confusion. It may be that confusion has not come to light. In *Julius Säaman Ltd v Tetrosyl Ltd*,<sup>50</sup> involving an allegation of infringement of the shape of a fir tree used for air fresheners often seen hanging from car rear view mirrors, Kitchen J said that he did not consider the absence of evidence to be determinative though it may be highly material. Nevertheless, Kitchen J held that the trade mark was infringed. He considered that there was a marked similarity between the trade mark and the offending sign when stripped of their packaging.<sup>51</sup>

Bearing in mind the Court of Justice rulings above, there follows some discussion of cases in the UK where the courts have had to consider the equivalent provision under the Trade Marks Act 1994, s 10(2). These cases usefully supplement the broad principles set out in the Court of Justice rulings.

### Similar sign

Account may be taken of colourable alternatives and the mark when spoken. In *Sir Terence Orby Conran v Mean Fiddler Holdings Ltd*<sup>52</sup> the claimant was registered proprietor of the trade mark 'Zinc' under the class of planning design and interior design of restaurants, cafes, bistros and wine bars, and he planned to open a series of restaurants in London and Glasgow, under the name 'Zinc Bar'. The defendant opened a wine bar in Kilburn, London calling it 'Zincbar', using the word 'ZINCBAR' on the right-hand side of the sign on the bar's fascia and 'Zn', the chemical symbol for zinc, on the left-hand side.

Walker J granted summary judgment. He considered trade mark infringement to be obvious, and the same applied to the alternatives suggested by the defendant, 'ZN', 'Sinc' or 'Sync' that were sufficiently colourably similar. Evidence of confusion included a would-be customer of the claimant who was given the number of the defendant's bar in Kilburn.

A degree of similarity is permissible provided the sign is not confusingly similar to the trade mark. After all, a likelihood of confusion is required; mere similarity is not sufficient *per se*. In *European Ltd v Economist Newspaper Ltd*,<sup>53</sup> the claimant published a weekly newspaper under the masthead incorporating the word 'European'. The masthead was a registered trade mark, but the claimant had disclaimed any monopoly in the word 'European'. The defendant's masthead included the phrase 'The European Voice'. The Court of Appeal confirmed the decision at first instance, dismissing the claimant's claim for trade mark infringement. An aural comparison was eschewed by the court. The marks were visually different but phonetically similar and any aural comparison would be to disregard the distinctive features of the claimant's mark that could be seen but not heard. The claimant's mark comprised two words in upper case though with 'THE' in a smaller font and with a dove holding a copy of the newspaper and part of the globe superimposed on the letter 'O' of 'EUROPEAN'. The defendant's masthead was in lower case type without a dove or globe, but with a star over the 'i' of 'Voice'.

The concept of imperfect recollection is recognised by the Court of Justice and may be used in determining whether there exists a likelihood of confusion and may also be relevant whether the sign is similar to the registered trade mark. In *LIFESYSTEMS*

<sup>48</sup> Other Court of Justice cases on likelihood of confusion, discussed in the Chapter 20, see pp 706–11, include Case C-342/97 *Lloyd Schuhfabrik Meyer & Co GmbH v Klisjen Handel BV* [1999] ECR I-3819 and Case C-120/04 *Medion AG v Thomson Multimedia Sales Germany & Austria GmbH*, 6 October 2005.

<sup>49</sup> Case C-206/01 *Arsenal Football Club plc v Matthew Reed* [2002] ECR I-10273.

<sup>50</sup> [2006] FSR 849.

<sup>51</sup> See also, *D Jacobson & Sons Ltd v Globe Ltd* [2008] EWHC 88 (Ch).

<sup>52</sup> [1997] FSR 856.

<sup>53</sup> [1998] FSR 283.

54 [1999] RPC 851. This was an opposition case.

*Trade Mark*,<sup>54</sup> it was held that ‘LIFESYSTEMS’ was not sufficiently similar to ‘LIFESTREAM’ to result in confusion even allowing for imperfect recollection. This was so even taking account of the fact that the words were of similar length as they were sufficiently different, visually and phonetically.

### Similar goods or services

55 [1996] RPC 281.

56 Romer J in *Jellinek's Application* (1946) 63 RPC 59, approved by the House of Lords in *DAIQUIRI RUM Trade Mark* [1969] RPC 600.

In determining whether goods are similar, Jacob J in *British Sugar plc v James Robertson & Sons Ltd*<sup>55</sup> suggested a test derived from the old test for whether goods were of the same description used under the 1938 Act.<sup>56</sup> He suggested the following factors were relevant:

- (a) the respective uses of the respective goods or services;
- (b) the respective users of the respective goods or services;
- (c) the physical nature of the goods or acts of service;
- (d) the respective trade channels through which the goods or services reach the market;
- (e) in the case of self-service consumer items, where in practice they are respectively found or likely to be found in supermarkets and in particular whether they are, or are likely to be, found on the same or different shelves;
- (f) the extent to which the respective goods or services are competitive. This inquiry may take into account how those in trade classify goods: for example, whether market research companies, which of course act for industry, put the goods or services in the same or different sectors.

In *British Sugar v Robertson*, Jacob J, applying the above test, found that the defendant’s sweet spread ‘Robertson’s Toffee Treat’ was not similar to ‘dessert sauces and syrups’ for which the claimant’s registered trade mark, ‘TREAT’, was registered. Jacob J’s test is very useful and there is no Court of Justice ruling providing such detail. However, the Court of Justice rightly focuses upon questions of likelihood of confusion and there is a danger of becoming swamped by the detail and losing sight of the question posed by the statutory provision. This is simply whether, because of the identity or similarity of the sign and the trade mark and the identity or similarity of the goods or services, there exists a likelihood of confusion as to the origin of the goods or services on the part of the public. Is the public likely to think that the goods or services come from the same or economically linked undertakings?

A passing similarity is not enough; a mere finding of similarity does not automatically lead to a conclusion of infringement. Even if, as a matter of fact, it is held that the goods or services are similar, the claimant must still adduce evidence that such similarity is the cause of a likelihood of confusion.<sup>57</sup> It is submitted that it was intended that only a relatively close connection would do. Similarity and likelihood of confusion are inexorably linked and the greater the divergence between the goods or services, the more difficult it will be to prove a likelihood of confusion.<sup>58</sup> The only proviso to this is that the answer will also be governed by the width of the specification of goods or services for which the trade mark is registered. However, if the specification is very wide, this may leave the mark vulnerable to a counterclaim for partial revocation on the basis of non-use.

57 In *LIFESYSTEMS Trade Mark* [1999] RPC 851, an opposition case, Jacob J’s test for similarity of goods was applied and it was held that electronic devices for attracting and killing insects were not similar to aromatherapy diffusing apparatus. In any case, the opponent to registration failed to adduce independent evidence of confusion.

58 *Pfizer Ltd v Eurofood Link (UK) Ltd* [2001] FSR 17. See also Case C-39/97 *Canon Kabushiki Kaisha v Metro Goldwyn Mayer Inc* [1998] ECR I-5507.

59 [2001] FSR 17.

It seems that, even if there is substantial dissimilarity between the defendant’s goods or services and those for which the claimant’s trade mark is registered, a finding of infringement under s 10(2) may still be possible. In *Pfizer Ltd v Eurofood Link (UK) Ltd*<sup>59</sup> Simon Thorley QC, as deputy judge of the High Court, said (at para 29):

... there may be substantial dissimilarity between the goods in question and yet proof of confusion. If the court is satisfied as to confusion then the relief is granted notwithstanding the measure of dissimilarity between the goods.

However, this must be treated with some caution as the wording of the Act and the Directive explicitly requires that similarity of goods and confusion are causally linked. If the goods or services are not similar then s 10(2) is not appropriate (though s 10(3), equivalent to Article 5(2) of the Directive, may well be).<sup>60</sup>

The makers of the popular ‘Baywatch’ television series were not pleased when someone started transmitting encrypted ‘adult films’ under the name ‘Babewatch’. In *Baywatch Production Co Inc v Home Video Channel*,<sup>61</sup> it was held, *inter alia*, that the goods or services were not similar. The claimant had registrations for ‘BAYWATCH’ against video discs and tapes in Class 9 and had other registrations, but none that covered television programmes or broadcasting. It was also held that the signs were not similar and there was no satisfactory evidence of confusion. This must be contrasted with *NAD Electronics Inc v NAD Computer Systems Ltd*<sup>62</sup> in which the claimant had registered the trade mark ‘NAD’ for, *inter alia*, compact disc players. The claimant made high quality sound systems. The defendant used the word ‘NAD’ on his computer systems and this was held to infringe. Account was taken of the fact that computer technology has evolved and many computer systems come complete with CDROM drives and have speakers and can play music compact discs as well as read CDROM discs.

The fact that services relate to the same type of vocation or profession is not sufficient to find that they are similar. For example, providing dental services to the public is not similar to the provision of financial services to dentists.<sup>63</sup> In such cases, it would very difficult, if not impossible, to show that there was any likelihood of confusion on the part of the public even if such services were held to be similar.

<sup>60</sup> In his judgment Simon Thorley QC did go on to say ‘... the public are not readily going to be confused between (say) ball bearings and perfumes no matter how similar the trade marks’.

<sup>61</sup> [1997] FSR 22.

<sup>62</sup> [1997] FSR 380.

<sup>63</sup> *Harding v Smilecare Ltd* [2002] FSR 589.

## Article 5(2) – unfair advantage or damage to repute

Article 5(2) provides that Member States may ‘... provide that the proprietor shall be entitled to prevent third parties not having his consent from using in the course of trade any sign which is identical to, or similar to, the trade mark in relation to goods or services which are *not similar* to those for which the trade mark is registered, where the latter has a reputation in the Member State and where use of the sign without due cause takes unfair advantage of, or is detrimental to, the distinctive character or repute of the trade mark’ (emphasis added). The UK has taken advantage of this optional further protection (the Trade Marks Act 1994 s 10(3)). The greater the distinctive character and repute of a trade mark, the easier it will be to find that detriment has been caused to it. This was observed by the Court of Justice in Case C375/97 *General Motors Corp v Yplon SA*.<sup>64</sup>

The rationale for this provision is that it gives protection where the use of a sign causes damage to a trade mark, for example, by diluting or blurring its distinctive character or by tarnishing or denigrating it. The protection does not depend on any likelihood of confusion as to origin.<sup>65</sup> The provision could apply where another undertaking uses someone else’s well-known trade mark for different goods or services, hoping to capture some of the goodwill attaching to the trade mark. It may also apply in the case of a parody of the trade mark. In *South African Breweries International (Finance) BV v Laugh It Off Promotions CC*,<sup>66</sup> the South African Supreme Court of Appeal held that not *any* detriment would do where freedom of expression is involved. This requires a balancing of the two rights, neither of which is absolute. However, a derisory parody of a trade mark will not be given protection as against the trade mark it is parodying. In that case, the defendant marketed T-shirts carrying caricatures of the claimant’s trade marks used on bottles of Carling Black Label beer.

The entry of a competitor into the market place is likely to have an adverse effect on the sales of goods of a particular description, especially where the trade mark proprietor had previously enjoyed a monopoly or near-monopoly. But even where the competitor uses a similar trade mark, it does not inexorably follow that there is detriment to the

<sup>64</sup> [1999] ECR I-5421.

<sup>65</sup> In *Baywatch Production Co Inc v Home Video Channel* [1997] FSR 22 it was held, erroneously, that s 10(3) requires a likelihood of confusion.

<sup>66</sup> [2005] FSR 686.

<sup>67</sup> *Whirlpool Corp v Kenwood Ltd* [2009] EWCA Civ 753. The trade mark was the shape of a food mixer having a ‘retro-style’. The defendant began to market a food mixer with a similar shape.

distinctive character of the registered trade mark.<sup>67</sup> Erosion of sales may be simply a result of fair competition and not due to consumers being deceived as to origin.

Another situation where this form of infringement may apply is where the trade mark was used by someone else in relation to substandard or defective goods or goods or services which some members of the public would find distasteful. The reason for limiting the provision to use of the offending sign on goods or services not similar to those for which the trade mark was registered was probably because it was felt that the use with identical or similar goods or services would be caught by Article 5(1)(a) or (b). Nobody seems to have contemplated that the forms of damage to a trade mark covered by Article 5(2) could be caused in relation to similar goods or services where persons were not likely to be confused as to the origin of the goods or services. Article 16(1) of the TRIPs Agreement is similar to Article 5(2) of the Directive and also states that the goods or services should be ‘not similar’.

<sup>68</sup> [2003] ECR I-389.

This unnecessary limitation to the scope of Article 5(2) came up for consideration by the Court of Justice in Case C292/00 *Davidoff & Cie SA v Gofkid Ltd*,<sup>68</sup> where the court said that Article 5(2) should not be interpreted solely on the basis of its wording but account should be taken of the scheme and objectives of the system of which it was part. That being so, the protection afforded to trade marks having a reputation should not be less protection where used for identical or similar goods or services than where they were used for goods or services that were not similar. This case was soon followed by Case C408/01 *Adidas-Salomon AG v Fitnessworld Trading Ltd*,<sup>69</sup> confirming that the provision also applied where the goods and services were identical or similar. Although no likelihood of confusion was necessary, there must be an association or link between the sign and the trade mark in the mind of the public.<sup>70</sup> For example, the use of the sign conjures up the trade mark even though consumers might not think that the goods or services came from the same or economically linked undertakings.

<sup>69</sup> [2003] ECR I-12537.

<sup>70</sup> The equivalent provision in the TRIPs Agreement, Article 16(3), expressly mentions the need for the use of the sign to indicate a connection between the goods or services and the owner of the registered trade mark.

The Trade Marks Act 1994 was amended to remove a reference that the goods or services had to be not similar under s 10(3) by the Trade Marks (Proof of Use etc.) Regulations 2004.<sup>71</sup>

<sup>71</sup> SI 2004/946.

The test under Article 5(2) can be broken down into the separate requirements that must be satisfied as follows:

<sup>72</sup> See Pumfrey J in *DaimlerChrysler AG v Javid Alavi (t/a MERC)* [2001] RPC 813 at para 88. The need for association or a link was confirmed in Case C-408/01 *Adidas-Salomon AG v Fitnessworld Trading Ltd* [2003] ECR I-12537.

- (a) the claimant’s trade mark must be found to have a reputation in the UK,
- (b) identity with or similarity to the trade mark of repute must be shown,
- (c) the use of the sign complained of must take an unfair advantage of or cause detriment to the distinctive character or repute of the claimant’s trade mark,
- (d) the use of the sign complained of must be without due cause,
- (e) the public should believe that there is an association between the defendant’s goods or services and the claimant.<sup>72</sup>

<sup>73</sup> [1993] FSR 641, discussed in Chapter 23.

<sup>74</sup> [2000] FSR 767. Neither blurring nor tarnishing was found in this case.

Unfair advantage may result from the use of the sign being parasitic of the trade mark of repute: that it ‘rides on its back’ or captures part of its goodwill. Detriment may come about in two ways, blurring or tarnishing. Blurring is where the use of the sign causes erosion or dilution of the distinctive character of the mark, making it less distinctive such as in extended passing off as in *Taittinger SA v Allbev Ltd*.<sup>73</sup> Although in *Premier Brands UK Ltd v Typhoon Europe Ltd*<sup>74</sup> Neuberger J said that dilution is a useful concept when considering s 10(3),<sup>75</sup> he stressed that not in every case where dilution is established will there be an infringement; nor will the absence of dilution negate a finding of infringement. Tarnishing may occur where the use of the sign is such as to imbue the trade mark of repute with negative, unpleasant or distasteful nuances, making it less attractive. An example is the use of VISA for condoms, *CA Sheimer (M) Sdn Bhd’s Trade Mark Application*.<sup>76</sup>

<sup>75</sup> US trade mark law specifically provides for dilution as a form of infringement: Lanham Act 1945 s 145.

<sup>76</sup> [2000] RPC 484. This was an opposition case. See also *Lucas Bols v Colgate-Palmolive* (1976) 7 IIC 420 where it was held that ‘CLAERYN’, a registered trade mark for a Dutch gin, was infringed by the use of ‘KLAREIN’ for a detergent. Both words have the same pronunciation in Dutch.

In Case C-87/07 *L'Oréal SA v Bellure NV*,<sup>77</sup> the defendant sold perfumes, which were imitations of those of the claimant, in bottles and packaging reminiscent of the claimant's trade marks but it did not appear that there was any likelihood of confusion as the defendant's perfumes were sold under quite different names to those used by the claimant. Following a reference from the Court of Appeal, the Court of Justice ruled that, for an unfair advantage to exist for the purposes of Article 5(2), there is no need to show a likelihood of confusion. Nor is it necessary to show detriment to the distinctive character or repute of the well-known mark or, indeed, to the proprietor. The court also ruled that an advantage was unfair where a defendant seeks to ride on the coat-tails of the mark to benefit from the power of attraction, reputation and prestige and to exploit, without financial compensation, the marketing effort of the proprietor in creating and maintaining the trade mark's image.

In a case on the equivalent provision on registrability, Case C-252/07 *Intel Corporation Inc v CPM United Kingdom Ltd*,<sup>78</sup> the Court of Justice considered the case where a trade mark is unique and has a huge reputation, the trade mark in question being 'INTEL' as used for computers and computer-related goods and services. The court ruled, *inter alia*, that, even though the earlier trade mark is unique and has a huge reputation, it is still a question of fact for the trial court to decide as to whether there exists a link within the meaning of *Adidas-Salomon*. Furthermore, even if such a link is established this alone does not establish unfair advantage or detriment to the repute or distinctive character of the earlier trade mark with a reputation. On the other hand, uniqueness is not a precursor to a finding of unfair advantage or detriment and even a first use of the later mark may suffice to establish detriment to distinctive character. The court also ruled that there must be evidence of a change (or serious likelihood of a change) in economic behaviour on the part of the average consumer of the *goods or services for which the earlier mark was registered* for a finding of detriment to the distinctive character of the earlier mark. The same principles ought to apply to infringement as the court also noted that the wording of Article 4(4)(a) and Article 5(2) was essentially identical and designed to give trade marks with a reputation the same protection.

The use of the sign alleged to infringe must be 'without due cause'. This phrase governs not just the use of the sign but is also relevant in the context of unfair advantage or detriment. The defendant has to show any unfair advantage or detriment are not without due cause.<sup>79</sup> Examples of due cause may be where the defendant can point to an earlier right or where he is using his own name or that of a predecessor. However, under Article 6 there are specific limitations to the effects of a trade mark that might apply in such situations. The meaning and purpose of the phrase is not entirely clear and may eventually need clarification from the Court of Justice. According to Neuberger J in *Premier Brands UK Ltd v Typhoon Europe Ltd*,<sup>80</sup> the phrase 'without due cause' does not mean an absence of 'good faith' or that the use is contrary to 'good honest commercial reasons'. Furthermore, the test is an objective one and should not take into account either the intention of the defendant or his subconscious desires. In *Premier Brands*, Neuberger J also suggested that the burden of proving whether the use is not without due cause lies on the alleged infringer as the words act as an exception rather than an element to be proved by the claimant.

Where a trade mark is well known when used for the goods most associated with the proprietor's main business but is also registered for other goods, use by a third party of the sign may infringe. In Case C48/05 *Adam Opel AG v Autec AG*,<sup>81</sup> the claimant was the well-known manufacturer of motor cars. It objected to the use of its Opel trade mark, registered for motor vehicles and toys, on remote control scale model cars manufactured by the defendant. The Court of Justice ruled that such use could constitute a use which the proprietor was entitled to prevent, providing if, without due cause, the use of the sign took unfair advantage of, or is detrimental to, the distinctive character

<sup>77</sup> [2009] ETMR 987. Another aspect of this case concerned comparative advertising and is discussed *infra*.

<sup>78</sup> [2009] ETMR 233.

<sup>79</sup> *Premier Brands UK Ltd v Typhoon Europe Ltd* [2000] FSR 767 at 791.

<sup>80</sup> [2000] FSR 767 at 790.

<sup>81</sup> [2007] ECR I-1017. It is interesting to note that the ruling on Article 5(2) was in relation to the trade mark as registered for motor vehicles, rather than toys.

**82** The Court of Justice ruled that the use in question could infringe under Article 5(1)(a) if the use affects or is likely to effect the functions of the trade mark as a trade mark registered for toys: see above in relation to Article 5(1)(a).

or repute of the trade mark as registered for *motor vehicles*.<sup>82</sup> Of course, when the ruling is applied, the referring court may find as a matter of fact that the use is not without due cause or that it neither takes unfair advantage of nor is detrimental to the trade mark in question.

### Saving under Article 5(4)

Article 5(4) contains a saving so that a sign, which would otherwise be caught under Article 5(1)(b) or (2) but could not be prohibited in a Member State before the Directive entered into force, can continue to be used without being liable to be prevented by the trade mark proprietor. This finds expression in para 4(2) of Schedule 3 to the Trade Marks Act 1994 which states that it is not an infringement of an existing registered mark<sup>83</sup> or a registered trade mark with the same or substantially the same distinctive elements registered for the same goods or services to continue any use which did not infringe under the old law.

**83** An ‘existing registered mark’ is one registered under the 1938 Act immediately before the commencement of the 1994 Act: para 1 Schedule 3.

### Article 5(5) – protection against use other than for the purposes of distinguishing goods or services

Article 5(5) allows Member States to preserve protection against the use of a sign other than for the purposes of distinguishing goods or services in cases where the sign without due cause takes unfair advantage of, or is detrimental to, the distinctive character or the repute of the trade mark. Unlike the other forms of infringement under Article 5, there is no express requirement that the use of the sign has to be in the course of trade. It is conceivable that a sign could be used, though not in the course of trade, in such a way as it harmed the trade mark: for example, by a published claim that the goods sold under the trade mark are defective.<sup>84</sup> However, it could be argued that damaging use would be without due cause in any case.

**84** Such a claim could result in an action for malicious falsehood: see Chapter 23.

**85** [2002] ECR I-10913.

Article 5(5) was considered by the Court of Justice in *Case C23/01 Robelco NV v Robeco Groep NV*.<sup>85</sup> The claimant, Robeco, had a registered trade mark ‘Robeco’ and complained about the defendant’s use of Robelco as its company and trade name. The claimant alleged infringement, *inter alia*, of the Benelux law equivalent of Article 5(5). The Court noted that the Directive did not seek full harmonisation and Article 5(5) was one of those provisions which was left to national law as it starts ‘Paragraphs 1 to 4 shall not affect provisions in any Member State . . .’ Therefore, where a sign is not used for the purposes of distinguishing goods or services, it is left to national law to determine the extent and nature, if any, of the protection afforded. Member States may adopt no legislation under Article 5(5) or they may, subject to such conditions as they choose, require that the sign shall be identical or similar or that there should be some other connection between them.<sup>86</sup>

**86** Article 5(5) is silent on whether the sign must be identical to or similar to the trade mark or whether there must be some other association between them.

In the UK, the Trade Marks Act 1994, s 10(6), allows use of a registered trade mark to identify goods or services as those of the proprietor of the trade mark. There is a proviso to this. This provision is usually associated with comparative advertising providing the use of the registered trade mark does not fall within the proviso to s 10(6). As it is for Member States to lay down the conditions which apply if they choose to implement Article 5(5), we will now consider the UK law under s 10(6) in the context of comparative advertising.

## COMPARATIVE ADVERTISING

Under the 1938 Act a trade mark was infringed if it was used in comparative advertising: for example, where a trader lists his products and prices alongside those of a

competitor, using the competitor's trade mark. Comparative advertising was included in the 1938 Act as a result of a failure to find infringement against a comparative advertiser in *Irving's Yeastvite Ltd v Horsenail*.<sup>87</sup> The 1994 Act allows comparative advertising to the extent that s 10(6) states that nothing in the preceding provisions of s 10 shall be construed as preventing the use of a registered trade mark by any person for the purpose of identifying goods or services as those of the proprietor. However, there is a proviso to this. The use must be in accordance with honest practices in industrial or commercial matters and, if it is not, such use will infringe if, without due cause, it takes unfair advantage of, or is detrimental to, the distinctive character or repute of the trade mark. A problem with s 10(6) is that there is no direct equivalent to it in the Directive.

It should be noted that s 10(6) only applies where the use would otherwise infringe under the other provisions in s 10. This means that the trade mark may be used in identical or similar form. The language in the proviso has some similarity with that in s 10(3) but this is unlikely to be relevant in respect of comparative advertising.<sup>88</sup> By its very nature, such advertising usually involves use of a sign identical to the registered trade mark in relation to identical goods or services. What s 10(6) saves from infringement is use in an advertisement (within the meaning of use in s 10(4)(d)) which would, but for s 10(6), infringe under s 10(1). Exceptionally, it may prevent an infringement under s 10(2) where the sign or goods or services are not identical but sufficiently similar to make comparative advertising attractive. An example is an advertisement comparing internal air fares with rail fares to the same destination. Allowing comparative advertising within reasonable parameters is by far the most controversial aspect of s 10(6); the provision is also there to save other potential technical infringements, such as where a retailer advertises goods for sale by reference to a manufacturer's trade mark. However, there are limitations to the effects of a trade mark under Article 6 of the Directive and it is arguable that s 10(6) should be repealed, as discussed later in relation to *O2 Holdings Ltd v Hutchinson 3G Ltd*.<sup>89</sup> Before then, the case law on s 10(6) is discussed.

The meaning of the proviso was first considered by Laddie J in *Barclays Bank plc v RBS Advanta*,<sup>90</sup> in which the claimant was the proprietor of the registered trade mark 'BARCLAYCARD'. The defendant was a joint venture between the Royal Bank of Scotland and the Advanta Corp of USA, which was about to launch a credit card called 'RBS Advanta Visa Card'. It distributed letters, leaflets and brochures. The leaflets contained a list of bullet points stating '15 ways the RBS Advanta Visa Card is a better card all round', and the brochure contained tables comparing the features of the RBS card with express reference to BARCLAYCARD and its features. The claimant applied for injunctive relief alleging that its trade mark was infringed under s 10(1) (use in the course of trade of a sign identical with the trade mark in relation to identical goods or services). The defendant argued that its advertising fell within the s 10(6) defence.

In refusing to grant an injunction, Laddie J said that the purpose of s 10(6) was to allow comparative advertising as long as it was honest. The burden was on the proprietor to show that one of the factors in the proviso to s 10(6) applied: that is, that the use was not in accordance with honest practices in industrial or commercial matters, or that it took unfair advantage of, or was detrimental to, the distinctive character or repute of the trade mark. He said that the question as to whether the use of the trade mark was in accordance with honest practices was an objective test, being whether it was considered honest by members of a reasonable audience. He also accepted that an amount of hyperbole was to be expected in much advertising copy. A reasonable audience would appreciate that an advertiser would select the most favourable features and might not show other features which showed his competitor's product to best effect. The amount of hyperbole which is acceptable will depend on the nature of the goods, and Laddie J contrasted second-hand cars with powerful medicines. In the latter case,

<sup>87</sup> (1934) 51 RPC 110.

<sup>88</sup> Note that, for the purposes of s 10(6), the trade mark does not have to have a reputation in the UK, unlike s 10(3).

<sup>89</sup> [2007] RPC 407.

<sup>90</sup> [1996] RPC 307.

to be in accordance with honest practices, comparative advertising should be more frank and forthright with much less scope for selecting features to show the advertiser's product in a more favourable light.

Laddie J in *Barclays*, stressed the importance of the phrase 'in accordance with honest practices' and suggested that the second part of the proviso, 'taking unfair advantage of, or being detrimental to, the distinctive character or repute of the trade mark' would add nothing of significance in the majority of cases. Jacob J agreed with this (and the basic test of whether the advertising was objectively misleading to a substantial proportion of a reasonable audience) in *Vodafone Group plc v Orange Personal Communications Services Ltd*.<sup>91</sup> In that case, which concerned an advertisement suggesting an average saving of £20 per month by switching to the defendant's mobile telephone network, Jacob J accepted that persons would generally expect some elasticity of price and usage. That is, a reasonable audience would realise that not everyone would save £20 a month and that fewer calls are generally made on a more expensive tariff.

91 [1997] FSR 34.

Most cases on s 10(6) will involve comparisons of cost, specification or performance. As members of the public are far more knowledgeable and circumspect than in the past, a certain amount of 'knockabout' between competitors is to be expected and is acceptable provided it does not step beyond a particular standard. In terms of commercial or industrial activity, an honest practice is one which does not step outside accepted and common practice, bearing in mind that advertisers are not setting out to provide a balanced and objective description of their product or service. They are out to sell by making theirs look better than the rest, whether in terms of value for money, performance, ease of use, durability, etc. A certain amount of advertising puff is to be expected.

Acceptable comparative advertising can be selective. It can even skew features or prices providing sufficient information is given to make this clear or to allow readers of the advertisement the opportunity to obtain the full picture. However, what it cannot do is to present, as fact, information which the advertiser knows to be false. This probably extends to information which is false and the advertiser, whilst not having actual knowledge of its falsity, has constructive knowledge: that is, that a prudent trader would have suspected that the information might be false and would have taken steps to check it. In *Cable & Wireless plc v British Telecommunications plc*,<sup>92</sup> it was said that a trader who made a statement knowing it to be false could not be said to be acting in accordance with honest practices. The test was an objective one and was, per Jacob J (at 391):

92 [1998] FSR 383.

... whether a reasonable trader could honestly have made the statements he made based on the information that he had.

Jacob J went on to say that a trader could have a defence if the information turned out to be untrue, providing he stopped once he discovered the truth. Again, however, this has to be based on an objective approach, rather than whether the trader himself could be regarded as honest. The use of misleading information which has been 'doctored' or not checked when it would be reasonable to do so is likely to infringe and will not be saved by s 10(6).<sup>93</sup>

93 *Emaco Ltd v Dyson Appliances Ltd* [1999] ETMR 903.

94 [2001] FSR 541.

In *British Airways plc v Ryanair Ltd*,<sup>94</sup> the defendant ran some advertisements suggesting that the claimant's fares were more expensive. The claimant's registered trade marks included 'BA' registered in respect of services including air travel services. One advertisement which contained the heading 'EXPENSIVE BA. . . DS!' was withdrawn after a complaint to the Advertising Standards Authority. However, the fact that an advertisement was offensive did not, *per se*, mean that it was caught by the proviso to s 10(6). A second advertisement was headed 'Expensive BA' and contained price comparisons for fares, which the claimant alleged were misleading. Jacob J rejected this, saying that the average consumer would expect conditions to apply and the small print in the advertisement made this clear. One particular complaint was that like and like

were not being compared in the case of flights to Frankfurt as the defendant's airplanes landed at an airport further out of Frankfurt than the claimant's airplanes. This was also rejected. Jacob J did not think this made the comparison significantly unfair.<sup>95</sup>

These above cases have set out useful guidance on the scope of acceptable comparative advertising within s 10(6). The decisions take a pragmatic approach and recognise that the public is knowledgeable about such advertising and realises that traders involved in such an activity will be selective in the choice of features that they use. For comparative advertising to be misleading, and therefore not in accordance with honest practices, it must amount to such a distortion that the public is deceived as to the nature of one trader's goods or services in comparison with the other trader's goods or services. Such distortion could come about because the selection of features is so unreasonable as to amount to a misrepresentation of the goods or services of either trader, or because the factual information used is inaccurate to a material extent. However, some caution is needed in respect of the above cases on comparative advertising in the light of the developments described below.<sup>96</sup>

It should be noted that there are controls over comparative advertising, which is allowed providing a number of conditions are satisfied. The legislation is the result of Directive 97/55/EC of the European Parliament and of the Council of 6 October 1997, amending Directive 84/450/EEC concerning misleading advertising so as to include comparative advertising.<sup>97</sup> The advertising (which is not limited to the use of registered trade marks) must, *inter alia*, be objective, must not be misleading, discredit or denigrate a trade mark or trade name or take unfair advantage of the reputation of a trade mark or trade name.

Section 10(6) has come in for some criticism and Jacob LJ in *O2 Holdings Ltd v Hutchinson 3G Ltd*<sup>98</sup> has suggested that it be repealed. He said (at para 58):

It is a pointless provision (and could not apply to a Community TM). It should be repealed as an unnecessary distraction in an already complicated branch of law.

In the *O2* case, described by Lewison J at first instance as a case about bubbles, the claimant complained about comparative advertising by the defendant which used images of bubbles similar to the registered trade marks. Both companies provided mobile phone services. The main thrust of the advertising was to show that the defendant's rates for mobile phone calls were cheaper than those of the claimant. Lewison J held that the defendant would have infringed under Article 5(1)(b) but for the defence under Article 6(1)(b) (use in the course of trade or indications concerning the kind, quality, quantity, intended purpose, value, etc. providing the use is in accordance with honest practices in industrial or commercial matters). Furthermore, he held that, since the Comparative Advertising Directive and the domestic regulations made under it, s 10(6), must be interpreted as allowing comparative advertising providing it is conducted in accordance with honest practices, as defined for the purpose of the Comparative Advertising Directive.

The Court of Justice ruled, in Case C44/01 *Pippig Augenoptik GmbH & Co KG v Hartlaeur Handelsgesellschaft mbH*,<sup>99</sup> that price comparisons, *per se*, do not discredit a competitor under Article 3a(1)(e) of Directive 84/450/EEC. The Court also made it clear that comparative advertising was generally in the interests of consumers as it helped them to make informed choices. It also said (at para 44):

Directive 84/450 carried out an exhaustive harmonisation of the conditions under which comparative advertising in Member States might be lawful. Such a harmonisation implies by its nature that the lawfulness of comparative advertising throughout the Community is to be assessed *solely* in the light of the criteria laid down by the Community legislature. Therefore, stricter national provisions on protection against misleading advertising cannot be applied

<sup>95</sup> Even though the defendant's airplanes landed at an airport located some 68 miles from Frankfurt city centre! However, the small print did state the airport truthfully as being Frankfurt (Hahn) Airport.

<sup>96</sup> After completing this section, readers could consider whether the decisions in *Barclays*, *Vodafone* and *British Airways* are wrong in the light of recent Court of Justice rulings.

<sup>97</sup> OJ L290, 23.10.1997, p 18, implemented by the Control of Misleading Advertising Regulations 1988, SI 1988/915, as amended, in particular, by the Control of Misleading Advertisements (Amendment) Regulations 2000, SI 2000/914.

<sup>98</sup> [2007] RPC 407.

<sup>99</sup> [2003] ECR I-3095. In that case, the parties sold spectacles and lenses and the claimant objected to the defendant's comparative advertising where misleading advertising was also a feature. The defendant was photographed standing 'triumphantly' outside the claimant's shop front which bore the trade mark.

to comparative advertising as regards the form and content of the comparison. (Author's emphasis)

In the light of the above, the Court of Appeal in *O2 Holdings* referred the following questions to the Court of Justice for a preliminary ruling under Article 234 of the EC Treaty:

- 1 Where a trader, in an advertisement for his own goods or services uses a registered trade mark owned by a competitor for the purpose of comparing the characteristics (and in particular the price) of goods or services marketed by him with the characteristics (and in particular the price) of the goods or services marketed by the competitor under that mark in such a way that it does not cause confusion or otherwise jeopardise the essential function of the trade mark as an indication of origin, does his use fall within either (a) or (b) of Art 5(1) of Directive 89/104 [the trade mark Directive]?
- 2 Where a trader uses, in a comparative advertisement, the registered trade mark of a competitor, in order to comply with Art 3a of Directive 84/450 as amended must that use be 'indispensable' and if so what are the criteria by which indispensability is to be judged?
- 3 In particular, if there is a requirement of indispensability, does the requirement preclude any use of a sign which is not identical to the registered trade mark but is closely similar to it?

Jacob LJ considered that using a trade mark comparatively such that the essential function of the trade mark was not jeopardised did not fall within Article 5(1)(a) or (b). He also said, in the context of the case, the application of the 'global appreciation' test was such that the average reasonably well informed consumer would not be misled. Furthermore, Article 6(1)(b) covered every case of comparative advertising, providing the defendant used the indications in accordance with honest practices in industrial or commercial matters. Compliance with Article 3a of the misleading advertising Directive is essential. That states:

#### Article 3a

1. Comparative advertising shall, as far as the comparison is concerned, be permitted when the following conditions are met:

- (a) it is not misleading according to Articles 2(2), 3 and 7(1);
- (b) it compares goods or services meeting the same needs or intended for the same purpose;
- (c) it objectively compares one or more material, relevant, verifiable and representative features of those goods and services, which may include price;
- (d) it does not create confusion in the market place between the advertiser and a competitor or between the advertiser's trade marks, trade names, other distinguishing marks, goods or services and those of a competitor;
- (e) it does not discredit or denigrate the trade marks, trade names, other distinguishing marks, goods, services, activities, or circumstances of a competitor;
- (f) for products with designation of origin, it relates in each case to products with the same designation;
- (g) it does not take unfair advantage of the reputation of a trade mark, trade name or other distinguishing marks of a competitor or of the designation of origin of competing products;
- (h) it does not present goods or services as imitations or replicas of goods or services bearing a protected trade mark or trade name.

2. Any comparison referring to a special offer shall indicate in a clear and unequivocal way the date on which the offer ends or, where appropriate, that the special offer is subject to the availability of the goods and services, and, where the special offer has not yet begun, the date of the start of the period during which the special price or other specific conditions shall apply.

It would appear that comparative advertising will not infringe a trade mark if it complies with Directive 84/450/EEC, as amended, with the added gloss that it must be in accordance with honest practices in industrial or commercial matters. In *O2 Holdings*, Jacob LJ suggested that a trader who is not ‘Article 3a compliant’ could not be regarded as so acting.<sup>100</sup> He also thought that even non-misleading but disparaging use would not be in accordance with honest practices in industrial or commercial matters. As he acknowledged, to that extent, his earlier decision in *British Airways v Ryanair* is wrong.

In its ruling, in Case C-533/06 *O2 Holdings Ltd v Hutchinson 3G UK Ltd*,<sup>101</sup> the Court of Justice confirmed that Article 5(1) and (2) does not allow a proprietor to prevent the use of a trade mark in comparative advertising where *all* the conditions in Article 3a(1) of Directive 84/450/EEC are satisfied. Of course, where there is a likelihood of confusion, Article 3a(1)(d) is not satisfied and the advertising will infringe. In Case C-87/07 *L’Oréal SA v Bellure NV*,<sup>102</sup> the defendant had been selling perfumes which were imitations of those sold by the claimant. The defendant published lists comparing its perfumes to those of the claimant. The defendant published lists comparing its perfumes to those of the claimant. The Court of Justice confirmed that in such a case, Article 5(1)(a) entitles the trade mark proprietor to prevent the use of his trade mark by a third party where the comparative advertisement does not satisfy all the requirements of Article 3a(1) of Directive 84/450/EEC even where the use does not jeopardise the essential function of the trade mark (being to guarantee the trade mark as an indication of origin of goods or services) provided other functions of the trade mark are affected. These are, in particular, the functions of communication, investment and advertising. Thus, the test for whether comparative advertising is lawful under trade mark law will be a question of whether it falls within the misleading advertising Directive even if it is not essential that the competitor’s trade mark is used to identify him or his goods or services.

<sup>100</sup> This was *acte claire* and did not require a reference to the Court of Justice.

<sup>101</sup> [2008] ECR I-4231. This followed a reference from the Court of Appeal.

<sup>102</sup> [2009] ETMR 987. Another aspect of this case concerned Article 5(2) and is discussed *supra*.

## APPLYING MARK TO MATERIAL, ETC.

Under s 10(5), a person who applies a registered mark to material intended to be used for labelling or packaging goods, as a business paper (for example, a company letterhead, or a sheet of instructions accompanying goods), or for advertising goods or services, shall be treated as a party to any infringing use if, when he applied the mark, he knew or had reason to believe that the application of the mark was not authorised by the proprietor or a licensee.

The relevant intention in s 10(5) must be an intention that the material is used within the UK. In *Beautimatic International Ltd v Mitchell International Pharmaceuticals Ltd*,<sup>103</sup> Neuberger J held that use under s 10(4)(a) (affixing the sign to goods or packaging) must be in relation to goods in the UK and affixing a sign to material to be used as packaging for goods outside the UK could not be an infringing use. He went on to consider the relationship between s 10(4) and (5) and agreed that the two provisions must be construed so as to be consistent. Therefore, a person manufacturing packaging bearing the sign cannot be deemed to be a party to infringement if the intention is that the packaging is to be used in relation to goods outside the UK.

<sup>103</sup> [2000] FSR 267.

## WELL-KNOWN MARKS – PARIS CONVENTION COUNTRIES

Section 56(2) of the Act gives a right to relief for proprietors of marks which are well known in the UK, being a mark of a person who is a national of or is domiciled in a Paris Convention country or is entitled to protection under the World Trade Organisation,<sup>104</sup> whether or not that person carries on business or has any goodwill in the

<sup>104</sup> The UK is expressly excluded from the definition of ‘Convention country’ by s 55(1)(b).

**105** This derives originally from Article 6bis(1) of the Paris Convention for the Protection of Industrial Property 1883. The Directive is stated to be consistent with the Paris Convention: 12th recital.

UK.<sup>105</sup> Such a person is entitled to injunctive relief against the use of an identical or similar mark used in relation to identical or similar goods or services where the use is likely to cause confusion. Thus, a foreign mark which is not used in the UK but is, nevertheless, well known in the UK, may be protected against non-consensual use there. This form of protection does not extend to use on non-similar goods or services.

A number of factors are taken into account as guidelines in determining whether a trade mark is well-known. In particular:

- 1 the degree of knowledge or recognition of the mark in the relevant sector of the public;
- 2 the duration, extent and geographical area of any use of the mark;
- 3 the duration, extent and geographical area of any promotion of the mark, including advertising or publicity and the presentation, at fairs or exhibitions, of the goods and/or services to which the mark applies;
- 4 the duration and geographical area of any registration, and/or any applications for registration, of the mark, to the extent that they reflect use or recognition of the mark;
- 5 the record of successful enforcement of rights in the mark, in particular, the extent to which the mark was recognised as well known by competent authorities;
- 6 the value associated with the mark.<sup>106</sup>

In *Hotel Cipriani SRL v Cipriani (Grovesnor Street) Ltd*,<sup>107</sup> in granting the claimant an injunction under s 56(2), Arnold J applied these criteria in relation to the Community trade mark CIPRIANI.<sup>108</sup>

There are similar provisions for injunctive relief for national and other emblems in ss 57 and 58. Furthermore, such emblems may not be registered. An example is a national flag or state armorial bearings or such devices used by international intergovernmental organisations of which one or more Paris Convention countries are members.

**106** Joint Recommendation concerning Provision on the Protection of Well-Known Marks, Assembly of the Paris Union for the Protection of Intellectual Property and the General Assembly of the World Intellectual Property Organisation (WIPO), September 1999.

**107** [2008] EWHC 3032 (Ch).

**108** The Hotel Cipriani is a famous (and very expensive) hotel in Venice.

## TRADE MARKS AND THE INTERNET

The internet knows nothing of territorial boundaries and material placed on the internet, say on a web page, is available, potentially, throughout the world. Traditional forms of advertising are more predictable in terms of determining and targeting the advertiser's audience. It is clear that the audience of a glossy magazine published and distributed for sale in the UK only consists of persons resident in the UK. This remains the case even if some copies of the magazine find their way to other countries, even if this is a response to orders for the magazine from persons resident in other countries. Other factors which will colour the judgment as to where an advertisement is directed include whether parallel editions are circulated in other countries and carry advertising relevant to those other countries and whether advertisers actively seek orders placed in other countries: for example, by quoting alternative prices in different countries or quoting different postal costs for orders placed in different countries or regions of the world. Even so, and to all intents and purposes, it is the advertiser who takes the decision as to where his target audience is by choosing the publications in which his advertisements appear and in selecting the content of his advertisements. If the trader's advertisements stray into a territory where he does not trade, then there can be no use in relation to goods in that territory.

The internet is a global environment and, as such, traders need to exercise greater care when using signs or trade marks that could, potentially, infringe trade marks registered in other jurisdictions. An example of the possible difficulties is provided by *Euromarket Designs Inc v Peters and Crate & Barrel*.<sup>109</sup> The defendant had a shop in Dublin and placed an advertisement on its website. Jacob J rejected the argument that

**109** [2001] FSR 288.

the advertisement was directed at anyone in the UK. Any person carrying out a search will often pick up lots of irrelevant ‘hits’, many of which will be foreign. If, in this case, it could be said that the defendant was using the trade mark *Crate & Barrel* in the UK, this would mean that the defendant was using the trade mark in every country in the world. Jacob J distinguished the present case with *Amazon.com*, a company that actively seeks worldwide trade. In an earlier case, *1800 FLOWERS Trade Mark*,<sup>110</sup> at first instance, Jacob J rejected the notion that placing a trade mark on a website was a potential trade mark infringement all over the world as this was tantamount to use in an ‘omnipresent cyberspace’ and was ‘putting a tentacle’ into the computer of each and every user accessing the site. He gave an example of a fishmonger from Bootle (Lancashire) who advertised on his own website. Anyone accessing that website from another country would realise that it was not directed to him. In practice it will depend on the circumstances. The website owner’s intention and the impact on persons accessing the website will be important, especially what a person accessing the website would understand.

110 [2000] FSR 697.

The danger of accepting the proposition that placing a sign on the internet in an advertisement for goods or services is to use it in every jurisdiction has very serious consequences. Many traders have small businesses with restricted physical catchment areas with sales only to persons who visit their retail outlets and who do not engage in mail order sales or other indirect sales. An example is a small ironmongery shop with a single retail outlet in a small town, such as Pershore, Worcestershire. Say the owner decides to set up a website and advertise his business there. Clearly, the advertisement will be directed at persons within a few miles of Pershore. It would be very unfortunate if the trader decided to use a trading name that happened to be the same or similar to that used by traders selling similar goods in Rome, Melbourne or San Francisco, if placing the advertisement was considered to be use of the sign throughout the world. Whilst it may be reasonable to accept that publication on the internet is publication to the world for the purposes of defamation, this should not apply in the case of trade marks. Use within a particular jurisdiction should require evidence of actual trade or an intention to trade within that jurisdiction. On appeal, in the *1800 FLOWERS* case above, Buxton LJ said:<sup>111</sup>

111 *1-800 FLOWERS Inc v Phonenames Ltd* [2002] FSR 191 at paras 136–139.

... it was a significant part of the applicant’s submissions that, for instance, ‘publication’ of statements in a particular jurisdiction by downloading from the internet according to the rules of the law of defamation or of misrepresentation was of at least strong analogical relevance to whether a trade mark downloaded from the internet had been ‘used’ in the jurisdiction to which it was downloaded. . . . There is something inherently unrealistic in saying that A ‘uses’ his mark in the United Kingdom when all that he does is to place the mark on the internet, from a location outside the United Kingdom, and simply wait in the hope that someone from the United Kingdom will download it and thereby create use on the part of A. . . . the very idea of ‘use’ within a certain area would seem to require some active step in that area on the part of the user that goes beyond providing facilities that enable others to bring the mark into the area. Of course, if persons in the United Kingdom seek the mark on the internet in response to direct encouragement or advertisement by the owner of the mark, the position may be different; but in such a case the advertisement or encouragement in itself is likely to suffice to establish the necessary use.

Thus far, a sensible and realistic approach has been adopted in the UK. As far as traders using websites to advertise their wares are concerned, they ought to consider including statements making the geographic boundary of their prospective target audience quite clear unless they do intend to sell anywhere (in which case, they must ensure that there are no conflicting trade marks anywhere else). In the *Euromarket* case, the Irish defendant had foolishly advertised the prices of its goods in US dollars though this was later changed to Irish punts.

Where a sign is used on a website it is arguable that the test of similarity leading to a likelihood of confusion is modified. Where the website owner does not have a physical presence in the country of a person who accesses it, there is a lack of other attributes or clues that may come into play and colour and inform the conclusion as to confusion. Where a trader has a physical presence in a particular country, those other attributes and clues include the trader's premises, including retail outlets, distribution vehicles and a rich advertising mix which might include advertisement in newspapers and magazines, on advertising hoardings and on television and radio. There may also be sponsorship of local or national activities. All of these factors may combine to negate a finding of confusion notwithstanding a passing similarity between the sign used and a registered trade mark.

112 174 F 3d 1036  
(9th Cir, 1999).

In *Brookfield Communications Inc v West Coast Entertainment Corp*,<sup>112</sup> Brookfield had databases containing information about the entertainment industry and used an unregistered trade mark, 'MovieBuff'. When it tried to register moviebuff.com as its domain name, it found that it had already been taken by the defendant so it acquired 'moviebuffonline.com' and 'brookfieldcomm.com' instead. Brookfield later registered 'MovieBuff' as a trade mark in respect of software and providing access to an online database in the field of motion picture and television industries. The defendant was offering a similar database on its website and Brookfield sued for trade mark infringement.

The US Court of Appeals, Ninth Circuit, held that there was an infringement of the trade mark by the defendant. An eight-factor test is normally used for determining whether confusion exists in the US, sometimes known as the '*Sleekcraft* factors'.<sup>113</sup> They are:

113 *AMF Inc v Sleekcraft Boats*,  
599 F 2d 341, 348 (9th Cir, 1979).

- the similarity of the marks;
- the relatedness or proximity of the products or services;
- the marketing channels used;
- the strength of the claimant's mark;
- the defendant's intention in selecting its mark;
- evidence of actual confusion;
- likelihood of expansion into other product lines;
- the degree of care likely to be exercised by customers.

The court held that not all factors may be relevant in each case and a subset will often be sufficient to determine the question of confusion. However, the list is not necessarily exhaustive. Delivering the judgment of the court, O'Scannlain J said:

We must be acutely aware of excessive rigidity when applying the law in the internet context: emerging technologies require a flexible approach.

He confirmed that a comparison of domain names is relevant; what mattered was a comparison between the alleged infringing sign, 'moviebuff.com', with the registered trade mark. Applying the first three factors in the *Sleekcraft* test, the court decided that the marks were very similar (almost identical even allowing for differences in capitalisation and the addition of '.com') and there was also similarity in terms of sound and meaning. The products and services were closely related, the parties were competitors and the products very similar. As regards the marketing channels used, the fact that both parties used the internet as a marketing and advertising facility was seen as exacerbating the likelihood of confusion, especially as both offered internet-based products. O'Scannlain J said:

Web surfers are more likely to be confused as to the ownership of a Web site than traditional patrons of a brick-and-mortar store would be of a store's ownership.

The forms of confusion alluded to included that consumers might think that the defendant was a licensee of the claimant, that they might think that the defendant had bought out or replaced the claimant's business. Although the court accepted that there was a strong showing of confusion, it went on to consider the other factors in case they tipped the balance back in favour of the defendant. They did not. On the issue of intention, it was noted that the defendant had not adopted the domain name with an intention of selling it to the claimant.

*Brookfield* was applied in *GoTo.com Inc v Walt Disney Corp*,<sup>114</sup> where it was held that the use by the defendant of a confusingly similar mark to that of the claimant infringed the latter's registered trade mark, comprising of the words 'GO' and 'TO' arranged on a green circle and usually displayed against a yellow background. Again, the fact that both parties used the internet for advertising was deemed to be a factor which exacerbated the likelihood of confusion. Furthermore, both offered search engines to the public and the defendant's logo looked very similar in terms of colouring and the font used for the lettering.

The above cases show that the approach in the US to the use of trade marks on the internet is that a finding of confusion is more likely than is the case with traditional forms of advertising. There have, as yet, been no cases in the UK to address this possibility fully but it is likely that the outcome will be similar. The virtual world is different from the real world and there are significantly fewer clues to help users of the internet to distinguish between marks displayed on web pages. Furthermore, although a domain name is not normally regarded as a trade mark (the purpose of a domain name is entirely different, being an address to find a particular entity's website), most persons expect that a commercial enterprise's domain name will include a trade mark. That trade mark is likely to be part of the enterprise's corporate name (usually a trade mark) or its most famous product or service, again usually registered as a trade mark.

Another issue in relation to the internet is whether the use in a meta-tag of a word or phrase that is similar to another's registered trade mark infringes that trade mark. A meta-tag is not visible to the user but is used by search engines to find sites matching an inquiry entered by the user. Meta-tags are embedded in HTML code.<sup>115</sup> There are different forms including descriptive meta-tags, containing information describing the website or keyword meta-tags containing keywords relating to the contents which are searched by search engines. Again, in the UK, there is little guidance but there is a reasonable body of case law in the US where the courts have been fairly consistent in finding that use of meta-tags which are similar to a registered trade mark will infringe if, of course, the other requirements for infringement are present. For example, in *Playboy Enterprises Inc v Calvin Designer Labels*,<sup>116</sup> the use of the claimant's trade marks, 'Playboy' and 'Playmate', in meta-tags on the defendant's website was held to infringe. However, in *Playboy Enterprises Inc v Welles*,<sup>117</sup> there was no finding of infringement. Terri Welles's website advertised the fact that she was a former Playmate of the Year, but the use of Playboy's marks was minimal and the site contained numerous disclaimers. It was held that she was not using 'Playboy' and 'Playmate' as trade marks, but as descriptive terms fairly and accurately describing her website. Her use of the trade marks in meta-tags was permissible and was an attempt, in good faith, to index the content of her website.

The case of *Brookfield*, discussed above, is also instructive in relation to the use of trade marks in meta-tags. The form of confusion caused by such use was described as 'initial interest confusion'. Any person who is looking for a specific website and does not know the exact address is likely to use a search engine using words such as company names, trade marks and the like. If other sites have embedded the trade marks in meta-tags, these will also be retrieved. However, and bearing in mind that persons using search engines expect to retrieve numerous irrelevant hits, that should be where the

<sup>114</sup> (Unreported) 27 January 2000.

<sup>115</sup> HTML stands for Hyper-Text Mark-up Language.

<sup>116</sup> 985 F Supp 1220 (ND Cal, 1997).

<sup>117</sup> 7 F Supp 2d 1098 (SD Cal, 1998).

confusion ends. At least, it is unlikely that the initial confusion will result in an order for goods or services being placed with the wrong trader through continuing confusion. However, the use of another’s trade mark in meta-tags to capture initial consumer attention has usually been regarded as a potential infringement of a trade mark in the US. A nice analogy was used by the court in *Brookfield*, which is set out below, adapted to the UK:

- Trader A (Ash Ltd) and Trader B (Birch plc) both sell similar goods and both have retail outlets near junctions along the A5 Trunk Road. Both Ash and Birch are registered trade marks.
- Ash’s outlet is just off the A5 along the A47 road to Nuneaton and Birch’s outlet is just off the A5 along the A447 road at Hinckley (on the opposite side of the A5). (Hinckley and Nuneaton are just a few miles apart.)
- Ash places a notice on advertising hoardings along the A5 stating that customers for Birch’s retail outlet should take the A47 to Nuneaton.
- A person, travelling along the A5 wanting to visit Birch’s store for the first time, and seeing the advertising hoarding, would turn off the A5 at the junction with the A47 towards Nuneaton.
- Being unable to find the Birch store, that person would probably see Ash’s store and might decide to shop there instead. He would not, at this stage, be confused in a narrow sense. If he decided to buy something, he would know precisely from whom he was buying.

According to the court in *Brookfield*, such an activity should infringe Birch’s registered trade mark because it is a misappropriation of Birch’s goodwill.

There are very few cases involving use of trade marks in meta-tags in the UK. In *Roadtech Computer Systems Ltd v Mandata Ltd*,<sup>118</sup> the defendant had used the claimant’s trade mark, ‘Roadrunner’, and its company name, ‘Roadtech’, in meta-tags. However, before the hearing, the defendant removed the offending meta-tags, although it was confirmed that using the trade mark as a meta-tag was an infringement. The defendant in *Pfizer Ltd v Eurofood Link (UK) Ltd*<sup>119</sup> used the claimant’s registered trade mark, ‘Viagra’, in its meta-tags. However, after finding infringement under s 10(2) or, alternatively, under s 10(3), Simon Thorley QC, sitting as deputy judge of the Chancery Division, did not expressly address the question of whether the use of a trade mark in a meta-tag infringed the trade mark. Other activities of the defendant were sufficient to decide there had been an infringement of the claimant’s trade mark.<sup>120</sup>

The use of trade marks in meta-tags may escape if the word used in the meta-tag is not identical to the trade mark. For example, in *Brookfield*, the court said that it was acceptable for the defendant to use ‘Movie Buff’ in a meta-tag. The space between the words was pivotal and persons trying to find the claimant’s website by typing in its trade mark would be less likely to retrieve the defendant’s website instead. However, in this case, the term ‘Movie Buff’ has an ordinary meaning and the situation might be different if both the trade mark and the word used in the meta-tag had no ordinary meaning.

There are differences between US and UK trade mark law which mean that the US authorities do not translate particularly well in terms of similar facts in the UK (or, indeed, in Europe). The concept of *initial interest confusion* simply will not do where infringement under s 10(2) is alleged. This is because confusion for the purposes of s 10(2) has been held, on numerous occasions, to be confusion as to origin. Persons picking up the wrong website, because of its embedded meta-tags, will quickly realise that it is not the website they were seeking. Infringement by the use of meta-tags including registered trade marks may occur, however, where infringement under s 10(1) or (3) is alleged, neither of which require confusion. Thus, where the registered trade mark,

<sup>118</sup> [2000] ETMR 970.

<sup>119</sup> [2001] FSR 17.

<sup>120</sup> It could be argued that infringement by use of meta-tags was implicitly accepted by the judge. It is a pity, however, that the opportunity was not taken to explore this further.

being a word or phrase (not stylised), is used without modification and the goods or services offered are identical, infringement is made out, *per se*.<sup>121</sup> Section 10(3) may be relevant where the meta-tag includes a word or phrase identical or similar to the registered trade mark where unfair advantage or detriment is found. This might be the case where the defendant's website results in an association (though not confusion as to origin) between the claimant's and defendant's trade (blurring) or where the material available on the defendant's website tarnishes the claimant's trade mark. Nonetheless, this may be more difficult to show than in other cases given the nature of the internet, the frequency of spurious 'hits' and the fact that users of search engines are probably more likely to make distinctions between different websites.

Internet domain names should be treated no differently to other marks but what is important is whether they perform as trade marks.<sup>122</sup> It is not enough that they function as domain names; they must have trade mark significance to be registrable. The purpose of a domain name is not the same as that of a trade mark and there must be some evidence of the public treating the domain name as a badge of origin rather than just an internet address. Adding a common internet generic or country code such as '.com', '.org' or '.co.uk' to an otherwise non-distinctive word or phrase may be sufficient to give the word or phrase a distinctiveness for trade mark purposes. There are examples of such registrations: for example, 'CAN AND WILL.COM' registered in the UK during 1998. However, the OHIM refused an application to register 'BUY.COM'. It was descriptive of an internet site at which persons could buy goods or services. It is submitted that the more knowledge the public have of domain names, the more difficult it will become to argue that simply adding an internet code as a suffix will at once transform an indistinct mark into a distinctive one.

Internet search engines, such as Google, use a system of sponsored links whereby companies and businesses pay for keywords known as 'adwords' so that when a person enters a particular adword, a list of sponsored links is retrieved in addition to other sites found during the search which may contain the searched for word, words or phrase. The sponsored list normally appears at the top or at the side of the retrieved sites and is usually described as such. In *Interflora Inc v Marks & Spencer plc*,<sup>123</sup> Interflora had the adword 'INTERFLORA'. Originally, trade marks were only permitted to be used as adwords by their proprietors or licensees but, due to a change of policy, it became possible for other companies to 'buy' trade marks as adwords. Marks & Spencer bought a range of keyword adwords which comprised of or included INTERFLORA. Arnold J granted a stay pending rulings before the Court of Justice on similar matters and, also, submitted further questions for a preliminary ruling. In *Joined Cases C-236/08, C-237/08 and C-238/08 Google France v Louis Vuitton*,<sup>124</sup> Advocate General Poirares Maduro concluded that the use of trade marks by third parties as keyword adwords did not infringe those trade mark rights. It remains to be seen if the Court of Justice agrees.

Further questions were submitted to the Court of Justice for a preliminary ruling in relation to internet auction sites in *L'Oréal SA v eBay International AG*.<sup>125</sup> L'Oréal and other cosmetics companies complained about goods being sold through eBay's via its online auction-style and fixed price sales. Evidence tendered by the claimants indicated that two test purchases were of counterfeit cosmetics whilst the remaining 15 purchases were of goods which had not been placed on the market within the EEA by the claimants, having been placed on the US and Canadian markets. There was a further claim that some goods offered for sale were unboxed or were tester products not intended for resale. Arnold J considered that eBay was not jointly liable with the individual sellers as eBay was under no legal obligation to prevent third parties infringing the claimants' trade marks. Furthermore, although eBay actively encouraged the listing and sale of goods from outside the EEA, since eBay's facilities could be used in a way which did not infringe trade marks and did not inherently lead to infringement,

<sup>121</sup> Providing the use is deemed to be in relation to goods or services in the UK.

<sup>122</sup> *Digeo Broadband Inc's Trade Mark Application* [2004] RPC 638.

<sup>123</sup> [2009] ETMR 954.

<sup>124</sup> 22 September 2009.

<sup>125</sup> [2009] ETMR 847.

this was insufficient to make eBay liable as joint tortfeasor. However, guidance from the Court of Justice was sought on the following:

- what the position was in relation to the sale of unboxed or tester goods;
- whether sponsoring links<sup>126</sup> which meant that users could access listings of infringing and non-infringing goods to be sold on eBay meant that eBay infringed the claimants' trade marks;
- whether eBay had the hosting defence under Article 14 of the Directive on electronic commerce;<sup>127</sup>
- the scope of the relief that Article 11 of the Directive on the enforcement of intellectual property rights<sup>128</sup> required national courts to grant against intermediaries such as eBay.

It is clear that the ruling of the Court of Justice in this and the *Interflora* case will have significant implications for search engines and e-commerce websites. If, as the Advocate General in *Interflora v Marks & Spencer* suggested, the use of trade marks belonging to others in keywords and adwords and other uses which are invisible to the ultimate consumer does not infringe trade marks, there is likely to be a massive upsurge in the use of trade marks in such ways. This will mean that companies offering search engine facilities should be able to reap the benefits from auctioning off trade mark words, not just to the highest bidder but to numerous bidders. The greater the bid, the higher up the list of sponsored links an e-commerce business will appear. In the *Interflora v Marks & Spencer* case, it was alleged that since the policy of Google was changed to allow others to 'buy' trade mark keywords, the price per click for Interflora rose from 2 pence to 28 pence. The problem for the proprietors of trade marks is that trade marks may be used legitimately by others in some cases, such as in lawful comparative advertising and certain descriptive uses. There is also the question as to whether such use constitutes use as a trade mark or an infringing form of use under Article 5(3) of the trade marks Directive.<sup>129</sup> As Advocate General Poiares Maduro said in his opinion in *Google France v Louis Vuitton* (at para 154):

... it is important not to allow the legitimate purpose of preventing certain trade mark infringements to lead all trade mark uses to be prohibited in the context of cyberspace.

## EVIDENTIAL ASPECTS

The proprietor bears the burden of proof as regards the use to which the mark has been put if the question arises (s 100). This will only be relevant where there is a challenge on the basis of non-use and, possibly, in connection with an application where the proprietor claims that the mark has become distinctive through use to overcome some of the absolute grounds of refusal.

Expert evidence is often submitted to show that there is a likelihood of confusion. However, such evidence is unnecessary in many cases and only prolongs the proceedings and increases costs. In *esure Insurance Ltd v Direct Line Insurance plc*,<sup>130</sup> one issue was whether there was a likelihood of confusion between esure's mouse on wheels and Direct Line's computer mouse on wheels, Maurice Kay LJ said (at para 82):

In a case such as this, neither a hearing officer nor a judge in the Chancery Division requires the assistance of an 'expert' when evaluating the likelihood of confusion from the standpoint of the average consumer.

The Civil Procedure Rules, r 35.1 states that expert evidence shall be restricted to that which is reasonably required to resolve the proceedings. Unfortunately, this rule does not apply to proceedings before a Hearing Officer at the Trade Marks Registry.

<sup>126</sup> That is, eBay's purchase and use of trade marks as adwords from third party search engines, as in *Interflora v Marks & Spencer*.

<sup>127</sup> Directive 2000/31/EC of the European Parliament and of the Council of 8 June 2000 on certain legal aspects of information society services, in particular electronic commerce, in the Internal Market (Directive on electronic commerce), OJ L178, 17.07.2000, p 1.

<sup>128</sup> Directive 2004/48/EC of the European Parliament and of the Council of 29 April 2004 on the enforcement of intellectual property rights, OJ L 157, 30.04.2004, p 45.

<sup>129</sup> However, the forms of use listed in that provision are not exhaustive because of the use of 'inter alia' before the list of prohibited activities.

<sup>130</sup> [2008] ETMR 1258.

Under s 72, in all legal proceedings relating to a registered trade mark, the registration of a person as proprietor shall be prima facie evidence of the validity of the original registration and on any subsequent assignment or other transmission of the registered trade mark. In terms of gathering evidence of infringing use, the proprietor should be able to gain access to articles bearing infringing marks that are being offered for sale or advertisements for such articles. Where difficulties arise they are in connection with proving confusion for the purposes of Article 5(1)(b) of the Directive (s 10(2) of the Act) or association for the purposes of Article 5(2) (s 10(3) of the Act). Evidence may take many forms, including surveys of consumers, evidence from wholesalers, retailers and experts. Survey evidence is often criticised by judges and in *BACH and BACH FLOWER Remedies Trade Marks*,<sup>131</sup> Morritt LJ said (at 526):

131 [2000] RPC 513.

But I do not think that the court is assisted by repetitious evidence from individuals put forward by the parties, whether expressly or not, as archetypal average consumers or end users for, by definition, no one individual is such a consumer or end user and the issue cannot be resolved by counting heads. We are told that the judges before whom cases of this sort are heard have increasingly imposed restrictions on the quantity of such evidence they are prepared to admit. In my view that practice is to be encouraged.

Even if the survey itself is properly designed, there is no guarantee that it is properly applied or that the answers are properly recorded, even if a reputable organisation is responsible for carrying out the survey.<sup>132</sup> Much more telling is evidence presented by witnesses who put themselves forward for cross-examination. In practice, survey evidence will be treated as hearsay and relatively little weight usually will be attached to it. In *esure Insurance Ltd v Direct Line Insurance plc*,<sup>133</sup> the Court of Appeal held that the Hearing Officer rightly rejected the survey evidence as the survey had been carried out just after an extensive advertising campaign undertaken by Direct Line.

132 See the comments of Lloyd J in *Dualit Ltd's Trade Mark Application* [1999] RPC 890 at 901.

133 [2008] ETMR 1258.

If the validity of a registered mark is contested and it is found to be valid, the court may give a certificate to that effect under s 73. This mirrors s 47 of the 1938 Act. Such a certificate could prove useful in any subsequent proceedings as regards an award of costs in favour of the proprietor.

## Trap orders

If the proprietor of a registered trade mark believes that his mark is being infringed, it should not be necessary to apply for a search order (formerly known as an *Anton Piller* order) for the purpose of obtaining and preserving evidence of the infringement. It will usually be possible to buy examples of the product to which the alleged infringing mark has been applied. Indeed, search orders are not lightly granted and alternative means of obtaining evidence should be explored first. For example, in *Systematica Ltd v London Computer Centre Ltd*<sup>134</sup> it was pointed out that the claimant could have freely walked into the defendant's shop and purchased copies of the alleged infringing computer programs.

134 [1983] FSR 313.

Several test purchases can be made to build up a pattern of infringement. It may serve a useful purpose to frame a request for goods or services in such a way as to demonstrate clearly that there is a significant chance of confusion. Such orders for goods are referred to as 'trap orders' and are commonly used as a means of obtaining evidence of infringement in relation to both trade marks and passing off actions. It is obvious that the way the order is placed is important and it should be done in a clear, unambiguous and fair way. Trap orders may indeed be essential if the trade mark infringement occurs in an advertisement, to verify that the goods or services being offered in fact are not those of the proprietor or a licensee.

One problem with trap orders is that low-level employees may be poorly trained or difficult to control, not always being aware of the dangers of supplying the wrong

goods. This is particularly important where an injunction has been granted against a defendant who has infringed a trade mark or been guilty of passing off. In *Showerings Ltd v Entam Ltd*,<sup>135</sup> the claimant produced the ‘Babycham’ drink and sent teams of trappers into the defendant’s public houses. The trappers ordered drinks including Babycham but were often supplied with a rival drink. In *British Telecommunications plc v Nextcall Telecom plc*,<sup>136</sup> some of the defendant’s salespersons told lies to try to persuade consumers to change from BT to the defendant’s telephone service. When the claimant complained, the defendant made appropriate undertakings but, unfortunately, the lies continued. The defendant claimed to have made attempts to prevent their salespersons telling lies. Jacob J refused to allow a qualification which would have prevented the defendant being in contempt of court if, in spite of using its best endeavours to prevent salespersons deceiving consumers, they still do so.

135 [1975] FSR 45.

136 [2000] FSR 679.

Trap orders can be very effective where counterfeit goods are concerned. Summary judgment is likely to follow in such cases with the only issue being the form of the injunction and the assessment of damages. In *Microsoft Corporation v Plato Technology Ltd*,<sup>137</sup> agents acting for the claimant bought five counterfeit copies of the claimant’s Windows 95 operating system software from the defendant. As it was accepted that the defendant had acted honestly and had not realised the copies were counterfeit, an injunction was granted restraining the defendant from dealing in the claimant’s software products which he knew, or ought upon reasonable inquiry to know, were counterfeit.

137 [1999] FSR 834.

## LIMITATIONS AND DEFENCES

The Directive contains a number of specific limitations on the effects of a trade mark in Article 6 (see s 11 of the Act). These allow a person to use his own name and address, to use indications to describe the characteristics of his goods or services or to use the trade mark to indicate the intended purpose of a product or service, such as accessories or spare parts. There is a requirement that the use is honest in an objective sense. Earlier rights that apply only in a particular locality may also be immune from attack based on a registered trade mark if Member States so provide. The Directive also provides for a defence based on acquiescence and there may be other defences available in the circumstances, such as lack of title to sue. In many cases, a defendant will put in a defence based on lack of a likelihood of confusion or damage to the repute of a trade mark and other aspects related to the scope of the rights and infringement. It is also common for a defendant to counterclaim for revocation or invalidity.

Another form of defence may be based on the principle of exhaustion of rights, where goods put on the market within the Community by or with the consent of the proprietor are further commercialised: for example, where they are bought in one Member State and imported into another Member State for resale.<sup>138</sup> This section of the chapter looks at the limitations in the Directive first, followed by acquiescence and exhaustion of rights.

138 The Directive applies to the European Economic Area as a result of the Agreement on the European Economic Area of 2 May 1992, OJ L 1, 03.01.1994, p 3.

### Limitation of the effects of a trade mark

Use in accordance with honest practices in industrial or commercial matters is the test for non-infringing use in Article 6(1), which states that a trade mark shall not entitle the proprietor to prohibit a third party from using, in the course of trade:

- (a) his own name or address,
- (b) indications concerning the kind, quality, quantity, intended purpose, value, geographical origin, the time of production of goods or of rendering of the service, or other characteristic of goods or services, or

- (c) the trade mark where it is necessary to indicate the intended purpose of a product or service, in particular, as accessories or spare parts,
- (d) provided he uses them in accordance with honest practices in industrial or commercial matters.

The presence of the limitations has no bearing on the absolute grounds for refusal of trade marks. For example, the fact that a trade mark for which registration is sought is a common name or is a word or phrase that other undertakings might reasonably use to describe characteristics of their own goods or services and could be subject to the limitations of the effects of trade marks is not a factor to be taken into account when determining registrability. It is no answer to say that, if the trade mark is registered, any conflicts with names and descriptive words and phrases can be resolved by reference to the limitations. The limitations are there to allow the use of own names and descriptions where trade marks are registered on proof of acquired distinctiveness even though without such proof they would not be registrable.

### Honest practices

Use in accordance with honest practices could be where a trader uses his own name, not having deliberately selected a trading name to capture goodwill associated with a registered trade mark. Another example is where a trader uses a geographical name to indicate the origin of his goods or the place from which he provides a service. In *NAD Electronics Inc v NAD Computer Systems Ltd*,<sup>139</sup> Ferris J considered that the test for honest practices was equivalent to *bona fide* use under s 8 of the 1938 Act, approving Lloyd Jacob J in *George Ballantine & Sons Ltd v Ballantine Stewart & Co Ltd*<sup>140</sup> in relation to the adoption of a company name similar to an existing trade mark, where he held that the relevant aspect was the use made of the company name, not the *bona fides* in selecting the name in the first place. A criticism of Ferris J's judgment on this point is that it is not clear that 'honest practices' is the direct equivalent of '*bona fides*'. Honest practices in the cut and thrust of commercial life may not necessarily be *bona fide* in a strict sense. The question should be what reasonable and honest traders consider to be acceptable.

It was accepted that a subjective approach to the question of *bona fide* was appropriate under the 1938 Act. However, the determination of what constitutes honest practices under the Directive is objective. In *Aktiebolaget Volvo v Heritage (Leicester) Ltd*,<sup>141</sup> the defendant had been an authorised dealer for the claimant's Volvo cars. After termination of the dealership, the defendant continued to use the name Volvo, but also used the words 'independent' and 'specialist' with it, as in 'Independent Volvo Specialist'. It was held by Rattee J that the continued use of the name Volvo clearly fell within the ambit of use within s 11(2)(c), but the defence was not made out as the use was not in accordance with honest practices. He said that the question was whether a reasonable motor trader would think it was in accordance with honest practices in that business. In this case, he considered that the continued use was calculated to confuse and some customers would probably believe that the defendant remained an authorised dealer for Volvo cars.<sup>142</sup>

The Court of Justice dealt with a not dissimilar question in Case C63/97 *Bayerische Motorenwerke AG v Ronald Karel Deenik*,<sup>143</sup> in which a Dutch car dealer sold and repaired second-hand BMW cars. He advertised using statements such as 'BMW Specialist' and 'Repairs and Maintenance of BMWs'. It was held, *inter alia*, that the limitation in Article 6(1)(c)<sup>144</sup> applied unless the trade mark was used in such a way to create an impression that there is a commercial connection with the trade mark proprietor: for example, that the person using the mark is affiliated with the proprietor's business or there is a special relationship between the undertakings.<sup>145</sup> In the *Volvo* case above, the judge did think it was possible that such an impression would be gained.

<sup>139</sup> [1997] FSR 380.

<sup>140</sup> [1959] RPC 47.

<sup>141</sup> [2000] FSR 253.

<sup>142</sup> Rattee J also found that infringement fell within s 10(1) as the sign was identical to the word mark Volvo notwithstanding the addition of other words or material.

<sup>143</sup> [1999] ECR I-905.

<sup>144</sup> Equivalent to the Trade Marks Act 1994 s 11(2)(c).

<sup>145</sup> As regards the sale of second-hand BMWs the court held that the doctrine of exhaustion of rights applied as set out in the Trade Marks Directive Article 7.

In *Bayerische Motorenwerke v Deenik* the Court of Justice ruled that the condition of honest practices constitutes in practice a duty to act fairly in relation to the legitimate interests of the proprietor of the trade mark. In Case C100/02 *Gerolsteiner Brunnen GmbH & Co v Putsch GmbH*,<sup>146</sup> the Court of Justice confirmed this and went further in holding that the mere fact that there is a likelihood of aural confusion between a word mark registered in one Member State and an indication of geographical origin from another Member State is not sufficient, *per se*, to conclude that the use of the indication in the course of trade is not in accordance with honest practices. In that case, Gerolsteiner made soft drinks and the like under the trade mark ‘Gerri’ registered in Germany. Putsch imported soft drinks bottled in County Kerry in Ireland under the name ‘Kerry Spring’. The Court of Justice pointed out that, in a Community of 15 Member States with significant linguistic differences, soon due to be enlarged, the chances of a phonetic similarity between a trade mark registered in one Member State and an indication of geographical origin in another Member State was already substantial and likely to increase.

146 [2004] ECR I-691.

### Own name and address

The fact that there is an own name limitation under Article 6(1)(a) does not affect an assessment as to whether a trade mark is devoid of any distinctive character under Article 3(1)(b).<sup>147</sup> At the time of the adoption of the Directive, the European Council and the Commission were of the view that this limitation was restricted to the names and addresses of natural persons. However, it was accepted that the question was one for the Court of Justice and, in Case C245/02 *Anheuser-Busch Inc v Budějovický Budvar*,<sup>148</sup> the Court of Justice ruled that the limitation also applied to trade names as there was no such restriction to natural persons in the wording of the Directive.

147 Case C-404/02 *Nichols plc v Registrar of Trade Marks* [2004] ECR I-8499.

148 [2004] ECR I-10989.

Previously, in the UK, there was some doubt as to whether the equivalent provision in s 11(2)(a) of the Trade Marks Act 1994 applied to company and trading names. At first sight, the language of that paragraph appears restricted to natural persons, referring as it does to ‘his own name and address’ (as indeed does the Directive). Under the 1938 Act, *bona fide* use by a person of his own name was assumed to apply also to artificial legal persons such as companies.<sup>149</sup> This issue has arisen a number of times under the 1994 Act. Although Ferris J cast some doubt on this in the *NAD Electronics* case, it was accepted by Lloyd J at first instance in *Scandecor Developments AB v Scandecor Marketing AB*.<sup>150</sup> He said that the use of a corporate name could be within the provision even if used with the omission of ‘Limited’. The same ought to apply to ‘plc’ and other equivalents.<sup>151</sup> This conclusion seemed sensible and was followed in *Euromarket Designs Inc v Peters and Crate & Barrel*.<sup>152</sup> In *DaimlerChrysler AG v Javid Alavi (t/a MERC)*,<sup>153</sup> Pumfrey J was sympathetic to this view and, although he did not have to decide the point, he accepted that the limitation could apply also in respect of a trading name, for example, as used by the sole trader defendant in that case. However, on appeal in the *Scandecor* case,<sup>154</sup> the House of Lords decided to refer a number of questions for a preliminary ruling to the European Court of Justice under Article 234 of the EC Treaty. One of those questions was whether a company is a person for the purposes of s 11(2)(a). Lord Nicholls of Birkenhead (at para 54) said the issue was not *acte claire*. The reference was withdrawn but has now been overtaken by the *Anheuser-Busch* ruling confirming that the limitation also applies to trade names and is not restricted to the names of natural persons.

149 See, for example, *Parker-Knoll Ltd v Knoll International Ltd* [1962] RPC 265.

150 [1998] FSR 500.

151 The own-name limitation will not apply in the case of a newly formed company otherwise the route to piracy would be obvious: *WEBSPIHERE Trade Mark* [2004] FSR 796. However, in any case, the use has to be in accordance with honest practices.

152 [2001] FSR 288.

153 [2001] RPC 813.

154 *Scandecor Developments AB v Scandecor Marketing AB* [2002] FSR 122.

155 [2002] FSR 487.

In *Asprey and Garrard Ltd v WRA (Guns) Ltd*,<sup>155</sup> the claimant had a registered trade mark ‘ASPREY’ and the second defendant was a member of the family which had run the claimant company’s predecessor in title. His name was William R Asprey and he formed the first defendant company and decided to open a shop in London which carried his name, ‘William R Asprey, Esquire’, across the top of the shop-front. It was held

that this amounted to trade mark infringement and passing off and the ‘own name’ defence did not avail the defendant. The Court of Appeal confirmed that the defence could never apply to the names of new companies otherwise the route to piracy would be obvious. The same applies to a newly adopted trade name other than its own name. The Court of Appeal also held that, no matter how honest a defendant’s subjective intentions were, any use of his own name which amounted to passing off could not be in accordance with honest practices in industrial or commercial matters within the s 11(2) defence. Similarly, the own name defence cannot apply to a registered company which chooses a trading name the same or very similar to a well-known trade mark. In *Hotel Cipriani SRL v Cipriani (Grovesnor Street) Ltd*,<sup>156</sup> the claimant owned the famous CIPRIANI trade mark registered for hotels and restaurants. The defendant opened a restaurant in London under the name CIPRIANI LONDON. It was clear that there was a likelihood of confusion as the additional word LONDON was not distinctive. As regards the own name defence, it was held that the defendant could not avail itself of the defence as it was not its own name.<sup>157</sup> Arnold J said that the defence could not be interpreted as applying to a company’s trading name as opposed to its registered name. Otherwise, this would constitute a substantial inroad into the rights conferred by the trade mark, particularly where a company has only just commenced trading.

The own name defence cannot apply where an abbreviation of the name is used which appears the same or very similar to the trade mark. In *Premier Luggage and Bags Ltd v Premier Company (UK) Ltd*,<sup>158</sup> the defendant’s salespersons introduced themselves as being from ‘Premier’, ‘Premier Luggage’ or ‘Premier Luggage Company’ rather than from ‘Premier Company (UK) Ltd’ and this amounted to an infringement of the claimant’s trade mark ‘PREMIER’. This was also held to amount to passing off.

### Indications of certain characteristics of goods or services

In Case C100/02 *Gerolsteiner Brunnen GmbH & Co v Putsch GmbH*,<sup>159</sup> the Court of Justice confirmed that where there is a likelihood of an aural confusion between a trade mark registered in one Member State and an indication of geographic origin in another Member State, the latter may be prevented by the proprietor only if the use is not in accordance with honest practices, this being a matter for assessment of the relevant circumstances by the national court. There seems no reason to suggest that the same logic should not apply to the other indications covered by Article 6(1)(b).<sup>160</sup> Indeed, this should not be restricted to a likelihood of aural confusion and should apply, not only to other forms of possible confusion (for example, textual, visual and conceptual), but to indications that are identical to registered trade marks and used in relation to identical goods or services. The only issue is the question of fact – whether the use is in accordance with honest practices – this being a matter for a national court to decide. Furthermore, the Directive does not require that the indication is used in a Member State other than that in which the trade mark is registered.

The inclusion of ‘other characteristics’ means that the list in Article 6(1)(b) is not exhaustive and the preceding characteristics are sufficiently diverse to suggest that almost any characteristic should be within the limitation such as the material from which goods are made, their colour and surface texture or even the manufacturing process used to make the goods.<sup>161</sup> However, there is no general interest rule on keeping certain signs available for use by other undertakings going beyond Article 6(1)(b).<sup>162</sup>

In Case C48/05 *Adam Opel AG v Autec AG*,<sup>163</sup> the defendant made scale model cars which bore the claimant’s trade mark which was registered, *inter alia*, for motor vehicles and toys. The Court of Justice confirmed that this was outside Article 6(1)(b). Applying an identical sign to the scale models so as to faithfully reproduce the claimant’s vehicles, and marketing those scale models, does not constitute the use of an indication of the characteristics of the scale models within Article 6(1)(b) of the trade

<sup>156</sup> [2008] EWHC 3032 (Ch). This case involved a Community trade mark but the same principles must apply.

<sup>157</sup> Following *Asprey*. Neither Cipriani nor Cipriani London was the name of the company even though the company name included Cipriani. Although the sole director of the company was called Giuseppe Cipriani, the company could not use this as a defence as it was the company, not he, which used the name.

<sup>158</sup> [2003] FSR 69.

<sup>159</sup> [2004] ECR I-691.

<sup>160</sup> Of course, the Court of Justice has to consider the questions submitted to it on a reference for a preliminary ruling and should not venture on a wholesale analysis of the relevant provisions of the legislation under hypothetical situations.

<sup>161</sup> In *O2 Holdings Ltd v Hutchinson 3G Ltd* [2007] RPC 407, Jacob LJ said that he could not think of any characteristic not mentioned.

<sup>162</sup> Case C-102/07 *Adidas AG v Marca Mode CV* [2008] ECR I-2439.

<sup>163</sup> [2007] ECR I-1-17.

marks Directive. It remains possible that the use complained of does not infringe under Article 5(1)(a) on the basis that it is not use as a trade mark and does not affect the essential function of the claimant's trade mark. It may not infringe under Article 5(2) unless the use is without undue cause and takes unfair advantage of, or is detrimental to, the distinctive character or repute of the registered trade mark.<sup>164</sup>

**164** Assuming the registered trade mark is one having a reputation in the Member State concerned.

**165** [1996] RPC 281.

**166** [1998] RPC 283.

**167** The Court of Appeal confirmed that the use of the sign (the defendant's three-headed rotary shaver) would be seen as an indication of its intended purpose and was within s 11(2)(b): *Philips Electronics NV v Remington Consumer Products Ltd* [1999] RPC 809. Although this case was referred to the Court of Justice, this particular aspect was not considered.

**168** [1996] FSR 205.

**169** [2001] FSR 541.

Article 6(1)(b) (s 11(2)(b) of the Trade Marks Act 1994) has been used in the UK as a defence on a number of occasions. For example, in *British Sugar plc v James Robertson & Sons Ltd*<sup>165</sup> it was held that the defendant's use of the phrase 'Toffee Treat' was within s 11(2)(b) although, in any event, the claimant's 'TREAT' trade mark was declared to be invalid. The same result occurred in *Philips Electronics NV v Remington Consumer Products Ltd*<sup>166</sup> (defendant's use within s 11(2)(b) but the claimant's registration was declared invalid).<sup>167</sup> In *Bravado Merchandising Services Ltd v Mainstream Publishing (Edinburgh) Ltd*,<sup>168</sup> the defendant published a book entitled *A Sweet Little Mystery – Wet Wet Wet – The Inside Story*. The book was about the pop group called 'Wet Wet Wet', which had been registered as a trade mark. The defendant's use of the mark fell within s 11(2)(b) because it was descriptive of the content of the book.

The relationship between s 11(2)(b) and s 10(6) came up for consideration in *British Airways plc v Ryanair Ltd*,<sup>169</sup> in which it was argued that the defence cannot apply where the trade mark is used in comparative advertising. That argument was rejected by Jacob J who gave the following two examples:

'Bisto' is as tasty as 'Oxo'  
'Bisto' tastes stronger than 'Oxo'

Also alluding to the fact that traders like to compare prices in their advertising, Jacob J said that in such cases the trade mark is being used to give an indication of the characteristics of the goods.

The defence in s 11(2)(b) applies in such a way to allow traders to use a registered trade mark, or part thereof, which is descriptive or contains descriptive elements such as a geographical name, as set out in s 11(2)(b). For example, 'YORKSHIRE TEA' is a registered trade mark. This fact should not prevent another trader based in Yorkshire who sells speciality teas by mail order advertising his wares from using the phrase 'Best quality teas sent direct to you from our premises in Yorkshire'. Such descriptive use is acceptable. It may not be acceptable, however, to use the descriptive word as a trade mark for the defendant's goods such as in 'We sell only the best quality YORKSHIRE TEA and coffee'.<sup>170</sup>

**170** Joined Cases C-108/97 and C-109/97 *Windsurfing Chiemsee v Huber & Attenberger* [1999] ECR I-2779, in which the Court of Justice confirmed that Article 6(1)(b) of the Directive did not confer upon third parties a right to use the name or word as a trade mark. It only allowed them to use it descriptively, for example, as an indication of geographic origin provided the use was in accordance with honest practices.

**171** [2005] ECR I-2337.

### Accessories and spare parts

Article 6(1)(c) allows third parties to use trade marks where necessary to indicate the intended purpose of their own products or services. Accessories and spare parts are mentioned as specific examples but the provision is not limited to these. The inclusion of services reinforces this. For example, services might be rendered in relation to maintenance, repair or refurbishment of products, for example. An important reason why this limitation exists is that, without it, a trade mark proprietor might be in a position to distort competition, for example, by preventing or restricting the use of the trade mark by independent spare parts manufacturers or repairers.

In Case C228/03 *Gillette Company v LA-Laboratories Ltd Oy*,<sup>171</sup> the Gillette Company had a registration for the trade marks 'Gillette' and 'Sensor' for razors, etc. and Gillette Group Finland held an exclusive licence to use those trade marks in Finland and had been selling razors comprising handles with replaceable blades. LA-Laboratories made razors and blades sold under the trade mark Parason Flexor and sold blades with a sticker applied to their packaging which stated 'All Parason Flexor and Gillette Sensor handles are compatible with this blade'. A number of questions were

referred to the Court of Justice. Particular issues were whether a replacement blade for the razor was a spare part or a product in its own right and whether the use of the trade mark to indicate the intended purpose was ‘necessary’, the scope of honest practices in relation to Article 6(1)(c) and whether the limitation applied where the third party not only made something which could be a spare part for the proprietor’s product but also made the product itself.

The Court of Justice ruled that the use by a third party of a trade mark with an accessory or spare part may still fall within Article 6(1)(c) even if the third party also markets the product with which the accessory or spare part can be used if necessary to indicate the intended purposes and if in accordance with honest practices.

Use of the trade mark was *necessary* if it was the only way in practice to provide the public with comprehensible and complete information on that intended purpose so as to preserve the undistorted system of competition in the market for that product. This is a matter for a national court taking into account the nature of the public for whom the product is made. There is no distinction between the use of a trade mark with an accessory or spare part or other purposes to which a product may be put. Accessories and spare parts are examples of the types of products where a third party may wish to use a trade mark to indicate their intended purpose but Article 6(1)(c) is not limited to accessories and spare parts. It is, therefore, not necessary to determine whether a product is an accessory or spare part. The Court of Justice had previously held that the use of a trade mark by a third party to indicate that he specialises in the sale, repair or maintenance of a particular make of car constitutes a use to indicate intended purpose in Case C63/97 *Bayerische Motorenwerke AG v Ronald Karel Deenik*.<sup>172</sup>

172 [1999] ECR I-905.

In most cases, it will be impossible to communicate the intended purpose of an accessory or spare part for a particular product or services provided in relation to a particular product without using the trade mark under which the product is sold or is known. In many cases, the name of the manufacturer of the product will be a trade mark and the main name by which the product is known, such as BMW, Ford, Kodak, Peugeot, etc. If an independent company specialises in selling second-hand BMW cars and providing servicing, maintenance and repairs for BMW cars, it would be unrealistic not to expect him to advertise his services by using the BMW name, which is a registered trade mark. If this were to be prevented, that would distort competition as only authorised dealers would be able to use the name under licence from the BMW car company.

In the *Gillette* case, the Court of Justice also set out some examples as to what would not constitute honest practices in the context of Article 6(1)(c), being where:

- the use of the trade mark gave the impression that there was a connection between the third party and the trade mark proprietor;
- the use affects the value of the trade mark by taking unfair advantage of its distinctive character or repute;
- the use entails discrediting or denigrating the trade mark; or
- the third party represents its product as an imitation or replica of the product bearing the trade mark.

The fact that a third party uses a trade mark to indicate the intended purpose of his product does not necessarily mean that it is being represented as being the same quality or having equivalent properties as the product bearing the trade mark. In *Gillette*, what the Court of Justice had to say was in the context of products, but the same considerations should also apply to services provided by third parties in relation to products.

Whilst it might be acceptable to use a trade name to advertise reconditioned goods originally made by the trade mark proprietor as suitable for use with other goods, it

173 *PAG Ltd v Hawk-Woods Ltd*  
[2002] FSR 723.

would be unlikely to be acceptable to fail to remove the trade mark from those reconditioned goods,<sup>173</sup> unless it was necessary to leave the trade mark on the reconditioned goods in order to indicate their intended purpose.

### **Earlier right in a particular locality**

The use by a third party in the course of trade of an earlier right, which applies only in a particular locality, cannot be prevented by the proprietor of the trade mark under Article 6(2). The earlier right must be one which is recognised by the laws of the Member State in question and within the limits of the territory in which it is recognised.

The Trade Marks Act 1994, s 11(3), states that an earlier right is an unregistered trade mark or other sign continuously in use in relation to goods or services by a person or predecessor in title from a time before the use or registration of the trade mark by the proprietor or predecessor in title in relation to those goods or services. In other words, the use of the earlier right must predate the first use or registration, whichever is the earlier of the registered trade mark. Furthermore, the use of the earlier right must be continuous. The earlier right must be one protected by any rule of law, particularly passing off, in the relevant locality.

To give an example, say that Andrew used the name ‘Milkwood’ for his home-made honey which he sold from market stalls in Devon and Cornwall from 1995 to 1998. During that time, the name became well known in that area and goodwill was established in the name but, in 1999, Andrew became ill and was unable to carry on. However, during 2001, Andrew’s daughter Betty, who had returned to the UK after spending some time abroad, decided to resurrect the business and she recommenced making and selling the honey in the same locality under the ‘Milkwood’ name. In 2004, a French company, Miel et Cie SA, decided to start marketing its honey, jams and preserves in the UK and registered the name ‘Milkwood’ as a UK trade mark during that year, without any knowledge of the use of the name by Andrew or Betty. In 2005, Betty grew tired of the business and sold it to Cedric together with the goodwill of the business. Cedric took over immediately and continued to sell honey under the ‘Milkwood’ name in Devon and Cornwall. In 2006, Miel brought infringement proceedings against Cedric on the basis of its registered trade mark. The action will fail as the use of the name by Cedric and his predecessor in title, Betty, has been continuous since 2001, which predates the use or registration of the name as a trade mark by Miel. The conclusion would be different, of course, if Miel had started selling honey under the name during 2000 even though it did not register the name as a trade mark until after 2001, since the use of the name by Cedric’s predecessors in title had been interrupted between 1999 and 2001.<sup>174</sup>

174 Even if the goodwill in the name survived the interruption and had been assigned to Betty by Andrew.

With the emphasis on a particular locality and the requirement for continuous use from before the use or registration of the registered trade mark, it would appear that the provision permits the continuing use of the earlier right in that locality only and does not provide a right to extend the immunity from infringement to new geographical areas. In terms of a right in goodwill the limitation will be restricted to those areas where it has already been built up and existed continuously since.

### **Conflict of registered trade marks**

Article 9(3) of the Directive limits the right in trade marks on the basis of acquiescence for a period of five successive years. So, for example, an earlier registered trade mark or other earlier right may not be used to attack the validity of a registered trade mark or oppose its use if the conditions for acquiescence apply. In such circumstances, the later trade mark may not be used to oppose the use of the earlier trade mark or other earlier right even though they may not be invoked against the later trade mark. Acquiescence

is described more fully later but the Trade Marks Act 1994 also states, under s 11(1),<sup>175</sup> that a registered trade mark is not infringed by the use of another registered trade mark. That does not prevent an application for a declaration of invalidity, of course. This provision makes no distinction regarding the timing of registration so will apply where there is a potential infringement of either the earlier or the later registered trade mark.

That one of two registered trade marks could otherwise be used in an infringement action against the other may seem unlikely because of the opposition process or because of the honest concurrent use provisions in s 7.<sup>176</sup> The situation is not, however, impossible. It may have been that an opportunity to oppose the registration of the later trade mark has been missed, through lack of vigilance, for example. In such a situation, the only way forward for the proprietor of the first mark is to apply for a declaration of invalidity in respect of the second mark. As a declaration of invalidity has the consequence that the trade mark is treated as never having been registered, in whole or to the extent that it is found to be invalid, a question arises as to whether the proprietor of the first mark, if successful in the application for invalidity, can subsequently bring an action for infringement. This would seem to be so as s 11(1) expressly draws attention to the effect of a declaration of invalidity. In some cases, where there is a conflict between trade marks or between a trade mark and some other earlier right, a defence of acquiescence may be put forward.

<sup>175</sup> This appears to be a home-grown provision.

<sup>176</sup> Under the Trade Marks Act 1994 s 7(3), honest concurrent use is declared to be as under the Trade Marks Act 1938 s 12(2). The case of *Second Sight Ltd v Novell UK Ltd* [1995] RPC 423 affords an example of applications for registration made under this provision. It gives a defence only as from the date of registration.

## ACQUIESCENCE

The proprietor's rights will be limited if he has acquiesced in the use of a later registered trade mark for a continuous period of five years, being aware of such use unless registration of the later trade mark was applied for in bad faith: Article 9(1) of the Directive. Member States may also apply this limitation in respect of some other earlier right. The UK provided for acquiescence in both cases under s 48. The proprietor of the earlier trade mark or other right will not be entitled to apply for a declaration of invalidity of the later trade mark or oppose its use. However, the limitation is reciprocal in that the proprietor of the later trade mark will not be able to oppose the use of the earlier trade mark or other earlier right even though the earlier trade mark or right can no longer be invoked against the later trade mark.

## EXHAUSTION OF RIGHTS

The principle of exhaustion of rights applies where goods are placed on the market within the Community by or with the consent of the proprietor of any intellectual property rights subsisting in relation to the goods. The principle prevents the proprietor from using those rights to interfere with any subsequent commercialisation of the goods in question. Thus, a third party may buy goods on sale within the Community by or with the consent of the proprietor and import them into another part of the Community and resell them there. The principle is more fully explained and described in relation to intellectual property rights in general and specifically in Chapter 24. It is mentioned here briefly as it is expressly mentioned in the Directive and in the Trade Marks Act 1994.

Under Article 7(1) of the Directive, a trade mark proprietor cannot prohibit the use of the trade mark in relation to goods put on the market in the Community under that trade mark by him or with his consent. The reference to a person having his consent is, for example, to a licensee having the right to make or sell the goods or provide services under the trade mark or in relation to a distributor or agent acting for the proprietor.

Thus, if a trade mark proprietor sells perfume to which his trade mark has been applied in Portugal, another person may buy a quantity of that perfume and import it into the Benelux countries and put it on sale there. There will be no infringement even though the perfume will have been exported from Portugal, imported into and put on sale in the Benelux countries.

The rationale for the principle is that, without it, undertakings would be able to control the subsequent commercialisation of their goods and this would allow them to partition or distort the market within the Community. An example would be where, taking advantage of differing economic conditions, they could charge a higher price in one Member State compared with another Member State, perhaps because consumers in one were more affluent than in others. To allow this would detract from one of the main aims underpinning the Community, being the establishment and consolidation of a single market.

A trade mark proprietor may grant licences in respect of the trade mark but may include terms in the licence agreement which seek to prevent the sale or distribution of the goods in question to certain types of wholesalers or retailers. For example, the proprietor of a trade mark used for luxury goods might want to prevent the licensee selling the goods to discount shops or selling them online. In Case C-9/08 *Copad SA v Christian Dior couture SA*,<sup>177</sup> Christian Dior was the proprietor of the Dior trade mark used in relation to luxury corsetry. The licence agreement stated that the licensee must not sell the goods to, *inter alia*, discount stores without permission from the licensor. The licensee sought permission but this was refused. In spite of this the licensee sold goods bearing the mark to a discount store. Article 8(2) of the Directive states that the proprietor of a trade mark can invoke his rights against a licensee ‘... who contravenes any provision of his licence contract with regard to its duration, the form covered by the registration in which the trade mark may be used, the scope of the goods or services for which the licence is granted, the territory in which the trade mark may be affixed, or the quality of the goods manufactured or of the services provided by the licensee’. The Court of Justice ruled that a licensee puts goods on the market without the consent of the proprietor only under one of the circumstances listed under Article 8(2). However, ‘quality of the goods’ can extend in the case of luxury goods the ‘allure and prestigious image which bestows upon those goods an aura of luxury’.

As will be seen in Chapter 24, the rights afforded by registered trade marks have to be controlled because of the ease with which they could be used to interfere with the subsequent commercialisation of goods. At this stage it should be noted that the principle of exhaustion of rights is limited to goods put on the market in the European Economic Area (‘EEA’)<sup>178</sup> and does not apply where the goods in question are first placed on the market by the trade mark proprietor or with his consent outside the EEA.<sup>179</sup>

There is a proviso to the principle of exhaustion of rights under Article 7(2) which disapplies the principle in a case where there are legitimate reasons for the proprietor to oppose further commercialisation of the goods. Specific examples are mentioned, being where the condition of the goods is changed or impaired after they have been put on the market. This is particularly relevant in the case of repackaging pharmaceuticals. In some cases, this may have to be done to comply with national regulations: for example, where they require pharmaceuticals to be sold in certain quantities or where there is consumer resistance to buying pharmaceuticals in the original packaging but with labels attached.<sup>180</sup> In *Copad v Christian Dior*, the Court of Justice also ruled that, in a case where a licensee is in contravention of the licence agreement, but nonetheless a national court finds that the goods have been put on the market with the consent of the proprietor,<sup>181</sup> that proprietor can oppose resale under Article 7(2) only if it is established that such resale damages the reputation of the trade mark.<sup>182</sup> The

177 [2009] ETMR 683.

178 The Directive including the principle of exhaustion of rights applies within the EEA, which comprises the EC, Iceland, Liechtenstein and Norway: Agreement on the European Economic Area of 2 May 1992, OJ L 1, 03.01.1994, p 3. The Trade Marks Act 1994 s 12 expressly mentions the EEA.

179 See, for example, Joined Cases C-414/99 to 416/99 *Zino Davidoff SA v A & G Imports Ltd* [2001] ECR I-8691.

180 See, for example, Case C-143/00 *Boehringer Ingelheim KG v Swingward Ltd* [2002] ECR I-3759, discussed in Chapter 24.

181 For example, because the national court finds that the sale is unlikely to undermine the quality of luxury goods.

182 The examples mentioned in Article 7(2) (changed or impaired condition) are not exhaustive because of the use of the word ‘especially’.

national court will have to consider whether further commercialisation of the luxury goods bearing the trade mark by the third party, using methods which are customary in its sector of trade, damages the reputation of that trade mark.

## GROUNDLESS THREATS OF INFRINGEMENT PROCEEDINGS

As with patents, the UK design right and registered design and the Community Design, there is an action for groundless threats of infringement proceedings under the UK Trade Marks Act 1994: s 21. This action was not available under the Trade Marks Act 1938. It applies in the UK in respect of threats concerning a UK registered trade mark or a CTM.<sup>183</sup> The action under trade mark law has not been modified as it has been under patent law where the proprietor is now allowed to make enquiries to ascertain whether or by whom his patent has been infringed and the further restriction of acts in relation to the patent which may trigger a groundless threats action.<sup>184</sup>

Any person aggrieved by a threat made to bring an infringement action against another may bring an action for groundless threats except where the threat is in relation to:

- (a) the application of the mark to goods or their packaging,<sup>185</sup>
- (b) the importation of goods to which, or to the packaging of which, the mark has been applied, or
- (c) the supply of services under the mark.

A groundless threats action can be brought, for example, to selling or offering to sell goods under the trade mark, using the trade mark in business papers or in advertising or stocking goods to which the trade mark has been applied for the purposes of selling them. The action is intended to prevent heavy-handed threats being made typically to secondary infringers such as retailers who may simply stop ordering further supplies of the alleged infringing goods rather than challenge the validity of the trade mark. However, the section is worded so that any person aggrieved may bring the action. For example, a manufacturer of goods to which the alleged offending sign has been applied may bring an action where a retailer is no longer willing to accept supplies of the goods because of threats made against the retailer.

Originally, there was a common law action for malicious threats similar to that for slander of title.<sup>186</sup> In statutory form, it first saw the light of day in the Patents, Designs and Trade Marks Act 1883. The remedy was originally used to prevent a proprietor of a patent 'from holding a sword of Damocles above another's head', particularly if they were 'willing to wound, but yet afraid to strike'.<sup>187</sup> The threat may be express, as in a letter or spoken, or it may be implicit.<sup>188</sup> The threat will typically convey the fact that the maker of the threat has a registered trade mark which he intends to enforce against the recipient. As Lightman J said in *L'Oréal (UK) Ltd v Johnson & Johnson*:<sup>189</sup>

It matters not that the threat may be veiled or covert, conditional or future. Nor does it matter that the threat is made in response to an enquiry from the party threatened.

Relief is a declaration that threats are unjustifiable, an injunction against continuance and damages.<sup>190</sup> Under s 21(2), the claimant is entitled to such relief unless the defendant shows that the act in respect of which proceedings were threatened was or would be an infringement, but even then the claimant will be entitled to relief if he shows that the registration is invalid or liable to be revoked in any material respect: s 21(3). Mere notification that the mark is registered or that application for registration has been made does not constitute a threat of proceedings by s 21(4).

<sup>183</sup> Community Trade Marks Regulations 1996, SI 1996/1908, reg 4.

<sup>184</sup> Patents Act 1977, s 70, as modified by the Patents Act 2004, s 12.

<sup>185</sup> Note that use under s 10(4) mentions 'affixing' rather than 'applying'.

<sup>186</sup> It appears that this action is still available: Thorley, S. *et al* (2005) *Terrell on the Law of Patents* (16th edn) Sweet & Maxwell, at para 16.01.

<sup>187</sup> *Day v Foster* (1890) 7 RPC 54 at 60. Also quoted by Lightman J in *L'Oréal (UK) Ltd v Johnson & Johnson* [2000] FSR 686 at 693.

<sup>188</sup> The Court of Appeal confirmed that implicit threats are actionable in *Scandecor Developments AB v Scandecor Marketing AB* [1999] FSR 26.

<sup>189</sup> [2000] FSR 686.

<sup>190</sup> It should be noted that the court has an inherent jurisdiction to grant declaratory relief. This inherent jurisdiction may be exercised even if, on the facts, s 21 does not apply.

From the viewpoint of a proprietor of a registered trade mark, it is unwise to threaten proceedings in such a way as to precipitate a groundless threats action. He will have to show that the acts complained of infringe the trade mark and, in many cases, he will also have to withstand an attack on the validity of the mark. Even if the act complained of is one of those excepted from the action – for example, it alleges that the person threatened has applied the mark to goods or their packaging – the proprietor may not escape a groundless threats action if the claimant can show that the act does not fall within that form of infringement. For example, in *Trebor Bassett Ltd v Football Association Ltd*,<sup>191</sup> the claimant was a sweet manufacturer which sold packets of confectionery with cards inside showing photographs of famous footballers. Some were members of the English national team and had been photographed wearing shirts with the England three-lion logo which was a registered trade mark belonging to the Football Association; it complained that this was an infringement of the trade mark. The claimant filed a groundless threats action, seeking relief, *inter alia*, by way of a declaration that the threats were unjustifiable. The defendant responded by bringing a cross-action for infringement. The claimant then applied for the cross-action to be struck out as an abuse of process.

191 [1997] FSR 211.

Rattee J gave summary judgment in favour of the claimant and awarded relief in the form of a declaration that the threats were unjustifiable and that the claimant's cards did not infringe the defendant's trade mark. He concluded that the claimant was not affixing or using the logo in respect of its cards within s 10(4)(a) or (b). The logo appeared on the cards only because the player was wearing the football strip with the defendant's logo on it at the time the photograph was taken and that inevitably reproduced the logo, rather as a photograph of one of the players of a team as reproduced for a newspaper. It was not even arguable that the claimant was using the logo in any real sense.

Foreign proprietors of trade marks might be surprised by a groundless threats action. For example, in *Prince plc v Prince Sports Group Inc*,<sup>192</sup> the claimant had registered 'prince.com' as its internet domain name. The defendant was an American company having registered 'Prince' as a trade mark in a number of countries including the UK. The defendant's attorneys wrote to the claimant pointing out that its use of the domain name would prevent the defendant registering that name as its own domain name and claiming that the claimant was infringing the defendant's UK registered trade mark. Litigation was threatened if the claimant did not assign the domain name to the defendant.

192 [1998] FSR 21.

The court granted a declaration that the threats were unjustified and an injunction against continuance of the threats. The basic test was held to be whether an ordinary reader would take the threat as constituting a threat of proceedings of a UK registered mark and, in the letter, reference was made to the UK registered mark. The threat was general in nature and the defendant could not take advantage of the exceptions to a threats action. A person who raised the possibility of proceedings had to take great care in expressing himself and was required to indicate precisely if he wished to rely on the exceptions. Further, where a threat was made to a person alleged to be an infringer, that person was a person aggrieved, save in exceptional circumstances.

193 [2000] FSR 686.

In *L'Oréal (UK) Ltd v Johnson & Johnson*,<sup>193</sup> the defendant (the one alleged to have made groundless threats) was the proprietor of UK and Irish trade marks including 'JOHNSON'S NO MORE TEARS' and 'NO MORE TEARS'. The claimant launched in the UK and Eire similar products to those of the defendant (baby shampoos and children's hair care products) in packaging bearing the words 'No Tears! No Knots!' Solicitors acting for the defendant sent a letter to the claimant alleging infringement of the Irish trade marks. Proceedings were commenced in the High Court of Ireland but, just before, the claimant wrote to the defendant asking for confirmation that proceedings

would not be brought in the UK. The defendant's English solicitor replied stating that no decision had been taken as to whether to make a claim of trade mark infringement in the UK but that third parties who had used the defendant's marks in the UK over recent years had agreed to stop using them. The letter also stated that investigations into the UK market and into English and European law were taking place and a decision would not be made immediately and that, in any case, the defendant had up to six years to make a decision.<sup>194</sup>

Lightman J granted the declaration sought and, of the letter, he said (at para 16):

The Letter is the work of a master of Delphic utterances who uses his skills to say everything and nothing and to convey an enigmatic message which has the same effect on the recipient as a threat or adverse claim whilst disclaiming to be either . . . In my judgment the thrust of the Letter is a warning of the possibility in the future of proceedings for infringement, perhaps contingent on success in the proceedings in Ireland.

The basic test is how the threat would be understood by the ordinary recipient: an objective test. If a letter is sent with the intention of unnerving the recipient or influencing him so that he seriously considers refraining from an activity then, no matter how veiled the threat is or how ambiguous or indecisive it might appear, if it would tend to make an ordinary recipient fear proceedings will be initiated if he does not comply, then it is likely to constitute a threat for the purposes of s 21. This will be so even if there is no express request for the activity complained of to cease contained in the letter.

## REMEDIES

Section 14(2) states that the remedies for infringement of a registered trade mark are damages, injunctions, accounts or otherwise, as are available in respect of infringement of any other property right.<sup>195</sup>

Orders for delivery up of infringing goods, materials or articles from a person having them in his possession, custody or control in the course of business are available under s 16(1). But under s 18, an order for delivery up is not available after the end of the period of six years from:

- (with respect to infringing goods) the date on which the registered trade mark was applied to goods or their packaging;
- (with respect to infringing material) the date on which the registered trade mark was applied to the material;
- (with respect to infringing articles) the date on which the articles were made;

unless the proprietor of the mark was suffering from a disability, or was prevented by fraud or concealment from discovering the facts entitling him to apply for the order. In these cases, the six years run from the time when the proprietor ceased to be under a disability or when he could, with reasonable diligence, have discovered the true facts.<sup>196</sup>

Infringing goods, materials or articles are defined in s 17. Infringing goods are those bearing (or whose packaging bears) an identical or similar mark, the application of which was an infringement of the same in respect of goods to be imported, or where the sign has otherwise been used in relation to the goods so as to infringe. This does not affect the importation of goods that can legally be imported by virtue of any enforceable Community right (s 17(3)).

Infringing material is material that bears an identical or similar mark and which is used (or is intended to be used) for labelling or packaging the goods, or as a business paper or for advertising goods or services so as to infringe (s 17(4)). Infringing articles

<sup>194</sup> On the basis of the limitation period.

<sup>195</sup> In relation to the assessment of damages, subject now to the Intellectual Property (Enforcement, etc.) Regulations 2006, SI 2006/1028, discussed previously in relation to copyright and patents.

<sup>196</sup> Trade Marks Act 1994 s 18(2). A disability has, by s 18(3), the same meaning as under the relevant limitation legislation – in England and Wales, the Limitation Act 1980.

are those specifically designed or adapted for making copies of a sign identical to or similar to a registered trade mark, and the person who has the article in his possession, custody or control knows or has reason to believe that the article has been or will be used to produce infringing goods or material (s 17(5)).

Where infringing goods, materials or articles have been delivered up in pursuance of an order made under s 16, an application can be made for an order for their destruction or forfeiture or for a decision that no such order is made. A literal interpretation suggests that an application under s 19 could only be made after the infringing goods, materials or articles had in fact been delivered up. In *Miller Brewing Company v Mersey Docks and Harbour Company*,<sup>197</sup> this was said to be wasteful of the court's time and in conflict with s 16(2) which uses the term 'also makes' in relation to an order under s 19. A strained interpretation must be given to s 19 such that it was the actual destruction or forfeiture that took place after and not the application under s 19. Persons having an interest in the goods, such as those in whose favour such an order could be made under copyright, design law etc., should be notified and can appear in the proceedings and/or appeal against any order made under these provisions.

Sections 56–58 provide for injunctive relief in favour of the proprietors of well-known marks, national emblems and the like of Convention countries, and emblems, etc. of certain international organisations. Under s 56(1), well-known marks are those entitled to protection as well-known marks under the Paris Convention for the Protection of Industrial Property or the World Trade Organisation Agreement (of which the TRIPs Agreement is an integral part), being well known in the UK as the mark of a person who is a national of, domiciled in, or who has a real and effective industrial or commercial establishment in, a Convention country, other than the UK.<sup>198</sup> There is no requirement for the proprietor to carry on business or have goodwill in the UK. With respect to emblems, there are some notification requirements to be fulfilled under s 59.

A proprietor of a trade mark which is well known in the UK may restrain by injunction the use of an identical or similar sign in the UK in respect of identical or similar goods or services where such use is likely to cause confusion: s 56(2). Thus, the proprietor of a foreign trade mark which is well known in the UK has protection equivalent to Article 5(1) of the Directive (s 10(1) and (2) of the Act) as if he had registered the trade mark in the UK.<sup>199</sup>

In *Philips Electronics NV v Remington Consumer Products*,<sup>200</sup> at first instance, Jacob J confirmed that s 56(2) puts a claimant who has a reputation but no business and, hence, no goodwill in a passing off sense, in the UK in the same position as if he did have a business and goodwill in the UK. The claimant was domiciled in the Netherlands (a Convention country) but was not able to rely on s 56(2) as there was no deceptive use. Jacob J confirmed that the provision did not extend to non-deceptive use. Section 56 is headed 'Protection of well-known trade marks: Article 6bis' and implements Article 6bis of the Paris Convention, a provision which dates from 1927. Jacob J also made the point that the claimant's shape mark was not covered by this provision as he did not consider a shape mark to be a trade mark for the purposes of the Paris Convention and that it was impossible to envisage that, in 1927, anyone would have thought the provision would cover 'engineering artefacts of this sort'. Furthermore, although certain shape marks are registrable in the European Community, they are not registrable in a great many other countries belonging to the Paris Convention. With this limitation in mind, what s 56 does is to cure the defect in the law of passing off that requires the claimant to demonstrate that he has goodwill within jurisdiction.<sup>201</sup>

If the application for registration of a trade mark is made by an agent of the proprietor, registration shall be refused if the proprietor opposes the application; and if the application is accepted, registration shall be refused if the proprietor applies for

197 [2004] FSR 81.

198 Well-known marks are defined in Article 6bis of the Paris Convention and Article 16(2) of the Agreement on Trade Related Aspects of Intellectual Property Rights (the TRIPs Agreement), administered by the World Trade Organisation, refers back to Article 6bis of the Paris Convention as regards the meaning of a well-known trade mark. 'Convention country' is defined in s 55(1)(b) so as to expressly exclude the UK.

199 Compare with passing off, see *Anheuser-Busch Inc v Budějovický Budvar NP* [1984] FSR 413, discussed in Chapter 23.

200 [1998] RPC 283.

201 A point made in the South African case of *McDonald's Corp v Joburgers Drive-In Restaurant (Pty) Ltd* [1997] (1) SA 1, approved by Jacob J in *Philips Electronics v Remington*.

a declaration of the invalidity of the registration, or applies for rectification of the register so as to substitute his name as proprietor (s 60).

*TRAVELPRO Trade Mark*<sup>202</sup> provides an example of rectification under s 60. A sole distributor of an American company, which had several registrations for TRAVELPRO in other countries, applied to register the mark in the UK without informing the American company. It was held that the distributor was an agent within s 60 and had no claim to ownership of the mark. The American company's name was substituted for that of the distributor as registered proprietor.

202 [1997] RPC 864.

## CRIMINAL OFFENCES

There are a number of offences relating to the unauthorised use of a trade mark which also cover secondary offenders who facilitate this. Other offences apply in connection to falsification of the register of trade marks and falsely representing that a trade mark is registered. As is usual, senior officers also may be found guilty of offences committed by corporate bodies.

The main offences under s 92 (unauthorised use and enforcement of s 92 by local weights and measures authorities under s 93 and forfeiture under ss 97 and 98) also apply in respect of the CTM. There is also an equivalent offence of falsely representing a trade mark as registered in respect of the CTM.

The offences of unauthorised use are set out in s 92 and are expressed in terms of being 'with a view to gain for himself or another or, with intent to cause loss to another, and without the consent of the proprietor'. The offences under s 92 are:

- applying a sign identical to (or likely to be mistaken as the registered trade mark of) goods or their packaging; selling, hiring, offering or exposing for sale or hire or distributing such goods; having such goods in his possession, custody or control in the course of a business with a view to selling, hiring, etc. whether by himself or another (s 92(1));
- applying a sign identical to (or likely to be mistaken as the registered trade mark of) material intended to be used for labelling or packaging goods, as a business paper in relation to goods, or for advertising goods; using in the course of a business such a sign for labelling or packaging goods, as a business paper in relation to goods, or for advertising goods; having such material in his possession, custody or control in the course of a business with a view to making such use of the sign, whether by himself or another (s 92(2));
- making an article specifically designed or adapted to make copies of a sign identical to (or likely to be mistaken for) the registered trade mark, or having such an article in his possession, custody or control in the course of a business (s 92(3)). For the offences in this subsection, a form of knowledge is required in that the person knows or has reason to believe that the sign has been, or is to be, used to produce goods or material for labelling or packaging goods, as a business paper in relation to goods or for advertising goods.

For the offences to apply, under s 92(4), the relevant goods must be those for which the mark is registered, or the trade mark must be one with a reputation and the use of the sign would take unfair advantage of, or is or would be detrimental to, the distinctive character or the repute of the trade mark. Oddly, these offences apply only in relation to goods and not to services. Therefore, providing a service under a sign that is identical to or is likely to be mistaken for a registered trade mark, in the course of trade and without consent, may bring civil liability but cannot bring criminal liability under trade mark law.

Note that the offences are committed if the sign is identical to or likely to be mistaken for a registered trade mark. This is different to the equivalent civil infringements where the sign, if not identical, must be *similar* to the registered trade mark. There are other differences, such as, where the use of the sign takes unfair advantage of or is detrimental to the repute of a well-known trade mark, there is no requirement in the criminal offence for the use to be without due cause as there is for civil infringement. It is submitted that the *actus reus* for the criminal offences cannot be more extensive than for civil infringement as this would extend the protection of registered trade marks provided for in the Directive and, apart from the possibility of granting more extensive protection in one case, registered trade marks must enjoy the same protection under the legal systems of all the Member States. The ninth recital to the Directive states that this should be so and that more extensive protection may be granted only in the case of trade marks having a reputation. It is possible that the offences in the Act were influenced to some extent by the offences under the s 58A of the Trade Marks Act 1938 although those offences required the offending mark to be identical to or nearly resembling a registered trade mark.<sup>203</sup>

<sup>203</sup> Nearly resembling was also used in relation to infringement in s 4 of the 1938 Act.

<sup>204</sup> A civil test for a criminal offence. See Rawlinson, P. 'The UK Trade Marks Act 1994: It's Criminal' [1995] 1 EIPR 54.

It is a defence if the person charged can show that he believed on reasonable grounds that the use or intended use of the sign in the manner in which it was used, or was intended to be used, was not an infringement of the registered trade mark (s 92(5)).<sup>204</sup> There is also a defence, curiously placed in s 9(3), where the relevant act was done before the date of publication of registration, notwithstanding that, once registered, the proprietor's rights are deemed to have accrued at the filing date. The maximum penalty for all the offences in s 92 is ten years' imprisonment and/or a fine on conviction on indictment, or, if tried summarily, six months' imprisonment and/or a fine not exceeding the statutory maximum.

The phrase 'with a view to gain for himself or another, or with intent to cause loss to another', is used for all the offences and is identical to the wording in the Theft Act 1968 s 21 which contains the offence of blackmail, apart from the omission of a comma. However, there is no further clarification of this phrase in the Trade Marks Act 1994 as there is for blackmail which is limited, under the Theft Act 1968 s 34(2), to a gain or loss in money or other property.<sup>205</sup> It may be that gain and loss, for the purposes of trade marks, is at least as extensive as it is for the purposes of blackmail and could extend also to goodwill.<sup>206</sup> In *R v Zaman*,<sup>207</sup> the Court of Appeal held that 'with a view to' simply meant that the defendant had something in mind but not necessarily something he wanted or intended.

<sup>205</sup> There is further clarification of 'gain' and 'loss' in the Theft Act 1968 s 34(2): for example, 'gain' includes keeping what one has, as well as getting what one has not.

<sup>206</sup> The definition of 'property' in the Theft Act 1968 s 4(1) includes things in action and other intangible property. Goodwill protected by passing off has long been recognised as a form of property.

<sup>207</sup> [2003] FSR 230.

The offences in s 92 potentially have quite a wide scope and could apply in many cases where a trader, who is otherwise in legitimate business, deliberately uses a sign identical to or likely to be mistaken for a registered trade mark, hoping to capture some of the goodwill attached to the registered trade mark. It may be that the trader is trying to get as near as he can to the registered trade mark without infringing. Although a misjudgment on the part of the trader could leave him exposed to the possibility of criminal proceedings, it seems clear that s 92 is aimed primarily at counterfeiters and persons knowingly dealing in counterfeit goods. The presence of the defence in s 92(5) confirms this. An honest trader who misjudged how near he could get to a registered trade mark would undoubtedly argue that he did not believe what he was doing would infringe (such belief has to be on reasonable grounds though). After all, no honest trader would deliberately engage in activity which he thought would, more likely than not, infringe a registered trade mark.

The offences in s 92(1)–(3) appear to be almost strict liability and have been treated so by the courts. There is a very limited mental element, that the accused is acting with a view to gain or an intent to cause loss but, in most cases, that will not be much of a hurdle, if any, for the prosecution. Coupled with the presence of the relevant facts, the

accused will be guilty unless he can rely on the defence in s 92(5) and it is he who will bear the burden of proof in respect of that. In *Torbay Council v Satnam Singh*,<sup>208</sup> the accused had been charged with two counts of an offence under s 92(1)(b) in that he exposed for sale two garments bearing the ‘Teletubbies’ logo. He argued that he did not know that the logo had been registered as a trade mark and further claimed that he checked the *Draper’s Weekly* regularly for trade marks. He was acquitted and the Council appealed to the Divisional Court by way of case stated. The appeal was allowed and the court confirmed that an offence under s 92(1) was made out if it was proved:

208 [2000] FSR 158.

- (a) that the trade mark was registered and the sign used was identical to it or likely to be mistaken for it,
- (b) that the accused was acting with a view to gain for himself or another or with intent to cause loss to another, and
- (c) that his use was without the consent of the proprietor of the trade mark.

As regards the defence in s 92(5), the court said that it required a reasonable belief that the use complained of did not infringe the registered trade mark and this presupposed a knowledge of the fact of registration. It did not require an investigation into the accused’s state of mind as to whether there was or was not a registered trade mark capable of being infringed. Doubts about this aspect of *Torbay v Singh* were expressed in the Court of Appeal in *R v Rhodes*<sup>209</sup> and it was expressly overruled by the House of Lords in *R v Johnstone*,<sup>210</sup> below.

209 [2003] FSR 147.

210 [2003] FSR 748.

The maximum penalties for the offences in s 92 seem draconian, especially when they are almost offences of strict liability and, in most cases, the accused will have to prove the defence. Nevertheless, there can be little sympathy for counterfeiters and persons knowingly dealing in counterfeit goods. For such cases, custodial sentences may be appropriate. In *R v Adam*,<sup>211</sup> the Court of Appeal (Criminal Division) said that a deterrent sentence was called for. In that case, the offender had persisted in his activities in the face of a clear warning and had been sentenced to seven months’ imprisonment despite having no previous convictions. In *R v Burns*,<sup>212</sup> the Court of Appeal (Criminal Division) upheld a custodial sentence of 12 months. The accused had pleaded guilty to 53 offences relating to counterfeit clothing bearing well-known trade marks such as ‘Adidas’ and ‘Calvin Klein’. He had two recent previous convictions and the case was deemed more serious than *Adam*. A court may make a confiscation order under s 71 of the Criminal Justice Act 1988, as it did in *R v Davies*<sup>213</sup> in a case where the offender had a turnover of about £1 million in around 18 months from selling counterfeit goods to which trade marks had been applied. Davies was also sentenced to three-and-a-half years’ imprisonment. His appeal against the confiscation order was dismissed by the Court of Appeal.

211 [1999] 1 Cr App R (S) 403.

212 [2001] FSR 423.

213 [2004] FSR 486.

Selling counterfeit goods at a car boot sale may also incur a serious punishment. In such a case, *R v Keane*,<sup>214</sup> two offences of offering for sale under s 92(1)(b) and five possession offences under s 92(1)(c) resulted in a sentence of 150 hours’ community punishment.

214 [2001] FSR 63.

The House of Lords, in *R v Johnstone*,<sup>215</sup> had to consider a number of issues relating to the offences under s 92, including whether the offences were in breach of the right to a fair trial under Article 6(2) of the Council of Europe Convention for the Protection of Human Rights and Fundamental Freedoms, 1950 (the ‘Human Rights Convention’).

215 [2003] FSR 748.

Johnstone was involved with ‘bootlegging’ activities relating to unauthorised copies of recordings of performances of famous singers and groups. His activities were discovered when a parcel containing over 500 CDs was misdirected and received by a third party and the police were contacted. They searched his house and found more CDs there. Most of the CDs were of unauthorised recordings of performances. The CDs

bore the names of the performers, such as Bon Jovi, many of which were also registered trade marks. Johnstone was charged with a number of specimen counts under the Trade Marks Act s 92(1)(c) of being in possession of goods bearing trade marks with a view to selling them.

It was argued that, before an offence could be established under s 92, it must be proved that there had been a civil infringement of the trade mark under ss 9–11 of the Act (Articles 5 and 6 of the Directive). Johnstone's defence was based on s 11(2)(b) (indications of certain characteristics of goods) claiming that the names of the performers on the CDs were not indications of origin but were merely there to indicate the identity of the performers. An alternative defence was based on s 92(5) (belief on reasonable grounds that the use in question was not an infringement of the trade mark).

In the Crown Court, the judge rejected the defence submissions on the basis of previous decisions in the Crown Court. He accepted that s 92 was a 'standalone' provision and it was not necessary to prove civil infringement. The judge also accepted that, under s 92(5), infringement meant unauthorised use as defined earlier in s 92. Consequently, Johnstone changed his plea to guilty and was sentenced to six months' imprisonment concurrent on each count and a confiscation order was made for £130,181.24 together with orders for forfeiture.

Johnstone appealed to the Court of Appeal which held that, unless the defences available for a civil claim of trade mark infringement were available also for the criminal offences, behaviour which could not result in a successful civil action could result in conviction and that infringement, for the purposes of s 92(5), was as defined in ss 9(1) and (2) and 10.<sup>216</sup> Furthermore, the Court of Appeal held that the prosecution did not have to prove that the defendant's conduct amounted to a civil infringement unless the defendant raised a defence on the basis of ss 10–12 of the Act. As Johnstone had not been allowed to have his defence under s 11(2)(b) put to the jury, his appeal was allowed; but a question was certified for determination by the House of Lords as to whether it was a defence to a charge under s 92 if the defendant's acts did not amount to a civil infringement of the registered trade mark.

The Lords' decision covered several aspects relating to the offences under s 92. The House confirmed that it was implicit that the offending use must be use as a trade mark. Descriptive use, that is, use other than as an indication of trade origin, was not within s 92. If the offences were interpreted as extending to circumstances beyond ss 9–12, it could lead to an inconsistency with the Directive. The equivalent provisions in the Directive, Articles 5–7, are amongst those for which complete harmonisation is required. Therefore, the prosecution must prove that the use of the sign in question was use as an indication of trade origin as this was an essential element of the offences. Determination of this was a question of fact.

On the facts of the case, Johnstone would commit an offence, for example, if he sold CDs under the Bon Jovi trade mark. This would be an indication of trade origin. However, if his use would be understood to be exclusively as identifying the performer, this would be descriptive use only and not an indication of trade origin.

One difference between the terminology used for civil and criminal liability is that the former requires the use of the sign in the course of trade whereas, for some of the criminal offences, the conduct must be in the course of a business. This difference is probably not of any practical importance, especially as all the criminal offences required that the accused act with a view to gain for himself or another, or with intent to cause loss to another. Lord Nicholls said that it would be hard to think of a realistic example of conduct that would attract criminal liability, but not civil liability, because of this difference.

Previous case law suggested that lack of knowledge as to whether the trade mark in question is registered deprives the accused of the defence.<sup>217</sup> Lord Nicholls thought that

<sup>216</sup> As in the index of defined expressions in s 104.

<sup>217</sup> *Torbay Council v Satnam Singh* [2000] FSR 158 and *R v Keane* [2001] FSR 63. However, this was doubted in the Court of Appeal in *R v Rhodes* [2003] FSR 147, where it was suggested that a trader who engaged a reputable trade mark agent to carry out a search to see if a particular trade mark was registered should not be deprived of the defence if that agent made a mistake.

Parliament could not have intended that a person could put forward the defence of reasonable belief only if he knew of the existence of the trade mark registration but could not if he did not know of it. Therefore, the defence is available in either case and *Torbay v Singh* must now be regarded as wrong on this point. Of course, the defendant must show his belief was on reasonable grounds. This brings us to the burden of proof.

Article 6(2) of the Human Rights Convention states that every person charged with a criminal offence shall be presumed innocent until proved guilty according to the law. Section 92(5) appears to place the burden of proof on the defendant as it states that '[i]t is a defence for a person charged with an offence under this section to show that he believed on reasonable grounds . . .'.<sup>218</sup> Lord Nicholls thought that, unless incompatible with Article 6(2) of the Human Rights Convention, s 92(5) placed on the accused the burden of proving that he did believe on reasonable grounds that the use of the sign did not infringe the registered trade mark on a balance of probabilities. In other words, s 92(5) places a legal or persuasive burden on the accused. This appears to be in conflict with Article 6(2). However, the European Court of Human Rights has accepted that the right to a fair trial and the presumption of innocence does not necessarily prevent presumptions of fact or law but that they must be kept within reasonable limits, taking into account the importance of what is at stake and maintain the rights of the defence. A balance must be struck between the rights of the individual and the public interest and it is for the state to justify any derogation from the presumption of innocence. Lord Nicholls then considered six factors in determining whether the derogation was justified:

- 1 Counterfeiting is a serious problem which has severe economic consequences and has adverse effects on consumers in terms of quality and even, in some cases, health and safety. Protection of consumers and honest traders is an important policy consideration.
- 2 The offences in s 92 have been described as offences of near absolute liability and the prosecution does not have to prove an intention to infringe a registered trade mark.
- 3 The potential penalty is severe, with up to ten years' imprisonment and/or an unlimited fine together with confiscation and forfeiture orders.
- 4 Traders are aware of counterfeit goods and the need to be on guard against them and to deal only with reputable suppliers and keep records.
- 5 The s 92(5) defence relates to facts that are within the accused's own state of knowledge; his state of mind and the reasons why he held the belief in question. Furthermore, he knows his sources of supply.
- 6 Those who supply counterfeit goods are unlikely to be cooperative, even if traced by investigators. Therefore, if the prosecution were required to prove that the accused acted dishonestly, fewer investigations and prosecutions would take place.

Lord Nicholls considered that points 4 and 6 above were compelling reasons why the accused should have the persuasive burden placed on him and it was fair and reasonable that the accused should prove on a balance of probability why he honestly and reasonably believed that the goods in question were not counterfeit. This was not incompatible with Article 6(2) of the Human Rights Convention.

Both Lord Nicholls and Lord Walker, with whom the other judges agreed, thought that s 92 contained the complete code for the criminal offences but the test for civil infringement was not completely irrelevant. The key is s 104 which indicates that the meaning of infringement for the purposes of the Act was to be found in s 9(1) and (2) and s 10. Lord Nicholls said (at para 33) that:

. . . the circumstances in which criminal liability arises are for the most part either the same as, or narrower than, the circumstances in which civil liability arises under sections 9 to 11.

<sup>218</sup> The Court of Appeal thought that this was an evidential burden only and, once the accused had adduced evidence sufficient to raise an issue, the prosecution would then have to disprove it. However, in *R v S (Trade mark defence)* [2003] 1 Cr App R 602, the Court of Appeal questioned this.

Lord Walker appeared to accept that consideration could also be given to ss 11 and 12. Both Lord Nicholls and Lord Walker accepted that whether use of a sign is trade mark use is a question of fact of a fairly complex sort. Lord Walker said (at para 88) that trade mark use is a necessary ingredient of criminal liability under s 92 and, that being so,

... there is no need to go on a circuitous route through Article 6(1)(b) [of the Directive] or section 11(2)(b) in order to arrive at that conclusion. It is adequately (if not pellucidly) expressed in the language of section 92...

Lord Walker went on to say that facts such as those in *Mothercare UK Ltd v Penguin Books Ltd*<sup>219</sup> (use of Mother Care/Other Care for a book title) and Case C2/00 *Michael Hölderhoff v Ulrich Freiesleben*<sup>220</sup> (discussed above, see p 744) would not fall within the offences within s 92. The use of trade marks in those cases was purely descriptive rather than as indicating origin.

219 [1988] RPC 113.

220 [2002] ECR I-4187.

Lord Nicholls and Lord Walker both referred to the Australian case of *Musidor BV v Tansing (t/a Apple Music House)*<sup>221</sup> which involved bootleg copies of recordings of the Rolling Stones. The packaging bore a photograph of the Rolling Stones and the group's name in prominent lettering. In a majority decision, it was held that there was no infringement of the Rolling Stones' trade mark as the use in question was not use as a trade mark. The dissenting judgment by Davies J was to the effect that such use will normally inform the public that the recording is of a performance by the group and that the group has authorised its release. The Court of Appeal had preferred the dissenting view but emphasised that whether the use is use as a trade mark is a question of fact in every case. However, in the House of Lords in *R v Johnstone*, Lord Walker thought that the minority view in *Musidor* went too far and not every bootlegging case of that kind would necessarily involve trade mark use.

221 (1994) 123 ALR 593.

In *Johnstone*, Lord Nichols said (at para 43):

Section 92(5) is concerned to provide a defence where the person charged has a reasonable belief in the lawfulness of what he did. Those who act honestly and reasonably are not to be visited with criminal sanctions.

Although s 92(5) does not use the word 'honestly', the last sentence of the quote was picked up in the magistrates' court in *Essex Trading Standards v Singh*.<sup>222</sup> The accused had agreed to look after a market stall for a third party who was a drug addict and unwell at the time. At the trial for offences under s 92(1)(c), the magistrates concluded that the accused was not guilty. He was inexperienced in selling from a market stall and of previous good character. He had asked the third party whether the shoes were dodgy but had been assured that they were not. However, the magistrates posed some questions for the Divisional Court of the High Court, in particular, whether they were wrong in law to apply the principles set out in *Johnstone*, namely that 'those who act honestly and reasonably are not to be visited with criminal sanctions' in the instant case, when the defendant argued that he did not know the goods were counterfeit? The Divisional Court held that previous good character was relevant to the question as to whether a person acted honestly but was irrelevant as far as whether a person acted reasonably. It was held that no reasonable court could find that the accused discharged the burden of proof under s 92(5) to show that he had objectively reasonable grounds for believing the shoes were genuine. The accused had known that the selling price was low, his belief was based on the word of an unwell drug addict and he had not sought independent evidence to show that the shoes were genuine, such as documentary evidence relating to the supply of the shoes and their provenance. The Divisional Court concluded that the magistrates were wrong to apply the above-mentioned test. Although not explicit in the relatively brief judgment, honesty was not an issue, it being simply a matter of whether the accused believed on reasonable grounds that the use of

222 [2009] 2 Cr App R 88.

the sign in the manner in which it was used, or was to be used, was not an infringement of the registered trade mark.

Guidance on the scope of s 92(1)(c) was given in the Court of Appeal in *R v Boulter*,<sup>223</sup> in which the accused pleaded guilty to 19 counts of possession of counterfeit CDs and DVDs bearing the logos of EMI and other companies which were registered trade marks. He also asked for a further 144 offences to be taken into account. His guilty plea came after the trial judge ruled that his defence, that the material bearing the trade marks was of such poor quality that no one would think it came from the trade mark owners, was ineffective. It did not matter that the quality of the counterfeiting was so poor that no one would think the trade origin was the trade mark owner.

223 [2008] EWCA Crim 2375.

On appeal it was argued that there could be no criminal offence under section 92 if the intended usage of the goods would not infringe the trade mark under section 10 of the Act. The defence argued that, for there to be a civil infringement, there must be a likelihood that the public would be deceived or confused. This was rejected by the Court of Appeal because it failed to draw a distinction between s 10(1) and 10(2). The former, use of a sign identical to a registered trade mark for identical goods or services infringes *per se* and requires no evidence of confusion on the part of the public. Although the trade marks had been badly copied, the usage was still within s 10(1). A further argument was that it had to be established that the use was use as a trade mark. The essential function of a trade mark is to guarantee the origin of goods bearing the trade mark. Use which is purely descriptive does not infringe. In *Johnstone*, Lord Nicholls considered a problem under the old law whereby a trader would describe his goods as 'genuine fakes', for example, and accepted that s 92 avoided this problem. In the present case, Toulson LJ said (at para 9):

In our judgment, it is impossible to read Parliament as having intended that, where there is straightforward counterfeiting of goods and their registered trademark, it is open to a defendant to advance a defence that the quality was so poor as not to give rise to any risk of confusion, not only because that would fail to recognise the distinction drawn between section 10(1) and 10(2) but it would go a considerable way to assist the vice which Lord Nicholls at any rate thought that Parliament had attempted to combat, namely the counterfeiter who sells his wares as 'genuine fakes'.

The appeal was dismissed. In another Court of Appeal case, *R v Kousar*,<sup>224</sup> the appellant was convicted of a number of counts of unauthorised use of the trade mark contrary to s 92(1)(c). The appellant's husband was a market trader and was a co-defendant and had been convicted on all counts. The case against his wife was that Trading Standards Officers seized a number of counterfeit goods from the loft in her home (which she shared with her husband) and from the husband's van which was parked on the drive to the house. It was claimed that she was in joint possession of these goods as she was aware of their presence. The appellant claimed that she did not know the goods were counterfeit. She took no part in her husband's business and was in unrelated employment. Nor did she use the van.

224 [2009] EWCA Crim 139.

The Court of Appeal distinguished a number of cases on possession of drugs (for which there is a separate offence of permitting premises to be used for certain activities but for which there is no equivalent in relation to the trade mark offences). Two reasons were given for allowing the appeal:

- 1 Permission is not the same as possession. Generally, one is not in possession of a spouse's personal property (for example, a husband cannot be said to be in possession of his wife's cosmetics). If it is accepted that the appellant permitted the counterfeit goods to be in her house and in the van, this is not enough. Permission may be more than acquiescence. A key point is that s 92(1)(c) refers to possession,

- custody or control. A finding that the appellant had the ability to exercise a measure of control is far from a finding that she did actually exercise control.
- 2 The offence requires that the possession, custody or control be in the course of a business. This element could be satisfied only if the prosecution could show that the accused was in possession of the goods in the course of a business. It had not been shown that she was involved in her husband's business, whether paid or otherwise. Even if, contrary to the view of the court, it had been shown that her 'ability' or right to control the goods was sufficient to render her in possession of them, this further element of the offence was not established.

An interpretation can be placed on s 92 which does not yet appear to have been considered. Having a view to gain for himself or another or cause loss to another may simply be taken to mean an intention to make money by selling articles and depriving a competitor of sales. A different, and far more satisfactory, interpretation is possible by reading the view to gain or cause loss in context with the rest of the relevant subsection. For each of the offences the view to gain or cause loss relates to a specific act of the accused: for example, by applying the sign to goods. Therefore, it could be said that the view to gain or cause loss is formed because, when the accused applied the sign to the goods, he wanted, by that act, to gain or cause loss; not by selling what he thought were goods to which a non-infringing sign had been applied but because he realised that the sign infringed the trade mark or was likely to infringe it. All traders want to make a gain by selling more than competitors or to cause loss to competitors by diverting sales from them. This is a fact of normal honest commercial life. For the offences the gain or loss must be read in context of the use of the sign. It is as if, for the offence to be made out, the offender has said to himself: 'By using a sign on my goods that looks like the sign of a well-known and respected undertaking, I will be able to sell more of my goods because customers might think they are from that undertaking.'

If that approach is followed, it does not make the defence in s 92(5) redundant. Its purpose is to protect a trader who uses a sign similar to a registered trade mark but who believes, on reasonable grounds, that he does not infringe it, for example, because there is no likelihood of confusion. This approach would also bring the offences nearer to those under the 1938 Act where the offence required that the offender intended the goods in question should be accepted as those of the person entitled to use the registered trade mark.

Given the problems with the *mens rea* for these offences and the fact that s 92 appears not to be completely in line with the rights and infringement under ss 9–12, it would be better for s 92 to be replaced by a new section that meets the above concerns. One way would be to provide that it is an offence to carry out any of the acts infringing a registered trade mark with the intention of causing a deception on the part of the public as to the origin of the goods. This would tie in with the basic purpose of trade marks and would not detract from the reason for having trade mark offences as that intention would not be difficult to prove in the case of counterfeiters. Another issue is whether the offences should be extended to services to catch the situation where a service provider deliberately uses the name of a well-known service provider.<sup>225</sup>

<sup>225</sup> Of course, in some circumstances, offences may be committed under other laws such as consumer protection laws.

<sup>226</sup> Both ss 97 and 98 are modified in respect of the Olympic symbol, motto or protected words under the Olympic Symbol etc. (Protection) Act 1995, s 11.

### Enforcement, etc. of s 92

There are provisions in s 93 for enforcement of s 92 by local weights and measures authorities and provisions for forfeiture in s 97. The equivalent provisions for forfeiture for Scotland are contained in s 98.<sup>226</sup> Forfeiture is available in respect of offending goods, material or articles which have come into the possession of any person in connection with the investigation or prosecution of any relevant offence (under s 92, under

the Trade Descriptions Act 1968 or any offence involving dishonesty or deception). An application for an order for forfeiture must be obtained from the court where proceedings have been brought, or otherwise from a magistrates' court. The order will be granted only if the court is satisfied that the relevant offence has been committed, but the inference may be made that the offence has been committed in relation to a batch or consignment of goods from consideration of a representative sample.

The order may require the offending goods, materials or articles to be destroyed, or to be released to such person as the court may specify on condition that the offending sign is erased, removed or obliterated. An appeal from a forfeiture order lies to the Crown Court in England and Wales.<sup>227</sup>

The Copyright, etc. and Trade Marks (Offences and Enforcement) Act 2002 inserted s 92A into the Trade Marks Act 1994 which provides for search warrants where, on information on oath, given by a constable, there are reasonable grounds for believing that an offence under s 92 has been or is about to be committed on premises and evidence is on those premises.<sup>228</sup> Reasonable force may be used by the constable in executing the warrant.

The warrant must be executed within 28 days (3 months in England and Wales) but may authorise persons to accompany the constable executing the warrant. Such persons could be, for example, the trade mark agents of the proprietor of the trade mark alleged to have been infringed, a trading standards officer or lawyer experienced in trade marks law. The constable may seize articles he reasonably believes constitute evidence that an offence under s 92 has been or is about to be committed. 'Premises' is given its usual wide definition and includes land, buildings, fixed or moveable structures, vehicles, vessels, aircraft and hovercraft. Search warrants under s 92 are additional to and separate from the powers of local weights and measures authorities, *inter alia*, to enter premises and seize goods and documents.

## Other offences

The offence of falsifying the register of trade marks is set out in s 94. It applies where a person makes, or causes to be made, a false entry on the register, knowing or having reason to believe that it is false. It is also an offence to make or cause to be made anything falsely purporting to be a copy of an entry in the register or to produce or tender or cause to be produced or tendered in evidence such a false copy, knowing or having reason to believe that it is false. The maximum penalty on conviction on indictment is imprisonment for two years and/or a fine. The maximum on summary conviction is six months' imprisonment and/or a fine not exceeding the statutory maximum.

Falsely representing a trade mark as registered is triable summarily only and carries a maximum penalty of a fine not exceeding level 3 on the standard scale. Under s 95, it is an offence falsely to represent that a mark is a registered trade mark, or to make a false representation as to the goods or services for which a trade mark is registered where the person making the representation knows or has reason to believe that the representation is false. There is an equivalent offence in respect of the CTM under reg 8 of the Community Trade Marks Regulations 1996.<sup>229</sup>

The test of having reason to believe is an objective test. What would the reasonable trader, having knowledge of the facts known to the accused, believe? For the purposes of these offences, the use of the word 'registered' or any other word or symbol importing an express or implied reference to registration is deemed to be a representation as to registration of the trade mark. Using a phrase such as 'registered trade mark', or the familiar ® symbol for an unregistered mark, would be falsely representing a mark to be registered.

<sup>227</sup> In Northern Ireland, the County Court; in Scotland, the High Court.

<sup>228</sup> In England and Wales, the warrant cannot extend to personal and confidential material under s 9(2) of the Police and Criminal Evidence Act 1984.

<sup>229</sup> SI 1996/1908.

**230** There is no equivalent defence for the CTM. There is no need for one as a claim that a mark is a CTM cannot be interpreted as a reference to a registration elsewhere.

**231** [1995] RPC 423.

There is a defence in s 95(2) where it is shown that the reference is to registration elsewhere than in the UK and the reference is consistent with that registration and to the goods or services for which it is there registered: s 95(2).<sup>230</sup> In *Second Sight Ltd v Novell UK Ltd*<sup>231</sup> the defendant used its US registered mark TUXEDO in the UK with the word ‘registered’ and the ® symbol before it had registered the mark in the UK. Lightman J considered that s 95(2) ought to be construed so as to excuse if the reference is consistent with a registration elsewhere and such registration does, in fact, exist. It is unnecessary to refer to the foreign registration on the face of the material or article on which the trade mark is displayed.

Unauthorised use of the Royal arms or other devices, emblems or titles of Her Majesty or a member of the Royal family may constitute an offence under s 99 triable summarily only with a penalty of a fine not exceeding level 2 on the standard scale. Apart from being unauthorised, the use of the Royal arms (or arms so closely resembling the Royal arms as to be calculated to deceive) must be in connection with any business and used in a manner calculated to lead to the belief that the person using the arms is duly authorised to use them. In respect of devices, emblems and titles, again this must be in connection with any business. However, in this case, the use must be in a manner as to be calculated to lead to the belief that the person is employed by, or supplies goods or services to Her Majesty or the relevant member of the Royal family.

Contraventions may be restrained by injunction in proceedings brought by the person authorised to use the arms, device, emblem or title in question or by any person authorised by the Lord Chamberlain. These provisions do not affect the right of a proprietor of a registered trade mark containing any such arms, device, emblem or title to use that trade mark.

Finally, it should be noted that s 101(5) extends potential liability for all the criminal offences to directors, managers, secretaries or other similar officers of a corporate body where that body commits the offence. Liability also applies in respect of persons purporting to act in such a capacity. The test is that the offence was committed with the consent or connivance of the senior officer concerned. There are special provisions for offences committed by partnerships. Under s 101(1), proceedings are to be brought against the partnership in its name and not against the partners. However, under s 101(4) every partner may also be prosecuted unless it is proved that a partner was ignorant of the offence or attempted to prevent the commission of the offence.

# COMMUNITY TRADE MARK AND THE MADRID SYSTEM

### INTRODUCTION

A person seeking to gain protection for his trade mark by registration has a number of routes open to him. He may apply for a national registration, direct to the relevant national trade marks office, apply for a Community trade mark ('CTM'), which takes effect throughout the European Community and has a unitary nature, or he may apply to register the trade mark in a number of countries, which have ratified either the Madrid Agreement on the International Registration of Trade Marks or the Protocol to the Madrid Agreement (collectively known as the 'Madrid System'). Anyone may apply for a national registration, but application under the Madrid Agreement or Protocol may only be used by a natural person who, or a legal entity which, has a real and effective industrial or commercial establishment in, or is domiciled in, or is a national of, a country which is party to the Agreement or the Protocol, as appropriate.<sup>1</sup> In terms of the CTM, there used to be a requirement based on nationality or domicile, but this was removed so that now any natural or legal person, including authorities established under national law, may be the proprietor of a CTM.<sup>2</sup>

The CTM is provided for by Council Regulation (EC) No 207/2009 of 26 February 2009 on the Community trade mark<sup>3</sup> (the 'CTM Regulation')<sup>4</sup> and marked an important step forward in relation to the single market in Europe following on from the limited harmonisation achieved by the First Council Directive 89/104/EEC of 21 December 1988 to approximate the laws of the Member States relating to trade marks<sup>5</sup> (the 'Directive'). As we will see there are many similarities between the CTM Regulation and the Directive, especially in terms of the requirements for registration and grounds for refusal, the rights and limitations and surrender, revocation and invalidity. Many of these provisions are equivalent.<sup>6</sup> In other respects, there are similarities with the Community design, especially in relation to infringement proceedings, hearings and appeals at the Office for the Harmonisation of the Internal Market (Trade Marks and Designs) (the 'OHIM') and jurisdictional issues. As with registered Community designs, the OHIM handles registration and a number of other procedural issues.

After looking at the substantive and procedural aspects of the CTM, this chapter briefly describes the Madrid System for the international registration of trade marks. This system is of increasing interest, as now it is possible to obtain registration of a trade mark as a CTM through the Madrid Protocol as the European Community joined the Protocol as from 1 October 2004.

<sup>1</sup> This also extends to an organisation having such an establishment in, or which is domiciled in, the territory of an intergovernmental organisation which is a party to the Protocol and to nationals of a Member State of such an organisation.

<sup>2</sup> Article 5 of the CTM Regulation (codified version).

<sup>3</sup> OJ L 78, 24.03.2009, p 1. This codified version of the CTM Regulation repealed and replaced the original Regulation (Council Regulation (EC) No 40/94 of 20 December 1993 on the Community trade mark, OJ L 11, 14.01.1994, p 1), as amended. The Implementing Regulation, dealing with much of the fine detail, is Commission Regulation (EC) No 2868/95 of 13 December 1995 implementing Council Regulation (EC) No 40/94 on the Community trade mark, OJ L 303, 15.12.1995, p 1, as amended.

<sup>4</sup> References in this chapter are to the codified Regulation. This Regulation contains a correlation table in Annex II.

<sup>5</sup> OJ L 40, 11.02.1989, p 1.

<sup>6</sup> There are some differences: for example, bad faith is not included in the absolute grounds for refusal in Article 7 of the Regulation although it is a ground for invalidity in Article 53.

## COMMUNITY TRADE MARK

<sup>7</sup> Though the official date was 1 April 1996, the Regulation in its original form allowed applications up to three months before that date to be deemed to be made on 1 April 1996.

<sup>8</sup> Articles 112–114 of the CTM Regulation.

<sup>9</sup> The fact that the CTM system is autonomous has been stated by the Court of First Instance and Court of Justice on numerous occasions. See, for example, Case T-281/02 *Norma Lebensmittelfabrik GmbH & Co KG v OHIM* [2004] ECR II-1915 at para 35.

<sup>10</sup> There are many examples. In Case C-329/02P *SAT.1 SatellitenFernsehen GmbH v OHIM* [2004] ECR I-8317, the Court of Justice cited six earlier cases before the court on the Directive as authority for issues including the basic function of a trade mark, the average consumer and whether a combination of indistinctive signs can itself be distinctive.

<sup>11</sup> For example, in Case C-404/02 *Nichols plc v Registrar of Trade Marks* [2004] ECR I-8499 the Court of Justice cited Case C-445/02P *Glaverbel SA v OHIM* [2004] ECR I-6267 on the fact that there is no distinction between different categories of trade marks in determining whether they have a distinctive character.

The CTM Regulation established the OHIM, which commenced accepting applications for registration of trade marks as CTMs on 1 January 1996.<sup>7</sup> The Office is situated in Alicante, Spain. As the CTM has a unitary nature, only marks which can have effect throughout the entire Community will be accepted. This is one reason why existing national systems will continue to operate. For example, it may be that a trade mark for which registration as a CTM is sought is similar to an existing national registration in one or more Member States so that the relative grounds of refusal apply. To overcome practical problems of that nature, it is possible to convert an application for a CTM or a registered CTM into an application for a national trade mark, retaining the priority of the CTM or the application for the CTM or, where appropriate, any claim to seniority.<sup>8</sup>

Community collective marks are provided for in Articles 66–74 and require an applicant also to submit regulations governing the use of the mark. There are also additional grounds for revocation and invalidity and it is possible to register geographical names as a Community collective mark. There are no provisions for certification marks or guarantee marks.

As many of the provisions of the substantive law of the CTM are equivalent to those under the Directive, most of the decisions of the European Court of Justice (the ‘Court of Justice’) on the Directive are useful in determining the scope and interpretation of the CTM Regulation. However, the CTM and the national trade mark systems are separate and distinct and decisions and rulings on either are not binding upon the other.<sup>9</sup> Having said that, it is becoming increasingly common for the Court of Justice and the Court of First Instance (which hears appeals from the OHIM) to refer to earlier cases on the other system.<sup>10</sup> As the Directive is of older pedigree, the ‘traffic’ is more one way than the other at the present time but cases on the Regulation have been cited on a number of occasions in cases on the Directive.<sup>11</sup> One thing that is clear is that decisions in the national courts have little, if any, persuasive authority on cases on the CTM just as decisions before the OHIM are of limited utility before the national courts looking at the Directive. Of course, there are some differences between the Directive, which carried out a limited harmonisation of national trade mark laws, and the Regulation which, with the Implementing Regulation, sets out an entire legislative framework for trade marks. One example is that the absolute grounds for refusal apply even if they obtain only in part of the Community. Another difference is that the limitation on the effect of a trade mark to prevent the proprietor prohibiting a third party using in the course of trade an earlier right which only applies in a particularly locality within a Member State does not apply to the CTM. However, under Article 111 of the CTM Regulation, the proprietor of an earlier right in a particular locality can actually oppose the use of the CTM in that locality.

The OHIM has its own Boards of Appeals to hear appeals, *inter alia*, from the examiners and Opposition or Cancellations divisions. From there, appeals go to the Court of First Instance and then, finally, to the Court of Justice. Decisions of the Boards of Appeal must be based solely on the CTM Regulation and not the practice of the OHIM in previous cases. Therefore, citing examples of trade marks registered as CTMs in the past should not influence a decision in respect of a subsequent application.

In the following section on the CTM, it might be worth reflecting on Table 19.1 in Chapter 19 which gives a comparison of the references in the UK Trade Marks Act 1994, Directive and the CTM Regulation. The description of the substantive and procedural aspects of the CTM is intended, wherever possible, to avoid too much repetition of what has been discussed in the previous chapters on trade marks. Emphasis is placed

on differences between the CTM Regulation and the Directive and on cases on the CTM Regulation, many of which may also be instructive in relation to the Directive just as many decisions on the Directive will be helpful in the interpretation of many of the substantive law provisions of the CTM Regulation.

## NATURE OF THE CTM

A CTM is stated, under Article 2,<sup>12</sup> to have a unitary character having equal effect throughout the Community.<sup>13</sup> A CTM may not be registered, transferred or surrendered, or be subject to a decision revoking the proprietor's rights or be declared invalid, neither shall its use be prohibited save in respect of the whole Community. Thus the unitary character of a CTM cannot be compromised. This does not prevent the transfer of a CTM in respect of some or all the goods or services for which it is registered, and the grant of licences, exclusive or non-exclusive is expressly provided for.<sup>14</sup> Licences may be partial in respect of the whole or any part of the Community and in respect of some or all the goods or services for which it is registered. Assignments and licences may, of course, also be limited in time. The proprietor must be careful to avoid the danger of the mark becoming deceptive and liable to revocation proceedings by granting too many licences or by transferring the CTM in respect of some of the goods or services only, whilst retaining it and using it for the remainder of the goods or services. If the transfer is likely to mislead the public as to the nature, quality or geographic origin of the goods or services, the OHIM will not register the transfer unless the successor agrees to limit the registration to goods or services so as it is not likely to mislead.<sup>15</sup>

Where there is a transfer of the whole of an undertaking, the CTM will also be transferred in accordance with the law governing the transfer unless there is agreement to the contrary or the circumstances clearly dictate otherwise.<sup>16</sup>

Any natural or legal person, including authorities established under public law, may be the proprietor of a CTM and companies, firms and other legal bodies are to be regarded as legal persons if, under the law governing them, they have capacity in their own name and have rights or obligations of all kinds, to make contracts or accomplish other legal acts and sue or be sued: Articles 3 and 5.

## REQUIREMENTS FOR REGISTRATION

Article 4 states that a CTM '... may consist of any signs capable of being represented graphically, particularly words, including personal names, designs, letters, numerals, the shape of goods or of their packaging, provided that such signs are capable of distinguishing the goods or services of one undertaking from those of other undertakings', a definition which is virtually identical to that in the Directive. As the definition of a CTM includes letters, it seems that even a single letter may be registrable if it has become distinctive of an undertaking's goods or services.<sup>17</sup>

The requirement for being capable of being represented graphically was interpreted by the Board of Appeal at the OHIM, in *Antoni and Alison's Application*,<sup>18</sup> in the context of a mark other than a word mark, as requiring a drawing or a like representation. The following description was rejected: '... the vacuum-packing of an article of clothing in an envelope of plastic'. In *Swizzels Matlow Ltd Three-Dimensional Trade Mark Application*,<sup>19</sup> Simon Thorley QC, as the Appointed Person, said that decisions of the OHIM were persuasive but not binding. Furthermore, in upholding practice at the UK Registry, he said that the word 'graphically' serves to extend the meaning of the word

<sup>12</sup> Unless otherwise stated in this section on the CTM, statutory references are to the CTM Regulation.

<sup>13</sup> However, under Article 111, the proprietor of an earlier right that applies in a particular locality can oppose the use of the CTM in that territory where the earlier right is protected.

<sup>14</sup> See Articles 17 and 22.

<sup>15</sup> Article 17(4).

<sup>16</sup> Article 17(2).

<sup>17</sup> See Case T-3/07 *BORCO-Marken-Import Matthiesen GmbH & Co KG v OHIM*, 29 April 2009. This case involved an application to register the Greek symbol alpha ('α') as a trade mark.

<sup>18</sup> [1998] ETMR 460.

<sup>19</sup> [1999] RPC 879.

‘represented’ rather than to restrict it to a visual image and went on to suggest that the Board of Appeal at the OHIM probably did not intend such a restrictive approach. However, Article 4 of the CTM Regulation uses the phrase ‘capable of being represented graphically’. The order of the words do, indeed, suggest a narrowing rather than an extension of the requirement that the mark be represented.

### Absolute grounds for refusal

There are absolute and relative grounds for refusal of registration in Articles 7 and 8 which are very similar to those in the Directive, though there are some differences. Of the absolute grounds, those common to both the CTM Regulation and the Directive are that the sign does not meet the basic definition of a trade mark, that the mark lacks a distinctive character, that it consists exclusively of signs or indications which may serve, in trade, to designate kind, quality, quantity, etc. or have become customary in the trade, signs consisting exclusively of certain types of shape, trade marks contrary to public policy or accepted principles of morality, deceptive trade marks and trade marks not authorised by competent authorities and are to be refused in accordance with Article 6ter of the Paris Convention for the Protection of Industrial Property and badges, emblems and the like other than those under Article 6ter of the Paris Convention unless the consent of the relevant authority is obtained.<sup>20</sup>

The CTM Regulation has no equivalent absolute ground for refusal of registration to the optional ones in the Directive where the use of the trade mark may be prohibited by law other than trade mark law or where the application was made in bad faith.<sup>21</sup>

The CTM Regulation has some additional absolute grounds for refusal of registration inserted by subsequent amendment. The first is in respect of trade marks for wines or spirits containing or consisting of geographical indications of origin when the wines or spirits do not have that origin. The second also relates to geographical origin, but in connection with agricultural products and foodstuffs.<sup>22</sup> An example where this ground for refusal could apply is if a Dutch producer of ham tried to register ‘Parma Ham’ for his products. The Directive instead has an absolute ground for refusal based on the use of the trade mark being prohibited by law, other than trade mark law, which would cover these grounds expressly mentioned in the CTM Regulation.

As with the Directive, some of the grounds for refusal can be overcome by showing that the trade mark has, in fact, acquired a distinctive character in consequence of the use that has been made of it (Article 7(3)). The grounds for which acquired distinctiveness can overcome refusal of registration are as those in the Directive. The time at which the sign in question must have acquired a distinctive character is at the time of the filing of the application to register and not after.<sup>23</sup>

An important proviso for the CTM is that the sign or trade mark will be unregistrable if any of the grounds apply only in respect of part of the Community (Article 7(2)). Thus, for example, if a trade mark is descriptive of the characteristics of the goods for which it is intended to be used only in German-speaking parts of the Community, it will still be caught by Article 7. That would not prevent the conversion of the application into a number of national applications in non-German-speaking countries where the mark might have no particular meaning for persons not fluent in German. In Case C-104/00P *DKV Deutsche Krankenversicherung AG v OHIM*,<sup>24</sup> the Court of Justice confirmed that the Court of First Instance rightly held that the trade mark ‘Companyline’ was not registrable as it was not distinctive in English-speaking areas of the Community.<sup>25</sup>

The Court of Justice and the Court of First Instance have dealt with numerous appeals from decisions on the absolute grounds for refusal. The Court of Justice will not interfere with findings of fact before the Court of First Instance<sup>26</sup> unless it made a

<sup>20</sup> This latter ground for refusal was, in the Directive, an option for Member States.

<sup>21</sup> But making an application in bad faith is a ground for invalidity of a CTM under Article 52(1)(b).

<sup>22</sup> Council Regulation (EEC) No 2081/92 of 14 July 1992 on the protection of geographical indications and designations of origin for agricultural products and foodstuffs, OJ L 208, 24.07.1992, p 1. The ground for refusal applies to situations under Article 13 of the Regulation: for example, where the trade mark is misleading or evokes the product for which registration has been granted under that Regulation.

<sup>23</sup> Case C-42/07 *Imagination Technologies Ltd v OHIM*, 11 June 2009.

<sup>24</sup> [2002] ECR I-7561.

<sup>25</sup> The applicant cited numerous examples of UK registered trade marks ending in ‘-line’, to no avail.

<sup>26</sup> Which has exclusive jurisdiction to make such findings as between the Court of First Instance and the Court of Justice.

substantive inaccuracy in its findings attributable to the documentation submitted to it or where the evidence produced before the court has been distorted.<sup>27</sup>

There have been numerous cases on Article 7(1)(b), the ground for refusal where a sign is devoid of any distinctive character. In Case C-64/02P *OHIM v Erpo Möbelwerk GmbH*,<sup>28</sup> an application was made to register ‘DAS PRINZIP DER BEQUEMLICHKEIT’ in relation to goods including furniture.<sup>29</sup> The Court of Justice confirmed, in accordance with the case law on the equivalent grounds in the Directive, that there is no distinction between different categories of trade marks when assessing whether a trade mark has a distinctive character for the purposes of Article 7(1)(b). The Court of First Instance had erred in finding that, in relation to a trade mark which appears to be a slogan, it is not devoid of a distinctive character unless it is shown that it is commonly used in business communications and, in particular, in advertising. This went outside the bounds of the statutory provision.<sup>30</sup>

The Court of Justice relied heavily on its own case law on the Directive in Case C-329/02P *SAT.1 SatellitenFernsehen GmbH v OHIM*.<sup>31</sup> The court confirmed that, in assessing distinctive character, the basic function of a trade mark must be considered, being to identify the origin of the goods or services.<sup>32</sup> Furthermore, in making that assessment, it is appropriate to take the viewpoint of the average consumer who is reasonably well informed and reasonably observant and circumspect.<sup>33</sup> The Court of Justice also held that each of the grounds for refusal of registration under Article 7 is separate and independent of the rest although there is inevitably some overlap between them. They should be examined in the light of the different considerations underlying them. Article 7(1)(b) is inexorably linked with the essential function of a trade mark. In the above case, the applicant sought to register ‘SAT.2’ in relation to satellite broadcasting. The Court of Justice held that, where a trade mark comprises two elements, a word and a digit in this case, the combination may possess a distinctive character even though each taken separately would not.<sup>34</sup> It is the overall impression of the trade mark that is important.

The trade mark CELLTECH might be interpreted as an abbreviation for ‘cell technology’ but it is the combination that is important and, in Case C-273/05P *OHIM v Celltech R & D Ltd*,<sup>35</sup> the Court of Justice confirmed that it had not been shown that the trade mark was descriptive of the goods or service for which registration had been sought.

The independence of the grounds under Article 7 means that criteria used under Article 7(1)(c) (that is, where the trade mark is descriptive of certain characteristics of goods or services) cannot be used as a basis for finding that the trade mark is devoid of any distinctive character for the purposes of Article 7(1)(b). A finding that a trade mark is commonly used in the trade did not justify a finding that it lacked distinctiveness in Case C-37/03P *BioID AG v OHIM*.<sup>36</sup> The trade mark for which registration was sought was ‘BioID.®’ for software and telecommunications services and the like relating to biometric identification. Where a decision of the Court of First Instance is quashed, as it was in this case, the Court of Justice may itself give final judgment. Consequently, the Court of Justice examined the trade mark. It held that the dominant element of the mark when its overall impression is examined through the eyes of the relevant public was the abbreviation BioID, which would be understood as meaning ‘biometric identification’, and this lacked distinctive character.

Article 7(1)(c) prevents registration of trade marks which consist exclusively of signs or indications which may serve, in trade, to designate kind, quality, quantity, etc. or other characteristics of goods or services. Usually, an application to register a geographical name as a trade mark will be refused on this ground in the absence of distinctiveness acquired through use. However, for this ground to apply to a geographical name, it must be perceived as indicating geographical origin. If it does not it may

<sup>27</sup> Joined Cases C-468/01P to C-472/01P *Procter & Gamble Co v OHIM* [2004] ECR I-5141.

<sup>28</sup> [2004] ECR I-10031.

<sup>29</sup> In English the phrase means the principle of comfort.

<sup>30</sup> An advertising slogan may be registrable but may face an uphill task, especially if it, or something similar, is in common use such as ‘REAL PEOPLE, REAL SOLUTIONS’: Case T-130/01 *Sykes Enterprises Inc v OHIM* [2002] ECR II-5179. See also Case T-122/01 *Best Buy Concepts Inc v OHIM* [2003] ECR II-2235 (‘BEST BUY’) and Case T-281/02 *Norma Lebensmittelfilialbetrieb GmbH & Co KG v OHIM* [2004] ECR II-1915 (‘Mehr für Ihr Geld’ meaning ‘More for your money’).

<sup>34</sup> The Court of First Instance paid too much attention to the individual elements of the trade mark and failed to take into account aspects such as the existence of an element of imaginativeness.

<sup>35</sup> [2007] ECR I-2883.

<sup>36</sup> [2005] ECR I-7975.

37 [2005] ECR II-4633.

be registrable. In Case T-379/03 *Peek & Cloppenburg KG v OHIM*,<sup>37</sup> an application was made to register ‘Cloppenburg’ for retail trade services. Cloppenburg is a small town in Saxony, Germany. It was refused on the basis of Article 7(1)(c) but the applicant’s appeal to the Court of First Instance was successful.

It was held that, even if the relevant public knows of the town of Cloppenburg, it does not automatically follow that the sign may serve, in trade, to designate geographical origin. Account must be taken of all the circumstances, such as the nature of the goods or services, the greater or lesser reputation of the geographical location within that economic sector, the level of the relevant public’s familiarity with it, the customs obtaining in the area of activity concerned and the question to what extent the geographical origin of the goods or services at issue may be relevant, in the view of the persons concerned, to the assessment of the quality or other characteristics of the goods or services concerned. Applying these principles, the court noted that the town was a small one, there was no evidence that it enjoyed a reputation as the place where any class of goods are produced or services rendered. Furthermore, there was nothing to suggest that it was current practice in trade to indicate the geographical origin of retail trade services and, in any case, the geographical origin of such services is not usually regarded as relevant when assessing their quality or characteristics.

38 Joined Cases C-108/97 and 109/97 *Windsurfing Chiemsee v Huber and Attenberger* [1999] ECR I-2799. A similar public interest applies in respect of Article 7(1)(d).

39 [2002] ECR II-1963.

As is the case with the equivalent provision in the Directive, Article 7(1)(c) serves the public interest in keeping descriptive signs and indications free for all to use.<sup>38</sup> However, accepting this was so, in Case T-356/00 *DaimlerChrysler AG v OHIM*,<sup>39</sup> the Court of First Instance held that the fact that competitors do not need to use the sign for which registration is sought is not relevant to the inquiry and there does not need to be a real, current or serious need to leave the sign free. The question is whether there is a sufficient direct or specific association between the sign and the goods or services and if one of the possible meanings of the sign identifies a feature of the goods or services that is sufficient. The descriptiveness of a sign must be assessed in the light of the goods or services for which registration is sought. The trade mark in question, ‘CARCARD’, was capable of designating the kind or quality of some of the services applied for such as credit cards and cards for carrying information relating to aspects of cars such as details of servicing and repairs. Although in respect of other services, such as rental and leasing of data processing equipment, the trade mark was not descriptive and did not serve to designate specific characteristics of those services. Consequently, the trade mark was registrable in relation to some though not all of the services applied for.

40 [2001] ECR I-6251.

The same principle applies to composite marks as with the equivalent provision in the Directive and, where the individual components are descriptive, the impression created by the combination must be greater than the sum of its parts. The leading cases on this, involving the CTM, are Case C-383/99P *Procter & Gamble Co v OHIM*<sup>40</sup> where it was held that ‘BABY-DRY’ for nappies was registrable as it was a syntactically unusual combination not familiar in the English language. On the other hand, ‘DOUBLEMINT’ for chewing gum was not registrable as one of its possible meanings alluded to the characteristics of the goods: Case C-191/01P, *OHIM v Wm Wrigley Jr Co*.<sup>41</sup> The trade mark does not have to be exclusively descriptive for the purposes of Article 7(1)(c), nor does it need to be in current use; it is sufficient if this is a possibility in the future.

41 [2003] ECR I-12447.

42 8 September 2005.

43 [2004] ECR I-1619.

44 As with many of the provisions of the CTM Regulation and the Directive, it can be said with a fair degree of certainty that their interpretation is at one.

That a combination mark must not be inherently descriptive but has acquired its own distinct meaning as an indication of origin has been accepted on a number of occasions after the ‘BABY-DRY’ and ‘DOUBLEMINT’ cases by the Court of First Instance. For example, in Joined Cases T-178/03 and T-179/03 *CeWe Color AG & Co OHG v OHIM*,<sup>42</sup> the court cited the ruling in Case C-363/99 *Koninklijke KPN Nederland NV v Benelux-Merkenbureau*<sup>43</sup> on Article 3(1)(c) in the Directive, which was approved by analogy.<sup>44</sup> The signs applied for in *CeWe Color* were ‘DigiFilm’ and ‘DigiFilmMaker’

for a range of goods and services. Those relating to digital photography and digital image processing and the like were rejected on the basis of Article 7(1)(b) and (c). Of course, as the grounds for refusal are independent, even if there is some overlap, it is sufficient if only one ground for refusal applies.

### Acquired distinctiveness

Article 7(3) allows registration to proceed where some of the absolute grounds for refusal appear to exist if, in consequence of the use made of it, the trade mark has become distinctive as a matter of fact. It has been argued by applicants that the relevant date at which to determine whether a trade mark has any distinctive character should be the date of filing the application rather than the date the trade mark would be registered. This could make a difference where, in between those dates, more undertakings started using similar signs. In Joined Cases C-456/01P and C-457/01P *Henkel KGaA v OHIM*,<sup>45</sup> an application to register three-dimensional shapes for tablets for washing machines and dishwashers was refused as the tablets were devoid of distinctive character. It was argued that distinctiveness should be assessed at the time of filing the application as there were not many similar tablets on the market at that time, unlike the position later. The Court of Justice upheld the Court of First Instance's finding that it did not need to decide the point as the trade mark simply was not distinctive and it did not matter how many similar tablets were on the market.<sup>46</sup> In some cases, an applicant might argue that the later date should be used where he thinks it is more likely that there will be evidence of acquired distinctiveness by this time.

The rights to a CTM relate back to the date of publication of the application under Article 9(3), although any decision on infringement cannot be made until after the date of publication of the fact of registration. As regards a UK registered trade mark, it is deemed to be registered as at the date of filing the application.<sup>47</sup> Consequently, the time for determining whether a trade mark has a distinctive character can only be the date of filing.<sup>48</sup> If other undertakings subsequently use similar signs in the period between filing and registration, rather than detracting from registrability, they potentially infringe the trade mark. Using the date of filing as the relevant date for acquired distinctiveness also avoids the unsatisfactory position that the longer the procedure to registration at the OHIM takes, the better the chances that this ground for refusal will be overcome on the basis of Article 7(3).

In Case T-16/02 *Audi AG v OHIM*,<sup>49</sup> the Court of First Instance held that, to satisfy the requirement for acquired distinctiveness to overcome the absolute grounds for refusal under Article 7(1)(b)–(d), the trade mark must be seen by a significant proportion of the relevant public as identifying the origin of the goods or services in respect of which the trade mark is used and that distinctive character must be shown to exist in the substantial part of the Community where it was, in the case of Article 7(1)(b), devoid of any distinctive character. Factors to be taken into account include market share, intensity, geographic scope and duration of use and the amount of promotion of the mark.<sup>50</sup> The court also confirmed its earlier decision in Case T-247/01 *eCopy Inc v OHIM*<sup>51</sup> to the effect that the relevant time for assessing distinctive character was the date of filing the application.

### Relative grounds for refusal

A precondition for the relative grounds for refusal applying is that they depend upon the proprietor of an earlier trade mark opposing the application (Article 8(1)) or, in the case of objection based on an earlier unregistered trade mark or other sign used in the course of trade, opposition of the proprietor of that unregistered trade mark or sign (Article 8(4)).<sup>52</sup>

<sup>45</sup> [2004] ECR I-5089.

<sup>46</sup> See also Joined Cases C-468/01P to C-472/01P *Procter & Gamble Co v OHIM* [2004] ECR I-5141, concerning three-dimensional shapes for washing machines and dishwashers.

<sup>47</sup> Trade Marks Act 1994, s 40(3).

<sup>48</sup> Indeed the Court of First Instance accepted this, referring to Article 9(3) rejecting evidence of distinctiveness acquired after the date of filing in Case T-247/01 *eCopy Inc v OHIM* [2002] ECR II-5301.

<sup>49</sup> [2003] ECR II-5167. The mark applied for was 'TDI' for vehicles and repair and maintenance of them.

<sup>50</sup> It is not permissible to adduce evidence of acquired distinctiveness for the first time before the Court of Justice in the absence of distortion by the Court of First Instance of the facts or evidence before it: Case C-286/04P *Eurocermex SA v OHIM*, [2005] ECR I-5797.

<sup>51</sup> [2002] ECR II-5301.

<sup>52</sup> Until recently in the UK, any person could oppose an application to register a UK trade mark; however, where this was based on an earlier trade mark more than five years old, the opponent had to prove that the trade mark has been used in the last five years. Now, opposition may only be brought on the relative grounds by the proprietor of the earlier trade mark or other earlier right. Proof of use still applies.

The relative grounds for refusal based on earlier trade marks are as those in the Directive, that is, where the mark for which registration is sought is identical and is to be used for identical goods or services or where there is not complete identity, registration will be refused if there exists a likelihood of confusion on the part of the public. The option in the Directive (which was taken up in the UK) for refusal in the case of an earlier trade mark of repute where the use of the mark would take unfair advantage of or be detrimental to the distinctive character or repute of the trade mark is included in the CTM Regulation under Article 8(5). Although it is still expressed in terms of use for goods or services that are not similar to those for which the earlier trade mark is registered, it is almost certain that, should the matter come up, the ruling in Case C-292/00 *Davidoff & Cie SA v Gofkid Ltd*,<sup>53</sup> confirmed in Case C-408/01 *Adidas-Salomon AG v Fitnessworld Trading Ltd*,<sup>54</sup> to the effect that the equivalent provision in the Directive also applies to identical or similar goods or services, would be followed, even though, strictly speaking, these cases are not binding as regards the CTM.

Unlike the Directive, the CTM Regulation does not provide for relative grounds for refusal based on, for example, copyright and other industrial property rights although it does provide a relative ground of refusal based on earlier unregistered trade marks and other signs used in the course of trade. However, earlier copyright and industrial property rights, *inter alia*, may be used to challenge the validity of a CTM as well as earlier registered and unregistered trade marks and other signs used in the course of trade.

Under Article 8(2) earlier trade marks include CTMs, trade marks registered in Member States,<sup>55</sup> trade marks registered under international arrangements which have effect in Member States or the EC, applications for such trade marks and well-known marks within the meaning of Article 6bis of the Paris Convention. To be taken into consideration, the earlier trade mark must have an application date earlier than that of the application for the CTM, allowing for any priority claimed for the earlier trade mark, if appropriate.

There have been very few cases on the ground for refusal under Article 8(1)(a) – identical signs for identical goods or services. However, in Case T-317/01 *M + M Gesellschaft Unternehmensberatung und Informationssysteme mbH v OHIM*<sup>56</sup> it was noted that the Board of Appeal considered ‘EURODATA’ to be identical to ‘EURODATA’.<sup>57</sup>

In terms of the relative grounds for refusal, where appropriate, rulings on the provisions in the Directive are followed for the CTM. The most important case thus far is Case C-316/04P *Ruiz-Picasso v OHIM*,<sup>58</sup> in which the Court of Justice, on appeal from the Court of First Instance, applied some of the leading cases on the Directive. In particular, the test for a likelihood of confusion must be assessed by a global appreciation taking account of all the circumstances and that global appreciation of the visual, aural or conceptual similarity based on the overall impression given by the marks bearing in mind, in particular, their distinctive and dominant components.<sup>59</sup> The interdependence of the similarity between the signs and the similarity between the goods or services are amongst the factors to be taken into account. Again, in line with cases on the Directive, the greater the similarity of the signs, the lesser the similarity of the goods or services required to find a likelihood of confusion and vice versa.<sup>60</sup> The Court of First Instance applied this interdependence in Case T-162/01 *Laboratories RTB, SL v OHIM*,<sup>61</sup> holding that there was no likelihood of confusion between ‘GIORGIO BEVERLEY HILLS’ and earlier Spanish marks ‘J GIORGI’, ‘Miss GIORGI’ and ‘GIORGI LINE’ even though there was identity and similarity between the goods in question.

In *Ruiz-Picasso v OHIM*, the estate of Pablo Picasso, which had a CTM for ‘PICASSO’ for motor vehicles, opposed an application by DaimlerChrysler AG to register the name ‘PICARO’ for motor vehicles.

53 [2003] ECR I-389.

54 [2003] ECR I-12537.

55 Or, in the case of Belgium, the Netherlands and Luxembourg, registered at the Benelux Intellectual Property Office.

56 [2004] ECR II-1817.

57 This part of the decision was not appealed to the Court of First Instance.

58 [2006] ECR I-643.

59 Case C-251/95 *Sabel BV v Puma AG, Rudolf Dassler Sport* [1997] ECR I-14313.

60 Case C-39/97 *Canon Kabushiki Kaisha v Metro Goldwyn Mayer Inc* [1998] ECR I-5507 and Case C-342/97 *Lloyd Schuhfabrik Meyer & Co GmbH v Klisjen Handel BV* [1999] ECR I-3819.

61 [2003] ECR II-2821.

The degree of attention an average consumer will have varies according to the category of goods or services; the attention paid in the field of motor vehicles is high. In any case, the mark 'PICASSO' would be taken by the public to refer to the painter and the name, regardless of any inherent distinctiveness, was devoid of any distinctive character vis-à-vis motor vehicles. It would not have any resonance with motor vehicles even though it had been registered for these. The Court of Justice accepted this, answering an objection that the Court of First Instance failed to take into account previous case law to the effect that the greater the reputation, the wider the protection afforded.<sup>62</sup> There was no likelihood of confusion and the relevant public would not think that goods bearing the two marks would come from the same or economically linked undertakings.

The relevant public will not make an elaborate analysis to distinguish between two marks where, for example, there is a similarity of goods and an aural similarity between the mark applied for and the earlier trade mark. The Court of First Instance confirmed this in Case T-99/01 *Mystery Drinks GmbH v OHIM*<sup>63</sup> in which the mark applied for, 'MYSTERY', for non-alcoholic beverages, with the exception of non-alcoholic beers, was held to be unregistrable to that extent because of the existence of an earlier trade mark, 'Mixery', registered in Germany for beers and the like. Visually the marks were readily distinguishable ('MYSTERY' was in stylised form) but aurally they were similar. Conceptually, the marks were held to be similar as the evocative meaning of them was not so direct so as to be immediately perceived by consumers.

An aural and visual similarity would suggest that the grounds for opposition might be made out. In Case C-412/05 *Alcon Inc v OHIM*,<sup>64</sup> an application was made to register 'TRAVATAN' for ophthalmic pharmaceutical products. The proprietor of the earlier trade mark 'TRAVISTAN', registered for pharmaceuticals available under prescription only, opposed the application. The relevant consumers included healthcare professionals and end users. Although the former might have some influence, an issue was whether ultimate consumers were likely to be confused as to the origin of the pharmaceuticals in question. The Court of First Instance had given inadequate reasons for its assessment of the visual and phonetic similarity of the marks, but that was not enough to invalidate its judgment that, because there was a sufficient similarity between the sign and the trade mark and the goods, there was a likelihood of confusion between them.

Although goods or services may be similar, there may be no likelihood of confusion if they are aimed at different markets. For example, in Case T-316/07 *Commercy AG v OHIM*,<sup>65</sup> an application for invalidity was brought in relation to the CTM easyHotel on the basis of the earlier national mark EASYHOTEL. Both were used for computer software reservation systems but the earlier national mark was used for software sold to hotels and the like whilst the latter was used by persons making bookings online. The goods and services were sold to different publics.

<sup>64</sup> [2007] ECR I-3569.

<sup>65</sup> 22 January 2009.

## RIGHTS, INFRINGEMENT AND REMEDIES

Article 9 sets out the rights conferred on the proprietor of a CTM which are exclusive rights. The proprietor is entitled to prevent third parties not having his consent from using in the course of trade:

- (a) an identical sign for identical goods or services;
- (b) an identical or similar sign for goods or services that are identical or similar subject to a likelihood of confusion on the part of the public which includes a likelihood of association; or

- (c) an identical or similar sign for goods or services that are not similar where the CTM has a reputation and the use of the sign would take unfair advantage of or be detrimental to the distinctive character or repute of the CTM.

Again, this latter right must also extend to goods or services that are identical or similar in line with the Court of Justice ruling in Case C-292/00 *Davidoff & Cie SA v Gofkid Ltd.*<sup>66</sup>

<sup>66</sup> [2003] ECR I-389.

Article 9(2) states that the uses that may be prohibited include affixing the sign to goods or to their packaging, offerings goods, putting them on the market or stocking them for such purposes under the sign, offering or supplying services under the sign, importing or exporting goods under the sign or using the sign on business papers and in advertising. This list is not exhaustive.

Article 10 has no equivalent in the Directive and is designed to help proprietors to prevent their trade marks becoming generic names and, as a result, being vulnerable to revocation.<sup>67</sup> If the reproduction of the CTM in a dictionary, encyclopaedia or similar reference work gives the impression that the mark is a generic name, the publisher must, at the request of the proprietor, ensure that the reproduction is accompanied by an indication that it is a registered trade mark by the time of the next edition at the latest. Article 10 does not say what should happen if the publisher fails to comply. Presumably if this happens, any evidence that a CTM has become a common name to the extent that it is the result of its use in a dictionary or other work would be disregarded if the proprietor of the CTM has requested the publisher to mention that the CTM is registered.

<sup>67</sup> Article 51 includes as one of the grounds for revocation where the mark, as a consequence of the inactivity of the proprietor, has become a common name in the trade for the product or service in respect of which it is registered.

In a case where a CTM is registered in the name of an agent or representative of the proprietor without the proprietor's authorisation, the proprietor may oppose such use unless the agent or proprietor justifies his action (Article 11). The use of the word 'proprietor' in this sense must mean the person who should be entitled to register the trade mark as a CTM and covers a situation where, for example, his trade mark agent registers it in his own name. In cases, such as these, Article 18 allows for the assignment of the CTM from the agent or representative to the proprietor, unless the agent or representative can justify his action.

Article 14 confirms that the effects of a CTM shall be as governed by the CTM Regulation but, in other respects, infringement shall be governed by the national law relating to infringement of a national trade mark. This means that, for example, if an infringement action is brought before a UK Community trade mark court (assuming it has jurisdiction, as discussed later), such as the Chancery Division of the High Court, the usual remedies for infringement will be available as with infringement of a UK registered trade mark. An action could be brought in the national court on the basis of national law relating to civil liability and unfair competition. This would allow an action to be brought in the UK, subject to the court having jurisdiction, for passing off and, presumably, also malicious falsehood, in appropriate circumstances.

The unitary character of a CTM in having effect throughout the Community may be compromised by an earlier right which applies in a particular locality as, where such a right exists, its proprietor may oppose the use of the CTM in the territory where it is protected in so far as the law of the relevant Member State permits (Article 111). This would allow a person having business goodwill protected by the law of passing off in, for example, the north-west of England opposing the use of the CTM there. Five years' acquiescence will defeat such opposition to the use of the CTM in that locality provided the CTM was not applied for in bad faith. The proprietor of the CTM will not be able to oppose the use of the earlier right in that locality even though there has been acquiescence so that it can no longer be invoked against the CTM. The relative grounds for refusal do not permit opposition of an application for a CTM on the basis of an earlier

unregistered trade mark or sign used in the course of business if the right attaching to it has merely local significance. Furthermore, the CTM Regulation does not affect claims for infringement of earlier rights under the laws of Member States.<sup>68</sup>

## LIMITATION OF THE EFFECTS OF A CTM

Article 12 on the limitation of the effects of a CTM mirror those in Article 6(1) of the Directive.<sup>69</sup> It is likely that the case law of the Court of Justice in relation to the Directive will be used as precedent though, strictly speaking, not binding.

The doctrine of exhaustion of rights applies under Article 13 in relation to goods placed on the market within the Community by or with the proprietor's consent and there is an equivalent proviso to that in the Directive allowing the proprietor, where there exist legitimate reasons, to oppose further commercialisation of the goods where their condition has been changed or impaired.

As with the harmonised national trade mark, exhaustion of rights will not apply where the goods have been placed on the market by the proprietor, or with his consent, outside the Community. However, unlike the national trade mark, where exhaustion applies to goods placed on the market within the European Economic Area ('EEA'),<sup>70</sup> exhaustion for the CTM is limited to goods placed on the market within the Community.

A defence in an infringement action may be based on acquiescence under Article 54 where an allegation relates infringement of an earlier CTM, national trade mark within Article 8(2) or other earlier sign within Article 8(4) and the proprietor has acquiesced in the use of a later CTM for five successive years while being aware of its use, provided the application to register the later CTM was not made in bad faith.

## APPLYING FOR AND REGISTRATION OF A CTM

The application to register a trade mark as a CTM may be filed, at the choice of the applicant, direct at the OHIM or at the relevant national industrial property office (in the UK, the Trade Marks Registry) or the Benelux Intellectual Property Office. In the latter two cases, the application should be forwarded to the OHIM, retaining the original filing date.<sup>71</sup> The application must contain a request for registration as a CTM, information identifying the applicant, a list of goods or services for which registration is sought and a representation of the trade mark.<sup>72</sup> The application must also conform with any condition laid down in the Implementing Regulations and the fee must be paid within one month. Where the priority of a filing elsewhere is claimed, a declaration of priority must be claimed together with a copy of the previous application, including a translation if necessary.<sup>73</sup> A claim for seniority may also be made, including a claim made after registration of the CTM.<sup>74</sup>

The OHIM will examine the application to ensure that the conditions of filing are satisfied, including those in the Implementing Regulations, and that the fee has been paid within the prescribed period. There will also be examination in respect of the absolute grounds for refusal. A search is carried out of earlier CTMs and earlier applications for CTMs and a search report is produced. National trade mark offices which have indicated their willingness to carry out searches in respect of CTM applications are also required to carry out a search of their registers and produce search reports. These search reports are then sent to the applicant. The application may be withdrawn at any time or the applicant may choose to restrict the goods or services for which registration is sought. The application is then published and observations may be submitted or opposition raised. Proprietors of earlier CTMs or applications

<sup>68</sup> Article 110. Unless otherwise provided for in the CTM Regulations, laws of Member States which can be invoked against the use of national trade marks may be used against CTMs.

<sup>69</sup> There is no equivalent to Article 6(2) of the Directive which limits the right in respect of earlier rights which apply only in a particular locality.

<sup>70</sup> The Directive now has effect in the EEA, not just the EC.

<sup>71</sup> If the applications reach the OHIM more than two months later, they will be accorded a filing date of the date they were received by the OHIM. The national office or Benelux Intellectual Property Office may charge a handling fee not exceeding the administrative costs.

<sup>72</sup> Article 26.

<sup>73</sup> Priority may also be claimed in respect of recognised international exhibitions: Article 33.

<sup>74</sup> Articles 34 and 35.

<sup>75</sup> In respect of opposition where the application is made by an agent or representative of the proprietor without his consent, only the proprietor may oppose.

for CTM cited in search reports are notified of the act of publication. Opposition may be made only by the proprietor of an earlier trade mark or other earlier right or by licensees.<sup>75</sup> There have been some changes to the search provisions with effect from 10 March 2008.

Following publication, any person may make observations without becoming a party to any proceedings before the OHIM. The observations, which will be communicated to the applicant, who may comment on them, should be based particularly on the absolute grounds for refusal.

Within three months after publication, opposition may be raised on the basis of the relative grounds for refusal. Under Article 41, opposition may be raised only by the proprietors of earlier trade marks (or their licensees) on the basis of Article 8(1) or (5) (refusal based on identity or similarity with earlier trade mark) or by proprietors of trade marks where an agent or representative has applied for registration in his own name under Article 8(3) or by proprietors of earlier unregistered trade marks or other signs used in the course of trade under Article 8(4) (or persons authorised under national laws to exercise those rights under Article 8(4)).

Where the applicant so desires and the opposition is based upon an earlier trade mark which is five or more years old, the opponent must furnish proof that it has been put to genuine use in the last five years or there are proper reasons for non-use (Article 42(2)). Genuine use requires real use, not token use or artificial use merely to maintain the trade mark on the register.<sup>76</sup> Following opposition, the application may be rejected in whole or in part, otherwise the opposition will be rejected. There are provisions for withdrawal, restriction, amendment or division of the application. Division might be advisable where, for example, it appears that there may be objection to some of the goods or services applied for or some marks in a series of marks applied for. Dividing the application may allow the non-contentious elements to proceed to registration allowing the others to be dealt with in more detail at a later stage. Division of an application may not be made during opposition proceedings or proceedings for an application for revocation or a declaration of invalidity unless it would not prejudice those proceedings.

<sup>76</sup> Case T-39/01 *Kabushiki Kaisha Fernandes v OHIM* [2002] ECR II-5233.

The duration of registration (initial and on renewal) is, under Article 46, ten years, as it is in respect of national registered trade marks. Renewal must be applied for within six months of expiry. There is a further six months for late renewal subject to an additional fee. There are no provisions allowing for restoration of a lapsed CTM as there are for the UK registered trade mark.

An applicant for a CTM may convert his application into a national trade mark application, under Article 112, to the extent that the CTM is refused, withdrawn or deemed to be withdrawn or to the extent that it ceases to have effect. Conversion is not allowed if the CTM has been revoked for non-use unless it has been put to use in the Member State for which conversion to national trade mark is sought or for the purpose of protection in a Member State when there has been a decision of the OHIM or national court that grounds for refusal, revocation or invalidity apply to the application for a CTM or a registered CTM.<sup>77</sup> Where conversion takes place, the application to the trade mark office in the relevant Member State will retain its priority or seniority as appropriate. The time limit for conversion is generally three months after withdrawal, surrender or refusal, otherwise priority will be lost.

<sup>77</sup> In such a case, the refusal etc. is determinative of the position at the national level. However, there is nothing to prevent an applicant making a fresh application to a national trade mark office (of course, losing any right to priority or seniority): Case T-342/02 *Metro Goldwyn Mayer Lion Corp v OHIM*, [2002] ECR II-3191. Of course, conversion, where available, is optional.

## PROPERTY RIGHTS IN A CTM

CTMs are treated as objects of property which, in their entirety and for the whole of the Community (except as otherwise provided for under Articles 17–24 – the other

provisions on property rights in CTMs), are to be dealt with as national trade marks in the Member State where the proprietor has his seat or domicile or, failing this, his establishment. If none of these apply, it is the Member State where the OHIM is situated, at the present time, being Spain.<sup>78</sup>

A CTM may be transferred, with or without the transfer of the undertaking, for all or some of the goods or services for which it is registered (Article 17). There is a presumption that the transfer of an undertaking also transfers the CTM<sup>79</sup> and, as mentioned earlier, the OHIM may insist on limiting the transfer to goods or services so as not to mislead the public. Any assignment must be in writing, signed by the parties unless the transfer is the result of a judgment; otherwise the assignment is void. This is, however, without prejudice to a presumed transfer where the undertaking has been transferred. A successor in title cannot invoke the rights under a CTM until such time as his name is entered in the register. Article 18 provides that the proprietor may demand the transfer of a CTM wrongly registered by his agent or representative unless the agent or representative justifies his claim to the CTM. The right subsisting in the CTM may be charged as security or made subject to rights *in rem* (Article 19). A CTM may be levied in execution or be subject to insolvency proceedings.<sup>80</sup>

Article 22 contains the provisions for licensing CTMs and licences may be exclusive or non-exclusive and may be in relation to all or some of the goods or services for which the CTM is registered. Licences may be for the whole or part of the Community. Licensees may bring infringement proceedings if the proprietor consents, although, where the proprietor does not himself bring proceedings within a reasonable time, an exclusive licensee can bring such proceedings without consent. Where a proprietor has brought proceedings, a licensee may intervene for the purpose of obtaining compensation for damage caused to him by the infringement. Finally, at the request of one of the parties, the grant or transfer of a licence will be entered in the register and published. In almost all cases, licence agreements will contain express provision dealing with the right to bring proceedings for infringement of the CTM covered by the agreement.

Rights acquired by transfer under Article 17, rights *in rem*, etc. under Article 19 and licences under Article 22 only have effect as regards third parties after entry in the register except where the third party acquired rights in the CTM subsequently but knew of the relevant act by which the earlier rights were acquired. For example, an assignee of a CTM will take free of any mortgage granted earlier with the CTM as security unless the mortgage is registered or the assignee knew of the mortgage. However, this 'third party' rule does not apply where the CTM or right in question was acquired by way of a transfer of the whole undertaking or by way of other universal succession. However, effects on third parties in the case of bankruptcy and the like are governed by the law of the Member State where such proceedings are brought.

Finally, as is usual, the rules on CTMs as property rights also apply in respect of applications to register CTMs. For example, an application may be assigned or licences granted in respect of it.

## SURRENDER, REVOCATION AND INVALIDITY

A CTM may be surrendered by written declaration by the proprietor in respect of some or all the goods or services for which it is registered under Article 50. It takes effect once entered in the register. Any person registered as having a right in the CTM must have agreed to the surrender and the proprietor must prove that he has notified any registered licensees of his intention to surrender.<sup>81</sup>

<sup>78</sup> Article 16, which also has provisions to determine the Member State in the case of joint proprietors.

<sup>79</sup> The presumption does not apply where there is agreement to the contrary or the circumstances clearly dictate otherwise.

<sup>80</sup> Articles 20 and 21. There are provisions relating to jurisdiction for insolvency proceedings.

<sup>81</sup> Under rule 36(2) of the Implementing Regulation, where a licence has been registered, surrender takes effect three months after the proprietor has satisfied the OHIM that he has notified the licensee unless the proprietor proves the licensee consents, in which case the surrender will take effect immediately.

The grounds for revocation are set out in Article 51 and closely follow those in the Directive, being based on non-use for a continuous period of five years without proper reasons for non-use, where the CTM has become a common name for a product or service for which it is registered or where it has become deceptive. Where the grounds exist only in relation to some of the goods or services for which the CTM is registered, revocation will be limited accordingly.

There are absolute and relative grounds for invalidity in Articles 52 and 53. Both can be raised on application to the OHIM or by way of a counterclaim in infringement proceedings. The absolute grounds for invalidity are based on the registration being contrary to the absolute grounds for refusal under Article 7 plus, in addition, where the applicant was acting in bad faith when he filed the application. The absolute grounds under Article 7(1)(b), (c) or (d) can be overcome by showing that the CTM has subsequently acquired a distinctive character because of the use made of it.<sup>82</sup> If the ground for invalidity under Article 52 applies only in respect of some of the goods or services for which it is registered, it will be declared invalid for those goods or services only. It may be bad faith to apply to register a sign as a trade mark for the intention of defeating the prior use of that sign by other undertakings which had not registered that sign as a trade mark. This may be particularly relevant where the sign in question is a shape mark and there are technical and commercial reasons why it would be difficult for competitors to offer comparable products. The Court of Justice ruled to this effect in *Case C-29/07 Chocoladefabriken Lindt & Sprüngli AG v Franz Hauswirth*<sup>83</sup> in relation to an application to register as a CTM a sign depicting the shape of an Easter chocolate bunny covered in foil. Other undertakings had previously sold similar shaped chocolate bunnies for a number of years.

The relative grounds apply where there is an earlier trade mark or other earlier right and the conditions set out in the relevant parts of Article 8 are fulfilled. Article 53(1) effectively mirrors Article 8. However, Article 8(2) permits invalidity to be based on some other earlier right such as a copyright or industrial property right where the use of the CTM could be prohibited on the basis of such right under Community legislation or national law.<sup>84</sup> This ground for invalidity is additional to the relative grounds for refusal of registration which have no equivalent ground, unlike the case in the Directive. As with revocation, invalidity may be partial.

A CTM may not be declared invalid if the proprietor of the earlier trade mark or other right has expressly consented to the registration before applying for a declaration of invalidity. Also, if such a proprietor has already sought a declaration of invalidity he may not put it in issue again on the basis of another earlier trade mark or right which he could have invoked in support of his first application or counterclaim.

Under Article 54, the proprietor of an earlier CTM may not use that to challenge the validity of a later CTM or oppose its use if he has acquiesced in the use of the later CTM, being aware of its use, for five successive years unless it was applied for in bad faith. The same applies to proprietors of earlier national trade marks within Article 8(2) and other earlier signs referred to in Article 8(4). The proprietor of the later CTM may not oppose the use of the earlier CTM or other right which, under Article 54, can no longer be invoked against that later CTM.

Where a CTM is revoked, this takes effect from the date of application (or counterclaim, as appropriate) but in the case of invalidity, the CTM is deemed not to have had the effects set out in the CTM Regulation from the outset, to the extent that it is declared invalid. Subject to national provisions relating to claims for compensation or damage caused by negligence or lack of good faith on the part of the proprietor, or to unjust enrichment, the retroactive effect of revocation or invalidity does not affect:

<sup>82</sup> These grounds are where the trade mark is devoid of any distinctive character, 'descriptive' or customary in the current language or *bona fide* and established practices of the trade.

<sup>83</sup> 11 June 2009.

<sup>84</sup> Article 53(2) gives a non-exhaustive list of rights, being a right to a name, a right of personal portrayal, a copyright and an industrial property right, as does the Directive. The reference to Community legislation was the result of an amendment to the CTM Regulation and is intended to allow invalidity on the basis of an earlier Community design.

- decisions on infringement which have acquired the authority of a final decision and have been enforced prior to the revocation or invalidity decision; or
- any contract concluded prior to the revocation or invalidity decision, in so far as it has been performed before that decision (subject to repayment on the grounds of equity).<sup>85</sup>

Articles 56 and 57 govern proceedings at the OHIM in relation to applications for revocation or invalidity. In cases covered by Articles 51 and 52 (revocation and the absolute grounds for invalidity) any natural or legal person may make the application as well as any group or body set up for representing the interests of manufacturers, producers, suppliers of services, traders or consumers, which, under the law governing such group or body, has capacity to sue and be sued in its own name. In the case of invalidity on the basis of an earlier trade mark or earlier unregistered trade mark or sign used in the course of trade – that is, where Article 53(1) applies – the application can only be brought by the proprietor of that earlier trade mark or sign. Where invalidity is based on an earlier right, such as a copyright or industrial property right under Article 53(2), only the proprietor of that earlier right may apply. Furthermore, the OHIM will declare as inadmissible if an application relating to the same subject matter, the same cause of action and involving the same parties, has been adjudicated on by a court in a Member State that has acquired the authority of a final decision.

In proceedings before the OHIM, the proprietor of the CTM being challenged may require proof of use of an earlier CTM or earlier national trade mark used as a basis for the application for revocation or invalidity, as is the case in opposition proceedings. The OHIM may, if it thinks fit, invite the parties to make a friendly settlement.

<sup>85</sup> The UK Trade Marks Act 1994 expresses the effect in much simpler language stating that a finding of invalidity shall not affect transactions past and closed. The practical effect is probably the same.

## DECISIONS AT OHIM AND APPEALS

As well as the examiners, the OHIM has Opposition Divisions (deciding oppositions to registration) and Cancellation Divisions. The latter is responsible for deciding applications for revocation or for declarations of invalidity. An Opposition Division or Cancellation Division must consist of three members, one of whom is legally qualified. A further Division is the Administration of Trade Marks and Legal Division which is responsible for decisions under the Regulation which do not fall within the competence of an examiner, an Opposition Division or a Cancellation Division. Examples are decisions in respect of entries in the register of CTMs and keeping a list of professional representatives who may act for persons in the OHIM. Decisions of this Division may be taken by one member.

Appeals from the examiners or Divisions lie to the Boards of Appeal. Appeals have suspensive effect. The Boards sit with three members, of which at least two must be legally qualified. Appeal from the Boards of Appeal go to the Court of First Instance and, from there, to the Court of Justice.

## JURISDICTION

Under Article 95, each Member State is required to designate as limited a number as possible of national courts and tribunals of first and second instance, known as Community trade mark courts. In the UK, the designated courts are the Patents County Court and a number of other county courts, the High Court, the Court of Appeal, the Court of Session in Scotland and the High Court in Northern Ireland.

Community trade mark courts have, under Article 96, exclusive jurisdiction on actions for infringement of CTMs (and, where permitted under national law, actions

for threatened infringement), actions for declaration of non-infringement if permitted under national law, actions in respect of the period between publication of the application and publication of registration as under Article 9(3), and counterclaims for revocation and invalidity.

Under Article 97, the international jurisdiction of Community trade mark courts is established for claims referred to in Article 96 subject to the provisions of the CTM Regulation and to applicable provisions of the Convention on Jurisdiction and the Enforcement (the ‘Brussels Convention’) according to Article 94<sup>86</sup> (see p 891). There are three main rules for determining jurisdiction, only one of which will apply in a particular case. They are:

- the Member State in which the defendant is domiciled or, if not domiciled in any Member State, any Member State in which he has an establishment (Article 97(1));<sup>87</sup>
- where the defendant is neither domiciled nor has an establishment in any Member State, the action shall be brought before the courts in the Member State in which the claimant is domiciled or has an establishment, as appropriate (Article 97(2));
- if neither the defendant nor the claimant are domiciled or have an establishment in any Member State, proceedings shall be brought in the Member State in which the OHIM has its seat, presently being Spain (Article 97(3)).

There remain some alternative ways of determining in which Member State the Community trade mark courts have jurisdiction. Articles 17 and 18 of the Brussels Convention apply, which allows the parties to agree that a different Community trade mark court shall have jurisdiction and a different court may have jurisdiction if the defendant enters an appearance there, otherwise than solely to challenge jurisdiction (Article 97(4)).

Under Article 97(5), with the exception of actions for a declaration of non-infringement, actions may also be brought in the Community trade mark courts in the Member States in which the infringement has been committed or threatened or other act within Article 9(3), second sentence, being an action for compensation for acts between publication of the application for a CTM and publication of its registration.

For an example of an infringement action based upon the High Court’s jurisdiction as a Community trade mark court under Article 97(1) (the defendant was a UK company), see *Pfizer Ltd v Eurofood Link (UK) Ltd*.<sup>88</sup> In that case, it was held that the CTM was infringed, as was the claimant’s UK registered trade mark.

Where a Community trade mark court has jurisdiction under Article 97(1)–(4) it can deal with acts of infringement committed or threatened within the territory of any of the Member States including acts within Article 9(3), second sentence. Where jurisdiction is based on Article 97(5) a Community trade mark court can only deal with acts committed or threatened within the Member State in which it is situated.<sup>89</sup>

Community trade mark courts must treat a CTM as valid unless validity is put in issue by way of a counterclaim for revocation or declaration of invalidity (Article 99).<sup>90</sup> In an action for a declaration of non-infringement, validity may not be put in issue. In actions for infringement, threatened infringement and under Article 9(3), a plea relating to revocation or invalidity other than by way of a counterclaim is admissible in so far as the defendant claims the rights could be revoked for lack of use or declared invalid because of the defendant’s earlier right.

Article 100 contains provisions relating to counterclaims. In the case of revocation or invalidity, the only grounds on which the counterclaim can be based are those in the CTM Regulation but a Community trade mark court must reject the counterclaim if a decision made by the OHIM, involving the same subject matter and cause of action and the same parties has already become final. If the proprietor is not a party to an action where a counterclaim is made, he shall be informed and may be joined as a party in

<sup>86</sup> Convention on Jurisdiction and Enforcement of Judgments in Civil and Commercial Matters signed in Brussels on 27 September 1968, OJ L 299, 31.12.1972, p 32. For most purposes and for most Member States, this has been replaced by Council Regulation (EC) No 44/2001 of 22 December 2000 on jurisdiction and the recognition and enforcement of judgments in civil and commercial matters, OJ L 12, 16.01.2001, p 1 (the ‘Brussels Regulation’). Article 94 of the CTM Regulation disapplies certain provisions of the Brussels Convention, in particular Articles 2, 4, 5(1), (3), (4) and (5) and 24 in relation to actions and claims referred to in Article 96 of the CTM Regulation. Articles 17 and 18 of the Brussels Convention apply subject to limitations in Article 97(4) of the CTM Regulation.

<sup>87</sup> This is subject to those parts of the Brussels Convention applicable by virtue of Article 94 of the CTM Regulation.

<sup>88</sup> [2001] FSR 17.

<sup>89</sup> Article 98.

<sup>90</sup> Where a national court is dealing with an action other than one under Article 96, it must treat the CTM as valid.

accordance with the conditions set out in national law. The OHIM must be informed if a counterclaim is made for revocation or invalidity and this fact will be recorded on the register. Article 57(2)–(5) applies, which includes provisions relating to proof of use where an earlier trade mark is used to challenge validity and the power of the court to encourage a friendly settlement, if it thinks fit. A copy of a judgment that has become final will be sent to the OHIM where it will be mentioned in the register. Finally, a Community trade mark court hearing a counterclaim for revocation or invalidity may stay proceedings on application by the proprietor of the CTM after hearing the other parties and may request that the defendant apply to the OHIM within a reasonable time which the court will set. If it is not submitted within that time, the proceedings will continue with the counterclaim treated as withdrawn. As with other stays, the court may make other provisional and protective measures, for example, by granting an interim injunction.

The applicable law in cases before the Community trade mark courts is stated in Article 101 as that set out in the CTM Regulation except where not covered by the Regulation, in which case it will be the law of the Member State in which the court is situated, including its private international law. In terms of procedure a Community trade mark court will apply the rules governing the same type of action relating to a national trade mark in the Member State where it has its seat.

There are other provisions to deal with stays of proceedings where there are related actions, provisional and protective measures and sanctions.<sup>91</sup> Disputes relating to CTMs other than those within Article 96 may be brought in other courts which have jurisdiction under the Brussels Convention, *ratione loci* and *ratione materiae* (jurisdiction based by reason of location or the subject matter respectively) to hear national trade mark cases.

<sup>91</sup> For example, OHIM will normally stay proceedings where a CTM is already in issue on a counterclaim for invalidity or revocation before a domestic court under Article 104(2) (previously Article 100(2)): see *Kitfix Swallow Group Ltd v Great Gizmos Ltd* [2007] EWHC 2668 (Ch) in which a stay of English proceedings failed as they had been commenced some 7 to 8 months before those before the OHIM.

<sup>92</sup> SI 1996/1908.

## THE UK COMMUNITY TRADE MARK REGULATIONS

The Community Trade Mark Regulations 1996<sup>92</sup> contain a number of important provisions, including designating the UK's Community trade mark courts. Other provisions include:

- The extension of the provisions relating to groundless threats of infringement proceedings under the Trade Marks Act 1994 s 21 to CTMs (reg 4).
- A declaration can be sought, where the proprietor of a CTM claims the seniority of a UK registered mark which has been removed from the Register failing renewal or has been surrendered, that the registration would otherwise have been liable to revocation or invalidity (reg 3).
- Applying most of the criminal offences and provisions relating to forfeiture and treating infringing goods as prohibited goods to CTMs (regs 6–8).
- Conversion of CTMs or applications for CTMs to applications for UK registered trade marks (reg 10).

## INTERNATIONAL REGISTRATION OF TRADE MARKS

Registration of trade marks may be achieved by single applications to each country in which registration is sought. However, this can be expensive and time-consuming and will require the application to be made in that country's language, necessitating additional costs associated with translation. Whilst the situation within Europe is much easier, either by national applications in Member States having harmonised trade mark

laws or by application for a CTM, the situation elsewhere would be less satisfactory were it not for the Madrid System for the registration of trade marks. A major advantage is that, after filing an application for registration of a trade mark or following registration in the trade mark office in the applicant's country, only one application need be filed and one fee paid to that trade mark office (the Office of Origin).

The Madrid System is administered by the World Intellectual Property Organisation (WIPO) and comprises the Madrid Agreement of 1891 and the Protocol to the Madrid Agreement, adopted 1989 and which came into force on 1 April 1996. Together, the Agreement and Protocol form the Madrid Union which is a Special Union recognised under the Paris Convention for the Protection of Industrial Property.<sup>93</sup>

93 Article 19.

The UK is not a member of the Madrid Agreement but is a member of the Protocol, as is the European Community. The Agreement is better suited to countries which do not have rigorous examination systems. A further issue is that French is the only official language for the purposes of the Agreement whereas English and French are the official languages of the Protocol. The advantage of the EC belonging to the Protocol is that an application may include a request to apply for a CTM. As at 15 July 2009, there were 56 States party to the Agreement and 79 States party to the Protocol. Apart from the UK, amongst the latter are Bahrain, China, Denmark, France, Germany, Iceland, Ireland, Japan, Norway, Sweden and the US. Many States are a party to both, though by no means all.

An applicant for international registration of marks must be domiciled in, be a national of or have a real and effective industrial or commercial establishment in a country which is a party to either the Agreement or the Protocol. The applicant must designate one or more Contracting Parties to the Agreement and/or Protocol as appropriate. Application is made to the Office of Origin in the Contracting Party in which the applicant is domiciled, etc. Thus, a company established in the UK will apply to the UK Trade Marks Registry which then passes the application through to the International Bureau in Geneva.

If the application complies with requirements, it will be recorded in the international register and published in the *WIPO Gazette of Trade Marks*. Each of the Contracting Parties designated are then notified. From the date of international registration, protection is granted in each Contracting Party as if the application had been deposited directly with that Contracting Party. However, each Contracting Party may refuse protection within a time limit which is generally 12 months, though some Contracting Parties may work on a time limit of 18 months or longer in the case of refusal of protection based on opposition.

International registration for the first five years is based on the mark registered or applied for in the country of origin. That may cease to have effect, for example through cancellation, a decision of the Office of Origin or by a court, or if it is surrendered. Where this happens, the international registration is no longer protected. Thus, the international registration is vulnerable to acts or decisions in the Office of Origin but, after five years, the international registration becomes independent of the basic registration or application in the country of origin. As with the UK trade mark and the CTM, the registration is subject to renewal every ten years. The Madrid System is reasonably popular and 23,379 trade marks were accepted for registration during 2004.<sup>94</sup>

94 *WIPO Gazette of International Marks, Statistical Supplement for 2004*, Table 2.

Countries with lengthy examination systems for their national trade marks tend to be members of the Protocol. This is because one of the advantages of the Protocol over the Agreement is that an application for international registration may be based on an application for a trade mark in the Office of Origin, whereas the Agreement needs an actual registration in the Office of Origin to be used as the basis for the international registration. Other advantages of the Protocol include the implications of cancellation

of registration in the Office of Origin. In this case, the application may be converted into national applications in the other Contracting Parties designated and still take advantage of the priority of the initial application.

As from 1 October 2004, the European Community became a party to the Protocol. This means that an application for international registration may be based on an application for a CTM or registration at the OHIM. Furthermore, it will be possible to designate the European Community using an application for international registration under the Madrid Protocol.

## PASSING OFF AND MALICIOUS FALSEHOOD

### INTRODUCTION

The law of passing off and trade mark law have common roots and therefore are, in many respects, similar. Passing off is a tort and can be described as the common law form of trade mark law. The Trade Marks Act 1994 s 2(2) makes it clear that the law of passing off is unaffected by the Act.<sup>1</sup> Business ‘goodwill’ is protected by passing off and, whilst this may be associated with a particular name or mark used in the course of trade, this area of law is wider than trade mark law in terms of the scope of marks, signs, materials and other aspects of a trader’s ‘get-up’ that can be protected.<sup>2</sup> The owner of the goodwill has a property right that can be protected by an action in passing off. Buckley LJ described the nature of the proprietary right thus:

A man who engages in commercial activities may acquire a valuable reputation in respect of the goods in which he deals, or of the services which he performs, or of his business as an entity. The law regards such a reputation as an incorporeal piece of property, the integrity of which the owner is entitled to protect.<sup>3</sup>

He went on to confirm that the property right is not a right in the name, mark or get-up itself but that it is a right in the reputation or goodwill of which the name, mark or get-up is the badge or vehicle. The words ‘reputation’ and ‘goodwill’ are often used interchangeably but it is really in connection with goodwill that passing off is concerned. It is possible, after all, to have a reputation without goodwill, the Russian monk Rasputin providing a good example of this. The existence of reputation (in this case a favourable one) without any associated goodwill was fatal to a claim in passing off in *Anheuser Busch Inc v Budějovický Budvar*.<sup>4</sup> The Budweiser name for beer was well known in the UK but, in the absence of a trading presence here, the claimant could not establish the necessary goodwill to sustain an action in passing off.<sup>5</sup>

Lord Macnaghten gave a useful definition of goodwill in *Commissioners of Inland Revenue v Muller & Co’s Margarine Ltd*,<sup>6</sup> where he said (at 223):

What is goodwill? It is a thing very easy to describe, very difficult to define. It is the benefit and advantage of the good name, reputation, and connection of a business. It is the attractive force which begins in custom. It is the one thing which distinguishes an old-established business from a new business at its first start. The goodwill of a business must emanate from a particular centre or source. However widely extended or diffused its influence may be, goodwill is worth nothing unless it has power of attraction sufficient to bring customers home to the source from which it emanates.

The description of goodwill as the attractive force bringing in custom is very apt even though the customers may not know or care of the identity of the owner of the goodwill provided that they appreciate that there is such a person and the goods or services

<sup>1</sup> The Trade Marks Act 1994 s 2(1) also states that no action is available under the Act for the infringement of an unregistered trade mark. Passing off is a ground for refusal of registration for a trade mark: s 5(4)(a).

<sup>2</sup> Though the recent changes to trade mark law have brought the scope of trade mark law nearer to passing off. W & G was refused registration as a trade mark (*Registrar of Trade Marks v W & G Du Cros Ltd* [1913] AC 624) but a passing off action succeeded (*Du Cros (W & G) Ltd v Gold* (1912) 30 RPC 117).

<sup>3</sup> *HP Bulmer Ltd v J Bollinger SA* [1978] RPC 79 at 93.

<sup>4</sup> [1984] FSR 413.

<sup>5</sup> However, this case should be compared with *Maxim’s Ltd v Dye* [1977] 1 WLR 1155; the Indian case of *Calvin Klein Inc v International Apparel Syndicate* [1995] FSR 515 and the Singaporean case of *Pontiac Marina Private Ltd v CDL Hotels International Ltd* [1998] FSR 839, all discussed below.

<sup>6</sup> [1901] AC 217.

emanating from that person are of an expected standard.<sup>7</sup> This is particularly important in the context of corporate takeovers and mergers. If asked, many people would not be able to identify the maker of many products now available without referring to the product itself.

Quite often, passing off actions will be brought in respect of an unregistered trade mark, a mark that has not been registered through inertia on the part of the owner of the mark or as a result of ignorance of the advantages of trade mark law or because the mark fails to satisfy the requirements for registration. The great majority of cases will involve a mark in the wide sense, including containers and packaging, but business goodwill can be achieved and maintained in other ways and it is possible that business methods and get-up, marketing strategy and advertising themes can be protected by this useful area of law. Passing off actions have never been limited to goods and passing off in respect of the provision of services has always been a possibility. However, it is clear that the tort applies in a business context, directly or indirectly, although in other circumstances a passing off type of activity could amount to defamation.<sup>8</sup>

The main point about passing off is that goodwill has been established by one trader and another trader tries to take advantage of that goodwill, to cash in on it to the detriment of the first trader. There are two main reasons why a trader would wish to pass off his goods or services as being those of another, established trader. The first is that by doing so, a significant portion of the established trader's custom might be captured because of confusion amongst the buying public as to whom they are dealing with. The second reason is that sales might be boosted by unjustifiably imputing a quality to the second trader's goods that is widely recognised in connection with the goods of the established trader. In both cases, the established trader suffers damage by a shortfall in trade, but in the second case the damage may be even more far-reaching in that he stands to lose his goodwill and reputation for high quality goods if, because of the misrepresentation, the buying public associate inferior goods with him. Alternatively, the harm may be subtler and result in a gradual degradation or erosion of the first trader's name or get-up as an indicator of origin or quality,<sup>9</sup> the result being a blurring of distinctiveness of the first trader's name or mark in which his goodwill subsists.

The preservation of business goodwill is the prime concern of passing off but the protection of consumers from deception is an ancillary effect. The New Zealand case of *Plix Products Ltd v Frank M Whinstone (Merchants)*<sup>10</sup> involved pocket packs for kiwi fruit. The claimant had a monopoly in such packs as a result of the sole approval of the claimant's design for such packs by the New Zealand Kiwifruit Authority. The case turned on copyright issues in addition to passing off and in the former it was established that copyright infringement could occur through a verbal description. On the passing off claim it was held that a cause of action in passing off depended on damage to the claimant's reputation and not upon the premise that purchasers might confuse the claimant's and the defendant's packs and obtain an inferior or different product to the one they thought they were acquiring.

Passing off may overlap with other rights, especially trade marks and copyright, and a given set of circumstances may give rise to an action involving two or more different rights. For example, in *Mothercare UK Ltd v Penguin Books Ltd*<sup>11</sup> the defendant published a book, first published in the USA, about bringing up children, entitled *Mother Care/Other Care*. The claimant, who operated a chain of retail shops selling various items for babies, small children and expectant mothers, sued for trade mark infringement and for passing off. It was held the defendant had not infringed the 'Mothercare' trade mark because it had not been used in a trade mark sense. On the passing off action it was said that, considering the title of the book as a whole, there had not been a misrepresentation by use of that title.<sup>12</sup> In *Visual Connection (TVC) Ltd v Ashworth Associates Ltd*,<sup>13</sup> the claimant sued for infringement of copyright in photographs and

<sup>7</sup> *United Biscuits (UK) Ltd v Asda Stores Ltd* [1997] RPC 513.

<sup>8</sup> For example, *Tolley v JS Fry & Sons Ltd* [1931] AC 333.

<sup>9</sup> This is a continuing concern for traders dealing with high-quality goods. See the discussion on the 'champagne' cases below, pp 844–6.

<sup>10</sup> [1986] FSR 63.

<sup>11</sup> [1988] RPC 113.

<sup>12</sup> Dillon LJ considered the recent fashion for conducting surveys to be unhelpful. He also deplored the proliferation of affidavits, assertions and counter-assertions common when wealthy companies are involved in passing off, copyright or trade mark cases.

<sup>13</sup> (Unreported) 14 January 1986.

<sup>14</sup> See also *Columbia Picture Industries v Robinson* [1987] 1 Ch 38 in which the claimant alleged infringement of copyright and trade marks and passing off. The defendant admitted to these and injunctive relief and an inquiry as to damages was ordered but the claimant had to pay £10,000 to the defendant because of an abuse of the search order (*Anton Piller* order).

<sup>15</sup> [2004] RPC 186.

for passing off resulting from the use by the defendant of the photographs, representing his business as that of the claimant.<sup>14</sup>

There may be a conflict between passing off and trade marks law. Section 2(2) of the Trade Marks Act 1994 confirms that nothing in the Act affects the law relating to passing off. The general rule for determining the date at which goodwill should be assessed in a passing off action is the date that the defendant's acts, in respect of which complaint is made, commenced. Determining this date may be particularly important when the claimant is building up his goodwill around that time: for example, where he has recently started trading. The consequence of filing an application to register a trade mark is that, under s 40(3) of the Trade Marks Act 1994, it is deemed to have been registered as from the date of filing and so, the proprietor's rights date back to the filing date under s 9(3). The problem here is that one trader may be using an unregistered trade mark in which goodwill is being built up but another trader applies to register a conflicting mark but does not use it until later. At the time of filing the application, goodwill might not yet exist in an actionable sense under passing off but it might by the time the second trader actually starts using his trade mark.

This conflict came up for consideration in *Inter Lotto (UK) Ltd v Camelot Group plc*.<sup>15</sup> The claimant started using the unregistered trade mark 'HOTPICK' during August and September 2001. The defendant, responsible for running the national lottery under licence from the National Lottery Commission (the 'NLC'), caused the NLC to register 'HOTPICKS' as a trade mark and the application was duly filed on 17 October 2001 but it was not used by the defendant until around July 2002. The claimant opposed the trade mark application. That opposition was pending. The question was whether the date at which the claimant's goodwill should be assessed was the date of filing the application or the date the defendant actually started using the trade mark.

- If the former, the opposition might fail as the claimant opposing the trade mark application may not be able to show that it had by that time built up goodwill in the 'HOTPICK' name.
- If the latter, the opposition might succeed as, by then, the claimant might be able to show that it had a goodwill in the name.

The Court of Appeal, dismissing the defendant's appeal, held that the relevant date was the date the use of the trade mark by the defendant commenced. That was the effect of s 2(2) of the Act which defeated any claim that the relative ground for refusal under s 5(4) of the Act, and the fact that the Act treats registration as being effective as from the date of filing the application to register a trade mark, prevented reliance on any goodwill established between the date of filing the application and the date the applicant actually started using his trade mark. Section 2(2) confirms that the Act does not affect the law of passing off. Otherwise, in a case like *Inter Lotto*, on the basis of deemed registration at the date of filing, a proprietor may be able to invoke his trade mark to prevent another trader using a similar though unregistered trade mark which had not built up actionable goodwill at that date even though it did subsequently before the date that the trade mark proprietor actually started using his trade mark.

## BASIC REQUIREMENTS FOR A PASSING OFF ACTION

<sup>16</sup> (1842) 49 ER 749.

<sup>17</sup> Misrepresentation is one of the essential ingredients of a passing off action but its presence is a question of fact depending on the circumstances: *Harding v Smilecare Ltd* [2002] FSR 589.

In *Perry v Truefitt*<sup>16</sup> it was said by Lord Langdale MR that, 'a man is not to sell his own goods under the pretence that they are the goods of another trader'; that is, the law would restrain one trader from passing off his goods as being those of another trader. The essence of the action is a misrepresentation, either express or implied.<sup>17</sup> This was expanded to include a situation where the origin of the goods was not at issue; rather it

was the quality of the goods. In *Spalding & Bros v AW Gamage Ltd*,<sup>18</sup> the claimant was a dealer in footballs described for some years as ‘Orb’ footballs and this description and descriptions including the word ‘Orb’ became distinctive of the claimant’s footballs. The claimant sold a quantity of defective balls to a waste rubber merchant and, eventually, they fell into the hands of the defendant who advertised them as being ‘Orb’ balls. An injunction was granted in favour of the claimant and Lord Parker considered the nature of passing off, saying:

The more general opinion appears to be that the right [that is, the right to take action to prevent passing off] is a right of property . . . property in the business or goodwill likely to be injured by the misrepresentation.<sup>19</sup>

An important case in which the basic requirements for success in a passing off action were described in the House of Lords was *Erven Warnink Besloten Vennootschap v J Townend & Sons (Hull) Ltd*.<sup>20</sup> The claimants made a liqueur called Advocaat which came to be well known.<sup>21</sup> It was a high-quality liqueur made from brandewijn, egg yolks and sugar which acquired a substantial reputation and sold in large quantities. The defendant decided to enter this market and made a drink called ‘Keeling’s Old English Advocaat’ which was made from Cyprus sherry and dried egg powder, an inferior but less expensive drink compared to the claimants’. This captured a large part of the claimants’ market in the UK but it could not be shown that consumers would mistake it for the claimants’ drink. Nevertheless, it was held that the reputation associated with the claimants’ product should be protected from deceptive use of its name by competitors even though several traders shared the goodwill. There was a misrepresentation made by the defendant calculated to injure the claimants’ business or goodwill and an injunction was granted in favour of the claimants, there being no exceptional grounds of public policy why an injunction should not be granted. Lord Diplock laid down the essentials for a passing off action, derived from the case of *Spalding & Bros v AW Gamage Ltd*<sup>22</sup> and subsequent cases, as being:

- a misrepresentation
- made by a trader in the course of trade
- to prospective customers of his or ultimate consumers of goods or services supplied by him
- which is calculated to injure the business or goodwill of another trader (in the sense that this is a reasonably foreseeable consequence) and
- which causes actual damage to a business or goodwill of the trader by whom the action is brought or (in a *quia timet* action) will probably do so.

Lord Oliver reduced this list to three elements in *Reckitt & Colman Products Ltd v Borden Inc*,<sup>23</sup> namely, the existence of the claimant’s goodwill, a misrepresentation as to the goods or services offered by the defendant, and damage (or likely damage) to the claimant’s goodwill as a result of the defendant’s misrepresentation. Nevertheless, many judges still prefer Lord Diplock’s authoritative test.<sup>24</sup> In the *Erven Warnink* case, Lord Fraser proposed a different formula to that used by Lord Diplock. Lord Fraser said:

It is essential for the claimant in a passing off action to show at least the following facts: (1) that his business consists of, or includes, selling in England a class of goods to which the particular trade name applies; (2) that the class of goods is clearly defined, and that in the minds of the public, or a section of the public, in England, the trade name distinguishes that class from other similar goods; (3) that because of the reputation of the goods, there is goodwill attached to the name; (4) that he, the plaintiff, as a member of the class of those who sell the goods, is the owner of goodwill in England which is of substantial value; (5) that he has suffered, or is really likely to suffer, substantial damage to his property in the goodwill by reason

<sup>18</sup> (1915) 84 LJ Ch 449.

<sup>19</sup> [1979] 1 CMLR 326.

<sup>20</sup> [1979] AC 731.

<sup>21</sup> The claimants were representative of the Dutch manufacturers of Advocaat.

<sup>22</sup> (1915) 84 LJ Ch 449.

<sup>23</sup> [1990] 1 All ER 873.

<sup>24</sup> See, for example, the judgments in *Taittinger SA v Allbev Ltd* [1993] FSR 641. The simpler statement of passing off is, however, preferred by some judges; see *Consorzio de Prosciutto di Parma v Marks and Spencer plc* [1991] RPC 351.

25 [1979] AC 731 at 755. Being able to identify the class of products is essential. In *Sweeney v Macmillan Publishers Ltd* [2002] RPC 651, the trustees of the estate of James Joyce who did not themselves sell products failed to identify a clearly defined class of products to which the goodwill might have attached. This was fatal to an action for passing off in relation to the publication of the bulk of Joyce's novel, *Ulysses*.

26 Lord Diplock later states that 'calculated to injure' does not require actual intention to injure. It is more to do with whether injury is a reasonably foreseeable consequence.

27 See *British Broadcasting Corp v Talbot Motor Co Ltd* [1981] FSR 228; *Bristol Conservatories Ltd v Conservatories Custom Built Ltd* [1989] RPC 455. In the former case, Lord Megarry VC suggested that the two tests may have been cumulative but, in the latter, it was held that they were not cumulative. In *Pete Waterman Ltd v CBS UK Ltd* [1993] EMLR 27, Lord Browne-Wilkinson VC suggested that the Diplock and Fraser tests should be read together as the Diplock test focuses on the defendant's activities whereas the Fraser test concentrates on what the claimant has to show to succeed.

28 [1991] RPC 351.

29 [1995] FSR 169.

30 *Baume & Co Ltd v AH Moore Ltd* [1958] RPC 226.

31 See, for example, *Gillette UK Ltd v Edenwest Ltd* [1994] RPC 279.

32 See *Croft v Day* (1843) 7 Beav 84. However, a true statement that the defendant had operated the fine art department in the claimant's store was not passing off: *Harrods Ltd v Schwartz-Sackin & Co Ltd* [1991] FSR 209.

33 (1949) 66 RPC 149.

of the defendants selling goods which are falsely described by the trade name to which the goodwill is attached. Provided these conditions are satisfied . . . the claimant is entitled to protect himself by a passing off action.<sup>25</sup>

The definitions given by Lords Diplock and Fraser can be seen as attempts to produce a generalised, all-purpose rule, but it is probable that their Lordships were too strongly influenced by the facts of the case before them. In particular, Lord Fraser's definition is far too narrow – being restricted to goods sold in England (although recognising that trade reputation has a specific locality) – but he does specifically mention the need for a goodwill associated with the goods although this is implicit in Lord Diplock's statement. Lord Diplock talks in terms of goods and services and it is clear that a passing off action is available in respect of services. Lord Diplock, by using the phrase 'calculated to injure', seems to suggest some fraud or malice on the part of the defendant whilst Lord Fraser makes no such inference.<sup>26</sup> As will be seen later, relief can be given when the misrepresentation is unintentional; the action is not limited to goods; the geographical scope can extend outside the UK as far as the trade is concerned; and passing off is not limited to trade names as indicated by Lord Fraser. On the whole, Lord Diplock's definition is probably closer to the present legal position and is the one most referred to. In subsequent cases, there has been some conflict about whether the Diplock and the Fraser test should be applied together.<sup>27</sup> On the whole, Lord Diplock's test is of more general application than Lord Fraser's test.

As well respected as *Erven Warnink* is, another line of definitions adopting the simpler approach in *Reckitt & Colman* has the approval of a number of judges. For example, in *Conorzio de Prosciutto di Parma v Marks and Spencer plc*,<sup>28</sup> Nourse LJ identified the ingredients of a passing off action as being comprised of:

- the goodwill of the claimant
- the misrepresentation made by the defendant and
- consequential damage.

Jacob J approved of this formula in *Hodgkinson and Corby Ltd v Wards Mobility Services Ltd*,<sup>29</sup> stressing that the essence of passing off is deception which misleads customers. This line of authorities is not inconsistent with *Erven Warnink* and can be regarded as a clearer statement of passing off, bearing in mind that Lord Diplock's phrase 'calculated to injure' appears to be redundant. However, the simpler statement of passing off ought to have some reference to the fact that it is set in the context of trade.

In most cases, the defendant will have deliberately used some name, mark or get-up designed to capture part of the claimant's business but a fraudulent motive is not essential to the tort.<sup>30</sup> Even if the passing off is 'innocent', relief may be granted.<sup>31</sup> It depends mainly on whether the goodwill associated with the claimant's business is harmed because the nature or origin of the defendant's goods or services is misrepresented and the buying public or ultimate consumers are taken in by that misrepresentation. A statement which is true may give rise to the action. If a sole trader with a retail clothing business changes his name to Levi Strauss by deed poll, having the name sign-written above his shop, it is not a false misrepresentation but it is, nevertheless, likely to be restrained if the clothing manufacturer by that name sues for passing off.<sup>32</sup> Although it is generally accepted that honest use of one's own name is permitted, regardless of the fact that customers may be misled, such honest use must be done in a way so as not to exaggerate the connection. For example, in *Wright, Layman & Umney Ltd v Wright*<sup>33</sup> the claimant had a wide reputation under the name 'Wright's', as in 'Wright's Coal Tar Soap'. The defendant, trading as 'Wright's Chemical Company', had, without any dishonesty on his part, passed off his goods as those of the claimant by using the name 'Wright's' in relation to them. Lord Greene MR said:

A man may sell goods under his own name as his own goods. If he does so, he is doing no more than telling the truth. If there happens to be already on the market another trader of that name . . . that is just his misfortune . . . provided that a man keeps within the limit of using his own name and does so honestly and *does not go beyond that*, nobody can stop him even if the result of him doing so leads to confusion.<sup>34</sup> (emphasis added)

34 (1949) 66 RPC 149 at 151.

It is apparent from the above case that a trader can easily go beyond the limit of using his own name honestly and the original injunction was extended to prevent the use by the defendant of the name ‘Wright’ or ‘Wright’s’ in a descriptive phrase applied to his products. It is difficult to see what use of his own name the defendant was left with and the spirit of the sweeping and generous statement by Lord Greene does not appear to have been reflected in his judgment, bearing in mind the defendant’s real surname was ‘Wright’.

## CLAIMANT’S GOODWILL

Merely copying the name or style of another trader is not, *per se*, sufficient for a passing off action although it could give rise to an action for infringement of copyright if what is copied is more than a simple name: for example, a logo. There must have been a goodwill associated with reputation which had been acquired by the claimant in relation to that name or style. Reputation comes about through consistent use:<sup>35</sup> for example, the phrase ‘Camel Hair Belting’ used by the claimant from 1879 to 1891 was considered by the jury in *Reddaway v Banham*<sup>36</sup> to have become distinctive of the claimant’s belting even though it was entirely descriptive. In *County Sound plc v Ocean Sound plc*,<sup>37</sup> the phrase ‘Gold AM’ used in connection with broadcasts of ‘golden oldies’ was held not to have acquired goodwill because it was often used in conjunction with the name ‘County Sound’, it was immediately descriptive of a certain type of radio programme and it did not indicate the source of such programmes. Nourse LJ acknowledged that, had the name been truly distinctive, goodwill in that name could have been acquired within a period of six months. However, the test for whether a trade has established goodwill protected by passing off is not the same as distinctiveness for trade mark purposes.<sup>38</sup>

35 Suspension of use for a long period of time might result in the later recommencement of use being insufficient to revive any residual goodwill or raise an issue of concurrent goodwill in the face of another trader who had been using the name during the period of suspension of use: *Patience and Nicholson (NZ) Ltd v Cyclone Hardware Pty Ltd* [2002] FSR 656 in the Court of Appeal, New Zealand.

36 [1896] AC 199.

37 [1991] FSR 367.

38 *Phones 4u Ltd v Phone4u.co.uk Internet Ltd* [2007] RPC 83.

If a trader has only just started in business or has only recently started using an unregistered mark or ‘get-up’ he may be unable to succeed in a passing off action. Passing off does not protect goodwill of a trivial extent.<sup>39</sup> Even where sufficient goodwill once existed, it may diminish over time and later become trivial.<sup>40</sup> Nor is contemplating future goodwill likely to be helpful even though passing off may be able to protect the development of a growing business.<sup>41</sup> Although a newly registered trade mark has immediate protection, with passing off the claimant must be able to prove that he has built up a reputation around the name, mark or ‘get-up’: that is, he has acquired a property in the goodwill associated with the subject matter.<sup>42</sup> It is not possible to lay down hard and fast rules as to the period of time taken to acquire protectable goodwill. It depends on the circumstances. If there is a great deal of commercial activity and advertising throughout the UK, goodwill could be acquired in a relatively short period of time even prior to the availability of the goods or services to which the goodwill relates. In *Stannard v Reay*<sup>43</sup> it was held that three weeks was sufficient time to build up goodwill in the name ‘Mr Chippy’ for a mobile fish and chip van operating on the Isle of Wight. The central question is whether a sufficient reputation has been acquired, and it is possible for the goodwill to be shared amongst a number of traders or businesses as the *Erven Warnink* case emphatically indicates.

39 *Hart v Relentless Records Ltd* [2003] FSR 647, per Jacob J noting that before registration of trade marks was possible, the property right in a mark could be acquired in a relatively short time simply by putting the mark to use. That did not apply now to goodwill.

40 *Knight v Beyond Properties Pty Ltd* [2007] FSR 313.

41 *Teleworks Ltd v Telework Group plc* [2002] RPC 535.

42 Just as, in the law of real property, a person may acquire property rights by continued use: for example, by prescription.

43 [1967] RPC 589.

It is generally accepted that the date at which goodwill is required to be shown to exist is the date of commencement of the defendant’s acts which are the subject of the

53 [1994] FSR 81.

complaint.<sup>44</sup> However, in *Scandecor Development AB v Scandecor Marketing AB*,<sup>45</sup> it was said that:

As a general rule, the goodwill which it is sought to protect must exist at the date of the proceedings. That is therefore the correct date on which to concentrate . . . however, in a case such as this, where the goodwill in dispute originates from a common source overseas, but then expands, spreads and is developed by different companies in different territories, it is also important to analyse the effect of the changes occurring from time to time in the control and ownership of the businesses which generate the goodwill.<sup>46</sup>

It is submitted that the latter approach is incorrect because, as a matter of logic, the existence of goodwill must coincide with the acts complained of. In the event that goodwill can be proved to exist no earlier than the date of proceedings, then what the defendant had been doing previously was not unlawful. Indeed, in *Cadbury Schweppes Pty Ltd v Pub Squash Co Pty Ltd*,<sup>47</sup> Lord Scarman, delivering the judgment of the Judicial Committee of the Privy Council, confirmed that the relevant date is, at law, the date that the conduct complained of commenced. The only possible proviso is that, where the claimant seeks a *quia timet* injunction, he must, at least, be able to show goodwill at the commencement of proceedings.

Goodwill can exist even if the product or service to which it relates has not yet been made available if a significant proportion of the public knew about the product or service because of a great deal of publicity. So it was held in *British Broadcasting Corp v Talbot Motor Co Ltd*,<sup>48</sup> where there was evidence that a significant part of the public recognised the name CARFAX as distinctive of the BBC's traffic information system capable of being received in vehicles by special radios. Similarly, in the Singaporean case of *Pontiac Marina Pte Ltd v CDL Hotels International Ltd*<sup>49</sup> it was held that a trader could, through extensive advertising, acquire a goodwill before he commenced trading.<sup>50</sup> Furthermore, goodwill is not restricted to traders which are large companies with high turnovers, and a small trader may establish goodwill in a particular locality or because he is well known in a specialist field.<sup>51</sup>

It is important to consider how the goodwill is associated with the product or service concerned. This may, of course, be influenced by the form of an advertising campaign. In *Whitworth Foods Ltd v Hunni Foods (International) Ltd*<sup>52</sup> the defendant deliberately copied the claimant's containers for glacé cherries. Viewed from the top, the cartons were easily distinguishable because the two companies' names were represented differently and set on different colour backgrounds. However, from the side the cartons looked very similar (both carrying the words 'Glacé Cherries') and the claimant argued that if the cartons were displayed on supermarket shelves, stacked on top of one another with the claimant's and the defendant's cartons adjacent to each other, there was a danger of confusion. In considering the association of the claimant's reputation with the features of their carton, Hoffmann J said that the claimant's goodwill was chiefly associated with their name and not the design of their containers and that this was confirmed by evidence of the claimant's advertising which was done in a general way without specific reference to their individual products.

Sometimes, the defendant may also have a goodwill associated with the name used by the claimant. If this relates to different goods or services, this may not be a problem. However, the possibility for a conflict arises if the defendant later wishes to diversify and enter the claimant's field of activity. In *Provident Financial plc v Halifax Building Society*,<sup>53</sup> the claimant had built up a substantial goodwill in the name Halifax which it used in respect of its motor insurance underwriting which it carried out through brokers. The defendant, then one of the leading building societies, widely known as 'The Halifax', decided to launch motor insurance services under its Halifax name and 'X' logo. Granting an injunction to maintain the status quo until a full trial, it was held

that it was reasonably arguable that, if the defendant were allowed to move into motor insurance, it would misrepresent that it was connected with the claimant. An important factor was that the defendant's goodwill and enormous public profile (it had spent over £27 million in advertising in 1991) would have been likely to have swamped and subsumed the claimant's goodwill.

Goodwill may be built up over a considerable period of time and transferred with the sale of the business with which it is associated. The fact that a member of a family business was employed by that business before its sale does not give that family member any goodwill in his own right even if the goodwill subsists in his own name.<sup>54</sup>

### Shared goodwill and ownership of goodwill

We have seen in *Erven Warnink Besloten Vennootschap v J Townend & Sons (Hull) Ltd*,<sup>55</sup> that goodwill can be shared by a number of traders. In that case the shared goodwill was in the name 'Advocaat', describing a particular type of alcoholic beverage, and that the goodwill was shared between the Dutch companies making the drink. The companies may also have an additional goodwill in their trading name which can reinforce and supplement the shared goodwill, such as in 'Warnink's Advocaat'.

In most cases, it will be obvious who owns the goodwill in question, even if shared. However, where more than one entity is involved in the placing of a product on the marketplace, there may be issues as to who owns the goodwill which has been generated or whether the goodwill is shared between them. This might be in the context of a group of companies or where one company acts as a distributor for another or operates as a licensee under a licence agreement.

In *Scandecor Development AB v Scandecor Marketing AB*,<sup>56</sup> two students at Uppsala University realised the potential of selling posters to students who, presumably, would be pleased to find a relatively inexpensive way of brightening up their student accommodation. They set up a company in Sweden but eventually fell out with each other. They agreed to split the business territorially and one set up a company in the UK. For a time, the English company obtained its posters from the Swedish company. At first instance, it was held that the goodwill was shared, the English company having a distributor's goodwill and the Swedish company having a publisher's goodwill.

The court went further to suggest that goodwill was shared as in a group of companies, with neither being able to restrain the other from using the *Scandecor* name in which the goodwill subsisted. Lloyd J referred to *Dent v Turpin*,<sup>57</sup> in which it was held that neither of the two stepsons of E.J. Dent could restrain the other from using the name (though either could stop a third party from using the name).

In the Court of Appeal<sup>58</sup> it was held that there was no rule of law or presumption of fact that goodwill generated by trading activities of a wholly owned subsidiary belonged to the parent company or was the subject of an implied, if not express, licence in favour of the subsidiary. The Court of Appeal disapproved of Lloyd J's finding that there were two different but connected goodwills in separate, not shared, ownership. Rather it accepted that it was legally and factually possible for a business based outside the UK to acquire goodwill in the UK by means of the supply of products through a subsidiary, agent or licensee. However, on the facts before the court, it was held that the Swedish company did not have goodwill in the UK because it neither traded there nor exercised any business control over activities in the UK such as to acquire goodwill.

In *Scandecor*, the Court of Appeal did not need to explore fully the possibility of goodwill being shared but it is by no means a novel concept. For example, in *Erven Warnink* (above), the House of Lords accepted that goodwill could be shared amongst an unrelated group of producers of Advocaat. In *Gromax Plasticulture Ltd v Don & Low Nonwovens Ltd*,<sup>59</sup> the claimant marketed a plastic crop cover made by the defendant.

<sup>54</sup> *Asprey and Garrard Ltd v WRA (Guns) Ltd* [2002] FSR 487. The second defendant (the first defendant was his company) used his name, 'William R Asprey, Esquire', above his shop front.

<sup>55</sup> [1979] AC 731.

<sup>56</sup> [1998] FSR 500.

<sup>57</sup> (1861) 2 John & H 139.

<sup>58</sup> [1999] FSR 26.

<sup>59</sup> [1999] RPC 367.

They agreed that it should be marketed under the name ‘Gro-Shield’ and cooperated to promote these products. At first, it was sold in such a way to indicate the defendant as the manufacturer but later publicity linked the product only with the claimant. The court held that, at the beginning, the factors pointed both ways as to who was responsible for the character and quality of the product and, as a consequence, the goodwill was shared. The claimant was unable to discharge the burden of proving that it alone had the sole right to use the name.

A goodwill which is shared between two businesses may have the effect of giving an impression that the businesses are bigger than they actually are. Where two companies share goodwill in their dominant trading names, care must be taken not to make changes to them which could amount to passing off. In *Sir Robert McAlpine Ltd v Alfred McAlpine plc*,<sup>60</sup> the two companies derived from a single company originally set up by Sir Robert McAlpine in the nineteenth century. During 1935, the company split, with one of Sir Robert’s sons, Alfred, taking one of them. The companies agreed on a geographical split which lasted until 1983. There had been informal agreements that ‘Alfred’ would be used in the name of Alfred’s company. The defendant was the holding company of Alfred’s trading company, which changed its name in 2003 to McAlpine Capital Projects Ltd, although the holding company did not change its name. It was held that the trading company was guilty of passing off although it was accepted that the claimant and defendant had goodwill in the name ‘McAlpine’. However, neither could complain of the other having that goodwill providing it took steps to use an appropriate identifier to make it clear it was not associated with the other company. By stopping using ‘Alfred’ in its name, this was something the defendant’s trading company failed to do. Just as the sole owner’s rights in goodwill should not be prejudiced, neither should joint owners be prejudiced whether at the hands of the other joint owner or a third party.

60 [2004] RPC 711.

Determining the identity of the owner of goodwill is a question of fact. Though it might be convenient to make use of a time-worn presumption, it seems the question can only be answered by looking at the facts of a particular case. For example, in *Medgen Inc v Passion for Life Products Ltd*,<sup>61</sup> it was held in the Chancery Division that ownership of goodwill was a question of fact and that there was no presumption that, as between a foreign manufacturer and UK distributor, goodwill belonged to the former. The facts of the case are that the claimant manufactured an anti-snoring remedy under the name ‘Snorenz’ which the defendant sold in the UK as the claimant’s exclusive distributor. When the relationship broke down, the defendant started selling its own equivalent product under its registered trade mark ‘Snoreeze’. Both claimed goodwill in ‘Snorenz’. A number of factors were important in the decision that the claimant owned no goodwill in the UK. The claimant carried on no direct business in the UK, the packaging bore no reference to the claimant, all the marketing and sales activity in the UK was carried out by the defendant and all references on the packaging and advertisements related exclusively to the defendant to whom trade customers turned if there were any problems. Finally, there was no evidence that retailers or ultimate customers knew or cared that the claimant was the developer or manufacturer of the product.

61 [2001] FSR 496.

In the context of a licence or distributorship agreement, where the licensor or manufacturer is based in another country which recognises the law of passing off, it may be possible that each will share goodwill but will own it on a territorial basis. For example, in *Electro Cad Australia Pty Ltd v Mejati RCS SDN BHD*,<sup>62</sup> pre-launch publicity and promotions in Malaysia established goodwill in ‘Stopcard’, a device which allowed the owner of a vehicle which had been stolen to dial a telephone number to bring the car to a gradual stop. It was held that the goodwill was shared between the Australian manufacturer and the Malaysian company that had been granted exclusive rights to market the product in Malaysia. However, as regards Malaysia that goodwill was owned solely by the Malaysian company.<sup>63</sup>

62 [1999] FSR 291.

63 The defendants were guilty of passing off by placing an equivalent product on the market in Malaysia under the name ‘Stopcar’.

In many cases, a licence agreement or distributorship agreement will contain specific provisions dealing with the issue of goodwill and ownership of it. It clearly makes good sense to deal with this question where the goodwill subsists in a trading or product name. Often the ex-licensee or ex-distributor will be contractually barred from using the relevant name as the licensor or manufacturer, as the case may be, will be careful to prevent the continued use of the name post-agreement as this could have the effect of eroding the goodwill or causing confusion in the relevant market. This could lead to the eventual destruction of the goodwill. The same considerations apply where a subsidiary company, trading under a variation of a name used by other members of the group, falls into the hands of a third party. In *Dawnay Day & Co Ltd v Cantor Fitzgerald International*,<sup>64</sup> a subsidiary company of the claimant was known as Dawnay Day Securities Ltd. Eventually, due to a management deadlock, an administrator sold the business to the defendant for £2.5 million with the right to use the name ‘Dawnay Day Securities’ so far as it was lawfully able to do so.

64 [2000] RPC 669.

Sir Richard Scott VC, in the Court of Appeal, said it was unnecessary to analyse the ownership of the ‘Dawnay Day’ name but he said that all the remaining members of the group were entitled to restrain the use of the name by the defendant. He had no hesitation in finding passing off, pointing out it was a clear misrepresentation for the defendant to use the name as that would send out a message that the defendant was associated with the group. The only way in which the defendant could continue to use the name would be if he could show that the name had ceased to be distinctive of the group of companies.

A trader might build up goodwill in his business then sell that business as a going concern together with that goodwill. Difficulties might arise if the original trader later wishes to start up business again and use a similar name. In some cases, the name in which the goodwill exists may be the original trader’s own name. One way to deal with this potential difficulty is for the buyer of the business to ask for an appropriate restrictive covenant from the seller of the business and, of course, to ensure that the sale agreement does include the assignment of the goodwill, properly defined. In *IN Newman Ltd v Richard T Adlem*,<sup>65</sup> the defendant operated a funeral undertaking business under his own name. He later sold the business to the predecessor in title of the claimant for £55,000 (comprising £54,000 for the goodwill and £1,000 for the stock in trade). He granted a lease of the Chapel of Rest to the buyer and continued to provide services to the new owner. There was a covenant in restraint of trade which prevented, *inter alia*, the defendant carrying on an undertaking business for five years within a ten-mile radius. After the covenant expired and following failure to agree a new covenant, the defendant recommenced an undertaking business on his own account and under his own name, Richard T. Adlem, and he applied to register ‘Richard T. Adlem Funeral Director’ as a trade mark. At first instance, the judge held that the parties both shared goodwill in the name Richard T. Adlem.

65 [2006] FSR 253.

The majority of the Court of Appeal disagreed and held that the goodwill in the name had been sold with the business and validly assigned to the claimant. The defendant was, therefore, guilty of passing off. Furthermore, the trade mark, which had by now been registered, was invalid. The trial judge erred in finding that both parties had concurrent goodwill. This seems to have been based on the fact that the defendant carried on working for the business after the sale in a personal capacity. However, any goodwill he built up during that period belonged not to him but to the business.<sup>66</sup> Once the restrictive covenant had expired, there was nothing to prevent the defendant starting up business in his own right again and even using his own name, but he was under a duty to make it clear that his new business was nothing to do with that of the claimant. Disclaimers had been used but these were insignificant and not

66 Arden LJ dissented. She pointed out that some parts of the original business had been retained by Mr Adlem, including the headstone business and that, in any case, most of the purchase price was to be paid over a period of time out of profits made by the buyer of the business.

sufficiently ‘up front’. Such disclaimers should be viewed from the perspective of all types of person who read them including those with a less than perfect memory.

## DESCRIPTIVE WORDS AND GEOGRAPHICAL NAMES

As the *Halifax* case shows, it is possible to acquire goodwill in a name which includes a geographical name. However, geographical names and, *a fortiori*, descriptive words are likely to lack distinctiveness in most cases such that it will be difficult, if not impossible, for a trader to demonstrate that he has a goodwill associated with the word or words in question.

67 [1946] 63 RPC 39.

In *Office Cleaning Services Ltd v Westminster Windows and General Cleaners Ltd*,<sup>67</sup> the claimant unsuccessfully tried to restrain the defendant from using the trading name ‘Office Cleaning Association’. In the claimant’s unsuccessful appeal to the House of Lords, Viscount Simonds said (at 42):

... the courts will not readily assume that the use by a trader as part of his trade name descriptive words already used by another trader as part of his trade name is likely to cause confusion and will easily accept small differences as adequate to avoid it. It is otherwise where a fancy word has been chosen as part of the name.

68 [1981] RPC 69.

69 [1983] RPC 407.

Other examples of descriptive words denied protection by the law of passing off include ‘Oven Chips’ in *McCain International Ltd v Country Fair Foods Ltd*<sup>68</sup> and ‘Chicago Pizza’ in *My Kinda Town Ltd v Soll*.<sup>69</sup> Where such words are used, there are two issues in effect. First, because descriptive words are unlikely to be distinctive, it is difficult for a trader to show that he has established goodwill in the words. Second, a trader complaining that another trader is wrongfully using the words will find it almost impossible to prove that there is a likelihood of confusion in the minds of the buying public and, that being so, proof of damage (an essential element in passing off) will not be present.

If things were otherwise and protection was readily afforded to descriptive words, it would become very difficult for other traders to describe their activities to potential customers. As Laddie J said in *Antec International Ltd v South Western Chicks (Warren) Ltd*<sup>70</sup> (at 285):

70 [1997] FSR 278, an interim hearing.

As it is sometimes put, no trader will be allowed to fence in the common of the English language. From this it flows, that in some cases where a trader has used a highly descriptive name he will find it virtually impossible to obtain protection at all by means of passing off proceedings.

He went on to say that this is not, however, an exact science, echoing Oliver LJ in *My Kinda Town Ltd v Soll* who said that there was no clear dichotomy between unprotected descriptive words and fancy names. Of course, made-up words (‘fancy names’), unless very similar to already known words, are distinctive *per se* and there should be little difficulty in establishing a likelihood of confusion. In *Antec*, the phrase in issue was ‘Farm Fluid’ used for disinfectants used at farms, and, although Laddie J accepted that it was relatively descriptive, he nevertheless went on to grant an interim injunction to restrain passing off. It was at least arguable that persons buying under that phrase wanted the claimant’s product and, furthermore, no other trader, apart from the defendant, was using ‘Farm Fluid’ to describe their disinfectant.

71 [1998] FSR 738.

At the full trial of the action, Michael Hart QC accepted that the words ‘farm’ and ‘fluid’, taken together, as ‘farm fluid’, were not part of the common of the English language.<sup>71</sup> Acknowledging them separately as ordinary English words did not inexorably mean to say that the phrase is simply descriptive of the product. He pointed out that there was no evidence to support the notion that the term ‘farm fluid’ was in general

usage amongst farmers. On the contrary, the evidence established that the term had become associated by farmers with the claimant's agricultural disinfectant.

A word may be descriptive but may also develop a secondary meaning which could be protected by goodwill. In *Knight v Beyond Properties Pty Ltd*,<sup>72</sup> the claimant had authored some children's books, using the word 'Mythbusters' in the titles. Although this was descriptive, by 1993 it had also acquired a small-scale reputation sufficient to attract attention. However, by the time the defendant had produced some television programmes under the name 'Mythbusters' (around 2002–2006) the reputation in relation to the books had diminished to the point that it had become trivial and no longer protected.

Where, generally, one trader uses descriptive words and another trader uses similar words, the court will tend to concentrate on the differences. Thus, in the *Office Cleaning* case, the court isolated 'Services' and 'Association' and held that there was a sufficient differentiation between them such that the defendant was not guilty of passing off. The opposite was held in *British Diabetic Association v Diabetic Society Ltd*,<sup>73</sup> in which Walker J accepted that 'Society' and 'Association' were similar in derivation and meaning and 'not wholly dissimilar in form'.<sup>74</sup> Therefore, there was not a sufficient differentiation to avoid passing off and a final injunction was granted.

In *S\$1.99 Pte Ltd v Lifestyle 1.99 Pte Ltd*,<sup>75</sup> it was confirmed that, if a name or mark was descriptive, it could only be protected if it could be shown that it had acquired a secondary meaning. Furthermore, where descriptive words were used, a slight difference would suffice to distinguish them.

In that case, the claimant operated a retail outlet at which everything was sold for the price of \$1.99 (Singaporean dollars). It used a logo with the words 'ONE.99 Shop'. The defendant opened a similar outlet selling most of its goods for \$1.99 under a sign which included the word 'Lifestyle' under which the figure 1.99 appeared prominently. Accepting that figures could become distinctive for the purposes of a passing off action, the Singaporean Court of Appeal held that the defendant was not guilty of passing off as the defendant had used the word 'Lifestyle' and used different colours for their logos. Consequently, there was little likelihood of deception. The court went on to say that, although it appeared that the defendant was deliberately 'cashing in' on the favourable publicity generated by the claimant, there was no such thing as a tort of unfair competition.

In *British Broadcasting Corporation v Talksport Ltd*,<sup>76</sup> the BBC had sole radio broadcasting rights in the UK for the Euro 2000 football championship. It alleged that the defendant falsely represented that it provided live coverage of the competition when, in fact, it only offered 'off-tube' broadcasts (commentaries provided by commentators who watched live TV broadcasts, rather than being at the stadium at which matches were being played). The defendant nevertheless advertised its coverage as being 'live'. The defendant gave certain undertakings including that it would not represent that it held official or live broadcasting rights and that it would make it clear that its broadcasts were 'off-tube' and that it was not the BBC. At a resumed hearing, the BBC sought an order to restrain the defendant from representing by the use of sound broadcasts that any broadcast contained live coverage of Euro 2000 matches.

As a result of the defendant's skill in dubbing ambient sound on to the commentary, Blackburne J, in deciding whether to grant a further interim injunction, thought that the ordinary listener might think the defendant's broadcast was live. However, the judge did not accept that goodwill could subsist in words which were merely descriptive of the product or service. He said it was the indicia by which an activity was known rather than the activity itself which gave rise to goodwill. Thus, there could be no goodwill in the phrase 'live sports broadcasting'. In other words, the phrase remained descriptive and had not acquired a secondary meaning in respect of the BBC's activities.

<sup>72</sup> [2007] FSR 313.

<sup>73</sup> [1996] FSR 1.

<sup>74</sup> The word 'British' was not considered as part of the claimant's name for the purposes of the decision.

<sup>75</sup> [2001] FSR 98.

<sup>76</sup> [2001] FSR 53.

A trader using a descriptive word is more likely to acquire goodwill if the word is not generally used in the trade in which the trader is involved. For example, the word ‘Millenia’<sup>77</sup> was held not to be descriptive in the context of offices, shops and hotels.<sup>78</sup> The decision was upheld on appeal.<sup>79</sup> The claimant had used the word ‘Millenia’ for a complex comprising two office towers (including one named Millenia Tower), a shopping mall named Millenia Walk and two hotels including one named Ritz-Carlton, Millenia Singapore. An argument that the name of the hotel was Ritz-Carlton and ‘Millenia’ only served to designate the location of the hotel was rejected. Even if it was accepted that it was a geographical description, the word was more fanciful than obviously descriptive. Therefore, goodwill subsisted in the claimant’s business operations associated with the word ‘Millenia’.

Whether a word is capable of supporting goodwill depends very much on its context. Descriptive words may reach the status of fancy names if they are used in an unusual or unexpected context. For example, ‘Spectrum’ would be descriptive in terms of optical lens manufacture, but not when used in the field of lawnmowers. The issue is distinctiveness rather than whether the word or phrase is descriptive or fancy. Similarly, with a slang term, it will be difficult to establish the presence of goodwill associated with the term. To be successful, the claimant must show that the term has acquired a secondary meaning, being indicative of the claimant’s goods. Thus, in *Box Television Ltd v Haymarket Magazines Ltd*,<sup>80</sup> it was held that the claimant had failed to show that it had goodwill in ‘The Box’ for its cable TV channel. Parker J considered that ‘The Box’ was simply a colloquialism for a television set. That is not to say, however, that it is impossible to acquire goodwill in a slang term, merely that a trader will face an uphill task in convincing a court that the public associates the term with his goods or services.

A phrase such as ‘Internet World’ seems very descriptive at first sight, but in *Mecklermedia Corp v DC Congress Gesellschaft mbH*,<sup>81</sup> the claimant claimed extensive goodwill in the phrase as regards its activities in respect of its website and magazines. The defendant had registered the name as its trade mark in Germany and had already commenced proceedings there for trade mark infringement. Jacob J held that, although ‘Internet World’ was to some extent descriptive, it was not so descriptive that goodwill could not exist in it and he accepted that the claimant had established a serious question that it had extensive goodwill in England.<sup>82</sup> He refused to strike out the claim, stay the action or decline jurisdiction pending the outcome in the German case. The two claims were different and there was no danger of conflicting decisions as the German case involved a trade mark whereas the English case was concerned with passing off. Jacob J considered that the English courts were the most convenient forum for hearing an English passing off case.

A geographical name used by a trader could have one of three meanings. It could indicate that:

- the trader’s goods come from that place;
- the trader’s goods are of a particular type associated with that place and, therefore, likely to appeal to a particular taste; or
- it is the product of a particular trader.

The third meaning has been described in the House of Lords in the ‘Stone Ale’ case<sup>83</sup> as a secondary meaning to which goodwill could attach and which could be established by evidence. However, in *Barnsley Brewery Co Ltd v RBNB*,<sup>84</sup> the court declined to renew an injunction against the use of ‘Barnsley Bitter’ by the defendant as the claimant did not have a strong case that the phrase had acquired such a secondary meaning. ‘Barnsley Bitter’ had been used by a third party at its Oakwell (near Barnsley) brewery from 1883 to 1976. Both the claimant and defendant were hoping to capture the historical goodwill associated with the name.

77 The correct spelling is ‘Millennia’.

78 *Pontiac Marina Pte Ltd v CDL Hotels International Ltd* [1997] FSR 725, High Court, Singapore.

79 [1998] FSR 839.

80 *The Times*, 3 March 1997.

81 [1997] FSR 627.

82 The defendant’s claim that ‘Internet World’ was too descriptive for goodwill to exist in it lay ill with its claim to have a valid registered trade mark in Germany consisting of that name.

83 *Montgomery v Thompson* [1871] AC 217.

84 [1997] FSR 462.

In some cases, geographical names have a special form of protection by virtue of European Community Regulations: for example, Council Regulation (EEC) 1576/89 of 29 May 1989 laying down general rules on the definition, description and presentation of spirit drinks,<sup>85</sup> which restricts the use of geographical names for spirits such as Scotch whisky, and Council Regulation (EEC) No 2081/92 of 14 July 1992 on the protection of geographical indications and designations of origin for agricultural products and foodstuffs.<sup>86</sup> In the case of the former Regulation, in *Matthew Gloag & Sons Ltd v Welsh Distillers Ltd*,<sup>87</sup> the defendants bought Scotch whisky and marketed it under the name Welsh whisky. It was held that the claimants had an arguable case for passing off<sup>88</sup> and that they also had a private right under the Regulation which allowed the use of other geographical names provided that they did not mislead customers.

As regards the latter Regulation, at first instance it was held that Asda Stores could not be prevented by virtue of the regulation from selling Parma ham which had been sliced and packaged outside the Parma region of Italy even though that was contrary to Italian law.<sup>89</sup> The ham itself came from the Parma region and was not misdescribed as the Regulation was concerned with designation of origin and contained no direct reference to slicing and packaging. The Parma Ham Association appealed. In *Consorzio del Prosciutto di Parma v Asda Stores Ltd*,<sup>90</sup> the House of Lords referred the following question to the European Court of Justice for a preliminary ruling under Article 234 of the EC Treaty:

Whether, as a matter of Community law, Council Regulation (EEC) No. 2081/92 read with Commission Regulation (EC) No. 1107/96 and the specification for the PDO<sup>91</sup> ‘prosciutto di Parma’ create a valid Community right, directly enforceable in the court of a member state, to restrain the retail sale as ‘Parma ham’ of sliced and packaged ham derived from hams duly exported from Parma in compliance with the conditions of the PDO but which have not been thereafter sliced, packaged and labelled in accordance with the specification.

Although clearly contrary to Italian law,<sup>92</sup> concerns had been expressed in that the specification containing the description of the product (and in particular the requirements as to the packaging and labelling of sliced ham) had not been published in the *Official Journal*, or, for that matter, anywhere else. The Court of Appeal said that it was a general principle of European law that any measures directly enforceable against the citizen should be transparent and readily accessible.

## THE SCOPE OF PASSING OFF

The scope of passing off is quite wide and it can protect unregistrable business names, unregistered trade marks, advertising and general ‘get-up’; in fact, anything that is distinctive of the claimant’s goods, services or business. Trade mark law requires some use of the mark whereas, in passing off, no express use or mention of a trade name is required; mere implication is adequate. For example, in *Copydex Ltd v Noso Products Ltd*,<sup>93</sup> the claimant had given a demonstration of its glue on television although the name of the product was not mentioned (this was before the days of commercial television and great care was taken not to mention trade names, even to the extent of covering over manufacturers’ names on items used in dramatic sketches). The defendant company also made glue and one of its salesmen gave a demonstration of its glue in a large retail store. During the demonstration a large card was displayed which bore the words: ‘“NOSO” here again! As shown on television “Women’s Hour”’. When the claimant complained, the defendant gave the court an undertaking not to do it again; otherwise an injunction would have been granted in favour of the claimant.

The scope of passing off can be considered in terms of the meaning of ‘in the course of trade’, the extent of marks and ‘get-up’ protected and geographical range.

<sup>85</sup> OJ L 160, 12.06.1989, p 1.

<sup>86</sup> OJ L 208, 24.07.1992, p 1.

<sup>87</sup> [1998] FSR 718.

<sup>88</sup> On the basis of inverse passing off, as in *Bristol Conservatories Ltd v Conservatories Custom Built Ltd* [1989] RPC 455.

<sup>89</sup> *Consorzio del Prosciutto di Parma v Asda Stores Ltd* [1998] FSR 697.

<sup>90</sup> [2002] FSR 37.

<sup>91</sup> PDO means protected designation of origin.

<sup>92</sup> Law No 26 of 13 February 1990, entitled ‘Protection of denomination of origin “Prosciutto di Parma”’.

<sup>93</sup> (1952) 69 RPC 38.

## In the course of trade

Although some judges have talked about passing off in relation to trade in goods, it is clear that it applies equally to services as well. Before service marks could be registered, this was of exceptional importance as the use of another's name in relation to the provision of services could only be actionable as passing off. In *Harrods Ltd v R Harrod Ltd*,<sup>94</sup> the claimant was a well-known company with a banking department, but which was precluded from operating as a moneylender by the articles of association. The defendant registered a money lending company under the 'fancy name'<sup>95</sup> of R Harrod Ltd, that is a name having nothing to do with his own name. This fact, together with his advertising style, showed that he was acting fraudulently in an attempt to gain advantage from these similarities and the claimant was granted an injunction to restrain the defendant from using that name.

'Trade' does not have to be primarily associated with commercial enterprise and in *British Medical Association v Marsh*<sup>96</sup> the claimant, a professional body constituted as a non-profit-making unincorporated association, was able to obtain an injunction to prevent the defendant passing off his business as that of the claimant's. The Association had published analyses of 'quack medicines' because of concern that they were of no medical value and were being sold at excessive prices. The defendant started making up proprietary medicines from the Association's analyses and sold them in a drug store which had the letters 'B.M.A.' displayed in the window together with other references to the Association. To describe the Association's operations as being in the course of trade shows a certain elasticity of thought but it was said that the claimant's 'business' would be harmed because the passing off might cause existing members to leave the Association or to discourage potential members from joining. That is, existing and potential members might think that the defendant's activities were approved of or connected with the Association.

It has been accepted that a charity, too, is capable of possessing goodwill indistinguishable from commercial goodwill which was equally entitled to legal protection through an action in passing off. In *British Diabetic Association v Diabetic Society*<sup>97</sup> the defendant charity was restrained from using its name, such use amounting to a deception calculated to injure (albeit unintentionally) the reputation and goodwill of the claimant charity. Walker J expressed his profound regret at the failure of the parties to settle the dispute, the costs of which were £750,000. He said that it was difficult even for a lawyer to comprehend how the litigation could help diabetics whose subscriptions and gifts would ultimately be the source of payment of the lawyers' bills.<sup>98</sup>

The fact that goodwill can attach to non-profit-making organisations was confirmed again in *Burge v Haycock*<sup>99</sup> in which a former member of the British National Party purported to stand in a council election as a candidate of the Countryside Alliance. His nomination and ballot paper describing him as such a candidate had been accepted by the returning officer but the Countryside Alliance, which campaigned and lobbied against the abolition of field sports such as hunting with dogs, sued for passing off. The court held, on the basis of a long line of authorities, that the claimant had protectable goodwill which could be injured by loss of control of its name or by association with the defendant.

Such a robust view of trade and potential harm has not readily been embraced in cases involving individuals whose names have been used without their permission. In *McCullogh v Lewis A May Ltd*<sup>100</sup> the claimant was a well-known children's broadcaster who used the name 'Uncle Mac'. The claimant had some physical infirmities. The defendant sold cereal under the name 'Uncle Mac', with indirect reference to the claimant's infirmities, without the claimant's permission. It could be argued that, in such a situation, inferences might be drawn by the public seeing the cereal which might

94 (1924) 41 RPC 74.

95 It may have been so described because the Patents, Designs and Trade Marks Act 1883 permitted the registration of 'fancy words', although the phrase 'invented word' was soon to replace it.

96 (1931) 48 RPC 565.

97 [1996] FSR 1.

98 *The Times*, 14 October 1995, p 6.

99 [2002] RPC 553.

100 (1948) 65 RPC 58.

be harmful to the claimant. For example, it could be inferred that the claimant had to resort to allowing his nickname to be used in this way to earn more money and that to soil his hands with advertising was contrary to the image he was trying to maintain. However, it was held that the facts could not give rise to passing off because the claimant was in no way involved in the making or marketing of cereals; instead, he was a broadcaster. There was no common field of activity.<sup>101</sup> The decision totally fails to take any account of the fact that many of the public buying and eating the cereal would assume that the claimant had given permission for his nickname to be used in such a fashion and the possibility that he might lose popularity as a broadcaster because of the lower regard in which media personalities involved with advertising were once held.

Where a personal name has been used without permission in order to promote a product or a service, there is always a possibility of an action in defamation.<sup>102</sup> ‘Uncle Mac’ may have stood a better chance had he sued in libel, as Wynn-Parry J said: ‘If it were anything, it were libel, as to which I say nothing.’ In *Sim v HJ Heinz Co Ltd*,<sup>103</sup> Ron Moody, the actor, was engaged to read the commentaries for advertisements for the defendant’s products to be broadcast on television. In making the commentaries, he mimicked the voice of another popular actor, Alistair Sim, who took objection. However, it was held that an injunction would not be granted, whether on the basis of defamation or passing off, because there was no evidence of damage to the reputation of the claimant. Again, there is no common field of activity: the claimant was in the business of acting and not in the business of making and selling soups and baked beans. It is certainly far less likely that the claimant’s business goodwill would be harmed in cases such as this compared to the ‘Uncle Mac’ case.

Both of the above cases must now be seen in the light of *Irvine v Talksport Ltd*<sup>104</sup> in which it was accepted that falsely implying that a celebrity was endorsing a product is actionable under passing off. However, in *Irvine v Talksport* a doctored photograph was used rather than the use of a name or the voice of a mimic. Nevertheless, it is submitted that now a court would be more ready to find passing off in wider circumstances, given that the public is now more used to the fact that celebrities commonly endorse products in return for payment.

Registering a domain name on the internet which includes a famous person’s name may be actionable as passing off, on the basis that the person registering the name has made an instrument of deceit, if there is evidence that there is a dishonest or fraudulent motive behind it.<sup>105</sup>

### Extent of protection of marks and ‘get-up’

Passing off goes beyond the type of mark that is registrable as a trade mark and can apply in respect of containers and packaging.<sup>106</sup> In a controversial case which went all the way to the House of Lords, *Reckitt & Colman Products Ltd v Borden Inc*,<sup>107</sup> it was held that the law of passing off protected the Jif lemon. The Jif lemon is a plastic lemon coloured and shaped receptacle in which the claimant’s lemon juice was sold. The defendant sold lemon juice in a similar but not identical container (it was bigger, having a green cap and a flat side) and was restrained from passing off its lemon juice as that of the claimant by use of a deceptively similar ‘get-up’. Lord Bridge said that the result was to give the claimant a *de facto* monopoly on the container which was just as effective as a *de jure* monopoly and he commented on the fact that a trader selling lemon juice would never be allowed to register a lemon as a trade mark but that the claimant had achieved that result indirectly.<sup>108</sup> However, Lord Bridge reluctantly had to agree that that was the outcome on the basis of the application of the law of passing off.<sup>109</sup> Lord Oliver said that all the main ingredients of a passing off action, namely

<sup>101</sup> The need for the common field of activity is discussed later in this chapter.

<sup>102</sup> An example where the claimant successfully sued in defamation is *Tolley v JS Fry & Sons Ltd* [1931] AC 333 where the picture of the claimant was printed on the wrappers of chocolate bars.

<sup>103</sup> [1959] 1 All ER 547.

<sup>104</sup> [2003] FSR 619.

<sup>105</sup> See the section on ‘Passing off and internet domain names’ below.

<sup>106</sup> Trade mark law now permits the registration of the shape of goods or their packaging: Trade Marks Act 1994 s 1(1), subject to s 3(2).

<sup>107</sup> [1990] 1 All ER 873.

<sup>108</sup> Under the 1994 Act, although a representation of a lemon is descriptive of the goods, it may still be registrable if, in fact, the mark has become distinctive through use.

<sup>109</sup> All judges from the trial judge up to and including the House of Lords judges came to the same conclusion as regards passing off.

goodwill, misrepresentation and damage, were present. The Jif lemon had been on sale since 1956 and a considerable goodwill had built up associated with it; it was likely that a good number of housewives would purchase the defendant's lemon juice in the belief that they were purchasing Jif lemons even though careful inspection would show that the defendant's lemons were not Jif lemons because of the different shape and the attached labels.<sup>110</sup> The essence of a passing off action was said to be a deceit practised on the public. Customers were to be taken as they were found, it being no answer to the claim that customers would not have been mistaken had they been 'more careful, more literate and more perspicacious'.

110 However, it was accepted that the labels could easily become detached.

The decision seemed out of step with trade mark law at the time which, generally, denied registration to containers, as in the trade mark case of *Re Coca-Cola Co*<sup>111</sup> where the House of Lords was concerned about creating a monopoly in a container. The decision in *Reckitt & Colman v Borden* did raise the question as to whether a greengrocer could ever be accused of passing off his natural lemons as Jif lemons! Of course, the decision stops short of this. Now, with the Trade Marks Act 1994, the congruence between the law of passing off and trade mark law is much greater.

111 [1986] 2 All ER 274.

The law of passing off does not stop short at containers. Even the shape or appearance of the article itself may be protected. In *Hodgkinson and Corby Ltd v Wards Mobility Services Ltd*,<sup>112</sup> the claimant made a cushion for use by permanently immobile persons to prevent pressure sores. It had a distinctive appearance. The defendant was planning to sell a 'lookalike' cushion though under a different trade name. It was held that passing off could occur even when the appearance of goods had been copied and that passing off was not restricted to taking a name, mark or sign. Although copying the appearance of a product is not unlawful, *per se*, in the absence of infringing an intellectual property right, in terms of passing off, the defendant must always do enough to avoid the deception.

112 [1995] FSR 169.

The ability of purchasers to make subtle distinctions was considered to be a factor in the Privy Council case of *White Hudson & Co Ltd v Asian Organisation Ltd*<sup>113</sup> in which the claimant had sold cough sweets wrapped in red cellophane in Singapore since 1953. The wrapper bore the word 'Hacks' and a list of ingredients. From 1958, the defendant also sold cough sweets of a similar colour and shape which were also wrapped in red cellophane but with the name 'Pecto' printed on the wrappers. It was held that the claimant had established a get-up in the red coloured wrapper that was distinctive of his cough sweets and there was a danger of confusion, especially as few purchasers could read the words 'Pecto' and it was shown that many customers asked for 'red paper cough sweets'. Although no deception was proved on the part of the defendant, the get-up of the defendant's sweets was calculated to deceive and the injunction granted to the claimant in the Court of Appeal in Singapore was confirmed. To avoid confusion the defendant could have simply used a different colour for its wrappers or used a prominent symbol on the wrapper. The use of a different colour will not always be a realistic option: for example, as in the Jif lemon case.

113 [1964] 1 WLR 1466.

The protection of wrappers and containers by passing off is one example of the width of this area of law compared to trade marks, although the latter has now caught up as a result of amendments to trade mark law so as to implement the Trade Marks Directive.<sup>114</sup> But passing off can go even further in the subject matter protected and can protect, in principle, anything associated with goodwill such as a method of doing business or a theme used in advertising. Of course, the less tangible the subject matter is, the less likely it is that the claimant can show that there has been or will be damage to his goodwill as a result of the defendant's misrepresentation. In *Cadbury-Schweppes Pty Ltd v Pub Squash Co Pty Ltd*,<sup>115</sup> the claimant marketed a soft drink in Australia called 'Solo' which was sold in cans resembling beer cans bearing a medallion device. An

114 Even so, the law of passing off may prove wider in this respect as there are some exceptions that affect the registrability of marks.

115 [1981] 1 All ER 213, PC.

intensive advertising campaign portrayed it as a drink associated with ‘rugged masculine endeavour’ and, in total contradiction of the popular image of the Australian male, it sold well. The defendant later started selling a comparable drink called ‘Pub Squash’ in similar cans with advertising in a similar vein. It was held that the claimant had failed to acquire an intangible property right associated with its advertising campaign because it never became a distinguishing feature of the product or generally associated with it. Although it was conceded that the defendant had deliberately taken advantage of the claimant’s advertising campaign, the consuming public were not misled or deceived by this into thinking that Pub Squash was the claimant’s drink. In other words, the claimant could show no damage resulting from the defendant’s use of similar advertising and get-up.

The *Pub Squash* case shows that distinctiveness is important to success in a passing off action. If a name is descriptive this will reduce or even eliminate the possibility of it being distinctive of a particular trader’s business. For example, in *Advance Magazine Publishing Inc v Redwood Publishing Ltd*,<sup>116</sup> the claimant published a food magazine entitled ‘GOURMET’. The defendant planned to publish, as part of a series of magazines, a food magazine called ‘BBC Gourmet Goodfood’. Harman J refused to grant interim relief to the claimant. As the word ‘Gourmet’ was descriptive, small differences in get-up would be sufficient to avoid confusion. Furthermore, the claimant had failed to establish an arguable case. The magazines were different when looked at alongside each other and, even though purchasers might shorten the defendant’s title to ‘Gourmet’, magazines were not usually sold by name over the counter but from racks from which purchasers would select the magazine they wished to buy.

116 [1993] FSR 449.

The use of numbers may be controlled by the law of passing off. It was recognised in *Pontiac Marina Pte Ltd v CDL Hotels International Ltd*<sup>117</sup> that figures such as 1.99 could be protected if they achieved a secondary meaning, being distinctive of a trader’s goods. It has become very common for motor vehicle manufacturers to use numbers as model identifiers: for example, Peugeot 306, BMW 318i, Volvo 850, Mercedes C180 and so on. The use of one maker’s number by another could raise an arguable case of passing off; depending on how well established the number is. In many cases, showing goodwill should present no problem and using another manufacturer’s number certainly could be described as a misrepresentation. The difficulty lies in proving consequential damage. If Peugeot decided to sell a car under the name 850, would any potential buyer be deceived into thinking he was ordering a Volvo? It seems unlikely in the extreme unless the car became so well known by the number on its own without reference to the maker. However, as we shall see, the law of passing off has developed to accept erosion of goodwill as a form of damage. This could apply where one car maker uses a number that has become strongly associated with a particular manufacturer’s car which is, itself, of high quality or performance.

117 [1998] FSR 839.

Where the use of a number is at issue, the individual circumstances may be highly relevant. In *Law Society of England and Wales v Griffiths*,<sup>118</sup> the claimant had launched a ‘phone in’ advice line in respect of accidents and personal injuries. The telephone number was 0500–192939. The defendant, who was not part of the claimant’s scheme, set up one of his own and obtained and used the telephone number 0800–192939. It was held that there was a serious issue to be tried by the court, which granted an interim injunction in favour of the claimant. By deliberately choosing a confusingly similar number, the defendant was representing that he was the claimant either by saying so or by failing to disabuse callers. The effect would be to cause a serious loss of business to the claimant, which had built up a substantial goodwill associated with its scheme. It appeared that the defendant had deliberately selected his telephone number in order to divert business away from the claimant.

118 [1995] RPC 16.

## Geographical range

119 [2003] FSR 909.

120 [2007] FSR 125.

Goodwill may vary depending on the geographical area under consideration. In *Associated Newspapers Ltd v Express Newspapers*,<sup>119</sup> it was accepted that the claimant's reputation in its newspapers, especially in respect of its newspaper the *London Evening Standard*, was particularly pronounced in the south-east of England. Whilst injunctive relief may be appropriate limited to the south-east, it would be important not to grant more extensive relief. Where goodwill is local only, the area of the defendant's activities may be relevant. In *Bignell v Just Employment Law Ltd*,<sup>120</sup> the claimant was a sole principal solicitor trading under the name 'JUST EMPLOYMENT'. He was based in Guildford, Surrey. The majority of the claimant's clients came from the Guildford area. The defendant operated a business offering legal advice on employment law matters. It was based in Glasgow though did have a service office with one employee in London. Although both parties operated in the same field, it was held that none of the three requirements in *Reckitt & Colman v Borden* were satisfied. Although the claimant had goodwill in and around Guildford, it did not extend elsewhere.

If passing off by one trader is to damage another trader's interests in the goodwill he has acquired, it should be reasonable to assume that there should be some overlap in the geographical location and extent of the catchment area of their respective businesses. For example, it might be assumed that a baker in Leeds operating under the name 'Melwood Bakeries' would not be able to restrain another baker using the same name in Dover; but he might be able to restrain the use of the name by a baker in Bradford, which lies relatively close to Leeds. Bearing in mind the basic test for passing off stated in its barest form as being a misrepresentation that causes damage to business goodwill, there is a possibility that people in Bradford will think that the bakery there and the one in Leeds are owned by the same person and the latter may lose sales as a result. Overlapping or contiguous geographical areas would seem to be precursors for a passing off action.

The narrow view above does not take account of future growth of businesses and this may be a reason for allowing passing off an expansive geographical range. For example, the baker in the above example may be ambitious and his business may grow so that eventually he has a chain of bakeries spanning the whole of England, including Dover.<sup>121</sup> The goodwill may even be in relation to activities in a different country. In *Maxim's Ltd v Dye*,<sup>122</sup> the claimant, an English company, owned a world-famous restaurant in Paris known as 'Maxim's'. The defendant opened a restaurant in Norwich and also named it 'Maxim's'. It was held that the claimant had goodwill in England derived from the business in France which might be regarded as being prospective. The claimant might want to commence trading in England in the future and should be able to rely on the goodwill he had in connection with the name.<sup>123</sup> Such international extent of goodwill will not be common, but if an international reputation has been achieved, there is a danger that another person carrying out business using the same name could cause confusion and customers might think that they were dealing with the claimant's business. This is particularly so in the case of large multinational organisations such as 'McDonald's'. The above case is also an example of a remedy being available without proof of any actual or immediate damage; indeed, the damage is purely speculative as the claimant might never open a restaurant in Norwich, England or the UK. The decision can be justified on the basis that, by his choice of name, the defendant attempted to cash in on the claimant's goodwill. Additionally, there is always the danger that, had the defendant's food not been of a high quality, the claimant's reputation, which it enjoyed in the UK, might have been harmed as a consequence. Dilution of goodwill is also a possible factor.

<sup>121</sup> See, for example, *Brestian v Try* [1958] RPC 161 where the claimant, who had hairdressing shops in London, Wembley and Brighton, succeeded in obtaining an injunction to prevent the defendant using the same name in Tunbridge Wells.

<sup>122</sup> [1977] 1 WLR 1155.

<sup>123</sup> Compare with *Anheuser Busch Inc v Budejovicky Budvar* [1984] FSR 413, discussed above, p 809.

*Maxim's v Dye* was followed in the Calcutta High Court in *Calvin Klein Inc v International Apparel Syndicate*,<sup>124</sup> where it was held that it was not necessary to have trade in India to have a reputation there. In that case, the emphasis seemed to be on reputation rather than goodwill. But we have seen that reputation without goodwill is insufficient to support an action in passing off: *Anheuser Busch Inc v Budějovický Budvar* (Budweiser beer).<sup>125</sup> The distinction that can be made between *Maxim's* and *Anheuser Busch* is that, in the former, the claimant was established in the UK and persons living there might go to Maxim's in Paris on a weekend break, or whatever, attracted by its reputation.

124 [1995] FSR 515.

125 [1984] FSR 413.

It has been suggested that the claimant, wherever located, must be able to show at least a customer or customers in England. In *Panhard et Levassor SA v Panhard Levassor Motor Co Ltd*,<sup>126</sup> the French car manufacturer had goodwill in the UK even though it had no established place of business there. The goodwill was based on the fact that the claimant sold cars to customers in the UK either directly from Paris or through importers. There are other contrasting cases on the subject. In *Sheraton Corp of America v Sheraton Motels Ltd*,<sup>127</sup> the claimant was granted an interim injunction on the basis that, although it had no hotels in the UK, it took bookings for its American hotels from an office in England whereas, in *Alain Bernadin et Cie v Pavilion Properties Ltd*,<sup>128</sup> an injunction was refused to the claimant, which owned the Crazy Horse Saloon in Paris, to prevent the defendant using the name for its establishment in London. The claimant did not have any place of business in the UK nor did it take bookings there. The *Alain Bernadin* case was cited with approval in the *Anheuser Busch* case, but has been criticised. One distinction between the *Alain Bernadin* and *Panhard* cases is that the former was concerned with a local activity (eating, drinking and making merry) compared with the 'rather more durable enjoyment of a Panhard car'.<sup>129</sup> The authorities seemed in a confused state and irreconcilable.

126 (1901) 18 RPC 405.

127 [1964] RPC 202.

128 [1967] RPC 581.

129 *Jian Tools for Sales Inc v Roderick Manhattan Group Ltd* [1995] FSR 924.

Recent case law, albeit foreign, tends to support the approach taken in *Maxim's*. For example, in *WHIRLPOOL Trade Mark*,<sup>130</sup> the Supreme Court of India held that a trader did not need to show actual sales in India to establish goodwill there. In such a case, goodwill could result from advertising in magazines which were circulated in India. In *C & A Modes v C & A (Waterford) Ltd*,<sup>131</sup> the defendant began trading under the name and symbol 'C & A' in Ireland and was held to be guilty of passing off by the Supreme Court of Ireland. The claimant did not have any trade outlet in Ireland, although it did in Belfast in Northern Ireland. However, many of the customers at the Belfast store had travelled from Ireland to shop there. The Supreme Court of Ireland held that goodwill does not necessarily stop at the frontier and the defendant's activities were calculated to cause confusion in the minds of existing or potential customers. Similarly, in *McDonald's Corp v McDonald's Corp Ltd and Vincent Chang*,<sup>132</sup> the Court of Appeal in Jamaica accepted that the famous worldwide chain of fast-food restaurants had a goodwill in Jamaica before it started trading there because of intensive advertising.

130 [1997] FSR 905.

131 [1978] FSR 126.

132 [1997] FSR 760. It was held that both parties could trade under the name McDonald's. The defendant had been trading under that name in Jamaica since 1971, whereas the worldwide food chain had only recently commenced trading in Jamaica.

The correctness of *Alain Bernadin* must now be doubted. The international nature of many business operations shows that this case is no longer relevant. In many cases, the reputation of large multinational organisations precedes them as they expand their activities into other countries. Reputation in that sense must equate with goodwill because, if the reputation is harmed, the consequence is that, once established in those other countries, turnover there will also be harmed. Injuring reputation prospectively injures goodwill in future trade. That being so, *Anheuser Busch* must also be doubted.

Incidentally, there is no problem with finding passing off where the activity complained of occurs in another country, provided the defendant's misrepresentation in that other country is likely to injure the claimant's goodwill.<sup>133</sup> What matters is whether the claimant's goodwill has been injured and this requires consideration of a supplementary question when looking at the classic trinity of goodwill, misrepresentation and

133 In which case, for jurisdictional purposes, the tort occurs in the country where the goodwill exists: *Mecklermedia Corp v DC Congress Gesellschaft mbH* [1997] FSR 627.

damage. That question is to ask whether the claimant's goodwill has extended to the territory where the defendant's activities have taken place. If the answer to this is 'No', a further question arises, being whether knowledge of the defendant's activities would reach a substantial number of persons in the territories to which the claimant's goodwill has extended.

## THE NATURE OF THE MISREPRESENTATION

Misrepresentation is an essential element in the tort of passing off. It may be that the misrepresentation goes to the origin of goods or it may be that, because of the manner in which the goods are marketed, some attribute is falsely associated with the goods by a significant sector of the public.<sup>134</sup> Misrepresentation may come about in numerous ways such as by written or oral statements or by implication or by similarity in appearance or presentation of goods or even from the presence of some object which acts as a signpost to the owner of the goodwill, such as 'swing tags' attached to luggage, similar to those used by the claimant.<sup>135</sup> To be actionable, however, the misrepresentation does not have to suggest that the defendant's business is that of the claimants and it is sufficient if the misrepresentation indicates an association between the businesses of the claimant and defendant.<sup>136</sup>

Misrepresentation is not a question of whether there is a risk of confusion because the defendant's name was similar to that of the claimant but whether the defendant's use of his own name in connection with his goods or business could be taken to be a representation that those goods were, or his business was, those of the claimant or had some connection with the claimant so giving rise to or a risk of harm to the claimant's goodwill which the claimant was entitled to protect.<sup>137</sup>

The misrepresentation or deception is not necessarily limited to an exact copy of a name, mark or 'get-up'. Similarity sufficient to result in confusion will do, an important factor being whether purchasers or consumers of the product or services have been or are likely to be misled. For trade marks, except where there is identity of the mark and the goods, the litmus test is whether the use of the second mark is likely to cause confusion on the part of the public, including a likelihood of association.<sup>138</sup> So too with passing off but set in the wider context of 'get-up'. In deciding whether the buying public (or the ultimate consumer) is likely to be misled or confused, it is not necessary to consider whether members of the public who are knowledgeable about the particular product or service are deceived and it may be sufficient if members of the public who have relatively little knowledge of the product or service are deceived or are likely to be deceived.

There must be a misrepresentation for passing off; a likelihood of confusion will not suffice *per se*,<sup>139</sup> though it is not easy to think of examples of confusion absent a misrepresentation which may be direct or indirect, deliberate or innocent. Misrepresentation can take many forms. For example, it may confuse as to the origin of goods or services or the nature of the defendant's goods or services.<sup>140</sup> It may be made in words or pictorially,<sup>141</sup> or be implied from behaviour. It could be that a trader fails to disabuse customers about their mistaken beliefs, which may have been encouraged by the trader. Using a statement which implies that a trader is an authorised distributor may amount to passing off when this is not, or no longer is, the truth. In *Musical Fidelity Ltd v Vickers*,<sup>142</sup> the claimant had undoubted goodwill in the name 'Musical Fidelity' for hi-fi equipment and numerous internet domain names. The defendant, who had at one time been an authorised distributor, registered 'www.musicalfidelity.co.uk' as his domain name and his advertisement on the website included the phrase 'Welcome to the website of one of Musical Fidelity's oldest retailers'. The Court of

<sup>134</sup> For example, by naming a chocolate bar 'Swiss Chalet' it was held that the defendant was guilty of passing off: *Chocosuisse Union des Fabricants Suisses de Chocolat v Cadbury Ltd* [1999] RPC 826.

<sup>135</sup> *Premier Luggage and Bags Ltd v Premier Co (UK) Ltd* [2001] FSR 461. However, in the Court of Appeal at [2003] FSR 69, it was held that there was no passing off in relation to the swing tags.

<sup>136</sup> *Sir Robert McAlpine Ltd v Alfred McAlpine plc* [2004] RPC 711.

<sup>137</sup> *Premier Luggage and Bags Ltd v Premier Company (UK) Ltd* [2003] FSR 69.

<sup>138</sup> Trade Marks Act 1994 s 10(2).

<sup>139</sup> *Barnsley Brewery Co Ltd v RBNB* [1997] FSR 462.

<sup>140</sup> For example, in *Law Society of England and Wales v Society of Lawyers* [1996] FSR 739, there was a risk that members of the public might believe that the defendant's members had recognised legal qualifications or even were solicitors.

<sup>141</sup> For example, the use of another seabird (a puffin instead of a penguin) and similar coloured get-up in *United Biscuits (UK) Ltd v Asda Stores Ltd* [1997] RPC 513.

<sup>142</sup> [2003] FSR 898.

Appeal confirmed that this was passing off as it indicated a continuing connection with the claimant, especially because of the use of the possessive form of its name.

A number of factors will affect whether the misrepresentation is likely to confuse, such as whether the traders operate in the same field of activity, the distinctiveness of the claimant's get-up, how well-known and familiar the get-up is and the sales outlets for the traders' goods. In *NAD Electronics Inc v NAD Computer Systems Ltd*,<sup>143</sup> important factors in finding passing off (and trade mark infringement) were the facts that the goodwill subsisted in 'NAD', a fancy name, that the goods were advertised in similar ways (the claimant sold hi-fi systems of high quality and the defendant sold computers) and both traders' goods were sold alongside each other in retail outlets such as Dixons.

143 [1997] FSR 380.

In *HFC Bank plc v Midland Bank plc*,<sup>144</sup> the claimant objected to the use by the defendant of the name HSBC. It was confirmed that evidence of confusion alone does not constitute passing off. What is required is that the claimant shows that it has achieved brand name recognition. Up to the time that the defendant had started using HSBC, the claimant's name had a relatively low profile. Lloyd J quoted Lord Greene MR in *Marengo v Daily Sketch & Sunday Graphic Ltd*<sup>145</sup> where he said (at 2):

144 [2000] FSR 176.

No one is entitled to be protected against confusion as such. Confusion may result from the collision of two independent rights or liberties, and where that is the case neither party can complain . . . The protection to which a man is entitled is protection against passing off, which is quite a different thing from mere confusion.

145 [1992] FSR 1.

In the present case Lloyd J said that, now that there was an actively promoted brand somewhat similar to the claimant's, it would be more difficult for the claimant to improve its own brand recognition. However, that was a reflection that it had an easy task until the time the defendant launched its new brand name and that the claimant would now have to try harder. It did not entitle it to a *cordon sanitaire*. Finally, Lloyd J thought this was a case of non-actionable confusion.

In *Dawnay Day & Co Ltd v Cantor Fitzgerald International*,<sup>146</sup> the defendant was a firm involved in financial services including broking which was totally unconnected with the claimant group of companies but which had acquired one of the group of companies, known as Dawnay Day Securities Ltd. Confirming that the use of the Dawnay Day name by the defendant would be passing off, Lloyd J said that it would be impossible not to conclude that the use by the defendant of the Dawnay Day name would be a plain misrepresentation.

146 [2000] RPC 669.

The public is not expected to be particularly knowledgeable about the product concerned.<sup>147</sup> The reasonable man is no connoisseur of fine wines and exotic foods. In *J Bollinger v Costa Bravo Wine Co Ltd (No 2)*,<sup>148</sup> the claimant made the famous sparkling wine known as 'champagne' in the Champagne region of France. This drink has a very high reputation and is often bought for special occasions by people who do not purchase it regularly. The defendant imported into the UK a sparkling wine called 'Spanish Champagne' which was supposed to be like the claimant's product but made in Spain. The defendant claimed that, by adding the word 'Spanish', this clearly indicated that the wine was not made in France and, because champagne was such a well-known product, only a tiny portion of ignorant, ill-educated persons would be misled. The defendant further claimed that the word 'champagne' had become a generic description. An injunction was granted preventing the use of the word 'champagne' by the defendant. It was held in the High Court that a substantial number of persons, whose life and education had not taught them much about the nature and production of wine, might want to buy champagne from time to time and these people might be misled by the description of the defendant's sparkling wine as 'Spanish Champagne'. The description 'Spanish Champagne' was intended to attract to the defendant's product the goodwill

147 However, the degree of attention paid by a consumer depends on the nature of the goods or services. In some cases, purchases are considered more carefully and opportunities for confusion are reduced accordingly: *Teleworks Ltd v Telework Group plc* [2002] RPC 535.

148 [1961] 1 All ER 561.

connected with the reputation of champagne and amounted to dishonest trading. Danckwerts J said, 'it seems to me that close resemblance makes the counterfeit not less but more calculated to deceive . . .' 'Champagne' had not become a generic name because corresponding wines made elsewhere were not described using that word.

A misrepresentation that is ineffective because the public see through it is not actionable in passing off because one important and fundamental requirement is missing.<sup>149</sup> In the absence of confusion there can be no harm to goodwill and, therefore, no damage to the claimant. In *Tamworth Herald Co Ltd v Thomson Free Newspapers Ltd*,<sup>150</sup> the claimant's newspaper had been published since 1868 as the *Tamworth Herald*, a weekly newspaper selling at 23 pence at the time of the action. The defendant bought the rights in a weekly free newspaper called the *Tamworth Trader* and intended to change its name to the *Tamworth Herald & Post*. Both newspapers were circulated in the same geographical area and the claimant commenced a *quia timet* action for passing off but was refused an injunction. It was held by Aldous J that it was improbable that the recipients of the defendant's paper would believe it was published by the claimant. An example of the defendant's new 'masthead' included a reference that the paper was formerly the *Tamworth Trader*. Potential advertisers would obtain the address or telephone number from the newspapers themselves or from the Yellow Pages and would in neither case be under a misapprehension as to whom they were dealing with.<sup>151</sup> The possibility of confusion and subsequent damage to the claimant's goodwill was, therefore, remote.<sup>152</sup>

Giving a false impression that a celebrity is endorsing a product is likely to amount to passing off. In *Irvine v Talksport Ltd*,<sup>153</sup> the defendant ran the radio station 'Talk Radio'. It mounted a promotional campaign which included photographs of Eddie Irvine, the Formula One Grand Prix racing driver. The photograph had been manipulated. It originally showed Mr Irvine speaking on a mobile phone but was changed so he held a portable radio on which the words 'Talk Radio' were clearly visible. It was held that this gave the impression that he endorsed the radio station and this false representation was passing off. The Court of Appeal described as somewhat surreal the photograph, as altered, showing Mr Irvine wearing his Ferrari racing gear amid the hubbub of a Grand Prix, listening intently to Talk Radio. Product endorsement is very common and celebrities expect to be paid large sums of money for such activities.<sup>154</sup>

## Parodies

In terms of passing off a parody is acceptable provided that it is clear that it is a parody and not associated with the claimant. There is no misrepresentation if the source is made absolutely clear.<sup>155</sup> However, great care must be taken because, as mentioned above, the public is not generally expected to be particularly knowledgeable. On the same basis, the general public is not taken to be particularly careful and scrutinise the goods or services in question to determine their true origin.

Alan Clark, the famous Member of Parliament, had published his 'Diaries', which proved somewhat controversial, though very successful. The *London Evening Standard* published a weekly spoof of Alan Clark's diaries based on what a journalist imagined Alan Clark would record in his diary. The newspaper column was headed 'Alan Clark's Secret Political Diaries' and included a photograph of Alan Clark. Below was a note identifying the journalist as the author and what the basis for the column was. In *Alan Kenneth McKenzie Clark v Associated Newspapers Ltd*,<sup>156</sup> the proprietor of the *Evening Standard* was held liable for passing off and for false attribution of authorship under copyright law. The court held that, to be actionable as passing off, the deception had to be more than momentary and inconsequential (as it might have been had the true fact of authorship been more prominent).

<sup>149</sup> See, for example, *Ciba-Geigy plc v Parke Davis & Co Ltd* [1994] FSR 8 where it was held that a reasonable doctor, reading the defendant's advertisement for its drug, which was equivalent to the claimant's drug and which used a picture of a green apple as used by the claimant, would not think the defendant's drug was associated with the claimant's drug, business or slow release formulation.

<sup>150</sup> [1991] FSR 337.

<sup>151</sup> Whether two business concerns having similar names can be easily distinguished in the Yellow Pages is a nice objective test for passing off.

<sup>152</sup> That the word 'Herald' is commonly used in the newspaper industry was a factor. The claimant was also concerned about the possibility of confusion resulting from telephone canvassing but this would not happen if the canvassers followed their instructions carefully and it was wrong to assume that they would not do so.

<sup>153</sup> [2003] FSR 619.

<sup>154</sup> The Court of Appeal increased the award of damages from £2,000 to £25,000.

<sup>155</sup> Even though there is no passing off, the aggrieved party may have remedies under copyright law and the law of defamation.

<sup>156</sup> [1998] RPC 261.

In cases where there are mixed and conflicting messages, the dominant message matters and it is not sufficient to claim that a careful sensible reader would read the ‘disclaimer’. The work had to be looked at as a whole to decide whether a substantial number of readers would be misled into thinking that the column was written by Alan Clark. Nor was it a defence to claim that readers of the column would not be misled had they been more careful. The court did not prevent the continuing publication of the column but insisted that, should it continue, the identity of the true author must be made sufficiently clear.

As will be seen later, for passing off there must be a common field of activity (although it is arguable that this rule has been relaxed of late). There was a common field of activity here as Alan Clark had himself written diaries. Had he not, the passing off action might not have succeeded, although this would leave the false attribution of copyright claim intact.

## Acquiescence

A case with similar facts to the *J Bollinger* (Spanish Champagne) case demonstrates that acquiescence in an activity that could be passing off will defeat the claimant’s claim. In *Vine Products Ltd v MacKenzie & Co Ltd*,<sup>157</sup> the Spanish producers of sherry tried to prevent the use of that word as in British Sherry, South African Sherry, Cyprus Sherry, etc. The genuine drink derives its name from the Jerez region in Spain and is a high-quality product. However, similar fortified wines have been produced in other countries, such as Australia, South Africa and Cyprus, and sold under names including the word ‘sherry’: for example, ‘British Sherry’ and ‘Cyprus Sherry’. There was no evidence of confusion amongst the wine-drinking public and these other wines had been so described for a considerable period of time. It was held that the word ‘Sherry’, standing alone, meant a wine from Jerez and others would be prevented from using the word on its own. However, the use of other descriptions such as ‘British Sherry’ would not be restrained because of acquiescence on the part of the claimant. In practice, each type of sherry from different countries had achieved, over a long period of time, its own individual and distinct reputation. For example, it could be said that ‘Cyprus Sherry’ is a very pleasant and inexpensive form of the wine whilst the Spanish variant retains its high reputation as the wine of the highest quality. It is self-evident that the owner of an unregistered trade mark or other name or mark or get-up should not delay in taking action against any person copying that mark, name or get-up.

157 [1969] RPC 1.

Subsequent case law confirms the importance of acquiescence as a way of defeating a claim in passing off. In *Taylor’s Fashions Ltd v Liverpool Victoria Trustees Co Ltd*,<sup>158</sup> Oliver J said that the approach to be entertained by the court is:

158 [1982] QB 133.

ascertaining whether, in particular individual circumstances, it would be unconscionable for a party to be permitted to deny that which, knowingly or unknowingly, he has allowed or encouraged another to assume to his detriment.<sup>159</sup>

159 See also *Habib Bank Ltd v Habib Bank AG Zurich* [1982] RPC 1; *International Business Machines Corp v Phoenix International (Computers) Ltd* [1994] RPC 251.

If the claimant has been given prior warning of the defendant’s planned activities and fails to object, he is less likely to be granted an injunction by the court. In *Dalgety Spillers Foods Ltd v Food Brokers Ltd*,<sup>160</sup> the defendant wrote to the claimant (which marketed ‘Pot Noodles’) indicating an intention to sell a similar product under the name ‘Cup Noodles’, enclosing an example of the container. When the claimant, some time later, complained and requested an injunction it was refused on the balance of convenience. An important factor was that the claimant could give no convincing explanation for its inactivity following the defendant’s letter putting it on notice and, in the meantime, the defendant had spent time, trouble and expense in launching its ‘Cup Noodles’ product.

160 [1994] FSR 504.

## Inverse passing off

It has been said that passing off can be one of two types:

- 1 classical passing off, where B represents his goods as being those of A; or
- 2 extended passing off, where A uses a false description for his goods to impute some quality to his goods – for example, as in the Spanish Champagne case or the Advocaat case.

However, passing off is not necessarily limited to these two forms and the common law should develop in such a way to reflect the higher standards of consumer protection now available. Indeed, in the Advocaat case, Lord Diplock said that passing off ought to proceed upon a parallel rather than diverging course to the trend in legislation.<sup>161</sup>

Inverse passing off (if it exists as a separate species) occurs where the defendant falsely claims that the claimant's goods or services are actually made by, or provided by, the defendant. For example, in *Bristol Conservatories Ltd v Conservatories Custom Built Ltd*,<sup>162</sup> the defendant's sales representatives showed potential customers photographs of conservatories as a sample of the defendant's workmanship. The photographs were, in fact, of the claimant's conservatories. The Court of Appeal had no doubt that this constituted passing off although refusing to describe it as inverse (or reverse) passing off.<sup>163</sup> Nevertheless, the boundaries of passing off are not fixed and false claims as to patents or testimonials may fall within its ambit.<sup>164</sup>

Inverse passing off may also be committed by implicitly encouraging others to think that one is associated or responsible for material created and belonging to another. For example, in *John Robert Powers School Inc v Denyse Bernadette Tessensohn*,<sup>165</sup> the defendant, in her manner of leaving the claimant's study notes on shelves easily accessible to students and customers, was holding out that they were her notes and this misrepresentation amounted to inverse passing off.

In *Matthew Gloag & Sons Ltd v Welsh Distillers Ltd*,<sup>166</sup> the defendant obtained genuine Scotch whisky and blended it with herbs which it sold in bottles labelled 'Welsh Whisky'. This case was different to the *Bristol Conservatories* case in which the defendant was claiming that the claimant's buildings were actually those of the defendant. In the present case, the defendant was not claiming its product was that of the claimant; conversely, the defendant, by labelling it as Welsh whisky, was denying that it was Scotch whisky. The claimant alleged, *inter alia*, reverse passing off. Although the defendant's strike out application failed, as the judge did not think the allegation was bound to fail, he did say (at 725):

The borderline between reverse passing off of the *Bristol Conservatories* variety and cases falling outside the tort is difficult to formulate.

## Misrepresentation by imputing authorisation

Misrepresentation is not limited to the use of a name or a similar get-up and it can even extend to an act that implies that it is authorised or consented to by another person. Placing advertising leaflets inside magazines and newspapers is a fairly common activity nowadays and this may be done after the magazines and papers have been delivered to the newsagents with neither the permission nor the authority of the proprietors of the magazines and newspapers. An independent advertising company may approach newsagents and ask them to insert advertising leaflets and one complication is that, at this time, the title to the magazines and newspapers will have passed to the newsagent. Although such an activity by itself will not amount to passing off, it will do so if sufficient persons are likely to believe that the leaflets were inserted with the authority of the publishers of the magazines and newspapers. So it was held in the Court of

<sup>161</sup> *Erven Warnink Besloten Vennootschap v J Townend & Sons (Hull) Ltd* [1979] AC 731 at 743.

<sup>162</sup> [1989] RPC 455.

<sup>163</sup> For a discussion of inverse passing off, see Carty, H. 'Inverse passing off: a suitable addition to passing off?' [1993] 10 EIPR 370.

<sup>164</sup> For example, *Copydex Ltd v Noso Products Ltd* (1952) 69 RPC 38 ('as shown on television'); *Lawrie v Baker* (1885) 2 RPC 213 where the defendant sold, as patented, articles that were not patented but the claimant held a patent such that the consumers would think that the defendant was selling articles made to that patent.

<sup>165</sup> [1995] FSR 947, CA, Singapore.

<sup>166</sup> [1998] FSR 718.

Appeal in *Associated Newspapers (Holdings) plc v Insert Media Ltd*.<sup>167</sup> The mere fact that the advertisements had been inserted in the claimant's newspapers without its permission did not establish the existence of a misrepresentation and it was necessary to consider whether a substantial number of people would think that the insertion had been authorised by the proprietor of the newspaper. It had been shown that the essence of the plan to insert the advertising was the defendant's hope that it would be associated with the newspaper concerned, the *Daily Mail*, to the effect that the advertising would appear to have the newspaper's seal of approval. The claimant might thus suffer damage to its reputation and goodwill. The Court of Appeal rejected a suggestion that a disclaimer should be printed on the inserts on the grounds that it would not be effective.

167 [1991] 3 All ER 535.

This case represents a new extension to the law of passing off because, in the High Court, it was doubted that such an activity could amount to passing off.<sup>168</sup> However, it does illustrate the potential width of passing off and the way that it is capable of being developed to meet new mischiefs. Nevertheless, the case is unusual on its facts and the normal way of imputing authority will involve the use of a name or mark. For example, a person might falsely claim to be a member of a professional body and the body will be able to take action to have the claim withdrawn and not repeated.

168 *Mail Newspapers plc v Insert Media Ltd* [1987] RPC 521.

Impliedly representing that the claimant's helmets would comply with safety regulations when fitted with the defendant's lens was said to be on the outer limits of passing off in *Hodge Clemco Ltd v Airblast Ltd*.<sup>169</sup> Helmets for use with sand-blasting had to comply with the regulations and be approved by the Health and Safety Executive. It was unlawful to use helmets which did not comply. At the time of the action, the defendant was seeking the approval of its lens and it looked like such approval would be forthcoming soon but, until it was granted, using the claimant's helmets fitted with the defendant's lenses was unlawful. The claimant claimed that the defendant, by representing that its lenses were suitable for the claimant's helmets, was misrepresenting that the helmets when fitted with the lenses would comply with the regulations. Although it was arguable that advertising the lenses as suitable for the claimant's helmets suggested that customers could lawfully use them, an injunction was refused as the balance of convenience lay in the defendant's favour, especially as it was likely to obtain approval as soon as its lenses had successfully completed the required tests.

169 [1995] FSR 806.

## Intention

The great majority of passing off cases involve a deliberate and calculated attempt to take advantage of the goodwill owned by another trader and associated with goods manufactured or sold by him or services supplied by him. However, a fraudulent motive is not necessary to a passing off action and, indeed, innocence is no defence,<sup>170</sup> the main thrust of the law of passing off being the protection of goodwill. In *Taittinger SA v Allbev Ltd*<sup>171</sup> Peter Gibson LJ said:

Lord Diplock's phrase 'calculated to injure', as he himself made plain, does not import a test of actual intention to injure: it is sufficient that this should be the reasonably foreseeable consequence of the misrepresentation.

In contrast, in some cases, a person may make a deliberate misrepresentation that is intended to boost the reputation and sales of his product or services but against which there is no legal remedy under the law of passing off.<sup>172</sup> Some examples of this will be seen later in the section on character merchandising. A reading of the cases does, however, give the impression that intention may be an influential factor in the court's decision-making process;<sup>173</sup> although a deliberate and fraudulent act of copying someone else's get-up will not amount to passing off if there is little danger of the public being

170 See *Baume & Co Ltd v AH Moore Ltd* [1958] RPC 226. However, motive may influence the decision whether to grant an interim injunction: see *Law Society of England and Wales v Griffiths* [1995] RPC 16 where there was clear evidence that the defendant deliberately selected a similar telephone number to that of the claimant in order to divert business from the claimant.

171 [1993] FSR 641 at 667.

172 See, for example, *McCullogh v Lewis A May Ltd* (1948) 65 RPC 58.

173 See, for example, *Harrods Ltd v R Harrod Ltd* (1924) 41 RPC 74.

deceived, as in *Whitworth Foods Ltd v Hunni Foods (International) Ltd*, discussed above, where the defendant had placed an order with the company making containers for the claimant for containers that were similar in shape and appearance.

174 [1996] RPC 697.

In *Harrods Ltd v Harrodian School Ltd*,<sup>174</sup> one interpretation of the defendant's evidence as to why he chose that name as the name of his school (occupying the building that had formerly been a club for members of Harrods and known as the Harrodian Club) was that he had deliberately chosen the name because he thought it would be an advantage to him to indicate a connection with Harrods. However, that interpretation was rejected in the Court of Appeal in favour of one based on a selection of the name simply because the school occupied a magnificent site which had formerly been occupied by the Harrodian Club. As regards intention, Millett LJ said (at 706):

Deception is the gist of the tort of passing off, but it is not necessary for a plaintiff to establish that the defendant consciously intended to deceive the public if that is the probable result of his conduct. Nevertheless, the question why the defendant chose to adopt a particular name or get up is always highly relevant.

One is left to wonder why motive is 'highly relevant' if it is accepted that the absence of a deliberate intention to deceive customers does not prevent the defendant's activities constituting a misrepresentation for the purposes of passing off. The test surely is whether, in fact, customers are deceived: a purely objective test.

### Common fields of activity

In most cases, the rights associated with registered trade marks are restricted in terms of the classes of goods and services against which the marks are registered. Therefore, if Trader A has a trade mark consisting of a representation of a Harp registered for Class 2 goods (paints, varnishes, lacquers, etc.) and Trader B copies this mark but only uses it in respect of wines (falling within Class 33), Trader B does not infringe Trader A's trade mark unless it is a mark of some repute and such use would take unfair advantage of or be detrimental to Trader A's mark.<sup>175</sup> Apart from this latter exception, trade mark law, by reference to identical or similar goods or services, requires a 'common field of activity' between the claimant and defendant.

175 This is an infringement under the Trade Marks Act 1994 s 10(3) where the goods or services are non-similar.

Passing off is limited in a similar way in that there must be a common field of activity between the claimant and the defendant. There must be some common ground; otherwise there can be no trespass to this form of intellectual property. The justification for this is that, if there is no common field of activity, there can be no damage to the claimant's goodwill because the public will not make a connection between the traders and their different fields of activity. For example, if Trader A uses an unregistered trade name, 'Spright', for its margarine and, later, Trader B uses the same name for its bicycles, there will be little danger of damage to Trader A's goodwill (irrespective of the quality of the bicycles) because the public are not likely to think that the bicycles are made by or with the licence of Trader A. An electric shaver called a 'Rolls Razor' would not normally be confused with the makers of 'Rolls-Royce' motor cars; at best it indicates that the razor is claimed, rightly or wrongly, to be of high quality.

176 [1973] RPC 49. See also *Harrods Ltd v Harrodian School Ltd* [1996] RPC 697.

177 The name 'Granada' could not have been registered in Part A of the register of trade marks, being a relatively well-known geographical name: Trade Marks Act 1938 s 9. It was unlikely that it would have been accepted for Part B registration.

A simple example of the common field of activity doctrine was the case of *Granada Group Ltd v Ford Motor Company Ltd*,<sup>176</sup> the outcome of which was that the Granada television group, famous for making the television serial *Coronation Street*, could not prevent the Ford Motor Company naming one of its cars the 'Ford Granada'. There was no danger of confusion because of the different fields of activity (television and motor cars) and, consequently, there was little possibility of the claimant's goodwill being harmed.<sup>177</sup> This decision accords with common sense as it is highly unlikely that

ordinary members of the public, even those knowing nothing about cars, would think that the car had anything whatsoever to do with the television company. The test of common field of activity is concerned with making an objective determination of the likelihood of damage to goodwill. This can only occur if there is, at least, a possibility of confusion. Yet, the test can be criticised because the diversification of business concerns and their fields of activity make the application of the test imperfect. Many members of the public realise that some large companies have interests that are wide and disparate in nature. With a registered trade mark that has a reputation in the UK, use in respect of non-similar goods or services may infringe.<sup>178</sup> However, where such trade mark infringement cannot be made out, the common field of activity rule seems coarse and arbitrary in terms of well-known names, marks and get-ups. To make the issue more difficult is the general desire amongst judges not to restrict competition unduly.

Where fields of activity are converging, it is easier to accept that confusion is likely. For example, developments in computer technology have resulted in most modern personal computers having a compact disk drive capable of reading CD-ROMs and stereo speakers. They can also play audio compact discs. Therefore, the fields of audio entertainment and computers are converging. So it was held in *NAD Electronics Inc v NAD Computers Systems Ltd.*<sup>179</sup>

Showing a determined flexibility, the law of passing off has developed to embrace a situation where a name or mark is very well known, and in such cases the boundaries of the activities may be moved, dramatically enlarging the field of play. In *Lego Systems A/S v Lego M Lemelstrich Ltd.*,<sup>180</sup> the very well-known Lego company, that makes coloured plastic construction bricks for children, was granted an injunction preventing the use of the name Lego by the defendant, which was planning to use it for its plastic irrigation and garden equipment. The defendant had used the name Lego for its equipment in various other countries such as Israel, but the claimant's children's bricks had become so well known, as had the name Lego in association with these bricks, that the House of Lords was of the opinion that confusion was extremely likely. In this case, the common field of activity was, effectively, coloured plastic.<sup>181</sup> If the claimant's business had not been so successful and on such a grand scale in the UK, the claimant's field of activity might have been restricted to coloured children's plastic construction bricks, a much narrower field. Note that the quality of the defendant's products was not an issue: once the danger of confusion is present, it is assumed that there is a possibility that the claimant's reputation will be harmed. Such harm can go beyond the quality of the products concerned, and in the Lego case harm could be the result of the public thinking that the company was no longer concentrating on children's construction kits and might not continue to make the kits and additional parts for them so that it might not be feasible for a child to build up a large collection of Lego bricks and materials over a long period of time. In *Teleworks Ltd v Telework Group plc*,<sup>182</sup> it was said that, if the strength of goodwill is such as to induce a belief that there was a connection between the defendant and the claimant, that goodwill will be protected in fields that claimant had not yet entered and may not have had the slightest intention of entering in the future.

Although *Lego* and *Teleworks* can be said to show that the requirement for a common field of activity is not as rigidly applied as before, it was still relevant in terms of whether there existed a likelihood of confusion.<sup>183</sup> If the claimant and defendant are engaged in the same field of activity, then confusion is all the more likely. If they operate in completely different fields, there is far less likelihood of confusion though the possibility is not entirely extinguished. Given the breathtaking diversification of many large corporations, especially from the Far East, some relaxation of the rule is appropriate.

The boundaries of the claimant's field of activity appear to be directly proportional to the magnitude of his goodwill: the greater the goodwill, the greater the net of

<sup>178</sup> Trade Marks Act 1994 s 10(3). Under the previous Act, defensive registration was possible.

<sup>179</sup> [1997] FSR 380.

<sup>180</sup> [1983] FSR 155, yet another case involving a survey of the public used in support of the claimant's argument that the public would be deceived.

<sup>181</sup> See also *Annabel's (Berkeley Square) v Schock* [1972] RPC 838, where it was held that there was a possibility of confusion between a nightclub and an escort agency as both could be considered to be night-time activities.

<sup>182</sup> [2002] RPC 535.

<sup>183</sup> *Nice and Safe Attitude Ltd v Piers Flook* [1997] FSR 14.

184 [1994] FSR 438.

passing off will be cast and the more likely it is that the defendant will be found to have committed passing off. However, the Lego approach was distinguished in *Fortnum & Mason plc v Fortnam Ltd*,<sup>184</sup> where the defendant imported low-price goods from the Far East, mainly for export to the rest of Europe, and operated under the name Fortnam Ltd but did not apply the name to the goods. The claimant had a well-known and high-class store in Piccadilly and sued in passing off. Although the claimant was primarily known for its groceries, food and wine of high quality, it also sold fashion clothing, toys and various other articles. The defendant accepted that the claimant had an outstanding reputation associated with the name Fortnum and Mason, often abbreviated to Fortnums. However, in refusing the interim injunction sought, Harman J considered that the defendant was not guilty of passing off. It was extremely unlikely that anyone would buy the defendant's goods thinking that they were the goods of the claimant. Relevant factors were the quality of the goods and the nature of the trade. Although there was some overlap in the goods the parties sold, the defendant's were mostly cheap and plastic and not likely to be associated with the claimant's business. Furthermore, the defendant mainly exported his goods rather than selling them in the UK. Harman J distinguished the *Lego* case, which he suggested was strongly influenced by the fact that both the claimant's goods and the defendant's goods were made from the same raw material, being plastic. The ordinary person might think that the claimant had developed a further branch of its business. Thus, whilst it might be reasonable to think that Lego had diversified in such a way, it would be unreasonable to think that Fortnum and Mason had suddenly decided to sell 'cheap and nasty' goods.

## CHARACTER MERCHANDISING

A fictitious or fantastic character might be devised for a television series, a book, a film or a computer game: for example, Harry Potter, Lara Croft, the Teletubbies, Kojak, the Wombles, Thunderbirds, the Simpsons, Teenage Mutant Hero Ninja Turtles, etc. The person who devised the character or the person commissioning the design will want to maximise the financial return on the investment involved. One way of doing this is to licence others to sell articles to which a representation of, or the name of, the character is applied. Examples are very common: Action Man watches, Bob the Builder figures and T-shirts, Pink Panther mugs, Postman Pat toys, etc. Using fictitious characters in order to sell ordinary items is known as character merchandising and is very popular, particularly with respect to children's toys, games and stationery. It is big business. The normal way it is done is for the merchandising organisation to obtain a licence from the creator of the character permitting the application of a representation of the character to the articles. In a few cases, the creator of the character or the owner of the rights in the character will retail the articles direct. Character merchandising is not limited to fictitious characters. Many famous sportsmen and women and television personalities allow their name to be used for promotional purposes. In this case, unauthorised appropriation of their name or nickname may not be remediable either under the law of passing off or under copyright law but it may be actionable as being defamatory.<sup>185</sup>

<sup>185</sup> See *McCullogh v Lewis A May* (1948) 65 RPC 58; *Tolley v JS Fry & Sons Ltd* [1931] AC 333.

Character merchandising is not a new phenomenon. Walt Disney characters in particular have been used in this way for a long time. However, when this operation is related to intellectual property rights subsisting in such characters, some major gaps appear. Copyright can give a fair degree of protection: for example, where a representation of the character infringes the copyright in a drawing of that character. For example, if a company wishes to sell a mug to which a picture of Mickey Mouse has been applied by transfer printing, this will infringe the copyright in the original drawings of Mickey Mouse. If a photograph is made from a Mickey Mouse cartoon or film, whether

to be reproduced and sold as photographs or used as a medium from which to prepare a representation for transfer printing, the copyright in the film will be infringed. If a doll or three-dimensional figure is made, then the copyright in the drawings will be infringed, as it was in the case of Popeye dolls which were held to infringe the cartoon drawings of the Popeye character in *King Features Syndicate Inc v O and M Kleeman Ltd*.<sup>186</sup> But, difficulties arise where only the name of the character is used. We have seen in Chapter 3 that copyright will not be afforded to a title for a film or a book and that it was also denied to the word 'Exxon'.<sup>187</sup> Neither does copyright protect the name of a fictitious character. This can be seen as the working of the *de minimis* principle and a throwback to the judgment of Davey J in *Hollinrake v Truswell*<sup>188</sup> to the effect that a literary work should offer information, instruction or pleasure in the form of literary enjoyment.

All that is left to protect a name is the law of passing off, or, in some cases, trade mark law. With respect to the latter, until the Trade Marks Act 1994 came into force, the question hinged simply on whether the merchandiser had applied the name to the same or similar goods. However, it was not possible to use trade mark law to promote character merchandising because the Trade Marks Act 1938 s 28(6) required the Registrar to refuse an application for registration of a registered user if it appeared to him that this would tend to facilitate trafficking in the mark. The House of Lords confirmed that trade marks law was not to be used to facilitate character merchandising in confirming the Registrar's refusal to register the 'Holly Hobbie' device, including a drawing of a young girl, as a trade mark.<sup>189</sup> This mark had been very successfully exploited in the USA but the registered user provisions in the UK were a considerable hurdle. One way over this hurdle was to show that the proprietor of the mark was able to maintain strict quality control over the articles to which the mark was applied, so demonstrating a sufficient connection in the course of trade. However, in the *Holly Hobbie Trade Mark* case, the applicant was unable to show this, partly because of the enormous scale of the planned commercial activities. Thankfully the registered user provisions and the bar over trafficking in trade marks has been swept aside to be replaced by licensing provisions which are much more suited to modern commercial practices.

Passing off may not be very effective in the context of character merchandising because of the requirement of a common field of activity and without this there can be no harm to the owner of the name of the character. For example, if someone buys a 'Garfield' telephone, that person would not be likely to complain to the makers of the Garfield cartoons and comic strips if the telephone turns out to be faulty.<sup>190</sup> The general public probably have a much better understanding of character merchandising than the judges have, in the past, given them credit for.

In the South African case of *Lorimar Productions Inc v Sterling Clothing Manufacturers (Pty) Ltd*<sup>191</sup> the Supreme Court considered that character merchandising was not particularly well known and, in the absence of evidence to the contrary, it could not be assumed that the man in the street would have any knowledge of it. The claimant owned the rights in the television series *Dallas* and failed to show an association in the minds of the public between the goodwill in the series and clothing or restaurants owned by the defendant which used names, locations and titles from the series.

The case of *Tavener Rutledge Ltd v Trexapalm Ltd*,<sup>192</sup> involving the television detective character 'Kojak', demonstrates some of the deficiencies of the law as regards character merchandising. Kojak, played by Telly Savalas, was often seen in the series sucking a spherical lolly. The claimant made similar shaped lollies and used the word 'Kojakpops' as a brand name for these lollies and quickly built up a substantial trade in respect of them. The claimant had not obtained the permission of the makers of the *Kojak* television series to use this name or to make similar shaped lollies. Some time later, the defendant started making similar lollies called 'Kojak lollies' and claimed to

<sup>186</sup> [1941] AC 417. But now this may be subject to a defence under the Copyright, Designs and Patents Act 1988 s 51.

<sup>187</sup> *Exxon Corporation v Exxon Insurance Consultants International Ltd* [1981] 3 All ER 241.

<sup>188</sup> [1894] 3 Ch 420.

<sup>189</sup> *Holly Hobbie Trade Mark* [1984] FSR 199. This limitation does not apply under the Trade Marks Act 1994.

<sup>190</sup> For a discussion on trafficking in marks where this point is made, see Pearson, H.E. and Millar, C.G. (1990) *Commercial Exploitation of Intellectual Property*, Blackstone Press, pp 216–17.

<sup>191</sup> [1982] RPC 395.

<sup>192</sup> [1977] RPC 275.

193 There was also a trade mark issue because the claimant had applied for a trade mark but, because the passing off action succeeded, it did not require consideration.

194 See also *Nice and Safe Attitude Ltd v Piers Flook* [1997] FSR 14, where the claimant, which used a logo similar to that used by the US National Aeronautics and Space Administration (NASA), succeeded in preventing a rival organisation, having a licence from NASA, using the logo.

195 *Children's Television Workshop Inc v Woolworths (New South Wales) Pty Ltd* [1981] RPC 187.

196 [1977] RPC 99. This case may be difficult to reconcile with the *Lego* case. However, neither the *Wombles* case nor the *Kojak* case was mentioned in Falconer J's judgment.

have a licence agreement with the owners of the television series allowing it to do this. The claimant commenced an action for passing off<sup>193</sup> and applied for an interim injunction. The defendant claimed that there was a sufficient connection in the course of trade between the lollies and the owners of the *Kojak* name because there were provisions for quality control contained in the licence agreement between the defendant and the owner of the name, and because of this quality control arrangement there was a common field of activity. Nevertheless, the injunction was granted to restrain the defendant passing off its lollies as being those of the claimant. The claimant had built up a considerable reputation in its lollies and the introduction of a similar lolly would cause confusion. Walton J considered that the defendant's lollies were not as good value as the claimant's and, as a consequence, the claimant's reputation would be seriously harmed. The licence agreement argument failed on the basis that there was no actual or potential field of activity between the owners of the television series and the claimant's business.<sup>194</sup> The point had not been reached where the fact of quality control was so well known that the public would rely on the existence of the licence as a guarantee of the defendant's product. Indeed, the public, in general, were not to be taken as having any particular knowledge of character merchandising. Finally, Walton J confirmed that there is no property in a name or a word, *per se*.

A common field of activity is the key to an action in passing off and no more so than where character merchandising is involved. It is important for the parties to a licence agreement to construct a connection in the course of trade between the owner of the name, the licensor, and the goods or services to which the name is to be applied. One way to do this has been hinted at above and that is to establish a system of quality control so that the owner of the name has a part to play in the practical aspects of the marketing exercise. In this way, the reputation of the name's owner will be extended into the other fields of activity defined by the merchandising project. This approach was successful in Australia, where a licence agreement for the making of soft toys of the Muppet characters contained quality control provisions,<sup>195</sup> but has yet to find favour in the UK. It is submitted that the exercise of quality control must be known about by the public and that appropriate advertising, marketing and labelling of the goods can do much to spread the word, thus extending the fields of activity.

Even if the field of activity can be widened by careful licensing and advertising, there will still be cases where this will not be sufficient to provide a remedy, bearing in mind that the prospect of harm to goodwill is a fundamental requirement. If there is no obvious link, regardless of any character licences, then there is no remedy under the law of passing off although there may be copyright issues, particularly if a drawing of the character is used. *Wombles Ltd v Wombles Skips Ltd*<sup>196</sup> shows that a wide disparity in fields of activity is fatal to a claim in passing off. The *Wombles* are fictitious animals from a television series and are noted for cleaning up litter and putting it to good use. The claimant company owned the copyright in the books and drawings of the *Wombles*. Its main business was granting licences in respect of the characters; for example, it granted one such licence for wastepaper baskets for children. The defendant formed a company to lease builders' skips, containers used typically for building rubble. After considerable thought, and remembering the *Wombles*' reputation for clean habits, he decided to call his company *Wombles Skips Ltd* and registered the company name accordingly. The claimant argued that the use of the name would lead some persons to conclude that the defendant's business was connected with the claimant and that there was a common field of activity because one of the licences was for wastepaper baskets. It was held that there was no common field of activity and this was an essential ingredient in a passing off action. Without a common field of activity there is no danger of confusion and, in this case, the similarity between the making and selling of waste-paper baskets and hiring out builders' skips was not strong enough. The plain fact of the matter was that it

was highly improbable that ordinary members of the public would think that the skips were associated with the Wombles in any way, just as a link between Granada Television and Ford Granada cars is quite absurd. Such an association might be made, however, in the case of wastepaper baskets for children and Wombles toys and dolls.

Full legal protection of character merchandising by the law of passing off has yet to find favour in the UK courts, although there are now signs that the position is changing. There is a contradiction in the way the law has tended to dislike this form of exploitation and the way in which it has given full protection to other forms of intellectual property rights. The owner of the character has made an investment of time and money in creating and developing the character. In many cases, the character is the result of substantial flair and imagination which should be no less deserving of protection than, say, literary and artistic works. Whilst it is clear that the law gives some protection – for example, copyright subsisting in drawings of characters or in written thumbnail sketches of characters<sup>197</sup> and other descriptive material – there are some gaps, and it is with respect to names that the law seems to be least effective. Trade mark law will only give a remedy in respect of use of a registered mark in respect of non-similar goods or services if the mark is one having a reputation in the UK.<sup>198</sup>

Consider the following possibilities concerning *Coronation Street* characters. What if the name ‘Rover’s Return’ is used for a public house in the Salford area? What if a tobacco company starts marketing ‘Mike Baldwin cigars’ or, for those with longer memories, a trader starts selling ‘Ena Sharples hairnets’? There seems to be little that the makers of the television series can do because of a lack of a common field of activity. But, there is a possibility that some portion of the public will take the use of names to indicate that the products have some seal of approval from the television company and have achieved certain standards. This might allow the traders concerned to overcharge for sub-standard goods. In attempting to cut back the degree of protection offered to the owners of fictitious characters and the like (and indeed, their licensees and franchisees), the courts may indirectly be encouraging unfair and undesirable trading practices whereby unscrupulous traders still manage to cash-in on someone else’s reputation in a way which transcends the artificiality of compartmentalised fields of activity.

There have been signs of a change of heart. The case of *Mirage Studios v Counter-Feat Clothing Co Ltd*<sup>199</sup> is a good example, Lord Browne-Wilkinson VC seeming to prefer the way in which Australian passing off law has developed compared to UK law. The facts of the case were that the claimant created the Teenage Mutant Hero Ninja Turtle characters and made and marketed cartoons, films and videos containing these characters. Part of the claimant’s business involved licensing the reproduction of the characters on goods sold by licensees, that is, character merchandising. It was almost inevitable, in view of the success of the characters, that someone else would wish to take an unfair advantage of the immense goodwill built up by the claimant. The defendant, without the claimant’s permission, made drawings of humanoid turtle characters that were similar in appearance to the claimant’s characters. They were not exact reproductions. The defendant then began to licence these drawings to garment manufacturers for the purpose of applying them to T-shirts and the like. The defendant claimed that there were no intellectual property rights either in the name or the idea of the ‘Turtles’. The Vice-Chancellor granted an interim injunction to the claimant on the basis of an arguable case in copyright and for passing off. He found passing off to have occurred by applying Lord Diplock’s test in the *Erven Warnink* (Advocaat) case.<sup>200</sup> The misrepresentation made by the defendant was that a substantial number of the buying public would believe that the reproduction of the figures was the result of a licence between the owner of the rights in the original drawings of the turtles. The result of the defendant’s action would be that, because the public associated goods bearing the defendant’s drawings with the creator of the cartoons, the claimant’s goodwill would be harmed by fixing

<sup>197</sup> This protection might be less effective. Obviously, an unauthorised photocopy will infringe, but will there be copyright infringement if a rival copies the nature of the character? Perhaps there might be a possibility that the restricted public performance will be relevant if the rival character faithfully follows the written description.

<sup>198</sup> Trade Marks Act 1994 s 10(3).

<sup>199</sup> [1991] FSR 145.

<sup>200</sup> *Erven Warnink Besloten Vennootschap v J Townend & Sons (Hull) Ltd* [1979] AC 731.

representations of turtles to inferior goods. The potential value of the claimant's licensing rights would be seriously harmed. Furthermore, there was a sufficient link between the claimant and the goods to found a case in passing off. At last, it seemed an English judge was prepared to accept that the public are aware of character merchandising.

Lord Browne-Wilkinson VC considered that the law as developed in Australia was sound and applied *Children's Television Workshop Inc v Woolworths (New South Wales) Ltd*,<sup>201</sup> in which it was held that the defendant, by his unlicensed use of the Muppet characters, had misrepresented that he had a connection with the owner of the copyright in drawings of the characters and was a *bona fide* licensee of rights in the Muppets. The Vice-Chancellor managed to distinguish three English cases involving the Wombles, Kojak and the pop group 'Abba',<sup>202</sup> although he seemed unduly cautious about doing so. The three English cases are distinguishable very easily because they only involved a name and not a drawing and are still good law. The question is whether the *Mirage Studios* (Turtles) case has modified the requirement of a common field of activity for an action in passing off to succeed. Certainly, there is now a greater awareness of character merchandising amongst the public, but it may be insufficient to found an argument that goodwill will be harmed by unlicensed use of names and representations of characters. The public may be aware that the creator of a fictitious character will licence its use in this way, but equally may be prepared to accept that other companies can use the characters without such a licence. There may be a connection between quality products and the creator of the character, but the public may simply assume that cheaper, inferior goods are made without the creator's specific permission and the link between inferior goods and the creator, essential for a passing off action to succeed, is thus absent. Put crudely, do the public really care? Many members of the public probably think that the creator of the character has made enough money through films, books and cartoons.

One major criticism of the judgment in the *Mirage Studios* (Turtles) case is that the copyright issue alone should have been sufficient to dispose of it, and this will usually be so where representations of characters are used, whether two-dimensional or three-dimensional. In the future, fictitious names may be registrable as trade marks.<sup>203</sup> Lord Browne-Wilkinson's views on passing off could be considered to be *obiter*. Where names are used, there must be a common field of activity for there to be a prospect of harm to goodwill. The only way a character merchandiser can establish a sufficient link is to exercise a form of control over the goods to which the character or its name is applied and this link must be such that sufficient numbers of the public are aware of it. This view is consistent with Australian law and prior UK law.

Essentially, the issue of passing off in relation to character merchandising is one of deceit. If the public is insufficiently aware of character merchandising ordinary persons will not associate the use of the character with the origin of goods. Therefore, there can be no passing off because any misrepresentation by the defendant is ineffective and, hence, causes no damage. Furthermore, these are not cases where erosion of goodwill is really an issue. In *BBC Worldwide Ltd v Pally Screen Printing Ltd*,<sup>204</sup> Laddie J dismissed an application for summary judgment by the owners of the rights in the famous fictional television characters the Teletubbies (rotund furry creatures with television screens set into their abdomens) for passing off (and copyright infringement). He considered that the defendants, who made and sold T-shirts showing representations of the Teletubbies, had an arguable defence that they were not guilty of passing off because it was possible that members of the public, seeing the T-shirts bearing representations of the characters, would see them for no more than that. They would not necessarily consider that the T-shirts were sold by or with the consent of the claimant.

In *Arsenal Football Club plc v Reed*,<sup>205</sup> the defendant had, for over 30 years, sold memorabilia bearing the football club's name and logo. In respect of passing off, Laddie J

held that the claimant had failed to show any evidence of confusion. It appeared that the defendant's customers bought his products as badges of allegiance to the football club and realised they neither came from nor were sanctioned by the club.<sup>206</sup>

## POST-SALE CONFUSION

For a passing off action to succeed there must be evidence that customers or ultimate consumers have been deceived or, if the defendant's planned activity were to come to fruition, a real likelihood of confusion. The key is confusion and it might be reasonable to assume that the confusion must occur at the time the goods are purchased, not later. For example, in *Bostick Ltd v Sellotape GB Ltd*<sup>207</sup> the claimant made adhesive putty called 'Blu-tack' which was coloured blue. Apparently the colour was chosen because it might be less likely to be swallowed by children, as there are very few edible materials of that colour. The defendant launched an equivalent product called 'Sellotak' which was also coloured blue. However, the defendant's adhesive putty was not visible in the packet it was sold in and could only be seen after it had been purchased by removing it from its packaging. Nevertheless, the claimant sued for passing off. It was held that, as the defendant's product could not be seen at the point of sale, there was no danger of confusion and it was highly unlikely that the similarity in colour would lead to confusion and influence future sales to the detriment of the claimant.

The concept of post-sale confusion, that is where the misrepresentation so essential for passing off comes after the goods have been purchased, seems, at first, difficult to accept as a possibility. Even if there is confusion post-sale, how could that lead to damage to the claimant? However, it must be stressed that it is business goodwill which is protected by passing off, not just trade or reputation. Damage extends beyond a straightforward and immediate loss of sales as a result of the defendant's misrepresentation. The more distinctive the name or mark used by the claimant, the greater the goodwill is likely to be. Even if there is no deception at the time of sale, later confusion as to the origin of the name, mark or device can still damage the goodwill by a process of dilution or erosion. So it was held in the New Zealand case of *Levi Strauss & Co v Kimbyr Investments Ltd*.<sup>208</sup> The defendant used a protruding tab on its jeans which was similar to the distinctive tab used by the claimant on its jeans. As a result of the defendant's cardboard advertising labels attached to the jeans displayed for sale, there was little likelihood of confusion at the point of sale. However, the court held, *inter alia*, that it was irrelevant that the confusion took place after sale and that the owner of goodwill in a product or get-up was entitled to have that goodwill protected throughout the life of the product. The claimant could show that the tab continued to operate as an effective badge connecting the jeans with it. The post-sale confusion would lead to a dilution of the distinctiveness of the tab and, accordingly, damage the claimant's goodwill.<sup>209</sup>

If post-sale confusion is accepted in the UK, which it might in view of the acceptance of the principle of erosion of goodwill as being a form of damage, then manufacturers of lookalike articles who attempt to avoid allegations of passing off by the use of distinguishing labelling or disclaimers had better tread warily. However, this would represent a further extension of passing off which could result in protecting the shape of goods even where such shapes would not be registrable as trade marks, for example, by being necessary to achieve a technical result of giving substantial value to the goods.<sup>210</sup> This might turn out to be as effective as the old indirect copyright infringement through drawings suppressed by the Copyright, Designs and Patents Act 1988 s 51. Shapes, colours and other aspects of appearance of articles could end up with protection where those features cannot be protected by any other intellectual property right through lack

<sup>206</sup> This point was also relevant to the trade mark issue in the case. Laddie J later referred the case to the European Court of Justice for a Preliminary Ruling under Article 234 of the EC Treaty on the trade mark point.

<sup>207</sup> [1994] RPC 556.

<sup>208</sup> [1994] FSR 335.

<sup>209</sup> For a discussion of this trend, see Karet, I. 'Passing off and trade marks: confusing times ahead?' [1995] 1 EIPR 3.

<sup>210</sup> Trade Marks Act 1994 s 3(2).

of novelty or the expiry of a pre-existing right such as a registered design or patent. This could be a dangerous road to take. Imagine if the Coca-Cola company could have prevented other manufacturers from producing a drink having a similar colour.

## DAMAGE TO GOODWILL

Damage to goodwill, or at least a probability that damage will ensue, is one of the essential requirements for a passing off action.<sup>211</sup> Damage is not limited to the direct diversion of sales<sup>212</sup> and may result in a number of ways. The diminution in the claimant's goodwill may be caused by:

- 1 lost sales because buyers confuse the defendant's products (or services) with those of the claimant;<sup>213</sup>
- 2 the fact that the defendant's product is inferior to the claimant's product and buyers think the defendant's product is the claimant's;<sup>214</sup>
- 3 erosion, blurring or debasement of a name that is exclusive and unique and which is used by the claimant (or a number of persons entitled to use it);<sup>215</sup> indirect though invidious damage which prevents the claimant controlling and developing his goodwill in the future as he wished even though none would be deceived into thinking the defendant's product was from the claimant.<sup>216</sup>

In *National Association of Software and Service Companies v Ajay Sood*,<sup>217</sup> in the High Court of Delhi, it was suggested that the activity of 'phishing' (misrepresenting that the sender of an e-mail was a legitimate organisation to induce the disclosure of personal information) could give rise to an action in passing off. The court said that this would be passing off if it affected or tarnished the image of the organisation in question. However, there is little case law on whether 'tarnishing' goodwill would be a natural result of phishing. Certainly, the 'instrument of deceit' approach should apply in such circumstances.

A court may look to potential risk to reputation or goodwill: for example, in *Sir Robert McAlpine Ltd v Alfred McAlpine plc*,<sup>218</sup> the court held that, although the defendant currently had a good reputation, things could change, for example, if it suffered a setback or got involved in an environmentally sensitive project. Such things might not be probable though neither were they fanciful in a modern commercial context.

As the essence of passing off is deception, the basic test is whether a substantial number of persons have been or are likely to have been deceived by the defendant's misrepresentation.<sup>219</sup> If the vast majority of persons to whom the misrepresentation is addressed simply see through it and do not believe it, then there can be no damage, subject to what is said below in respect of erosion of goodwill as a form of damage. In conventional passing off cases, the *dictum* of Lord Morris in *Parker-Knoll Ltd v Knoll International Ltd*<sup>220</sup> holds true, where he said (at 281):

the issue . . . is whether the respondent clearly established that if furniture is sold under the mark Knoll or Knoll International there will be a serious risk that substantial numbers of the purchasing public will be led to believe that they are buying Parker-Knoll furniture.

The question of whether or not there is a real likelihood of confusion is, of course, a matter for the court and not for the witnesses to decide;<sup>221</sup> it is a 'jury question'.

An association with an overall project or scheme does not necessarily mean that there is an association with someone who made a contribution to that project. In *Pasterfield v Denham*,<sup>222</sup> the claimant was commissioned to design leaflets and brochures for a tourist attraction, the Plymouth Dome. The defendants were later commissioned to update the leaflets and, after around one million of the new leaflets had been produced

<sup>211</sup> *Erven Warnink Besloten Vennootschap v J Townsend & Sons (Hull) Ltd* [1973] AC 731 per Lords Diplock and Fraser. Lord Fraser spoke in terms of a real likelihood of suffering substantial damage to goodwill.

<sup>212</sup> *Phones 4u Ltd v Phone4u.co.uk Internet Ltd* [2007] RPC 83.

<sup>213</sup> See, for example, *Reddaway v Banham* [1896] AC 199.

<sup>214</sup> For example, as in *Spalding & Bros v AW Gamage Ltd* (1915) 84 LJ Ch 449.

<sup>215</sup> *Sir Robert McAlpine Ltd v Alfred McAlpine plc* [2004] RPC 711.

<sup>216</sup> *Associated Newspapers Ltd v Express Newspapers* [2003] FSR 909.

<sup>217</sup> [2005] FSR 824.

<sup>218</sup> [2004] RPC 711.

<sup>219</sup> The fact that some persons would not be confused did not, by itself, prevent a finding of misrepresentation: *Sir Robert McAlpine*.

<sup>220</sup> [1962] RPC 265.

<sup>221</sup> See, for example, *Jacob J in Neutrogena Corporation v Golden Ltd* [1996] RPC 473 at 482.

<sup>222</sup> [1999] FSR 168.

and distributed, the claimant sued for copyright infringement, derogatory treatment and passing off.<sup>223</sup> With respect to the passing off claim there was no actual proof of damage. The court accepted that one of the defendants, by placing the words ‘Designed and Produced by Denham Design 0752 671787’ on the leaflets was attempting to associate himself with the Dome project rather than the claimant’s drawings on the leaflets. The judge said that there had been no suggestion of dishonesty or fraud and, if anyone had been deceived and had asked the defendant for a similar drawing, the defendant would have most likely disclaimed authorship of the drawing.

The use of a disclaimer may be an important factor in the court’s determination of the question of damage to goodwill. If it is clear and effective, this would tend to suggest that substantial persons will not be confused. It was an important factor in *Arsenal Football Club plc v Reed*,<sup>224</sup> where the defendant used a disclaimer making it clear that his Arsenal memorabilia had no association with official club merchandise. However, the outcome may be different, notwithstanding the use of a disclaimer in the case of an allegation of damage in the form of erosion of goodwill or in respect of a trade mark.

The case of *Taittinger SA v Allbev Ltd*<sup>225</sup> provides an important example of erosion as a form of damage to goodwill.<sup>226</sup> The defendant, an English company, made a non-alcoholic drink called Elderflower Champagne. Not surprisingly, it attracted the attention of the French makers of champagne who had previously taken legal action no less than 46 times in England to protect the name ‘champagne’. The High Court judge found for the defendant. He applied Lord Diplock’s test and, although he found all the other elements present, he decided that there was no real likelihood of serious damage to the claimant’s undoubted goodwill. Elderflower Champagne was only £2.45 for a 75 cl bottle and had wording on the label to the effect it was non-alcoholic. Davies J considered that only a small number of persons would be confused even though Elderflower Champagne was sold in bottles resembling champagne bottles. A representation of the label is shown in Figure 23.1.

The Court of Appeal allowed the claimant’s appeal because use of the word ‘champagne’ by those not entitled to use it would inevitably diminish the goodwill associated with it. Peter Gibson LJ said (at 670):

... it seems to me no less obvious that erosion of the distinctiveness of the name champagne in this country is a form of damage to the goodwill of the business of the champagne houses.

Erosion of goodwill may be a possibility even where the second form of damage identified above is also possible (that is, where inferior goods or services provided by the defendant are taken to be those of the claimant). In *Dawnay Day & Co Ltd v Cantor Fitzgerald International*,<sup>227</sup> one company (Dawnay Day Securities) within a group of companies, using the name Dawnay Day in the names of the individual companies, fell into the hands of the defendant which was unconnected with the Dawnay Day group. An action was brought to restrain the defendant using the name Dawnay Day. In the Court of Appeal, Sir Richard Scott VC identified two forms of damage, the first being because the Dawnay Day group members, collectively and individually, had no control over the activities of Dawnay Day Securities and might suffer if those activities ‘... become in any way reprehensible’. The second form of damage was recognised as an erosion of the distinctiveness of the Dawnay Day name, as in the *Taittinger v Allbev* sense.

In *Harrods Ltd v Harrodian School Ltd*,<sup>228</sup> Millett LJ found it difficult to accept that erosion of goodwill was sufficient, *per se*, to amount to damage for passing off. However, in that case, there was no danger that Harrods would become a generic term for retailing luxury goods by virtue of the defendant’s activities. It is arguable that in *Taittinger*, the use of the word ‘champagne’ by the defendant for a drink would be the bridgehead by which other manufacturers of drinks would start using the name. In

<sup>223</sup> As to the copyright claims, the court held that Plymouth City Council, which had commissioned the first and later leaflets, had the benefit of beneficial ownership of copyright or, alternatively, an implied licence. Nor was there a derogatory treatment as the minor changes made to the drawing did not amount to a distortion or mutilation which was prejudicial to the claimant’s honour or reputation as an artist.

<sup>224</sup> [2001] RPC 922.

<sup>225</sup> [1993] FSR 641. The case also hinged on Council Regulation (EEC) No 823/87 of 16 March 1987 laying down special provisions relating to quality wines produced in specified regions, OJ L 84, 27.03.1987, p 59, amended by Council Regulation (EEC) No 2043/89 of 19 June 1989 amending Regulation (EEC) No 823/87 laying down special provisions relating to quality wines produced in specified regions, OJ L 202, 14.07.1989, p 1, limiting the use of names for wines which refer to specified regions.

<sup>226</sup> Other examples are provided by the *Erven Warnink* (Advocaat) case and the *Bollinger* (Spanish Champagne) case discussed earlier.

<sup>227</sup> [2000] RPC 669.

<sup>228</sup> [1996] RPC 697.

**Figure 23.1** Elderflower Champagne bottle label

**229** In *Dawney Day & Co Ltd v Cantor Fitzgerald International* [2000] RPC 669, at first instance, *Harrods v Harroldian School* was distinguished because in *Dawney Day* the two businesses were in closely connected fields.

**230** [1998] RPC 117.

**231** [1999] RPC 826. Although some of the Swiss manufacturers of chocolate had made chocolate outside Switzerland, there was no evidence that a substantial proportion of the public regarded such chocolate as ‘Swiss Chocolate’.

**232** Russell, F. ‘The elderflower champagne case: is this a further expansion of the tort of passing off?’ [1993] 10 EIPR 379.

**233** Hutchinson, P. *Peggy Hutchinson’s Home Made Wine Secrets* (undated) Foulsham & Co. The preface for the book starts ‘The recipes for this book were originally compiled in the days of plenty before the Second World War. Times have changed; some of the ingredients are no longer easy to obtain . . .’ I am indebted to Lorraine Keenan for finding this book. No representation is made as to the taste or quality of alcohol made in accordance with the recipe.

*Harrods*, the fields of activity (retailing and education) were very different.<sup>229</sup> This was not so in *Taittinger* where the fields were alcoholic sparkling drinks and non-alcoholic sparkling drinks. The ‘insidious’ form of damage that erosion of goodwill is recognised as by some judges was evidenced again in *Chocosuisse Union des Fabricants Suisses de Chocolat v Cadbury Ltd*<sup>230</sup> where the name ‘Swiss Chalet’ was given by the defendant to a new range of bars of chocolate. The damage was that the exclusivity of the designation ‘Swiss Chocolate’, descriptive of chocolate made in Switzerland, would suffer, even though lesser numbers of persons might wrongly think the defendant’s chocolate was made in Switzerland according to Swiss food regulations compared to the number of persons who would not be confused. As not all chocolate made by Swiss companies and described as Swiss chocolate is actually produced in Switzerland, this case must stand at the very limits of passing off.

In the Court of Appeal,<sup>231</sup> confirming the decision in the Chancery Division, Chadwick LJ said that the trial judge, Laddie J, accepted that the question of confusion was a difficult one in this case but that he approached it carefully and on the correct basis. Laddie J concluded that the number of persons likely to be confused would be smaller than those that would not (given the domestic significance of the name ‘Cadbury’) but, nevertheless, he concluded that it was still likely to be a significant number.

Protection of goodwill from erosion by ‘non-origin association’ can be seen as an extension of the tort of passing off because in the *Erven Warnink* case there was also a substantial diminution in the sales of the claimant’s drink.<sup>232</sup> However, it could be argued that the claimant acquiesced in the use of the name ‘champagne’ by others as it had been used in the UK and elsewhere for a number of years to describe a variety of locally made products. For example, ‘rhubarb champagne’ and ‘greengage champagne’, *inter alia*, have been used to describe home-made wines as the extracts below taken from *Peggy Hutchinson’s Home Made Wine Secrets*, published around the time of the Second World War, demonstrate:<sup>233</sup>

## GREENGAGE CHAMPAGNE

*Ingredients:*

- 4 lbs greengages
- 20 vine leaves
- 1 gallon water
- 4 lbs sugar
- 1 slice toast; 1 oz yeast

*Method:*

- 1 Put the greengages and vine leaves in a bowl, cover with cold water. Take the vine leaves out in 3 days but mash and stir the plums for 8 days, then strain.
- 2 Then add the sugar and yeast spread on both sides of the toast and leave to ferment 14 days.
- 3 Skim and bottle.

## Proof of damage

A claimant must be able to satisfy the court that he has, or will, suffer substantial damage to his goodwill. Mere speculation will rarely suffice. Nor will the fact that ‘only a moron in a hurry would be misled’.<sup>234</sup> In many cases proof of damage is not only important in quantifying damages to be awarded to the claimant but also it may be essential in demonstrating that there has been a misrepresentation calculated to injure the claimant’s goodwill. In the case of *Tamworth Herald Co Ltd v Thomson Free Newspapers Ltd*,<sup>235</sup> the claimant did not put in any evidence of actual confusion on the part of persons seeking to place advertisements in its newspaper. However, in some cases, particularly in interim hearings, there will be no actual damage to put before the court. The claimant must be able to convince the judge that there is a risk of confusion amongst the public. This will help to show that there is a serious issue to be tried and the judge can then move on to consider the balance of convenience and whether an interim injunction should be granted.

Where the defendant has been engaged in the activity complained of over a long period of time, the fact that the claimant fails to adduce any hard evidence of actual confusion will be fatal to his case. In *Arsenal Football Club plc v Reed*,<sup>236</sup> the defendant had been selling Arsenal football memorabilia, such as scarves carrying names ‘Arsenal’ and ‘Gunners’ and the football club logo, for over 31 years. In spite of this long period of trading, the football club failed to find sufficient evidence to persuade the judge that there had been the slightest confusion on the part of persons buying the defendant’s products. It is possible that this case, and others, represents a growing recognition of the importance of intellectual property rights in areas where little attention has been paid to them in the past. It also reflects the contemporary importance of merchandising.

Where the alleged damage is of the erosion of goodwill type, the claimant will be unable to show sales have been or are likely to be diverted to the defendant. Instead, it is long-term commercial damage that will ensue from the deception. Indeed, it could be argued that, if there is a deception, damage is almost certain to follow, whether in the short or longer term, as in *Kimberley-Clark Ltd v Fort Sterling Ltd*,<sup>237</sup> where the defendant placed an offer on its packs of Nouvelle toilet tissue stating:

Softness guaranteed (or we’ll exchange it for Andrex®).

There was an acknowledgement under the ‘Andrex®’ to the effect that this was the claimant’s registered trade mark. The case proceeded on the basis of passing off and the court was satisfied that the overall impact on normal but busy customers was that the product was that of the claimant or somehow associated with the claimant.<sup>238</sup> The damage would come about from the defendant taking the benefit of the claimant’s mark and its goodwill which would strengthen the defendant’s position relative to the claimant. The court confirmed that, in such a case, the claimant would not be

<sup>234</sup> Per Foster J in *Morning Star Cooperative Society Ltd v Express Newspapers Ltd* [1979] FSR 113 in which the proprietor of the *Morning Star* had objected to the name *Daily Star*.

<sup>235</sup> [1991] FSR 337.

<sup>236</sup> [2001] RPC 922.

<sup>237</sup> [1997] FSR 877.

<sup>238</sup> Confusion leading persons to believe that the defendant is connected to the claimant as being sufficient to prove damage was identified in *Ewing v Buttercup Margarine Co Ltd* (1917) 34 RPC 232 by Lord Cozens-Hardy MR.

required to point to particular examples of sales lost to the defendant as a result of the misrepresentation.

239 [1992] FSR 267.

In *Morgan-Grampian plc v Training Personnel Ltd*<sup>239</sup> the claimant published a series of magazines with titles beginning with the phrase ‘What’s New in . . .’ and the defendant later changed the title of one of its publications to ‘What’s New in Training’. An interim injunction was granted. There was a risk of confusion and the fact that it would be difficult to quantify damage in monetary terms helped to tilt the balance of convenience in favour of the claimant.

240 [1984] RPC 293.

It may be tempting to obtain evidence of damage through surveys and trap orders. Surveys are carried out for a number of reasons but, unless they are properly carried out, they will fail to impress the court. For example, in *Imperial Group plc v Philip Morris Ltd*<sup>240</sup> it was held that there was no passing off by the defendant who used black and gold packets for ‘Raffles’ cigarettes. The claimant made John Player Specials (JPS) cigarettes in black with gold lettering and a gold monogram. The claimant had used surveys to show that there was a high degree of association between the colours black and gold and the JPS cigarette. Whitford J criticised the survey techniques used and he laid down some guidelines if a survey is to have validity, being:

- the persons interviewed must be selected to represent a relevant cross-section of the public;
- the sample size must be statistically significant;
- the survey must be conducted fairly;
- all the surveys carried out must be disclosed fully (a ‘warts and all’ approach);
- all the answers given must be disclosed and made available to the defendant;
- no leading questions should be put to interviewees;
- interviewees must not be led to embark upon a field of speculation they would not otherwise have considered;
- instructions to interviewers must be disclosed;
- if the answers are to be coded for computer input, the coding instructions must also be disclosed.

In other words, good statistical methods must be used coupled with complete openness and disclosure. In many cases, fulfilling these requirements will result in the survey being prohibitively expensive.

Trap orders are often used to provide evidence of passing off. For example, an order may be placed by the claimant (or his agent) for genuine goods in the hope that the defendant will supply other goods instead. A trap order was used in *Showerings Ltd v Entam Ltd*,<sup>241</sup> in which the claimant made a drink called ‘Babycham’ and sent teams of trappers into the defendant’s public houses to order a round of drinks including Babycham. Often, a rival drink was provided without the bar staff first pointing out that it was not Babycham. Where used, trap orders should be fair and, preferably, in writing where this is possible. In effect, in executing a trap order, the claimant is representing himself as a *bona fide* customer – in other words, he himself is making a misrepresentation. This he is allowed to do and his solicitor is allowed to advise him that he may do this and to make the necessary arrangements.<sup>242</sup> If the defendant had been ‘caught’ by a trap order, he should be put on notice immediately so that he can recall the facts clearly.<sup>243</sup>

241 [1975] FSR 45.

242 The ‘clean hands’ doctrine does not appear to apply to trap orders: see *Marie Claire Albums SA v Hartstone Hosiery Ltd* [1993] FSR 692.

243 *Cellular Clothing Co Ltd v G White & Co Ltd* (1952) 70 RPC 9 where a trap order was held to be unsatisfactory for want of notice.

## PASSING OFF AND INTERNET DOMAIN NAMES

Any person may obtain an internet address (domain name) for his own web pages. There are certain naming conventions. There are generic top level domains (gTLDs)

such as ‘.com’, ‘.org’ and ‘.net’<sup>244</sup> and country code top level domains (ccTLDs) such as ‘.uk’ (UK), ‘.de’ (Germany), ‘.fr’ (France), ‘.jp’ (Japan), ‘.tv’ (Tuvalu), ‘.us’ (USA), etc. Within the country code domains, there is further subdivision, for example, by using ‘.co’, ‘.ltd’, or ‘.ac’. Thus, an English-based company called Acme Trading Ltd may have registered ‘acme-trading.co.uk’ or ‘acme-trading.ltd.uk’ as its domain names. An educational institution called Rutland University may have chosen to register ‘rutland.ac.uk’ as its domain name. These organisations may have also chosen to register some gTLDs such as ‘acme-trading.com’ or ‘rutland.net’.

Each domain name must be distinct from every other one. One problem is, however, that computers will distinguish between names if there is only one character different. This enables the registration of very similar domain names. For example, as regards Acme Trading Ltd, the following might have been registered by third parties: ‘acmetrading.co.uk’, ‘acme-trading.co.uk’, ‘acme-traders.co.uk’, ‘acmetraders.co.uk’, and so on. Another problem is that someone might register a domain name before the person or organisation which might be expected to have an interest in the name. A person, having no connection or association whatsoever to the pop singer Madonna, the footballer Wayne Rooney or the company Burger King Ltd might choose to register these names as domain names,<sup>245</sup> pre-empting or blocking appropriate registrations by those persons or organisations. Such persons are sometimes referred to as ‘cybersquatters’. Their activities have given rise to some litigation and have also resulted in dispute resolution systems being set up. Typically, cybersquatters register names and then try to sell them to the persons or organisations which one might expect to have a legitimate interest in them because they are their real names or trading names or registered trade marks.

In the UK, a body called Nominet UK allocates the addresses. It used to allocate names purely on a first-come-first-served basis, and made no checks to see if the applicant or any others were entitled to any rights in the name. Generally, bodies such as Nominet UK allocate names by automation without human intervention and do not assess the legality of a registration, or require a declaration of a right to use or operate an opposition system.<sup>246</sup> Past examples of domain names registered by persons not connected with the organisation whose name was used include ‘mcdonalds.com’, ‘mtv.com’ and ‘harrods.com’.<sup>247</sup>

The first-come-first-served rule was shown to be unsatisfactory in *Pitman Training Ltd v Nominet UK*<sup>248</sup> in which two companies, having a common origin, Pitman Training Ltd and Pitman Publishing, now trading under the Longman name, a division of Pearson Education Ltd, clashed over the domain name ‘pitman.co.uk’. Pitman Publishing, the second defendant, applied for and secured that name, but did not make use of it initially. Due to a mix up, the name was reallocated to Pitman Training Ltd, the claimant, but following complaints from Pitman Publishing, Nominet UK, the first defendant, reallocated the name to Pitman Publishing. The claimant commenced proceedings for reinstatement of the domain name, contending that its use by the second defendant amounted to passing off.<sup>249</sup> This was dismissed by the judge who thought it highly unlikely that the public would associate the domain name with the claimant; rather it was the second defendant which was more likely to have goodwill in that name as it had been trading under that name for nearly 150 years. Furthermore, when the Pitman companies were de-merged in 1985, there was an express agreement that Pitman Training Ltd would not use the word Pitman without the word ‘training’ and the use by the claimant of the domain name would probably be a breach of that agreement.

The registration of ‘harrods.com’ initiated the first case in the UK on domain names. It was registered to a person with no association with the famous Knightsbridge store and was registered through an American organisation, Network Solutions Inc, which provided registration services. Harrods complained to Network Solutions, which

<sup>244</sup> ICANN, the Internet Corporation for Assigned Names and Numbers, has overall control.

<sup>245</sup> These are true examples and all three were successful in having the names transferred. The singer known as ‘Sting’, unfortunately, was unsuccessful.

<sup>246</sup> Wood, N. ‘The trouble with domain names’ (1997) 2(3) *Intellectual Property* 7.

<sup>247</sup> See *ibid.* for a discussion of these and other examples. Nominet UK has an ‘Expert Determination’ process to resolve disputes.

<sup>248</sup> [1997] FSR 797.

<sup>249</sup> There were also claims of unlawful interference with contract (the contract between the claimant and its internet service provider) and abuse of process, neither of which was deemed to be even arguable.

suspended the domain name pending the outcome of its dispute resolution process. In the meantime, Harrods Ltd commenced proceedings for trade mark infringement and passing off. In *Harrods Ltd v UK Network Services Ltd*,<sup>250</sup> summary judgment was granted and the defendants were ordered to release the domain name 'harrods.com'. However, this was an application for summary judgment only under the former RSC Ord 14, and the defendants were not represented so the case was not fully contested. As no use had been made of the website, it was arguable whether it was passing off.<sup>251</sup> Presumably, the intention of the defendants was not to use the website but to sell the domain name to Harrods Ltd.

250 [1997] EIPR D-106.

251 But see the *One in a Million* case below.

The next case shows that, even without evidence of use of a domain name, the courts are prepared to use the law of passing off to prevent persons registering a domain name with the hope of selling it to a company that already has rights in the name as a trade mark or has established substantial goodwill in the name. In such circumstances, it was held that the domain name itself was an instrument of fraud.

252 [1998] FSR 265.

In *Marks & Spencer plc v One in a Million Ltd*,<sup>252</sup> five actions for summary judgment were brought by well-known business organisations, having substantial goodwill, against the defendants, who were dealers in internet domain names and who registered names to sell to potential users. The defendants had registered a number of names including 'bt.org', 'sainsbury.com', 'marksandspencer.co.uk'. Jonathan Sumption QC, sitting as a deputy judge, considered that threats of passing off and trade mark infringement were made out and he granted *quia timet* injunctions which went beyond normal *quia timet* injunctions in that the defendants were ordered to take the necessary steps to assign the domain names to the claimants.

253 (1880) 18 ChD 395.

254 The Court of Appeal preferred the term 'instrument of fraud'.

At the time of the hearing, the defendants had not made any use of the domain names but, following *Singer v Loog*,<sup>253</sup> it was held to be sufficient for passing off for a person to put an 'instrument of deception'<sup>254</sup> into the hands of another or to authorise another to do so. This would be the case should the defendants transfer the domain names to third parties which might or might not have any connection with the names concerned. For example, the name 'j.sainsbury.com' could be sold to Joe Soap & Co or to someone who, by coincidence, happened to have the name John Sainsbury. In either case, use of the domain name by the third party would be highly likely to amount to passing off.

Two further possibilities were identified. First, and most obvious, the defendants might sell the domain name to the organisation with that name or trade mark. Another option might be for the defendants simply to retain the name without using it, thereby blocking the organisation from registering its own name (at least in an identical form). Neither of these possibilities would result in or involve passing off. It was not, therefore, certain that passing off would occur. Nevertheless, the judge thought it sufficient, even for a final *quia timet* injunction, that what had been done was calculated to infringe the claimant's rights.

The defendants appealed unsuccessfully to the Court of Appeal in *British Telecom plc v One in a Million Ltd*.<sup>255</sup> In respect of *Marks & Spencer*, it was noted that any person who entered 'marksandspencer' in an internet register to find the identity of the owner would obtain details of *One in a Million Ltd*. As most persons would not have heard of that company otherwise, they would naturally assume it was somehow connected or associated with *Marks & Spencer plc*. Furthermore, erosion of goodwill would result from registration of the name as a domain name by anyone other than *Marks & Spencer plc*. Aldous LJ said that domain names which comprised distinctive names were instruments of fraud. In the other cases, Aldous LJ said that passing off or threatened passing off had also been demonstrated and that the domain names in those cases also were instruments of deceit. He said that the court would interfere in cases where:

255 [1999] FSR 1. *Marks & Spencer plc* was also a co-respondent, along with others.

- passing off was established;
- the defendant was a joint tortfeasor with another in actual or threatened passing off;
- the defendant equipped himself or intended to equip another with an instrument of fraud.

The motive of the defendants was clearly influential. They had offered to sell the domain names to the relevant organisations for large sums, usually with an express or implied threat to sell to third parties otherwise. The reason why the defendant had registered those very names was, in the view of Aldous LJ, because of the value of the goodwill subsisting in them. On the point of restraining the use of an instrument of fraud, Aldous LJ said (at 18):

... there can be discerned from the cases a jurisdiction to grant injunctive relief where a defendant is equipped with or is intending to equip another with an instrument of fraud. Whether any name is an instrument of fraud will depend upon all the circumstances. A name which will, by reason of its similarity to the name of another, inherently lead to passing off is such an instrument. If it would not inherently lead to passing off, it does not follow that it is not an instrument of fraud. The court should consider the similarity of the names, the intention of the defendant, the type of trade and all the surrounding circumstances.

Aldous LJ went on to say that an intention to appropriate goodwill or enable someone else to do so, allows the court to infer that it will happen even if there is a possibility that it will not take place. An injunction is appropriate in such circumstances. In that way he dealt with the problem that a threat to use a domain name or to put it into the hands of another to use may not, in fact, materialise. He appears to suggest also that a name which, if used in a particular manner, may not amount to passing off, may still be deemed to be an instrument of fraud attracting injunctive relief. However, what he is probably suggesting is that use of the name, *per se*, may not inexorably lead to passing off but it will do if used in a particular way. Injunctive relief is appropriate where a person is in possession of a name produced or adapted to enable passing off if fraudulently used, where it is likely that it will be so used.

Both *Directline Group Ltd v Directline Estate Agency*<sup>256</sup> and *Glaxo plc v Glaxowellcome Ltd*<sup>257</sup> were cited with approval in the *One in a Million* case. In both of those cases, injunctions were granted to restrain threatened rather than actual passing off and trade mark infringement. The companies that had been set up had not traded, but the threat of passing off was very real. In *Directline*, Laddie J accepted that the companies, which included Manchester U Ltd, Virgin Jeans Ltd, Jean Paul Gaultier Ltd and Cantona French Brandy Ltd, had been set up with the intention of trading off the claimants' reputations and there was a strong case that passing off would occur. Laddie J described the defendants' activities as a 'scam'.

In *Glaxowellcome*, the defendant was quick off the mark to register that name as a company name when it realised that there was likely to be a takeover bid by Glaxo plc for Wellcome plc, and that the new company would be known as Glaxo-Wellcome plc. When the claimant Glaxo discovered the registration, it tried to persuade the defendant to change the name of the defendant company or to sell it to the claimant at the standard price asked for by a company registration agent of £1,000 (the third defendant was a company registration agent). The defendant responded with a demand for £100,000. Lightman J granted an injunction on the basis of passing off saying that an injunction would be granted in such a case, whether or not the defendant's company had traded. The injunction was mandatory, requiring the defendant to take steps to change or facilitate a change in name of the company.

Registering a well-known company name as a trade mark may amount to passing off but the instrument of deceit concept may be more difficult to show an intention to deceive. Although he remarked that there may be differences compared with registering

<sup>256</sup> [1997] FSR 374.

<sup>257</sup> [1996] FSR 388.

258 [2002] FSR 223.

a well-known company name as a domain name, Patten J refused to strike out an application for passing off in *Reality Group Ltd v Chance*<sup>258</sup> where, two days after an announcement that the name Reality used by a recently acquired subsidiary company was to be used for its business, the defendants applied to register the name as a Community trade mark.

259 [2004] RPC 351.

Where a third party registers another company's trading name as a domain name, there must still be proof of damage or a likelihood of damage and this will be difficult to show if the claimant has chosen a descriptive or generic name for his business. For example, in *Radio Taxicabs (London) Ltd v Owner Drivers Radio Taxi Services Ltd*,<sup>259</sup> the defendant registered 'www.radiotaxis.com' as a domain name and from there provided a link to its previously registered domain name 'www.dialacab.co.uk' which contained its main website presence. The defendant's trading name was Dial-A-Cab. There was no real evidence to show that the defendant had registered the domain name with the intention of either taking advantage of the claimant's goodwill or diverting business from the claimant. In the absence of an intention to deceive, the claim for an order to assign the domain name to the claimant on the basis that it was an instrument of deceit could not succeed. The claimant had taken the risk of choosing a descriptive or generic name for its business. Any representation by the defendant was simply that it operated a radio taxi service.

It is possible that the look and feel of a website might amount to passing off. Even though the domain name itself has no connection with the aggrieved party, the site accessed by the domain name may look deceptively similar to another site or be similar to the get-up of another trade so as to be likely to cause confusion.<sup>260</sup> This possibility may be enhanced in the view of the fact that websites are often linked to other websites by a process of linking which may, in some cases, involve deep links, by-passing the front page of a particular site. The basic test of passing off applies nonetheless to the internet. Has the claimant goodwill in his product or service? Has the defendant made a misrepresentation (which may be by virtue of his domain name or the look and feel of his website)? Has there been or is there likely to be damage to the claimant's goodwill? This might be because the deception causes persons to be confused as to the origin of the product or service concerned or by erosion of the claimant's goodwill. Links from the defendant's to the claimant's website may increase the likelihood of confusion and disclaimers are less likely to be effective than in other forms of advertising as they are more likely to be missed in this context.<sup>261</sup> It is perhaps in terms of the internet that passing off has recently displayed its utility as a method of preventing unfair competition.

A plausible application of the law of passing off in the context of registration of a company name was given in *Compagnie Générale des Eaux v Compagnie Générale des Eaux Sdn Bhd*.<sup>262</sup> In that case, the claimant was a large company based in France and operating internationally. It had been established for 138 years and had interests in Malaysia providing training and technical services to a group of Malaysian companies. The claimant earned income and paid taxes in Malaysia. The defendant registered an identical name as a company name in 1991 and offered to negotiate favourable terms as to the future use of the company name by the claimant.

In finding that the claimant had goodwill in Malaysia and the existence of a likelihood of confusion, the High Court of Malaysia found that there was a probability of damage of one of two types. Either the claimant would suffer damage as a result of confusion, or the claimant would suffer damage by virtue of being unable to register its own name as its company name in Malaysia because of the defendant's prior registration. An important aspect of this case was that the actions of the defendant were clearly *mala fides* and he had refused to disclose the nature of the business he intended carrying on, in which case the court felt entitled to assume that it was for an improper

260 In *easyJet Airline Co Ltd v Dainty* [2002] FSR 111, the defendant had the domain name 'www.easyRealestate.co.uk' (a cut-price estate agency) but, because of the similar look and feel of his website compared to the claimant's airline website, he was held to be guilty of passing off. The defendant had informed the claimant that the domain name was to be auctioned off and that a number of persons were interested.

261 See *Yahoo! Inc v Akash Arora* [1999] FSR 931 in which the defendant registered Yahooindia.com. The High Court of Delhi held that this was passing off (the claimant being the registered proprietor of the trade mark YAHOO! in 69 countries and the owner of the domain name yahoo.com). The court also held that the defendant's disclaimer was ineffective as the nature of the internet meant that the use of a very similar domain name could not be rectified by the use of a disclaimer.

262 [1997] FSR 610.

motive. The concept of suffering damage as a result of being unable to register a name as a company name or, for that matter, as a domain name, is a very real form of damage. Otherwise, why would a person try to register names of famous organisations?

Registering a domain name very similar to that used by an established trade will almost inevitably lead to a conclusion that passing off is or will occur. In *Phones 4u Ltd v Phone4u.co.uk Internet Ltd*,<sup>263</sup> the claimant had already acquired goodwill in ‘Phones 4u’ used for its mobile phone business when the defendant registered ‘Phone4u.co.uk’ for its business. In the Court of Appeal, Jacob LJ said that there was no realistic use of the latter without causing deception and there was some evidence that potential customers of the claimant had visited the website and the defendant then sought to take advantage of the misunderstanding by trying to deal with them. At one stage, the defendant sought to sell the domain name to the claimant. The defendant said, untruthfully, that he had already been offered £100,000 for the domain name by a third party. The Court of Appeal, reversing the judge at first instance, confirmed that the domain name was an instrument of deceit.

In view of the difficulties of registration of domain names by persons who are not otherwise entitled to use the name, dispute resolution systems have been set up. ICANN has such a process, as does the World Intellectual Property Organisation which deals with disputes over gTLD names and some ccTLD names. In the UK, Nominet is in the process of unveiling a dispute resolution system. Whilst such means of resolving disputes may be reasonably effective in relation to cybersquatting,<sup>264</sup> they are unlikely to be very effective with more subtle forms of passing off on the internet, such as where the look and feel of a website has been imitated. The law of passing off still has an important role to play, as indeed does the law of copyright.

## DEFENCES

Defences to a passing off action are fairly straightforward. In the case of the first (no confusion and thus no harm to goodwill), the defendant may commission a survey to demonstrate that there is no confusion although it is more likely that the claimant will commission such a survey to show the opposite. The utility of such surveys has been doubted, as mentioned above, and the main difficulty is ensuring objectivity. The defences to a passing off action include:

- 1 the claimant does not have *locus standi*; as discussed earlier in the chapter, in some cases there may be a real issue as to who owns the goodwill in question;
- 2 the defendant’s activities have not harmed and are not likely to harm the claimant’s goodwill associated with the name, mark or get-up. This may be because there is no common field of activity or because there is no danger of confusion as to the origin or quality of the goods or services;<sup>265</sup>
- 3 the passing off is not in the course of trade, that is, the defendant is not using the name or get-up in the course of trade;
- 4 the claimant has no trade interest to be harmed, that is, the claimant is not using the name or mark in the course of trade;<sup>266</sup>
- 5 the claimant has not established the existence of goodwill associated with the name, mark or get-up concerned;<sup>267</sup>
- 6 the defendant is simply making honest use of his own name or company name. Nevertheless, the actual use must be done carefully so as not to appear as passing off;<sup>268</sup>
- 7 the claimant has acquiesced in the defendant’s use of the name or mark, or has expressly or impliedly granted the defendant permission to use the name or mark – for example, in a contract for the sale of a business including the goodwill;<sup>269</sup>

<sup>263</sup> [2007] RPC 83.

<sup>264</sup> An example is *WH Smith Ltd v Peter Colman* [2001] FSR 91. The defendant later claimed to have transferred the domain name ‘WHSmith.com’ to an individual with a Bahamian address who happened to be called William Harold Smith.

<sup>265</sup> This line of defence succeeded in *Wombles Ltd v Wombles Skips Ltd* [1977] RPC 99.

<sup>266</sup> *McCullogh v Lewis A May Ltd* (1948) 65 RPC 58.

<sup>267</sup> *County Sound plc v Ocean Sound plc* [1991] FSR 367.

<sup>268</sup> See, for example, *Wright, Layman & Umney Ltd v Wright* (1949) 66 RPC 149.

<sup>269</sup> *Vine Products Ltd v MacKenzie & Co Ltd* [1969] RPC 1 is an example of acquiescence.

8 the claimant is estopped from enforcing his rights under passing off because he has encouraged the defendant's act.<sup>270</sup>

<sup>270</sup> *Habib Bank Ltd v Habib Bank AG Zurich* [1982] RPC 1. This can be seen as a more positive form of acquiescence.

<sup>271</sup> [1979] AC 731.

<sup>272</sup> *Baume & Co Ltd v AH Moore Ltd* [1958] RPC 226.

According to the judgment of Lord Diplock in *Erven Warnink Besloten Vennootschap v J Townend & Sons (Hull) Ltd*,<sup>271</sup> the misrepresentation made by the defendant must be calculated to injure the claimant's business or goodwill. But, as mentioned earlier, innocence does not provide a defence to a passing off action<sup>272</sup> and whether the misrepresentation is intended or accidental should make no difference as to whether an injunction is available. One point about this is that, if knowledge was a factor, there might be difficulty concerning proof and, generally, other intellectual property rights are enforceable regardless of the defendant's state of knowledge although this may be relevant as to the availability of some of the remedies, especially damages.

## REMEDIES

Remedies available are injunctions (especially interim injunctions) and/or damages or, as an alternative, an account of profits. Additionally, an order may be granted for the delivery up or destruction of articles to which the name or mark has been applied or, if possible, an order for the obliteration of such names or marks. A declaration may be sufficient if the defendant has agreed not to continue the acts complained of.

Damages will usually be based upon the actual loss attributable to the passing off, that is, resulting from the loss of sales experienced by the claimant.<sup>273</sup> How else can harm to goodwill be measured? However, in some cases, damages may be calculated on a royalty basis, that is, based on the amount that would have been payable by the defendant if he had sought a licence to use the name or mark from the claimant. This possibility was discussed in *Dormeuil Frères SA v Feraglow Ltd*<sup>274</sup> although it was accepted that there was no authority to that effect. However, a royalty basis could be applicable if it would yield a greater amount than that attributable to loss of sales. Of course, it will always be difficult to calculate damages resulting from a loss of sales and each sale by the defendant does not necessarily represent a sale lost by the claimant. A lost sale in a strict sense occurs where a purchaser buys the defendant's goods thinking that they are the claimant's goods. However, some of the defendant's customers will not have heard of the claimant, or even if they have will realise that they are not dealing with the claimant. In the above case, the claimant reckoned that 75 per cent of the defendant's sales of cloth represented sales of which the claimant was deprived as a result of the passing off. The claimant also claimed damages on a royalty basis for the remaining 25 per cent of the defendant's sales and damages for damage to goodwill because the defendant's cloth was of an inferior quality. The claimant was awarded a total of £20,000 damages which included interest and the unrecovered costs expended in pursuing foreign manufacturers of infringing cloth.

If the passing off is of the extended variety as in *Erven Warnink*, the assessment of damages may prove very difficult. The same applies to inverse passing off. However, in many cases of this sort, the main remedy sought by the claimant will be an injunction, often at the interim stage before any actual damage to the claimant's goodwill has been caused. In an interim hearing, the fact that damages will be difficult to quantify should an injunction not be granted may be a factor, though not a conclusive one, to be taken into account.<sup>275</sup> In interim hearings, the judge is entitled to take account of the behaviour of the parties as well as considering the balance of convenience as in *Dalgety Spillers Foods Ltd v Food Brokers Ltd*,<sup>276</sup> discussed earlier.

Nominal damages will be available against a trader who commits passing off innocently (an injunction almost certainly will be granted in addition). An account of profits

<sup>273</sup> But see now the Intellectual Property (Enforcement, etc.) Regulations 2006, SI 2006/1028, reg 3 which covers assessment of damages, discussed in more depth in relation to copyright and patents.

<sup>274</sup> [1990] RPC 449.

<sup>275</sup> See *Morgan-Grampian plc v Training Personnel Ltd* [1992] FSR 267; cf *Blazer plc v Yardley & Co Ltd* [1992] FSR 501.

<sup>276</sup> [1994] FSR 504.

may be a possibility in relation to the period following the time when the innocent trader is disabused of his innocence if he continues the passing off beyond this time. The position of the innocent passer off was well put by Lord Parker in *Spalding & Bros v AW Gamage Ltd*<sup>277</sup> where he said:

277 (1915) 84 LJ Ch 449.

Nor need the representation be made fraudulently. It is enough that it has in fact been made, whether fraudulently or otherwise, and that damages may probably ensue, though the complete innocence of the party making it may be a reason for limiting the account of profits to the period subsequent to the date at which he becomes aware of the true facts. The representation is in fact treated as the invasion of a right giving rise at any rate to nominal damages, the enquiry being granted at the plaintiff's risk if he might probably have suffered more than nominal damages.<sup>278</sup>

278 (1915) 84 LJ Ch 449 at 449.

Passing off resulting from a false impression that a celebrity has endorsed a product may be determined on the basis of what that celebrity would normally charge as a fee for such an endorsement. In *Irvine v Talksport Ltd*,<sup>279</sup> the Formula One racing driver Eddie Irvine said that he would not have 'bothered to get out of bed' for less than £25,000. He led evidence as to the sort of fee he would normally charge, but the judge at first instance awarded him only £2,000. However, the Court of Appeal held that the judge had erred in rejecting Mr Irvine's evidence, which had not been challenged, and the award was increased to £25,000.

279 [2003] FSR 619.

If the defendant's actions infringe a trade or service mark as well as constituting passing off, the damages that may be awarded are not cumulative. However, if passing off (or trade mark infringement) and copyright infringement both occur in relation to the same events, then the damages for passing off and copyright infringement may well be accumulated.<sup>280</sup>

280 *Columbia Picture Industries v Robinson* [1987] 1 Ch 38.

## MALICIOUS FALSEHOOD

A tort that is related to passing off is that known as malicious falsehood, sometimes referred to as trade libel.<sup>281</sup> This could occur where someone publishes information that is capable of seriously damaging a trader's position or reputation. For example, one trader might unjustifiably state that another trader's goods are of poor quality or are counterfeit.<sup>282</sup>

281 For fuller description of this tort, see Jacob, R., Kitchin, D., Mellor, J. and Meade, R. (2000) *Kerly's Law of Trade Marks and Trade Names* (13th edn) Sweet & Maxwell.

282 This might also be a personal libel, depending upon the circumstances.

The tort is wide-ranging, having originated from slander of title and developed to include slander of goods and any false disparagement about a business. But it is not limited to commercial activities and has been used in respect of a false and malicious allegation that a woman was already married and, more recently, a false and malicious statement that a dismissed company director had broken into the company premises and stolen a cash box, was setting up a business of his own and was in breach of his fiduciary duty as a company director: *Sallows (Mark) v Griffiths (Laurie)*.<sup>283</sup>

283 [2001] FSR 188.

Advertising 'puff' and mere claims that one trader's goods are superior to those of another trader does not, *per se*, amount to malicious falsehood. For example, in *Hubbuck & Sons Ltd v Wilkinson, Heywood & Clerk Ltd*,<sup>284</sup> a published statement that the defendant's zinc paint had a slight advantage over the claimant's paint was held not to be a malicious falsehood, even if the statement had been made maliciously. Nor is vulgar abuse actionable as malicious falsehood. In *British Airways plc v Ryanair Ltd*, the defendant was involved in comparative advertising and placed advertisements comparing its prices with those of the claimant under the headings 'EXPENSIVE BA. . . DS!' and 'Expensive BA'.<sup>285</sup>

284 [1899] 1 QB 86.

285 [2001] FSR 541. Jacob J said that the malicious falsehood claim 'does not get off the ground'. However, in relation to trade marks, it has been recognised that comparative advertising must comply with the Comparative Directive: see *O2 Holdings Ltd v Hutchinson 3G Ltd* [2007] RPC 407, discussed in Chapter 21.

286 [1999] FSR 161.

not sufficient. To hold otherwise would result in a considerable extension to the tort. So held Jacob J in *Schulke & Mayr UK Ltd v Alkapharm UK Ltd*.<sup>286</sup> The claimant had, at one time, been the defendant's distributor for a disinfectant for dentists' instruments manufactured by the defendant. Subsequently, the claimant began to manufacture its own equivalent product and, around that same time, the defendant issued an advertisement which made certain claims in relation to the defendant's disinfectant. The advertisement claimed that the defendant's disinfectant was 'The most powerful; the most stable' and also stated that these attributes had been independently confirmed. There was no reference whatsoever to the claimant's product.

Jacob J rejected the claimant's submission that, for a cause in action in malicious falsehood, three things must be shown, being:

- that the statements were untrue (specifically false and not a mere puff);
- that the statements were made maliciously, that is, without just cause or excuse; and
- that the claimant had suffered special damage or, as a result of the Defamation Act 1952 s 3, the words were calculated to cause pecuniary damage to the claimant.

Jacob J said of that submission (at 164):

It is a far-reaching and bold submission. It would mean that many aspects of the law of passing off would become unnecessary . . . It would mean, and would involve, a very considerable extension by the common law into a field mainly regulated by statutes.<sup>287</sup>

287 Jacob J went on to point out that such an extension as implemented in Australia by the Trade Practices Act 1974 s 52, effectively doing away with the need to prove malice, has significantly increased litigation.

What Jacob J was referring to was the requirement to show that the statement was untrue without necessarily being a statement expressly directed to the claimant's goods. He referred to *White v Mellin*,<sup>288</sup> discussed below, in which Lord Watson said (at 166):

In order to constitute disparagement which is, in the sense of law, injurious, it must be shewn that the defendant's representations were made of and concerning the plaintiff's goods; that they were in disparagement of his goods and untrue.

288 [1895] AC 154.

In *Schulke v Alkapharm*, a further cause of action, passing off failed because the representation, even if it was false, did not relate to the claimant's product or goodwill. A 'false representation in the air' cannot found an action in passing off.

The basis of the action is a false statement made maliciously, that is, without just cause or excuse. These two ingredients, falsity and malice, are essential if the claimant is to succeed. The claimant failed in *White v Mellin*<sup>289</sup> where the defendant sold the claimant's infants' food after fixing labels to the wrappers stating that the defendant's food for infants was far more nutritious and healthful than any other. There was no proof that the statement was untrue or that it had caused damage to the claimant. Proof of financial loss is another requirement but this was relaxed by the Defamation Act 1952 s 3 which states that proof of special damage is not necessary if the statement was calculated to cause pecuniary damage to the claimant:

289 [1895] AC 154.

- (a) and was published in writing or some other permanent form, or
- (b) was made in respect of any office, profession, calling, trade or business held or carried on by him at the time of publication.

Prior to the Defamation Act 1952, proof of special damage was not always required and general damage such as a significant fall in a trader's turnover could be sufficient. In *Ratcliffe v Evans*,<sup>290</sup> the claimant carried on business under the name 'Ratcliffe & Sons'. The defendant published a weekly newspaper circulated in the area where the claimant's business was situated. One week the newspaper carried a statement implying that the claimant had ceased trading and that the firm known as 'Ratcliffe & Sons' no longer existed. Not surprisingly, this untrue statement caused the claimant to

290 [1892] 2 QB 524.

experience a fall in business activity. It was held in the Court of Appeal that an untrue statement maliciously published about a claimant's business which is intended to produce and does indeed produce a loss is actionable as a malicious falsehood. Evidence of general loss, as was the case here, as opposed to evidence of particular loss (for example, where a named customer takes his trade elsewhere as a result of the untrue statement), was admissible in evidence and was sufficient to support the action.

Other examples of trade libel include circulars suggesting that the claimant's goods were not genuine<sup>291</sup> and claims that the claimant was intending to make use of a patented invention the use of which had been abandoned earlier by the defendant as being inadequate.<sup>292</sup> Selling one class of the claimant's goods as a different class can amount to malicious falsehood and passing off. The defendant in *Wilts United Dairies Ltd v Thomas Robinson Sons & Co Ltd*<sup>293</sup> obtained large quantities of the claimant's condensed milk that had been sold off by the Ministry of Food at a very low price on condition that it should be used for animal food, manufacturing or export. The milk was old (it had been stocked during the Second World War) and it was known that it deteriorated with age. The claimant always had required that retailers sold the cans of milk within six months. The defendant offered the old milk for sale for human consumption. It was held that the defendant had passed off one class of the claimant's milk (that is, old stock not fit for human consumption) as another class (normal quality) and this amounted to a malicious falsehood calculated to injure the claimant's reputation. In many respects, the basic principles in this case are the same as those applying to the passing off case of *Spalding & Bros v AW Gamage Ltd*,<sup>294</sup> discussed earlier in this chapter, see p 812, where the defendant sold defective footballs made by the claimant as if they were of normal quality.

Malicious falsehood could be a possibility where a trader engages in comparative advertising in a way in which the stated facts concerning the other traders' goods are untrue or misleading. In *Compaq Computer Corp v Dell Computer Corp Ltd*<sup>295</sup> the defendant advertised using a photograph showing its computer and the claimant's computer side by side. Underneath were details of the two computers including price and performance. This information was selected so as to show off the defendant's computer as being the best value. However, the information was misleading, particularly as regards price. The defendant had indicated a heavily discounted price for its machine compared to the list price (undiscounted) of the claimant's machine. An interim injunction was granted because, although the defendant intended to justify his statement, the test was whether a jury would reasonably conclude that the statement was true.<sup>296</sup> However, this case should be compared with *McDonald's Hamburgers Ltd v Burgerking (UK) Ltd*,<sup>297</sup> where it was held that an advertising campaign for 'Whopper' burgers using the slogan 'It's Not Just Big Mac' in close proximity with the phrase 'Unlike some burgers, it's 100 per cent pure beef . . .' did not amount to a malicious falsehood. It did, however, constitute passing off.

Another comparative advertising case was *DSG Retail Ltd v Comet Group plc*.<sup>298</sup> The claimant traded under the familiar High Street name 'Currys' and the defendant was a rival company. The defendant placed advertisements, mainly by way of posters displayed at its stores claiming that its prices were lower than its competitors. A claim was also made that the defendant would beat any of its competitors' 10 per cent off and weekend £10 price-cut promotions. Fixed to some of the posters were prominent cuttings from national newspapers showing advertisements placed by the claimant. An injunction had been obtained against the defendant but there was some evidence that some of the offending posters had been displayed in defiance of the injunction. Owen J extended the injunction. He reviewed the principles in the context of the facts of the case, saying that the following questions were relevant:

<sup>291</sup> *Thomas v Williams* (1880) 14 Ch D 864.

<sup>292</sup> *London Ferro-Concrete Co Ltd v Justicz* (1951) 68 RPC 65. The statement had been made in hope that this would induce a contractor to divert a subcontract to the defendant.

<sup>293</sup> [1958] RPC 94.

<sup>294</sup> (1915) 84 LJ Ch 449.

<sup>295</sup> [1992] FSR 93.

<sup>296</sup> However, there is no entitlement to a jury in a malicious falsehood action, unlike the case with defamation. The case also involved a trade mark infringement although the judge considered that there was an arguable case that the trade mark 'Compaq' was invalid.

<sup>297</sup> [1987] FSR 112.

<sup>298</sup> [2002] FSR 899.

- whether the defendant's advertisements were directed at the claimant;
- whether the meaning in the advertisements was false;
- whether the advertisements were intended to be taken seriously;
- whether the advertisements had been published maliciously; and
- whether there was a likelihood that the claimant would suffer actual damage.

He found that all these questions were to be answered in the affirmative though he said it was to be regretted that parties to such disputes could not resolve them without recourse to the courts.

In passing off the test is whether a substantial number of people would be deceived. That is not the test to be used in malicious falsehood where the one-meaning rule is used. The judge, as notional jury, had to decide a single and natural meaning of the defendant's statement and determine its falsity on the basis of that meaning. So held Jacob J in *Vodafone Group plc v Orange Personal Communications Services Ltd*,<sup>299</sup> where the defendant advertised with the slogan 'On average, Orange users save £20 every month'. Jacob J decided the single meaning was that if Orange users had been using Vodafone, on the basis of the same amount of usage, on an arithmetic average they would pay £20 per month more including VAT. It did not mean that every single user would save £20 by switching to Orange.

299 [1997] FSR 34.

In disallowing the claimant's claim for malicious falsehood, Jacob J held that the statement was neither misleading nor made with malice.<sup>300</sup> As to the claimant's submission that the saving was only around £15 per month, Jacob J said that the sting in the advertisement would not have been much less if that figure had been used instead. Orange would have been happy to show a saving of £10 per month.

300 He also dismissed a claim of trade mark infringement.

In some cases there may be an overlap between malicious falsehood and defamation and, if that is so, it may be advantageous to bring an action in malicious falsehood as legal aid is not available for defamation. To do this is not an abuse of process even if the sole aim is to facilitate an application for legal aid and in spite of the fact that the defendant will thus be deprived of a right to elect trial by jury. So it was held in *Joyce v Sengupta*<sup>301</sup> in which a former lady's maid of the Princess Royal took action in respect of an allegation by the defendant (a reporter for the *Today* newspaper) that the claimant had stolen intimate letters belonging to the Princess Royal and handed them to the newspaper. Lord Nicholls VC also confirmed that the effect of the Defamation Act 1952 s 3 was not to limit damages to nominal damages only.<sup>302</sup>

301 [1993] 1 WLR 337.

302 Proof of special damage is unnecessary in certain cases.

Local authorities may not sue in defamation because to allow defamation actions by local authorities and other bodies run on political lines would be an undesirable fetter on the freedom of speech. The House of Lords so held in *Derbyshire County Council v Times Newspapers Ltd*,<sup>303</sup> applying authorities from the USA, in particular, *New York Times Co v Sullivan*.<sup>304</sup> Although the US cases were related to the American Constitution provisions securing freedom of speech, the UK principle of public interest was just as valid. Previous UK law as expressed in *Bognor Regis UDC v Champion*<sup>305</sup> was unsatisfactory and this case was overruled by the House of Lords. In that case, the Council had been awarded £2,000 in damages after the defendant had circulated a leaflet savagely attacking the Council. Of course, a personal individual such as a councillor or an officer of the council will be able to bring a libel action if his individual reputation was wrongly harmed. Indeed, the leader of Derbyshire County Council had brought a personal action based on the same facts as in the local authority action.

303 [1993] AC 534. The Court of Appeal decision to the same effect is reported in [1992] QB 770.

304 (1964) 376 US 254.

305 [1972] 2 QB 169.

At the interim stage where malicious falsehood is in issue and the defendant intends to plead justification a court will not normally grant an injunction if the statements are not obviously untrue.<sup>306</sup> Furthermore, where the balance of justice favours neither party an injunction should be refused on the grounds that it would interfere with the

306 *Macmillan Magazines Ltd v RCN Publishing Co Ltd* [1998] FSR 9.

defendant's right of free speech.<sup>307</sup> In this respect, the courts behave in a similar manner as in breach of confidence cases where defamation is alleged by the confider.

<sup>307</sup> *Bestobell Paints Ltd v Bigg* [1975] FSR 421.

## SUMMARY

The establishment and development of passing off is a typically common law method of protecting traders' rights but it does have equivalents in other forms of jurisdiction, broadly falling under the heading of unfair competition.<sup>308</sup> For example, in Germany, there is trade mark law-like protection for the *Ausstattung* (get-up) of goods, packaging, their advertising and the like.<sup>309</sup> For traders contemplating operations overseas, it is obviously important to take precautions such as seeking registrations of trade marks. In terms of the EC Treaty, the law of passing off does not appear to pose any particular problems and, because of differences between trade mark law and the law of passing off, the difficulties experienced in respect of parallel importing and trade marks do not seem to occur. It is apparent that passing off provides a very useful remedy where there is no trade mark and the wider scope of passing off can be important in restraining unfair practices. However, the scope can sometimes appear to be too wide, as in the Jif lemon case, and there are certainly some defects and gaps, particularly in the field of character merchandising. Nevertheless, the law of passing off is alive and kicking and prevents a great deal of unfair appropriation of business goodwill. It still proves to be a useful supplement to trade mark law. In turn, the law of malicious falsehood provides a useful supplement to passing off. It should be noted that, in a significant number of cases where passing off is an issue, criminal offences may have been committed such as making a false instrument<sup>310</sup> or offences under the Fraud Act 2006, in addition to offences under the Trade Descriptions Act 1968 and Consumer Protection Act 1987. A local trading standards officer is likely to take an interest in an activity where a name or mark has been used without permission in circumstances where the public are likely to be deceived, as is the trader whose name or mark it is.

<sup>308</sup> In *Arsenal Football Club plc v Reed* [2003] RPC 696, Aldous LJ said that the law of passing off had developed to a considerable extent and, for example, could now take in situations where there is blurring of the distinctive character of a mark, that it might better now be described as unfair competition.

<sup>309</sup> For an overview of German intellectual property law as it applied to the appearance of articles including get-up, see Rohnke, C. 'Protection of external product features in West Germany' [1990] 2 EIPR 41.

## Part Six

# BUSINESS GOODWILL AND REPUTATION SUMMARY

### KEY POINTS

Business goodwill and reputation is protected by:

- the Community trade mark;
- the UK registered trade mark (harmonised throughout the EC by the Trade Marks Directive);
- the law of passing off;
- the law of malicious falsehood.

### Community trade mark and UK registered trade mark

The basic requirements for registration and infringement are equivalent with respect to the Community trade mark and the harmonised national registered trade marks in Europe. In particular:

- to be registrable a sign must be capable of being represented graphically and be capable of distinguishing the goods or services of one undertaking from those of other undertakings;
- words, personal names, designs, letters, numerals, the shape of goods or their packaging are given as particular examples;
- there are two sets of grounds for refusal of registration, being:
  - absolute grounds; and
  - relative grounds.

The Community trade mark ('CTM') has a unitary character and registration is obtained by application to the Office for the Harmonisation of the Internal Market (Trade Marks and Designs) ('OHIM').

The absolute grounds for refusal include signs that fail the basic requirement, are devoid of distinctive character, are descriptive or laudatory or comprise particular types of shapes.

The relative grounds for refusal are so called because of the identity or similarity of the sign for which registration is applied for and pre-existing trade marks or other signs and the goods or services for which they are used. One

of the relative grounds for refusal is based on unfair advantage or detriment to an earlier registered trade mark. Detriment may occur either by:

- blurring; or
- tarnishing.

In some cases, the relative grounds require a likelihood of confusion to exist. The test is based on a global assessment by the average consumer who is reasonably well informed and circumspect but who may have an imperfect recollection of the sign or marks under consideration.

Infringement of a registered trade mark follows the same tests as apply in relation to the relative grounds for refusal. Comparative advertising is permitted in the UK but it appears to be limited to that allowed under European Directives on comparative advertising.

There are some defences, including:

- use of own name or address;
- use to describe goods and characteristics or purposes of goods, such as spare parts or accessories;
- exhaustion of rights.

A remedy of groundless threats of infringement proceedings applies to the UK registered trade mark and the CTM (in relation to threats made in the UK).

Registered trade marks may be dealt with, for example, by assignment or licensing. As the Community trade mark has a unitary character, it can only be assigned or declared invalid in respect of the whole Community.

### Passing off

The law of passing off is based around what has been described as the 'classic trinity', being:

- the existence of goodwill;
- a misrepresentation made by the defendant;
- consequential damage actual or anticipated.

Goodwill may be built up over a period of time and may be shared by a number of traders. It is the attractive force that ‘brings in customers’.

The misrepresentation may be implied but need not be deliberate. Normally it could be such that consumers think that trader A’s goods are actually those of trader B, for example, where trader A uses the same name for his goods as that used by trader B. It may be inverse, where trader A claims that trader B’s goods are actually his. Passing off may be by imputing a characteristic or quality such that the goodwill of other traders could be eroded or diluted.

Damage may involve lost sales through diversion or damage to goodwill through erosion or claims that the other trader’s goods are inferior.

Passing off has been very successful in countering ‘cybersquatting’ where domain names registered to speculators have been held to be instruments of deceit.

### Malicious falsehood

This tort is seldom used as it is difficult to prove. It requires a false statement made with malice which causes special or pecuniary damage. It could apply, for example, where an untrue claim is made that another trader’s goods are inferior or defective and which is calculated to cause loss of business to that trader. Something more than mere advertising puff is required.

## DISCUSSION QUESTIONS

- 1 Discuss the Court of Justice rulings in the *Philips v Remington*, *Arsenal v Reed and Davidoff v Gofkid* cases.
- 2 The doctrine of exhaustion of rights does not apply in relation to goods placed on the market outside the European Economic Area. Discuss the case law confirming this and comment on whether this limit to exhaustion of rights is justified in economic and commercial principles.
- 3 Discuss the meaning and scope of the phrase ‘likelihood of confusion on the part of the public, which includes the likelihood of association’ in relation to Article 4(1)(b) and Article 5(1)(b) of the Trade Marks Directive.

4 Apply the relevant provisions of the trade marks Directive to the use of registered trade marks belonging to third parties in meta-tag keywords and in search engine keywords and ‘adwords’ which are not normally visible to the end-user. Under what, if any circumstances, do such uses infringe registered trade marks? Are there good policy reasons for holding that such uses do or do not infringe?

5 The scope of passing off was extended by the Court of Appeal in *Taittinger v Allbev*. Discuss whether this extension is desirable and the extent to which, if any, the law of passing off differs from trade mark law in protecting against erosion.

## EUROPEAN AND INTERNATIONAL PERSPECTIVES ON IPR

<b>24</b>	<b>Freedom of movement of goods and EC competition law</b>	<b>863</b>
<b>25</b>	<b>IPR and conflict of laws</b>	<b>890</b>

# FREEDOM OF MOVEMENT OF GOODS AND EC COMPETITION LAW

## INTRODUCTION

The EC Treaty has, according to its Preamble, a number of aims including the encouragement of fair competition, the elimination of barriers to, *inter alia*, economic progress and the progressive elimination of restrictions on international trade. These aims are reinforced by Article 3 which sets out the activities of the Community as including the following:

- the prohibition of quantitative restrictions on import and export;
- the abolition of obstacles to free movement of goods, persons, services and capital;
- ensuring competition is not distorted; and
- the approximation of laws to the extent required for the functioning of the common market.

We have seen the impact of the fourth of these in the numerous harmonising Directives which are dealt with in the appropriate parts of this book. The introduction of Community-wide intellectual property rights such as the Community trade mark and the Community design further enhances the concept of a single market and assists in removing barriers to freedom of movement of goods by facilitating the treatment of the Community as a single entity by economic operators.

An intellectual property right places the owner in a privileged position by allowing him to prevent third parties doing certain acts in relation to the subject matter of the right. Certain of these rights are not intrinsically controversial, such as the right to prevent others making copies of a work in which copyright subsists without the owner's licence. Indeed, the owner of a copyright may decide not to place his work, or copies of it, on the market in the first place. However, intellectual property rights can and do come into conflict with some of the aims and objectives of the EC Treaty. Infringement of some intellectual property rights, such as patents and trade marks, extends to the import of infringing goods into the Member State where the patent or trade mark is registered. This could allow proprietors of patents or trade marks to interfere with the subsequent commercialisation of goods which they themselves have placed on the market in another Member State. This could lead to the fragmentation of the single market. For example, a company which makes clothing bearing the company's trade mark, registered in France and the UK, could sell a quantity of the clothing in France and then use his UK trade mark to object to a third party, who bought some of the clothing legitimately in France, importing the clothing into the UK for resale. If this right to prevent importation were to be upheld without modification, it would encourage the company to sell its clothing at different prices in different parts of the Community. This would contribute to the fragmentation of the single market, reinforce price differentials within the Community and interfere with the freedom of movement of goods.

Another way in which the owner of an intellectual property right can distort the market is by the way in which he grants rights to others to use the right: for example, by including restrictive terms in licence agreements or granting similar licences to a number of licensees, each in their own Member State, on different terms. Another potential abuse is for the proprietor of an intellectual property right to refuse to grant licences at all, whilst keeping prices high by limiting supplies of goods subject to the right. Yet another form of abuse is a campaign of buying all the rights in a particular technology to eliminate competition.

The relevant parts of the EC Treaty which apply to such activities and abuses are: Articles 28–30 which prohibit quantitative restrictions on imports and exports, and measures having equivalent effect, with some exceptions which include, *inter alia*, the protection of industrial and commercial property; Article 81 which prohibits certain types of restrictive agreements, decisions and practices; and Article 82 which controls abuses of dominant positions within the Community. The Agreement on the European Economic Area (the ‘EEA Agreement’) contains equivalent provisions in Articles 11–13, 53 and 54. The Contracting Parties to the EEA Agreement are the Member States of the EC, the EC itself and Iceland, Liechtenstein and Norway (the European Free Trade Area ‘EFTA’ States). Many of the harmonising Directives in the field of intellectual property apply also to the EFTA States.<sup>1</sup>

Another provision prevents discrimination on the grounds of nationality and has proved important where lack of harmonisation has enabled a Member State to treat nationals of other Member States differently to their own nationals, for example, by failing to give foreign nationals rights to prevent the sale of bootleg recordings made elsewhere. At one time, German law on copyright and related rights provided that non-German nationals could not rely on the provisions which prohibited the distribution of unauthorised recordings of performances given outside Germany.<sup>2</sup> In Joined Cases C-92/92 and C-326/92 *Collins v Imtrat Handelsgesellschaft mbH*,<sup>3</sup> Phil Collins and Cliff Richard argued that this provision offended against Article 12 in an action relating to the distribution in Germany of bootleg recordings of their performances given in the USA and the UK. The German court referred the matter to the European Court of Justice (‘Court of Justice’) for a preliminary ruling under Article 234, where it was confirmed that copyright and related rights fell within the scope of Article 12 and the principle of non-discrimination applied to those rights.<sup>4</sup> Even though there was not yet full harmonisation of copyright and related rights throughout the Community, they fell within the Treaty’s provisions because of their effect on intra-Community trade in goods and services.

The remainder of this chapter looks at the impact of Articles 28–30 and Articles 81 and 82 on the exercise of intellectual property rights. What follows is not, however, to be an exhaustive exposition or study of EC competition law and readers wanting a fuller description and analysis should turn to leading texts on this important area of law.<sup>5</sup>

## FREEDOM OF MOVEMENT OF GOODS

Articles 28 and 29 of the EC Treaty prohibit quantitative restrictions on imports and exports and measure having equivalent effect. Article 30 contains a saving so that prohibitions and restrictions may be justified on a number of grounds such as public morality, public policy and public safety. Other grounds include the protection of industrial and commercial property<sup>6</sup> and intellectual property rights fall within these forms of property so immediately there is a balance to be struck between restriction on imports and exports and intellectual property rights. This has led to the important

<sup>1</sup> References, generally, in what follows are stated in terms of the EC Treaty.

<sup>2</sup> German Copyright Act 1965, ss 96(1) and 125(1).

<sup>3</sup> [1993] ECR I-5145.

<sup>4</sup> See also Article 4 of the EEA Agreement.

<sup>5</sup> Whish, R. (2008) *Competition Law* (6th edn) OUP.

<sup>6</sup> It is self-evident that patents, trade marks and rights in designs fall within the meaning of industrial property and, in Joined Cases 55/80 and 57/80 *Musik-Vertrieb Membran and K-Tel International v GEMA* [1981] ECR 147, it was confirmed that copyright was also included. By parity of reasoning, rights related to copyright must also be included.

principle of exhaustion of rights. The proprietor's rights further to commercialise particular goods are said to be exhausted by the first consensual sale of those goods. Of course, the exhaustion of rights is not absolute and other acts may infringe the relevant intellectual property rights, such as making copies of the goods without consent.

Exhaustion of rights means that the holder of intellectual property rights cannot use his rights to prevent the further commercialisation of goods which have been placed on the market within the Community (or, in reality, the EEA as the EEA Agreement contains provisions equivalent to Articles 28–30 of the EC Treaty) by him or with his consent. To this extent, his intellectual property rights have been compromised. However, this does not affect the fact that he has these intellectual property rights. There is a distinction between the *existence* of intellectual property rights and the *exercise* of those rights. Article 295 of the EC Treaty states that the Treaty shall in no way prejudice the rules in Member States governing the system of property ownership. Exhaustion of rights does not prejudice rules on ownership, nor does it prejudice the existence of those rights; it merely controls the exercise of those rights where such exercise conflicts with the principle of freedom of movement of goods. The principle is not an absolute one and will not apply under certain circumstances, such as where the further commercialisation involves acts which would be prejudicial to the holder of the intellectual property right, such as where he has repackaged the goods or altered them in an unacceptable way.

Where relevant, EC Directives and Regulations specifically provide for the working of the principle of exhaustion of rights. An example is found in Council Directive 89/104/EEC of 21 December 1988 to approximate the laws of the Member States relating to trade marks,<sup>7</sup> Article 7 of which states:

- 1 The trade mark shall not entitle the proprietor to prohibit its use in relation to goods which have been put on the market in the Community under that trade mark by the proprietor or with his consent.
- 2 Paragraph 1 shall not apply where there exist legitimate reasons for the proprietor to oppose further commercialisation of the goods, especially where the condition of the goods is changed or impaired after they have been put on the market.

Article 4(2) of Directive 2001/29/EC of the European Parliament and of the Council of 22 May 2001 on the harmonisation of certain aspects of copyright and related rights in the information society<sup>8</sup> states that the distribution right is not exhausted in relation to the original or copies of a work except where the first sale or other transfer of ownership in the Community of that object is made by the rightholder or with his consent.<sup>9</sup> These and other provisions on exhaustion have been implemented expressly in UK law.<sup>10</sup> However, the principle applies even without express legislation. The European Patent Convention and the UK Patents Act 1977 do not expressly mention the principle, but there is a wealth of case law before the Court of Justice to show that it applies to patents as it does to other intellectual property rights. Indeed, the principle of freedom of movement of goods existed to some extent in the UK prior to its membership of the European Community and, in some cases, the courts were prepared to imply a licence allowing the purchaser of an article to resell it. For example, in *Betts v Willmott*,<sup>11</sup> an old patent case, the claimant sold metal capsules to the defendant in France. The claimant, who had factories in England and France, tried to prevent the capsules being resold in England. Lord Hatherley said (at 245):

When a man has purchased an article he expects to have control of it, and there must be some clear and explicit agreement to the contrary to justify the vendor in saying that he has not given the purchaser his licence to sell the article, or use it wherever he pleases as against himself.

<sup>7</sup> OJ L 40, 11.02.1989, p 1.

<sup>8</sup> OJ L 167, 22.06.2001, p 10.

<sup>9</sup> In Case C-479/04 *Laserdisken ApS v Kulturministeriet* [2006] ECR I-8089, the Court of Justice confirmed that national rules providing for exhaustion in relation to objects placed on the market outside the EEA were not permitted and Article 4(2) was valid.

<sup>10</sup> For example, see the Trade Marks Act 1994 s 12, the Registered Designs Act 1949 s 7A, the Copyright, Designs and Patents Act 1988 s 18 and, in respect of Community-wide rights, there are similar provisions in relation to the Community design and the Community trade mark.

<sup>11</sup> (1871) LC 6 Ch App 239.

Of course, under traditional English law, such freedom to resell (and presumably also to import) was entirely vulnerable to the principle of freedom of contract. Another area of English law which could apply to ensure freedom of movement in limited circumstances is the doctrine of non-derogation from grant; however, the relevant provisions of the EC Treaty and other EC legislation are much stronger and of far greater application.

Article 30 overcomes Articles 28 and 29 where the protection of industrial and commercial property is at stake and this is interpreted as protecting the ‘specific subject matter’ of the intellectual property right in question. The definition of what constitutes the specific subject matter of a patent was given in Case 15/74 *Centrafarm BV v Sterling Drug Inc*<sup>12</sup> as being:

... the guarantee that the patentee, to reward the creative effort of the inventor, has the exclusive right to use an invention with a view to manufacturing industrial products and putting them into circulation for the first time, either directly or by the grant of licences to third parties, as well as the right to oppose infringements.

It is essential that trade between Member States is affected or likely to be affected by the restriction or measure in question. The grant of a compulsory licence to work a patent subject to a prohibition on importation from outside the European Community did not affect trade between Member States in Case C-191/90 *Generics (UK) Ltd v Smith Kline and French Laboratories (UK) Ltd*.<sup>13</sup> The imposition of excessive prices in the UK did not, *per se*, affect trade between Member States.<sup>14</sup>

The effect of Article 28 on the exercise of a patent right is often brought into question in cases involving ‘parallel importing’, the term used to describe the activity of buying goods in one Member State and importing them for resale in another Member State, usually undercutting the price charged by the proprietor of the intellectual property right in that destination Member State. Manufacturers of goods leave themselves wide open to this practice if they charge different prices in different Member States. They may try various ways of preventing parallel importing, for example, by their contracts with distributors or retailers imposing obligations to sell only to private individuals and to sell only limited numbers to any particular individual. Parallel importers usually still manage to get their hands on the goods, even going to such lengths as sending out dozens of persons posing as private buyers.

An example of parallel importing was Case 15/74 *Centrafarm BV v Sterling Drug Inc*.<sup>15</sup> Sterling Drug was the proprietor of patents in the UK and the Netherlands in respect of a pharmaceutical product. It had UK and Dutch subsidiary companies and granted licences to both of them in respect of the drug. Due to government regulations in the UK, the pharmaceutical product there cost approximately half that in the Netherlands. The UK company exported large quantities of the pharmaceutical to the Netherlands, undercutting the Dutch company. It was held that this was permissible because the pharmaceutical product had been put on the market with the parent company’s consent, thereby exhausting its rights under the patent. The Dutch subsidiary had wanted the parent company to exercise its patent rights to prevent the importation into the Netherlands of the pharmaceutical made in the UK. Therefore, it is difficult for a proprietor of patents in respect of the same invention in different Member States to maintain price differentials between those Member States. Purely economic considerations affecting the marketing of a product may be distorted and it could mean that a decision is taken not to market a product in a country where a low price would be appropriate or necessary. However, for the exhaustion doctrine to apply, the first marketing must have been by or with the consent of the patentee, and in Case 24/67 *Parke, Davis & Co v Probel*<sup>16</sup> the doctrine did not apply and the proprietor of a Dutch patent was able to prevent the importation of quantities of a pharmaceutical product into the Netherlands from Italy where it had been made without the consent of the

<sup>12</sup> [1974] ECR I147, affirmed in Case C-30/90 *Commission of the European Communities v United Kingdom* [1992] ECR I-829.

<sup>13</sup> [1992] ECR I-5335. However, the criteria could be applied in such a way as to affect trade between Member States.

<sup>14</sup> *Chiron Corp v Organon Teknika Ltd (No 2)* [1993] FSR 324.

<sup>15</sup> [1974] ECR I147.

<sup>16</sup> [1968] ECR 55.

<sup>17</sup> The availability of a licence in one Member State may also defeat the right to prevent imports made in another country without consent: *Allen and Hanbury v Generics (UK)* [1986] RPC 203.

<sup>18</sup> Case 187/80 *Merck & Co Inc v Stephar BV* [1981] ECR 2063.

<sup>19</sup> [1996] ECR I-6285. The defendant in the original infringement action had bought the drugs in Spain and Portugal and imported them into the UK.

patentee.<sup>17</sup> At the time, the pharmaceutical could be lawfully made by a third party in Italy as it did not, at that time, extend patents to pharmaceuticals.

The consensual marketing of goods in a Member State lacking protection in a relevant respect still will exhaust the right to prevent further commercialisation of the goods.<sup>18</sup> In some cases, the principle of exhaustion of rights might be postponed when a new Member State joins the Community. In Joined Cases C-267/95 and C-268/95 *Merck & Co Inc v Primecrown Ltd*,<sup>19</sup> before Spain and Portugal joined the Community, patents for pharmaceutical products were not available. Under the Acts of Accession to the Community, these countries were required to grant patents for pharmaceutical products but the principle of exhaustion of rights was not to apply for three years after pharmaceutical products first became patentable in Spain and Portugal. Two issues required to be resolved by the Court of Justice. The first was to determine precisely when the three-year period postponing the application of exhaustion of rights to pharmaceutical products ended. Was it three years after such products became patentable, or three years from the end of the calendar year during which they became patentable? The second question for the court was whether the rule in *Merck v Stephar* needed reconsidering.

The court held that the three-year period expired three years from the precise time at which drugs became patentable in Spain and Portugal and not three years from the end of the calendar year during which they so became patentable. The Acts of Accession were ambiguous on this point but, because the three-year period was a derogation from the normal working of the EC Treaty, the court said that it must be construed so as to cause the earliest application of Articles 28 and 30. The Court of Justice confirmed that the rule in *Merck v Stephar* still applied. The claimant submitted a number of reasons for modifying the rule, including state controls on prices and ethical or moral obligations to supply drugs in a Member State even though they were not patentable there. However, the claimant had freely sold its pharmaceuticals in Spain and Portugal.<sup>20</sup> It had not been compelled to do so by any rule of law. Simply being under an ethical or moral obligation was not a reason to depart from the rule. Neither was the imposition of price controls by a Member State a reason to depart from the rule. The distortion caused by price controls was a matter to be dealt with by measures taken by the Community rather than by providing a special derogation from the principle of freedom of movement.

The Court of Justice accepted that, where a proprietor of a patent was compelled by law to sell his products in a Member State, he did not consent to the sale in any real sense and could use his rights to prevent imports. That had not been the case here. Thus, the rule in *Merck v Stephar* has been qualified to that limited extent only. Neuberger J applied *Merck v Stephar* in *Sandvik Aktiebolag v KR Piffner (UK) Ltd*,<sup>21</sup> where he rejected counsel's argument that the observations of the Court of Justice in *Merck v Stephar* should be limited. Neuberger J stressed that the consent required for the purposes of exhaustion of rights must be a consent to marketing rather than a consent under the patent. This is an important distinction especially where a product is put on the market by or with the consent of the proprietor of patents for an invention in a Member State in which he holds no patent.

Often, there will be a tension between Article 28 and Article 30. In Case C-316/95 *Generics BV v Smith Kline & French Laboratories Ltd* ('SKF'),<sup>22</sup> SKF had a Dutch patent for the drug cimetidine. Before the patent expired, a third party filed applications for marketing authorisation in respect of the drug to the Dutch assessment board for medicinal products, submitting samples of the drug as required. The authorisations were granted and were assigned to Generics shortly before the patent expired. SKF applied for and was granted a temporary injunction to take effect immediately upon the expiry of the patent, restraining Generics from offering for sale or supplying the

<sup>20</sup> The case was referred to the Court of Justice by Jacob J: see *Merck & Co Inc v Primecrown Ltd* [1995] FSR 909.

<sup>21</sup> [2000] FSR 17.

<sup>22</sup> [1997] ECR I-3929.

drug. The injunction was to last 14 months after the patent expired, this being the average time it took to obtain marketing authorisation.

The Court of Justice accepted that the consequence of Dutch law was that a person other than the proprietor of the patent could not sell cimetidine as soon as the patent had expired. This was a measure having equivalent effect to a quantitative restriction on importation within Article 28. The drugs were lawfully on the market in other Member States, but the effect of the approach of the Dutch court was to prevent anyone importing them from another Member State and offering them for sale in the Netherlands.<sup>23</sup> However, the Court of Justice also held that such a restriction was justified under Article 30 and confirmed that the use of samples to obtain marketing authorisation was within the specific subject matter of a patent.

The outcome of the case was to place the proprietor of the patent in the same position he would have been in had his patent rights been respected whilst the patent was still in force. However, neither the Patents Act 1977 nor the European Patent Convention extend infringement to obtaining authorisation.<sup>24</sup> The applicant for authorisation would only infringe if he made the product whilst the patent was still in force.<sup>25</sup> What if the third party lawfully purchased a quantity of the drug made by the proprietor of the patent and submitted that for marketing authorisation? In the present case, the samples submitted by Generics had not been put on the market by or with the consent of SKF.

Of course, the proprietor or his licensee might attempt to use contractual methods to prevent the subsequent resale of the products, and if it affects trade between Member States this also will be controlled. The fact of the matter is that, in the European context, the use of patents (or other intellectual property rights) to divide the market and maintain territorial boundaries is vulnerable to challenge and control. This may be a good thing: for example, where a manufacturer is deliberately operating price differentials for no other reason than to make unreasonable profit margins, a parallel importer may soon put an end to this practice. However, there may be other good reasons for selling goods at different prices in different Member States based on economic factors, though such reasons should disappear or at least diminish as the concept of the single market becomes more of a reality.

One important exception to the principle of exhaustion of rights is that it does not apply to works and other subject matter subject to copyright or related rights which have been made available online. A distinction is made between, for example, a work of copyright released on tangible media (such as a compilation of music sold on CDs or films sold on DVDs) and the same work made available online. In the first case, the normal principle of exhaustion of rights applies but in the latter case, the owner is not to be taken to have abandoned his rights to control subsequent commercialisation. This also applies to material copies made by users of online services.<sup>26</sup>

## REPACKAGING

The principle of exhaustion of rights will not apply if the effect is seriously to damage the intellectual property right in question. Where exhaustion of rights has been expressly stated in trade marks legislation it is coupled with a proviso that it will not apply where there exist legitimate reasons for the proprietor of the trade mark to oppose further commercialisation of the goods, especially where their condition has been changed or impaired after they had been put on the market.<sup>27</sup> An equivalent proviso must apply in other cases where the legislation does not specifically mention exhaustion of rights or contain a similar proviso as it can be explained as being an example, in the context of the derogation in Article 30 on the basis of the protection of

<sup>23</sup> The rule in Case 8/74 *Procureur du Roi v Benoît and Dassonville* [1974] ECR 837 applies Article 28 where the law in question is capable of hindering directly or indirectly, actually or potentially, intra-Community trade.

<sup>24</sup> The defence of doing an act for experimental purposes would not seem to apply. Dutch patent law allows examination of the patented product, but has been held not to apply to the submission of samples of medicinal products.

<sup>25</sup> Or performed any of the other infringing acts unless the proprietor's rights had been exhausted.

<sup>26</sup> This 'derogation' from the principle of exhaustion of rights applies to services including online services: Directive 2001/29/EC of the European Parliament and of the Council of 22 May 2001 on the harmonisation of certain aspects of copyright and related rights in the information society, OJ L167, 22.06.2001, p 10, recitals 28 and 29 and Articles 3(3) and 4(2).

<sup>27</sup> Article 7(2) of the trade marks Directive and Article 13(2) of the Community Trade Mark Regulation. Note that the examples given (changed or impaired condition) are not exhaustive.

industrial or commercial property. Therefore, it is submitted that any subsequent commercialisation of a product subject to an intellectual property right, which has the effect of seriously prejudicing or harming that intellectual property right, should permit its proprietor to oppose that subsequent commercialisation.

The application of Article 30 in relation to intellectual property rights is usually seen in the context of trade marks and the reference to further commercialisation after the condition of the goods have been changed or impaired are only examples of situations where the proprietor may be able to oppose that later commercialisation. For example, it may be that the reputation of a trade mark used for prestige or luxurious goods is harmed by the manner in which the reseller advertises those goods using the trade mark.<sup>28</sup>

It is common for pharmaceutical products to undergo relabelling or repackaging by parallel importers so as to be suitable for resale in other Member States. This may be a result of compliance with national rules concerning the sale of pharmaceuticals: for example, the quantities a drug may be supplied in. There may be consumer resistance to adding labels to the outside of the trade mark proprietor's own packaging and it may be preferable to manufacture replacement packaging which will normally carry the trade mark. The extent to which, and conditions under which, repackaging is permitted has been considered on a number of occasions by the Court of Justice.

In Case C-143/00 *Boehringer Ingleheim KG v Swingward Ltd*,<sup>29</sup> a number of pharmaceutical companies brought trade mark infringement proceedings against the defendant who had bought quantities of the claimants' pharmaceutical products and imported them into the United Kingdom. The form of repackaging varied. In some cases, a label setting out critical information, such as the name of the parallel importer and its parallel import licence number, had been attached to the original package. Wording in languages other than English remained visible and the trade mark was not covered up. In other cases, boxes designed by the parallel importer and carrying the trade mark were used. In yet other cases, the product was repackaged in boxes designed by the parallel importer but which bore the generic name of the product, not the trade mark. Inside such boxes, the inner packaging bore the original trade mark, over-stickered with a label with the generic name as well as the identity of the manufacturer and of the parallel import licence holder. In all cases, the boxes contained an information leaflet for the patient written in English and bearing the trade mark.

The Chancery Division of the High Court sought a preliminary ruling from the Court of Justice, which ruled:

- a trade mark proprietor can prevent a parallel importer from repackaging pharmaceutical products unless the exercise of his trade mark rights contributes to the artificial partitioning of the markets between Member States;<sup>30</sup>
- however, where the repackaging is necessary for the pharmaceutical products concerned to be marketed in the importing State, for example, because of national rules or practices, the exercise of trade mark rights to prevent repackaging contributes to such artificial partitioning. But such repackaging must have regard to the legitimate interests of the proprietor;<sup>31</sup>
- the proprietor can oppose repackaging where it is done by a parallel importer solely to gain a commercial advantage;<sup>32</sup>
- replacement packaging of pharmaceutical products, rather than simply sticking labels on those packages, is objectively necessary if, without such repackaging, effective access to the market concerned, or to a substantial part of that market, is hindered as the result of strong resistance to such relabelling from a significant proportion of consumers for pharmaceutical products. The presence of some resistance is not necessarily such an impediment to effective market access to make repackaging necessary. The question as to whether it is necessary is a question for the national court;

<sup>28</sup> This was noted as a possibility in Case C-337/95 *Parfums Christian Dior SA v Evora BV* [1997] ECR I-6013.

<sup>29</sup> [2002] ECR I-3759.

<sup>30</sup> Case 102/77 *Hoffmann-La Roche & Co AG v Centrafarm Vertriebsgesellschaft mbH* [1978] ECR 1139. In that case, the Court of Justice ruled that the repackaging must be such so as not adversely to affect the original condition of the product, the trade mark proprietor must be notified beforehand and the name of the repackager must appear on the packaging.

<sup>31</sup> Joined Cases C-427/93, C-429/93 and C-436/93 *Bristol-Myers Squibb v Paranova A/S* [1996] ECR I-3457.

<sup>32</sup> Case C-379/97 *Pharmacia & Upjohn SA v Paranova A/S* [1999] ECR I-6927.

- even where a parallel importer is otherwise entitled to repackage trade-marked pharmaceutical products, he must notify the proprietor before he puts the repackaged product on sale and must, if requested to do so, provide a sample to the proprietor. This enables the proprietor to check to make sure the condition of the original product is not affected and that the reputation of the trade mark is not damaged. It also enables the proprietor to protect himself better from counterfeiters;<sup>33</sup>
- in the event of dispute, it is for the national court to assess, in the light of all the relevant circumstances, whether the proprietor had a reasonable time to react to the intended repackaging.

<sup>33</sup> *Bristol-Myers Squibb v Paranova A/S* [1996] ECR I-3457 at para 78.

Parallel importers will be able to repackage pharmaceutical products, as opposed to sticking a label on the original packaging, where this is necessary to overcome what would otherwise amount to an artificial partitioning of the market between Member States. They have to comply with the requirements for notice and give the proprietor sufficient time to consider the proposed repackaging and its impact on the condition of the product and the trade mark. It would be reasonable to assume that the time should be such to allow for any concerns of the proprietor to be addressed and other issues to be resolved. If the consent is not forthcoming, it should be a matter of an objective assessment of whether the condition of the product or the trade mark's repute would be likely to be adversely affected. Such issues are for the national courts to determine in a particular case.

Exercising trade mark rights to prevent the removal of identification numbers applied to goods for the purposes of complying with legal obligations, product recall and to combat counterfeiting do not offend under Article 7 providing they are not also used as a means of preventing parallel importing. In Case C-349/95 *Frits Loendersloot v George Ballantine & Son Ltd*,<sup>34</sup> Ballantine brought trade mark infringement proceedings in the Netherlands against a transport and warehousing firm whose customers were engaged in the parallel importation of Ballantine's Whisky. The complaints included removing labels and replacing them with copies, removing identification numbers, removing the name 'pure' and the name of the approved importer. The Court of Justice confirmed that Article 7 of the trade marks Directive should be interpreted in the same way as Article 30 of the EC Treaty and held, *inter alia*, that a trade mark proprietor could use his rights to prevent a third party removing and reaffixing or replacing labels bearing the trade mark unless:

<sup>34</sup> [1997] ECR I-6227.

- it is established that the use of the trade mark rights to oppose the marketing of relabelled products under the mark would contribute to the artificial partitioning of the internal market;
- it is shown that the relabelling cannot affect the original condition of the product;
- the presentation of the relabelled product is not such as to be liable to damage the reputation of the trade mark and its owner;<sup>35</sup> and
- the person who relabels the products informs the trade mark owner of the relabelling before the relabelled products are put on sale – there is no duty otherwise to inform the trade mark proprietor or to provide samples on demand.

<sup>35</sup> In *Glaxo Group Ltd v Dowlehurst Ltd (No 2)* [2000] FSR 529, Laddie J suggested that some damage was acceptable providing it was not substantial.

A further reference for a preliminary ruling was made in a subsequent appeal in the *Boehringer Ingelheim v Swingward*<sup>36</sup> case. The case still rumbles on. In that second reference, the Court of Justice ruled, *inter alia*, that where the criteria laid down in the *Bristol-Myers Squibb v Paranova* and the first *Boehringer Ingelheim v Swingward* case (Case C-143/00) were complied with, the trade mark proprietor would not have any reason to oppose the further commercialisation of the goods to which the trade mark had been applied.<sup>37</sup> However, it seems there may be a conflict between these rulings and

<sup>36</sup> *Boehringer Ingelheim AG v Swingward Ltd* [2004] ETMR 920.

<sup>37</sup> Case C-348/04 *Boehringer Ingelheim AG v Swingward Ltd* [2007] ECR I-3391.

38 Case C-276/05 *Wellcome v Paranova*.

39 *Boehringer Ingelheim AG v Swingward Ltd* [2008] EWCA Civ 83.

that in *Frits Loendersloot v Ballantine* and the Court of Justice appears ready to reconsider the position following a reference from Austria.<sup>38</sup> In the latest appeal to the Court of Appeal,<sup>39</sup> Jacob LJ thought he had no option but to defer making a final decision pending the ruling from the Court of Justice. Needless to say, the law on repackaging is in a mess that can only be resolved by the Court of Justice. In the latest Court of Appeal case, Jacob LJ said (at para 2):

Notwithstanding the two references to the ECJ and its answers, each 'side' . . . claims to have won. That is a sorry state of affairs. European trade mark law seems to have arrived at such a state of uncertainty that no one really knows what the rules are, outside the obviously core case of straightforward infringement . . . The compromises which have emerged have very fuzzy lines. So it is that in this case, notwithstanding two references (and a host of cases about relabelling parallel imports going back at least 30 years, see *Hoffmann-La Roche v Centrafarm*, Case 102/77 [1978] ECR 1139), there is still room for argument. There is indeed a yet further reference about the subject still pending before the ECJ . . .

40 The principle of freedom of movement of goods (and the other 'freedoms') also applies to the other Contracting Parties to the EEA Agreement, being Iceland, Liechtenstein and Norway.

41 For example, exhaustion as regards the harmonised national trade mark applies within the EEA but, in relation to patents and the Community trade mark, it applies to the EC.

42 [1998] ECR I-4799.

43 That is, where the goods had been sold by or with the proprietor's consent anywhere in the world.

44 However, Article 7(1) does not, *per se*, give a proprietor a right of action. This depends on the implementing legislation in Member States.

45 [1999] ECR I-4103.

46 See also Case C-479/04 *Laserdisken ApS v Kulturministeriet* [2006] ECR I-8089.

47 [2001] ECR I-8691.

## GOODS PLACED ON THE MARKET OUTSIDE THE EEA<sup>40</sup>

The doctrine of exhaustion of rights does not apply to goods that have been placed on the market outside the EEA, as the case may be.<sup>41</sup> In Case C-355/96 *Silhouette International Schmied GmbH & Co KG v Hartlauer Handelsgesellschaft mbH*,<sup>42</sup> the claimant made and sold spectacles in a number of countries under its Austrian registered trade mark 'Silhouette'. Large numbers of older designs had been sold by the claimant outside the EEA in Bulgaria and quantities of these had been bought by the defendant and imported into Austria where they were put on sale. Trade mark law in Austria at the time appeared to countenance international exhaustion of rights.<sup>43</sup> The Court of Justice ruled that national rules regarding goods put on the market outside the EEA by the proprietor or with his consent were contrary to Article 7(1) of the trade marks Directive. The reason being that, if it were left to each Member State to choose whether exhaustion should be limited to the EEA or not, barriers to trade within the EEA would thereby be erected. Consequently, Article 7(1) provided for exhaustion in respect of goods put on the market within the EEA only and a trade mark proprietor could exercise his rights to prevent the importation of goods from outside the EEA to an EEA Member State even if those goods had been placed on the non-EEA market by or with the proprietor's consent.<sup>44</sup> *Silhouette* was followed by the Court of Justice in Case C-173/98 *Sebago Inc v GB-Unic SA*.<sup>45</sup> That case also confirmed that exhaustion applies only in respect of *those* goods put on the market within the EEA by or with the consent of the proprietor and not that class of goods.<sup>46</sup>

A further challenge to the limitation of the principle of exhaustion of rights to the EEA, as the case may be, was made in Joined Cases C-414/99 to C-416/99 *Zino Davidoff AG v A & G Imports Ltd*,<sup>47</sup> in which goods were placed on the market outside the EEA by Davidoff and Levi Strauss. Davidoff's toiletries had been placed on the market in Singapore from where they had been bought by A & G Imports and imported in to the UK for sale. Quantities of Levi jeans put on the market mainly in Canada, the US and Mexico had been bought by Tesco Stores and Costco Goods and imported into the UK for sale.

The Court of Justice again confirmed that placing goods, bearing the proprietor's trade mark, on the market outside the EEA by or with the consent of the proprietor does not exhaust the rights of the proprietor to control their initial marketing in the EEA. A major issue was whether a trade mark proprietor's consent to importing the goods into the EEA from outside for resale could be inferred or whether such consent had to be express. The Court of Justice held that the concept of consent must be applied

uniformly throughout the EEA. As the effect of extinguishing exclusive rights is serious, the proprietor must evince an intention to renounce his rights unequivocally. This would normally be only by way of an express statement of consent. However, it may be possible to infer such consent from the facts and circumstances prior to, simultaneous with or subsequent to the placing of the goods on the market outside the EEA which, in the view of the relevant national court, unequivocally demonstrates that the proprietor has renounced his rights to object to their further commercialisation within the EEA.

The Court of Justice confirmed that implied consent to the marketing of goods placed on the market outside the EEA to their subsequent marketing within the EEA cannot be inferred merely from facts such that:

- the proprietor has not communicated his opposition to marketing in the EEA to all subsequent purchasers of the goods; in other words, mere silence on the part of the proprietor does not imply consent;
- the goods carry no warning of a prohibition on their being placed on the market within the EEA;
- the proprietor has transferred his ownership of products bearing the trade mark without imposing any contractual reservations and that, according to the law governing the contract, the property right transferred includes, in the absence of such reservations, an unlimited right to resell or, at the very least, a right to market the goods subsequently in the EEA.

The Court of Justice further held that the burden of proof lies on the person alleging consent. It is he who must prove consent and it is not for the proprietor to demonstrate its absence. In answer to further questions referred by the Patents Court in the UK, the Court of Justice ruled that, having regard to exhaustion of rights, it is not relevant that the importer of goods is unaware of the proprietor's objection to the goods being placed on the market within the EEA or being sold there by persons other than authorised traders. Nor is it relevant that authorised retailers and wholesalers have not imposed on their own purchasers contractual reservations setting out such opposition, even though they have been informed of such opposition by the trade mark proprietor.

The *Davidoff* case shows that it might be possible to find implied consent from the circumstances which will mean, in effect, that the proprietor has waived his right to object to the further commercialisation of goods, which he placed on the market outside the EEA situation, within the EEA. The practical effect of the ruling will be, of course, that proprietors of trade marks or other intellectual property rights make it clear to their distributors and retailers that the goods are not for resale within the EEA, perhaps adding a note to that effect on labels or tickets attached to the goods.

One argument often used by proprietors of intellectual property rights such as trade marks is that, through their authorised retailers, they have cultivated a high-quality experience for consumers which could be harmed by parallel importers selling the goods in less luxurious surroundings. The sale of expensive perfumes from department stores could be compared with the sale of the same perfumes, imported from other parts of the market, in relatively low-cost outlets, now familiar on High Streets. As far as imports from outside the EEA, sometimes the products sold there by the proprietor may be of a inferior quality to those placed on the market within the EEA by that proprietor. This may be a reflection of the differing amounts of consumer spending power in other countries. Another issue might be after-sales service where authorised retailers operate under performance levels set down by and monitored by the proprietor of the relevant intellectual property right.

48 [1989] RPC 497.

49 The licence agreement between the parent company and the Brazilian subsidiary contained a clause declaring that no restrictions were to be placed on exports. This was held not to be equivalent to express consent and was narrowly interpreted because it was inserted so as to comply with Brazilian law.

50 [1990] ECR I-3711.

51 This was a result of expropriation of the Belgian mark after the Second World War.

52 [1999] ECR II-3989.

53 On the basis of a manifest error of assessment of the evidence.

54 [1979] ECR 649.

The UK courts had the opportunity to consider parallel importing from Brazil in *Colgate-Palmolive Ltd v Markwell Finance Ltd*.<sup>48</sup> The US parent company of the UK company and the Brazilian company owned trade marks registered in the UK and similar marks registered in Brazil. The defendant imported into the UK and sold the toothpaste made in Brazil, which was of a poorer quality than that made in the UK. The Court of Appeal held that the UK trade marks were infringed, and the defendant's argument that the parent company had expressly or impliedly consented to the importation was rejected because it would amount to a misrepresentation to consumers as to the quality of the goods.<sup>49</sup>

This approach found some sympathy in the Court of Justice because of the deception as to quality operating on members of the public. For example, in Case C-10/89 *Cnl-Sucal NV SA v Hag GF AG*,<sup>50</sup> an unusual case involving the same trade mark ('Kaffee Hag' for coffee) owned by different proprietors in Belgium and Germany,<sup>51</sup> the current owner of the Belgian mark sought to sell its coffee in Germany. It was held that Articles 28–30 of the EC Treaty did not prevent national legislation from permitting an undertaking which owned a trade mark in one Member State from restraining the importation from another Member State of similar goods bearing a similar mark. The justification was that otherwise consumers would not be able to identify with any certainty the origin of the product and the owner of the mark in one Member State might be blamed for the poor quality of goods for which he was not responsible. However, this case must now be reconsidered in the light of the harmonisation of national trade mark law in Europe and the fact that a trade mark has become deceptive is a reason for invalidation or in terms of infringement by causing detriment to the repute of a well-known trade mark.

As far as *Colgate-Palmolive* is concerned, this now is of historical interest as the rulings of the Court of Justice, in cases such as *Zino Davidoff*, show that the proprietor can object to the subsequent commercialisation in the EEA of goods he has placed on the market outside the EEA, without having to show any possibility of detriment or other adverse effect. The only time exhaustion will apply in such a case is where there is evidence that the proprietor has consented to the importation and resale of the goods in question within the EEA.

Finally, one issue is whether the fact that the principle of exhaustion of rights does not extend to goods placed on the market outside the EEA enabling the rightholder to enforce his rights to prevent importation into the EEA could, nonetheless, form the basis of an allegation of an abuse of a dominant position under Article 82 of the EC Treaty. In Case T-198/98 *Micro Leader Business v EC Commission*,<sup>52</sup> Micro Leader (a French company) imported into France copies of Microsoft software in the French language which it had purchased in Canada. Eventually, Micro Leader was unable to obtain further copies and brought an action based on a breach of Articles 81 and 82 by Microsoft Corporation. The Court of First Instance, in annulling the decision of the Commission in rejecting the complaint,<sup>53</sup> ruled that, although it was clear from case law that the holder of a copyright could prevent the importation into the EC of goods placed on the market outside, it is not itself a breach of Article 82 but it could be in exceptional circumstances.

## EXHAUSTION OF RIGHTS AND DISPARITIES BETWEEN NATIONAL LAWS

The application of the freedom of movement of goods and exhaustion of rights may be compromised where different Member States have different internal rules relating to a particular product. In Case 120/78 *Rewe-Zentral AG v Bundesmonopolverwaltung für Branntwein*<sup>54</sup> (known as the *Cassis de Dijon* case), the Court of Justice had to consider

such a problem. Cassis de Dijon is an alcoholic blackcurrant liqueur. It was made in France lawfully at a strength of 15–20 per cent alcohol by volume. In Germany, the law prevented the sale of spirits of the type in which Cassis de Dijon fell unless the strength was at least 32 per cent alcohol by volume. An action was brought by an importer claiming that the German law was incompatible with Article 28 and an Article 234 reference was made to the Court of Justice.

The court accepted that, pending harmonisation, it was for Member States to regulate the production and marketing of alcoholic drinks on their own territory, but this is subject to European Community law and can only be justified if necessary to ‘... satisfy mandatory requirements relating in particular to the effectiveness of fiscal supervision, the protection of public health, the fairness of commercial transactions and the defence of the consumer’. German law did not discriminate against imports as such and applied to all liqueurs regardless of origin. However, such a law could clearly affect trade between Member States and could only be allowed to affect trade if it was justified by the Member State in accordance with the criteria above. A claim that the law helped to prevent alcohol abuse did not impress the court (banning weaker rather than stronger spirits seems an odd way of preventing alcohol abuse) and, in any case, any restriction to satisfy mandatory requirements must be proportionate and any alternative that could achieve the objective in a less onerous manner should be adopted, that being a matter for the national court following the Article 234 reference. The objective could be achieved simply by clearly labelling the drink with its alcoholic strength.

The *Cassis de Dijon* principle has been applied on a number of occasions and is of much wider application than freedom of movement of goods in relation to intellectual property rights. For example, in Case C-30/99 *Commission of the European Communities v Ireland*,<sup>55</sup> provisions in Irish law on hallmarking precious metals which resulted, *inter alia*, in the prohibition of imports lawfully made in the Member States of origin, was contrary to Article 28 of the EC Treaty.

55 [2001] ECR I-4619.

In relation to trade marks, in Case C-313/94 *Fratelli Graffione SNC v Ditta Fransa*,<sup>56</sup> the Scott Group marketed toilet paper and paper handkerchiefs under the trade mark ‘Cotonelle’ in Italy. In 1993, the Italian courts declared that the trade mark was invalid as it was misleading to consumers who might think the product contained cotton. The Scott Group stopped selling the products under that name in Italy. The trade mark was challenged in other countries, including France, where it was successfully defended, and the Scott Group continued to sell the products under that trade mark in France. The defendant bought quantities of the goods in France and exported them to Italy where he sold them under the ‘Cotonelle’ trade mark. The claimant, a distributor of Scott products, sought to prevent the sales by the defendant in Italy on the basis that the use of the ‘Cotonelle’ trade mark was misleading. Traders who wished to sell the goods of the proprietor of the trade mark under that trade mark could do so by importing them from other Member States but, if an injunction were to be granted prohibiting the marketing of those products in Italy, this would operate as an obstacle to intra-state trade.

56 [1996] ECR I-6039.

The Court of Justice ruled that obstacles to intra-state trade resulting from differences in national law were acceptable provided that:

- they were applicable to domestic and imported goods without distinction, and
- they were necessary to satisfy overriding requirements relating, *inter alia*, to consumer protection or fair trading.

Applying *Cassis de Dijon*, the court held that protection against the risk of misleading consumers by the use of a misleading trade mark could justify a barrier to the free movement of goods. The court went on to say that, before making an order, the national court must be satisfied that:

- the risk of misleading consumers was sufficiently serious to justify a barrier by preventing the use of the ‘Cotonelle’ trade mark, and
- the prohibition was necessary to prevent consumers being misled and was proportionate to that objective such that no other measure less restrictive of intra-Community trade would be capable of preventing consumers from being misled.

The national court must take into account factors such as the circumstances in which the goods are sold, the information on the packaging and its clarity, the presentation and content of advertising material and the risk of error in relation to the type of consumers of that product.

Although a law aimed at preventing unfair competition could justify a barrier to trade between Member States, it was not so here where one trader bought goods in one Member State where they were lawfully on the market and imported them into another Member State under the trade mark when other traders had the same right, even if they did not choose to exercise it.

Where European Community law of freedom of movement of goods conflicts with domestic laws, it is for the Member State to justify any obstacle to trade between Member States. Freedom of movement can be seen as the overriding principle and, where there is a justifiable objective to be achieved by domestic law, careful consideration should be given as to alternative ways of achieving that objective which are less restrictive of trade. An outright ban on importation will rarely succeed as clear and appropriate information in the form of labels or advertising will usually be sufficient to achieve the objective. Of course, as more intellectual property laws have become harmonised, there is less danger of conflict between domestic law and Community law as regards freedom of movement. For example, a number of cases on exhaustion of rights under copyright and rights in performances confirming that sale of a copy of a work does not exhaust the right to control rental<sup>57</sup> are no longer relevant as Community law has now clearly provided for rental and lending as distinct additional rights.<sup>58</sup>

<sup>57</sup> See, for example, Case C-61/97 *Foreningen af danske Videoogramdistributører v Laserdisken* [1998] ECR I-5171 and Case 158/86 *Warner Bros Inc v Christiansen* [1988] ECR 2685.

<sup>60</sup> EC Treaty, Preamble and Article 3.

## COMPETITION LAW

Domestic laws have, for some time, attempted to prohibit anti-competitive agreements and abuses which militated against fair competition. Many European countries had laws on unfair competition and, in the UK, there were laws to prevent restrictive trade agreements and anti-competitive practices, as there still are. Many of these laws could be engaged by abuses involving intellectual property but competition law is of much wider reach and would apply, to give just one example, to price-fixing arrangements between undertakings. The common law in the UK also developed controls: for example, terms in contracts in restraint of trade.<sup>59</sup>

The ability of domestic laws to control abuses within a country is clearly desirable but, in the context of the European Community, having control over anti-competitive practices which detract from the goal of a single market is important. The EC Treaty itself recognises this and has, as one of its aims, the removal of barriers to, and the promotion of, fair competition and the need to ensure competition in the internal market is not distorted.<sup>60</sup> Abuses may take many forms and include setting up barriers to make it difficult or impossible for other undertakings to enter a particular market, agreements between undertakings to divide up the internal market, inserting restrictive terms in intellectual property agreements, refusing to grant licences and abusing the monopoly rights provided by, for example, a portfolio of patents.

Freedom of movement of goods can be seen as one of the means of preventing anti-competitive behaviour by preventing the partitioning of the internal market which

would enable manufacturers to maintain price differentials and exploit variances in consumer spending power in different Member States. The EC Treaty has, however, two specific provisions attacking anti-competitive practices, being Article 81 which controls anti-competitive agreements, and Article 82 which controls abuses of dominant trading positions.<sup>61</sup> In both cases, it does not matter whether the prohibited behaviour is intended to affect trade between Member States; it is sufficient if that is the effect. The offending behaviour is to be determined along the lines of objectivity rather than the subjective intention of the undertaking or undertakings in question.

It should be noted that there is a *de minimis* principle that applies in relation to Articles 81 and 82. Article 81 will not apply where the effect on the market is insignificant: see Case 5/69 *Franz Völk v SPRL ets J Vervaecke*.<sup>62</sup> The Commission of the European Community has also issued notices setting out the threshold below which Article 81(1) will not apply, based on the size of undertakings and market share.<sup>63</sup> The criteria are for guidance only, however, and are not conclusive. Guidelines have also been issued as to the application of Article 81(1) to ‘vertical’ and ‘horizontal’ agreements.<sup>64</sup>

Both of these provisions, being Article 81 and Article 82, in the context of intellectual property rights, are considered below. As mentioned earlier, it should be remembered that each has much wider application than just in relation to intellectual property rights and what follows is considered from the perspective of intellectual property rights and is not intended to provide a comprehensive description of EC competition law.<sup>65</sup>

## ARTICLE 81 – RESTRICTIVE AGREEMENTS, ETC.

Article 81 of the EC Treaty prohibits agreements between undertakings, decisions by associations of undertakings and concerted practices which may affect trade between Member States and which have as their object or effect the prevention, restriction or distortion of competition within the common market, and in particular those which:

- (a) directly or indirectly fix purchase or selling prices or any other trading conditions;
- (b) limit or control production, markets, technical development, or investment;
- (c) share markets or sources of supply;
- (d) apply dissimilar conditions to equivalent transactions with other trading parties, thereby placing them at a competitive disadvantage;
- (e) make the conclusion of contracts subject to acceptance by the other parties of supplementary obligations which, by their nature or according to commercial usage, have no connection with the subject of such contracts.

Article 81(2) makes such agreements or decisions void. This does not mean to say that the whole agreement will be void if the objectionable terms can be severed whilst leaving the agreement intact in a meaningful way. The list of agreements and the like is, as usual, non-exhaustive. In terms of intellectual property rights, Article 81 is particularly concerned with terms in licence agreements (described as vertical agreements) or agreements between undertakings, for example, to pool or share rights or provide for joint research and development with the intention of creating new rights (horizontal agreements). A cartel is a typical sort of agreement caught by Article 81. In the case of cartels, the goods or services may or may not be subject to intellectual property rights. An extreme example of a cartel was given by a price fixing arrangement between suppliers of vitamins in Commission Decision 2003/2/EC of 21 November 2001 relating to a proceeding pursuant to Article 81 of the EC Treaty and Article 53 of the EEA Agreement.<sup>66</sup> Fines of up to €462 million were imposed.<sup>67</sup> In the civil follow up

<sup>61</sup> There are equivalent measures in the EEA Agreement.

<sup>64</sup> Commission Notice – Guidelines on Vertical Restraints, OJ C291, 13.10.2000, p 1 and Commission Notice – Guidelines on the applicability of Article 81 of the EC Treaty to horizontal/co-operation agreements, OJ C3, 06.01.2001, p 2.

<sup>65</sup> For which reference should be made to one of the leading texts on competition law such as Whish, R. (2008) *Competition Law* (6th edn) Oxford University Press.

<sup>66</sup> OJ L 6, 10.01.2003, p 1.

<sup>67</sup> Some of the other fines were reduced. One company which acted as a whistleblower had its fine commuted: Joined Cases T-22/02 and T-23/02 *Sumitomo Chemical Co Ltd v Commission of the European Communities* [2005] ECR II-4065.

68 [2008] ECC 28.

69 However, it appears that exemplary damages or an account of profits is not. The former would inevitably involve an element of double counting and be contrary to the principle *non bis in idem*.

70 [2009] EWCA Civ 750.

71 OJ C 3, 06.01.2001, p 2.

case before the High Court, *Devenish Nutrition Ltd v Sanofi-Aventis SA (France)*,<sup>68</sup> it was accepted that, despite the punitive and deterrent elements of the fines, compensatory damages might also be available.<sup>69</sup>

Where a body has a monopoly in relation to a particular activity, exclusive agreements made by a number of undertakings involved in that activity with a new entrant is unlikely to be caught by Article 81. In *Bookmakers' Afternoon Greyhound Services Ltd v Amalgamated Racing Ltd*,<sup>70</sup> a company owned by the leading bookmakers in the UK had exclusive media rights with racecourses and broadcast live horse races to licensed betting offices. Eventually a significant number of racecourses set up a rival service to which they granted exclusive media rights. The claimants alleged that this had the object or effect of restricting or preventing competition but, at first instance, the judge considered that the defendant's object was pro-competitive and the Court of Appeal agreed, holding that there was no breach of Article 81(1). As per Article 87 of Commission Notice, Guidelines on the applicability of Article 81 of the EC Treaty to horizontal cooperation agreements:<sup>71</sup>

Cooperation between firms which compete on markets closely related to the market directly concerned by the cooperation, cannot be defined as restricting competition, if the cooperation is the only commercially justifiable possible way to enter a new market, to launch a new product or service or to carry out a specific project.

The basic prohibition in Article 81(1) does not apply in the case of any agreement or category of agreements between undertakings, any decision or categories of decisions by associations of undertakings or any concerted practice or category of concerted practices, which contributes to improving the production or distribution of goods or to promoting technical or economic progress, while allowing consumers a fair share of the resulting benefit, and which does not:

- impose on the undertakings concerned restrictions which are not indispensable to the attainment of these objectives;
- afford such undertakings the possibility of eliminating competition in respect of a substantial part of the products in question.

The purpose of Article 81(3) is to exempt from the general prohibition agreements and the like which have beneficial effects and in which consumers may participate provided they go no further than necessary and do not provide an opportunity to eliminate competition for a substantial part of the products in question.

## Copyright and restrictive agreements

Although copyright is not a true monopoly right, apart from the rare example where the owner has exclusive access to the information contained within the work, copyright may be subject to the abuses sought to be prohibited under Articles 81 and 82. The Court of Justice has made it clear that it will be prepared to act against exclusive copyright licences if they offend,<sup>72</sup> and although intellectual property rights *per se* do not fall within the meaning of term 'agreement' within Article 81(1), the exercise of an intellectual property right might well do so.<sup>73</sup> Terms within licence agreements, such as export bans, may be susceptible to control. To some extent it is a matter of whether the provision is part of the specific subject matter of the right, and in *Re Ernest Benn Ltd*<sup>74</sup> an export ban was objected to on the basis of Article 81(1). There are no specific block exemptions directed at copyright works.

Reciprocal agreements between collecting societies protecting national interests do not fall foul of Article 81. In Case 395/87 *Ministère Public v Jean-Louis Tournier*<sup>75</sup> it was held that such collecting societies were pursuing legitimate aims where they sought to

72 Case 262/81 *Coditel SA v Ciné Vog Films SA* [1982] ECR 3381.

73 Case 144/81 *Keurkoop BV v Nancy Kean Gifts BV* [1982] ECR 2853.

74 [1979] 3 CMLR 636.

75 [1989] ECR 2521.

safeguard the rights and interests of their members, and contracts with users for that purpose could not be regarded as falling within the meaning of Article 81(1). However, this assumed that the practice was not excessive and did not go beyond what was necessary to achieve those legitimate aims.

## Patents and restrictive agreements

Being such a strong monopoly right, one might expect that there are ample opportunities for patent agreements to be caught by Article 81(1). The holder of a patent is placed in a strong bargaining position when it comes to negotiating with potential licensees. However, it is impossible to predict all the circumstances under which patent licences or horizontal agreements between patent proprietors are concluded and provision is made for exemption from the rigours of Article 81(1). This is because there may be circumstances in which an agreement, which appears at first sight to offend under Article 81(1), has positive effects, and can provide consumers with benefits, whilst not being unduly restrictive or abusive of competition.

Exemption from Article 81(1) is available under Article 81(3) on the basis of 'Block Exemption Regulations', where available, or on an individual basis otherwise. There is a block exemption on technology transfer agreements (relevant particularly to patent and know-how licences) but there are no block exemptions covering patent pooling agreements. Application may be made for individual exemption or negative clearance. The latter applies where the Commission does not grant exemption but is to the effect that the Commission does not consider the agreement is caught by Article 81(1), or that it is but is saved by Article 81(3). This means that the Commission can see no reason to intervene in the light of information available to the Commission at the time. An individual exemption under Article 81(3) is granted for a specific period of time which may be extended. The advantage of an Article 81(3) exemption over a negative clearance is that the former carries an immunity against fines imposed by the Commission while the latter does not.

In Commission Decision 90/46/EEC of 12 January 1990 relating to a proceeding under Article 85 of the EEC Treaty<sup>76</sup> (*Alcatel Espace/ANT Nachrichtentechnik*)<sup>77</sup> there was an application to the Commission for a negative clearance or individual exemption in respect of an agreement between a French company and a German company, both involved in the manufacture of communication equipment, for the purposes of joint research and development, production and marketing activities. The agreement included a term to the effect that the relevant patents owned by each party (or to which each party was entitled) would be communicated to the other party and the parties would be free to work each other's patents on a royalty-free, non-exclusive licence basis. First of all, the Commission held that the agreement offended against Article 81(1) because it would allocate research and development so that only one party would carry this out, that the agreement provided for the procurement by one party of equipment made by the other and that decision-making processes were to be allocated to common committees. The Commission considered all of these would restrict competition. The block exemption relating to research and development agreements was not applicable as the agreement went beyond its scope. However, the Commission granted an individual exemption under Article 81(3) for a period of ten years, subject to notification of changes in the agreement. The reasons given by the Commission are instructive:

- 1 the planned cooperation would lead to improved technical solutions which would be discovered more rapidly and would contribute to technical progress which would benefit customers;

<sup>76</sup> Now, of course, Article 81 of the EC Treaty.

<sup>77</sup> OJ L32, 03.02.1990, p 19; [1991] 4 CMLR 208.

- 2 the agreement only imposed restrictions necessary to the above objective. The fact that the agreement did not prohibit either party from engaging in other activities outside the scope of the agreement was an important factor;
- 3 the nature of the market implied that separate marketing was not practicable;
- 4 the parties' market share was not high.

Agreements of the type mentioned above are sometimes described as 'horizontal agreements' because they reflect mutuality of restrictions, in contrast with a vertical agreement, a typical example being one between licensor and licensee.<sup>78</sup> Both types of agreements could be invalid if challenged if they affect trade between Member States. The types of terms that are likely to cause problems are those that attempt to extend the agreement or any part of it beyond the term of the patent, those which tie the licensee to the licensor (for example, where the licensee agrees to purchase goods from the licensor that are unconnected with the patent in question), and terms which state that the licensor is not to work the patent in countries other than those included in the licence agreement.<sup>79</sup> It is certainly the case that any licence which includes some sort of exclusive right should be drawn up very carefully and specialist advice taken where there is any possibility of exploitation in more than one Member State, or where the product is likely to be exported, with or without the consent of the parties to the agreement. However, some terms have been declared to be permissible, such as minimum royalty clauses and terms requiring minimum quantities of the product to be made by the licensee, as they are properly within the normal exploitation of the patent and go to the specific subject matter of the patent. Terms which purport to prevent the licensee from challenging the validity of the patent, or which require him to refrain from competing with the licensor, are likely to be struck out by the Commission or Court of Justice if they could affect inter-state trade.

Patents are territorial and one aspect of the European Patent Convention is that patents in respect of a particular invention may exist in some Member States but not others. This fact may encourage a proprietor to include territorial restrictions in any licence granted under the patent. Such restrictions, when viewed from that perspective, are, in principle, compatible with Article 81.<sup>80</sup> In Case 193/83 *Windsurfing International Inc v EC Commission*,<sup>81</sup> the Court of Justice held that the following did not fall within the specific subject matter of a patent and, as far as they restricted competition, were incompatible with Article 81:

- (a) provision for quality control by the licensor either in respect of a product not covered by the patent or without being based on objective criteria set out in advance;
- (b) an obligation, arbitrarily imposed, that the licensee only sell the patented product in connection with a product outside the scope of the patent;
- (c) a method of calculating royalties which induced the licensee to sell the patented product together with a product not covered by the patent;
- (d) a clause prohibiting manufacture of the patented product in a state where the licensor has no patent protection (note that this is in terms of manufacture, not subsequent sale or use).

An obligation in a licence agreement to pay an excessive royalty may constitute an abuse under Article 81, although charging excessive royalties might properly be expected to be relevant to abuses of dominant positions under Article 82. In *Philips Electronics NV v Ingman Ltd*,<sup>82</sup> Laddie J pointed out that fixing prices at unfair levels was accepted as being contrary to Article 82 in cases such as Case 53/87 *CICRA v Renault*<sup>83</sup> and that this principle seems to have been applied in connection with intellectual property licences in Case 262/81 *Coditel SA v Ciné Vog Films SA*<sup>84</sup> (although this was a case on a copyright licence).

<sup>78</sup> Other examples include franchise and distributorship agreements.

<sup>79</sup> The case of *AIOF v Beynard* [1976] FSR 181 concerned a provision which purported to allow the unilateral extension of the licence by the licensor. See also Case 320/87 *Kai Ottung v Klee & Weilbach A/S* [1989] ECR 1177, about an obligation to pay royalties after the expiry of a patent. The Court of Justice considered that whether an agreement affected inter-state trade, and thus offended against Article 81(1), was a matter for a national court to decide from the economic and legal context in which the agreement was concluded.

<sup>80</sup> *Sandvik Aktiebolag v KR Pffifner (UK) Ltd* [2000] FSR 17.

<sup>81</sup> [1986] ECR 611.

<sup>82</sup> [1999] FSR 112.

<sup>83</sup> [1988] ECR 6039.

<sup>84</sup> [1982] ECR 3381.

A whole list of provisions in a licence agreement in respect of a patent and a trade mark were, according to the Commission in the case of *Velcro SA v Aplix SA*,<sup>85</sup> caught by Article 81(1), including:

- 1 exclusivity preventing the licensor exploiting the patents and trade mark in the licensed territory, or granting further licences there when the basic patents expired;
- 2 an export ban preventing the licensee selling outside the licensed territory;
- 3 the automatic extension of certain terms on the expiry of basic patents on the basis of improvement patents;
- 4 an obligation to obtain manufacturing equipment exclusively from a named manufacturer;
- 5 an obligation not to use specialised manufacturing machinery outside the licensed territory;
- 6 an obligation on the parties not to compete with each other;
- 7 an obligation to allow the licensor to acquire title to improvement patents in other Member States for improvements discovered by the licensee; and
- 8 a provision for the unilateral extension of the patent licence.

It cannot be disputed that the agreement in this case contained a great many provisions that were capable of affecting trade between Member States (the above list is not complete – there were other reasons why the agreement was caught by Article 81(1)). However, it is natural for commercial organisations to have their own interests at heart when drawing up licensing agreements, and too much interference by the Court of Justice can be criticised as being counter-productive and likely to restrict trade, the flow of information and collaboration by destroying the commercial viability of licences and other agreements. A comparison of the *Velcro* and *Alcatel Espace* cases indicates that the ‘look and feel’ of an agreement is very important – whether it prohibits certain activities, or merely discourages them. For example, a collateral term insisting that equipment is obtained only from the other party will be struck down, but a term stating that equipment should or may be obtained from the other party may survive an attack based on Article 81(1). Another factor is that, in some cases, the complaint has not come from a third party whose trade has been affected adversely by the operation of the agreement, but from one of the parties to the agreement itself, who is now trying to free himself of terms to which he had earlier expressly agreed.

## THE TECHNOLOGY TRANSFER REGULATION

The Commission is empowered to provide for block exemption for certain categories of agreements and concerted practices which fall within the scope of Article 81(1). It may also grant individual exemption. The first block exemption for patent licences came into force in 1984 and was intended to last for ten years.<sup>86</sup> There was also a block exemption for certain categories of know-how licensing agreements.<sup>87</sup> As know-how (generally confidential information relating to the use or application of industrial processes) is often licensed along with patents, it was considered desirable, in the interests of simplification and encouraging the dissemination of technical knowledge, to combine the two block exemptions into a single Regulation. The 1984 Regulation on patent licensing was extended beyond its normal ten years pending the new Commission Regulation (EC) 240/96 on the application of Article 81(3) of the EC Treaty to certain categories of technology transfer agreements, often referred to as the Technology Transfer Regulation.<sup>88</sup> This Regulation came into force on 1 April 1996 and was declared to apply until 31 March 2006. Pre-existing agreements in force at 31 March 1996 which fulfilled the requirements of the previous two Regulations are

<sup>85</sup> Commission Decision 85/410/EEC of 12 July 1985 relating to a proceeding under Article 85 of the EEC Treaty (*Velcro/Aplix*), OJ L 233, 30.08.85, p 22; [1989] 4 CMLR 157.

<sup>86</sup> Commission Regulation (EEC) 2349/84 on the application of Article 85(3) [now Article 81(3)] of the Treaty to certain categories of patent licensing agreements, OJ L 219, 16.08.1984, p 15.

<sup>87</sup> Commission Regulation (EEC) No 556/89 of 30 November 1988 on the application of Article 85(3) of the Treaty to certain categories of know-how licensing agreements, OJ L 61, 04.03.1989, p 1.

<sup>88</sup> OJ L 31, 09.02.1996, p 2.

89 OJ L 123, 27.04.2004, p 11.

unaffected by the prohibition in Article 81(1). The 1996 Regulation was prematurely repealed following an evaluation report and replaced by Commission Regulation (EC) No 772/2004 of 27 April 2004 on the application of Article 81(3) of the Treaty to categories of technology transfer agreements,<sup>89</sup> which came into force on 1 May 2004.

The new Technology Transfer Regulation moves away from an approach based on listing clauses in agreements deemed to be exempt to place greater emphasis on defining categories of agreements exempted up to a certain level of market power and specifying restrictive clauses that must not be included in such agreements. It is certainly much easier to understand than its predecessors. The Regulation applies to licensing agreements but not to pooling arrangements. The market share thresholds are 20 per cent where both parties are competitors and 30 per cent where they are not competitors. There is no presumption that the agreement automatically falls within Article 81(1) if the market share thresholds are exceeded but the Commission may withdraw the benefit of the block exemption in a particular case.

‘A technology transfer agreement’ is a patent licensing agreement, a know-how licensing agreement, a software copyright licensing agreement or a mixed patent licensing agreement, know-how licensing agreement or software copyright licensing agreement. Certain collateral agreements are also included provided they do not detract from the primary objective of the technology transfer agreement. Also covered are assignments of rights in patents, know-how and software copyright where the assignor continues to bear some of the risk after assignment. This would include the position where the assignor is paid a royalty based on future sales. The previous Technology Transfer Regulation did not apply to software copyright and its inclusion now is perhaps a reflection of the immense market power of some software companies.

Know-how is the practical knowledge based on experience and testing which is not patented but which is secret, substantial and identifiable. It may be, for example, the knowledge to put a patented invention to best effect of a ‘shop-floor’ technique used by one undertaking over a period of time which has proved valuable even though it is not capable of the precise definition required for patenting.

Particular clauses, described as ‘hardcore restrictions’, are not permitted under Article 4(1) of the Regulation where the parties to the agreement are competitors. These include controls over prices at which products are sold to third parties, certain limitations on output and allocation of markets and certain restrictions on the use by the licensee of his own technology and any clauses restricting research and development by either party.

Examples of limitations on the allocation of markets that are acceptable are:

- obligations to produce with the licensed technology only within one or more technical fields of use or one or more product markets;
- in a non-reciprocal agreement, an obligation on either party not to produce with the licensed technology within one or more technical fields of use or one or more product markets or one or more exclusive territories reserved for the other party.

For example, it should be acceptable to impose an obligation on the licensor not to exploit the technology in the territory reserved for the licensee. That could include, in a non-reciprocal agreement, an obligation on the licensor not to sell products made with the licensed technology, actively or passively, in the territory reserved by the licensee. There may also be a restriction on the licensee not to grant other licences in respect of the licensed territory. Where licences are granted to two or more licensees operating in different territories, there may be non-reciprocal restrictions on the active sales by the licensee in the territory reserved for the other licensee, provided he is not a competitor of the licensor.

Article 4(2) sets out the restrictions which will not benefit from block exemption in agreements between non-competing parties. They include obligations in relation to prices, though not the setting of a maximum or recommended price and restrictions on the allocations of markets, though not as restrictive as in the case of parties that are competitors.

Article 5 sets out other terms that are described as excluded restrictions and these include obligations to grant-back exclusive licences in respect of severable improvements or to assign rights in such improvements and obligations not to challenge the intellectual property rights held by the licensor in the common market. However, it may be provided for that such a challenge would bring the technology transfer agreement to an end.

## ARTICLE 82 – ABUSE OF A DOMINANT TRADING POSITION

The owner of a true monopoly intellectual property right, such as a patent, can be in a dominant position. However, although copyright and rights related to copyright are not true monopoly rights as such, the owner of a copyright or related right can still be in a dominant position. This might be the case where the owner is the sole source of the information, data or other material incorporated in the work. Whilst being in a dominant position, *per se*, is not controlled by the EC Treaty, certain abuses of dominant positions are. Article 82 prohibits the abuse of a dominant position within the common market. It states:

Any abuse by one or more undertakings of a dominant position within the common market or in a substantial part of it shall be prohibited as incompatible with the common market insofar as it may affect trade between Member States . . .

Again, it must be noted that the abuse must affect trade between Member States, and if it does not there is no remedy under EC law no matter how unfair the practice concerned.<sup>90</sup> Also, there is no need for trade actually to be affected and it is sufficient if it may be affected by the abusive behaviour. Four examples of abuse are given in Article 82:

- the imposition of unfair trading conditions or prices;
- the limitation of production, markets or technical developments to the prejudice of consumers;
- discrimination against some trading parties by applying dissimilar conditions to equivalent transactions;
- the imposition of unconnected supplementary obligations in contracts.

Examples would include the limitation of the supply of music recordings or video films in respect of some Member States, probably coupled with high prices. A supplementary obligation that would offend is where a publisher will supply only to retail outlets who agree not to buy from a rival publisher resident in another country.

What constitutes an abuse of a dominant position is not defined as such in Article 82, but in Case 85/76 *Hoffmann-La Roche AG v Commission to the European Communities*<sup>91</sup> it was described as:

. . . an objective concept relating to the behaviour of an undertaking in a dominant position which is such as to influence the structure of the market where, as a result of the presence of the undertaking in question, the degree of competition is weakened and which, through recourse to methods different from those which condition normal competition . . . has the effect of hindering the maintenance of the degree of competition still existing in the market or the growth of that competition.

<sup>90</sup> Although there may be a remedy under national law. For example, the UK Competition Act 1998 contains provisions equivalent to Articles 81 and 82 set in the context of the UK: see ss 2 and 18 of the 1998 Act. These provisions apply where trade within the UK is affected.

<sup>91</sup> [1979] ECR 461.

Abuse is therefore directed at the use of methods different from normal commercial practices. Refusing to supply further goods until those already supplied have been paid for is outside Article 82.<sup>92</sup> This is a normal business practice.

<sup>92</sup> See *Leyland Daf Ltd v Automotive Products plc* [1994] 1 BCLC 245.

<sup>93</sup> [1987] ECR 1747.

<sup>94</sup> [2009] ECDR 42.

Merely occupying a dominant position does not automatically bring Article 82 into play. For example, a collecting society occupies a dominant position in its particular country of operation, and in Case 402/85 *Basset v SACEM*<sup>93</sup> the French collecting society SACEM was occupying a dominant position but the exercise of its power was not an abuse as such. The Court of Justice will not normally interfere unless some plain abuse is present. A collecting society which uses different royalty models for commercial broadcasters compared with public broadcasters is not necessarily in breach of Article 82. In Case C-52/07 *Kanal 5 Ltd v Föreningen Svenska Tonsättares Internationella Musikbyrå (STIM)*,<sup>94</sup> the collecting society 'STIM' collected in Sweden royalties on behalf of music composers and recording companies. It had a monopoly in Sweden in relation to music played in broadcasts. With respect to commercial broadcasters, STIM based the royalty on the revenue of the broadcaster together with the amount of music played. For the public broadcaster in question, STIM charged a lump sum. The Court of Justice ruled that a model which took account of the amount of music played was not necessarily an abuse of the collecting society's dominant position. In certain circumstances, however, it could amount to an abuse, in particular, where another method of calculating the royalties payable existed which enabled the use of the music and the audience to be identified and quantified more precisely providing it did not lead to a disproportionate increase in the cost of managing and supervising the scheme. As regards the different model used for the public broadcaster, it was for the national court to determine whether:

- the commercial broadcasters were placed at a competitive disadvantage;
- in fact the public broadcaster was a competitor of the commercial broadcasters; and
- the practice of having different models could be objectively justified.

A factor to be taken into account was that the public broadcaster had no revenue from advertising or subscription contracts.

<sup>95</sup> [1988] ECR 6211.

In Case 238/87 *Volvo AB v Erik Veng (UK) Ltd*,<sup>95</sup> Volvo refused to grant licences to spare parts manufacturers and the Court of Justice held that the proprietor of a protected design has a right to prevent third parties from manufacturing, selling or importing spare parts incorporating the design and that this was the very subject matter of the right. Consequently, the court would not impose a compulsory licence, because to do so would be to take away the essence of the right even though royalties would be payable. Volvo's decision to refuse to grant a licence was not, therefore, an abuse of its dominant position.<sup>96</sup> Lack of harmonisation in design law at the time was a significant reason for the court's reluctance to intervene. The outcome might be different now, say in relation to the Community design where there is some abuse present.

<sup>96</sup> Compare this with *British Leyland Motor Corp Ltd v Armstrong Patents Co Ltd* [1986] 2 WLR 400.

<sup>97</sup> [1995] ECR I-743.

This lack of interference with the exercise of the right to choose whether to grant licence rights is not absolute, and in Joined Cases C-241/91P and C-242/91P *RTE and ITP v Commission of the European Communities*,<sup>97</sup> the Court of Justice dismissed an appeal from a decision of the Commission and Court of First Instance finding that refusal to make available to third parties in advance listings of forthcoming television programmes was an abuse caught by Article 82. Although the court accepted that mere ownership of copyright did not confer a dominant position on its owner, the fact that the television companies had a *de facto* monopoly in relation to information concerning forthcoming programme schedules meant that they were in a dominant position. The companies could effectively prevent competition from weekly television magazines containing listings of programmes. Exercise of the property right in a work of copyright would not, on the basis of the *Volvo v Veng* decision, normally constitute an abuse of a

dominant position. However, by withholding the information, the television companies were preventing others from marketing a competing product for which there was public demand. Such refusal to licence could not be justified on the basis of the companies' broadcasting or publishing activities. The Court of Justice confirmed that the requirement that trade between Member States be affected was satisfied by showing that the conduct concerned was capable of affecting such trade, and it was not necessary to show that trade had in fact been affected.<sup>98</sup>

A distinction can be made between the *RTE* and the *Volvo* cases in that, although it refused to grant licences, Volvo did supply spare parts; whereas in the *RTE* case, the listings were not made available in advance at all. The Broadcasting Act 1990 anticipated the outcome of the *RTE* case, as s 176 imposes a duty to provide advance information about programmes broadcast by the BBC, the Independent Television Commission, Channel 4 and the public television services of the Welsh Authority.<sup>99</sup>

The *RTE* and *Volvo* cases have been used numerous times. In Case C-418/01 *IMS Health GmbH & Co OHG v NDC Health GmbH & Co KG*,<sup>100</sup> both parties provided services in relation to data on regional pharmaceutical sales. IMS was the owner of copyright in a 'brick structure' used to represent regions and their attributes and had distributed the structure to pharmacies and doctors' surgeries free of charge, thereby building up a market prominence such that clients were reluctant to accept other structures. The defendant which was the successor to a company set up by a former manager of IMS tried to use structures very much like the claimant's. IMS sued for infringement of its copyright in the brick structures and the defendant counterclaimed, arguing that the claimant's refusal to grant it a licence was contrary to Article 82. The Court of Justice confirmed, on the basis of *RTE* and *Volvo*, that a refusal to grant a licence, *per se*, did not amount to an abuse under Article 82. However, it could do if coupled with other factors, being:

- where the undertaking requesting the licence intended to offer new products or services not offered by the copyright owner and in respect of which there was a potential consumer demand;
- where the refusal to grant the licence cannot be justified on objective considerations; and
- where the refusal is such as to reserve to the copyright owner the market for the supply of the data in question in the Member State concerned by eliminating competition in that market.

### Abusive pricing

Simply charging a high price is not necessarily abusive under Article 82. The British Horseracing Board Ltd ('BHB') was the governing body of horseracing in Great Britain. It controlled and maintained a database of information including 'pre-race data' about horse races, horses, trainers, jockeys and owners. In *Attheraces Ltd v British Horseracing Board Ltd*,<sup>101</sup> the claimant made transmissions via websites and television providing customers with information which originally came from the BHB database. The claimant alleged that the BHB, which had a monopoly in such data, was abusing its dominant position under Article 82 of the EC Treaty and s 18 of the Competition Act 1998 by charging excessive, unfair and discriminatory prices for its pre-race data. At first instance,<sup>102</sup> the judge agreed. The Court of Appeal held that the trial judge had erred by calculating the economic value of the pre-race data as the cost of producing it plus a reasonable margin, described as a 'cost plus' approach. That did not take account of the value of the pre-race data to the claimant and resulted in a value too near to the cost of production. BHB's prices were neither excessive nor unfair and there was no discriminatory pricing.<sup>103</sup>

<sup>98</sup> The Court of First Instance had correctly found that the exclusion of all potential competitors had affected the market comprising Ireland and Northern Ireland.

<sup>99</sup> It applies to the BBC's UK services, the ITC's regulated services, and, in addition, to any national service regulated by the Radio Authority. In the absence of agreement as to the payment, the Copyright Tribunal has the power to fix payments. These provisions came into force on 1 March 1991.

<sup>100</sup> [2004] ECR I-5039.

<sup>101</sup> [2007] ECC 98.

<sup>102</sup> [2006] FSR 336.

<sup>103</sup> BHB also threatened to refuse to licence the use of the pre-race data by the claimant. The Court of Appeal confirmed that such refusal did not constitute an abuse under Article 82.

104 [2004] ECR I-10415.

105 [2005] ECC 458. BHB Enterprises plc was, in effect, the trading arm of the BHB.

In another case involving the BHB database, following the Court of Justice ruling in Case C-203/02 *British Horseracing Board Ltd v William Hill Organization Ltd*,<sup>104</sup> which appeared to significantly prejudice any rights BHB owned in respect of the database, the defendant bookmaker in *BHB Enterprises plc v Victor Chandler (International) Ltd*<sup>105</sup> decided to stop paying a licence fee to the claimant for the pre-race data. The claimant threatened to withdraw the supply of the pre-race data to the defendant. This was argued to be contrary to Article 82 of the EC Treaty and s 18 of the Competition Act 1998. The cost of maintaining the BHB database was estimated at around £4m per annum. However, it was claimed that the income BHB received from exploiting it was in the region of £600m over the previous five years. The defendant had been paying £60,000 per month for the pre-race data, based on 10 per cent of the defendant's gross profit or 1.5 per cent of its turnover. Laddie J rejected the allegation that the price charged was unfair through lack of evidence showing this to be the case. The defendant's approach failed to consider the value of the database as an asset and concentrated on the cost of acquisition or creation instead.

### Failing to provide information

106 OJ L 122, 17.05.1991, p 42, Article 6.

The permitted act of decompilation of a computer program for the purposes of achieving interoperability with that or another program under s 50B of the Copyright, Designs and Patents Act 1988 originates from Council Directive 91/250/EEC of 14 May 1992 on the legal protection of computer programs.<sup>106</sup> Sometimes the permitted act may turn out to be illusory and obtaining the information necessary to achieve interoperability may be technically extremely difficult if not impossible.

107 Commission Decision 2007/53/EC of 24 March 2004 relating to a proceeding pursuant to Article 82 (EC) and Article 54 of the EEA Agreement against Microsoft Corp, OJ L 32, 06.02.2007, p 23. The fine included an amount for the objectionable tying of Windows Media Player: see later.

A number of software companies, including Sun Microsystems Inc, applied to the Microsoft Corporation asking for information which would allow them to interoperate their software systems with Microsoft's Windows client PC operating system. Failing provision of this information, Sun Microsystems lodged a complaint with the Commission to the European Communities. The Commission imposed a fine of a497,196,304, holding that failing to make the interoperability information available to competitors was an abuse of a dominant position under Article 82.<sup>107</sup> The Commission required Microsoft to submit a proposal for a mechanism which included a monitoring trustee with the power of access to Microsoft's information, documentation, employees and source code without recourse to the Commission with costs to be borne by Microsoft and a right reserved to the Commission to impose such a mechanism. Microsoft's appeal failed in respect of the abuse of a dominant position and the level of the fine but it succeeded in relation to the imposition of the monitoring mechanism before the Court of First Instance in Case T-201/04 *Microsoft Corp v Commission to the European Communities*.<sup>108</sup>

108 [2007] 5 CMLR 846.

There were parallel proceedings in the US against the Microsoft Corporation under US antitrust law. Eventually a settlement was reached between Microsoft and the US Department of Justice and the Attorney Generals of nine States. Microsoft agreed to draw up the specifications of the communication protocols used by the Windows server operating systems in order to 'interoperate', that is to say, to make them compatible with the Windows client PC operating systems and to grant third parties licences relating to those specifications on specific conditions. Furthermore, Microsoft was required to allow original equipment manufacturers and end users to activate or to eliminate access to its middleware which included Windows Media Player. This was intended to ensure suppliers of media software could develop and distribute products which would function properly with Windows. The settlement was affirmed by the Court of Appeals, District of Columbia, in *Commonwealth of Massachusetts v Microsoft Corp*.<sup>109</sup>

109 30 June 2004.

### Sword or shield

A defendant sued for an infringement of copyright might advance a ‘Euro-defence’, for example under Article 82 of the Treaty. If nothing else, such a ploy might lengthen the proceedings, especially if the case is referred to the Court of Justice for a preliminary ruling under Article 234.<sup>110</sup> In *Ransburg-Gema AG v Electrostatic Plant Systems*<sup>111</sup> it was alleged that the defendant had infringed the copyright subsisting in certain drawings. The defendant entered a ‘Euro-defence’ claiming that the claimant was guilty of a breach of Article 82. In striking out the Euro-defences, Aldous J held that there must be a connection between the alleged actions of the claimant and the alleged breach under Article 82. The existence of an exclusive right and its exercise were not *per se* a breach of the Treaty of Rome. Further, to show this, the Euro-defence must be sufficiently detailed. In the earlier case of *Imperial Chemical Industries Ltd v Berk Pharmaceuticals Ltd*,<sup>112</sup> Megarry V-C struck out Euro-defences because the defendant had failed to show a sufficient nexus between the alleged breach of Article 82 and the right claimed by the defendant – in that case, to imitate the claimant’s get-up.<sup>113</sup> In *Her Majesty’s Stationery Office v The Automobile Association Ltd*,<sup>114</sup> Laddie J struck out defences based on an abuse of a dominant position in relation to an infringement action involving Ordnance Survey maps. He said that the defendant had not been able to put forward a case even up to the low level required to withstand a strike out attack.

Defences under Article 82 are common but rarely, if ever, succeed in the English courts. In *Pitney-Bowes Inc v Francotyp-Postalia GmbH*,<sup>115</sup> Hoffmann J said (at 77):

There is, as far as I know, no English case in which a defence under Article 86 [now Article 82] to an action asserting intellectual property rights has actually succeeded.

It is clear that Articles 81(1) and 82 can be used in national courts as a sword or a shield and have a much better success rate when used as a weapon of attack. For example, in *Cutsforth v Mansfield Inns Ltd*,<sup>116</sup> the claimant succeeded in obtaining an injunction in the High Court to prevent the defendant brewery enforcing an obligation to purchase games equipment from nominated suppliers (not including the claimant), which was contained in agreements between the brewery and tenants of public houses. In *Attheraces Ltd v British Horse Racing Board*,<sup>117</sup> the claimants brought proceedings against the defendant which had a monopoly in pre-race data for horse races and which attempted to impose onerous terms and had also threatened to terminate the supply of such data. It was held that the defendant was in breach of Article 82 and also s 18 of the Competition Act 1998, which is the equivalent to Article 82 though in the context of trade being affected within the UK rather than as between Member States.

The occasions when the Court of Justice will interfere with the normal exploitation of copyright are quite rare, and the court seems to have achieved a fine balance between commercial exploitation and misuse of the right. The fact that copyright law is not fully harmonised throughout the EC has the effect of raising the status of, and hence the ability to rely on, national laws.

### Abuse of a dominant position and patents

The ability of patents to place their proprietors in a dominant position is self-evident, especially where there are no effective alternative technologies or where the proprietor has built up a portfolio of patents in a particular technology. One might think that a refusal to licence patented technology cannot be an abuse as such as the decision to licence surely falls with the specific subject matter of a patent. In *Chiron Corp v Organon Teknika Ltd (No 2)*<sup>118</sup> Aldous J restated that a refusal to grant a licence to work an intellectual property right could not, *per se*, be an abuse of a dominant position.

<sup>110</sup> This can take about 18 months.

<sup>111</sup> [1990] FSR 287.

<sup>112</sup> [1981] FSR 1.

<sup>113</sup> See also, to similar effect, *International Business Machines Corp v Phoenix International (Computers) Ltd* [1994] RPC 251.

<sup>114</sup> [2001] ECC 272.

<sup>115</sup> [1991] FSR 72.

<sup>116</sup> [1986] 1 WLR 558.

<sup>117</sup> [2006] FSR 336.

<sup>118</sup> [1993] FSR 324.

**119** Following Hoffmann J in *Pitney Bowes Inc v Francotyp-Postalia GmbH* [1991] FSR 72, who in turn followed the Court of Justice in Case 238/87 *Volvo AB v Erik Veng (UK) Ltd* [1988] ECR 6211.

**120** [1995] ECR I-743.

**121** [1999] FSR 112.

Therefore, refusal to grant a licence except on unfair or unreasonable terms also was not an abuse.<sup>119</sup> However, this must now be reviewed in the light of Joined Cases C-241/91P and C-242/91P *RTE and ITP v Commission of the European Communities*,<sup>120</sup> in which the Court of Justice held that the television organisations were abusing their dominant position under Article 82 by refusing to grant licences in respect of information concerning forthcoming television programmes. An important feature of this case was that the information was not available elsewhere and, furthermore, the Court of Justice made it clear that this was an exceptional case. Therefore, at least where there are comparable or equivalent products on the market, refusal to grant a licence should not, *per se*, be an abuse of a dominant position. The issue is more unpredictable when there are not similar or equivalent products available, although in *RTE* a significant factor was that, by denying access to the information to others, the television organisations were reserving for themselves the secondary market of publishing details of forthcoming television programmes.

An argument that the decision in *RTE* was applicable to patents was rejected by Laddie J in *Philips Electronics NV v Ingman Ltd*.<sup>121</sup> The defendant in an action for infringement of patents in relation to the design and manufacture of compact discs raised defences under Articles 81 and 82, *inter alia*. The defendant had earlier refused to take on the claimant's standard form licences on the grounds that the terms were unfair. Of the defence under Article 82, Laddie J said (at 124):

... a patent entitles the proprietor to the exclusive right to prevent others from exploiting his invention. The exclusive right is the central defining characteristic of a patent. It is what gives it its legal and commercial value. . . . The reward takes the form of a right to exclude competitors from using or exploiting any inventive product of such research and development. The purpose and effect of that right of exclusivity is to enable the owner of the patent to take advantage of the absence of competition so as to increase his prices and thereby increase his profits or market or both.

Laddie J then rejected the notion that the EC Treaty obliges patentees to grant licences on fair and reasonable terms. Otherwise, patent rights would be emasculated, in the words of Laddie J. Articles 81 and 82 have to live side by side with intellectual property rights which are, because of their very nature, anti-competitive. Of course, it is very much a matter of reconciling Article 296 (formerly Article 222) which states that the EC Treaty shall in no way prejudice the rules in Member States governing the system of property ownership. Articles 81 and 82 apply to specific forms of abuse and cannot be widened out in such a way as to prejudice intellectual property rights. The drive to greater harmonisation of intellectual property rights and the introduction of Community-wide rights confirm the importance with which these rights are seen by the European Commission, Parliament and the Council, as will a reading of the recitals in Directives and Regulations relating to intellectual property rights.

In *Philips Electronics*, Laddie J also made the point that it did not follow that the same principles apply to all intellectual property rights when it came to Article 82 (or other provisions of the EC Treaty for that matter). He said (at 134):

... not all intellectual property rights are equal. Some are more equal than others. It is convenient and conventional to treat copyright, designs, topography rights, moral rights, confidential information, patents and trade marks as a group. But there are substantial differences between them. They last for different periods in respect of different types of subject matter. They are infringed by different types of activity. They are subject to different types of defences or exceptions. For example, the fair use defences in copyright have no equivalent in patent law and the compulsory licence provisions in patent law have no equivalent in copyright law. In *Magill* [the *RTE* case] what was being considered was the rights in a subspecies of copyright. It does not follow inevitably that *Magill* can be applied by analogy to a patent case.

Although *RTE* involved a quasi-monopoly situation, the decision can be seen as a response to a particular form of abuse in respect of an intellectual property right that does not normally give rise to a monopoly as the independent creation of a similar work does not infringe copyright. Furthermore, as Laddie J noted above, stronger monopoly rights, such as those associated with patents, have built-in statutory controls over abuses of the monopoly, such as compulsory licensing and, in the UK, Crown use. It should also not be forgotten that Articles 81 and 82 are concerned with abuses that affect trade between Member States, being contrary to one of the basic tenets of the common market. Again, it must be emphasised that these provisions (and Article 28) are there to control exploitation of rights that run counter to the effective working of the common market rather than to question the very existence of those rights.

The basic ingredients for an infringement of Article 82 were laid down in Case 24/67 *Parke, Davis & Co v Probel*<sup>122</sup> as:

- 1 the existence of a dominant position;
- 2 an improper exploitation of it; and
- 3 the possibility that, as a result, trade between Member States may be affected;

confirming that being in a dominant position is not sufficient by itself to bring Article 82 into play – something further is needed. An important factor indicating dominance is the ownership of intellectual property rights. In particular, ownership of a patent might constitute a considerable barrier to entry into the relevant market by third parties. Adopting commercial strategies to establish barriers to competitors entering the market was held to be an abuse.<sup>123</sup>

Neuberger J confirmed that the task faced by a defendant running a defence under Article 82 was fourfold.<sup>124</sup> In addition to showing the three elements in *Parke, Davis & Co*, he also had to demonstrate a nexus between those elements and his defence on the facts. Neuberger J said that he did not doubt that a breach of Article 82 could result in a court ordering the holder of an intellectual property right to grant a licence to another, though this would be exceptional.

Where it is held that there is a breach of Article 82, large fines can be imposed. In Case T-51/89 *Tetra Pak Rausing SA v Commission to the European Communities*,<sup>125</sup> Tetra Pak, the world leaders in cartons and filling machines for liquid foods, especially aseptic packaging for UHT milk, through the acquisition of another company, obtained the exclusivity of a patent licence for an alternative process of sterilisation.<sup>126</sup> Tetra Pak argued that Article 82 was inapplicable because a block exemption applied to the licence.<sup>127</sup> The Court of First Instance considered the implications of Article 82 and the relationship between Articles 81(1) and 82, and the effect of an exemption under Article 81(3) on the operation of Article 82. It was held that Articles 81 and 82 were complementary in as much as they have a common objective in accordance with Article 3(g) (the institution of a system ensuring that competition in the common market is not distorted), but the Articles constitute two independent provisions addressing different situations. Therefore, an exemption under Article 81(3) cannot be such as to render Article 82 inapplicable. The fact that a company in a dominant position becomes more dominant through the acquisition of a patent licence does not *per se* constitute an abuse within Article 82. Account must be taken of the circumstances surrounding the acquisition, such as the effect on competition within the relevant market. The Court of First Instance upheld the Commission's finding that there had been an abuse of a dominant position. The Commission imposed a fine of ECU 75 million.<sup>128</sup>

A tying clause is one that requires a buyer of goods or a licensee under a patent to obtain other goods or services or raw materials from the seller or licensor. For example, a company selling patented toothbrushes to retail outlets might insist that the company's toothpaste is also purchased by the outlets. The Patents Act 1977 could make

<sup>122</sup> [1968] ECR 55.

<sup>123</sup> *Masterfoods Ltd v HB Ice Cream Ltd* [1994] FSR 1, High Court of Ireland.

<sup>124</sup> *Sandvik Aktiebolag v KR Pffner (UK) Ltd* [2000] FSR 17.

<sup>125</sup> [1990] ECR II-309.

<sup>126</sup> Tetra Pak had 92 per cent of the European Community market in aseptic filling machines, and 89 per cent of the market for cartons.

<sup>127</sup> Under Commission Regulation (EEC) 2349/84 of 23 July 1984 (exemption from Article 85(1)).

<sup>128</sup> Tetra Pak's appeal to the Court of Justice was dismissed: Case C-333/94P *Tetra Pak International SA v Commission to the European Communities* [1996] ECR I-5951.

such tying clauses void under certain circumstances, and the existence of contracts or licences containing them could provide a complete defence to an infringement action.<sup>129</sup> European Community law can also control such tying clauses if they conflict with Article 82. For example, in Case T-30/89 *Hilti AG v Commission to the European Communities*,<sup>130</sup> users of Hilti nail-guns, used to fire nails into walls, were required to buy nails from Hilti when they bought cartridges for the guns. Other manufacturers made suitable nails. Hilti was fined ECU 6 million for this infraction of Article 82. The tying of the purchase of sailboards and rigs was also held to be an abuse of a dominant position in Case 193/83 *Windsurfing International Inc v Commission to the European Communities*.<sup>131</sup>

The Microsoft Corporation distributed Windows Media Player bundled in with its Windows 2000 software package. The Commission to the European Communities held that this constituted an abuse of a dominant position and the Court of First Instance confirmed this in Case T-201/04 *Microsoft Corp v Commission to the European Communities*.<sup>132</sup> The court required that, in future, Microsoft must distribute its Windows software package with the Media Player being included only as an option.

Compulsory licences may not be liked by proprietors of patents but, if they are uncooperative in settling the terms of such licences that might be viewed as an abuse under Article 82 if the purpose is to delay the evil day when the licence is available. Hilti were held needlessly to have protracted proceedings for the grant of a licence of right and had demanded a royalty six times that finally adopted by the Comptroller of Patents. The patent had originally been granted under the Patents Act 1949 and an additional four years were allowed subject to licences being available as of right.<sup>133</sup>

<sup>129</sup> Patents Act 1977 s 44, now repealed.

<sup>130</sup> [1991] ECR II-1439.

<sup>131</sup> [1986] ECR 611.

# Chapter 25

## IPR AND CONFLICT OF LAWS

### INTRODUCTION

Conflict of laws, sometimes referred to as private international law, is an area of law which has developed to resolve three particular issues that a court may be faced with deciding in a case which has a foreign element. The issues are whether a court in a particular country has jurisdiction to hear a case, what body of law should apply to the case and the recognition and enforcement of judgments of foreign courts. These issues do not come up in every case, of course. In fact, conflict of laws comes up only in a minority of cases where there is a foreign dimension to the case, such as where the parties are domiciled in different countries. Where, for example, a British citizen resident in England owns a work of UK copyright which is infringed in the UK by another British citizen who is also resident in England, one would naturally assume that the infringement action would be commenced in the courts of England and Wales. However, even this is not always that clear cut as the UK is comprised of different jurisdictions (England and Wales, Scotland and Northern Ireland) and, furthermore, there are other jurisdictions in the British Isles such as the Isle of Man, Jersey and Guernsey. What if the infringer was a British citizen resident in Scotland?

One thing that must be made clear from the outset is that intellectual property laws are, generally, territorial. They subsist and can be infringed only in their relevant territories. This is the same with European Community-wide rights such as the CTM and Community design although here we are talking of the territory of the Community. This rule is not without exception, however, as business goodwill protected by passing off may be protected outside the geographical limits of its country. This could be the case where goodwill acquired in respect of a business in Northern Ireland could be the basis of a passing off action in neighbouring areas of Ireland.<sup>1</sup>

There are some other exceptions to the territorial limitation of some intellectual property rights. For example, copyright can be infringed by authorising of the acts within the exclusive rights of the owner. In such a case, a UK copyright will be infringed by carrying out one of these acts, in the UK, without the consent of the copyright owner. However, the person authorising the act will also be liable for infringing the UK copyright even if he was outside the UK when he gave his authorisation.<sup>2</sup> The corollary to this rule is that the courts of one jurisdiction would not be expected to accept jurisdiction over disputes relating to alleged infringements of foreign patents, copyrights or trade marks.<sup>3</sup> However, as we will see, this has been compromised to some extent, certainly as regards the informal rights and even formal intellectual property rights where there is no challenge to the validity of the right.

The courts in the UK and other countries developed their own rules as to whether to accept jurisdiction and which law to apply and the enforcement of foreign judgments. Treaties and arrangements with other countries were entered into. An important

9 *Bonnier Media Ltd v Greg Lloyd Smith* [2003] SC 36.

10 The numbering of equivalent provisions in the Lugano Convention is not the same as in the Brussels Regulation. The Lugano Convention is to be replaced by the Convention on jurisdiction and the recognition and enforcement of judgments in civil and commercial matters, OJ L 339, 21.12.2007, p 3. Denmark will also join this Convention.

11 If the defendant is not domiciled in a Member State, the jurisdiction of each Member State will be determined by the law of that Member State, subject to Articles 22 and 23 which apply, *inter alia*, to land, formal intellectual property rights and agreements between the parties as to which courts should have jurisdiction. Against such a defendant, a person domiciled in a Member State may avail himself of the rules of jurisdiction as apply to nationals of that State.

principle was *forum non conveniens*. This meant that an English court would decline jurisdiction to hear a case if the courts in another country would be more suitable to hear the case. This principle reached a high point in the House of Lords in *Spiliada Maritime Corp v Cansulex Ltd (The 'Spiliada')*,<sup>4</sup> in which guidelines for the application of the principle were set out by Lord Goff. The principle is still very important in some situations but has, in the context of conflict of laws in a European context, lost much of its relevance. In Europe there are a number of Conventions and Regulations that set out a fairly comprehensive system for determining the issues that may arise.

As with the previous chapter, this does not attempt to present a detailed view of conflict of laws and reference should be made to a suitable book on the subject.<sup>5</sup> Rather, this chapter examines the subject from the perspective of intellectual property rights and is focused accordingly. In particular, jurisdiction is the main area covered, with some material on applicable law.

## JURISDICTION<sup>6</sup>

The main piece of legislation in Europe is Council Regulation (EC) No 44/2001 of 22 December 2000 on jurisdiction and the recognition and enforcement of judgments in civil and commercial matters.<sup>7</sup> This Regulation is referred to as the 'Brussels Regulation' and replaced the Brussels Convention 1968<sup>8</sup> on jurisdiction and the recognition and enforcement of judgments in civil and commercial matters which was retained only by Denmark. For our purposes, there is only one minor difference between the Regulation and the Convention in that the former expressly applies to torts which *may* occur whereas the latter does not, although the Court of Session, Outer House, in Scotland held that the Brussels Convention also applied to threatened torts (or, in Scotland, delicts).<sup>9</sup>

A parallel Convention to the Brussels Convention is the Lugano Convention on jurisdiction and the recognition and enforcement of judgments in civil and commercial matters, 1988 ('Lugano Convention'). This has equivalent provisions to those relevant to intellectual property rights and, in effect, extends them to the other EEA Member States.<sup>10</sup> The following discussion on jurisdiction is based on the Brussels Regulation, unless otherwise stated.

The basic rule in Article 2 is that defendants should be sued in the courts in the Member State in which they are domiciled, whatever their nationality. If they are not nationals of the Member State in which they are domiciled, they are governed by the rules of jurisdiction applicable to nationals of that Member State.<sup>11</sup> This basic rule is subject only to the possibility that such persons may be sued in the courts of another Member State only if provided for by the Regulation.

Simply put, the basic rule is that defendants 'play at home'. The Brussels Regulation contains a number of other provisions which displace that rule or even give alternatives as to the courts in which Member States have jurisdiction. Before looking at the exceptions to the basic rule, the fact that in some cases the courts of more than one Member State may have exclusive jurisdiction under the Brussels Regulation, one additional rule should be mentioned. This prevents parallel actions in a number of Member States for the same cause of action and between the same parties.

Where proceedings involving the same cause of action and the same parties are brought before the courts of different Member States, any court other than the court first seised shall stay proceedings until the jurisdiction of the court seised is established: Article 27. Where the jurisdiction of the court first seised is established, other courts must decline jurisdiction in favour of the court first seised. A simple example should help. Albert and Bertie are parties to a contract which is to be performed in England.

Albert is domiciled in England and Bertie is domiciled in France. On 1 May 2006, Albert commences proceedings against Bertie for breach of contract in the English courts. On 8 May 2006, Bertie commences proceedings against Albert for breach of contract in France. Under the Regulation, the French court must stay the action until the English court has decided whether it has jurisdiction, which it will confirm it has, as it is possible to sue a defendant in a contract case in the courts in the Member State where the contract is to be performed. Once the English court has established that it does indeed have jurisdiction, the French court must decline jurisdiction. Even where, as in the case of Albert and Bertie, the courts of both England and France have jurisdiction, the French court must still decline jurisdiction in favour of the English court which was first seised.<sup>12</sup>

Notwithstanding the basic rule that a defendant should be sued in his home Member State, Article 5 of the Brussels Regulation provides that a person domiciled in a Member State may be sued in another Member State under certain circumstances. These include:

- in relation to a contract, the courts for the place of performance of the obligation in question;<sup>13</sup>
- in relation to a tort, delict or quasi-delict, the courts for the place where the harmful event occurred or may occur.<sup>14</sup>

Infringement of an intellectual property right is a tort and many intellectual property rights are exploited by means of a contractual licence. These two particular situations potentially give an alternative forum for hearing a dispute in intellectual property cases involving a foreign element. For example, suppose the contract between Albert and Bertie was a copyright licence which permitted Bertie to make and sell copies of a watercolour painting and for these purposes he is provided with a master copy of the painting. Albert owns the copyright in the painting. It is a work of UK copyright but, in accordance with Article 5 of the Berne Convention for the Protection of Literary and Artistic Works, Albert is able to enforce his copyright in other countries where he will be entitled to the relevant national copyrights. Say that, in breach of the licence agreement, Bertie makes a duplicate of the master copy which he sells to Cedric, domiciled in Germany, who makes and sells prints in Belgium. Albert can sue in France (breach of licence agreement<sup>15</sup> and infringement of copyright by the making of duplicates by Bertie) or Belgium (infringement of copyright there by Cedric). Albert cannot sue in England as his UK copyright has not been infringed. He has to rely on the licence agreement and his equivalent French and Belgian copyrights.

The next rule is that, under Article 6(1), where there is more than one defendant and the claims against each are so closely connected that it is expedient to hear them together to avoid the risk of irreconcilable judgments resulting from separate proceedings, the defendants may be sued in the courts in the Member State in which any one of them is domiciled.<sup>16</sup> In our example, if Bertie and Cedric are, in effect, joint tortfeasors in relation to the sales in Belgium,<sup>17</sup> on the basis of this rule, Albert can sue in France or Germany. This rule does not prevent the working of Article 5 so the potential alternatives for Albert, depending on the precise circumstances, are:

- sue Bertie in France and Cedric in Germany (Article 2);
- sue Bertie in France for breach of contract and for making an infringing copy there (Article 5);
- sue Cedric in Belgium for making and selling infringing copies there (Article 5);
- sue Bertie and Cedric in either France or Germany as being joint tortfeasors in respect of making and selling infringing copies in Belgium (Article 6(1)).

<sup>12</sup> Being 'seised' means having the document instituting proceedings lodged with the court. Under the Brussels Convention there was no further guidance on the meaning of 'first seised', unlike the modest attempt to define the term under Article 30 of the Brussels Regulation: see *Tavoulares v Tsavlis* [2004] 1 Lloyd's Rep 445.

<sup>13</sup> In a sale of goods contract this is the place the goods were or should have been delivered and, in the case of a service, the place where the service was, or should have been, provided.

<sup>14</sup> There are further circumstances under Article 5 including maintenance, agency or trusts.

<sup>15</sup> Assuming the licence does not contain a clause giving the courts of one Member State exclusive jurisdiction.

<sup>16</sup> The test of close connection and expediency was a result of the decision of the Court of Justice in Case 189/87 *Athanasios Kalfelis v Bankhaus Schröder, Münchmeyer, Hengst & Co* [1988] ECR 5565 in which the court interpreted the previous provision in the Brussels Convention narrowly.

<sup>17</sup> In other words, it was a joint venture to infringe the copyright.

Where there is a contract, for example, a licence agreement in respect of intellectual property rights, one would expect the contract to include express provision for applicable law and it may also include an agreement between the parties as to exclusive jurisdiction. Article 23 of the Brussels Regulation allows the parties, one or more of which is domiciled in a Member State, to agree that a court or the courts of a Member State are to have jurisdiction to settle disputes which have arisen or may arise out of a particular legal relationship. That jurisdiction shall be exclusive unless the parties agree otherwise. The agreement conferring jurisdiction must be in writing<sup>18</sup> or evidenced in writing or in a form in accordance with practices established by the parties or in a form in international trade or commerce which is widely used and regularly observed by parties to such contracts and the parties to the present contract are, or ought to be, aware of this. Such an agreement cannot oust the jurisdiction of a court which has exclusive jurisdiction under Article 22, including Article 22(4) below.<sup>19</sup>

The next provision of the Brussels Regulation of particular interest in relation to intellectual property rights applies where the right is formal in nature, being subject to registration, such as a patent or trade mark, and the proceedings are concerned with the registration or validity of the right in question: Article 22(4). In such cases, the courts of the Member State, in which the right, such as a patent, trade mark, design or similar right, is secured by registration or deposit, have exclusive jurisdiction. This applies also to application to register such rights and to European patents granted under the European Patent Convention.

Therefore, in an action concerning a UK patent, trade mark or registered design where registration or validity is an issue in the case, the courts of the UK have exclusive jurisdiction. Of course, if neither registration nor validity is in issue, then the usual rules apply. However, in most cases, a defendant will mount an attack on validity. The impact of Article 22(4) can be serious when dealing with parallel infringements of national registered intellectual rights covering the same subject matter, such as where a proprietor of a bundle of national patent rights acquired through the European Patent Convention could be faced with the expense of bringing parallel proceedings in a number of Member States for what might amount to the same infringing acts in relation to the same invention. The rules in Article 22 (Article 16 of the Brussels Convention) are exclusive and mandatory by nature. It is almost inevitable that validity of a patent or other registered property right will be challenged, even indirectly, in infringement proceedings. It does not matter whether validity is brought up by an action, for example, for revocation or invalidity, or by way of a defence and it does not matter at what stage in the proceedings validity is raised.<sup>20</sup> For example, if there is a later challenge to a patent registered in another Contracting State, the court hearing the action will have no option but to stay proceedings.

Even though validity has not yet been put in issue, if it is clear that it will be in the future, either in the current proceedings or where new proceedings alleging invalidity are likely to be commenced, no purpose is to be served by a court in a country other than that in which the patent is registered accepting jurisdiction. In *Knorr-Bremse Systems for Commercial Vehicles Ltd v Haldex Brake Products GmbH*,<sup>21</sup> Knorr-Bremse brought an action in England for a declaration of non-infringement of Haldex's patents valid in a number of European countries including the UK. Haldex sought an order for a stay of proceedings.<sup>22</sup> However, Knorr-Bremse had already indicated that it intended to claim that the patents were invalid and had instructed its attorneys to file a counterclaim for invalidity once Haldex had served its defence. Lewison J referred to the ECJ case of *Gesellschaft für Antriebstechnik*, noted above,<sup>23</sup> and Laddie J in *Coin Controls Ltd v Suzo International*<sup>24</sup> and said that where it was clear that validity 'is to be put in issue' in the future, the court should decide the application on the basis that validity is one of the issues in the case. It is not necessary for the allegation of invalidity to be formally

18 'Writing' includes an electronic communication which provides a durable record of the agreement.

19 The Court of Justice confirmed in Case C-4/03 *Gesellschaft für Antriebstechnik mbH & Co KG v Lamellen und Kupplungsbau Beteiligungs KG* [2006] ECR I-6509 that parties may not derogate from Article 16 of the Brussels Convention by agreement conferring jurisdiction or by voluntarily putting in an appearance. Article 22 of the Brussels Regulation is equivalent to Article 16 of the Brussels Convention.

20 Case C-4/03 *Gesellschaft für Antriebstechnik mbH & Co KG v Lamellen und Kupplungsbau Beteiligungs KG* [2006] ECR I-6509.

21 [2008] FSR 752.

22 Haldex argued that an agreement between it and the German parent company of Knorr-Bremse in settlement of an earlier patent dispute conferred exclusive jurisdiction on the Landgericht Düsseldorf in Germany.

23 See note 20.

24 *Infra*.

pleaded. In such a case, if the action were to be stayed, there would be nothing to stop the relevant party starting a new action alleging invalidity as well as non-infringement. If Haldex brought proceedings before the German court, that court would have to decline jurisdiction once the allegation of invalidity of the UK designations of the European patents had been raised here. Lewison J said that he could not see the point of that.

The Community trade mark and Community design both have their own rules of jurisdiction under which a number of the rules of the Brussels Regulation are suppressed or modified. Jurisdictional issues relating to these Community-wide rights, including the unregistered Community design, are specifically provided for in the relevant Regulation and are described in Chapters 17 and 22.

Before looking further at jurisdiction in particular cases, it should be plain from what has been said above that the issues can be somewhat different for the informal intellectual property rights such as copyright and the formal rights.

## Copyright

A case that signified an important step in applying the then Brussels Convention to intellectual property disputes was *Gareth Pearce v Ove Arup Partnership Ltd*.<sup>25</sup> In that case, the claimant claimed that he had UK and Dutch copyright in his architectural drawings for a building, originally drawn by the claimant for a town hall in London Docklands. He alleged that the second and third defendant copied his plans and used them to construct a building called the Kunsthal in Rotterdam, built by the first defendant. The fourth defendant was the owner of the building. This, the claimant alleged, was an infringement of his Dutch copyright. He sued in England on the basis of the Brussels Convention, Article 6(1),<sup>26</sup> in that at least one of the defendants (civil engineers for the construction of the building) was domiciled in the UK. One of the main issues in the case was whether the action was justiciable in the English courts.<sup>27</sup>

On the basis of *British South Africa Co v Companhia de Moçambique*<sup>28</sup> and *Def Lepp Music v Stuart Brown*,<sup>29</sup> a claim made in respect of a breach of a foreign statutory intellectual property right would not be entertained in an English court, such a claim being regarded purely as local. Further, the *Def Lepp* case is also an example of a claim failing because of the double actionability rule. However, the *Moçambique* rule and the double actionability rule were effectively overruled by the Brussels Convention as far as necessary to give effect to that Convention.<sup>30</sup> Therefore, the English courts had jurisdiction to hear the claim of infringement of Dutch copyright against the first, English domiciled defendant and, by the operation of Article 6(1) of the Convention, the English courts also had jurisdiction to hear the action against the other defendants.

In the *Gareth Pearce* case, Lloyd J remarked on the possibility of ‘forum shopping’, where a claimant takes into account the procedures and remedies available in different states where he has a choice, and accepted that, in appropriate circumstances, an English court might not be able to refuse jurisdiction to hear cases involving, for example, infringement of the French law of privacy or the German law of unfair competition or some other action in foreign law not having a direct equivalent in English law.<sup>31</sup>

At first instance, in the *Gareth Pearce* case, whilst deciding that the English court had jurisdiction to hear the action based on Dutch copyright, Lloyd J struck out the action as being an abuse of process as there was insufficient similarity between the drawings submitted by the claimant and those for the building in Rotterdam. The claimant appealed to the Court of Appeal,<sup>32</sup> seeking to adduce further evidence. A portfolio of 18 drawings were received by the court on the basis that they did not constitute additional evidence but were an explanation of counsel’s submissions on behalf of the claimant.<sup>33</sup>

25 [1997] FSR 641, approved by the Court of Appeal in *Fort Dodge Animal Health Ltd v Akzo Nobel NV* [1998] FSR 222, a patent case.

26 Whether the actions between the defendants were so closely connected that it would be expedient to hear them together is now a test for the application of Article 6(1) of the Brussels Regulation.

27 The other main issue was whether the action should be struck out as an abuse of process, being purely speculative. On this point the defendants succeeded.

28 [1893] AC 602, a claim involving trespass to foreign land.

29 [1986] RPC 273, followed in *Tyburn Productions Ltd v Doyle* [1991] Ch 75.

30 The double actionability rule required that an act done in a foreign country is a tort and actionable in England only if it was a tort had it been done in England and was also actionable according to the law of the country where it was done. This was abolished on 1 May 1996 by the Private International Law (Miscellaneous Provisions) Act 1995 s 11(1). However, the facts in the *Gareth Pearce* case occurred before that date.

31 [1997] FSR 641 at 652.

32 *Gareth Pearce v Ove Arup Partnership Ltd* [1999] FSR 525.

33 The Court of Appeal decided that the claimant’s allegations were not so fanciful as to be regarded as wholly speculative.

The Court of Appeal affirmed that decision that the English court was not bound to refuse to hear the claim on the basis of the *Moçambique* rule nor on the basis of the first limb of the double actionability rule. Although still relevant to the present case, following *Red Sea Insurance Co Ltd v Bouygues SA*,<sup>34</sup> the first limb of the double actionability rule (that the act must be a tort in England had the act occurred there) is a matter of determining the choice of law rather than a matter of jurisdiction. This is an exception to the double actionability rule and it enables the English court to hear a claim involving an alleged infringement of Dutch copyright. Not only can an English court deal with issues of infringement of a foreign copyright where subsistence is not an issue, in appropriate cases, it can also deal with subsistence of a foreign copyright.<sup>35</sup>

Where the defendant is not domiciled in a Contracting State, he can be served with process if he is present within the jurisdiction of a part of the UK, otherwise leave of the court is required. It might be given, for example, in the case where a tort has been committed within jurisdiction and the court considers it proper for service of process out of jurisdiction.

However, even if a court within part of the UK could entertain a claim against a defendant domiciled out of jurisdiction, where there is a conflict between that part of the UK and a non-Brussels Convention state, the court here might stay or dismiss the action on the grounds of *forum non conveniens*, that is, that the courts here are less appropriate to hear the case than the courts in that other country. For example, in *Re Harrods (Buenos Aires) Ltd*<sup>36</sup> the English court considered that the Argentinean courts were more appropriate to decide the issues. As will be seen later, *forum non conveniens* has no place in relation to the Brussels Regulation and Lugano Convention though may still be relevant where the foreign element is outside Europe.

## Patents

Before the Brussels Convention, previous law in the UK included the *Moçambique* rule<sup>37</sup> to the effect that the English courts did not have jurisdiction over disputes concerning foreign land, a rule which was later applied to intellectual property on the basis that it too was an ‘immoveable’. It was held by Laddie J not to apply to intellectual property in *Coin Controls Ltd v Suzo International (UK) Ltd*.<sup>38</sup> He said that patents and other intellectual property rights are not accurately described as immoveable. Indeed, a patent is described in the Patents Act 1977 as personal property or, in Scotland, as incorporeal moveable property.<sup>39</sup>

A further rule was that of double actionability. In *Boys v Chaplin*<sup>40</sup> it was said that, for an act done in a foreign country to be actionable in England, it must first of all be actionable as a tort according to English law (it would be a tort if committed in England) and, second, it must be actionable as a tort according to the law of the foreign country in which the act was done. However, it was pointed out in *Def Lepp Music v Stuart Brown*<sup>41</sup> that an English intellectual property right could never be infringed by an activity taking place out of jurisdiction and could not, therefore, be treated as if it had been done in England.<sup>42</sup> The double actionability rule was abolished as far as it applies to a claim in tort (or delict in Scotland) by the Private International Law (Miscellaneous Provisions) Act 1995 s 10.

The rule in relation to the court first seised also applies where there are related actions in different Member States, although this is expressed as discretionary in Article 28 which states that any court other than the court first seised *may* . . . stay its proceedings. In *Fort Dodge Animal Health Ltd v Akzo Nobel NV*,<sup>43</sup> Lord Woolf MR said (at 243) of actions involving a UK patent and a Dutch patent:

They are actions relating to two different national rights. True they stem from the same patent application [before the European Patent Office] and similar rules of construction will be

34 [1995] AC 190.

35 *Lucasfilm Ltd v Ainsworth* [2009] FSR 103.

36 [1992] Ch 72.

37 *British South Africa Company v Companhia de Moçambique* [1893] AC 602.

38 [1997] FSR 660.

39 Sections 30(1) and 31(1), respectively.

40 [1971] AC 356.

41 [1986] RPC 273.

42 The one exception is in relation to infringing by authorising an infringing act: *ABKCO Music & Records Inc v Music Collection International Ltd* [1995] RPC 657.

43 [1998] FSR 222.

applicable, but the rights given by those patents are national rights limited in territory to the State in which they are registered and the ambit of the monopolies will not necessarily be the same as amendment is possible . . . a judgment on infringement in the United Kingdom will depend upon a national right having effect only in the United Kingdom. The same applies to a judgment on the Dutch patent.

In *Research in Motion UK Ltd v Visto Corporation*,<sup>44</sup> the Court of Appeal held that Article 28 does not require a mechanical test unlike Article 27. Under Article 28(3), actions are related ‘. . . where they are so closely connected that it is expedient to hear and determine them together to avoid the risk of irreconcilable judgments resulting from separate proceedings’. This does not mean that a court must consider actions to be related if there is any possibility of inconsistent judgments. In that case, proceedings had been commenced in England on 30 October 2006 by Research in Motion (RIM – which makes the famous BlackBerry hand-held device) for revocation of Visto’s patent.<sup>45</sup> On 5 December 2006, RIM also commenced proceedings in England for a declaration of non-infringement of the patent but this excluded the BlackBerry Mail Connector. On 27 December 2006, RIM commenced proceedings in Italy applying for revocation of Visto’s equivalent Italian patent and declarations of non-infringement of the Italian patent and of the equivalent German, French, Spanish, Dutch and Belgian patents. On 2 February 2007 Visto served a defence and counterclaim to the English action which included a claim to damages under Article 96 of the Italian procedural code which provides for a separate award of damages against a losing party where it has brought or resisted a claim in bad faith or with gross negligence. RIM successfully sought an order from Lewison J declining jurisdiction or a stay of proceedings. RIM later dropped the English action for a declaration of non-infringement after Visto accepted that the BlackBerry device without the Mail Connector did not infringe its patent. Visto appealed to the Court of Appeal against the order of Lewison J. The only way in which the actions were related was the Article 96 claim. In dismissing Visto’s appeal, the Court of Appeal said (at para 38):

The substance of the English proceedings is declaration about an English patent and a particular product [the BlackBerry without the Mail Connector]. The substance of the Italian proceedings is other designations, but not focusing on the same product [the BlackBerry with the Mail Connector]. The abuse of Italian process is a link between them, but it is the only link; it is only in relation to that point that there is a risk of inconsistent judgments. It does not seem to us that Article 28(3) requires one to find that *any* possibility, no matter how small the point, requires the conclusion that the actions are related. One still has to consider expediency. We consider that the area of potential conflict is not sufficiently great to lead to the conclusion that expediency would require one trial even if it were theoretically possible.

It is important to note that, even though patents may go through the European Patent Office, once the national stage is reached different rules of procedure and amendment apply in different countries. It is possible for two national patents based on the same invention to end with differing claims because of amendment. In *Coin Controls Ltd v Suzo International (UK) Ltd*,<sup>46</sup> Laddie J considered that, for Article 6(1) to apply where two or more national patents are involved, it is crucial that the patents are identical (providing, of course, there is no challenge to validity). In *Fort Dodge*, Lord Woolf MR seems to suggest that Article 6(1) would not apply even where the patents are identical in all respects.

What Lord Woolf MR is not saying, however, is that an action for infringement of a foreign patent cannot be heard before an English court. His comments are in relation to Article 6(1) and must be restricted to that provision. *Gareth Pearce v Ove Arup Partnership Ltd*<sup>47</sup> and *Coin Controls Ltd v Suzo International (UK) Ltd*<sup>48</sup> are authorities for the proposition that the Brussels Regulation can force the courts in a Member State to hear and determine foreign infringement proceedings, and both were approved by

<sup>44</sup> [2008] FSR 499.

<sup>45</sup> Visto’s patent was granted by the EPO in May 2006 designating a number of Contracting States to the EPC. There were on-going opposition proceedings before the EPO brought by RIM (note that the EPO has a post-grant opposition procedure). Such proceedings can take five or more years to conclusion.

<sup>46</sup> [1997] FSR 660.

<sup>47</sup> [1997] FSR 641.

<sup>48</sup> [1997] FSR 660.

Lord Woolf MR on this point in *Fort Dodge*. The major exception is where there is an issue concerning the validity of the patent or some aspect of its registration, in which case Article 22(4) applies leaving the courts of the place where the right is registered as having exclusive jurisdiction.

In such a case, under Article 25 a court in any other Member State seised of a claim which is *principally concerned* with a matter in Article 22 must declare by its own motion that it has no jurisdiction. Validity is often put at issue by a defendant and the Patents Act 1977 s 74(1)(a) expressly states that validity may be put in issue as a defence in infringement proceedings. As Laddie J said in *Coin Controls*, ‘we have always taken the view that you cannot infringe an invalid patent’. The *Gillette*<sup>49</sup> defence is quite common. The defendant submits that the patent is invalid if the alleged infringing act falls within its claims, for example, because what the defendant did was not novel or inventive at the priority date of the patent, or the defendant’s acts fall outside the scope of the patent claims.

There does not appear to be any authority on the meaning of ‘principally concerned’, but the Jenard Report<sup>50</sup> suggests that preliminary or incidental matter is ignored. As Laddie J said in *Coin Controls* (at 676):

Something which is a major feature of the litigation is not incidental and is therefore a matter with which the action is primarily concerned.

Therefore, validity or registration does not have to be the prime issue provided it is a major issue for Articles 22(4) and 25 to apply, giving exclusive jurisdiction in the state where the patent has been applied for or granted. Of course, it is possible to have an action, for infringement or otherwise, where validity is not in issue. In such a case, Articles 22(4) and 25 do not apply and exclusive jurisdiction is not granted, by virtue of these provisions, to the state in which the patent is in force or has been applied for. This was so in *Plastus Kreativ AB v Minnesota Mining and Manufacturing Co*<sup>51</sup> where Aldous J struck out claims relating to French and German patents, though not for reasons associated with the then Brussels Convention.<sup>52</sup>

Where an action has been commenced in a country other than that in which the patent has been registered and validity has later been put in issue, the court first seised of the action does not necessarily have to decline jurisdiction. The Dutch courts have taken a less cautious approach on this point. *Julio Cesar Palmaz v Boston Scientific BV*<sup>53</sup> concerned an action for infringement of European patents for stents.<sup>54</sup> Of the defendants, all of which were interconnected companies, there were two Dutch, one Belgian, one English, one Swiss, one Norwegian, one French, one Spanish and one Italian. Interim injunctions were sought by the claimant in respect of all the countries with the exception of England and Germany. The Dutch court<sup>55</sup> accepted that it had jurisdiction on the basis of Articles 2 and 6(1).

The claims in *Julio Cesar Palmaz* concerned the same European patents. The Dutch court remarked that Article 49 of the European Patent Convention required that they should be interpreted in the same manner and, so as to avoid conflicting decisions, it was expedient that the Dutch court determine the claims. The question of infringement could not be determined without taking a decision on the validity of a patent; this produced a dilemma in respect of Article 22. There were two possibilities. First, the court first seised should divest itself of jurisdiction immediately the validity of a foreign patent is put in issue, as in *Coin Controls*. The second possibility is for the court first seised to stay proceedings until the question of validity has been determined in the other jurisdiction. The second alternative was preferred by the Dutch court as being the more satisfactory. The jurisdiction of the court was based on Articles 2 and 6(1) of the Brussels Regulation (and Brussels Convention) and the court had jurisdiction to grant cross-border injunctions.<sup>56</sup> The first option was deemed to be unacceptable because

<sup>49</sup> *Gillette Safety Razor Co v Anglo-American Trading Co Ltd* (1913) 30 RPC 465.

<sup>50</sup> One of two reports, named after their authors, on the Brussels Convention and which may be referred to in determining the meaning of the provisions of the Convention: Civil Jurisdiction and Judgments Act 1982 s 3(3). The other report is the Schlosser Report.

<sup>51</sup> [1995] RPC 438.

<sup>52</sup> The claimant sought a declaration of non-infringement in respect of UK, French and German patents, but the defendant (proprietor of the patents) had made no claim in respect of the French and German patents.

<sup>53</sup> [1998] FSR 199.

<sup>54</sup> A stent is a tubular prosthesis to be inserted into a hollow structure such as a blood vessel.

<sup>55</sup> District Court of the Hague.

<sup>56</sup> In the event, the Dutch court came to a provisional conclusion that the patents had not been infringed.

jurisdiction would not be established until after the defence had been pleaded and this was said to be contrary to the objects of the Brussels Regulation or Brussels Convention and the Lugano Convention.<sup>57</sup> Furthermore, Article 16 of the Brussels Convention (Article 22 of the Brussels Regulation) was a derogation from the main rule on jurisdiction and, as such, should be interpreted restrictively.

A consequence of the decision of the Dutch court in *Julio Cesar Palmaz*, where the validity of a patent registered in another state is put in issue, is that a court having jurisdiction under Articles 2 and 6(1) can stay proceedings pending determination of the validity of the patent in the courts of that other state. In the meantime, the court first seised can grant interim relief. Following the determination of validity, the court first seised may then apply that finding to the question of infringement before it.

Two points can be made. First, it is not clear whether the same principles would apply in respect of a court having jurisdiction under Articles 5 and 6(1). The main rule, to which Article 22 is a derogation, is that in Article 2 defendants shall be sued in the courts of the Member State in which they are domiciled. Article 5 could, itself, be seen as a derogation from Article 2. The second point is that Article 25 uses the phrase ‘principally concerned’ and this gives the clue that there may be other issues involved. Nevertheless, Article 22 clearly states that the court seised of a claim in respect of which the courts of another Member State have exclusive jurisdiction by virtue of Article 22 shall declare of its own motion that it has no jurisdiction. There is no discretion in Article 25. It does not say that the court first seised shall stay proceedings until the determination of the validity of the patent or other registered right by the court in that other Member State. It is submitted that the decision of the Dutch court was wrong, although the court did highlight ambiguities in the Jenard Report and concluded that neither that report nor the Brussels Convention foresaw that issues of infringement and validity are, in patent cases, almost inseparable. The opportunity to remedy the situation when the Brussels Regulation was formulated was not taken.

Of the approaches taken in *Coin Controls* and *Julio Cesar Palmaz*, neither is satisfactory. If the court first seised divests itself of jurisdiction this will lead to delay. It may also encourage defendants to plead invalidity (although the English courts appear to treat infringement and invalidity as a single issue). It also means that interim relief is not available until the action brought before the court in the state in which the patent is registered. The possibility of staying the action pending a decision as to validity can also be criticised as causing delay and the inconvenience of hearings before two different courts in different Contracting States. An amendment to the Brussels and Lugano Conventions to widen the scope of Article 22 to include infringement actions would be most welcome.

The rationale for the rule in Article 22<sup>58</sup> was described by the Court of Justice in Case C-4/03 *Gesellschaft für Antriebstechnik mbH & Co KG v Lamellen und Kupplungsbau Beteiligungs KG*,<sup>59</sup> a challenge was made to the validity of two French patents in a German court. The purpose of the rule is to ensure that jurisdiction is placed before the court most closely linked with the proceedings in fact and law. The courts in the Contracting State where a patent is registered are best placed to rule on validity or registration and rule on such matters according to their own national law on validity and the effects of registration. This meets concerns for sound administration of justice, particularly in a specialised field such as patents also bearing in mind that a number of Contracting States have established special courts to hear patent cases. The Court of Justice confirmed that the rule in Article 22 was of an exclusive and mandatory nature and could not be derogated for by the an agreement between the parties conferring jurisdiction elsewhere or by the defendant’s voluntary appearance elsewhere. The Court of Justice also noted that infringement actions almost always involve issues of validity and it did not matter whether validity was raised as a claim or a defence or at what stage

<sup>57</sup> Lugano Convention on Jurisdiction and the Enforcement of Judgments in Civil and Commercial Matters, 16 September 1988.

<sup>58</sup> The Court of Justice was actually dealing with the equivalent provision in Article 16 of the Brussels Convention.

<sup>59</sup> [2006] ECR I-6509.

in the proceedings it became an issue. The importance of Article 22 is such that any decision which fell foul of it would not benefit from the system of recognition and enforcement of judgments under the Brussels Regulation.

### **Patents and the European Patent Convention**

The meeting of the Brussels Regulation and the European Patent Convention is not a particularly happy one. The case of *Sepracor Inc v Hoechst Marrion Roussel Ltd*<sup>60</sup> gives a glimpse of the nightmare that lies in wait for patent proprietors who have a number of patents for the same invention in force in different Contracting States of the European Patent Convention. In that case, Sepracor was a co-proprietor of patents for an anti-histamine drug. There were 17 national patents in all, granted through the European Patent Office. Sepracor considered that its patents were being infringed in the UK and some other countries. The timing of what happened next is important. Before Sepracor commenced the English action, one of the defendants in that English action took a pre-emptive strike and commenced proceedings in Belgium for a declaration that the Belgian and German patents were invalid or not infringed. Later, Sepracor commenced proceedings in England for a declaration that its UK patent and equivalent patents in 12 other countries were valid and infringed by the defendants. Where there is choice of forum, a defendant might be tempted to commence proceedings, typically for invalidity of one of a bundle of national patents in a country perceived to be ‘infringer-friendly’ on the basis that the action in that country will take a long time. In Belgium, in a patent infringement case, a typical action might take five years to come to trial and any appeal might take another five years. Amongst practitioners, this practice is known as ‘deploying the Belgian torpedo.’<sup>61</sup>

Laddie J accepted that there would never have been any proceedings in Belgium had it not been for a desire to frustrate proceedings in Germany which was most likely the source of the drugs made in Europe by the defendants.<sup>62</sup> The true position was that the defendants wanted all the issues resolved in Belgium whilst the claimant wanted all the issues resolved in England. Laddie J said (at 752):

... it may well be that issues such as the law of patent infringement and validity in most of the foreign countries referred to in the writ ... and the law of joint tortfeasance in each of them would never have arisen at all ... had sensible procedures for investigating the validity and infringement of patents obtained under the EPC been in place. As it is there is a positive incentive to commence proceedings in countries where they are not likely to come to a hearing within a reasonable period of time or in countries which have no real relationship to the acts of infringement alleged or, as here, in both. A less sensible system could not have been dreamt up by Kafka.

In striking out those parts of the writ, statement of claim and particulars of infringement relating to foreign patents, Laddie J went on to remark that the fact that courts in some countries have differing opinions about the effect of the Brussels Convention has not caused the problem but it has exacerbated it. Although references have been made to the Court of Justice that might have clarified the matter, these appear to have fallen by the wayside.<sup>63</sup> This sort of problem, which could have resulted in separate actions being brought in 13 countries, with 26 teams of lawyers being instructed, can only be resolved when the Community patent becomes available. Even then, the resolution cannot be complete as national systems will run alongside the Community patent. The only alternative is for changes to be made to the Brussels Regulation or the European Patent Convention or both. One possible solution would be for domestic actions to be stayed whilst the European Patent Office determines validity, where this is likely to be an issue between the parties. A further complicating factor in the *Sepracor* case was that opposition proceedings had been commenced in the European Patent Office. There, opposition proceedings are commenced post-grant. Article 99 of the European Patent

<sup>60</sup> [1999] FSR 746.

<sup>61</sup> There is also an Italian torpedo.

<sup>62</sup> The defendants included a German company and its subsidiary companies in the UK, Germany and the USA.

<sup>63</sup> According to Laddie J, the litigation in *Fort Dodge* looked likely to come to a halt and a reference from the Dutch Court of Appeal (*Boston Scientific NV v Cordis*, unreported, 26 November 1998) seemed bound to go the same way. That appears to have been the case.

Convention allows notice of opposition to be filed within nine months of publication of the grant of the patent.

Where there are opposition proceedings underway at the European Patent Office (bearing in mind that opposition takes place post-grant at the EPO) and an application for revocation is brought before a national court, that national court is not bound to stay proceedings. The Court of Appeal so held in *Glaxo Group Ltd v Genentech Inc*<sup>64</sup> in which the defendant first brought opposition proceedings before the EPO and then initiated revocation proceedings before the Patents Court. The Court of Appeal confirmed the decision to refuse a stay. The risk of duplicate proceedings was inherent in relation to the European Patent Convention as, even if opposition failed, the national courts could still be asked to decide on validity. If the Patents Court could resolve the matter sooner than the EPO, that would be a factor for refusing a stay where the evidence indicated that the EPO would take significantly longer.

<sup>64</sup> [2008] EWCA Civ 23.

Where a number of national patents for the same invention obtained through the European Patent Convention are alleged to be infringed, as in the *Sepracor* case above, there is a danger that the application of the rules in Article 22 will result in conflicting judgments even where the infringements in different Contracting States are being carried out by sister companies to a common plan. Even then, there is no place for abrogation of the rules. In Case C-539/03 *Roche Nederland BV v Primus*,<sup>65</sup> allegations were made of infringement of European patents owned by two persons domiciled in the US. The infringements were alleged to have been carried out by companies in the Roche Group in a number of countries including the Netherlands, Belgium, Germany, France, the UK, Switzerland, Austria and Sweden. The proprietors commenced proceeding in the Netherlands and the Roche Group companies not established in the Netherlands contested the jurisdiction of the court on the basis of lack of infringement and invalidity of the patents. Questions were referred to the Court of Justice for a preliminary ruling. The case concerned the Brussels Convention, Article 6(1) of which stated that a person domiciled in a Contracting State may also be sued, where he is one of a number of defendants, in the courts for the place where any one of them is domiciled. Subsequent case law required a connection between the defendants such that it was expedient to determine the actions together so as to avoid irreconcilable judgments.<sup>66</sup> However, the Court of Justice ruled that even if ‘irreconcilable’ meant ‘contradictory’ this did not prejudice the operation of Article 22. Although national courts ruling on infringement and validity of what was essentially the same patent could reach different conclusions, those decisions were not contradictory as such. Although the grant of European patents was in the hands of the EPO, they were subsequently subject to national laws as regards infringement and validity. Any divergence in those decisions was, therefore, the result of the application of different legal situations and could not be said to be contradictory. This meant that Article 6(1) could not apply to proceedings involving a number of companies established in different Contracting States, even if those companies were part of a group acting in an identical or similar manner in accordance with a common policy. Even if a court seized by the defendant accepted jurisdiction where there was a consolidation of patent infringement actions, there would almost certainly be at least a partial fragmentation of the actions as at least some would involve validity triggering the rules in Article 22 on exclusive jurisdiction.

<sup>65</sup> [2006] ECR I-6535.

<sup>66</sup> Case 189/87 *Athanasios Kalfelis v Bankhaus Schröder, Münchmeyer, Hengst & Co* [1988] ECR 5565. Article 6(1) of the Brussels Regulation includes such a test.

Some criticism of the Brussels Regulation in relation to intellectual property was made by the Court of Appeal in *Research in Motion UK Ltd v Visto Corporation*.<sup>67</sup> The Court noted that the Regulation (as the Convention) did not specifically address the problem of parallel claims but was intended to deal with the simpler and more ordinary case of a claim for breach of contract or tort or delict. A number of complications in the context of intellectual property rights were identified by the Court of Appeal, being:

<sup>67</sup> [2008] FSR 499.

- 1 There is considerable scope for forum shopping as a there is often a range of potential defendants ranging from the manufacturer, importer and ultimate user. Depending on the circumstances and the nature of the right, each may infringe. The rightholder may bring an action against one defendant domiciled in a country of his choosing under Article 2 and then join others domiciled elsewhere under Article 6.
- 2 The existence of the action for a declaration of non-infringement means that a potential defendant can commence proceedings before being sued for infringement.
- 3 The only courts that can rule on the validity of a registered intellectual property right are the courts in the country where the right is registered. But a range of possibilities may arise in practice in, for example, a patent infringement action. A defendant may simply say that what he is doing is outside the scope of the patent. He may say that, although he is within the scope of the patent, it is invalid in whole or to a relevant extent. Finally, he may raise the ‘Gillette’ defence and claim that if the scope of the patent is wide enough to cover what he does, then the patent is invalid.
- 4 A final complication is the existence of the ‘Italian torpedo’.<sup>68</sup>

<sup>68</sup> There is also a Belgian torpedo. As the legal systems are very slow in these countries, this can have the effect of tying up litigation for a considerable time. However, it seems that both countries have made improvements in this respect.

Finally, the potential difficulties arising from courts ruling on foreign law should not be a reason to decline jurisdiction. So the Schlosser Report stated, adding that ‘where the courts of several States have jurisdiction, the claimant has deliberately been given a right of choice, which should not be weakened by application of the doctrine of *forum conveniens*’.

## FORUM SHOPPING

In some cases, a potential litigant may have a number of options in deciding where to commence proceedings. It may be advantageous to bring an action in a Member State which has quick and effective protective measures such as interim injunctions and freezing injunctions and where the full trial will happen relatively quickly. On the other hand, a defendant may wish to take pre-emptive action and commence proceedings for a declaration of non-infringement, for example.

Tactical decisions are not taken into account in applying the Brussels Regulation and an argument that a particular court has been first seised by a party to a dispute to deliberately slow things down is unlikely to have any impact: for example, in Case C-116/02 *Eric Gasser GmbH v MISAT Srl*,<sup>69</sup> in which the defendant, an Italian company, commenced proceedings in Italy before the claimant, an Austrian company, began proceedings in Austria. The Court of Justice confirmed that Article 27<sup>70</sup> cannot be derogated from where, in general, the duration of proceedings before the courts of the Member State in which the court first seised is shown to be excessively long. This is because there is no provision for such a situation and the Convention (now Regulation) is based on a mutual trust as regards each Member State’s legal systems and judicial institutions.

To give an example of forum shopping, consider a Scottish company which is the proprietor of a Spanish patent and the following scenario.

- 1 The patent is infringed in Spain by a Spanish company. The Scottish company can sue in Spain on the basis of Article 2 (basic rule – defendants play at home). This was so before the Brussels Convention or Regulation.<sup>71</sup>
- 2 The patent is infringed in Spain by a French company. The Scottish company can sue in France on the basis of Article 2 or Spain on the basis of Article 5 (the place where the tort occurred).
- 3 The patent is infringed in Spain by a French company and an English company, as joint tortfeasors. The Scottish company can sue in either France or England by virtue

<sup>69</sup> [2003] ECR I-14693.

<sup>70</sup> Actually Article 21 of the Brussels Convention, equivalent to Article 27 of the Brussels Regulation.

<sup>71</sup> As a result of Article 2 of the Paris Convention for the Protection of Industrial Property 1883.

of Article 2 and Article 6(1) (the defendant is one of a number of defendants who can be sued in the courts for the place where any one is domiciled where actions are related).<sup>72</sup>

- 4 As 3 above, but the defendants claim that the patent is invalid. The Scottish company may only sue in Spain on the basis of Article 22(4) and Article 25 (exclusive jurisdiction where the case is principally concerned with validity).

<sup>72</sup> As there is only one patent which is only being infringed in one State, Case C-539/03 *Roche Nederland BV v Primus* [2006] ECR I-6535 does not apply to negate the application of Article 6(1).

In the third example, the claimant has a choice. He can go ‘forum shopping’ and choose the country which suits him best. It is likely that factors such as the availability of interim relief, cost, time to come to trial and interpretation of the scope of infringement will strongly influence him. If he selects England or France in which to commence legal action, the courts there may not be keen to apply foreign law, even though there is some common origin in the European Patent Convention but that is the effect of the Brussels Convention. Of course, from a defendant’s point of view, he could counterclaim for revocation of the patent on the grounds of invalidity, thus taking away the claimant’s choice, leaving the country in which the patent has been granted as the only forum. Of course, in the above example, it would be rare for the validity of the patent not to be challenged, even indirectly and whether at the outset or later in the proceedings. Indeed, it has been said that one cannot infringe an invalid patent and issues of infringement and validity are almost always entangled.

Where there are several discrete issues before a court where validity is raised, it may be possible to sever the issues and try some of them. However, as Laddie J pointed out in *Coin Controls*, infringement and validity are so interwoven that they should be tried together in the same court. It would be undesirable to split the issues of infringement and validity, and to do so could only result in a proliferation of court actions.

The prospect that courts in England and other parts of the UK could be forced to hear proceedings involving foreign patents is not something judges are likely to view with relish, with the exception of Jacob J who seemed to enjoy the opportunity immensely in deciding whether a licence for a US patent extended to particular acts alleged to fall within the claims, applying US patent law on file wrapper estoppel.<sup>73</sup> In *Plastus Kreativ AB v Minnesota Mining and Manufacturing Co.*,<sup>74</sup> Aldous J expressed his concern at the prospect, especially as a decision could affect the prices the public have to pay for a product in another country. For example, if an English court decided that a German company was infringing a German patent belonging to the English company, that could drive up prices in Germany for the product. Aldous J suggested such decisions would carry the respect of the public better if tried in the local courts.

<sup>73</sup> *Celltech Chiroscience Ltd v MedImmune Inc* [2003] FSR 433. The validity of the patent was not put in issue.

<sup>74</sup> [1995] RPC 438.

Nor was Laddie J happy with the impact of the Brussels Convention on intellectual property disputes. Registered and unregistered rights may be subject to different regimes. This could be particularly so in relation to passing off and registered trade marks. Actions for these two rights often go hand in hand. An English court could hear an action for passing off by an activity taking place in Germany which also results in a challenge to the validity of a German trade mark, meaning that the trade mark issue must be heard in Germany. Laddie J gives a wonderful example of the potential for complexity and confusion in *Coin Controls*. He stated (at 678):

... an English company might be sued in England for unfair competition in Holland or Germany by alleged use of an unregistered trade name. The court here will not only have to decide questions of Dutch and German law but also factual issues relating to the pronunciation and meaning of similar words spoken in Dutch or German ... Similarly, the fact that what are likely to be essentially the same issues of patent validity may have to be litigated in a number of countries simultaneously is unlikely to impress the user of the EPC system, but this appears to be an inevitable consequence of Article 16(4) of the Convention [Article 22(4) of the Brussels Regulation].

## FORUM NON CONVENIENS

Where there is a choice of countries in whose courts a legal action may be commenced, each of which have jurisdiction, the courts of one country may decline to hear the action on the basis that the courts of another country are more suitable to hear the case. There may be a number of factors to take into account such as the applicable law, the location of the evidence and witnesses, the nationality of the would-be litigants and the enforceability of judgments and awards.

The high point of the doctrine in the UK was the case of *Spiliada Maritime Corporation v Cansulex Ltd*,<sup>75</sup> in which Lord Goff laid down guidelines applicable to a decision whether an English court should accept jurisdiction in a particular case or stay proceedings as follows, in summary form.

<sup>75</sup> [1987] AC 460.

- 1 A stay will be granted only if the court is satisfied that there is another court available having a competent jurisdiction which is appropriate for the trial because the case may be tried there more suitably for the interests of the parties and the ends of justice.
- 2 The burden of proof rests with the defendant to persuade the court to exercise its discretion to stay in the defendant's favour.
- 3 The defendant must show that not only is England not the natural or appropriate forum but that there is another forum that is clearly or distinctly more appropriate. In any case, if the connection with the English forum is a fragile one (for example, if he is served with proceedings during a short visit to England), it will be easier for him to show that another clearly more appropriate forum exists overseas.
- 4 Factors which point to another forum must be considered by the court such as convenience, expense, availability of witnesses, governing law and the places of residence or business of the parties.
- 5 A stay will almost certainly be refused if the court decides that no such other clearly appropriate forum exists.
- 6 If the court decides that there is, prima facie, a more appropriate forum, it will normally grant a stay but the claimant, who now bears the evidential burden, may be able to show that circumstances additional to those in 4 above exist such that a stay should be refused. For example, the claimant may be able to show that he will not be able to obtain justice in a foreign court.

However, the Brussels Regulation makes no mention of *forum non conveniens* and makes no exceptions for it. Whilst it may be reasonable to assume that the doctrine has no place where the parties and cause of action all are within Member States of the Brussels Regulation, the position was not clear where there was a foreign element which was outside the Member States. It might have been thought the doctrine could still apply in such cases. This has proven not to be so, except as between parts of the United Kingdom, for example, as between England and Scotland.<sup>76</sup>

<sup>76</sup> *Ivax Pharmaceuticals UK Ltd v Akzo Nobel BV* [2006] FSR 888 and *Vetco Gray UK Ltd v FMC Technologies Inc* [2007] EWHC 540 (Pat).

<sup>77</sup> [2005] ECR I-1383.

In Case C-281/02 *Owusu v Jackson*,<sup>77</sup> the claimant lived in England and was on holiday in Jamaica at a villa at Mammee Bay which was owned by the first defendant, Mr Jackson, who was domiciled in England. Mr Owusu walked into the sea up to his waist and then dived in. He struck his head on a submerged sandbank and was rendered tetraplegic. Two years earlier another English holidaymaker suffered a similar accident and was also rendered tetraplegic.

Mr Owusu commenced proceedings in England against Mr Jackson for breach of contract and the other defendants, Jamaican companies involved in one way or another with the beach at Mammee Bay, for the tort of negligence. The claim against Mr Jackson was based on an implied term to the effect that the beach would be reasonably safe and free from hidden dangers. The tort claims were based on a contention that the other

defendants failed to warn swimmers of the hazard of the submerged sandbank and that they failed to heed the earlier accident.

At first instance, the judge held that the United Kingdom was the State which was the appropriate forum. An appeal to the Court of Appeal resulted in questions being referred to the Court of Justice for a preliminary ruling under Article 234 of the EC Treaty. The essential point was whether Article 2 of the Brussels Convention (now Article 2 of the Brussels Regulation) was mandatory or whether it was subject to the *forum non conveniens* rule in cases where there was a connection between a Contracting State and a non-Contracting State (in this case Jamaica).

The Court of Justice noted that one of the main purposes of the Convention was to bring about certainty and predictability so that persons who were likely to be sued could predict in which State they might be sued. Article 2 clearly has an international flavour and determines jurisdiction (subject to other provisions of the Convention) where relationships between different Contracting States are involved. However, it still applies where the issue is international involving a Contracting State and a non-Contracting State. This does not displace the general rule in Article 2. The rules of jurisdiction in the Convention are not intended to apply only to situations where there is a real and significant link with the working of the internal market.

It was argued that the Convention cannot impose obligations on States which have not agreed to be bound by it. The Court of Justice countered this by saying that designating a Contracting State, in which a defendant has a domicile, even where the proceedings are at least partly connected with a non-Contracting State, is not such as to impose an obligation on that latter State. Consequently, the Court of Justice held that Article 2 applies to circumstances involving relationships between the courts of a single Contracting State and those of a non-Contracting State.

Article 2 is mandatory in nature and there can be no derogation from it except as laid down in the Convention itself. Therefore, national rules such as the doctrine of *forum non conveniens* provide no exception. The principle of legal certainty would be undermined otherwise, as would the legal protection of persons domiciled within the European Community. The fact that there may be practical difficulties, such as logistical difficulties, enforceability of a default judgment in Jamaica and cross-claims against other defendants, was of no consequence and could not affect the mandatory nature of Article 2 of the Convention.

In respect of the UK it could now be said that the doctrine of *forum non conveniens* can apply only to a case outside the scope of the Brussels Regulation.<sup>78</sup> However, the scope of the *Owusu* ruling is not beyond doubt and, in *Antec International Ltd v Biosafety USA Inc*,<sup>79</sup> Gloster J noted that the Court of Justice did not look at the position where the parties had agreed a choice of jurisdiction under Article 23.<sup>80</sup>

Where the claimant is based in the UK and the defendant is based in the US and the contract (the place for the performance of which is in the US) is subject to English law, it would seem that the Brussels Regulation has no effect in the absence of a choice of jurisdiction clause. In *Sawyer v Atari Interactive Inc*,<sup>81</sup> Collins J<sup>82</sup> held that the claimant, a Scot, had established that England was the most appropriate forum to hear the case. A significant factor was that the contract was subject to English law.<sup>83</sup>

## APPLICABLE LAW

Determining which system of law should apply in a particular situation is not usually difficult. Where two English persons make a contract in England, it can safely be assumed that, in the absence of any express mention of the question of applicable law, the law governing the contract will be English law. Where a UK copyright is infringed,

<sup>78</sup> Specific exceptions are mentioned in Article 1 of the Regulation and include arbitration. Also, the Civil Jurisdiction and Judgments Act 1982, s 49, as amended, allows a court to apply *forum non conveniens*, providing it is not inconsistent with the Brussels Regulation or Lugano Convention. Furthermore, it has been accepted that the doctrine still applies as between countries in the UK, such as between England and Scotland.

<sup>79</sup> [2006] EWHC 47 (Comm).

<sup>80</sup> Even though the choice was for a non-exclusive jurisdiction.

<sup>81</sup> [2005] EWHC 2351 (Ch).

<sup>82</sup> Himself an editor of *Dicey and Morris on Conflict of Laws*.

<sup>83</sup> The defendant's arguments included a submission that the claimant, being a Scot, had no connection with England as a forum apart from the choice of law clause.

the law will be that under the Copyright, Designs and Patents Act 1988. If a UK patent is infringed, the law governing the infringement will be that under the UK Patents Act 1977 even if the UK patent was obtained through the European Patent Convention.

In one major respect, contract law is different in that the parties to a contract can decide what law should apply to the contract. This has long been the case in the UK and would seem to be an eminently sensible way of proceeding in a business or commercial relationship. Where contracts were silent as to the applicable law, the English and other common law courts applied presumptions such as the law was that of the country where the contract was made or which had the closest connection to the contract, where the parties were domiciled in different countries.<sup>84</sup> More flexibility was introduced in these rules of thumb in *Brinkibon Ltd v Stahag Stahl und Stahlwarenhandsgesellschaft mbH*.<sup>85</sup>

The 1980 Rome Convention on the law applicable to contractual obligations<sup>86</sup> made the situation more consistent where a contract was involved. It retained the basic rule that the parties should be free to choose the law applying to a contract under Article 3.<sup>87</sup> It does not matter if the basic subject matter of the contract is an intellectual property right and, for example, it is possible, and not uncommon, to have a patent licence agreement subject to the law of a country other than that in which the patent is registered. Lack of a choice of law clause in any significant licence agreement for the exploitation of intellectual property rights would be rare and somewhat careless. It is bad enough if there is a dispute under the agreement without adding a further dimension to the dispute.

In cases where there is no choice of law clause, the Rome Convention provides some rules for determining which law applies. Under Article 4, the contract shall be governed by the law of the country with which it is most closely connected.<sup>88</sup> The Convention appreciates that a separable part of the contract may be more closely connected to another country and that, consequently though exceptionally, part of the contract may be governed by the law of one country whilst another part is governed by the law of another country.

A contract may be subject to legal controls over exclusion clauses, anti-competitive measures or consumer protection laws. In some cases, these cannot be overcome or side-stepped by a choice of law clause. The fact that a patent licence between an English company and a Swiss company, containing terms in breach of Article 81(1) of the EC Treaty, is expressed as being subject to the laws of Florida will not escape the application of Article 81(1) provided it affects trade between Member States and has, as its object or effect, the prevention, restriction or distortion of competition within the European Community.

With respect to Community-wide rights, the applicable law is as set out in the appropriate Regulation except where Member States are to apply their own laws. For example, in relation to the Community trade mark, the law relating to provisions on registrability, infringement, revocation and invalidity is set out in the Regulation and must be applied, in accordance with any case law of the Court of Justice interpreting those provisions. The rules on dealing with a Community trade mark and transfer fall to be determined under the law of the Member State in which the proprietor is domiciled or has his establishment.<sup>89</sup>

Some modification of the rules on applicable law were made by Regulation (EC) No 864/2007 of the European Parliament and of the Council of 11 July 2007 on the law applicable to non-contractual obligations (Rome II).<sup>90</sup> Article 8 of the regulation states that the law applicable to a non-contractual obligation arising from an infringement of an intellectual property right shall be the law of the country for which protection is claimed. In the case of a unitary Community intellectual property right, in a case where the applicable law is not governed by the relevant Community instrument, the

<sup>84</sup> *Entores Ltd v Miles Far East Corporation* [1955] 2 QB 327.

<sup>85</sup> [1983] 2 AC 34.

<sup>86</sup> OJ C 27, 26.01.1998, p 34 (consolidated version); brought into UK law by the Contracts (Applicable Law) Act 1990.

<sup>87</sup> Subject to requirements for formalities and to subsequent variation by the parties. Also some 'mandatory provisions' cannot be compromised, such as consumer rights in the EU.

<sup>88</sup> This will usually be based on the domicile of the party responsible for the characteristic performance of the contract: for example, in a sale of goods contract, the place the seller is established.

<sup>89</sup> If the proprietor is not domiciled nor has an establishment in any Member State, the rules are those of the Member State in which the Office for the Harmonisation of the Internal Market (Trade Marks and Designs) is situated, presently Spain.

<sup>90</sup> OJ L 199, 31.07.2007, p 40. The Regulation does not apply to Denmark.

applicable law shall be that of the country in which the act of infringement was committed. There can be no derogation from these rules by virtue of a choice of law agreement. Rome II clarifies that the court having jurisdiction under Regulation 44/2001 may apply the laws of other countries in appropriate cases. For example, if Luigi, based in Italy, is distributing products in Italy, France and Germany which infringe patents which protect the product in those countries, the proprietor may sue Luigi in Italy under Article 2 of the jurisdiction Regulation. The Italian court may then apply Italian, French and German patent law to the infringements occurring in those countries, provided, of course, that there is no challenge to the validity of the patents.

# Part Seven

## EUROPEAN AND INTERNATIONAL PERSPECTIVES ON IPR SUMMARY

### KEY POINTS

The following provisions of the EC Treaty impact on the exploitation of intellectual property rights:

- the principle of freedom of movement of goods (Articles 28 to 30);
- controls over certain anti-competitive practices such as restrictive trade agreements (Article 81(1)); and
- controls over abuses of dominant trading positions (Article 82).

Freedom of movement of goods gives rise to the doctrine of exhaustion of rights. However, the owner of an intellectual property right may still object to the further commercialisation of the relevant goods if there exist legitimate reasons for doing so. A major example is where goods have been poorly repackaged.

The Technology Transfer Regulation gives block exemption from Article 81(1) in particular cases. Individual exemption is also possible.

Being in a dominant position, *per se*, does not fall foul of Article 82. There must be some sort of abuse.

Under ss 2 and 18 of the Competition Act 1998, the UK has equivalent provisions to Articles 81 and 82 of the EC Treaty.

In Europe, jurisdiction over civil and commercial matters is determined under the provisions of the 'Brussels Regulation' (with the exception of Denmark for which the Convention still applies).

The basic rule under the Regulation is that defendants should be sued in the Member State where they are domiciled. To this there are some important exceptions, including:

- in the case of a tort (infringement of an intellectual property right is a tort), a defendant could instead be sued in the Member State where the harmful event occurred or is threatened;

- where there are co-defendants domiciled in different Member States inexorably involved in the same alleged wrong, the action could be brought in any of those Member States;
- where the action involves the registration or validity of a formal right such as a patent, the action must be brought in the Member State where it is registered.

In some cases, a litigant may have a choice of Member States in which to commence the action. Any court other than the one first seised must decline jurisdiction.

There is no place for the principle of *forum non conveniens* in cases where the Brussels Regulation applies.

### DISCUSSION QUESTIONS

- 1 Discuss the circumstances under which licence agreements could fall foul of Article 81(1) of the EC Treaty.
- 2 Discuss possible situations where an abuse of a dominant position contrary to Article 82 of the EC Treaty could be present in relation to the exercise of informal rights such as copyright, rights in performances and the database right.
- 3 Parallel patents are held in a number of Member States and are alleged to have been infringed in each and validity is going to be challenged by the defendant(s); there is no option but to bring separate actions in each of those Member States. Discuss this unsatisfactory state of affairs and how it can be or should be remedied.

# Appendix 1

## Trade mark classification for goods and services

Note: the classification below is based on the class headings from the Ninth Edition of the International Classification of Goods and Services (made under the Nice Agreement concerning the International Classification of Goods and Services for the purposes of the Registration of Marks of 15 June 1957). This current edition dates from 1 January 2007. Further detail can be obtained from the UK Intellectual Property Office and the World Intellectual Property Office.

### CLASSIFICATION FOR GOODS (34 CLASSES)

1. Chemicals used in industry, science and photography, as well as in agriculture, horticulture and forestry; unprocessed artificial resins, unprocessed plastics; manures; fire extinguishing compositions; tempering and soldering preparations; chemical substances for preserving foodstuffs; tanning substances; adhesives used in industry.
2. Paints, varnishes, lacquers; preservatives against rust and against deterioration of wood; colourants; mordants; raw natural resins; metals in foil and powder form for painters, decorators, printers and artists.
3. Bleaching preparations and other substances for laundry use; cleaning, polishing, scouring and abrasive preparations; soaps; perfumery, essential oils, cosmetics, hair lotions; dentifrices.
4. Industrial oils and greases; lubricants; dust absorbing, wetting and binding compositions; fuels (including motor spirit) and illuminants; candles and wicks for lighting.
5. Pharmaceutical and veterinary preparations; sanitary preparations for medical purposes; dietetic substances adapted for medical use, food for babies; plasters, materials for dressings; material for stopping teeth, dental wax; disinfectants; preparations for destroying vermin; fungicides, herbicides.
6. Common metals and their alloys; metal building materials; transportable buildings of metal; materials of metal for railway tracks; non-electric cables and wires of common metal; ironmongery, small items of metal hardware; pipes and tubes of metal; safes; goods of common metal not included in other classes; ores.
7. Machines and machine tools; motors (except for land vehicles); machine coupling and transmission components (except for land vehicles); agricultural implements other than hand-operated; incubators for eggs.
8. Hand tools and implements (hand operated); cutlery; side arms; razors.
9. Scientific, nautical, surveying, photographic, cinematographic, optical, weighing, measuring, signalling, checking (supervision), life-saving and teaching apparatus and instruments; apparatus and instruments for conducting, switching, transforming, accumulating, regulating or controlling electricity; apparatus for recording, transmission or reproduction of sound or images; magnetic data carriers, recording discs; automatic vending machines and mechanisms for coin-operated apparatus; cash registers, calculating machines, data processing equipment and computers; fire-extinguishing apparatus.
10. Surgical, medical, dental and veterinary apparatus and instruments, artificial limbs, eyes and teeth; orthopaedic articles; suture materials.
11. Apparatus for lighting, heating, steam generating, cooking, refrigerating, drying, ventilating, water supply and sanitary purposes.
12. Vehicles; apparatus for locomotion by land, air or water.
13. Firearms; ammunition and projectiles; explosives; fireworks.
14. Precious metals and their alloys and goods in precious metals or coated therewith, not included in other classes; jewellery, precious stones; horological and chronometric instruments.
15. Musical instruments.
16. Paper, cardboard and goods made from these materials, not included in other classes; printed matter; bookbinding material; photographs;

- stationery; adhesives for stationery or household purposes; artists' materials; paint brushes; typewriters and office requisites (except furniture); instructional and teaching material (except apparatus); plastic materials for packaging (not included in other classes); printers' type; printing blocks.
17. Rubber, gutta-percha, gum, asbestos, mica and goods made from these materials and not included in other classes; plastics in extruded form for use in manufacture; packing, stopping and insulating materials; flexible pipes, not of metal.
  18. Leather and imitations of leather, and goods made of these materials and not included in other classes; animal skins, hides; trunks and travelling bags; umbrellas, parasols and walking sticks; whips, harness and saddlery.
  19. Building materials (non-metallic); non-metallic rigid pipes for building; asphalt, pitch and bitumen; non-metallic transportable buildings; monuments, not of metal.
  20. Furniture, mirrors, picture frames; goods (not included in other classes) of wood, cork, reed, cane, wicker, horn, bone, ivory, whalebone, shell, amber, mother-of-pearl, meerschaum and substitutes for all these materials, or of plastics.
  21. Household or kitchen utensils and containers; combs and sponges; brushes (except paint brushes); brush-making materials; articles for cleaning purposes; steelwool; unworked or semi-worked glass (except glass used in building); glassware, porcelain and earthenware not included in other classes.
  22. Ropes, string, nets, tents, awnings, tarpaulins, sails, sacks and bags (not included in other classes); padding and stuffing materials (except of rubber or plastics); raw fibrous textile materials.
  23. Yarns and threads, for textile use.
  24. Textiles and textile goods, not included in other classes; bed and table covers.
  25. Clothing, footwear, headgear.
  26. Lace and embroidery, ribbons and braid; buttons, hooks and eyes, pins and needles; artificial flowers.
  27. Carpets, rugs, mats and matting, linoleum and other materials for covering existing floors; wall hangings (non-textile).
  28. Games and playthings; gymnastic and sporting articles not included in other classes; decorations for Christmas trees.
  29. Meat, fish, poultry and game; meat extracts; preserved, frozen, dried and cooked fruits and vegetables; jellies, jams, compotes; eggs, milk and milk products; edible oils and fats.
  30. Coffee, tea, cocoa, sugar, rice, tapioca, sago, artificial coffee; flour and preparations made from cereals, bread, pastry and confectionery, ices; honey, treacle; yeast, baking-powder; salt, mustard; vinegar, sauces (condiments); spices; ice.
  31. Agricultural, horticultural and forestry products and grains not included in other classes; live animals; fresh fruits and vegetables; seeds, natural plants and flowers; foodstuffs for animals; malt.
  32. Beers; mineral and aerated waters and other non-alcoholic drinks; fruit drinks and fruit juices; syrups and other preparations for making beverages.
  33. Alcoholic beverages (except beers).
  34. Tobacco; smokers' articles; matches.

#### CLASSIFICATION FOR SERVICES (11 CLASSES)

35. Advertising, business management; business administration; office functions.
36. Insurance; financial affairs; monetary affairs; real estate affairs.
37. Building construction; repair; installation services.
38. Telecommunications.
39. Transport; packaging and storage of goods; travel arrangement.
40. Treatment of materials.
41. Education; providing of training; entertainment; sporting and cultural activities.
42. Scientific and technological services and research and design relating thereto; industrial analysis and research services; design and development of computer hardware and software.
43. Services for providing food and drink; temporary accommodation.
44. Medical services; veterinary services; hygienic and beauty care for human beings or animals; agriculture, horticulture and forestry services.
45. Legal services; security services for the protection of property and individuals; personal and social services rendered by others to meet the needs of individuals.

## Appendix 2

# Useful internet addresses for intellectual property information

**<http://www.bailii.org>** Masses of judgments (full text) and legislation and world law resources and much more. Includes Irish cases and cases at the Court of Justice and Court of First Instance. Probably the most useful free resource for case law.

**[http://curia.europa.eu/jcms/jcms/j\\_6/](http://curia.europa.eu/jcms/jcms/j_6/)** CURIA – European Court of Justice site with case law of Court of Justice and Court of First Instance and other information and links. This link is to the English version but many other languages are available.

**<http://eur-lex.europa.eu/en/index.htm>** EUR-LEX – EC legislation and cases before the European Court of Justice and Court of First Instance (European Community Reports) together with the full text of Directives, Treaties and Regulations including legislation in preparation. Official Journal of the European Union. Very useful directory of legislation in force. Go to ‘17 Law relating to undertakings’ and then to ‘17.20 Intellectual Property law’.

**<http://oami.europa.eu/en/default.htm>** Office for the Harmonisation of the Internal Market (Trade Marks and Designs) – general information plus decisions of the Divisions and Boards of Appeal, databases of Community Trade Marks and Designs. Case law on trade marks and designs before the Office, ECJ case law on trade marks and designs, legal texts and decisions of the Member States’ CTM courts.

**<http://wipo.org>** World Intellectual Property Organisation – text of treaties including Berne, Paris, Madrid and classification systems, such as Nice and Locarno, list of Convention countries and general information. Domain name resolution decisions. Sign up for e-newsletters including the WIPO Magazine (published six times each year). There is a useful collection of laws for electronic access including main IP legislation in a great many countries. For example, the US, Malaysian and Australian Copyright Acts are available. Some foreign legislation is available translated into English, for example, the French and German Copyright Acts. Caution may be needed, as some legislation may not be fully up to date.

**<http://www.cla.co.uk>** Copyright Licensing Agency – useful information about the organisation, licensing, news releases, copyright on the internet, links to other organisations, etc.

**<http://www.courtservice.gov.uk>** The Court Service – information about the courts, civil procedure rules (full text), court diaries, etc.

**<http://www.epo.org>** European Patent Office home page with much useful information and full text of cases before the Boards of Appeal and Enlarged Board of Appeal, text of the European Patent Convention, many links to other sites including national patent offices, patent databases, etc. Subscribe to a fortnightly electronic newsletter.

**<http://www.icann.org/udrp/udrp.htm>** ICANN Uniform Domain Name Dispute Resolution Policy, including summaries of cases.

**<http://www.opsi.gov.uk>** The Office of Public Sector Information. Access from here to Acts of Parliament, Statutory Instruments, draft Statutory Instruments, Command Papers, information about Crown Copyright, etc.

**<http://www.ipo.gov.uk>** The UK Intellectual Property Office (the operating name of the UK Patent Office) home page. Lots of useful information about intellectual property including descriptions of rights, the work of the Office and news releases and links to numerous other intellectual property related sites. Full text of cases before the Comptroller-General of Patents, Designs and Trade Marks and before the Appointed Person (Trade Marks) and much intellectual property legislation. Databases of patents, registered designs and trade marks.

**<http://www.publications.parliament.uk/pa/ld/ldjudgmt.htm>** House of Lords judgments – full text of judgments appear within hours. All judgments from 14 November 1996.

**<http://www.supremecourt.gov.uk>** UK Supreme Court including full text of judgments of the Supreme Court which opened on 1 October 2009 and took over the judicial business of the House of Lords.

**<http://www.statutelaw.gov.uk>** UK Statute Law Database – the official revised edition of the primary legislation of the United Kingdom made available online. Updating legislation is an ongoing task.

**<http://www.supremecourtus.gov>** US Supreme Court.

**<http://www.uspto.gov>** US Patents and Trademark Office home page, includes access to US legislation on patents and trade marks.

**[http://www.judiciary.gov.uk/docs/pub\\_media/pcc-report.pdf](http://www.judiciary.gov.uk/docs/pub_media/pcc-report.pdf)** Judiciary of England and Wales Intellectual Property Committee, *Working Group's Final Report on Proposals for the Reform of the Patents County Court*, 31 July 2009.

**<http://www.law.cornell.edu/>** Cornell Law School Legal Information Institute. Impressive databases and links. US laws and cases (including full text Supreme Court from 1990) and comprehensive world law materials (even including Magna Carta).

Websites and addresses may be subject to change and the information available from them and the links to other sites may change from time to time. In some cases you will need an Acrobat Reader from Adobe Systems Inc to access or download larger files. Your computer department should be able to tell you how to obtain a copy. (It is possible to obtain a free copy via the internet from some of the websites listed above.) Acrobat is a registered trade mark.

The amount of useful information now available on the internet is impressive and it is growing at a phenomenal rate.

Most of the information outlined above may be accessed free of charge. However, this is not always so. Please ensure that you abide by the terms or conditions of use. Some allow printing or downloading for your own personal use only.
